For the benefit of readers who may wish to follow up an individual contributor's articles, the Editors have decided to place after each contributor's name the numbers of the pages on which his signature appears. Academic but not other addresses are given (for a retired scholar, the place of his last known academic appointment). The following is a consolidated list and index of authors for the first two volumes of the Encyclopaedia.

In this list, names in square brackets are those of authors of articles reprinted or revised from the first edition of this Encyclopaedia or from the Shorter Encyclopaedia of Islam. An asterisk after the name of the author in the text denotes an article reprinted from the first edition which has been brought up to date by the Editorial Committee; where an article has been revised by a second author his name appears in the text within square brackets after the name of the original author.
VIII AUTHORS

Mrs N. R. KEDDIE, University of California, Los Angeles, ii, 583.
E. KEDDIE, University of London, ii, 515.

the late R. A. KERN, University of Leiden. i, 267
(Ahī-i Waṣīr).

M. KHALAFALLAH, University of Alexandria. i, 569, 850, 400, 103, 505, 1127, 1139.
W. A. S. KEALI, American University, Beirut. i, 60, 352, 1110, 1152; ii, 167.
H. KINDERMANN, University of Cologne. i, 683, 684.
J. S. KIRKMAN, Mombasa. ii, 983.

H. J. KISSLING, University of Munich. i, 95, 313, 869.
M. J. KISTER, Hebrew University, Jerusalem. i, 343, 345, 1248; ii, 481, 990.
Mme E. KÖCHER, Berlin. ii, 428.

M. FUAD KOPRULU, University of Istanbul. i, 241, 850, 862.

[T. KOWALSKI, Cracow]. i, 1222; ii, 203.

the late J. KRAEMER, University of Erlangen. i, 1230.

The late

E. KURAN, Middle Technical University, Ankara. i, 1235.

l. 7, for Yādash-i Ayādī read Yādash-i Ayādī.

P. 518b, DJAZā, (ii), l. 2, for hāmān-i dājādī read hāmān-i dājūdī (cezā).

P. 539b, DJIBUTI, after the third paragraph, ending of the majority, insert the following paragraph, omitted in error in the English edition:

Djibuti is the administrative centre of a region misleadingly called “Côte Française des Somalis”, “French Somaliland”; in fact more than three-quarters of its area (ca. 23,000 sq. km.) and of its coast belong to the ‘Arab, while less than a quarter belongs to the Somalis. It is a desert region, with practically no agriculture. Outside the capital, the population is agriculturally nomadic; all the inhabitants are Muslims. Besides the ‘Arab (numbering some 25,000), it contains the subjects of four “sultanates”: the whole of Tadjoura (Tadjurra, in ‘Arab Tagorryri) and Goba‘ad, the majority of Raḥayto, and a small part of Awaṣa. The ‘Arab (called by the Arabs Danākīl [q.v.]) form a relatively organized population, with a firmly hierarchical social structure, divided into regional ‘commands’ ruled by hereditary chiefs and based on a family and tribal organization. Among the Somalis, the only autochthonous tribe is that of the ‘Iṣe, nine-tenths of whom in any case belong to Somalia or to Ethiopia. This tribe is unusually anarchical, having no true chiefs: the uga’a, who lives in Ethiopia, has no effective power; a minimum of authority is exercised by councils of elders, who dispense justice. The ‘Iṣe groups which normally wander throughout the country during part of the year total about 6000 individuals. They belong mainly to the sub-tribes Rér Mūse, Urwāne, Furlabe, Horrāne and Māmmānān.

P. 576b, DJUGHRAFIYA, ll. 50, 57 and 71, for Aṣyabhaṣa read Aṣyabhaṣa.

P. 578a, l. 24, for Sīyāḥī read Sīyāḥī.

P. 578b, l. 18, for after insert of.

P. 579a, DJUMHŪRIYYA, l. 44, for Sīyasat read Sīyasat.

P. 579b, DJUMĀNĀGH, l. 15, before thriving insert a.

l. 19, for ensinhas read ensinhas.

P. 597a, l. 3, for Rīdī read Rādiā.

l. 65, for Aṃnāwādār read Aṃnāwādār; for tālhūkas read tālhūkas.

l. 67, for zāralbī read zāralbī.

P. 598a, l. 11, for read college.

l. 25, for tālhūkas.

ll. 41-5, for It has . . . . employ of the ruler. read It has two large-size cannon, originally from the armament brought by Khādīm Sūleymān Paṣḥā, Ottoman governor of Cairo under Sūleymān I and commander of the fleet sent from Suez against the Portuguese settlement of Diū in India; they were brought to Dūnāgharā by Mūljāhid Khān of Pālīṭāna (see Cam. Hist. India, iii, 334, 349). P. 598b, l. 15, for Zarfīn read zarīn.

P. 600a, al-DJUNAYD b. ABD AL-LĀH, l. 7, for Dīghaba b. Dīghābī read Dīghābī b. Dīghābī; l. 12, for Ibn Dīghābī’s read Ibn Dāhī’s [These readings, kindly communicated by Mr. A. S. Bazmee Ansari, make it possible to correct the texts of Ibn al-Athīr, iv, 465, 466, v, 40, 101, and al-Baladhuri, 441-2, which have respectively Čādīm and Čādīm and al-Kāmil, 441-2, which have respectively Čādīm and Čādīm and Čādīm and Čādīm].

P. 602a, DJURĀT, l. 11, for Muhabbāt read Muhabbāt.

P. 1021a, GHASSÂN, l. 6, after ‘Ayn Ībârī delete [q.v.].

[Shortly before this article by Dr Shahid was published, the editors interpolated a note communicated to them by another scholar, which introduced a newly-discovered inscription from a Ghassânid building. Dr Shahid has now pointed out to them that this note on buildings deals with an aspect of the subject which he had discussed in articles listed in his Bibliography and which he had therefore decided not to treat in detail in the body of the article; the insertion of the note might give the impression that the editors had thought that the part allotted to Ghassânid buildings was insufficient. The editors readily express their regret if any such misunderstanding has occurred and take this opportunity of mentioning that Dr Shahid is at present engaged on a book on Arab-Byzantine relations before the rise of Islam which will include a comprehensive chapter on Ghassânid structures.]
CABRA [see KABRA]
CADIZ [see KADIS]
CAESAREA [see KAYSARIYAH, KAYSERI, SHAR-SHAL]
CAGHANIYAN (Arabic rendering: Şaghaniyan). In the early Middle Ages this was the name given to the district of the Caghan-Rud [q.v.] valley. This river is the northernmost tributary of the river Anu-Daryâ [q.v.]. The district lies to the north of the town of Tirmidh [q.v.], the area of which, however, (including Camaangân) did not form part of Caghaniyan either politically or administratively (Ibn Khurraḍâdhibh, 39). Wâdschâjî (i.e. Fayâdbâd) was regarded as the boundary with the district of Khuttalan [q.v.]; between the rivers Pandj and Wakhsh. Incidentally, the area around Kabâdiyân (Kuwâdiyân; [q.v.]) to the south-east, has frequently been regarded as an independent district.

The region had a pleasant climate, good water supplies, good soil, and corresponding agriculture. Its peasants, however, were considered lazy, thus a considerable number of poor (dârsîgân) were to be found in Caghaniyan, and the area was sparsely populated. The capital was also called Caghaniyan (the derivation by Markwart, Wehrot 93, from the Mongol Caghan 'white' is surely wrong). It was situated on the side of a hill where there was running water. The population of the town was also regarded as poor and ill-educated, and despite its greater size, it was soon overshadowed by Tirmidh (Istakhri, 298; Mukaddasi, 332). Round the year 985, the taxes were 48,529 dirhams (Mukaddasi, 283, 305). Other known places in the district were Bârangî and Dârzangî. Maps of the area: Hûdâd al-'Alâm, 339, and Le Strange, map ix.

History: In the 5th and 6th centuries, Caghaniyan was one of main Hephthalite (see HAYTAL) areas and was under Buddhist influence. Even in the 4th/10th century it was considered a border region against the 'Kumdâli', who are regarded as remnants of the Hephthalites (Bayhâkî, ed. Morley, 495, 576, 611, 666; and also Markwart, Wehrot 93 f., with further data), though they may also have belonged to the Saks (Hûdâd al-'Alâm, 365). In Sâsânî times, it was ruled by its own dynasty with the title Câghân-Khudât (Tabari, ii, 1596). In 31/651, its troops took part in Yazdaqirdâd's [q.v.] fight against the attacking Arabs. Some of them (prisoners?) could be found in Başra around 59/678 (Bâlâdjâhi, ed. De Goeje, 419 f. = ed. Cairo 1901, 413; Spuler, Iran, 19). In 86/705 the Câghân-Khudât submitted to Kutâbyâ b. Muslim [q.v.], who had conquered Transoxania for the Muslims. Thus Caghaniyan became part of an Islamic region, and accepted its culture from Balîk rather than from Bûkhâra and Sâmarqand (Tabari, ii, 1180; Dînawari, Abûbâr, 330; Spuler, Iran, 29 and note 6; H. A. R. Gibb, Arab Conquests in Central Asia, 1923, 32 (Turkish ed., 28); Gh. H. Sadighi, Les mouvements relig. iraniens, 1938, 24 f.). In 119-121/737-9, the inhabitants fought on the side of the Arabs against the western Turks, their allies, and Süghd refugees (Tabari, ii, 1596; Ind., p. 735; Barthold, Turkestan, 191 b. G. Gafurov, Ist. Tadzhiskoj Naroda, i, 1949, 147). They took part in the civil war between the Umayyads and ʿ Abbâsids (Tabari, ii, 1423, 1767); in 191-195/806-10, in the rising of Râdî b. Layâf against the ʿ Abbâsids (Yaʾkîb, Hist. Istl., 1883, ii, 528), and in 323/934, followed for a short time a certain 'False Prophet' Mahdi (name? title?) (Gardizi, 37 f.). Abû ʿAlî (see ILVAŠID), who ruled over this district as well as over Tirmidh and Shîman and Khartân further east, had come here for purposes of defence in 337/948, after he had been deposed as governor of Khurâsân. He is described as a member of the Muḥâdî dynasty. It is not evident whether there was a link between this house and the Caghan-Khudât. When he became governor of Khurâsân once more in 341/952, he passed the rule of Caghaniyan on to his son. Deposed again in 343/954, he was buried in Caghaniyan (Radab-Shâbân 344/Nov. 955) (Ibn Hawâkal 401; Mukaddasi 337; Gardizi 36 f.; Yâkût, Learned Men (Gibb Mem. Ser. VI), i, 143; Barthold, Turkestan, 233, 247/49; Spuler, Iran, 97).

Towards the end of the 4th/10th century, a lengthy war broke out between the amir of Caghaniyan (who ranked as one of the Mulâk al-ajrād), the rulers of Gâzân (Dişânjân; [q.v.]), and other candidates (Narâşkhâl, 157; further information in Barthold, Turkestan, 294; Minorsky in Hûdâd al-'Alâm, 178, with further data). It ended in 390/999, when Caghaniyan came under Kârâkhânîd rule. In 416/1025, the district joined Mâmûd of Ghâzna, and in 426/1035, it repelled Kârâkhânîd attempts to recover it with the assistance of the Gâzânawîs (Bayhâkî, ed. Morley, 82, 95, 355, 575 f., 611, 616 (see KARGÂNÎNÎ). Finally, Caghaniyan came under Sâlджâk rule in 45/1059. They suppressed a rising in 457/1064 (Ibn al-ʿÂghî, ed. Tornberg, x, 22). By ca. 561/1165, the Kârâkhânîds (who were subject to the Kârâ Khîṭāy) had once again achieved a position of great influence (al-Ḳāṭîb al-Samârâkandî, in Barthold, Turk. rûss., i, 71 f.). Around the years 570-571/1174-75, the country came under the rule of the Ghûrîds (Dîrjânî, Tabâgî, 423-6).

The district is not mentioned during the time of the Mongol conquests; and subsequently it is hardly found in Mongol sources. In the 7th/13th century, Câghânîyân belonged to the Câghâtî empire, and the Transoxanian Khân Barâk (generally called Burâk [q.v.] by the Muslims) had the centre of his empire here in 663-670/1264-71. In Timîr's time, the place-name Dîh-i naše (now: Dënow) is mentioned (Sharaf...}

Encyclopaedia of Islam, II
al-Din Yazdi, ed. Ilahdad, 1885, i, 124), and this appears to be on the site of the ancient town of Caghāniyān (thus, Bol'shaya Entsiklopediya Sovetskoi Entsiklopedii, 63, St. Petersburg 1901, 109; Bol'shaya Entsiklopediya Sovetskoy, 41, (1956) 315). CAGHATAY KHAN, founder of the Caghatay Khanate (q.v.), the second son of Cingiz-Khan and his chief wife Borte Fudjin. Already in his father's lifetime he was regarded as the greatest China (1211-1216) and against the kingdom of the Khwarzim-Shah (1219-1224). Urgandj, the latter's capital, was besieged by the three princes Dioci, Caghatai and Ögedey and taken in Safar 618/27th March-24th April 1221. In the same year Caghatai's eldest son Djoci had predeceased his father) he enjoyed enormous prestige. In the year 1229 he presided with his uncle Öttügen over the Kurilay at which Ögedey was elected Great Khan: owing to his position as the recognized authority on the yasa, he exercised an influence which even the Great Khan Ögedey had to bow. He seems to have spent this period partly in Mongolia at his brother's court, partly in the territory allotted to him by Cingiz-Khan, where he held his own court-camp. Like all the Mongol princes Caghatai had separate camps (ordu) for summer and winter. His summer residence according to Djulwanj was at some place on the Ili whilst his winter quarters were at Kuyas, probably to be identified with the Jugius of William of Rubruck, near Almaliq, i.e., in the region of the present-day Kulja. The residence of Caghatai's successors is called Ulugh Ef (in Turkish „Great House") by Djulwany and others.

Caghatai had received from his father all the lands from the Uyghur territory in the east to Bokhara and Samarqand in the west; we must not however regard these lands as a single kingdom governed from the Ili valley and only indirectly subject to the Great Khan. Everywhere, even in the Ili valley itself, the local dynasties who were there before the Mongols remained. On the relationship of these dynasties to the Mongol rulers we have no accurate information; we know equally little about which dynasties held the right to the court on the Ili could claim from the Great Khan and his deputies. The settled lands of Central Asia were certainly not governed in the name of Caghatai but in that of the Great Khan. In the account of the suppression of the rebellion in Bukhara in 636/1238-1239 Caghatai is not mentioned; the governor of Má wará al-Nahr at this period was Mahmúd Yalavac, a Khwarzim by birth, who had been appointed by the Great Khan. Even the generals of the Mongol forces in Má wará al-Nahr were appointed by the Great Khan. When, soon afterwards, Mahmúd Yalavac was arbitrarily dismissed from his office by Caghatai the latter was called to account by his brother and had to admit the illegality of his action. Ögedey was satisfied with this apology and granted the land to his brother as a fief (indju), but the legal position of this territory was not thereby altered. During the last years of Ögedey's reign, as well as under Mongke, all settled areas from the Chinese frontier to Bukhara were governed by Mášûd Beg, the son of Mahmúd Yalavac, in the name of the Great Khan.

It cannot be ascertained how far Caghatai's Muslim minister Kürb al-Din Habash 'Amid had a share in the administration of the country along with the representatives of the Great Khan. According to Rashid al-Din this minister came from Otrar, according to Djamal Karsli from Karmina, and like many other Muslim dignitaries at this time had made his fortune among the Mongols as a merchant. He was on terms of such intimacy with the Khan that each of Caghatai's sons had one of Habash 'Amid's sons as a companion.

In general Caghatai was not favourably inclined towards Islam. Among the infringements of Mongol law which he rigidly punished was the observance of certain prescriptions of Islam. Among the Mongols it was forbidden to slaughter an animal by cutting its throat, which is the method prescribed by the shari'a, another law frequently broken by the Muslims. In the year 1247 the ruler of the town of Noyon was brought to Caghatai's court and severely punished because he slaughtered an animal by cutting its throat.

The cruel punishment which Caghatai visited upon any such transgressions made his name hated among the Muslims.
According to Djuwayni, Caghatay survived his brother Ögedey, who died on 5 Djumada II 639/1141 December 1241 though only for a short period. On the other hand Rashid al-Din states that he died seven months before Ögedey, i.e., apparently in the beginning of May, 1241.

**CAGHATAY KHANATE**

The Caghatay, or Great Asian Khānate to which Caghatay gave his name was really not founded till some decades after the Mongol prince’s death. Caghatay was succeeded by his grandson Kara-Hülegü, the son of Mövêtiken who fell at Bāmīyān. Kara-Hülegü had been designated as Caghatay’s heir both by Cingiz-Khan himself and by Ögedey; he was however deposed by the Great Khan Gūyūk (1241-1248) in favour of Yesū-Mönkè, the fifth son of Caghatay, with whom Gūyūk was on terms of personal friendship. In 1251 Yesū-Mönkè was involved in a conspiracy against the Great Khan Mönkge, who reinstated Kara-Hülegü and handed Yesū-Mönkè over to him for execution. Kara-Hülegü however did not survive the homeward journey and the executors, not being sure of his worst, proposed to Orkina, who now ruled in his husband’s stead, though her authority does not seem to have extended beyond the Ili valley. As appears from the narrative of William of Rubruck, the whole Empire was at this period divided between Mönkge and Batu: Batu’s portion was the whole area west of a line between the rivers Talas and Ću, east of which all territories were directly subject to the Great Khan. Mas’ud Beg [see the previous article], who enjoyed the confidence of both Khans, was governor of all the settled areas between Baş-Barch and Khwarizm.

With the death of the Great Khan Mönkge in 1259 a different condition of things arose. During the struggle for supremacy between Kubilay and Arigh Böke, the brothers of the late Khan, Alūghū, a grandson designate, assumed possession of Central Asia for Arigh Böke and support him from that quarter against his enemies. He actually succeeded in bringing the whole of Central Asia under his sway, including areas such as Khwarizm and other princes, remained pagans and resided in Muslim culture. Kaydu and Capar, as well as Djuwayni, postponed for several decades the final victory of the Mongols in this part of Asia.

The Mongols, particularly the rulers; but this influence was not strong enough to induce the mass of the people to change their mode of life. When the ruling family decided to settle in Mā wara al-Nahr and break with the customs of the people, their action resulted in the complete separation of the eastern provinces.

Even the brief reign of Yesū-Mönkè (1246-1251) appears to have been favourable to those who professed Islam. The chief minister then was a friend of the Khan’s youth and a foster-son of Habashʿ Amīd, Bahāʾ al-Dīn Marghānā, a descendant of the Shuyukh al-Islām of Farghāna. As a patron of poets and scholars he is praised by his contemporary Djuwayni, who was personally acquainted with him. Habashʿ Amīd, who was hated by the Khan as an adherent of Kara-Hülegū, owed his life to the intervention of Bahāʾ al-Dīn. Nevertheless, when Bahāʾ al-Dīn was involved in his master’s downfall, he was handed over to his foster-father, who ordered his execution in the cruelest fashion.

Under Orkina, Habashʿ Amīd again occupied the position he had held under Caghatay; this princess however was favourably inclined to the Muslims; she is described by Wāsīf as a protectress of Islam, and by Dīmāl Karšī was even said to be a Muslim. Her son Mubārak-Shāh, raised to the throne in Mā wara al-Nahr, certainly adopted Islam, as did his rival Burāḳ Khan some years later. The rule of Alūghū seems to have been less favourable to the Muslims, and the events of the following years postponed for several decades the final victory of Mongol culture. Kaydu and Capar, as well as Dū’s and other princes, remained pagans and resided in the eastern provinces. In the reign of Esen-Būkā the armies of the Great Khan penetrated deep into Central Asia and ravaged the winter and summer.
residences of the Khan; the continuator of Rashid al-Din in his account of these happenings says that the winter residence was in the region of the Isik-Kul, while the summer residence was on the Talas.

Esen-Buqta's successor Kebek was the first to return to the settled lands of Mā warā al-Nahr. Though he did not adopt Islam he is praised by Muslims as a just prince; he is said to have built or restored several towns; he also had built for himself a palace in the neighbourhood of Nāghshāb, from which the town takes its modern name of Karshi (from the Mongol word for "palace"). He introduced the silver coins afterwards called Kebeki, which may be considered the first independent coinage of the Caghatay Khānate.

After two brief interregnums Kebek's brother Tarmashirin was raised to the throne. This Khan adopted Islam and took the name of 'Alā' al-Din; the eastern provinces were entirely neglected by him and the nomads of those provinces rose against him as a violator of the Yasa. This rebellion appears to have taken place about 734/1333-1334; it was headed by Buzan, a nephew of the Khan, and resulted in Tarmashirin's flight and death. Buzan can have reigned only for a few months since he was succeeded in 1334 by Cangshi, another nephew of Tarmashirin and the co-arbiter in Khwarizm. Christian missionaries show that the centre of the Khānate was now again transferred for a brief period to the Ili valley and Christians were allowed to propagate their religion unhindered and to build churches; it is even said that a 7-year-old son of Cangshi was baptised with his father's consent and received the name of Johannes.

Some years later Nakhshab is mentioned again as the residence of the Caghatay Khan. This was Kāzan, who was descended, not like Du'a and his sons from Yessin-To'a, but from Būrī, another son of Mōḥetūken. Kāzan fell in battle in 747/1346-1347 in the course of a struggle against the Turkish aristocracy, and with his death the rule of his house in Mā warā al-Nahr came to an end. Till 1370, descendants of Caghatay were placed on the throne by the Turks as puppet-rulers; in the time of Türk-Tūmūr these rulers were chosen from the family of Ūgend. Nevertheless under Türk-Tūmūr and his successors the nomad population of Mā warā al-Nahr, who as a warrior caste enjoyed many privileges, were still as before called Caghatay.

(W. BARTHOLD-J. A. BOYLE)

CAGHATAY LITERATURE [see TURKS]
CAGHATAY TURKISH [see TURKS]

CAGHRI-BEG [see TURKS]

CAGHRI-BEG DAGGūD MĪḤĀJIR B. SALTUQ was the brother of Tughrīl-Beg [q.v.], and the co-founder with him of the Saltūqid dynasty. The careers of both brothers were, for the most part, interwoven. Some years later Nakhshab is mentioned again as the residence of the Caghatay Khan. This was Kāzan, who was descended, not like Du'a and his sons from Yessin-To'a, but from Būrī, another son of Mōḥetūken. Kāzan fell in battle in 747/1346-1347 in the course of a struggle against the Turkish aristocracy, and with his death the rule of his house in Mā warā al-Nahr came to an end. Till 1370, descendants of Caghatay were placed on the throne by the Turks as puppet-rulers; in the time of Türk-Tūmūr these rulers were chosen from the family of Ūgend. (W. BARTHOLD-J. A. BOYLE)
the neighbouring Karakhanids. On their side, the Seljukids interfered in the internal quarrels of Ghazna, where Mas'ud's successor, Mawdud, had been murdered. Sons of Caghri, but without a successor of Mawdud, the Seljukids encouraged the usurper Farrukhzad, only to find themselves soon afterwards at war with him also. Hostilities went on intermittently in the Balish and the Sistan districts, and in Sistan the danger was for a while so grave that it became necessary to recall the Turcomans temporarily from Kirmán. Caghri was, by that time, old, and the conduct of operations fell in fact upon his son Alp-Arsalan [q.v.]. Seljukids and Ghaznavids were forced to recognize that their power was about equal, and in 457/1060, Caghri and Ibrázim of Ghazna concluded a peace that remained virtually undisturbed by their successors. Some months later, Caghri died (at the beginning of 458/1060).

Practically nothing is known of Caghri-Beg's government. The chief of the plundering nomads became prince of a territory in which the traditional administration was continued or resumed. He gave himself the title of Malik al-Mulk. A brother of the famous Isma'îîlî writer Nasîr-i Khusraw for a long time held a prominent position in the service of the sovereign. Nevertheless, the fact that neither Ni'am al-Mulk nor the authors of moral tales, nor the divans of the poets, have preserved any noteworthy information about Caghri from the time that he was separated from his brother, gives the impression of a weaker personality and a rather passive political attitude, from a religious and all other points of view.

It is difficult even to obtain a clear assessment of Caghri's relations with his kinsfolk. After Dandakan, Sistan appears to have been handed over to Músa Payghu (Payghu?), the uncle of Caghri and Tughril, but the power of the chiefs of this family seems to have been unstable, and in 448-1057, hostilities arose between them and Yakûl, one of Caghri's brothers, who came into dispute from Kirmán. It appears that from then onwards Caghri was communication in Sistan as the suzerain over his young cousins. A more important question is that of the relations between Caghri and Tughril, holding in mind the successes that made the latter the protector of the Caliphate and the legally recognized master of the entire Muslim East. The only certainty is that the good relations between them were never belied. It seems that in Sistan Caghri accepted Tughril's decisions. In any case, when in 450/1058-9, the revolt of Ibrázim Inal constituted a grave threat to the sovereignty, Caghri in Armenia, the article of Ibrahim Kafesoglu, Dolû Anadoluya ilk selçuklu akini, in Fuad Koprulu, Ah b. Nasir (Akhbâr al-dawla al-Seldiu-i din) of the latter was utilized by Ibn Khurrasam, which is lost but utilized by Ibn Khurrasam, Safar-i nâmâ. In any case, when in 450/1058-9, the revolt of Ibrázim Inal constituted a grave threat to the sovereignty, Caghri in Armenia, the article of Ibrahim Kafesoglu, Dolû Anadoluya ilk selçuklu akini, in Fuad Koprulu, Ah b. Nasir (Akhbâr al-dawla al-Seldiu-i din) of the latter was utilized by Ibn Khurrasam, Safar-i nâmâ.

CAGHRt-BEG — CAIN
the neighbouring Karakhanids. On their side, the Seljukids interfered in the internal quarrels of Ghazna, where Mas'ud's successor, Mawdud, had been murdered. Sons of Caghri, but without a successor of Mawdud, the Seljukids encouraged the usurper Farrukhzad, only to find themselves soon afterwards at war with him also. Hostilities went on intermittently in the Balish and the Sistan districts, and in Sistan the danger was for a while so grave that it became necessary to recall the Turcomans temporarily from Kirmán. Caghri was, by that time, old, and the conduct of operations fell in fact upon his son Alp-Arsalan [q.v.]. Seljukids and Ghaznavids were forced to recognize that their power was about equal, and in 457/1060, Caghri and Ibrázim of Ghazna concluded a peace that remained virtually undisturbed by their successors. Some months later, Caghri died (at the beginning of 458/1060).

Practically nothing is known of Caghri-Beg's government. The chief of the plundering nomads became prince of a territory in which the traditional administration was continued or resumed. He gave himself the title of Malik al-Mulk. A brother of the famous Isma'îîlî writer Nasîr-i Khusraw for a long time held a prominent position in the service of the sovereign. Nevertheless, the fact that neither Ni'am al-Mulk nor the authors of moral tales, nor the divans of the poets, have preserved any noteworthy information about Caghri from the time that he was separated from his brother, gives the impression of a weaker personality and a rather passive political attitude, from a religious and all other points of view.

It is difficult even to obtain a clear assessment of Caghri's relations with his kinsfolk. After Dandakan, Sistan appears to have been handed over to Músa Payghu (Payghu?), the uncle of Caghri and Tughril, but the power of the chiefs of this family seems to have been unstable, and in 448-1057, hostilities arose between them and Yakûl, one of Caghri's brothers, who came into dispute from Kirmán. It appears that from then onwards Caghri was considerer in Sistan as the suzerain over his young cousins. A more important question is that of the relations between Caghri and Tughril, holding in mind the successes that made the latter the protector of the Caliphate and the legally recognized master of the entire Muslim East. The only certainty is that the good relations between them were never belied. It seems that in Sistan Caghri accepted Tughril's decisions. In any case, when in 450/1058-9, the revolt of Ibrázim Inal constituted a grave threat to Tughril's sultanate, Tughril in part owed his preservation to the help brought to him by Alp-Arsalan and Yakûl. Relations between Caghri and Tughril must have been made easier by the fact that the latter was childless. Therefore when the Caliph wanted to form a marriage alliance with him, it was a daughter of Caghri that became the wife of al-Ka'im. Caghri had married a Khwárizmian princess, who had already a son, Sulaymán. When his brother died, Tughril married her. It is not certain whether Alp-Arsalan, who was to unite the two inheritances, had been selected for that fortune by the two ruling brothers, or whether, as Tughril's vizir declared, Sulaymán had been intended to all events, the latter had played no role under either Caghri or Tughril.

CAIRO [see AL-KAHIRA].

CAKIRI-BASHI, chief falconer, a high official of the Ottoman court. In the 16th century the numbers and sub-divisions of the aghas of the hunt (şikâr aghaları) increased greatly, and the Cakirî-bashi is joined by separate officers in charge of the peregrines, lanners, and sparrow-hawks (Şahînî-bashi, Doghânî-bashi, and Âmânaştî-bashi). Until the time of Mehmed IV (1088/1678-1687) the Doghânî-bashi and his staff belonged to the Inner service (Enderûn); the others to the outer service (Bırûn). During the 17th and 18th centuries the falconers dwindled in numbers and importance.

ÇAKMAK, AL-MALIK AL-Zâhir SAYF AL-DIN, Sultan of Egypt, was in his youth enrolled among the Mamluks of Sultan Barkok. He gradually rose, till under Sultan Barsbay he became Chief hâdîcî (Chief Master of the Horse, and finally Atâbeg (Commander-in-Chief). On his deathbed in 842/1439, Barsbay appointed him regent to his infant son al-Malik al-'Aziz Yusuf. The various divisions of the Mamluks, originating in the bodyguards of the Sultan's Barkok, Nasir Faradji, Mustayyad Shâykeh and Barsbay, were at enmity with one another and their sole aim was to obtain all the wealth and influence they could. In the confusion that arose the only course open to Çakmak was to seize the reins of government for himself. Sultan Yusuf was deposed, placed in confinement in the citadel, retaken after an attempt to escape and finally taken to Alexandria and kept under a mild form of custody. Soon afterwards the resistance of the governors of Damascus and Aleppo also collapsed; they had been defending Sultan Yusuf's claims to further their own interests. The Syrian rebels were defeated, the leaders executed and Çakmak's supremacy was assured, in 842/1439. Like his predecessor Barsbay [q.v.] Çakmak wished to make war on the Christians under pretence of checking piracy on the north coast and therefore sent ships via Cyprus to Rhodes but the Egyptians had to return as the resistance offered by the Knights of St. John, who were well prepared, was too strong for them. In the years 840/1442 and 848/1444 the Egyptians again made unsuccessful attempts to conquer Rhodes, and had finally to make peace with the Knights. Çakmak's foreign policy was a successful one; he was on good terms with all Muslim rulers and did not, like Barsbay, fall into the error of causing irritation by petty trickeries. Against the advice of his amîrs, he allowed Timur's son șâhab Rûsh to send a covering for the sacred Ka'ba, although this was a privilege of the Sultans of Egypt (see the article BARBARS in E1). The populace was still so strongly incensed against the Mongols that they actually attacked an embassy which included one of Timur's widows. He was also on good terms with the Ottoman Sultan and the princes of Asia Minor. In his domestic policy, in Egypt itself, he was not quite able to put a stop to the mismanagement of the state monopolies [see BARBARS]. Jews and Christians were tormented with strictly enforced petty regulations. He could not restrain the arrogance and outrages of the Mamlûks so that the only way he could protect women from them on the occasion of festivals was to forbid them to go out. He himself was an exceedingly frugal and pious man, liberal only to the learned, and thought no price too high for a beautiful book; he left but little property behind him on his death. Through his example the morals of the court improved. When, in the year 854/1453, he felt the approach of death—he was now over 80 years old—he had homage paid to his son Uğmân whom the Caliph chose to be Sultan. The amirs and officials of the court and a large multitude of the people attended his funeral, contrary to the usual custom sincerely grieving at his loss.

ÇAKMAK, MUSTAFA FEVZI, also called Kavakî, marshal in the Turkish army. Born in Istanbul in 1876, he was the son of an artillery colonel. He entered the war academy (Harbiye, [q.v.]) where he became a lieutenant in 1895, joined the staff course, and was gazetted as a staff captain in 1898. After spending some time on the general staff, he was posted to the First Corps where he became a successful Colonel, divisional commander, and Army Corps Chief of Staff. He served on the staff of the army of the Vardar during the Balkan War, and during the World War saw service at the Dardanelles, in the Caucasus, and in Syria. He became a general in 1914. In December 1918 he became, for a while, Chief of the General Staff in Istanbul, and in Feb. 1920 Minister of War. He used his position to send arms and give other help to the nationalists in Anatolia, and in April 1920 left with Ismet [Inönü] to join them. In May he became minister of defence and on 21 January 1921 was elected president of the council of ministers of the Ankara government, and was sentenced to death in absentia in Istanbul. On 2 April 1921, after the second battle of İnönü, he was promoted to the rank of Grand Marshal (Mushîr). He remained chief of the General Staff until his retirement, ostensibly under the age limit, in January 1944. In 1946 he was elected as an independent candidate on the Democrat Party list, and in August was nominated as opposition candidate for the Presidency, receiving 59 votes in the Assembly, as against 378 for Ismet İnönü. In 1948 he appeared as honorary president of the newly formed Party of the Nation (Millî Partisi). He died on 10th April 1950.

ÇALA [see BÜKHARA]

CALATAYUD [see KALCAT AYYUB]

CALATRAVA [see KALCAT RABAH]
CALCUTTA (KALIKATĀ), the capital of West Bengal and the largest city in India, situated about 80 miles from the sea on the left or east bank of the Hugli, a branch of the Ganges (Ganges), which is navigable for the largest ocean vessels. A centre of rail, river and ocean traffic, and lying midway between Europe and the Far East, it is one of the busiest ports of the world. About five-sevenths of India's overseas trade is shared by Calcutta and Bombay, with Calcutta having the major share; about one-third of the country's organized factory industry is in its vicinity. It has a large international airport. Area, 32.32 sq. m.; pop. (March 1, 1951) 2,548,677, a density of 139 persons per acre. Including Howrah (pop. 433,630) which is really a part of Calcutta, and the suburbs which are within half an hour's bus journey to the city, Calcutta has three and a half million people.

The crowded metropolis of today grew out of a cluster of three mud villages at the end of the 17th century. Calcutta is first mentioned in a Bengali poem, Manasā-rājya by Viprādāsa (ASB text, 144), written in 1495, but the portion in which Calcutta is referred to is possibly a later elaboration. The first definite mention of Calcutta then occurs in the Šāh-i Akbari (Lucknow text, ii, 62), compiled about 1596, as a rent-paying village in the sārkār of Sātgāon under the Mughal emperor Akbar. The foundation of the city occurred about a century later in 1690. The English merchants, who had been in Bengal for about fifty years, felt the necessity of a fortified place, and under the direction of Job Charnock and after two futile attempts after 1686 they finally settled at Sātgāon, the northern portion of present Calcutta, on 24 August, 1690. In 1696 the English were permitted to build a fort and two years later they secured permission from Prince Šāzīm, grandson of the emperor Awrangzīb, to rent the three villages of Sātgāon (north), Kalikātā (centre) and Govindapur (south), which formed the nucleus of modern Calcutta. In 1707 Calcutta was made the seat of a separate Presidency. In 1717 the English were permitted by the emperor Farrukhshāy to purchase 38 villages in the vicinity of their settlement. The names of these 38 villages still survive in the street-names of the city today. In June, 1756 Sirādž al-Dawla, Nawwāb of Bengal, captured it and during his temporary occupation he named it Ahnagar. Modern Calcutta dates from 1757 when, after the battle of Plassey (June), the English became virtual masters of Bengal; the old fort was abandoned and the present Fort William begun by Clive on the site of Govindapur. In 1772 the treasury of the province was transferred from Murshīdābād to Calcutta, which in 1773 became the official capital of British India. It remained India's capital until 1911 and that of Bengal as well until 1947.

Though Calcutta is a creation of English rule, it is an important centre of Muslim life. On 1 March 1951, Calcutta city had a Muslim population of 305,932 and including two of its immediate suburbs, Howrah and Garden Reach, Calcutta had a Muslim population almost equal to the entire population of Dacca (Dhaka), the capital of East Pakistan, and the historic centre of Muslim activity. About one-third of Muslims had left Calcutta on the eve of the census of 1951 in view of the unsettled conditions of the time, and the census of 1961 is likely to show a considerable increase of Muslim population. Calcutta is an important centre of Muslim culture. The Calcutta Madrasa was founded in 1781 by Warren Hastings for the encouragement of Islamic learning. It had among its Principals Islamic scholars of repute like H. Blochmann and Sir John Denison Ross. The Asiatic Society, founded in 1754, possesses over 6,000 Arabic and Persian MSS. and has to its credit a large number of valued publications bearing on Muslim history and culture. The National Library has in its Būhār collection a good number of Arabic and Persian MSS. and has recently acquired the rich collection of the distinguished historian of Muslim India, Sir Jadhānār Sarkār. The Indian Museum and the Victoria Memorial exhibit some rare and beautiful examples of Indo-Islamic paintings. The University of Calcutta has two Post-Graduate Islamic departments: (i) Arabic & Persian and (ii) Islamic History & Culture. In Calcutta lived the sons of Tipu Sulṭān, and the last king of Awadh (Oudh), Wādiḍī Allī Shāh, who died in 1857. Of the Muslim monuments, the only one with any architectural pretensions is the mosque in Dharamtala St., built in 1842 by Prince Ghūlām Muḥammād, son of Tipu Sulṭān; the oldest are the Nīmṭalā mosque (built some time after 1784), the mosque and tomb of Bhonsri Shāh at Chitpur (1804) and Djamma Shāh's tomb in Netājī Subhās (Clive) St. (1808).

CALDIRAN, the plain in north-western Persian Azerbaijan, near the western bound of the province of the present-day frontier with Turkey (cf. Farhang-i Dvṛghārdī-yi ʿIrān, iv (Tehran, 1330 šahīdī, 154), which on the 2 Radjab 920/23 August 1514 was the scene of a decisive Ottoman victory over the Şafawids.

The campaign was launched by Selim I, despite the reluctance of his troops and military advisers, on 23 Muharram 920/20 March 1514, as the first enterprise of his reign after he had secured his throne by the elimination of his brothers, and is properly to be regarded as the final response to those separatist tendencies which for over half a century had been manifesting themselves among the Turkish tribal elements of Anatolia in darvāg revolts or in active support for pretenders of the Ottoman line, and which now threatened to draw the entire province into the Şafawid orbit. The profound disquiet of the region may be judged from the mass executions and arrests of suspected dissidents which preceded the actual military operations, and the gravity with which this situation was regarded is to be inferred from the risks which Selim felt compelled to take in order to achieve a final settlement. Whether the Şafawids had inspired this dissatisfaction by their subversive missionary activities or merely benefited from the prevailing anti-Ottoman sentiments by appearing as an alternative hegemony is difficult to determine; but it is clear that the countereretical allure which the Ottomans gave to their attack upon the Şiʿī Muslims of the east was but the façade to a starkly political purpose.

The campaign, which seems to have been modelled on that of Mehmed II against Uzun Hasan in 1473, is described in detail in the journal preserved in Ferîdūn Beq, although the fundamental logistical
problems of moving an army of the size attributed to the Ottomans across home territories where they could not live off the land are scarcely touched upon. But that these could be solved and that the fraticious troops could be held under discipline throughout all the unfamiliar hardships of campaigning in these regions was certainly the most impressive display of Ottoman might that Anatolia had ever witnessed and far more overawing to Shah Isma'il and his supporters than the firearms and artillery which usually figure so prominently in the narratives as the reason for the Ottoman victory (cf. Lutfi Pasha's Dîjâkîn-dîr). The dominant early European account is that of Paolo Giovio, *Historiae Sui Temporis*, Paris 1558, i, 133-163 ff. (an Italian translation of this section is given in F. Sansovino, *Historia Universale dell' Origine, Guerre et Imperio de Turchi*, Venice 1654, ff. 323-360); also in Sansovino are the Fida al Legge Turchesca by G. A. Menavino (ff. 17-75), who, although claiming to have accompanied the Turks on this campaign, gives a highly distorted account of its outcome (a Latin translation in P. Lonicerus, *Chronica Turchorum*, Frankfurt 1578, i, ff. 95-97). The narrative in R. Knolles, *The General History of the Turks*, London 1621, 505-515, while noticing Menavino, follows Jovius throughout, as does also that of T. Artus in his continuation of De Vigenere's translation of Chalcoondylas, *L'Historie de la Decadence de l'Empire Grec*, Paris 1650, i, 358-374, though this does include, too, the accounts in J. Leunclavius, *Historiae Musulmanae Turcorum*, Frankfurt 1591, cols. 697-704, 742-745. F. Bizzar, *Rerum Persicarum Historiarum Perpetuum Libri*, Frankfurt 1607, is important only in that it contains the letter of H. Penia from Constantinople, dated 6 Nov. 1514, 275-278. The article by M. Tayyib Gökblin in *IA*, fasc. 24, 329-331, presents the familiar Ottoman version.

---

**Bibliography:** Among the general histories of the Ottoman Empire, Hammer-Purgstall's is still the most circumstantial account of this campaign (ii, 352 ff.), Zinkeisen (ii, 566 ff.) and Jorga (ii, 327 ff.) affording it but casual mention; I. H. Uzunşarılı, *Osmanli Tarhi*, ii, Ankara 1949, 246 ff. adds a diagram of the battle. To Ottoman historians: Kamâl Paşa-zâde, *Tâwarîkh-i Âlî-ı 'Othmân*, ix, Millet, Ali Emiri, no. 29, f. 35b, ff.; *Kunh al-akhbâr*, Süleymaniye, Esʿad Ef., no. 2162, f. 238a ff.; *Sa'd al-Dîn, Tâdž-dâl-Tâwarîkh*, ii, Istanbul 1279, 239 ff.; Luṭfi Paşa, *Tâwarîkh-i Âlî-ı 'Othmân*, ed. 'Âli, Istanbul 1341, 206 ff.; *Šâlâzâdê, Târîkh*, Istanbul 1287, 339 ff. (gives very much the same picture as presented by H. Peñitia). J. Leunclavius (ii, 566 ff. hot use of Kamâl Paşa-zâde and Luṭfi Paşa) which can be usefully supplemented in certain aspects by the various *Selim-nâmes* (a fairly complete repertoire of which is to be found in A. S. Levend, *Gazâvât-nâmes*, etc., Ankara 1956, 22 ff.), the most important being those of Şukrî, British Museum, Or. 1039, f. 62b ff. (repeated in Şawrî, Millet, Ali Emiri, no. 1310, f. 54a ff., and Yûsuf Efendi, Süleymaniye, Esʿad Ef., no. 2146, f. 11a ff.), Kaşghi, Süleymaniye, Esʿad Ef., no. 2147, f. 31a ff.; *Sa'dî b. 'Abd al-Muta'âl*, Topkapı, Revan, no. 1277, f. 64a ff.; Abu 'l-Faqîr b. İdris Bütîlî, British Museum, Add. 24,960, f. 63b ff.; Sudjüdi, Topkapı, Revan, no. 1284/f., f. 58 ff.; *Dîjâl-zâde Muşafâ Çelebi*, British Museum, Add. 7648, f. 120b ff. The documents in Ferîdun Beğ, *Mehmed-i Sâlihâb*, i, Istanbul 1374, 396 ff. (correspondence, journal of the campaign, *fatâh-nâmes*) are of exceptional importance. The Persian sources (a full discussion of which is to be found in Gholam Sarwar, *History of Shah Isma'il Sa'awî*, Aligarh 1939, 3-16) seek to palliate the magnitude of the defeat and their accounts are coloured by this purpose; the most important being those of Khwâjah, *Fâhib al-isâr*, iv, Tehran 1333, 543 ff., whose version underlies those of Hasan Rûmûlî, *Abîsân al-Tâwarîkh*, ed. C. N. Seddon, Baroda 1931, 143 ff. (with various expansions) and Iskandar Beğ Munhî, *'Alam-dâr-i 'Abîsân*, Tehran 1341, 31 ff. (who, in addition to the above two, uses also Ghâfârî's *Dîjâkîn-dîr*).
seriously practised by the Cham until after the fall of their kingdom.

To-day two-thirds of the Cham living in Viet-nam still practise Brahmanism; the other third, together with the Cham who emigrated to Cambodia, are Muslims. In the absence of precise and up-to-date statistics, there are an estimated 15,000 Cham living in the south of central Viet-nam (the provinces of Phan-rang and Phan-thiet) and 20,000 living in Cambodia (on the banks of the Mekong).

Cham society, originally matriarchal and organised in clans, adopted, under influence from India, the caste system and Hindu customs. The Cham, skilful craftsmen and experienced farmers, with a reputation as courageous soldiers, lived as pirates, raiding the neighbouring provinces and trading in slaves. Nowadays they constitute racial minorities in process of assimilation. Apart from work on silk and metals and the cutting of precious stones, the Cham were outstanding builders. Cham architecture has left us numerous sites and monuments, of which most are unfortunately in extremely bad condition. Cham monuments are all identical in silhouette, a tower with diminishing stories, built in pink sandstone, terra cotta, and above all in brick. However their style is not uniform. Hindu motifs can be recognised in their decoration. These towers were religious buildings (temples), and all of whose interior furnishings have disappeared. The scenes on the bas-reliefs again give concrete expression to the Cham’s pronounced love of music, which has had a very deep influence on the music of Viet-nam.

(C. MILLON)

Phan-rang and Phan-thiet) and 20,000 living in the south of central Viet-nam (the provinces of Phan-rang and Phan-thiet) and 20,000 living in Cambodia (on the banks of the Mekong). The population of the forest-covered south is 2,000,000; of the savannah and the uplands, 500,000; the rest is composed of immigrants and refugees from the mountains, long-established palaeo-nigritic peoples; in all, 3,100,000 Africans and 15,000 immigrants.

After the 1914-18 war, Camerons was placed under a Mandate by the League of Nations. In 1940, under Col. Leclerc, it rallied to Free France. In 1946 the system of the mandate was replaced by that of the trusteeship of the United Nations, Camerons becoming an Associated Territory of the French Union. In 1957 it was established as a State under trusteeship, possessing some degree of internal autonomy: the Prime Minister and his government were responsible to the Legislative Assembly sitting at Yaunde. A High Commissioner dealt with the spheres reserved to France—currency, defence, and public order. The administrative structure includes 21 departments and 60 arrondissements. Municipal administration is inspired by that of metropolitan France. The French government announced at the end of 1958 its intention of renouncing trusteeship and of recognising the independence of the Camerons on 1 Jan. 1960; this decision, after arousing lively opposition in the United Nations Assembly from the Soviet block and certain Afro-Asian states, was carried through and made official on the appointed date.

The economy is predominantly agricultural (coffee, cocoa, vegetable oils, timber, cotton, bananas) with cattle husbandry important in the north. Current industrial development: electrometallurgy at Edea, gold and diamonds in the east, tin in the west, petroleum in the south. Chief towns: the port of Duala (100,000 inhabitants), Yaunde, the capital (300,000), Douala capital of the north (151,000), Marua, Ngoundere, Edea, Nkongsamba, Fumban, Tchang, Kribi, Mblamoyo, and Ebolowa.

The south is almost entirely Christianized: 600,000 Catholics and 300,000 Protestants, with animist survivals, and a tendency toward the formation of syncretistic sects.

Islam has some 600,000 followers in the northern plain, Adamawa and the Bamun massif. It seems to have penetrated the area about the 12th century, coming from the east (Wadai, Bagirmi) and the north-west (Kanem, Bornu), but experienced its period of great expansion only at the beginning of the 19th century, under the influence of the conquering Fulani, successors of Uthman dan Fodio: his son Mohammad Bello and particularly his lieutenant Modibbo Adama (died 1847) who conquered Fumbina and gave it its present name of Adamawa. Adama took the title of Amiru (Amir) and made his capital at Yola (Nigeria) where the limibe (Fulani chiefs) went to receive the investiture until the Franco-British conquest. His work was continued up to the beginning of the 20th century by the Amirs Mohammed Lawal, Sanda and Zubeiru; they were however not able to subdue the Kirdi (beagheens) who took refuge in the mountains of the north.

Since the European conquest, some groups of Muslim immigrants have arisen in the towns of the south, where they are butchers, peddlers, and shoe-
CAMEROONS — CAMPANER

makers. They are thought to number some 25,000. They do a little proselytising by marriage. But, in addition to the 300,000 Fulani, there are in the north some Hausa, some Kotoko, and some Shua (or black Arab) Muslims of long standing, and Islam tends to spread among the pagan farmers of the plains and the Kirdi who have come down from the mountains. The Bamun of Fumban, long at war with the Fulani, saw their aristocracy converted by agreement or by force in 1937 by Ba Ow Njoya the Great who at this time took the title of Sultan and the name of Ibrahim.

Higher Muslim education is little developed, and the modibbe (or mīlāms) who wish to continue their studies have to go to Nigeria, Chad, or the Sudan.

The Kâdîrîyya sect is the oldest, but not the most numerous; its principal centre is Garua. The Tijdânîyya sect has predominated since the conversion of Mohamman Bello, who received the word of El Hadj Omar about 1840; its adherents probably amount to some 300,000. Mahdism comes next in importance. Local mahdîs appear every four or five years, but their influence is generally short-lived and localized. On the other hand, since the settlement of several thousand Fulani in the Sudan at the time of the British conquest of Nigeria, the Sudanese Mahdiyya has had numerous adherents in the Cameroons.

Wahhâbî influence is slight, exercised chiefly through the medium of former soldiers of the negro guard of King Ibn Sa'îd, nearly all Hausas. The Muslims have long remained aloof from local political trends. Precolonial institutions and hierarchies are more preserved among them than among the peoples of the south. Nevertheless, in contrast to the confessional and political divisions of the South, the westernized âlî of the north have been called on to play an increasingly important role as arbitrators, until, in 1958, a Fulani Muslim of modernist tendencies was appointed Premier of the newly formed State.

BRITISH CAMEROONS. This territory on the West Coast of Africa, between the Cameroon Republic on the west and Nigeria on the east, is that part of the old German colony of Camerun which passed in 1919 into British control, first under a League of Nations mandate and subsequently as a United Nations Trust territory. Following administrative practice, which is to some extent justified by real ethnic and cultural differences, it is convenient to consider it as two distinct units.

The Southern Cameroons [administrative capital Douala] has a total area of 16,581 square miles and a population of some 500,000. Until 1954 this territory was administered as an integral part of the Eastern region of Nigeria but a series of changes since that date have raised it to the status of a self-governing region within the Nigerian federation with its own regional government and a legislative assembly with a majority elected by universal adult suffrage. The political future of the region, which has not been provided economically or politically, is at present uncertain. The United Kingdom has undertaken to separate the administration of the region from that of the Federation of Nigeria by October 1960, the date when the Federation assumes complete independence. A plebiscite is to be held not later than March 1961 to decide between incorporation in Nigeria and reunion with the Cameroons Republic, the latter course being favoured by the present regional government.

The tribal pattern of the territory exhibits a marked degree of political fragmentation. The bulk of its population, speaking a large number of Bantu and semi-Bantu languages, have their nearest affinities with neighbouring peoples in the Cameroons republic. The Tikor and Bali peoples who are dominant in the central grasslands have migrated into this area from the north-east in the last few centuries and their traditional culture is of the pagan Sudanic type. The Christian missions have a continuous history in the area since the establishment of the Baptists at Victoria in 1858. The most reliable figures of missionary adherents show 58,000 Catholics and 65,000 Protestants but the number of those who have been strongly influenced by the missions is much greater. Islam is not numerically important.

There are no known mineral resources of commercial value within the territory and no industry beyond the processing of palm oil and rubber. The country is overwhelmingly rural in character and even the largest towns, Mâmfe and Kumba, have fewer than 10,000 inhabitants. Most of the exported cash crops of bananas, palm-oil, palm kernels and rubber are produced from the plantations administered by a government subsidised agency, the Cameroons Development Corporation. The growth of cash crops, especially cocoa, by individual small farmers is increasing with official encouragement, but the mass of the people in the interior are still engaged in subsistence agriculture as are those of the Northern Cameroons.

The Northern Cameroons, an area of 17,000 square miles with a population probably slightly smaller than the Southern Cameroons, is a narrow strip of territory more than 500 miles long but nowhere more than 80 miles wide, divided into two by a "corridor" of Nigerian territory, some 45 miles wide, on either bank of the Benue. Administratively the territory has been completely integrated with the Northern Region of Nigeria. The greater part falls within the Adamawa Province, but the Dikwa emirate in the north, formerly a part of the old "empire" of Bornu is appropriately incorporated, as a division, in Bornu province and three districts in the south belong to the Benue province. By a plebiscite held under United Nations auspices in November 1959 the people of the territory have postponed the final decision as to whether or not it is to remain with Nigeria after independence. The ruling tribes, Kanuri and Shoa Arabs in Dikwa and Fulani in Adamawa, are strongly Muslim but much of the hill country has never fallen effectively under their influence and remains entirely pagan. There are Catholic and Protestant missions in Adamawa and a few thousand converts to Christianity have been made. [For an account of the religious history see the preceding section on the French Cameroons].

(C. H. JONES)

GAMENIEC [see KAMENKA]

CÂMPÂNE, a ruined city of Gujurat in Western India, Lat. 23° 29' N., long. 73° 32', about 78 miles south-east of Ahmadâbâd, taken by the Gûdjârî sultan Mâhmûd Shâh I 'Begâdâ' on his conquest (889/1484) of the adjoining stronghold
of Pāwagāth, which had successfully resisted Aḥmad Shāh I in 821/1418. The Beggād occupied Čāmpānēr forthwith, building a city wall with bastions and towers (cf. Čāmpānēr, Čāmpānī; inscriptions 1929, 1932, 1933, 1-5), and a citadel (ḥuddār). He renamed the city Māḥmūdābād, and it was his favourite residence until his death in 917/1511; it remained the political capital of Gūdjarāt until the death of Bahādur Shāh in 942/1536. When Gūdjarāt came under the Mughals after 980/1572 Čāmpānēr was the head of a kanāt (q.v.) and also Dardaneli (cf. E. B. Havell, History of Indian and Eastern Architecture, 134-43; P. Brown, Indian Architecture (Islamic Period), 58-9. (J. Burton-Page))

ČAMPINA [see KĀNANIYA] ČANAK-KALE BOGHĀZI (Çanak-kale Bogazı) is the name now given in Turkish to the Dārdanellas. This narrow channel, which unites the Marmara and the Aegean Seas, has a length of about 62 km. (Gelibolu-Çardak to Seddiilbahir-Kumkale) and a width ranging from 8 km. down to 1250 m. (Çanak-kale to Kılıtbahir). The strait was known to the ancient Greeks as the Hellespont (δ' ᾨλησπόντος, in Doric δ' Ἡλησπόντος), a name that remained in usage amongst the Byzantines. It is called in some of the mediaeval Western sources and sea-charts Bucca Romaniae, Brachium s. Georgii (a term which denoted the entire channel separating Asia and Europe, i.e., the Limnicus or the Bosphorus as well as the Dardanelles), Bocca d'Avio (Avio, Aveo, the ancient Abydos: Ἀβῦδος) and also Dardanelo (cf. Pauly-Wissowa, s.v. Hellespontos, and Tomasek, 17). To the Ottomans it was the Ak Deniz Bogazı, Kałe-i Sultāniyye Bogazı and later Çanak-kale Bogazı.

The more notable localities on or near the European shore of the Dardanelles are Bolayir, Gelibolu (i.e., Gallipoli, the ancient Kallipolis), Kiyla (not far from the old Sestos), Ecebad (Eğebağ, formerly Maydos, i.e., the ancient Maydotos), Kılıtbahir (Kılıd al-Bahr) and Seddiilbahir (Sedd al-Bahr). Along the Asiatic shore are situated Çardak, Lapseki (the ancient Lampakaos-Lampsico, Lapsico, Lapso in the mediaeval Western sources), Çanak-kale (near the old Abydos), Erenköy and Kunkmale (Kum Kałe).

Sultan Mehemmed II (855-886/1451-1481), in order to establish a more effective control over the Dardanelles, built new defences on either side of the strait, amongst them a fortress close to the ancient Abydos. This fortress received the name of Kałe-i Sultāniyye (according to Piri Reis (Kilid-i Bahriyye), 86), because a son of Mehemmed II, Sultan Mustafa, was associated with its construction. Cf. also Ibn Kemel, 100 = Transkripsiyon, 101, where it is called Sultāniyye). The town of Kałe-i Sultāniyye counted amongst its inhabitants, during the 17th and 18th centuries, a considerable number of Armenians, Jews and Greeks. As a result of the establishment of the ottoman empire (perhaps ca. 1740) of potemkin, and of its subsequent reputation as a noted centre for the manufacture of earthenware, the town came to be known as Çanak Kalesi (canak = an earthen bowl), the older name falling out of current usage. Çanak Kalesi belonged, in 1876, to the Ottoman wilāyet of Djezair-i Bahri-i Sefid and thereafter to the sandjak of Bigha. It is now the centre of the present province of Çanak-kale. The town suffered much from fire in 1860 and 1865, from the earthquake of August 1912, and from naval bombardment in 1915 during the course of World War I. Çanak-kale, in recent years, has largely regained its former prosperity and was estimated, in 1940, to have 24,600 inhabitants.

The Ottoman Turks absorbed (c. 735-745 C. 1335-1345) into their own territories the state of Karaz (q.v.), and then, after the town had been ruined in the earthquake o f 755/1354, established themselves at Gallipoli [cf. Čehibolu], which served them as a point of departure for their subsequent conquest of Thrace. It was now, for the first time, that a Muslim state held control over the lands on either side of the strait. The Ottoman Sultan Baysaül (791-805/1389-1403) strengthened the defences of Gallipoli (792/1390), further improvements being carried out there in the reigns of Mehemmed I (816-824/1413-1421) and Murad II (824-855/1421-1445). Ottoman control of the Dardanelles was destined, however, to remain insecure, as long as the Sultan had no large and efficient fleet at his command: Christian naval forces sailed into the strait in 765/1366 (the "crusade" of Amedeo of Savoy, which brought about a brief relaxation of Gallipoli to Byzantine rule), in 801/1399 (expedition of the Maréchal Boucicaut to Constantinople), in 899/1416 (the Venetian defeat of the Ottoman naval forces before Gallipoli) and again in 848/1444 (Papal and Venetian squadrons sent to the Dardanelles at the time of the Varna campaign). Sultan Mehmed II (855-886/1451-1481), anxious to secure a more effective control of the Dardanelles, caused new defences to be built where the waters of the strait are at their narrowest, i.e., the fortresses of Kałe-i Sultāniyye on the Asiatic, and of Kılıd al-Bahr on the European shore. The manufacture and use of
fire-arms had now advanced to such a degree that the Sultan was able to furnish these new defences with the Ottomans across the channel. A restoration of the two fortresses was carried out in 958/1551 during the reign of Sultan Sulayman. At this time the region of the Dardanelles was included in the eyalet of Djezârî-Bahr-i Sefid, i.e., it formed, together with some of the islands and coastal areas of the Aegean Sea, the province of the Kapudan Pâghâ and High Admiral of the fleet.

The fortifications along the shores of the Dardanelles fell gradually into disrepair during the late 16th and early 17th centuries. It was not until the Cretan War (1055-1080/1645-1669) that the Porte, under the threat of a Venetian irruption into the strait, initiated new measures of defence. Kafe-i Sultânîyye and Kildâl-Bahr now underwent (1069-1070/1658-1660) a thorough restoration. Moreover, new forts were built at the Aegean mouth of the Dardanelles-Sedd al-Bahr on the European, and Kum Kafe on the Asiatic side of the channel. The danger arising from the presence of a Russian fleet before the Dardanelles during the Ottoman-Russian war of 1182-1188/1768-1774 led to the creation of new forts along the shores of the strait, this task being accomplished by Sultan Mahâmed III, in the name of Sultan Selîm, during the 17th century. A further effort was made to establish a more modern system of fortification in the Dardanelles towards the end of the reign of Selim III (1203-1222/1789-1807). The fact that in 1211/1807 an English fleet under the command of Sir John Duckworth forced a passage into the strait underlined once more the urgent need for a complete modernization of the defences on the Dardanelles. Control of the strait was to become thereafter a matter of more than local concern, the status of the Dardanelles (and also of the Bosphorus) being regulated in a series of international agreements negotiated during the 19th and 20th centuries.

More recent events associated with the Dardanelles it will be sufficient to mention here the Gallipoli campaign of 1915-1916 fought in the course of World War I.

CANDERI — CANKIRI

Candari who set up Medini Ray, Mahmud II’s dismissed minister who had escaped the massacre at Manda [q.e.v.], as governor; from him it was taken by Babor in 934/1528, who restored it to Ahmad Khán, son of Mahmud. Later it passed to the Pürbeya Radğut Pâna Mal, who lost it to Shîr Shâh c. 947/1540 but later retook it and massacred and degraded the Canderdî Muslims, an act which brought retribution from Shîr Shâh in 950/1543 (Briggs’s Ferîqhtâ, ii, 160). After Akbar had gained the sâhe of Mâla, Çendari became the headquarters of a sâkar (A’in-I Akbari, i, 122), when it was said to have been a large city with 14,000 stone houses and over 1200 mosques. Thereafter it passed frequently into Bundel hands, and after the early 18th/18th century remained in Hindu possession.

The city is walled, with 5 gates, one of which is the Kâtîghâli hewn through the rock outcrop; the fort, which stands some 70 metres higher, is dependent for its water supply on a large tank at the foot of the hill, access to which is by a stairway. (Map in Cunningham, ASI, ii, Plate XCVII). The Di’amî Masjîd is similar to that of Manda with its tall domes over the iwan stilted between springing and haunch, supported by ornamental spandrel brackets, a contribution of Gujdarât workmen; two tombs known as the madrasa and the Shâhâzâdi kâ râwda are of excellent workmanship in a similar style; probably somewhat earlier is the Kâkgh Mahâl, a large square building with intersecting passages on each of the remaining four storeys which divide the interior into four quadrants, in the suburb of Fatehâbâd, 3 km. west, identified with the seven-storeyed palace (Sat manzil) whose building was ordered by Mahmud Shâh I in 849/1445. At the western foot of the fort is an unattached gateway, the Bâdal Mahâl darwazâ, a triumphal arch between two tapering buttresses, somewhat over-ornamented.

Bibliography: Cunningham, ASI, ii, gives historical sketch with references to original sources in 404-12 (mainly Ferîqhtâ). Also C. E. Luard, Gwalior State Gazetteer, i, 1908, 209-12. Earliest inscr., 711/1312, in Ramsingh Saksena, Persian Inscriptions in the Gwalior State, in IHQ, i, 1925, 653, there assumed to be from New Persian Inscriptions in the Gwalior State, (1928); ASI Annual Reports, specially 1894-5, 163-4; Sir John Marshall, The monuments of Muslim India, in Cambridge History of India III, 1928, 622 ff. (J. Burton-Page)

Çankırî (earlier also known as Kiangri, Kandri, and popularly as Çangi or Cengiri), the ancient Gangra (in Arabic sources Khândjara or Dinjara), a town in the north of Central Anatolia, 40° 35’ north, 33° 35’ east, at the confluence of the Tatlıkay and the Acdî, a tributary of the Küf Frmak, at an altitude of 235 ft. (730 m.); since 1933, on the Ankara-Zonguldak railway (105 m. (174 km.) from Ankara). The town was once the capital of a sandjak (liewâ) of the eyâlet of Anadolu; after the Tanûmâdî, it became the capital of a sandjak of the wilâyât of Kastamonu; under the Turkish Republic, it is the capital of a wilâyât, united with the cornice Candarî, Çerkeș, and Ilgaz/Kochar). It was known even in antiquity as a fortified place, and was occasionally used by the Byzantines as a place of exile. Later it again gained importance because of its impenetrable fortress in the battles with the Arabs and the Turks. The Umayyads repeatedly advanced as far as Tanûmâdî, and their raids were sometimes even more disastrous.

They did this in 937/1722-12 (al-Tabari, ed. de Goeje, ii, 1236; Ibn al-Athîr, ed. Tornberg, iii, 457; al-Ya’qûbî, ii, 350 who calls the town (Hasal-I Hâdîd), in 1097-228 (al-Ya’qûbî, ii, 395), and in 1147/1732-3 (Bar Hebraeus, Ketâbi de Mešhêbanû Zahdâ, ed. Bruns and Kirsch, ii, 125; compare also al-Tabari, ii, 1561, and Theophanes under the year 6224).

When the Byzantines sacrificed the eastern border provinces as a result of their defeat near Malazgîrd (Manzikert) in 1071, the Sâlûdîs and the Dânishmendîs divided the loot. The former settled after a short intermission in Iznik and Konya, the latter spread over the northern half of Asia Minor from Amasya to Kastamonu. Çankırî is mentioned as being among the conquests of the first Dânishmand in 468/1075-76 (Hasan b. ‘All Tolkîd (?), Ta’rîkh-I Al-Î Dânîmand, in Hasun Husaîn Al-Î, Amasya-tarlâhi, Istanbul 1322, ii, 286 ff.; Hezarfenn, Ta’rîkh al-tawzîrî, in ZDMG, 30, 470). In 1101, an army of crusaders left Constantinople for the region of the Dânishmand-oghlu, in order to rescue Bohemund of Antioch whom these had captured at Malatya and imprisoned in Nîskàr. The army conquered Anadan (Manzikert) in 1134, and the former capital of Salmân (praesidium Gangara), but the attack failed, and shortly afterwards the army was completely routed near Amasya by the united Sâlûdîs and Dânishmandîs (Albert of Aix, i, VIII, c. 8; Ibn al-Athîr, ed. Tornberg, x, 203; cf. ZDMG, 30, 476; Chalandon, Les Compagnes, i, 224 ff.). The Comnine emperor John conquered Çankırî in 1134, with the aid of heavy siege-weapons, after he had attacked it without success in the previous year (Chronicle of Niketas, i, 6, and particularly John Prodromos; see Chalandon, op. cit., ii, 84 ff.); but shortly after the emperor’s departure, the fortress was recaptured by the Dânishmandîs, never to return to Byzantine rule.

Subsequently we find Çankırî in the hands of the Sâlûdîs of Konya (cf. Chalandon, passim). After the collapse of the Rûm Sâlûdî empire, (Anatólia), Çankırî became the residence of the region and the capital of the Sâlûdîs of Kastamonu, and was known as the capital of the Sâlûdîs of Kastamonu (Kandârî). For a short time the town formed part of the empire of the Ottoman Murâd I (this according to ‘Azîz Astarbâdî, Bezm u resm), later it was taken from the Candar-oghlu by Bâyazid I in 795/1392-93 (according to Nefîrî) or in 798/1394-95 (according to Aşikpâşahzâde, and the anonymous chronicles; Sa’d al-din, i, 159), together with the greater part of their possessions.

In 1401, Timûr returned them and finally, in 1422/1439, they were annexed by Meşhêmed I (Aşikpâşahzâde, Istanbul edition, 88 ff.; ed. Giese, 79; Leunclavius, Historiae Musulmanae Turcorum, Frankfurt 1551, col. 475; von Hammer’s statements, GOI, i, 70, are based on a misunderstanding). During the subsequent peaceful period under Ottoman rule, Çankırî is very much in the background. Historians hardly mention it, though Ewîlyâ Çelebi (Seyhâhat-nâmê, iii, 250 f.) and Kâtîb Çelebi (Dişkân-nâmê, 645), have left detailed descriptions of the town.

The first mention by an European visitor dates from the years 1553-55, and is by Dernschwam (in his Tagebuch einer Reise nach Konstantinopel und Kleinasiern, ed. Babiner, Munich 1923, 196). There is an eye-witness description by Ainsworth, almost 300 years later. The town has also been visited and occasionally described by Russian and German travellers in Asia Minor.

The fortress, which had been attacked by Arabs,
Danishmendids, Byzantines and Crusaders, is now in ruins. The only surviving monument is the grave of Karatekin, who was the founder of the first Danishmendid prince, and is now revered as a saint. The prehistoric cisterns on the castle hill, which are described in detail by both Ewliyâ Celebi and Kâtib Celebi, have not yet been closely investigated, nor has the "Megâl Tağî" (Taşh Megdîdî), a monastery of the Mawlawî Dervishes. This has inscriptions, which, according to what Ainsworth was told, date from the time of the Arab Caliphs. Some of the mosques are said to date back to Byzantine times (cf. Cuinet). The main mosque was built by Suleymân I in 996/1589-90.

The extensive salt-mines near Maghâra, 2 hours south-east of Çankîrî (Cuinet, iv, 447, and Mârcrker), were already famous in Byzantine times. Their product was known as rayyap7)v6v <5cXa<; (Nikolaos Myrepsos, at the end of the 13th century, in Du Cange, Glossar. ad scriptores med. et inf. Grac.). Even today this salt is still being mined in the same way (at a rate of 3000 to 5000 tons a year). The great earthquakes which have repeatedly shaken the town (the most recent in February 1944), were already mentioned in mediaeval times. Al-Kazwînî, Āhâr al-Bîlâtî, ed. Wustenfeld, 368, mentions one such catastrophe which destroyed the town in August 1959.

According to Texier, the number of inhabitants in Çankîrî in the middle of the 19th century was 16,000, predominantly Muslim. Amongst the inhabitants there were not more than 40 Greek families. In 1859, Tshihatsheff estimates about 18,000 houses, 40 of them Christian. For the end of the 19th century, Cuinet gives the following figures: 15,632 inhabitants, amongst these 738 Greek and 472 Armenian. The Sâlimâne of Kastamonu gives the number of inhabitants as 11,200, Leonhard (1903) as 25,000 in 5000 houses, J. H. Mordtmann about 30,000 in 5000 houses, amongst these 150 Greek and 50 Armenian families, who probably left after the Second World War. The 1930 census gave the following figures: the town of Çankîrî 14,161, the kasas 11,873, the town of Çankîrî 5000 houses, amongst these 150 Greek and 50 Armenian families, who probably left after the First World War. In the 1950 census the number of inhabitants was 14,161, the houses 11,873. The number of the inhabitants was already mentioned in mediaeval times. Al-Kazwînî, Āhâr al-Bîlâtî, ed. Wustenfeld, 368, mentions one such catastrophe which destroyed the town in August 1959.

CANNANORE [see KANNANUR]

ÇAO (Çao Persian transcription of Chinese 仛au), name given to the paper currency that was in circulation in Iran for about two months in the autumn of the year 693/1294. The Çao was introduced at the instigation of the Chief and Finance Minister of the Ilkhan Gaykhatu (1291-95), Şâîr al-Dîn Ahmad b. Ābîd al-Razzâk Khâlid or Zindânî, following the example of China, and was issued for the first time, according to Râshd al-Dîn, on the 19th Shawwât 693/13th September 1294, according to Wâsâfî and others somewhat later, namely in Dhu ‘l-Ka‘da’ 22nd September 1293/12th October at Tabriz and other provincial capitals where it was manufactured and distributed by the so-called Çao-Khânas, specially constructed for the purpose at considerable expense.

This new currency however met with very great resistance and the result was that trade and industry came to a standstill, the towns became depopulated and the country headed towards complete ruin, so that after two months the paper money had to be withdrawn from circulation in favour of the old coins.

The Çao, made of the bark of the mulberry-tree, was oblong in shape and, in addition to some Chinese signs, bore the shahîda. Underneath this was the name "Irînîn tûrûc" (transcription of "Rûn-êen tûrûc" = meaning 'very costly pearl') which had been given to Gaykhatu by the Tibetan Bakshîhs, and, inside a circle, the designation of the value: one (or one half) up to ten dinârâs. Besides this, these "bank-notes"—according to the continuator of the work of Bar Hebraeus—bore the red impression of the state seal in jade (the Altamgâ), granted by the Great Khan to the Îlkâhs. As regards the method of glossing, it may be assumed that this was done by means of wooden blocks.

Bibliography: K. Jahn, Das iranische Papiergeld, AR, x (1938), 308-340; B. Spuler, Die Mongolen in Iran, 1955, 88-89, 301-302, and the sources and publications listed in these two works. (K. Jahn)

ÇAPANÂGHULLARI [see Supplement and DEBREÞ]

ÇAPAR (Çâpar), the eldest son of Kâidî [q.v.] and great-grandson of the Mongol Great Khan Ögedey (Uk/gatay: Ñegâna: 1229-41), after his father's death in 700/1301 and his own succession to the throne on the in the spring of 702/1303 (Dîanâmî Kârâhî in W. Barthold, Turkestan, Russian ed. i., 1900, 138), he fought in the beginning continually against the claims of Kubilây's successors upon the Great Khanate, considering it his own prerogative as one of Ögedey's descendents, who were also called as protectors of the genuine Mongol tradition. In August 1303, together with Duwa, the Khan of Câshâs'f's Ulus, he submitted to the Great Khan (the emperor of China) by means of an embassy to Kândalîgîh (Peking). Thereby a plan for a Mongol federation with full freedom of movement for trade was to be realised. In September 1304 negotiations were made from China concerning it with the îlkhânî Ödâyâtî [q.v.]. In fact, the federation did not last: with the aid of Chinese troops Duwa forced Çapar out of his Ulus in West and East Turkestan, and succeeded him there. After Duwa's death (1306-7) Çapar attempted to regain these provinces, but could not hold his own against Duwa's son KebeK (Turkish KepeK = "bran", cf. Ibn Bâjtîjî, ii, 392) and was forced in 1309 to flee to China and the court of the Great Khan. Thereupon a Kurîltay in the summer of 1309 confirmed the almost complete disintegration of Ögedey's Ulus, whose inheritance was for the most part taken over by the Çâshâtsây line (cf. the article Ögedehâ), II, beginning, and III. According to Râshd al-Dîn (ed. Blochet, Dîjâmî al-tawarîhî, ii, 9), Çapar looked "like a Russian or a Circassian", apparently no longer of pure Mongol stock.

CASTILE [see RAGTALA]
CASTOR GYMNANI [see KASR VANI]
CATALDJA (Catalca, ancient Metra), 1. 4° 08' N, 28° 25' E. Thracian capital of the most rural of the 17 ßada's in the wilayet of Istanbul, 56 km. by asphalt road and 71.41 km. by rail (the station lies 2.3 km. NE of town). WNW of Istanbul, Catalca borders the Kara su (ancient Athryas) stream at an altitude of 255 feet near the centre of a range of hills forming the backbone of the fortified "Catalca Lines" extending from the Black Sea at Karaburun to the Marmara at Büyükkemke. Catalca was taken by the Byzantines under the advance to Thessaloniki, in the year 1909. In November 1912 retreating Turkish troops repulsed the Bulgarians at Catalca. The fortifications were reconditioned but saw no action in the 1914-18 and 1939-45 World Wars. Since 1950, Turkish forces have been substantially withdrawn with adverse economic consequences for the district. Some promise of producing oil was found, but a proposed atomic reactor may counteract this trend. In 1955 the population was growing fast with 5,354 in town and 58,988 in the kasas 3 other nahiye's of Büyükkemke, Hadimköy (Boyabak) and Karacaköy, and in its 67 villages. Population pressure on the land area of 1684 sq. km. is causing litigation. The district produces beets, sunflowers, grape, vegetables and cattle. In 1953 there were only four small industries, some 30 shops, 2 elementary and 1 middle schools in Catalca.

2. Catalca is also the name of the city of Pharsala, a town and ßada? in Thessaly 60 km. SE of Trikala, captured in 799/1397 by Bayazid I (Hammer-Purgstall, i, 250). According to Şahms ad-Dîn Sâmi (Kâmus al-Âłam, ii, 1867) it had a population of 5,000 under Ottoman administration and boasted 2 mosques, a madrasa, some shops, 2 elementary and 1 middle schools in Catalca.

3. Catalca is also the name of a village in the ßada? of Nizip (Nisib) in the wilayet of Gazi Anteb (Ghâzî 'Aytâb). The word Çatal or, fork (cf. Türkçesini Tarama Sûrlûgû, i, 1943 ii, 213) figures in 82 names of inhabited places in Turkey (Türkîye'de Mezkûr Yerlerı Kılavuzu, i, Ankara 1946, 240-1).

CASTILE [see RAGTALA]
CASTOR GYMNANI [see KASR VANI]
Catalyja — Cawgan

As follows: "the object is to get the ball through the opposing side's posts, which are at the end of the field," Chardin (approx. 1675) described the game as such.

In the 18th century, after the wars against the Khanate of Khwarizm, a proportion of them was driven off to the north-west of Khiwa, a proportion of them was driven off to the north-west of Khiwa, another proportion was driven off to the south-west of Khiwa, and a third proportion was driven off to the south-east of Khiwa. A proportion of them was driven off to the south-east of Khiwa.

The Turks used it as a synonym for "sawlad[ari]," a word which means a court usher or mace-bearer.

It is found in various literary texts many more could be added, but it suffices to mention the references to Firdawsi (tr. Mohl, v, 274), but in both texts. Omniz is replaced by his father Shähpur. Quatremère's detailed and learned note provides many quotations: from Cinnamus, on the popularity of "spalovoin" in Byzantium (122); from Abu Shama, on its suitability for keeping soldiers and horses in good physical condition; from various other writers (its popularity with the Mongols, Khurasan, and the rulers of Egypt) to an English version (1826-28); from the Persian, to a French and an English translation of the Persian work.

Some 25,000, in the Nukhus area (Austro-Baluchistan). [See: TURKMEN]. (Eo.)

The game originated in Persia, and was generally played on horseback, though sometimes on foot (cawgan "piyada bazi"); also used for any stick with the end bent back, particularly those for beating drums. The cawgan is not the same as the "mallem," which is a hardwood sledge-hammer. According to Quatremère (Mamluks, i, 123), the "sawladjan," a bent stick, was used for mall (polo), and the "dshkah (cawgan)," with a hollow scooped out of its end, for rackets; but Van Berchem (C.I.A. Jerusalem-ville, publ. FFAO, 1923, 269, n. i) raises the objection that al-Kalbashandi did not make this distinction. In certain religious sects and orders (e.g., Yazidil and Rifa'i), the title "cawgan" corresponded to a grade in the hierarchy of the sect. There were also "cawgans" in the guilds, where they were responsible for seeing that the rulings of the Guild Council were enforced.

Cawdors (or Daulvdur), a Turco-Mongol tribe, the first settlers of which came to Khwarizm in the 16th and 17th centuries, the bulk following in the 18th century. CAWGAN — CAY

Tea appears to be mentioned for the first time in an Arabic text by the author of the Aḥkâr al-Ṣin wa'l-Hind (ed. and transl. by J. Sauvaget, 18), under the form sâkîb, whereas al-Birûnî, Nuhbât fî Aḥkâr al-Ṣîn, ed. Krenkow, in MMA, i, 1955, 388, calls it sâkîbât and correctly identifies it as having been introduced into Europe towards the middle of the 16th century by the Dutch East India company; but it is only in the middle of 17th century that its use spread, particularly in England.

In Morocco, the first mention of tea dates back to 1700. It was a French merchant, with business contacts in the Far East, who introduced it to the sultan Moulay Isâlmâ (1672-1727). For a long time this commodity remained rare and expensive. At first the use of tea was known only to the bourgeoisie, but it afterwards spread to all classes of society. In Morocco mint tea has become the national drink. Its properties, and the ceremonies of its preparation and consumption have been the subject of several poems in Arabic and Berber; at the court of the sultans of Morocco a special corps of officials, called mûdîn iṭây, was formed to prepare it.

In Morocco, in Mauretania, and in the departments of Oran and Alger, the name of tea is iṭây. Tunisia and the department of Constantine use tây. In Libya shâhî is found; this perhaps represents the Eastern Arabic shâyi', contaminated, by popular etymology, with the root sh-i-n. The radical šây certainly seems to come from the English 'tea', but with the pronunciation (fei) which this word had until about 1720, when it rhymed in fact with 'obey' and 'pay' (cf. Yule, Hobson-Jobson, 1903, 905). It is known that it was English merchants who introduced the use of tea in Morocco, and that for a long time they kept a virtual monopoly on its importation.

As for the prefix a-, which figures in western Maghribi names, it must represent the Berber definite article in the masculine singular. Indeed, in Morocco and Tlemcen, its presence dispenses with the use of the Arabic definite article. Therefore the word iṭây was probably borrowed through Berber; it is established that in the 17th century the principal centres for importation were Agadir and Mogador, which are situated in Berber-speaking country. (For Cay and Cawgdn in Persia and Central Asia, see Supplement.)

CECENS, name given by the Russians to a Muslim people living in the valleys of the southern tributaries of the Sunja and Terek Rivers in the Central Caucasus (native name = Nakhêlo or Veynakhl).

The Cecens belong to the linguistic family of the Ibero-Caucasian peoples; their language forms with Ingush, Batzbi and Kistin, a special group rather close to that of the Dâghîstân languages.

The Cecens are the descendants of autochthonous Ibero-Caucasian tribes which were driven back and kept in the high mountains, between the pass of Daryal and the valley of Sharo-Argun, by the Alains. Nearly all their history until the 18th century is unknown; we know only that it is in the 16th century that their tribes of shepherds began to emigrate into the piedmont which today forms the whole of their country only from the 17th century, both a little before the arrival of the Russians.

Sunni Islam of the Hanafi school penetrated into their country only from the 17th century, both through Dâghîstân and Crimea, but until the middle of the 18th century it remained rather superficial; it was firmly implanted only at the end of the century thanks to the influence of the Nakshbandis. Among their western neighbours, the Ingush [q.v.], it was implanted still later, in the first half of the 19th century. At the beginning of the 20th century some traces of animism still persisted (cult of the patron spirit of the clan).

At the time when the first Russian detachments appeared, the Cecens were divided into clans, of which some were grouped together in tribes: Mêlk, Ikeri, Aujh, Kist, Nazran, Karabulakh, Ghalbay (this last under another name). The term “Cecn” was applied by the Russians to the whole of these tribes in the middle of the 18th century from the name of the “Cecn” aul on the river Argun where, in 1732, there occurred the first combat between a Russian detachment and the natives. The Russian advance toward the south began in the middle of the 18th century and was accelerated after the annexation of Eastern Georgia in 1801; it was slow and methodical, marked by the construction of fortresses, the establishment of Cossack colonies and the destruction of the villages of the natives, who were driven always back toward the high mountains. The Cecens offered fierce resistance to the Russian advance. A popular movement of the Shâykh Mansûr Vahlurma, burst out in 1785 and was crushed only in 1791. In the first half of the 19th century the Cecen country became the principal bastion of the imâmate of Shamîl (cf. Dâghîstân and Shamîl), and the Russian domination was imposed only in 1859; it was moreover marked by frequent revolts, of which the most important, that of “Albek Aldamov of Simsiri in 1857, lasted a year and spread to all the Cecen country. In 1865, an important group of Cecens, the Aukh, joined into one, the Cecen-Ingush Autonomous Region. On 30 November 1912 upper Cecenya was set up as the Cecen Autonomous Region. On 7 July 1924 the Ingush country situated to the west of Cecenya was, in its turn, transformed into the Ingush Autonomous Region (cf. Ingush).

On 4 November 1929 the lower country with Grozny was included in the Cecen Autonomous Region. In January 1934, the two autonomous regions were joined into one, the Cecen-Ingush Autonomous Region, which was transformed on 5 December 1936 into the Cecen-Ingush Autonomous Soviet Socialist Republic. On 25 June 1946 a decree of the Supreme Soviet of the U.S.S.R. abolished the Republic, and Cecen and Ingush peoples were deported to Central Asia (the same decree affected other Caucasian peoples: Balkars, Karâcas [qq.v.]). On 9 January 1957 a new Supreme Soviet decree rehabilitated the deportees and re-established the Cecen-Ingush Autonomous Soviet Socialist Republic, authorizing the survivors to return to their country between 1957 and 1960.

At present, the Cecen-Ingush A.S.S.R. (area 19,300 sq. km.) has a total population of 700,000 inhabitants (1958), the Cecens representing as yet only a minority.

The census of 1939 counted 407,724 Cecens, of whom roughly 30,000 were in the A.S.S.R. of Dâghîstân and the rest were in their own Republic; the Ingush numbered 92,074 in the western part of the Republic (the high valleys of Asa, Sunja, and Kambileya). The capital Grozny, a big industrial centre (226,000 inhabitants in 1926), is an almost entirely Russian city.

The Cecen-Ingush now form a “nation”, divided into two “nationalities” very closely related to one another. In fact, nothing distinguishes these two peoples except the fact that the Ingush have taken only a negligible part in the Shamîl movement. They speak very similar languages, Ingush being simply a dialect of Cecen. The Cecen language properly speaking is divided into two dialects—Upper Cecen (or Cuberloy), spoken in the mountains, and the Lower Cecen of the plains; this latter, the basis of the written language, is endowed with a Latin alphabet (after a fruitless attempt to transcribe Cecen into Arabic characters). For its part, Ingush was established as a written language in 1923 (based on the Lower Ingush dialect of the plains) and also transcribed into Latin characters. In 1934, after the fusion of the two Autonomous Regions, Cecen and Ingush, the two written languages were unified into a single language “Cecn-Ingush”, written
from 1938 in a Cyrillic alphabet. At present, they are once more officially separated. The new Cecen-Celebi literature has developed only during the Soviet period.

CELEBES, one of the four larger islands in Indonesia. With the exception of the north-eastern peninsula, which was one of the areas of early Christianization, and the south-western peninsula, where Islam also started its penetration in the 16th century, the island remained inaccessible to the influence of foreign religions until the second half of the 19th century. A new Christian community then came into existence in central Celebes, inhabited by the Jo-Radja. It is said that this community suffered a great deal from the military activity of the Där-Aslam mamluks in southern Indonesia became a republic in 1949; reliable information is lacking, however. The Muslim community of the south-western peninsula is not very different from those elsewhere in Indonesia; some details on its history are given under MAKASAR. For a general discussion of Indonesian Islam cf. DJAWA. (C. C. Berg)

CELEBÎ (Turkish), 'writer, poet, reader, sage, of keen common sense' (thus Muhammad Kho'î in Khudâ-i 'Abbâzî, in P. Melioranskiy, Zapischnik Vostochnogo Otdeleniya, xv, 1904, 042; similarly Ahmed Wefîk Pasha in Lelhî-i Ul'umami, i, 1876, 482). It is a term applied to men of the upper classes in Turkey between the end of the 13th and the beginning of the 18th century, as a title given to poets and men of letters, but also to princes trained in administrative work, Woldemar, Frh. von Tiessenhausen in the Zapiski, i, 124; ii, 124; W. Barthold also favours this view (in which case the development would be opposite to that of the Iranian word khvadhai 'lord' > khuda 'god'); 6) Manskuroglu (see bibliography) is undecided, but he does not believe in the foreign origin of the word. — Several of these attempts at a derivation (1, 2, and 4 in particular), seem impossible and far fetched. Though the word is apparently of Anatolian origin, there is no evidence of its Greek descent [as—on the contrary—E fendî]. It seems doubtful whether Ibn Battûta (ed. Defrémery and Sanguinetti, ii, 270), means 'Greek' in his mention of the meaning of the word Celebi 'in the language of Rûmî' (thus W. Barthold), or whether this is merely a reference to its use in Anatolia. To the etymology is by M. Mansuroglu, in the Ural-Altaische Jahrbücher, xxvii, 1955, 97/99; E. Rossi in Türk Dili Araştırmaları Yıllığı, Belleten 1954, 11/14; K. H. Mevges in Supplement to Word VII, Dec. 1951, 67/70. Concerning the Greek sources of the word, G. Moravcsik, Byzan-
tino-Turcica, Berlin 1958, ii, 311.

(Barthold—[B. Spuler])

CELEBÎ EFENDÎ [see İLAL-EL-DIN, M. MAStA] CELEBÎ-ZADE (or KUCUK CELEBÎ-ZADE) Ismâîl Asîm Efendi, 18th century Ottoman historian, poet and shaykh-al-islâm. His familiar name (labîrah) derives from his father Kucuk Celebi Mehmed Efendi (Sügîl-i Ottalîmî, iv, 205) who was "foreign secretary" (râfî ul-kâtib) for about ten months in 1108-09/1699 (Râşid, Ta'rikh, ed. 1822, ii, 387, 421). He was born in Istanbul, and, from the statement of Müslüm-zade Süleyman Efendi (Tâbî-i Khatîfâmî, Istanbul 1928, 1928, 650) that he was 77 years of age at the time of his death, his birth should be fixed about 1096/1685 about 1096/1685. His contemporary, Sâkîm Efendi (Tâbî-i Khatîfâmî, Istanbul, 1315, 452) says that he was given the grade of muallim by Faqihülâî Efendi in 1108/1666-97, but, as M. C. Baysun suggests (İA, fasc. xxv, 371b), this was...
probably an honorary degree conferred on the boy of twelve out of respect for his father's position—according to a contemporary Simonistic saying "zahhak al-talâm." (cf. Na'mâ, Ta'rîkh, ed. 1280, vi, Supp., 6-7. It is probable that the mustâskilân of Sêlim's text should be corrected to mustâskilân, "in anticipation"). His teaching career, all of which was passed in Istanbul, began in 1120/1708 at the madrasa of Kenân Paşa, from where he advanced to the Dizdâriyye (1125/1715), the Ahmed Paşa in Demir Kapi (1130/1718), the Ārifîyye (1131/1719) and finally (1135/1723) the madrasa founded by his father-in-law, the hâdî 'ashîr 'Omer Efendi, in Mollâ Gürânî (Sâlim, op. cit. and îsmâ'îl 'Âshîm, Ta'rîkh, ed. 1282, 110). On 28 Râmâdân 1135/5 April 1723, he was appointed official historiographer (waâkkîrnu'us) in succession to Râgîb Efendi, which post he filled until about 1143/1730 when his patron, the Grand Vizier İbrahim Paşa, was sacrificed to the rebels and his favourites driven from office (cf. Âhadîm III). In 1145-6/1732-3, he was hâdî of Yeâli Shehr (Larissa in Thessaly); in 1152-53/1738-9, of Bursa; in 1157-58/1744-45, of Medine; and in 1161-62/1748-49, of Istanbul. His next appointment did not come until 1170/1757, when he was made hâdî 'ashîr of Ahi Evranî Efendi, and on 5 Dhu 'l-Ka'ba 1172/30 June 1759, he attained the ultimate dignity of zahhak al-talâm, in which office he died after eight months (28 Dümâdâh II 1173/16 Feb. 1760). He was buried next to his father-in-law, 'Omer Efendi, in the courtyard of Mollâ Gürânî (Hâfiz Huseyn Efendi Ayyânsârîîî, Hâdîkât al-Dîvânîîîî, Istanbul 1921, i, 208).

His history (twice printed as a supplement to that of Râgîb: ç. 1153 and 1252) covers the period 1135-4/1722-29, and although, even by the standards of the official histories, notably superficial and frequently little more than a court chronicle, it has some of the virtue of its defects in being a wholly characteristic expression of the frivolity and complacency of the so-called Tulip Period of Ottoman history. In his verse he uses the poetic signature (mâhkâm) of İbrahim and while his literature as a poet is overshadowed by such great contemporaries as Neddîm, Seyyid Webbi and Neylî, nevertheless, his dîvân (lithographed, Istanbul 1268), with its graceful language and delicate sententiousness, has always been regarded as one of the masterpieces of this period in which Ottoman dîvân poetry finally develops its own recognizably authentic voice. His abilities and range as a prose writer can be better appreciated from his collected letters (Münhekebât: Istanbul 1268) than from his history, where he deliberately models his style on that of Râgîb Efendi. His only other surviving work is a trans-lation from the Persian commissioned by Dâmâd İbrahim Paşa of the Şefîret-nâme-i Cen of Ghiyâh al-Dîn al-Nââkî (Browne, iii, 397; M. F. Köprülü, MTM, ii (1332), 351-68) under the title Jadîdât al-Lahfî (ed. 'Âli Emîrî, Istanbul 1332). A Mawlid risâless attributed to him by Mûstâkim-zâde (op. cit., 651) is otherwise unknown.

Bibliography: The only reliable biographical information is in the notice by M. C. Baysun already referred to (but on 372a, 1, 3, for cemîsîyel-vel ed ed, after Sâlim, Dümâdâh II). Babinger, 293, is not a entirely exact translation of the Sîdîrî-i Oltîmîni, i, 366, which itself contains extracts from Beşâr Efendi, Emir Mânî al-Din, Ayînî-Alârî, Zafrûl (Addâl-i Zuaraâ, Istanbul 1314, 43 and Rif'at Efendi, Dawhat al-Mesâlihâth, Istanbul n.d., 101 derive from Wâsîf, Ta'rîkh, Istanbul 1270, i, 179. In addition to Sâlim, op. cit., Şâhîf Qâdirî, Millet, 'All Emîrî, 1775, 197 and Râmî (Addâl-i Zuaraâ, Millet, 'All Emîrî, 1762), 173 a contemporary opinion of his poetry. Apart from the short article of 'Ali Dînîbî, Haydî, i, no. 20 (1927), 3-5, no study has been made of his dîvân, which, moreover, requires re-editing from the Bâyezîd MS., no. 5644, with marginal corrections in his own hand. Sadeddin Nühet Ergun, Türk Şairleri, i, 108-111, contains extracts from some of the sources mentioned above; references to Fatin, von Hammer, Gibb, etc. may be found in Babinger. (J. R. Walsh)

CELEBI ZADE EFENDI [see Şâfî Efendi] CÊNĐERELI [see MIJANDARIL]

ÇEPNI, an Oghuz tribe, which holds an important place in the political and religious history of Turkey, and in the history of its occupation by the Turks. The most intimate muraşîs of Hâdîjî Bektâşi belonged to this tribe, an important branch of which must therefore have been living in the Kirghiz region in the 13th century. In the second half of this century there was another important group of the Çepni in the Samsun region, who in 696/1297 successfully defended Samsun against the forces of the Emperor of Trebizond, and in the 14th century played the chief part in the conquest of the Dânîk (Ordu-Giresun) district; the Hâdîjî Emîrî principality which controlled the Ordu-Giresun region in the 14th century was probably founded by this tribe. At the beginning of the 16th century the region round Trabzon, especially to the west and south-west, was in their hands and was hence called wîlâyîtÇ Çepni after them. From the 16th century onwards they began to penetrate the region east of Trabzon too, where even in the 18th century the Çepni were waging fierce struggles with the local people. Thus the Çepni played a very important role in the conquest and turcization of the Samsun-Rize area.

Important groups connected with this tribe are found in other parts of Turkey too in the 15th and 16th centuries. The largest lived in the Sivas region and practised agriculture. There was another important group among the Türkmen of Aleppo, one branch of which began to settle in the 'Ayntab area in the 16th century; another, generally called wîlâyîtÇ Çepni after them. From the 16th century onwards they began to penetrate the region east of Trabzon too, where even in the 18th century the Çepni were waging fierce struggles with the local people. Thus the Çepni played a very important role in the conquest and turcization of the Samsun-Rize area.

Importantly connected with this tribe are found in other parts of Turkey too in the 15th and 16th centuries. The largest lived in the Sivas region and practised agriculture. There was another important group among the Türkmen of Aleppo, one branch of which began to settle in the 'Ayntab area in the 16th century; another, generally called wîlâyîtÇ Çepni after them. From the 16th century onwards they began to penetrate the region east of Trabzon too, where even in the 18th century the Çepni were waging fierce struggles with the local people. Thus the Çepni played a very important role in the conquest and turcization of the Samsun-Rize area.

CÊREMİSS [see FAKHKHÂR]

CÊREMİSS (native name Mari), people of the eastern Finnish group, living principally in the basin of the Middle Volga to the north-east of Kazan in
the Autonomous Soviet Socialist Republic of the Maris as well as in the neighbouring territories: A.S.S.R. of Tatarstan and of Bashkiria, regions (oblasti) of Ceremish and of Sverdlovsk of the R.S.F.S.R. The total number of Ceremiss reached 481,300 in 1939; they are divided into three distinct groups by their dialects and their material culture.

The Ceremiss of the plains (lugovye) live on the left bank of the Volga, those of the highlands (gornye) on the right bank, and the eastern Ceremiss emigrated in the 18th century in the valley of the river Belaya in Bashkir country.

The Ceremiss descend from the Finnish-Ugrrian tribes of the Volga, subjugated in the 8th century by the Khazar, then, between the 9th and the 13th century, by the Bulgars. It is through the medium of these latter that the Arabs became acquainted with the Ceremiss (under the name of Skirmis). After the destruction of the Kingdom of Greater Bulgaria, the Ceremiss fell under the domination of the Golden Horde, then of the Khânate of Kazan. The ancestors of the present Ceremiss were never converted to Islam, but they submitted, nevertheless, as early as the high Middle Ages, to the indirect influence which we recognise in our own day in certain ritual terms: payrdm (the feast of spring), keremet designating the spirit of the forests (from karda = miracle).

Conquered by Russia in the 16th century, the Ceremiss were from that period very strongly marked by Russian culture and, in the 19th century, the majority were officially converted to orthodox Christianity. At the end of the 19th century, only the Ceremiss of the eastern group remained Animists (the Ci-marises).

From the outset of 1905 to the October Revolution and even beyond, one notes among the Ceremiss living in contact with the Tatars and the Muslim Bashkirs numerous conversions to Islam. It is unfortunately impossible to judge the new influence of Islam on the Ceremiss because the converts generally adopt the language and customs of the Tatars and “Tatarize” themselves.

CERIGO [see Öôka 4apasi]

CERKES, The name of Cerkes (in Turkish Čerkas, perhaps from the earlier “kerkête”, indigenous name: Adğhe) is a general designation applied to a group of peoples who form, with the Aqbaq [q.v.], the Aboza (cf. Beskeres Aboza) and the Ubsâh, the north-west of Abasgo-Adğhe branch of the Ebro-Caucasian peoples.

The ancestors of the Cerkes peoples were known among the ancients under the names of Ẕwôl, Ḵpërêdzêl, Ẕyɔwu, Ẕywu, etc., and lived on the shores of the Sea of Azov and the Black Sea and in the plains of the Kuban to the south and the north of this river, extending perhaps to the Don.

In the 10th century, the Russians settled in the peninsula of Taman (the principality of Tmutarakan) and entered into contact with the Cerkes, whom their chronicles designate under the name of Kasag (Georgian name = Kachâk, Kasagi in Ossete). From the 13th to the 15th century, the north-west Caucasus was subjected to the Golden Horde and it is after the collapse of the latter that the eastern Cerkes tribes (the present Kabard) began to play a rôle in the history of the Caucasus.

The Kabard princes maintained in the 16th century friendly relations with the rulers of Moscow (the second wife of Ivan IV was a Cerkes princess). In the 17th century the Kabard tribes led the coalition of Caucasian peoples which halted and repulsed the advance of the Kalmiks and from that era, the Cerkes held supremacy which they lost only after the Russian conquest.

Distribution of the Cerkes Tribes. — Before the Russian conquest in the middle of the 19th century, the Cerkes peoples, numbering more than a million, inhabited the north-west Caucasian (country of the Kuban) and a part of the eastern coast of the Black Sea and the peninsula of Taman up to the neighbourhood of the Abghazi.

The principal tribes were:
- The Natoqhan (Natquadj) in the peninsula of Taman and near the estuary of the Kuban.
- The Shapsug, divided into the “Great Shapsug”, on the left bank of the lower Kuban and along the river Afips, and the “Little Shapsug” on the shores of the Black Sea. These two tribes spoke the same dialect; more to the East, in the basins of the tributaries of the river Belava, Pshish and Psekupe lived the largest of the Adğhe tribes: the Abadzekh.
- Before 1864, these three tribes formed 9/10 of the total of the entire population of Western Adğhe tribes. Among the other Western tribes, the most important were the Mokhos on the river Fursu, the Temirgoy (Kemgui, Cengui) between the Laba and the Kuban; the Bjudukh at the confluence of the rivers Pshish and Psekupe lived the largest of the Adğhe tribes: the Abadzekh. Before 1864, these three tribes formed 9/10 of the total of the entire population of Western Adğhe tribes. Among the other Western tribes, the most important were the Mokhos on the river Fursu, the Temirgoy (Kemgui, Cengui) between the Laba and the Kuban; the Bjudukh at the confluence of the rivers Pshish and Psekupe lived the largest of the Adğhe tribes: the Abadzekh.
- The eastern tribes or Kabards (Kaberdey) (cf. Kabarda) lived from the 18th century in the basin of the upper Terek and some of its tributaries. They were divided into two groups: the tribes of the Great Kabarda, between the rivers Malka and Terek (to the west of the Terek) and those of the Little Kabarda (between the Sunja and the Terek, to the east of the latter river.

To these tribes must be added two others who were of non-Adğhe origin but who were in point of fact assimilated by the Cerkes and whose history is indissolubly bound to that of the latter: the Ubsâh [q.v.] and the Aboza (cf. Beskeres Aboza).

After the conquest of the country by the Russians, the greater part of the western Cerkes emigrated in 1864-65 to Turkey and there remained in Russia only a small fraction of them. The last Soviet census (1939) counted only 164,000 Kabards and 88,000 western Adğhe thus distributed.

1. Kabard: The 152,000 in the Kabard-Balkar A.S.S.R. and 7,000 to 8,000 in the two Autonomous Regions of Adğhe and Karaçay-Cerkes (auls Katkhabli, Blečeps and Khodz’). In addition, the census of 1939 counted as Kabards the 2000 Kabard-speaking Armenians of Armavir (territory of Krasnodar) of the Armenian-Gregorian religion, the 2100 “Cerkes of Mozdok” of the A.S.S.R. of North Ossetia who are Kabards converted to orthodox Christianity, and finally a little group (500 to 600) of Kabard-speaking Jews of the district of Mozdok.

2. The Besleney: about 30,000, of whom 20,000 are in the Autonomous Region of Karaçay-Cerkes (this group adopted the literary language of...
the Kabards and is assimilated by the Kabard nation), and 30,000, in the Autonomous Region of Adigue and near Arnavor, who adopted the literary language of the Adigue.

3. — The Lower Adigue: in number about 55,000, principally in the Autonomous Region of Adigue. After the migration of 1864-65, the tribal differences shaded off rapidly, and the scattered elements of the tribes remaining in Russia solidified in an "Adigue Nation" commune. Only the following tribes still conserve some peculiarities of dialect and custom: the Adabzehk, about 5,000 around the auil Khakurinov (their dialect is on its way to disappearance); the Bjedukh, about 12,000 who populate 38 auils to the south of the Kuba and an auil near Arnavor; finally, the Shapsug to the number of 10,000 on the shores of the Black Sea (14 auils to the north and south of Tuapse) with a little inlet in the peninsula of Taman.

Language: With Abkhaz, Ubakh, and, according to some, Abaza (which others consider a simple Adigue dialect), the Cerkes languages form the north-west branch of the Ibero-Caucasian languages. The Cerkes group is divided into several dialects of which two are now literary languages: 1. — Eastern Adigue ("high Adigue") or Kabard, including the Abkhaz and Adjaks, which are little different from one another. The speech of the Great Kabarda serves as the basis of the Kabard literary language used in the Kabardo-Balkar ASSR. and in the Autonomous Republic of the Karachay-Cerkes, transcribed in the Latin alphabet since 1925 (after a trial of the Arabic alphabet in 1924). In 1938, the Latin alphabet was replaced by the Cyrillic. 2. — Lower Adigue (or "K'mir"), including dialects closely related to one another: Bjedukh, Shapsug, K'emirgoy (or Temirgoy), as well as the rest of the Adabzehk and Khakuci dialects. The Bjedukh and K'emirgoy dialects serve as the basis of the Adigue written language used in the Autonomous Republic of the Adigue. The first attempts to give the Adigue a written language trace back to 1855 (handbook of the Adigue language of "Umar Besney"). In 1865, Atakujin and in 1890 Loparinski aimed toward an Adigue Cyrillic alphabet.

Between 1917 and 1920 there were again attempts to give Adigue a script: Domatov worked out an Arabic alphabet and Saltakov modified Lopatinsky's Cyrillic alphabet. Finally, in 1925, Adigue received a Latin alphabet, replaced in 1935 by Cyrillic. From 1925, the linguistic unity of the Cerkes people was broken and the two written languages, Adigue and Kabard, thereafter developed along different lines, in spite of the vain attempt to reunite them in 1930, at the time of the conference of the Committee on the new Latin alphabet at Moscow.

Halfway between Kabard and Lower Adigue is found the Besleney dialect, which belongs to Lower Adigue but is full of Kabard elements.

The written Kabard and Adigue literatures appeared after the establishment of the Soviet regime. The Cerkes had until then only an oral literature, principally of folk-lore, which included two types in particular: the legends of Nartes (mythological-heroic legends) which the Cerkes share in common with some other Caucasian peoples such as the Ossetes, and the heroic-historical songs which Shora-Bekmurzin Nogmov gathered and published since 1931.

Religion. — The Cerkes are Sunni Muslims of the Hanafi school. Islam was brought in the 17th century, to the western Adigue. Penetration was slow and at first reached only the feudal nobility. It is only at the beginning of the 18th century, thanks to the zeal of the K'ahns of the Crimea and the Turkish pashas of Anapa, that Islam was imposed on all of the people, replacing Christianity (introduced as early as the 6th century by Byzantium and, between the 10th and the 12th centuries, by Georgia) and the ancient pagan religion of which one still finds traces among the western Adigues.

Before their conversion to Islam, the Cerkes worshipped agrarian divinities: Shible, god of storm and thunder, Sozerev, protector of the sowings, Khategnash, god of the gardens, etc. The cult of the god of thunder was linked to the worship of trees and sacred groves where, even recently, were offered sacrifices and prayers. A particular cult was dedicated to Tslepeh, god of the blacksmiths and doctors. The Cerkes had neither temples nor clergy; sacrifices were entrusted to the care of an old man elected for life.

Justice was rendered according to the Adigue-Khabza 'idat, a veritable unwritten code of law which governed all Cerkes life and which was adopted by neighbouring peoples more or less subject to the influence of the Cerkes and Adigue (q.v.), Karachays (q.v.), Balkars (q.v.) and Nogays (q.v.).

Social Structure and Customs. — Until the second half of the 19th century, the Cerkes people maintained a very archaic social structure different according to the tribes. The Kabards had a highly developed feudal system; their society, comprising up to thirteen classes, formed several groups clearly differentiated; and the class system was rigid. The Adigues had a sumptuous but more flexible system, similar to that of the western Adigues, with the addition of the Abadzekh, and the Shapsug, which did not have princes. Among them the work class was weak, while that of the Khabz9 was the most numerous and the strongest.

The same feudal system, less rigorous however, existed also among the Adigues and the lower eastern Cerkes tribes (Besleney, Bjedukh, Khutakay). On the other hand, the western Adigue tribes (Natukhay, Shapsug, Abadzekh) did not have princes. Among them the work class was weak, while that of the Khabz9 was the most numerous and the strongest. They are sometimes called the "democratic Adigue tribes", as opposed to the Kabard "aristocratic tribes".

The reasons for this difference are not known. Some think that the western tribes passed the feudal stage in the 16th century after the long struggle which set the Abadzekh, Shapsug and Natukhay against the princes of Bjedukh (battle of Besnik in 1706), thanks also to the action of Hasan Pasha, s e r a s k y of Anapa, who abolished in 1826 the privileges which the nobles of these three tribes enjoyed.

For others, on the contrary, the social evolution toward feudalism had been retarded by several factors, notably the economic influence of the Greek colonies, then the Italian and Turkish. This last opinion seems nearer the truth, because at the beginning of the 20th century one finds among the western tribes a strongly surviving one of the same feudal, clan system which had disappeared among the eastern Adigue. The clan (limekh) was divided into several groups of great patriarchal families (aflak).
which formed in their turn rural communities (posko), autonomously united and independently administered by the councils of the elders. All the Cerkes tribes maintained some customs characteristic of the patriarchal and feudal stages: 1. — blood vengeance in cases of murder, which was a right and an absolute duty for the whole of the clan; 2. — alaikalat, which consisted of having children raised from birth in the families of strangers, often vassals (boys till 17-18 years). Alakalat created a sort of foster brotherhood which served to tighten the feudal bonds and unite the Cerkes tribes; 3. — diverse traditions concerning hospitality, considered sacred. The guest became, by right of protection, a veritable member of the clan of his host, who put his life and his property at the service of his guest. Hospitality was extended even to the exile (abrek or khadjard). If this latter succeeded in touching with his lips the bosom of the mistress of a strange house, he became a member of the family, and the master of the house had to provide for his safety. Among other customs of the clan stage figured the swearing of brotherhood (kunak) by which a man became a member of another clan; 4. — customs concerning marriage. Exogamy inside the clan or the great patriarchal family was strictly observed especially by the Kabards. The kalym (purchase of the fiancee) was universally practised, and could only be avoided by resorting to abduction, a frequent occurrence, in case of refusal by the parents. The pretence of forcible abduction remains an essential rite in the marriage ceremony.

The Cerkes in the Soviet Union.—It was only at the end of the civil war that the Soviet regime was established in the regions inhabited by the Cerkes. In the spring of 1920, first in the country of the Adighe, then in that of the Kabard. Administratively, the Cerkes were divided into three territorial unities: — The Autonomous Region of the Adighe in the basin of the Kuban and its tributaries belonging to the territory (krai) of Krasnodar, formed 27 July 1922 under the name of the Autonomous Region of Adighe-Cerkes, then, on 13 August 1926, under that of the A.R. of Adighe. This territory has an area of 4400 sq. km. and a population of 270,000 people (in 1956), of whom the Adighe represent only a minority. The capital Maikop is a Russian city. — The Autonomous Region of the Kara-chau-Cerkes in the high valleys of the Great and Little Zelenluk belonging to the territory (krai) of Stavropol, which the Cerkes share with a Turkish people (the Karachay [q.v.]). This territory, formed 12 January 1922, was divided, 26 April 1926, into two administrative unities: the Autonomous Region of the Karachay and the national civil district of the Cerkes, elevated 30 March 1928 to the status of Autonomous Region. In 1944 the Karachay were deported and their Autonomous Region abolished, but after their rehabilitation, the Autonomous Region of the Karachay-Cerkes was re-established 9 January 1957. Its area is 14,200 sq. km., and the population, in 1956, was 214,000 people, in majority Russian and Ukrainian. — The Kabard-Balkar Autonomous Soviet Socialist Republic, in the mountainous part of the Central Caucasus. It was formed 1 September 1921 as the Autonomous Region of the Kabard to which the clan or the great patriarchal family was still attached, thus constituting the Kabard-Balkar Autonomous Region, which became on 5 December 1936 an Autonomous Republic. In 1944, following the deportation of the Balkar, the Republic, with the loss of a part of Balkar territory, was renamed the Kabard A.S.S.R. Finally, on 2 February 1957, the Balkar having been rehabilitated and authorized to return to their territory, the Republic became once more the Kabard-Balkar A.S.S.R. Its territory comprises 12,400 sq. km., and its population, in 1956, was 359,000 inhabitants. In 1939, the Kabard, Balkar and other Muslims represented 60% of the population, living mainly in the mountainous areas; Russians and Ukrainians (40% of the population) constitute the majority of the population of the capital Nal'chik (72,000 inhabitants in 1956) and predominate in the plain of Terek.

Bibliography: A very complete bibliography appears in the article by Ramazan Traho, Literature on Circassians in the Caucasus, in Caucasian Review, no. 1, 1955, Munich, 143-162. It included more than 250 titles of works and articles in Russian, in western languages (French, English, German, Turkish, Hungarian, and Polish) and in Cerkes languages dealing directly or indirectly with the Cerkes people. It is sufficient therefore to note here a few recent works:

Ch. Quekvejaj

II. Mamlik period. The Circassians are designated in Mamlik sources as Dirbas or Dirhakhisa (sing. Dirkasi). There are also alternative spellings: Carkas or Carhisa (sing. Carkasi); Shkars or Sharakhis (sing. Shkarskhi) and less frequently Djibraks. Circassia is variously known as bid al-Dirkas, or simply Dirkas and occasionally as Djbal al-Dirkas. According to al-Kalqashandi the Circassians live in poverty and most of them are Christians (Subh al-A'shd, v, 462, l. 5).

The Circassians, who, since the closing decades of the 8th/14th century and up to the end of the Mamlik sultanate (922/1517), constituted the predominant element of Mamlik military society, were quite important in that sultanate from its very inception in the middle of the 7th/13th century. They occupied a strategic place in the Burjyyiya [q.v.] regiment founded by Sulayn Khal'dun (678-685/1279-1290). Whether the decline of that regiment weakened their power or not, is an open
question. The Kipçağ Turks, the ruling race during the first hundred and thirty years or so of the sultanate’s existence, feared them very much because of their ambitious character, haughtiness and inclination to trouble and discord. As a matter of fact the Kipçağs succeeded in nipping in the bud a dangerous military coup of the Circassians during Ramadan-Shawwal 748/December 1347-January 1348 (Sultan Hasan’s reign). These Circassians were the favourites of Hasan’s immediate predecessor, Sultan Hāджişi (747-8/1346-7), who “brought them from all quarters and wanted to give them precedence over the Atrak” (Nudşım, v, 56, ll. 14-20). Sultan Hāджişi’s reign was apparently too short for his plan to be carried out, and thus the Circassians’ rise to power had been postponed for another 35 to 45 years.

It was Sultan Barkūk, himself a Circassian and a member of the Burdiyya regiment, who brought about the final victory of his own race, by the systematic purchase of increasing numbers of Circassian Mamluks and by drastically cutting at the same time the purchase of Mamluks of other races. He is justly called “the founder of Circassian rule” (al-Karim bi-dawlat al-Diārākisā) (Nudşım v, 362). Though he regretted his action towards the end of his life, as a result of a Circassian attempt to assassinate him (Nudşım, v, 353, 398), it was too late for him to change the situation which he himself had created. His son and successor, Sultan Faradż (809-815/1406-1412), paid with his life for his attempt to break the Circassians’ growing power by means of large-scale massacres. As early a writer as al-Kalkashandī, who completed his book in 815/1412, states: “In our time most of the amirs and army have become Circassians ... The Turk Mamluks of Egypt’s existence, so fed in number that all that is left of them are a few survivors and their children” (Subh al-‘Ashā, iv, 458, ll. 16-19). Sultan al-Mu’ayyad Shaykh (815-824/1406-1412), who is described by Ibn Taghrībirdī as resembling the former Mamluk sultans (muluk al-salaf) in that his criterion for the choice of soldiers was not race, but efficiency and courage (al-Manhal al-Safī, iii, fol. 148b, 1-3), failed in his attempt by drastically curbing the power of the Circassians by strengthening the Kipçağ-Turk element in Mamluk military society. But after his death the Circassians regained their supremacy, which they maintained without any serious challenge till the end of Mamluk rule.

Mamluk sources ascribe the rise of the Circassians at the expense of the Kipçağ-Turks mainly to factors existing within the Mamluk sultanate. Equally important, however, were factors prevailing in the Mamluks’ countries of origin. The decline of the Golden Horde during the latter half of the 8th/14th century and the internal wars that broke out there must have greatly influenced the decision of Egypt’s rulers to transfer the Mamluks’ purchasing centre to the Caucasus.

The writers of the Circassian period held, generally speaking, a very high opinion of the Kipçağ-Turks and harshly criticized the Circassians, to whom they ascribed the sultanate’s decline and misery. Typical in this respect are Ibn Taghrībirdī’s following words: Referring to Taşhtamur al-‘Alī, formerly davuddar and later at-tabak al-asāsī (commander-in-chief), who was removed by amirs Berke and (later Sultan) Barḵūk, he says: “The time of Taşhtamur was a flourishing and plentiful time for the Mamluk sultanate under his wise direction, and that condition prevailed until he was removed from office and thrown into prison. In his place came Barḵūk and Berke, who did things in the sultanate from which the population suffers till this day. Then Barḵūk became sole ruler, and turned the affairs of the realm upside-down, and his successors have maintained his policy down to the present. For he gave precedence to the members of his own race over the others, and gave those of his own Mamluks (adjihat) who were related to him large fiefs and high offices while they were still in their minority. This is the main cause of the decline of the realm. Indeed, is there anything more grave than to set the minor over the senior? This is at variance with the practice of the former sultans; for they did not recognise the superiority of any one race. Whenever they found a man who displayed wisdom and courage, they showed him preference and favour. No-one was given office or rank who was not worthy of it” (Manhal, iii, f. 185b, ll. 14-23).

Though this and other statements of the same kind contain a very substantial element of truth, they certainly should not be taken at their face value. The Circassians might have accelerated the process of the realm’s decline, but many of the factors that brought about that decline had already been quite visible in the closing decades of Kipçağ-Turk rule.

The predominance of the Circassian race in the later Mamluk period was much stronger and much more comprehensive than that of the Kipçağ Turks in the early period. Unlike the Kipçağ Turks, the Circassians were very hostile to the other Mamluk races, whom they relegated to a state of political insignificance. No other Mamluk race was so much imbued with the feeling of racial solidarity and of racial superiority as they were. Under their rule, al-qam, meaning the Race, denoted the Circassian race. Similarly al-baeva, the People, was applied only to the Circassians. Of all Mamluk races the Circassians were the only ones who claimed to trace their origin to an Arab tribe, namely, the Banū Ghassān, who entered Bilād al-Rūm with Djabala b. al-Ayham at the time of Heraclius’ retreat from Syria (Ibn Khaldūn, Kitāb al-tahrir, v, 472, ll. 4-18. Ibn Iyāb, v, 193, 1. 3). This legend was not so successful, but it imbibed with the feeling of racial solidarity and of racial superiority as they were. Under their rule, al-qam, meaning the Race, denoted the Circassian race. Similarly al-baeva, the People, was applied only to the Circassians. Of all Mamluk races the Circassians were the only ones who claimed to trace their origin to an Arab tribe, namely, the Banū Ghassān, who entered Bilād al-Rūm with Djabala b. al-Ayham at the time of Heraclius’ retreat from Syria (Ibn Khaldūn, Kitāb al-tahrir, v, 472, ll. 4-18. Ibn Iyāb, v, 193, 1. 3). This legend was not so successful, but it imbued with the feeling of racial solidarity and of racial superiority as they were. Under their rule, al-qam, meaning the Race, denoted the Circassian race. Similarly al-baeva, the People, was applied only to the Circassians.
Crimean Khans built there fortresses such as Coban-kalca, Nawruz-Kirman. Shad-Kirman and settled in them Noghays to defend the country against the Cossacks (Kazafr) and the Kalmyks. Not infrequently the Cerkes co-operated with the Cossacks, too. In his major efforts to subdue the rebellious Cerkes tribes Sâhih Girây Kâhn made five expeditions in Circassia, the first against Kansâwuk, beg of Zhana in 946/1539, the second and the third against Kabartây (Kabard). He forcibly settled on the upper Uşur the tribes who had taken refuge in the high Baksan valley. Later in 954/1549 he made his last expedition against the Khatukây (Sâhih Girây Ta'rîkhî, Blochet, Cat. Man. Turc. supp., 164). But after his death the Cerkes, especially those of Zhana and Psheduh (Pscheduq) sacked the Taman peninsula, threatened Azak (q.v.) and sought the protection of Ivan IV (see Belleten, no. 46, 1946, 364). At the same period the Cossacks, stationed on the Terek, also became a threat to Crimean-Ottoman influence in Kabartây.

The strengthening of Tatar-Circassian relations resulted in the spread of Islam among the Cerkes. But in 1076/1664-65 Ewliyâ Celebi (vii, 708-738) found that many tribes were still pagans and those professing Islam preserved their old religious beliefs and practices. Mehmed Girây IV induced the islamized Circassian farmers to give up pig-raising. But in 1076/1664-65 Ewliyâ Celebi (vii, 708-738) found that many tribes were still pagans and those professing Islam preserved their old religious beliefs and practices. Mehmed Girây IV induced the islamized Circassian farmers to give up pig-raising.

The Ottoman Sultans recognized Crimean sovereignty over the Cerkes, but this did not prevent their sending orders and granting titles to the Circassian chieftains as vassal begs (see Belleten, no. 46, 399). In 978/1570 Selim II wrote to the Czar not to interfere with the Cerkes, his subjects not to interfere with the Cerkes, his subjects (see Belleten, no. 46, 400). In 1076/1665, on his way from Taman to Albrus, Ewliyâ Celebi (vii, 698-768) found first the Noghays in Coban-eli then Şêkeğh tribe (cf. J. Klaproth, Voyage, i, 238) on the Black Sea coast, Great and Small Zhana tribes at the foot of the Hayko mountains, and further east Khatai, Adam, Takak (?), Bolatay, Bozoduk (Pscheduq), Mamshug (?), Beslet (Beslekey), and Kabartay tribes. He also reported that in this period the Kabartay tribes caused the Cerkes tribes in the Kuban and Kabartay regions to retreat to the inaccessable parts of the mountains, while in the west the Cossacks were pressing hard the Cerkes in the lower Kuban and the Tamam peninsula.

When from the early 18th century onwards Circassia was seriously threatened by Russian expansion they became more and more co-operative with the Ottomans. In 1145/1734 they repulsed the Russian forces on the other side of the Kuban. But with the treaty of Kütük-Kaynardja in 1148/1774 the Ottomans recognized the independence of the Crimean Khânate with its dependencies north to the Kuban which in 1770-1771 were ceded by Russia to the Russians. The Kabartay tribes were already in Russian control in 1885/1774.

In order to form a defence line against the Russians on the Kuban the Ottomans were now much interested in Circassia and built or rebuilt the fortresses of Soghudjuk (Sudûjuk), Gelenджik, Noghay, and Anapa in 1566/1572 and tried to reorganize the Cerkes as well as the newly arrived Tatar immigrants from the Crimea and the Noghays from Dobrudja. Perah (Allâh Pasâh) (1106/1746-1156/1786), an administrator of unusual ability, encouraged his Ottoman soldiers to establish family ties with the Cerkes which strengthened Ottoman influence and furthered the spread of Islam among the Cerkes. Anapa rapidly developed as the chief commercial centre of the area. Meantime Sheykh Mansûr, a forerunner of Sheykh Shâmhî (q.v.) in the Çelebi area found a response among the Cerkes for his preaching of the Holy War against the Russians (for this period see the important account of Mehem Hâşim, the Diwân Kâîb of Ferâ' Allâh Pasâh, MS. in Topkapî, Revân, no. 1504, cf. Djewdet, Ta'rîkh, iii, 165-272). During the Ottoman-Russian war of 1201-1206/1797-1799 a Khânate of Kuban was created with the Tatars under Şâhihâzîr Girây while the Cerkes co-operated with the Ottoman army under Battal Huseyin Pasâh and won some successes. But in the end Anapa, the main Ottoman base, fell (1205/1797-1799). With the peace treaty the Kuban river was fixed as the border line between the Russian and Ottoman empires. After the peace, while the Ottomans neglected the area, the Russians formed a line of fortresses along the border and settled large groups of Cossacks there. At the same time they annexed Georgia and, taking control of the Daryal Pass, encircled Circassia. By the treaty of Adrianopole 1245/1829 the Ottomans had to give up their rights on Circassia in favour of Russia. The Circassians, however, sustained a long and fierce struggle against the invaders until 1281/1864 and, according to an Ottoman report, 595,000 Circassians left their country fleeing to the mountains between 1822 and 1864. These were settled in Anatolia as well as in Kûmelî (see BULGARIA). According to the census of 1845 there were in Turkey 66,692 Circassians still speaking their mother-tongue. Under the Ottomans, especially from the 17th century onwards, Circassian slaves occupied an important place in the Ottoman civil and military system and many of them reached high positions in the state (see Ta'rîkh-i Â'î, vols. Istanbul 1291-1293).

the last Ottoman Chamber and the Ankara National Assembly. All three brothers took leading parts in the nationalist guerrilla movement, Edhem distinguishing himself against the Greeks at Salihli and Anz ürünler’ Kâwâ-yî Mehmâdiyye (summer 1919) and in suppressing the anti-Kemalist revolts at Düzce and Yozgad (spring 1920). As Commander of Mobile Forces (Kâwâ-yî Seyyârê), with his brother Tewfik as deputy) he came into increasingly sharp conflict with the regular army command, especially after Tewfik’s appointment as commander of the Greeks at Gediz (24 October 1920) and the appointment of Ismet [İnönü] as commander-in-chief of the Western front. An ad-hoc commission of the National Assembly failed to resolve the dispute. After a decisive clash with the Turkish regulars (Kütahya, 29 December), Edhem, his brothers, and several hundred Circassian guerrillas fled behind the Greek lines (5 January 1921). The Ankara Assembly denounced the brothers as traitors and expelled Reshîd; later the brothers were among the 150 persons (yıizelliêler) excepted from the amnesty provisions of the Lausanne Treaty of 1923. Edhem and Reshîd went to Greece, Germany, various Arab countries, and eventually to ‘Am’mân. In 1935 they were briefly detained there under suspicion of plotting against Ataturk, and in 1940 Edhem was again in ‘Am’mân. A memorial address of his support of the movement of Rashîd ‘Ali in Iraq. He died of throat cancer in Amman because of his support of Rashîd; later the brothers were among the 150 persons (yıizelliêler) excepted from the amnesty provisions of the Lausanne Treaty of 1923. Edhem and Reshîd returned to Turkey after the Democrat Party victory of 1950 and died in Ankara in 1951. Tewfik spent his exile years in Haifa as an oil refinery watchman and died soon after his return to Turkey in 1938.

(D. A. RUSTOW)

ÇERKES [see Muhammad Pasha Çerkes] ÇEHERME, a Persian word meaning “source, fountain” which has passed into Turkish with the same sense. It is the name of a market-town in Turkey Minor with a wide and safe natural harbour on the Mediterranean coast, at the entrance to the Gulf of the same name, at the north-western extremity of the peninsula of Ùrula opposite the island of Chíos, 26° 20’ W., 38° 23’ N. It is the chief town of a haza in the vilayet of İzmir. The town has (1950) 3,766 inhabitants; the haza, 12,337. Originally part of the principality (later sandjak) of Aydı’n, it was Ottoman from the time of Bayazid II. There is a citadel with a mosque of Bayazid II, of 924/1508. The present town, which is quite modern, occupies the site of the ancient harbour of Erthêreæ. There are hot springs at Ihidja.

A Russian fleet of nine ships of the line and a few frigates, divided into three squadrons commanded by Spiridov, Alexîs Orlov and Elphinston, which sailed from Kronstadt to aid the rebel Mânuhû, attacked the Turkish fleet at Çêgêmê. The Turkish fleet consisted of sixteen ships of the line besides frigates and small craft and was commanded by the Kapudân-Pasha Hoûsâm al-Dîn with DjezÎrî, Hasan Pasha and Djîfâr Bey. The Russian and Turkish flagships both caught fire at the same moment and those of the crew who could saved themselves by swimming (11 Rabî’ I 1183/5 July 1770). The remainder of the Turkish fleet was set on fire the following night. This defeat of the Turks at Çêgêmê was the fore-runner of the Peace of Kütîk Kaynarca.

(Ç. HUART-[FR. TAESCHNER])

ÇEHMÎZÂDE, Mustafa Râshîd, Ottoman historian and poet, one of a family of ‘ulamâ’ founded by the Kâdisı’Vasker of Rumelia, Çeheim Mehmed Efendi (d. 1044/1634) a grandson of the Shaykh-i’l-Islâm Mehmed Sâlih Efendi, and the son of a bâîli in the Hijâz, he entered the İ’limiyye profession, and held various legal and teaching posts. After the resignation of the Imperial historiographer Mehmed Hâkîm Efendi [q.v.], he was appointed to this office, which he held for a year and a half. He then returned to his teaching career, which culminated in his appointment as mididdirî at the Dâr al-Hadîth of the Sulaymâniyye. His history, which covers the period 1180-8/1766-68, was used by Wâsîf [q.v.]. The Turkish text was first published by Bekir Kütûkoglu in 1959; but a Swedish translation of his account of the war in Georgia in 1180-2/1766-68, with a brief account of some events in Cyprus, Egypt and Medina, was included by M. Norberg in his Turkhâ Rikets Annaler, v, Hernosand 1822, 1416-1424. He died in Şajbân 1184/Nov. 1770, and was buried at Rumeli Hisari.

(B. LEWIS)

CEUTA [see SABTA] CEYLON, The Muslims constitute only 6.63% of Ceylon’s population—roughly 550,000 out of a total of 8,000,000. Of this community, which is multi-racial in its composition, the Ceylon Moors form the most significant element and count 463,953. The Malays are the next in importance. They number 25,464. Nearly all of the remaining groups are of Indian origin; their ancestors first came to Ceylon after the British occupation of its Maritime Provinces during the 18th century.

As a result of the insufficiency of available evidence and the lack of sustained effort and encouragement in respect of the investigations involved, some require a good knowledge of several languages, each of them with a different background and most of them with distinctive characters, the ethnology of the Ceylon Moors has yet remained an inadequately explored field of research. A scientific and comprehensive treatment of the subject would indeed illumine some of the obscure aspects of Ceylon’s history—e.g., the nature and extent of the contacts the Muslims of Ceylon (Moors) had for several centuries with their brethren in faith in lands far and near; the political relations which Ceylon...
through these Muslims maintained with the Muslim World particularly during its period of glory; and the volume of Ceylon's external and internal trade and its geographical distribution during the early centuries. The Muslims of Ceylon were given the appellation of 'Moors' by the Portuguese who first came to Ceylon in 1505 and encountered these Muslims as their immediate rivals to trade and influence. This name, however, has persisted, having gained currency in Ceylon through its wide use by the Colonial Powers concerned, even though this term 'Moors' had been previously unknown among the Muslims themselves. 'Sonahar' was the name familiar to them, deriving its origin from 'Yavanar', an Indian word connoting foreigners especially Greeks or Arabs.

These Moors were the descendants of Arab settlers whose numbers were later augmented by local converts and immigrant Muslims from South India. With regard to the date of the arrival of the first Arab settlers, Sir Alexander Johnstone holds that it was during the early part of the 2nd/8th century. “The first Mohammedans who settled in Ceylon were, according to the tradition which prevails amongst their descendants, a portion of those Arabs of the house of Hāghīm who were driven from Arabia in the reign of Caliph ‘Abd al-Malak b. Marwān, and who, preceding from the Euphrates southward, made settlements in the Concan, in the southern parts of the peninsula of India, on the island of Ceylon and at Malacca. The division of them which came to Ceylon formed eight considerable settlements along the north-east, north, and western coasts of that island; viz., one at Tripsana, one at Alappu, one at Mantotte and Mannar, one at Coodramalle, one at Putlam, one at Colombo, one at Barberyn, one at Point-de-Galle.”

The presence of these settlers is strikingly corroborated by the accounts found in Muslim sources with regard to the proximate cause of the Arab conquest of Sind, during the time of Caliph al-Walid. His governor, al-Hāǧīmī, garrisoned at Jaffna, initiated this conquest, under the leadership of ‘Imād al-Din Muḥammad b. Kāsim, as a punishment for the plunder of the ships that carried the families of the Arabs who had died in Ceylon, together with presents from the King of Ceylon to the Caliph.

It is reasonable to suppose that during the 2nd/8th century and subsequent centuries these Arabs came in increasing numbers and settled down in Ceylon without entirely losing touch with the areas of their origin. Ceylon exercised a special fascination on these seafaring Arabs as a commercial junction of importance which afforded possibilities of profitable trade in pearls, gems, spices and other valued articles. Settlement was encouraged by the tolerant and friendly attitude of the rulers and people of the island.

After the sack of Baghdad in 1258 A.D., Arab activities in the Persian Gulf and the Indian Ocean diminished considerably. Muslim influence, however, did not thereby cease entirely. It began to emanate from India where by the 7th/13th century the Muslims had firmly established themselves along the western coast and possessed a virtual monopoly of external trade.

It may therefore be concluded that the Muslims of Ceylon began, as a result, to rely on India for their cultural leadership as well as for their commercial contacts. An Indian element was thus added into the composition of the local Muslim (Moors) community. Despite the racial admixture that took place in consequence and the new manners and customs that they acquired, the identity and the loyalty of the community was preserved on account of the cherished memory of its Arab origin and the emphasis that was placed on Islam as the base of its communal structure.

These Muslims were not treated as aliens, but were favoured for the commercial and political contacts with other countries they gained for Ceylon, for the revenue they brought to the country and the foreign skills they secured, e.g., medicine and weaving. Besides they encouraged local trade by the introduction of new crafts, e.g., gem-cutting and of improved methods of transport, e.g., thavalam-carriage-bullocks. They were therefore allowed to establish their local settlements, e.g., Colombo, Barberyn, with a measure of autonomy and with special privileges. The important seaports of Ceylon were virtually controlled by these Muslims (Moors).

With the advent of the Portuguese in 1505 the Muslims (Moors) suffered a change in their status from which they never again recovered. The Portuguese regarded them as their rivals in trade and enemies in faith. The Dutch who superseded the former as rulers of the sea-board were not prepared to give the Muslims even a small share of their commercial gains and therefore promulgated harsh regulations to keep them down. Deprived of their traditional occupation, many of them were forced to take to agriculture. To this could be mainly attributed the concentrations of Muslim peasantry in areas like Batticaloa.

It was during the Dutch period that many of them came to Ceylon, many of them brought by the Dutch as soldiers to fight for them and some as exiles for political reasons. When the Dutch capitulated to the British, the Malay soldiers joined the British regiments specially formed. On their disbandment the Malays settled down in Ceylon. Their separate identity has been preserved by the Malay language which they still speak in their homes. The British did not follow the Dutch policy of proselytization pursued by the Portuguese. Nor were the British so harsh as the Dutch in their economic exploitation of Ceylon. To that extent, under the new rulers, the Muslims fared better. Yet they could not gain any special favour, on account of their irreconcilable attitude towards the ways and culture of the West which they identified with Christianity. This, no doubt, handicapped the Muslims severely in the political, economic and educational spheres but ensured the preservation of their communal individuality despite the smallness of their numbers and the loss of cultural contacts with the Muslim World. As a result till about the beginning of the current century the Muslims of Ceylon remained culturally isolated, educationally backward and politically insignificant.

The Muslims, however, could not continue to ignore the trend of events taking place in Ceylon and India. Sir Sayyid Ahmad Khân, who founded in 1875 the Mohamnedan Anglo-Oriental College, was the leader of the Aligarh Movement in India with its emphasis on educational reforms. Arumuga Navalar, who countered the efforts of the Christian Missionaries in North Ceylon, established in 1872 an English school in Mannar. The Buddhist Theosophical Society established an English school in 1856 which finally developed into the present Ananda College, Colombo. In this
year the Anagarika Dharmapala who was actively associated with the inauguration of this Society resigned his Government post to devote his entire time to Buddhist activities. During this period the Muslims of Ceylon had in M. C. Siddi Lebbe a leader of vision who understood the significance of these changes. He had for several years canvassed the opinion of his co-religionists for a new educational approach but he had not been heeded. It was at this time, in 1883, that 'Urfābī Pāshā [q.v.] came as an exile to Ceylon. He provided a powerful stimulus for a reappraisal on the part of the Muslims of Ceylon in regard to their attitude towards modern education and Western culture. All these together culminated in the establishment in 1892 of Al-Madrasa al-Zahira under the patronage of 'Urfābī Pāshā which has since blossomed into Zahira College, Colombo.

The Ceylon Muslims—apart from isolated instances—belong to the Sha'ī school of Sunnīs. In the realm of Law the following special enactments pertaining to them may be cited—the Mohammedan Code of 1806 relating to matters of succession, inheritance etc., Mohammedan Marriage Registration Ordinance no. 8 of 1886 repealed by Ordinance no. 27 of 1929 and now superseded by the Muslim Marriage and Divorce Act no. 13 of 1951 which confers upon the Kadis appointed by the Government exclusive jurisdiction in respect of marriages and divorces, the status and mutual rights and obligations of the parties; the Muslim Intestate Succession Ordinance no. 10 of 1931 and the Muslim Mosques and Charitable Trusts or Wakfs Act no. 51 of 1936 which provides a separate Government Department with a purely Muslim Executive Board. Of these the Mohammedan Code of 1806 is of special value to students of Islamic Civilization, for it contains many provisions which are in conflict with the principles of Muslim law stated in standard text books on that subject. Wherever such conflict occurs the view has been taken that it is the duty of the courts in Ceylon to give effect to the provisions of the Code, which formed the statute law of this country, although they may do so in conflict with well-established principles of Muslim law.

Tamil is the home-language of the great majority of the Muslims of Ceylon. In the Tamil language as spoken and written by the Muslims of Ceylon and of South India, a number of Arabic words are used, which in many cases have displaced their pure Tamil equivalents. The term Arabic-Tamil has therefore gained currency to indicate the Tamil of the Muslims. At one time Arabic-Tamil was written in the Arabic script, ݁, ݂, ݃, ݄, being improvised to denote four Tamil sounds unknown to Arabic, and ݅ being represented by ݆, ݇ by ݈, ݉ by ݊ and ݋ by ݋. Today Arabic-Tamil is being generally written in the Tamil alphabet with or without diacritical marks. The literature of the Muslims of Ceylon has to be treated as part of the Arabic-Tamil literature of South India. Although Ceylon has produced its quota of poets and writers in Arabic-Tamil none has reached the stature of their well-known South Indian counterparts.

The Muslims of Ceylon received their first political recognition in 1889 a nominated seat was assigned to them in the Legislative Council. This representation was increased to 3 elected members in 1924. The Donoughmore Constitution of 1931 abolished communal representation but the Soulbury Constitution of 1947 envisaged a certain measure of communal representation through territorial electorates specially delimited. In the present House of Representatives, elected in 1956, there are 7 Muslim M.P.s among 95 territorially elected members.

ČEYREK, a corruption of Persian چابرهک (čaḫr), has in Turkish the special meaning of a quarter of an hour, or a coin, also known as the bigha, or five piastre piece, originally the quarter of a medjūdlık, issued in 1520/1544 under the reign of 'Abd al-Majid and issued by the succeeding rulers until the end of the Ottoman Empire. The silver Čeyrek had a fineness of 830, weighed 6.23 grams and measured 24 mm. in diameter. (G. C. Milès)

CHAM [see ČAM]

ČHAT, an ancient town, situated on the bank of the Ghaggar and 14 miles from Ambala (India), is now practically desolate, with the exception of a few huts of Gudjiyars (mill-sellers) and other low-caste people atop a prehistoric mound, still unexcavated. It was a mahdil in the sārkhār of Sirhind, sābah of Dīhil, during the reign of Akbar, with a cultivable area of 125,749 bighās yielding a revenue of 750,994 dāms annually. Its name suggests that it was a settled town of the Moors of Ceylon, or Chaita, i.e., Chatātaris (more accurately Khatātiriyas), a martial Hindu tribe. Apart from being a flourishing town peopleed mainly by the Afghans and the Rājpūts it was, during the early Mughal period, a military station garrisoned by 650 cavalry and 1,100 infantry. Its history is closely connected with that of Bandūr [q.v.] only 4 miles away. During the Sāyīyd and Lōḏī periods, as the vast ruins, the dilapidated but very spacious Dīāmi Masjid of the pre-Mughal period and the extensive grave-yard indicate, it was a town of considerable importance, and became the seat of one of the four branches of the Sāyīyīds of Bāhra, called the Chat-Bānūrī or Chat-rāwīl Sayyīds, of whom Sāyīyd Abu 'l-Faqīl Wāṣīfā was the first to settle in this town (see Čhānī-ī Akbārī, vol. i, transl. Blochmann, 450). In 1722/1729 it was over-run and laid almost completely waste by the Sīkhs under general Banda Bāyrāgī. Shaykh Muhammad Dā'īn, the commandant of Āmbālā, who encountered the Sikh army was defeated and fled in dismay to Lahore. The most wanted cruelties were perpetrated on the inhabitants of Čhāt and Bānūr and very few escaped the sword or forced apostasy. Since then Čhāt has remained a dependency of Pātīlā and has never regained its lost prosperity. Al-Badā'ūnī (Eng. transl. iii 47)
mentions one Shaykh Da3ud of Chatl, but apparently Chatl has been misread for Djuhnl, more accurately Djuhnlwal, once a small town in the
parshas of Multan, and the translator has ob-
48. It is well known that the last

CHESS [see SHATRANJ]
CHINA [see AL-SIN]

CHITRAL (Citṛal), a princely state and a fed-
erated unit of the Republic of Pakistan, situated between 35° 15' and 37° 8' N. and 71° 22' and 74° 6' E. with
an area of about 4,500 sq. miles, and a population
of about 105,000 in 1951, contiguous to Soviet Russia,
Afghanistan and the Peoples' Republic of China.
The state takes its name from the capital city,
Citrl, also known as Kāshkār or Citṛ, two ancient
names still in favour with the people who call
themselves Kāshkārīs. The origin of Kāshkār is not
known; the theory that it is composed of Ki̇k̇̄a
a demon and gādr̄—a cave must be dismissed as
absurd. The Chinese, after their conquest sometime
in the first century B.C.G., called the area Citār, said
to mean a green garden. Babur, in his memoirs,
uses the same word for Citār, which he
subdued by the Chinese in the first century B.C.
Nothing reliable is known thereafter till the 3rd/
roth century when we have archaeological evidence
to prove that Citrl was under the sway of king
Djupal of Kabul in 287/900 and that the people
were Buddhists. Cingiz Khan is also said to have
made incursions into Citrl, but this lacks historical
confirmation.

The founder of the present ruling dynasty was one
Bābā Ayūb, an alleged grandson of Bābūr, who
after the departure of his father, Mīrzā Kāmārān,
to Mecca, wandered into Citrl and took up service
with the ruling monarch, a prince of the Raśisyya
dynasty. His grandson Sangīn ʿAlī is said to have
found favour with the ruler, who appointed him his
first subject. Gradually he assumed great power,
and on his death in 978/1570 his two sons Muhammad
Ričā and Muhammad Bēg succeeded to the offices
he had held. On the death of the Raśisyya prince,
Muhammad Ričā became the virtual ruler, but soon
after he was murdered by his nephews for the
excesses which he had perpetrated against them
and their father, Muhammad Bēg. In 991/1585
Muhtaram Shāh I, one of the sons of Muhammad
Bēg, peacefully dethroned the last Raśisyya ruler
of Citrl, whose descendants he deported to Badakh-
shān, and himself assumed the reins of government.
In 1024/1615 Māhūd b. Nāṣir Raśisyya attacked
Citrl with a large force of Badakhshāni troops,
defeated Muhtaram Shāh I, granted him pardon but
expelled him from Citrl. In 1030/1620 Muhtaram
Shāh I returned to Citrl, after murdering Māhūd
Raśisyya, only to be attacked for the second time
in 1044/1634. Subsequently Muhtaram Shāh I had
to leave the country because of the defection of his

A mountainous country, its ice-caps and glaciers
are a permanent source of water-supply for the lush
green valleys of the Hindū-Kūsh whose off-shoots
circle Citrl into several orographic regions.
Bounded by the unnamed kāhinīs of Dir and Swāt
(qq.v.), the Himalayas and the Karakoram Range
there are many famous passes and peaks in Citrl.
The Dūrāh Pass (14,500 ft.) leads to Badakhshān
(qq.v.) and is open for only three months in the
year. From ancient times it has served as an important
caravan route between Citrl and the Central Asia.
The Bārgūl pass (12,500 ft.) across the Yārkūn
valley connects China and Soviet Russia with
Citrl and caravans from Kāshkār and Khōtān
(qq.v.) were a common sight till recently. The other
important passes are Shandur (12,500 ft.) and
Lowarāt (10,230 ft.) which lead to Gilgit and Dīr
respectively. The Lowarāt pass, the only link
between Citrl and the rest of West Pakistan,
remains snow-bound for at least seven months in
the year, and when open it can only be negotiated by
jeep traffic. During the snow-bound period travellers
cross into Citrl on foot and merchandise is carried
on mules.

The main occupation of the people is agriculture
or cattle-grazing, though the state is rich in mineral
and forest wealth, which awaits large-scale exploi-
tation. There are believed to be considerable deposits
of antimony, iron-ore, lead, sulphur, mica, crystal
and opiment. The Ta'rīkh-i Citrl mentions gold, silver,
lapis-lazuli, topaz and also turquoise among the
rare minerals found.

Communications are a great problem; no roads
worthy of the name exist. However, a good motor
road, mainly for strategic purposes, is under con-
struction across the Lowarāt Pass and is expected
to be completed by the end of 1959. A proposal to
construct an all-weather road, through a tunnel
under the Lowarāt Pass, connecting Pēshāwar with
Citrl, was also mooted but, in view of the huge
cost involved, has been abandoned.

Since her accession to Pakistan in 1947, Citrl
has made rapid progress in almost all spheres of life.
There are now 85 regular schools including two high
schools and two dār al-wūdūm for religious instruc-
tion, as compared to two middle schools and a few
maktabs before accession. Education up to matri-
culation standard is free, and facilities are also
provided for higher education outside the state.
Two well-equipped hospitals and a number of
dispensaries have been opened to provide free
medical aid to the people. Small-scale and cottage
industries have been set up and a fruit-crushing
factory has been established at Dolomus, near
Citrl. Other measures for raising the standard of
living of the people have also been taken.

Very little is known about the early history of
Citrl. The aborigines have been called Pishācas
and described as cannibals. They are said to have
been subdued by the Chinese in the first century B. C.

The founder of the present ruling dynasty was one
Bābā Ayūb, an alleged grandson of Bābūr, who
after the departure of his father, Mīrzā Kāmārān,
to Mecca, wandered into Citrl and took up service
with the ruling monarch, a prince of the Raśisyya
dynasty. His grandson Sangīn ʿAlī is said to have
found favour with the ruler, who appointed him his
first subject. Gradually he assumed great power,
and on his death in 978/1570 his two sons Muhammad
Ričā and Muhammad Bēg succeeded to the offices
he had held. On the death of the Raśisyya prince,
Muhammad Ričā became the virtual ruler, but soon
after he was murdered by his nephews for the
excesses which he had perpetrated against them
and their father, Muhammad Bēg. In 991/1585
Muhtaram Shāh I, one of the sons of Muhammad
Bēg, peacefully dethroned the last Raśisyya ruler
of Citrl, whose descendants he deported to Badakh-
shān, and himself assumed the reins of government.
In 1024/1615 Māhūd b. Nāṣir Raśisyya attacked
Citrl with a large force of Badakhshāni troops,
defeated Muhtaram Shāh I, granted him pardon but
expelled him from Citrl. In 1030/1620 Muhtaram
Shāh I returned to Citrl, after murdering Māhūd
Raśisyya, only to be attacked for the second time
in 1044/1634. Subsequently Muhtaram Shāh I had
to leave the country because of the defection of his
troops. He was driven from pillar to post and was ultimately killed in an encounter with the people of Chitral [q.v.].

In 1215/1799, however, he was severely punished and restored to the throne by Shah Al-Imam who succeeded him in Chitral, for the murder of his father. Sangin 'Alī II, having deserted his lost principality went to Afghanistan, then a province of the Indian Mughal empire.

On the accession of Shah 'Alī Imam Bahādur Shah 1 [see Bahādur Shāh I] to the throne of Delhi, Sangin 'Alī II came down to India and entered in 1215/1799 the seceding in Shah 'Alī Imam who appointed him custodian of the shrine of Ahmad Sirhindī [q.v.]. With the monetary assistance rendered by the Mughal emperor Sangin 'Alī II was able to enrol Swāt levies who helped him reconquer the lost territory. Sangin 'Alī II was murdered in 1158/1745 by some members of the Ra'sīsyya dynasty and was followed by a number of weak and effete rulers. In 1189/1775 Frāzmār Shāh, a nephew of Muhtārām Shāh 1, came to the throne. He was a military adventurer and led a number of campaigns against the neighbouring territories of Gilgit, Nāgar and Kāfīristān. He also attacked Čaghtī Serāy in Afghānistān and occupied it after a fierce battle. He was murdered in 1205/1790 by one of his uncles, Shāh Afdal, who occupied the throne. On his death in 1210/1795 his brother Shah  Fadil succeeded him. Then follows a series of internecine battles, and the picture becomes so confused that it is difficult to follow the events with historical precision.

Shāh Fadil was succeeded in 1213/1798 by Shāh Nawāz Khān, his nephew, who repulsed with heavy losses an attack on Chitral in 1223/1808 by Khayr Allāh Khān b. 'Imārat Allāh Khān, one of his cousins. He was, however, forced to quit the throne but was proclaimed ruler for the third time in 1234/1818. In the meantime Muhtārām Shāh 1, one of the brothers of Shāh Nawāz, had become a prominent figure in state affairs. Chitral was then divided into small units each under a local chieftain, the most powerful of whom was Mulk Aman, the ruler of Chitral proper. On his death in 1249/1833 Muhtārām Shāh 1, entitled Shāh Kā'tūr, assumed power, being acclaimed master of Mulk Aman. After a hectic and picturesque political career of 28 years Muhtārām Shāh 1, burdened with age, died in 1253/1837 and was succeeded by his son Shāh Afdal 1. In 1257/1839 Gahwār Amān, a son of Mulk Amān and ruler of Warshigum (Yāsīn and Maśdīd) unsuccessfully invaded Gilgit whose ruler appealed for help to his over-lord, the British Agent placed him under detention and provisionally recognized Shudjiālī al-Mulk, a boy of 14 years, and a son of Amān al-Mulk as the Mehtar.

The British Political Agent, with a mixed force of 400 native and British troops, had occupied the fort before placing Shudjiālī al-Mulk on the throne. The garrison had attacked the forces of 'Umār Khān and Shāh Afdal but met with little success. Then began the historic siege of Chitral by 'Umār Khān and his confederates which lasted from 3 March 1895 to 19 April 1895, and was finally raised by the entry into Chitral of the advanced guard of the main relief force on 26 April 1895 which had been despatched via Mālakand and Dir. Shāh Afdal fell a prisoner into the hands of the British while 'Umār Khān escaped to Afghanistan. Amir al-Mulk and his leading men were deported to India as a punishment for their complicity in the trouble which necessitated large-scale military operations. Shudjiālī al-Mulk was confirmed as the Mehtar and since then Chitral has enjoyed an unbroken period of peace and progress. During the Afghan War of 1338/1919 the Chitral Scouts fully co-operated with the British. The Mehtar was allowed a sum of 100,000 rupees as his contribution to the expenses of the war, and the same year the title of His Highness, with a personal salute of 11 guns, was conferred on him. In 1343/1926 the Mehtar entered into an agreement with the Government of India for the prevention of smuggling of narcotics through Dir and Swāt, into British India. An enlightened ruler, Shudjiālī al-Mulk introduced modern amenities like electricity, tele-communications and automobiles into the state and constructed roads, forts, grain godowns, irrigation channels and schools. He also built a Dāmī Khāzīn, said to be
the most beautiful and the largest building between Gilgit and Pëghëwar. He is known as the 'Architect' of modern Chítrál.

On his death in 1355/1356 he was succeeded by his son Nàshir al-Mulk. A ruler endowed with literary taste, his Persian poetic work, the Sahifat al-Takwin, a study of the theory of evolution in the light of the Kur'anic teachings, has won him praise and admiration from indigenous scholars. In 1362/1943 his younger brother Mu'izzafar al-Mulk succeeded him. It was he who offered the accession of Chítrál to Pakistan in 1367/1947. He was succeeded by Sayyid Nàshir al-Mulk Nasir, a boy of 3 years of age. The state is now ruled by a Council of Regency presided over by the Political Agent, Malakand Agency through the Wáśiti A'tâm, an officer appointed by the Government of Pakistan.

II. Name, languages and tribes.

Khowar Chétrár, together with corresponding forms in neighbouring languages, goes back to *Kèsřat( Cô ?). Sängešť Sâm-Catrâd, etc. contains an ancient name of N. Chítrál (cf. BSOS, vi, 441f.). Of the 105,529 (1951) inhabitants of Chítrál the great majority (90,000) speak Khowâr, the language of the Kho tribe and of the state. It extends east of the Shandûr pass as far as Ghír in Yasm. Khowâr is an Indo-Aryan language of archaic type, cf., e.g., šron hip, âśru tear, hairds heart, tšpâšur father-in-law, etc. But it contains, apart from more recent borrowings from Pers., Ar. and Hind., also loan-words from the Pamir dialects, as well as a number of words of Middle Indian origin. Some words are borrowed from, or shared withBurugháshi and Şinâ, and several of the most common words are of unknown origin.

Other Indo-Aryan languages are: Kalasà (3,000) spoken, mainly by pagans, in two dialects in the side-valleys of S. Chítrál. Kalašà is closely related to Khowâr. The Kalaš are said to have occupied Chítrál right up to Rešún, and to have been pushed back within the last few hundred years by the Kho, whose original home was in Torikho and Múljkho in N. Chítrál.—Phálurä (Dangärík) (3,000) is spoken in some side valleys of S. E. Chítrál by original immigrants from Cîlas. It is an archaic form of Şinâ. — Gawanâ-Bàti is spoken at Arândû, close to the Afghan border, and also across it. In the same neighbourhood we find Danâek in one village.—Gugjûr (2,000) is spoken by Gugjûr herdsmen who have filtered through from Swàl and Dír.

Kati, a Káfir language, has been introduced into S. Chítrál within the last few generations by settlers from Kândësh and the upper Båshgal valley in Nûristán.

Iranian languages: Persian (Badakhšßî) (1,000) at Madaglaht in the Shïshi Kuh valley.—Pashto (at least 4,000) in the Arândû district.—Wâkhl, spoken by a few settlers in upper Yârkûn. Yîdhâ, an offshoot of Mundji in Mundjin, is spoken by the Yîdh (Idagh, etc.) tribe, settled since long in the upper Lûtûk valley, below the Dèrhâ pass.

At a not too remote date we must suppose that Chítrál was divided between Khoš and Kalašë, and the ancestors of these languages must have been introduced from N.W. India at a very early stage of development. A couple of short Sanskrit inscriptions have been found. Khowar has no written literature, [except a translation of the Gandâ-i Pashto (Calc., 1902, romanized), and a short prayer book in Urdu script (Nime, 1958)]. But the language is rich in songs and popular tales (silogh < šloka).

With the exception of most Kalašë the inhabitants are Muslim, mainly Maulâls. The last pagan Katis were converted in the 1930s. But many traces of pre-Islamic customs and festivals remain. Note also Khowar dâsman priest, probably < Skt. dâksamânt.

The Khoš are divided into three social classes: Adamâdžâs, nobles; or at any rate free-holders; Arbânbâdâs, comparatively well off, being paid for their services to the Mehtar, and on that account with a higher status than the very poor Fâkir Miskin.

Each class contains a number of clans, some of which carry patronymical names, other such indicating foreign origin, while others are difficult to analyse. Also the Kalaš and Yîdh tribes are divided into clans.

The Khoš are dolicho- to mesoecephalic, of middle height, and often with eyes and hair of medium colour, a few are fair-haired and blue-eyed. Kalašë and Kati are more decidedly dolichocephalic, and the Kati also of greater height.

CHITTAGONG, Tset-ta-gong, Çátigrâma, or Çâtígm is the main sea-port in East Pakistan and the head-quarter of the district bordering on Arakan. The town, which has a population of 294,046 (1951 census) inhabitants, stands on the right bank of the Karnâphûli river, ten miles from the sea, and has a good natural harbour away from the flooded plains of Bengal and the silt-depositing
mouths of the Ganges. Its origin is obscure. The early Arab geographers speak of only Samandar...it was a form of regular taxation imposed on the re'sāyā. In the 10th/16th century Abu 'l-Su'ūd and others attempted to include it among the sharī'ī taxes as kharāj-i muwazzaf.

Married peasants with land amounting to less than half a çift, or possessing no land of their own, were called bennāk [q.v.], and were subject to lower rates, for example 6 or 9 akčas, which were later increased to 9, 12 and 18. In the Kānūn-nāme of Mehemed II the bennāk were supposed to be subject only to three services, the money equivalent of which was 6 or 9 akčas. Lastly the re'sāyā classified as kara re'dāyā, the very poor or bachelors, who possessed no land of their own, paid this tax at the lowest rate of 6 akčas.

Thus çift-resmi can be regarded as the basic unit of a graduated tax system, and even çift-resmi and dönüm-resmi can be included in the same system. Originally the rate of çift-resmi was 22 akčas, but in 862/1458 it was raised to 33 akčas in the sandjak of the eyalet of Anadolu. It was further raised in some parts of Anatolia with additions made in favour of subaskhs [q.v.] and sandjak-begs [q.v.], but under Süleyman I this innovation was abolished as causing confusion. Applied to Syria after its conquest with a higher rate of 40, and in Eastern Anatolia of 50 akčas it remained however, 22 akčas in Rūmeli (see the list in my Osmanlîarda Raiyyet Rusumun, in Belteliten, vol. 92, 1959). Partial or total exemptions from çift-resmi were granted by imperial herāts in return for some public services required from the re'sāyā. But in the 10th/16th century many such exemptions were abolished.

As a rule çift-resmi was included in the timār [q.v.] revenue of the sīphāsī. But it lost its importance when after 590/1582 the akča decreased in value and the naqī [q.v.] became a form of regular taxation imposed on the re'sāyā. (Halil Imacliu)

ÇİFTLIK is the ordinary word for farm in Turkish, but in the Ottoman times it designated, at first, a certain unit of agricultural land in the land-holding system, and then, later on, a large estate. It was formed from çift (pair, especially a pair of oxen) from the Persian dōst with the Turkish suffix, lik. Originally, a çiftlik was thought of as the amount of land that could be ploughed by two oxen. But çiftlik eventually varied with the fertility of the soil. The çiftlik was the basic land unit used in all forms of land-holding, miri, wahī, and mülk or mālkhāne. From the legal point of view, however, the kind of çiftlik varied with the type of tenure.

The ratsiyet çiftlik is which the re'sāyā, Christian and Muslim peasants, possessed, taxpaying, or possessing no land of their own, paid the uṣūl [q.v.] and çift-resmi [q.v.] taxes to the land-holder, made up by far the greater part of the agricultural land. As a rule çiftlik was not to be subdivided because such a situation would, in the judgement of Abu 'l-Su'ūd, make it impossible to collect the taxes imposed on a çiftlik as a whole. In reality, however, during the land surveys, tahār [q.v.], it was found that many çiftlik had lost their original form as a result of sub-division, and the çift-resmi were no longer being collected. In order to preserve the çiftlik, which was essential to the land-holding system of
tendency in the 10th/16th century was to convert all types of military ciftliks into râ'îyyet ciftliks so that the râ'îyyet taxes might be included in the timârs.

With the disruption of the timâr system, this course of development was reversed. During and after the period of confusion between 1003/1595-1018/1609, a great part of the râ'îyyet ciftliks found their way into the hands of the hâshî-huwa and palace favourites, and the old practices such as possession of timârs as mülk or mukāba'ât ciftliks were now widespread. In the same period, moreover, when the peasantry abandoned their lands en masse and scattered throughout Anatolia, which is known in Ottoman history as the Great Flight, the Janissaries and others took possession of the râ'îyyet ciftliks by tâpu. The accumulation of ciftliks in the hands of â'yân [q.v.], rich and influential men in the provinces, however, was mainly due to the mukâba'a system. This again was an old practice but now, with the disorganization of the timâr system, the timâr lands were increasingly rented as mukâba'a to private persons bidding the highest price. In reality however, through administrative abuses, the influential men managed to obtain them. Â'yân and â'yân with large mukâba'a holdings, as a rule, received theAssignment into râ'îyyet ciftliks and assigned as timârs. In the case of the hâshî-huwa, the timâr lands were increasingly cultivated by the â'yân and âlî-i surf, officials, in the provinces. It was on the mukâba'a lands that the power of the great â'yân rested in that century, and from this period on the word ciftlik was used to designate large personal estates. The attempts to break up these ciftliks made by the Tâsun'âdî [q.v.] reformers did not meet with any great success and this became the underlying factor in the peasant uprisings in the Balkans in the 13th/19th century. Under the Turkish Republic a law passed in 1945 (modified in 1950) provided that the large estates were to be broken up and distributed to the peasants in need of land.

CIĞHALA-ZADE (CIĞHALA-ZADE) YUSUF SINÂ PÂSHA (c. 1545-1605), also known as Câğhal (Dişâhâl) oglu, belonged to the Genoese house of Cicala. He was born at Messina in Sicily and received the Christian name Scipione Cicala. His father, the Visconde di Cicala, was, according to Gerlach, a "corsair" in the service of Spain, while his mother is said (cf. L’Ottomanno, of L. Soranzo) to have been "Turca da Castelnuovo". The Visconde and his son, captured at sea by Muslim corsairs in 968/1561 (some of the sources give the year as 967/1560), were taken first to Tripoli in North Africa and then to Istanbul. The father was in due course redeemed from captivity and, after living for some time at Beyoğlu, returned to Messina, where he died in 1564. His son, Scipione, became, however, a Muslim and was trained in the Imperial Palace, rising to the great personal estate of the Bağl. Cîghâla-zâde, through his marriage first to one (980-981/1573) and afterwards (983-984/1576) to another great-grand-daughter of Sultan Sulayman.
Kânûnî, found himself assured of wealth, high office and protection at the Porte.

He became Agha of the Janissaries in 982/1575 and retained this appointment until 986/1578. During the next phase of his career he saw much active service in the long Ottoman-Persian war of 986/1578-998/1590. He was Beglerbeg of Van in 991/1583, assumed command, in the same year, of the great fortress of Erivan—he was now raised to the rank of Vizier—and also had a prominent rôle. Once more as Beglerbeg of Van, in the campaign of 993/1585 against Tabriz. As Beglerbeg of Bagdad, an appointment which he received in 994/1586, Cîghala-zade fought with success in western Persia during the last years of the war, reducing Nîhåwand and Hamadân to Ottoman control.

After the peace of 998/1590 he was made Beglerbeg of Errurum and in 999/1591 became Kapudân Paşa, i.e., High Admiral of the Ottoman fleet—an office that he held until 1003/1595. During the third Grand Vizierate (1000-1003/1593-1595) of Khojdja Sinân Paşa he was advanced to the rank of fourth Vizier. The Ottomans, since 1001/1593, had been at war with Austria. Cîghala-zade, having been appointed third Vizier, accompanied Sultan Mehmed III on the Hungarian campaign of 1004-1005/1595. He tried, but in vain, to relieve the fortress of Khâvân (Hâvân), which was captured by the Habsburgs on 24 February 1005/1596, was present at the successful Ottoman siege of Egri (Erlau) (Muharrem-Safer 1005/September-October 1596) and, at the battle of Mezo-Keresztes (Hâc Ovası) in Rabl I 1005/ October 1596, shared in the final assault that turned an imminent defeat into a notable triumph for the Ottomans. Cîghala-zade, in reward for his service at Mezo-Keresztes, was now made Grand Vizier, but the discontent arising from the measures which he used in a effort to restore discipline amongst the Ottoman forces, the troubles which followed his intervention in the affairs of the Crimean Tatars, and the existence at court of powerful influences eager to restore Dâmad Ibrahim Paşa [q.v.] to the Grand Vizierate, brought about his deposition from this office before he had been in control of the government for little more than a month (Rabl I-Rabl II 1005/ October-December 1596).

Cîghala-zade became Beglerbeg of Şâm (Syria) in Diu̇mâdâ I 1006/December 1597-January 1598 and then, in Shawwâl 1007/May 1599, was made Kapudân Paşa for the second time. He assumed command, in 1013/1604, of the eastern front, where a new war between the Ottomans and the Persians had broken out in the preceding year. His campaign of 1014/ 1605 was unsuccessful, the forces that he led towards Tabriz suffering defeat near the shore of Lake Urmia. Cîghala-zade now withdrew to the fortress of Van and thence in the direction of Diyarbekir. He died, in the course of this retreat, during the month of October-December 1605.

**Cîghala-zade Sinân Paşa — Cilicia**

Geographical outline. Cilicia is wedged
between the Anatolian plateau to the north-west and the Syrian frontier to the south-east. Its southern edge is fringed by the Mediterranean, which is extremely rich in fauna and flora, and is guarded to the north by the Taurus range, over which the Cilician Gates assure communication with the plateau. To the east the Amanian Gates (al-Lukâm) and to the west, a short distance beyond Selindi (ancient Selinunte), begins the province of Pamphylia (region of Adalia). Cilicia has at all times possessed a great strategic importance on account of the Cilician and Amanian Gates. Although the mountains and sea which isolate Cilicia have given it a marked individuality, it has rarely been able to maintain its own independence for long, even when it was the kingdom of Lesser Armenia or the Turcoman principality of the Ramaḏān-oghlu. Most of the time, from the Hittites to the Ottomans, it has been incorporated by conquest into the great empires of the eastern Mediterranean.

Cilicia falls naturally into three geographical regions, Cilicia Trachea, the Cilician Taurus, and the Plain of Cilicia. Cilicia Trachea (lit.: 'rough, rugged') is a mountainous region to the west, its coast dotted with ports where pirates took refuge when chased by Pompey's ships. It is virtually without means of communication to the Turkish interior, and has patches of cultivable land only in a few valleys, such as Gök Su (ancient Cakyadnus) whose waters flow into the sea near Silifke. It is consequently a very poor region, and contains only a few small towns (Silifke, ancient Seleucia, Mut, on the road from Silifke to Karaman and Konya, and in the west Anamur on the coast and Ermenek inland).

The frontier between Cilicia Trachea and the coastal plain on the one hand and the Taurus on the other is the small river Lamos which has its spring in the Taurus. The Cilician Taurus is a strip 300 km. long by only 50 km. wide stretching in a south-west-north-east direction, and including the massifs of Dumbeka, Bulghar Dağ (corruption of Bughā; the Turkish translation of Taurus) and the Ala Dağ, one peak of which rises to 3600 m. The Cilician Gates continues northwards to the Haji Dağ. The Anti-Taurus begins to the east, on the left bank of the Zamanti Su, formerly Karmalas, a tributary of the Shayhān (Saros). Its mountains can easily be crossed, however, as the high waters have cut many valleys through them in forcing their way from the Cappadocian plateau down to the Mediterranean. The Tarsus Cay, ancient Cydnus, in Arabic Baradan, rises in the Bulghar Dağ massif and brings Tarsus its water. Between the Bulghar Dağ and the Ala Dağ are the valleys of the Cahit Su and Körkin Su, the Çaktı being a tributary of the Körkin which in turn is a tributary of the Shayhān. The road called the Cilician Gates climbs over passes and runs through these valleys. On the northern side it connects Tarsus with Ulukhīšla via Bozantlı (ancient Podandos-Budandun) where the narrowest defile, the Cilician Gates properly so called, is at Gükê Boghz, 1160 m. high on the upper reaches of the Tarsus Cay.

The most important part of Cilicia is the plain (Greek Pedias, Turkish Çukurova), a product of the alluvial deposits of its two large rivers, the Shayhān (ancient Saros) and the Diyāhān (ancient Pyramus). Along the left bank of the Diyāhān's lower reaches is a less elevated outcrop of the Taurus range, the Dağal al-Nūr or Diĝal Miṣṣā. Sheltered from the north by the great mountain barrier, the Cilician plain is open to the southern winds, enjoys the climate and flora of Mediterranean regions, and is extremely rich in flints and flint-quartz, which can be grown there, and apart from sugar-cane plantations there is also intensive cultivation of cotton. The main towns of Cilicia were always situated in this area. To the north, at the foot of the Taurus but still Mediterranean in climate, lie Sîs (at the present day Közan) and ʿAyn Zarba (ancient Anazarba), to the south Miṣṣā (Mopsuestia) on the Diyāhān, Adana on the Shayhān, Tarsus, Ayās (ancient Aigai) on the western coast of the gulf of Alexandretta, and Alexandretta on its eastern side. Mersin, to the west of Tarsus, is a relatively recent town, today named İcel.

In the Islamic epoch Cilicia Trachea and Seleucia belonged to the Greeks, the frontier between the two empires being formed by the Lamos (in Arabic Lamiš). Under the Ottomans Cilicia constituted the wilāyet of Adana, and was divided between the sangiāb of İc-I, Adana and Közan in the north, and of Diĝel Bereket around the gulf of Alexandretta.

The main towns of Cilicia are connected by the Aleippo-Fevzipasha-Adana-Uluḫīšla railway, with a branch line running via Tarsus to Marsina.

Cilicia has often been struck by earthquakes; Michael the Syrian (iii, 17) and Tabarl (iii, 68) record the one which occurred on 23 June 803; it blocked the river Diyāhān and partly destroyed the walls of Miṣṣā. Another one occurred in 1114 (see EI i s. v. Miṣṣā). The most recent occurred in 1952.

Historical Outline. When the Arabs had conquered Syria, Heraclius ordered the garrisons of towns between Alexandretta and Tarsus to evacuate their positions (see Miṣṣā). It is probable that part of the civilian population had to do likewise. The Arabs did not immediately take over these towns, but restricted themselves to raids into the region or across it into Anatolia, leaving small garrisons behind them as a security measure. On his return from an expedition in 31/651-652, Muʿāwiya is said to have destroyed all the fortresses as far as Antioch. However, records exist of the Arabs' capture of Tarsus in 53/672-673, which seems to indicate that it had been reoccupied by the Greeks or defended by its inhabitants. In 65/685, furthermore, the army of Constantine Pogonatus advanced as far as Mopsuestia (Miṣṣā). From 84/703 onwards the Arabs began to settle in Miṣṣā, stationing a garrison there during part of the year. They realized the advantage which would accrue in permanently
holding the Cilician positions, and 'Umar b. 'Abd al-'Aziz abandoned his plan to destroy all the fortresses between Miṣṣaṣa and Amorium, at the fortress of Tarsus. Amorium was captured in 103/721-22. In the first decades of the second century of the hijra it became apparent that the Arabs intended to settle in the area; Miṣṣaṣa was colonized by the Zūt [q.v.] with their buffaloes, and a bridge was built over the Sayḥān to the east of Adana, in order to secure communications across the country. Although the Arab armies had no difficulty in traversing the country by way of the Cilician Gates, its occupation was still precarious. There was as yet no systematic organization of the frontier strongpoints, or ṭughār, still dependent on the ḍiyan of Ḵinnasrīn, which Muʿāwiya or Yazid b. Muʿāwiya had detached from Ḫīṃṣ (cf. Ibn al-Shibḥa, 9). But already the positions had been transformed into ribāt, that is to say posts manned by voluntary defenders of the faith, noted for both their religious and military zeal. Al-Dinawarlī, 345, points out that after his dismissal from office Khalīd al-Ḵaṣrī [q.v.] obtained from the caliph Ḥiyyām permission to go to Tarsus, where he remained for some time marūbitun.

After the 'Abbasīd revolution the Byzantines did not take advantage of the disturbed situation to reconquer Cilicia, but instead concentrated their attention on the territories of Malayta and Ḵīšālāl. After the dynasty had become firmly established, and particularly in al-Mahdī’s reign, the Ābbāsīds undertook to fortify and populate the Cilician positions, above all at Miṣṣaṣa and Tarsus. Hārūn al-Raṣīd was the most vigorous exponent of the frontier policy. In 170/786–787 he detached the frontier strongholds from the Ḫīzaṣa and ḍiyan of Ḵīnaṣrīn and put them under a separate government called al-ʿAwaṣīm [q.v.] (al-Ṭabarl, iii, 604; Ibn al-Shibḥa, 9); Cilicia now became part of the ʿAwāṣīm ḍiyanun. Its reorganization served both defensive and offensive purposes; it helped protect Muslim territory against Byzantine incursions (cf. a poem of Marwān b. Abī Ḥaṣaṣa in Ṭabarī, iii, 742), provided a secure operational base for the Muslim armies which, by tradition, spent two to three each year into Greek territory, and served as a permanent base for volunteer troops and marūbitūn. The fortification of the positions went in hand with the launching of expeditions across the Cilician Gates during the reign of Hārūn al-Raṣīd and his successors. A vital step in the successful execution of these operations was the Muslim capture of Lulun (al-Luḥa`a) in 217/832. Its fortress guarded the northern side of a pass which led over the Cilician Gates from Podandos (Budandūn, present-day Bozant) to Tyana.

A considerable Christian population lived in the strongholds or the countryside around them. The Muslims recruited some of them as guides for their expeditions (see AIEO Alger, xv, 48), but they also sometimes acted as informers for the Byzantines, and it was perhaps as an act of reprisal that al-Raṣīd had all the ṭughār churches destroyed in 191/807 (Ṭabarī, iii, 716-717; Michael the Syrian, iii, 19 ff.).

The small river Lamos, demarcation line between Cilicia, Trachea and Arab Cilicia, was periodically the scene of the exchange of prisoners or their resale to the enemy; historians have left their records of these dealings, in particular al-Muṣṭaddī in Tāmbih, 189–196.

After Muṭṭaṣim’s famous campaign against Amorium in 223/838, which marks the end of the spectacular expeditions into Anatolia, it gradually became the custom to appoint special amirs to govern the region of Cilicia, mostly resident in Tarsus. Although initially dependent on the ʿAwāṣīm governor or the ruler of Syria, they enjoyed a certain degree of autonomy and were responsible for the defence of the country and the organization of annual land and sea expeditions. Some of the amirs of Tarsus became quite famous, e.g., ʿAll al-Armanī, the eunuch Yāzīmān (Greek Esman), Ṣulām Zaraṣā (alias Leo of Tripoli and Ṣalāḥ ‘al-ʿArwādī) Dāmūṣāna, Ṭamāl, Nasr al-Ṭamālī. For some time Cilicia, with its ʿAwāṣīm and ṭughār, passed from the control of the central government and became a dependency of Tūlūnīd Egypt (260/873–286/891). This was a troubled chapter of its history, due to the dispute between the Tūlūnīds and the central power, the intractability of the amirs, and the ravages incurred through Byzantine raids. The return of Luḥa`a (Lulun) to Byzantium in 263/876-77 constituted a serious threat to Cilicia. Nevertheless the ribāt of Tarsus developed during that period, and assumed greater proportions, as is shown by the sources used by Kamāl al-Dīn in the geographical introduction to his Buḥṣyat al-Talāb (see AIEO Alger, xv, 46 ff.) and the descriptions of al-Īṣṭaḥkī (see TARSUS). In particular, the account of Ibn al-Madīmī mentioned great sums on maintaining special units of marūbitun under military and religious leaders. At a time when the spirit of holy war gave a particular character to Cilicia, there flocked to the country a great number of scholars, traditionists, ascetics and fervent religious men, intent on fulfilling the personal obligation of ḏikād, teaching the old traditions and spreading a spirit of purest orthodoxy among the soldiers and the civilian population. The more well-known of them were Ḫibrahīm b. Adhm b. Manṣūr [q.v.], who died some time between 160 and 166 (776-783), and Ḫibrahīm b. Muḥammad al-Fazārī (d. 188/804) Ibn ʿAsākir, ii, 254. Several of these persons are mentioned in the obituaries of al-Dhahābī and Abu ʿl-Maḥāsīn, often carrying the ṭibād of Thaghrī or Tarsūsī (see under 181, 196, 273, 297 etc.). Yāḏ (ii, 526) mentioned their return of Luḥa`a (Lulun) in 252/866, two great numbers (cf. i, 529). It is known that ʿAbd al-Tūlūn was educated at Tarsus. Muslim festivals were celebrated in great brilliance there. Abu ʿl-Maḥāsīn (iii, 60) considered the feast of breaking the fast in Tarsus to be one of the four wonders of Islam.

In the first part of the 4th/10th century Cilicia came under the rule of the Ḫīṣḥīd, the governor of Egypt, who received his investiture from the caliph. After the clash between the Ḫīṣḥīd and the Ḥamdānī amīr Sayf al-Dawla, who won control of northern Syria and Aleppo, the governor of the frontier province submitted to the amīr of Aleppo, and the amīrs of Tarsus henceforth participated in Sayf al-Dawla’s expeditions. But the Tarsus fleet, weakened by the policy of the caliph al-Muṣṭaddī, who had had it destroyed, was only a minor factor in the struggles of the 4th/10th century. In the second half of the century the threat of Byzantium from the north caused constant disturbances and rebellions, and the operations of 852/963–854/965 resulted in the complete reconquest of Cilicia by the Greeks (or Byzantines). It remained Byzantine for more than a century, during which time the outflow of Muslims was accompanied by a considerable inflow of Armenians, stimulated by Byzantine practice of using Armenian officers to administer the country. After the Saljūq raids had driven back those Armenians
who had settled in Cappadocia after the Turkish conquest of Armenia, their number now increased once more, and, the battle of Manzikert in 1071, a virtual Armenian principality was created, stretching from Melitene to Cilicia. Its head was the Armenian Philaretus, a former general of Romanus Diogenes, and he established his capital at Marash (see Chalandon, Alexis Comnène, 95 ff.; J. Laurent, Byzance et les Teyls Seljoucides, 81 ff.; idem, Byzance et Antioche sous le curopealiate Philaretès, in Rev. des Ét. arm., ix (1929), 62 ff.; Grouset, Histoire des Croisades, i, xi, ff.). The Armenian chiefs Oshin of Lampron (present-day Namrun Yayla, northwest of Tarsus) and Ruben of Partzepet (north of Siş) were perhaps his vassals. They retained their feuds when Philaretus departed from the scene, defeated by the Turks. The Turks had ravaged Cilicia even before Manzikert, and shortly before the arrival of the Crusaders (Michael the Syrian, iii, 179) they seized the main towns, though failing to subjugate the Armenian princes in the Taurus. The latter joined forces with the Crusaders in 1097 and helped Baldwin of Boulogne and Tancred to reconquer the Cilician towns. There followed a period in which the towns continually changed hands in the struggle between Byzantium and the Frankish principality of Antioch. Alexis Comnenus recognized the independence of Cilicia, but he was driven by further efforts to lose them once more to the latter's nephew Tancred, who in 1103 handed them over to his uncle upon his release from the imprisonment imposed by the Dânishmand of Malatya. In 1104 they were retaken by the Byzantine general Monestras (Anna Comnena, XI, xi, 6; ed. Leib iii, 49). They remained the scene of dispute until 1108, when Bohemond was forced to sign a treaty acknowledging the authority of Alexis Comnenus over the whole of Cilicia (Anna Comnena, XIII, xii, 21; ed. Leib iii, 134-135). His nephew Tancred however did not abide by the treaty.

The descendants of Ruben continued to consolidate the development of an Armenian state, and sought to bring all of Cilicia under their control. Thoros I, who had moved from his first seat of power at Ruben Ayn Zarba to his new capital of Lampron (Tournebize, Histoire politique et religieuse de l'Arménie, 171; Cahen, La Syrie du Nord à l'époque des Croisades, 253; Matthew of Edessa, in Hist. arm. des Croisades, i, 84-85), captured Siş and Anazarba from the Greeks. During the reign of his successor Leo I (1129-1137), Bohemond of Antioch attempted to re-establish his authority in Cilicia, but this brought him to a fatal conflict with another aspirant to Cilicia, the Dânishmand of Cappadocia (Michael, iii, 227). Around 1132 Leo captured Tarsus, Adana and Misûşa from the Greeks (Chalandon, i, 235, ii, 108-109) (or from the Franks, according to Cahen, 354). He followed this up with the seizure of Sarvankar, on the western flank of the Amaranus. This led to a rupture with Raymond of Poitiers, count of Antioch, but the quarrel was patched up shortly afterwards when Leo was faced with a new Byzantine threat from the north, and as a token of reconciliation he ceded the plain of Cilicia to Raymond. John Comnenus invaded Cilicia in 1137, and regained all the towns except Anazara, and in the following year took Leo and his son prisoner. Leo was carried off to Constantinople, where he died in 1142. Out of all Cilicia was Byzantina, and remained so until Leo's son; Thoros, who had escaped from Constantinople after accession of Manuel Comnenus in 1143, regained a foothold in upper Cilicia; Thoros II (1145-1169) retook Ayn Zarba and the other towns in Cilicia in 1151-52, and defended them successfully against Mas'ud, the estâlikid of Konya, who fought at the instigation of Manuel Comnenus. Thoros also sided with Reynald of Châtillon, count of Antioch, in his attack on Byzantine Cyprus. Manuel Comnenus, however, was not willing to allow the situation to deteriorate any further. In 1158 he invaded Cilicia, reoccupied all the towns, and reduced the country once more to a Byzantine province. The emperor's camp was established at Marj-Dîbûdu (Baltolhâdi, north of Missûşa; see Honigmann, Ostgrenze, 121, and Cahen, 152), and Reynald of Châtillon went there to tender his submission. Thoros, who had taken refuge at vakha, north of Siş on the upper Sayhân, subsequently did likewise, and in return the emperor made him governor of Missûşa, Ayn Zarba and vakha, bestowing on him the title of Sebastos. But in 1162, when his brother Sâlefanâ perished in an ambush laid by the Byzantine governor Andronikos Comnenus, Thoros once more raised the standard of revolt, and seized Ayn Zarba together with other Cilician towns. Amâlric, king of Jerusalem, intervened to re-establish peace. In 1164 Thoros sided with the Franks in their conflict with Nur al-Dîn. He died in 1169. His brother Mîleh, whom he (Thoros) had exiled, rallied to the side of Nur al-Dîn, and with the aid of Bohemond of Antioch, he reconquered the rest of Cilicia and obtained official recognition by Manuel Comnenus. He was assassinated in 1175, and his nephew Ruben III succeeded him. The latter was driven by betrayal into the hands of Bohemond III of Antioch, and the price of his release, negotiated by his brother Leo with Hethoum (Het'um, Hajthûm) of Lampron, was the cession of Missûşa, Adana and Tell Hamdûn to Antioch. However, he recaptured them later. In 1187 he abdicated in favour of his brother Leo (1187-1198), who in 1198 became the first king of Armenia-Cilicia when crowned in Tarsus by the Catholicoi and the papal delegate. It was in Leo's reign that Frederick Barbarossa's Crusade arrived in Cilicia. Frederick was drowned in the Câlugadun (Gök Su), and part of his forces returned to Germany. The remainder was speedily defeated by the Byzantines. In 1198 Leo III died, and his son Leo IV was crowned as Leo IV. Leo IV's reign was his constant attempt, after Bohemond's death in 1201, to secure the succession to Antioch for Raymond Ruben. Although Raymond was Bohemond's grandson, he was also the son of Leo's niece Alice, and moreover had been brought up in Armenia. But Raymond had a strong competitor in Bohemond IV, count of Tripoli, who had the support of al-Malik al-Zahir of Aleppo, and Bohemond IV in the end triumphed.

After Leo's death in 1219, Raymond Ruben tried in vain to win possession of Cilicia. He was taken prisoner at a battle near Tarsus by the bailiff of Constantine, of the Lampron family, and died in captivity (1222). Philip, son of Bohemond IV and his wife Isabella (Leo's daughter), was crowned as his successor and was considered too 'Frankish' and not sufficiently Armenian, he was arrested by Constantine and put to death by poison. This act was one of the reasons which provoked an inter-
vention by 'Alâ’ al-dîn Kaykubâd (1219-37). On the instigation of Bohemond IV, he laid waste the region of Upper Cilicia in 1225 and reduced Constantine to subjection. The latter persuaded the Mongols to sell him tallers to give him their stronghold at Seleucia, which they had occupied ever since Leo had handed it over to them in 1210. In 1226 Constantine obtained the succession for his son Hethoum, who married Philip’s widow Isabella.

Hethoum reigned until 1270, and from the bilingual coinage minted under his reign, it is evident that he knew that in the early years of his reign he acknowledged Saldjûkîd suzerainty (de Morgan, Histoire du peuple arménien, 202-3). Other with Muslim and Christian princes he took part in the struggle against Çingiz Khân, but when the Mongol general BâyduÎ conquered the Saldjûkîd Kaykhûrsaw in 1243, he transferred his obedience to the Mongols and surrendered them Kaykhûrsaw’s mother, wife, and daughter. In consequence the Saldjûkîds reacted sharply against Cilicia in 1245, and Hethoum was able to avert defeat only by summoning Mongol assistance. His position as a vassal of the Mongols was formalized on several occasions; in 1247 he dispatched the High Constable Sempad to Mongolia; in 1254 he paid a personal visit to the Mongolian court; he supplied Armenian contingents for the Mongol expedition to Syria, and operated against the economic blockade of Egypt by withholding exports of Cilician timber (see Mas-Latrine, Histoire de Chypre, i, 412; Grousset, iii, 633). From that time onwards the Armeno-Cilician kingdom, or the land of Sis as Arab historians call it, increasingly became subject to the object of Mamluk attacks, as the following examples bear witness: (i) 664/1266, a retaliatory expedition under Baybars captured, pillaged, and burnt down Sis, Missisa, Adana, Ayas and Tarsus; (ii) 673/1275, another expedition by Baybars seized Missisa, Sis, Tarsus and Ayas, and carried out raids into the Taurus; (iii) 682/1283, a campaign under Kalâ’dûn against Alexandreta, Ayas and Tell Hamdûn; (iv) 697/1297, an expedition led by Lajîn against Alexandreta, Tell Hamdûn, Sis, Adana, Missisa, Nudjàyma, etc., during which the stronghold of Sis was occupied and a tax of 500,000 dirhams was imposed; (v) in 703/1303, as the payments had not been made regularly, and as the strongholds were firmly held, a new expedition forced the Armenians to pay the tribute in advance and confirmed the surrender of the strongholds; (vi) 705/1305, as a result of further defaults in payment, a new expedition was launched, in which the Mongols rendered assistance to the Armenians and defeated the Mamlûks; but when Egyptian reinforcements arrived, the king had to pay; (vii) 715/1315, the tribute was raised to one million dirhams; (viii) 720/1320; (ix) 722/1322, Ayas was captured, and to the tribute were added 50% of the revenues from the Ayas customs authority and the sale of salt; (x) 725/1325, a further expedition following a reprisal raid by the populace of Ayas on the merchants of Baghdad; (xi) 737/1337, a new expedition launched by Malik Nâsir Muhammad because payments of the tribute had stopped. It captured Sis (destroying its citadel in the process) and secured surrender of the forts under the name al-Futûhât al-Djâhânîyya (from the Armenian corruption of Djâyhân). They included Missisa, Kawara, Háûûnîyya, Sarvanükûr, Bayûs, Ayas, Nudjàyma, and ëmûnasra. Further raids were carried out in 756/1355 and 760/1359. The frequent raids of Mamlûk incursions indicates that they did not consolidate their occupation of the country after each expedition. Then, in 776/1375, a final expedition brought the end of Sis as an independent kingdom. Sis itself fell to the Mamlûks, and to the Venetians, but it was captured and was not released until 1382. The Armeno-Cilician kingdom became incorporated into the Mamlûk empire (on the above events see the following under relevant dates: al-Mâqûrî, Sulûk, ed. Muftûûa Ziûya, and Quatremerêde’s translation, Hist. des sult. mamli.; Mufa’dîl b. Abî ‘l-Fâdhîl, trans. and ed. Blochet, Pair. Or., xii & xiv; Abî ‘l-Fîdî and his continuator Ibn al-Wardî, Ibn ëlyûs, Ibn Kâhpîr, Bidâya, Abu ‘l-Ma’nûsî. See also note on the expeditions in AIEO Alger, 1939-41, 53-54, with other references, and G. Wiet, L’Egypte arabe, vol. iv of the Histoire de la Nation égyptienne, 417, 425, 449, 466, 475, 483-484. See also Zetterstéen, Beitrâge zur Geschichte der Mamlûken Sultane, indiae; the article on Mîsîsû, Adana, Ayas, sîs. For the relations between the Armenians and the Karamân-oghullarî, see the article KARÂMÂN and F. Taeschner, Al-Umarî’s Bericht über Anatolien, index).

A Mamlûk governor, the Turcoman Yûregirîghûl Rama’dân, who established himself at Adana in 1378, inaugurated the small Rama’dân-oghullarî [g.e.], dynasty nominally vassals of the Mamlûks. In 1467 Cilicia was invaded by Shâhsûwarî, of the Dîo ‘l-Kadr [g.e.] dynasty. Between 1455 and 1489 the Ottomans attempted to conquer Cilicia, but it was not until 1516 that they succeeded in doing so, Sulînîn Selim I capturing it during his expedition to Egypt. The Rama’dân-oghullarî were not removed from power however, and they remained vassals of the Ottomans until the end of the 17th century. Cilicia was then fully integrated into the Ottoman Empire. In 1833 Ibrahim Pâsha, the son of Mehemet Ali who had revolted against the Porte, carried out a victorious campaign in Cilicia, and the province was ceded to his father by the treaty of Kûtahya. To this day traces of the campaign can be seen in the Cilician Gates. Cilicia was returned to Turkey in 1840 and became part of the vilayet of Aleppo. In 1866 a military force was sent from Istanbul to assert the authority of the central government over the local dervishes and tribal chiefs. This prepared the way for extensive agricultural settlement, which was accomplished in part with the help of Muslim migrants and repatriates from the Crimea and from the lost Ottoman territories in Europe and North Africa. (Jewedet Pasha, Mûrûddî, TTEM, no. 1491, (1926), 117 ff.; W. Eberhard, Nomads and Farmers in south eastern Turkey; problems of settlement, Örients, vi (1953), 32-49). It was occupied by French troops from 1918 to 1922, and handed back to Turkey by the Franco-Turkish treaty of Ankara. The plain of Cukurova is now one of the most flourishing agricultural areas in Turkey.

CILLA [see KHALWA]

ČIMKENT, chief town of the region of South Kazakhstan of the Soviet Socialist Republic of Kazakhstan, situated on the river Badam, which flows into the river Arls, tributary of the Sr-Daryâ. The town is mentioned in the Żafar-nâma of Sharaf al-DIn Yazdi as a “village” near the city of Sayrâm. After its capture by the Kalmâks in 1864, Sayrâm declined to the advantage of Čimkent; but at the time of the Russian conquest (1281/1864) Čimkent was still only a fortified market-town, surrounded by a clay wall and dominated by a small citadel. According to the Russian census carried out a little after the conquest, the town comprised 756 houses.

On the eve of the October Revolution, Čimkent was mainly known as a summer resort frequented by the residents of Tashkent on account of the mildness of its climate and the excellence of its water. It had in 1897 12,500 inhabitants, of whom 800 were Russians and 150 Jews. The environs of Čimkent included at the end of the 19th century numerous prosperous Russian villages and several native villages, of which the most important were Sayrâm, and the Asbijdâ or Asbijdâ of the Arab groupers.

The very rapid development of the city dates from the Soviet period. In 1926 it comprised 21,000 inhabitants, in 1939 74,200 and in 1956 130,000. Čimkent is an important road centre at the junction of the roads which wind their way from Russia (by way of Aktubinsk and Kzy-Korda) and from Siberia (by way of Alma-Ata) towards Tashkent, and is an important railway junction where the Djambul-Arls, Kzy-Korda and Čimkent-Lenger railways intersect.

Before the Revolution Čimkent was an agricultural centre which subsisted principally from the plantations of cotton (introduced in 1897) and from the harvesting of the medicinal plant artémisia cinae from which santonin is prepared.

Since the discovery in 1932 of veins of lead at Aûsây and Karamazor, and of coal at Lenger, Čimkent has become an important industrial city (factories of chemical and pharmaceutical products, combined with non-ferrous metals). The city included in 1956 35 primary and secondary schools, 19 secondary technical schools and two colleges (the Teachers' Institute and the Technological Institute of Building Materials).

The population of the city is very mixed, the Russians now constituting the majority of the inhabitants; the Muslim community includes Kazakhs and some Özbekfs. (CH. QUELVURJAY)

CIN [see al-šın]

CINEMA (šînîmâ). History. Cinema is a newly imported art into the Muslim world; as such, it is a facet of the Western impact of the West, applied and expressing their interest in Western technical achievements and forms of entertainment. Silent films were apparently first imported into Egypt by Italians (1897), attracting considerable interest. Film shows for Allied troops, during World War I, familiarized many Near Easterners with the cinema. The influx of foreign films, the construction of entertainment halls, and the intellectual curiosity of the local intelligentsia made Egypt the centre of film shows and afterwards of local production. Most films shown then in the Near East were comedies or Westerns; in Egypt, mainly the former were emulated. Local production by foreign technicians, with Egyptians starring, started on silent films (1917); despite their mediocrity, they were warmly received. Simultaneously, cinema clubs sprang up, which eagerly discussed film-techniques and published in Arabic short-lived cinematic periodicals. Full-length Egyptian silent films were first produced (1927) by, respectively, the directors Wdâd ʿUrîfî and Lâma Brothers, at a minimum cost. All rather resembled photographed sequences of a play, but were nonetheless welcomed by the public. This success encouraged Yûsuf Wahbî,dots, to experiment with sound film: he took to Paris, for synchronization, an Arab silent film, Awâdâl dhawdt (apparently patterned after Fr. Coppée's Le coupable), in which he himself had starred. Its enthusiastic reception in Egypt assured the future of the Arabic-speaking film. Arabic film production has been speeded up in the last generation. In 1934, the large Studio Misr was founded near Cairo; others followed. Halls were built, chiefly in the towns. Production was encouraged, during World War II, by the lack of Italian and German competition. Commercial success led to quantity predominating over quality; the resulting lower standards were due also to inexperience in direction and photography, and to shortage of technical equipment.

Acting and actors. Most Arab filmstars are in Egypt. Some former theatre actors or singers are idolized, e.g., leadingmen: the late comedians ʿAlî al-Kassâr and Naṣîhîl al-Rihâlî, the living Yûsuf Wahbî, protagonist of the "social" film on local themes. Some leading ladies can act in character roles; most others sing well.

Characteristics and Themes. The Arabic-speaking film has been, until recently, rather imitative of its European or American counterpart, but artistic and technical standards are generally lower. While in recent years the overriding importance of music has somewhat declined, it is still customary to introduce a sub-plot that includes vocal and instrumental Arabic music and dancing. Another drawback to the plot is the somewhat faulty script-writing, due to the limited experience of local actors-authors. While scripts adapted from foreign films, plays or novels (e.g., al-Bu*asa? = Les misérables, with ʿAbbâs Fâris) were usually successful, those frequently composed at the bid of a producer-actor have often resulted in an unimaginative plot. The main types of films are: a. the historical (generally on themes chosen from Arab or Islamic history; in Egypt—also from Pharaonic times), b. the social drama or melodrama (once popular for its tear-jerking appeal, later for its social aims), c. the musical, d. the comedy or slap-stick farce (usually on local background), e. adventure
and detective films. The first two are the best, artistically. Colloquial Arabic (Egyptian dialect) is
long claimed Egypt as their earliest home; hence their English name, and hence too the Spanish
name is still uncertain; one suggestion is that it comes from Cangar or Zingar, said to be the name
of a people formerly dwelling on the banks of the Indus. It is supposed that the Sasanid Bahram V
Gür (420-438 A.D.) first brought the gipsies from India to Persia, and that they spread thence over
the world. In the relevant passages in Firdawsi and Hamza Isphahaní these Indians are called Loll or
Zott [g.v.]. Other names commonly used are Nawar
and elsewhere. In Egypt the name Ghadiar is also in
use, while the gipsies of Egypt are fond of calling them-
selves Baramika (descendants of the Barmakids).
Although the Indian origin of the gipsies is now
generally accepted, various groups of them have long claimed Egypt as their earliest home; hence
their name for themselves in their own language is Romany, the adjective of
rom, 'man'.

As in other countries, the gipsies of the east are
smiths, tinkers, pedlars, jugglers, musicians and
bear-trainers; some are sedentary while others lead
a wandering life. The sedentaries are generally
despised by those who adhere to the old ways.

No reliable statistics about them exist, but they
are certainly quite numerous in Persia and Turkey.
It has been fairly conclusively shown (by G. L.
Lewis; see Bibliography) that one tribe of 'Yuriks'
in western Anatolia is in fact gipsy, and it seems
likely that other Turkish gipsies are similarly hiding
behind this blanket-term.

Some gipsies are nominally Christian, others
nominally Muslim (thus the Geygellis are said to
be 'Alewi but not to intermarry with other
Alevis); in reality they have their own religion and political
organization, which need not be discussed here; a
useful short account will be found in Funk and
Wagnalls Standard Dictionary of Folklore, s.v.
Romany Folklore.

ClNGANE — ClNGIZ-KHAN

P. Anastase in Mashrik 1902; De Goeje, Mémoires d'histoire et de géographie orientales, no. 3 . . . . .;

The Cinganes of the Soviet Union ClNGANE are found in the Crimea, in Aďgharbaydyan and in Central Asia. The census of 1926 gave a number of 4,000 Muslims out of the 61,294 gipsies included in the census, but it is probable that the real figure is higher. S. A. Tokarev (Etatografiya Narevod SSSR, Moscow 1958) estimates the number of Muslim gipsies in Central Asia at 5,000, and that of Aďgharbaydyan as “some thousands”. According to the statistics of 1926, there were at that time 3,710 Muslim gipsies still in Özbekistan, 300 in Turkmenistan, and an indeterminate number, probably quite high, in the region of Kulîb and in the Soviet Socialist Republic of Tagîllistan.

The Cinganes of the Soviet Union comprise several groups, which are fairly distinct from each other by their language and customs. They are known either by local names: “Karači”, “Lülü”, “Mazang”, “Džügi”, “Kavol”, or by names of trades: Zargaran, Kâsâgaran, Margân-furush. They call themselves “lom” or “dom”. The Lül and the Džügi live in Özbekistan and speak mainly Persian (Tagîlliki); a Turkish-speaking minority speak Özbek. The gipsies of Aďgharbaydyan (Karači) and Kulîb (Kavol) speak only Persian. A group from the region of Kulîb still uses a distinctive language of its own which has not yet been studied, and which I. M. Oranskiy (Indyauññaya etnografiya chesaya gruppa “AFGON” v Srednñ Asii, in Sov. Etn., no. 2, 1956, 117-124) considers to be an Indian dialect. Their Tagîllik neighbours call them Afgân, and wrongly confuse them with the latter, who are quite numerous in the southern part of the Kulîb region. According to Oranskiy and Tokarev the Džügi, the Lül, and the Mazang still use a “secret language”. The gipsies of Central Asia and of the Crimea are theoretically Sunnîs and those of Aďgharbaydyan Shiîs.

ClNGIZ-KHAN, the founder of the Mongol world-empire, was born in 1167 A.D. on the right bank of the Onon in the district of Delî’un-Boldok in the present-day Chita Region in eastern Siberia. The ultimate sources for the details of his early life are two Mongol works, the Secret History of the Mongols, composed in 1240 (or perhaps as late as 1252), and the Allan Dehtor or "Golden Book", the official history of the Imperial family. This latter work has not survived in the original, but the greater part of it is reproduced in the Di’amî al-

The Cingane — Cingiz-Khan

The union of a grey wolf and a white doe; and in both authorities the new-born child is represented as clutching in his hand, in token as it were of his future career as a world-conqueror, a clout of blood of the size of a knuckle-bone.

Cingiz-Khan’s father, Yesügi, was the nephew of Kutula, the last khan or ruler of the Mongols proper, who were afterwards to give their name to all the Mongolian-speaking peoples. The Mongols had been the dominant tribe in Eastern Mongolia during the first half of the 12th century but had been forced to yield place to the Tatar, a tribe in the region of the Buir Nor, who in 1161, in alliance with the Chin rulers of Northern China, had inflicted a crushing defeat upon them. Though now leaderless and disorganized the Mongols still continued the struggle against the Tatar, for we find that at the time of Cingiz-Khan’s birth his father had brought in two Tatar chieftains as prisoners of war. One of these was called Temüüjin-Uke and it was after him that Cingiz-Khan received his original name of Temüüjin. The word means “blacksmith” and this gave rise to the legend, already current at the time of William of Rubruck, that the world-conqueror had begun his career at the forge.

When Temüüjin was nine years old his father, following the exogamous practice of the Mongols, took the boy with him upon a journey into the extreme east of Mongolia to find him a bride amongst his mother’s people, the Konkîrat. According to the custom Yesügi left his son to be brought up in the tent of his future father-in-law, whose daughter, the 10-year old Borte, was destined to be the mother and grandmother of Emperors. Upon the homeward journey Yesügi fell in with a party of carousing Tatar. Unable to refuse the invitation to share in their feast he was recognized by his former enemies, who poisoned his food; and he lived only long enough to reach his own encampment and dispatch a messenger to fetch back Temüüjin from the Konkîrat.

With Yesügi’s death his family was deserted by his followers under the instigation of the Tačïłut, a clan with aspirations to the leadership of the tribe. His widow, a woman of spirit, attempted, at first with some success, to rally the people to her; but in the end she and her young children were left to their own resources in the expectation that they would die of starvation. They survived however upon a diet of roots and berries eked out with such fish as Temüüjin and his brothers were able to catch in the Onon and such small prairie birds and animals as they were able to shoot with their bows and arrows. It was in a quarrel over game of this sort that Temüüjin is said to have been involved in the murder of one of his half-brothers.

He had grown almost into manhood when the Tačïlut, learning of the family’s survival, made a raid upon the little encampment with the object of seizing Temüüjin and preventing any possibility of his succeeding to his father’s position. He escaped into the forests and for some days eluded his pursuers. When finally captured he was not put to death but was kept as a perpetual prisoner, the Tačïlut taking him with them from encampment to encampment with a cangue or wooden collar about his neck. One evening, when they were feasting along the bank of the Onon, he made off in the dark and, to avoid detection, submerged himself in the river with only his face above water. When the pursuit started his hiding-place was discovered by a member of a kindred tribe, who however befriended the young
man and saved him from immediate danger by persuading the TaikTut to postpone their search till the morning. In the meanwhile Temüüjijn found his way to the tent of his benefactor, who concealed him once again from his enemies and then provided him with the means of escape.

It was soon after this adventure that Temüüjijn betook himself of the bride awaiting him in Eastern Mongolia and he paid a visit to the Konklärat to lay claim to her. Börte brought him as her entire dowry a black-sable skin, a circumstance worthy of mention, since with this sable Temüüjijn was to lay the foundations of his future fortune. He offered it as a present to Toghril, the ruler of the Kereyti, a Nestorian Christian tribe, whose territory lay along the banks of the Tula in the region of the present-day Ulan Bator. Toghril, better known to history as Ong-Khan (he is the Prester John of Marco Polo), had been the anda or blood-brother of Temüüjijn's father. He expressed his pleasure at the gift and took the young man under his protection. Not long passed before Temüüjijn had need of his patron's assistance. The Merkits, a forest tribe on the southern shores of Lake Baikal in what is to-day the Buryat A.S.S.R., raided Temüüjijn's encampment and carried off his newly married bride. With the aid of Toghril and Djamuka, a young Mongol chieftain who was his own anda, Temüüjijn was able to defeat the Merkites in battle and to recover his wife. For a time, after this campaign, Temüüjijn and Djamuka remained firm friends, pitching their tents and herding their animals side by side; but then an estrangement arose between them and they parted company. The reason for this estrangement is not clear but Barthold's theory, according to which Temüüjijn represented the Mongol aristocracy which Temüüjijn was for a time an exile at the court of the Kara-Khitay. Djamuka, meanwhile, deserted by his followers, had been betrayed into the hands of Cingiz-Khan, who, with the execution of his one-time anda, at last found himself the absolute master of Mongolia. At a kuriltai or assembly of the Mongol princes held near the sources of the Onon in the spring of 1206 he caused himself to be proclaimed supreme ruler of all the Mongol peoples. Having also at this kuriltai reorganized his military forces he was now in a position to embark upon foreign conquests.

Already in 1205 he had attacked the kingdom of the Tangut or Hsi Hsia, a people of Tibetan origin who inhabited the region of the great bend in the Yellow River and were converging from three directions upon Pekin. The Chin Emperor was now invaded and overran the whole area north of the Great Wall, but the Wall itself presented a barrier to further advance. In the following year their cause was promoted by the rising of a Khitan prince in southern Manchuria; and in the summer of 1213 they finally forced their way through the Wall and spread out over the North China plain. By the spring of 1215 they controlled the whole area north of the Yellow River and were converging from three directions upon Pekin. The Chin Emperor was now offered and accepted terms of peace and secured the withdrawal of the Mongol forces by the payment of tribute which consisted, in effect, in the immense dowry of a Chin princess bestowed in marriage upon Cingiz-Khan. Circumstances however led to the Mongols' almost immediate return. Pekin was captured and sacked (summer of 1215), and the Emperor fled to K'ai-feng on the southern banks of the Yellow River. Though the war still continued —and, in fact, the subjugation of North China was not finally completed until 1234, seven years after Cingiz-Khan's death—Cingiz-Khan now left the
command of operations in the hands of one of his generals, Mušali of the Djalayir tribe, and, in the summer of 1216, returned to his headquarters in Mongolia, turning his attention to events in Central and Western Asia.

The accession of Semirechye and Sinkiang to his Empire gave Cingiz-Khan a common frontier with Sultān Muhammad Khārīzm-Shāh. Relations between the two rulers had been established already in 1215, when Cingiz-Khan had received an embassy from the Sultan before Pekin. In 1216, or more probably in 1219, a battle took place, and in the course of which the local population he was captured and put to death.

Kūllūg the Nayman, who had sought refuge with the Kara-Khitay, had dethroned the last of their rulers and made himself master of their territories. In 1218 a Mongol army under the famous general Djebe invaded Semirechye and Sinkiang and pursued Kūllūg from Khashkhar over the Pamirs into Badakhshan, where with the co-operation of the local population he was captured and put to death.

The accession of Semirechye and Sinkiang to his Empire gave Cingiz-Khan a common frontier with Sultān Muhammad Khārīzm-Shāh. Relations between the two rulers had been established already in 1215, when Cingiz-Khan had received an embassy from the Sultan before Pekin. In 1216, or more probably in 1219, a battle took place, and in the course of which the local population he was captured and put to death.

Cingiz-Khan meanwhile had passed the summer of 1220 resting his men and animals in the pastures of the Nakhshab area. In the autumn he captured Tirmidh and then proceeded up the Oxus to spend the winter of 1220-1 in the conduct of operations in the region of the present-day Stallinabad, as also in Badakhshān. Early in 1221 he crossed the Oxus and captured Arizm-Shāh [q.v.]; and when the Sultan himself reached the Oxus, he accomplished with a thoroughness from which the site could be ploughed upon; and that in the execution of vengeance [for the death of a Mongol prince] not even cats and dogs should be left alive. After the capture of Harāt Toluy rejoined his father, who was laying siege to the town of Talāshān between Balikh and Marw ar-Rūd, whilst he himself with the main army reached the present-day Talāshān in the Afghan province of Badakhshān.

The summer of 1221 Cingiz-Khan passed in the mountains to the south of Balikh. In the meantime Djalāl al-Dīn, the son of Sultān Muhammad, had made his way to Ghazna and at Parwān to the N. E. of Čārkār had inflicted a crushing defeat upon the Mongol force dispatched against him, the only reverse suffered by the Mongols during the whole campaign. Cingiz-Khan, upon receiving news of this battle, advanced southwards at great speed in pursuit of Sultān Djalāl al-Dīn, whom he finally overtook on the banks of the Indus. In 1222 he left three sides of his army at the lower reaches of the Oxus, and with the river behind him Djalāl al-Dīn, after offering desperate resistance, plunged into the water and swam to the farther side, surviving to conduct sporadic warfare against the Mongols for three years after Cingiz-Khan's death.

The Battle of the Indus, which took place according to Nasawi on the Shawwal 513/24th November 1221, marks the end of Cingiz-Khan's campaign in the West. He began to prepare for the homeward journey and having explored the possibility of returning through India via Assam and Tibet finally turned back along the route he had been following. He travelled by easy stages, spending the summer of 1222 in mountain pastures on the Hindu-Kush and the following winter in the neighbourhood of Samarqand. The reverse suffered by the Mongols during the whole campaign. Cingiz-Khan, upon receiving news of this battle, advanced southwards at great speed in pursuit of Sultān Djalāl al-Dīn, whom he finally overtook on the banks of the Indus. In 1222 he left three sides of his army at the lower reaches of the Oxus, and with the river behind him Djalāl al-Dīn, after offering desperate resistance, plunged into the water and swam to the farther side, surviving to conduct sporadic warfare against the Mongols for three years after Cingiz-Khan's death.

In the autumn of the following year he was on the upper reaches of the Irtysh; and it was only in the spring of 1225 that he finally reached his headquarters in Mongolia.

In the autumn of the following year he was on the upper reaches of the Irtysh; and it was only in the spring of 1225 that he finally reached his headquarters in Mongolia.

share in the dismemberment of the Kipchak. Of these, the following succeeded:

c) Ulugh Mehemd (murdered in 850/1446), after his expulsion from the "Great Horde", to the Khânate of Kazan (Russ. Kazan [q.v.]) which his successors (among whom were the princes of Kasimov, see "Kasimov") lost in 960/1552 to the Russians.

d) Ulugh Mehemd's nephew, Hâjîdî Girây (q.v.; d. 870/1466), held last (definitively in 1449) to the Crimea (see Khâm) where his successors, under the dynastic name Girây, ruled as the last descendants of Cingiz Khan in Europe, until the annexation of the Crimea by the Russians in 1783.

e) In the small Tatar principality of Kasimov (q.v.), region of Ryazan, various princes (finally a princess) of the line of Ulugh Mehemd (see "Cingizids") ruled between 856-932/1452-56 and about 902/1681. Some of them (including the last ruler) became converted to Orthodox Christianity and became the forefathers of Russian noble families.

f) Descendants of the branch ruling in Astrakhan (see "B") had fled after the Russian conquest to the Shaybanids in Bukhârâ (see "E a"). One of them, Prince Dîjan b. Yâr Muhammad, married the daughter of the Shaybanid Khân Iskandar (968-991/1560-83). After the extinction of the male line of the Bukhârâ dynasty in 1006/1598, their son Bâî Muhammad assumed the rule of the land. The new dynasty was called "Astrakhanid", "Ashârkhânid" or "Dîânîd" (q.v.), and ruled in Bukhârâ (q.v.) until their displacement in 1200/1785 by the House of Mangit (q.v.).

d) Among the descendants of a further son of Dîjan, Moghol (or Tewal?; P. Pelliot, Notes 52/54 considers "Boa" better), his grandson Nohây (q.v.; Moghol "Nohây" 'dog') played a significant role as major domus for several rulers of the Golden Horde, until he was killed in a civil war in 699/1299. His descendants are known for a further two generations before they disappear. — Apparently the Nohây people (q.v.) is called after him.

e) Finally, the descendants of Dîjan's youngest son Shîban (Arabicized "Shâyban") lived originally in the region southeast of the Urals (somewhere between the basin of the Tobol in the west and the Upper Irtish in the east, modern Kazakhstan) where they preserved their nomadic life. When the inhabitants of Orda's "White Horde" under Toktamish migrated far into the Kipchak Plain, the Shaybanids (q.v.) occupied their territory, and the peoples under their rule came to be called Ozbek (q.v.); Russ. Uzbek). Of Shîban's descendants, the Shaybanids, Abu-i Khâyân (q.v.), i. 135 expelled in 851/1447 the Timûrids (q.v.) from Khwârizm (q.v.) and in the region north of the Srî Darâ (q.v.). He ruled the area from there to the neighbourhood of Tobol'sk, but was weakened by the devastating attacks of the Oirats (q.v.; Kalmuks) into his territory as well as by the struggles with the Kazaks (q.v.) and died in 870/1468. His grandson Muhammad Shaybânî (q.v.) conquered Transoxania in 908/1500, where he finally assumed the rule of the Timûrids, penetrating finally into modern Afghanistan (q.v.) as well as Khûrâsân (q.v.). The founder of the Safavid dynasty (q.v.), Ismâ'il I (q.v.) managed to expel him from there and to defeat him near Marw in 916/1510, where Muhammad Shaybânî was killed. With that move, the power of the Cingizids was restricted to the area north of the Amû Darya, and of this to a frontier zone between Persian Shi'I and Turkish Sunni influence (not without isolated shifts in both directions in the course of time).
The reign of the Shaybanids endured in Transoxania, where they ruled:

a) until 1007/1598 in Bukhara, where the ruling family died out in 1007/1598. The Abū ʿAlāʾ Allāh II (q.v.), i, 46 ff.; 901-1007/1593-98. The Djanids succeeded (see “C f.”).

b) In Khwarizm (q.v.), later called for the most part Khiva, which had fallen in 911-912/1505-06 to Muhammad Shaybânî, the tributary line of the ʿArabshâhid dynasty succeeded in 1001/1592 in the person of Ilbars I (1512-25). To this line belongs the famous āl-Atrak”. The line ruled until 1106-7/1694-95, when the power passed to the erstwhile “Condottieri” (Ināk) of the Kungrat family (q.v.) who after 1219/1804 called themselves “Khan”.

c) A further branch of the Shaybanids under Shāh Rukh I, a descendant of Abu-ʾl-Khayr, established himself in Farghana (q.v.) in 1122/1710. He founded the Khānate of Khokand (q.v.) which was annexed in 1876 by the Russians.

d) Finally in 886/1481 the Shaybanid prince Iblâ (d. 899/1491) was able to wrest the neighbourhood of the town of Tumen (Russ. Tyumen) from the hands of the Khân of Shibir (who was not a Cingizid). In 1253/1545 his grandson Khūmīrī expelled the last Khân of Shibir (q.v.) and put down his successors, though after 1279/1571 he himself oppressed by Russian attacks and gradually pushed out of his territory, until he had to flee to the Nogays after a defeat on the Ob’ in 1007/1598, dying there in 1009/1600. His son Išım Khan managed to hold out on the Upper Tobol’ until about 1635.

e) Kasimov (cf. “C e”).

II) The descendants of the second son Câghâtay (q.v.), d. 640/1242 persisted for almost as long, managing to hold their ground against the descendants of Ögedey (see III) in the 7th/13th century, and to win out against them in 700/1300 (See Čâpâr). After that date inner Asia belonged to their area of rule (Ulus). From then on there were various struggles with the Ilkhâns (q.v.; see also under “IV B”) in Persia, and invasions into India, particularly between 697/1297 and 706/1306.

Câghâtay’s great grandson Barâk (q.v.; usually called by Muslims “Bûrkâ”) and the latter’s son Duwa (about 691/1291 to 706/1306) had with Chinese aid asserted themselves against Kâdü (see III). Duwa’s son Kebek (Köpek) was able in 709/1309 to take possession of the latter’s inheritance. (d. 726/1326) His brother Termashirîn (727-735/1326-34) was converted to Islam, taking with him the dynasty and gradually (though not without setbacks) the territory it ruled into the sphere of Islam. His death was followed by a temporary cleavage in the Ulus of Câghâtay:

a) The branch of the house ruling in Transoxania was converted to Islam.

b) In the eastern part of the Ulus, since called Mogholistan (the land of seven rivers/Djeti suw/ Semirecye); the area round Issyk Kul as well as the western Tarim Basin with Kâşgar) ruled a line under whom Islam only spread slowly.

A renewed unity of the two parts by Tughrûl Temür (q.v.) was finally broken by Timûr’s victory in 765/1363 by which Transoxania came to develop a separate character, where Turkish now definitely attained to leadership. Beside Timûr Câghâtâyids continued to rule in the nominal Khân until 805/1402. The Khâns in Mogholistan could not be eliminated, despite Timûr’s persistent efforts.

Rather after Timûr’s death in 808/1405, they were able gradually to regain influence in Transoxania. In particular, Esen Bogha (833/876-1429-62) proved himself a dangerous opponent of the Timûrids.

Between him, the Kara Khoyunlu (q.v.), the Ak Khoyunlu and finally, the rising Şâfawîlds (q.v.), the Timûrîds (with the exception of the Great Moghuls) were gradually worn down. Their territory fell finally to the Shaybanids (q.v.; see also above “I E”) and to the (eastern) Câghâtâyids from Mogholistan, among whom Yûnus (874-891/1469-86), raised as a hostage in Shârz, took possession in 889/1484 of Şavâ as well as Sayrân (q.v.) and Sayrân (q.v.). His successors maintained themselves there, reaching out at the same time—in opposition to China—towards Hâ-mî and Turfân (q.v.), to whose islamization they decisively contributed. In Transoxania the Câghâtâyids were definitively eliminated in 914-5/1508-09 by the Shaybanids. Only Mogholistan east of Tîn-šan remained in the hands of this dynasty, who were forced to share their power with the clan of Duwa (q.v.), centred at Kâşgär. Living for the most part in harmony, both families took part in the struggle for Hâ-mî and Turfân against China, a struggle which lasted still in the 16th century. Apparently at the end of that century a particular branch of the Câghâtâyids established itself in Turfân, and in 1057/1647 and 1068/1657 sent embassies to the Great Khân in China. By the end of the 16th century Câghâtayid power had split in several parts. It was fully ended in 1089/1678 when Khan Ísmâîl of Kâşgär (q.v.) attempted to get rid of the control of the Khâdja (q.v.) which, divided in two parts, since the end of the 10th/16th century had been the real leaders in that region, which was organised in separate city states in the form of theocracies.

III) Cingiz Khan’s third son Müssîdî (q.v.), in accordance with his father’s will and with the approval of his agnates, succeeded his father as the Great Khân from 627/1230 until 639/1241. His son Göyük (Pers. Gôyûk) too had his honour from 644/1246 to 646/1248. The widows of both, Türegene (Pers. Türêkâna) and Oghul Kaymish, conducted the regency in 659-664/1261-66 and 664-67/1268-71. Under Bâtu’s infuences this son this line was unable to maintain itself in the Great Khânate, which passed to the line of Tolû (see IV). None of the less, Kaydû, a nephew of Gôyûk, held his own in Ögedey’s Ulus on the Imîl, in the Tarbagatay Mountains and in modern Afghanistan. He conducted long wars with the princes of the House of Câghâtay (II), especially Barâk, as well as with the Great Khân Kubîlay, whose “nomadic” rival he was. He adhered to the old Mongolian religious traditions, and died in 1301 on the return march from an assault on Karaşorum (q.v.). His son and successor Câpâr (Capar; q.v.) resumed the struggle against the descendants of Câghâtay and Kûbulay, but had to flee from Kebek (see II) in 1309 to the court of the Mongol Emperor of China. Thereupon the Ulus of Câghâtay ceased to exist.

IV) Cingiz Khan’s youngest son Tolû had a such received as Ulus the territory of the actuals Mongolia. Since his sons Möngü (Pers. Mangû; q.v.) 1251-1259, and Kûbulay (q.v.) 1259-94, were Great Khâns into whose hands until 1280 all of China had fallen, there was a dynastic connexion between Mongolia with its capital Karaşorum and the Middle Kingdom, where the Mongol dynasty was called Yûn. A third brother Arîk (Erik) Bûge, who attempted to establish himself in Mongolia, was forced to surrender in 1264 and died in 1266 in Kûbulay’s custody. His great-grandson Arpa ruled
The numbers and letters of this geneological table correspond with the numbers and letters of the article "ČINGIZIDS".
for a few months in 1335/36 as Ilkhan (see "IV B").

A) Kubilay inclined more and more towards Buddhism, and his successors as emperors of China were completely absorbed in the indigenous culture and in the Chinese religion. The essential cause of this was that after Kubilay's death in 1294 the entire Mongol network collapsed, as the other branches of the house had sooner or later converted to Islam, even the Ilkhans of Iran in 695/1295, who had hitherto particularly cultivated their relations with Khân-balik ("Khân-city"); Peking. The Yuan dynasty, driven out of China in 1368, maintained the rule in Mongolia, where the various branches of the house drifted apart, though having nothing to do with Islam. At the end of the 16th century among the Mongols (as a linguistic community) Buddhism was established in its Tibetan form of "Lamaïsm" of the "Yellow Church". The Kalnukuks (q.v.) too brought this religion to the Volga where they preserved it. After 1649 the Mongols in the Ords region were again subject to Chinese authority.

B) A fourth brother of Kubilay, Hulegui (Pers. Hulâgû; (q.v.) d. 1265) conquered in 635-638/1238-9. Persia, "Irâk and Mesopotamia, and, temporarily, Syria. He destroyed the Abbasid caliphate and founded the empire of the Ilkhans (q.v.). He and his successors were in the beginning more or less indifferent as long as they remained in the position of his ancestors. In 694/1295 were converted to Islam, even the Ilkhans of Iran in 695/1295, who had hitherto particularly cultivated their relations with Khân-balik ("Khân-city"); Peking. The Yuan dynasty, driven out of China in 1368, maintained the rule in Mongolia, where the various branches of the house drifted apart, though having nothing to do with Islam. At the end of the 16th century among the Mongols (as a linguistic community) Buddhism was established in its Tibetan form of "Lamaïsm" of the "Yellow Church". The Kalnukuks (q.v.) too brought this religion to the Volga where they preserved it. After 1649 the Mongols in the Ords region were again subject to Chinese authority.

In addition, see the bibliography for the individual branches of the Cingizids, for the individual members of the family, and for the above-mentioned geographical and town names. 

(B. Spuler)
disciples of Shaykh Nizām al-Dīn Awlīya’. His father Yahyā was born in Lāhore. Later the family settled at Awadh (A’bād-i Aydoğhā), where his father traded in woolen cloth or cotton (paşminā in Khāyār al-Maadīlis, var. panēh in A’kbur 80). It was in Awadh that Mūmūd was born, but he was not yet nine, when his father died. His widowed mother arranged for his education with a distinguished scholar of those days Mawlānā ‘Abd al-Karīm Shārahwānī (Nuzhāt al-Khawādir, ii, 70), with whom he studied up to al-Mārgānīn, Hīdāyāt al-Fīhāt, and Fazadāt Usul; (Brockelmann, i 373, s 1 f 837). When Shārahwānī died the young Mūmūd completed his education in the usual sciences with Mawlānā Iftīhār al-Dīn Muhammad al-Gilānī (Nuzhā, ii, 15). When he was about twenty-five, he renounced the world and for seven years went through a rigorous course of self-discipline and self-mortification, and fought against the passions with prayer and fasting. At forty-three he moved to Dīhīl and became a disciple of Shaykh Nizām al-Dīn Awlīya’, i.e., Muhammad Bādā’ūnī. After this he visited Awadh only occasionally and was mostly attending on his murshid at the Dīmā’at Khānā at Kilkohafi, on the bank of the Diamnā. He resided in Dīhīl in the house of his old friend and fellow-disciple Shaykh Būrhan Dīhīl al-Dīnahīg [q.v.]. Towards the end of 724/1324, or a few months later, his Shaykh, who was then about 94, appointed him his successor in Dīhīl, to carry on his life-work and engaged themselves in teaching and anecdotes about him, were collected by Hamid Kalandar (A’kbur, 109, 86). The work called Khayār al-Maadīlis, begun in 735/1334 and completed in 756/1355, is divided into 100 Madīlis (Assemblies). The Shaykh himself revised this work. A takmila (supplement) was added to it by the author, after the death of the Shaykh. The narrative is given in simple Persian and the account is full and detailed. For quotations from it see A’kbur, 109 f, 83-5. An Urdu translation of it exists (Tarīkh Masayikh Cishتل 16211, 1836). A number of his sayings reveal a learned and illumined personality. For an Arabic verse of his see A’kbur, 97.

The enormous influence which he wielded in Dīhīl and outside it (northern India and Deccan) in his own and the following generations, becomes clear from the lengthy list of his notable disciples and khāfīyas, who are noticed in detail in the A’kbur, 129-140, 141-144, 147-149 and 85, (see also Nuzhāt al-Khawādir, ii, 159), including as it does, among others such names as those of Kādī ‘Abd al-Muktarīd (d. 791/1399; see also Subha, 29, Nuzhāt al-Khawādir, ii, 70), Sayyid Mūhammad b. Yūsuf, usually known as Gūsdārdār (died in Gulbarga in 825/1422, see Fīrīshtā, ii, 748, Rīve, 347), Sayyid Dā’al Bakhārī Mādhūmī-Dīhānīyān (d. 783/1383 in Sindh), Aḥmad Thā’n’esari (died in Kālpī; who won consideration from Aḥmid Tūghluq (A’kbur, 142), Mūthābhar of Kāfā (for whom see the Oriental College Magazine, Lāhore, May 1935, 107-106, Aug. 1935, 48-216, A’kbur, 85 f.), and Mawlānā Khwādīgaṯl (A’kbur 141). To this list may be added the names of Gakh Sirāḏ Parwānā, the Shaykh’s khāliṯa in Bengāl, Huṣām al-Dīn al-Dīnah al-Nawrāhāl (Gūgārāt) (Fīrīshtā, ii, 748, 747), and Mūhammad Muḏīr Waḏḏ al-Dīnah Adｂ, author of the Muṯtaḏ al-Dīmā’at (Rīve, 40 f.). The Shaykh died after a short illness on the 18th Ramḍān 757/17 September 1356, and was buried in his own house (Kirmānī, 247), appointing no successor, and the relics he had received from his Shaykh were buried with him. This symbolised the end of the first series of the great Cīštī Saints in India. A mausoleum was built on his tomb by Sultan Flūrūz Shāh. A tomb close to the Shaykh’s is popularly supposed to be that of Sultan Bahlūl Lūdī (in verse), who visited his master (Kirmanī, 245 f.; Diāmāli 38 b; Dā’al al-Fid’l, 81, 91; Fīrīshtā, ii, 748). Muhammad Mubārak al-Kirmānī, Siyar al-Auliya’, Delhi 1902, 236-247; Dīmā’at, Siyar al-Ārīfūn no. 11, my MS., ff. 136-140, 141 b; Abu ‘l-Fadl, ‘Arīf-i Akhbar (Bib. Ind.) ii, 218; Aḥmad-I Ḥusayn, ‘A′rīf-i Akhbar (Bib. Ind.) ii, 218; Aḥmad-I Rāzī, Haft Ifrīm, Agra 1872, 100 f.; plus, Mūhammad Mubārak al-Kirmānī, Siyar al-Ārīfūn no. 402; ‘Abd al-Haḵḵ, Aḥḵār al-Akbār, Delhi 1309, 80 b, 129 f., 134 f., 139 f., 147-149, 153; Māνdawī, Aḥḵār-i Aḏrār (Urdu version of Gultūḏ al-Aḏrār), Āḏrā 1326, 115; Dārā Shuḵhōn, Safīnāt al-Awliya’h (Lucknow 1872, 100 f.; Hakim ‘Abd al-Ḥayyā Lāḏḵawānī, Nuzhāt al-Khawādir, Ḥaydarābāḏ-Deccan, 1350, ii, 147 f.; Rahmān ‘Ali) Aḥḵār ‘Ulamā’h Hind (Lahore 1914, 1938, 236; Balsk, Oriental Biographical Dictionary, Calcutta 1881, 205; idem, Miṣrīn al-Tawārīḵ, 89; Ghulām Sarwar, Khazīnāt al-Asfīyā’h, Lahore 1283, 340-35; Aḥmad Mahdi Usayn, The Rise and fall of Muḥammad bin Tughluq, London 1938, 209 ff., Muhammad Ḥabīb, Shāhī Naṣīr-al-Dīn Mūmūd, Char’gh-i Dīhīl as a great historical personality, in IC, 552 (1946), 129 ff.; Storey, i, 86-91; i, Kha ḫyār Ahmad

Har taraf dars-hā zar ỉ ṯ u ỉ ṭ hish u ṭ usl, Har taraf Ḹ hirh as Khudawān Rasūl. (Panjab University MS. f. 142)

When Sultan Muhammad Tughluq 725-52/1324-51 adopted a hostile policy against the ulamā’ etc. (for reasons discussed by Mahdi Husayn), they created difficulties for the Shaykh too in various ways. The sultan would take him along with him on his travels and on one occasion he put him in charge of his wardrobe. The Shaykh bore all these troubles and hardships and remained celibate like him. After the death of his Shaykh he guided the people for thirty-two years. Kirmānī (242 ff.) gives several instances of his remarkable power of thought-reading.

He and most of his khāfīyas lived in strict obedience to the shari’a and engaged themselves in teaching religious sciences and the spreading of knowledge (cf. Ghulām ‘All Āzād, Subḥat al-Margānīn, 30). A contemporary fafhīr, Kamāl al-Dīn, the author of Twafq al-Fuṭahāh (in verse), who visited his Ḹ hishānāh, confirms it thus:

“On every side Jurisprudence and its (its) Principles were being taught, on every side God, and the Apostles were being mentioned.”

- Bierstedt, Wanderjahre. II-V, 240-241; St. N. Kyriakides, "AvXaTVal MeXsToa," in India, was born in or about 536/1141 in Siijistan. He was in his teens when his father, Sawaiid Ghiyath al-Din, died leaving as legacy a grinding mill and an orchard. The sack of Siijistan at the hands of the Guuzz Turks turned his mind inwards and he developed strong mystical tendencies. He distributed all his assets and took to itineracy. He visited the seminaries of Samarkand and Bulbahra and acquired religious learning at the feet of eminent scholars of his age. While on his way to Irak, he passed through Harvan, a kasaba in the district of Nigashir. Here he met Khwajda Uthman and joined the circle of his disciples. For twenty years he accompanied his mystic teacher on his Wanderjahre. Later on he undertook independent journeys and came in contact with eminent saints and scholars like Shaykh ’Abd al-Kadir Gllani, Shaykh Nadjm al-Din Kubra, Shaykh Nadjib al-Din ’Abd al-Kahir Suhrawardi, Shaykh Abû Sa’id Tabrizi, Shaykh ‘Abd al-Wahid Ghaznavi—all of whom were destined to exercise great influence on contemporary religious thought. He visited nearly all the great centres of Muslim culture in those days—Samarkand, Bulbahra, Bagdad, Nishapir, Tabriz, Awhsh, Isfahan, Sazawir, Mhna, Khirkân, Astarabâd, Balkh and Ghaznî—and acquainted himself with almost every important trend in Muslim religious life in the middle ages. He then turned towards India and, after a brief stay at Lahore, where he spent some time in meditation at the tomb of Shaykh All al-Hudjwiri, reached Adjmêr before its conquest by the Guzz. It was here that he married at an advanced age. According to ’Abd al-Ha King Dihlawi (d. 1642) he took two wives, one of them being the daughter of a Hindu râdj. He had three sons—Shaykh Abû Sa’îd, Shaykh Fâhir al-Din and Shaykh Husâm al-Din—and one daughter, Bibî Djamal, from these wives. Bibî Djamal had strong mystic leanings but his sons were not inclined towards mysticism. Nothing is known about Abû Sa’id; Fâhir al-Din took to farming at Mandal, near Adjmêr; while Husâm al-Din disappeared mysteriously. Mu’in al-Din died at Adjmêr in 633/1236. His tomb is venerated by Hindus and Muslims alike

Encyclopedia of Islam, II
and hundreds of thousands of people from all over the Indo-Pakistan sub-continent assemble there on the occasion of his *urs* (death anniversary).

The dargah area contains many buildings—gates, mosques, hospices, langars—constructed by the rulers of Malwa, the Mughal emperors, nobles, merchants and mystics during the past several centuries. Muhammad b. Tughluq (626-752/1225-1351) was the first Sultan of Dhilli who visited his grave (*Futak al-Salatin*, Madras, 406). The Khaldji Sultans of Malwa constructed the tomb of the saint. It was during the reign of Akbar (959-1014/1556-1605) that Adjmer became one of the most important centres of pilgrimage in the country. The Mughal emperors displayed great reverence for the mausoleum of the saint. Akbar undertook a journey on foot to Adjmer, and Shah Djuhan's daughter, Djuhan-Árã, cleansed and swept the tomb with her eyelids.

KhwaÁ‡dja MuÁ‘in al-Din laid the foundations of the Cishti order in India and worked out its principles at Adjmer, the seat of Cawhan power. No authentic details are available about the way he worked in the midst of a population which looked askance at every foreigner. It appears that his stay was disliked by Prithvî Rádji and the caste Hindus but the common people flocked to him in large numbers. He visited Delhi twice during the reign of Iltutmish (1210-1235), but kept himself away from the centre of political power and quietly worked for a cultural revolution in the country. His firm faith in wahdat al-udwádât (Unity of Being) provided the necessary ideological support to his mystic mission to bring about emotional integration of the people amongst whom he lived. Some of his sayings, as preserved in *Siyar al-Awliyá*, reveal him as a man of wide sympathies, catholic views and deep humanism. He interpreted religion in terms of human service and exhorted his disciples "to develop river-like gentleness, sun-like affection and earth-like hospitality". The highest form of devotion (*tadh*), according to him, was "to redress the misery of those in distress; sympathies, catholic views and deep humanism. He provided the necessary wáhdat al-'árifin, a disciple of the saint, compiled by his *al-'Arifin*, a disciple of the saint, compiled by his and tracing the growth of legends round the Khwadja's person; its historical value is, nevertheless, very meagre. For later authorities, Abu 'l-Fadl, Á‡in-i Akbari, Sir Sayyid ed., 209; Ghawwáli, Gulád-i

CISHTIYYA, one of the most popular and influential mystic orders of India. It derives its name from Cîst, a village near Harat (marked as Khwâwâdá ‘i Cîst on some maps), where the real founder of the order, Khwâwâdá Abú Íshâk of Syria (Mir Khúrud, *Siyar al-Áªlwiyá?, Delhi 1302, 39-40; Dári, *Nafáhát al-Ums*, Nawal Kishore 1915, 206) settled at the instance of his spiritual mentor, Khwâwâdá Mûmâhd ‘Ulâm dinawâr (a place in Kuhistán, between Hamadán and Baghdad). The sîtsila is traced back to the Prophet as follows: Abú Íshâk Mûmâhêd ‘Ulâm dinawâr, Amlán al-Din Abú Hubayrát al-Áªrã, Sadid al-Din Huzayýfát al-Mar'áqshí, Íbráhim Adham al-Bálqíjí, Abu 'l-Fayyád Fuqâyá b. Íyád, Abu 'l-Fadl 'Abd al-Wâhid b. Zayd, Hasan al-Áªrã, ‘Ali b. Abí Tálíb, the Prophet Muhammad. Sháh Wâlt Allah (d. 1763) has doubted the validity of the tradition which makes Hasan al-Áªrã a spiritual successor of 'All (Al-Ísháb Í Saláís-í Alwiyá? Allâh, Delhi 1911, 18), but his views have been criticised by Sháh Faqîr al-Din Dhillawli (d. 1784) in his *Fakhr al-Hasân* (commentary on this, by Mawláwân Ahsan al-Zâmán, *Al-Kawal al-Mustakhyín fi Fakhr al-Hasân*, Haydarâbâd 1312). The pre-Indian history of the Cîshítl order cannot be reconstructed on the basis of any authentic historical data. Khwâdja MuÁ‘in al-Din Sîdijí Cîshít (see preceding article) brought the sîtsila to India in the 12th century and established a Cîshítl mystic centre at Adjmer, whence the order spread far and wide in India and became a force in the spiritual life of the Indian Muslims. Khwâdja MuÁ‘in al-Din was connected with the founder of the sîtsila by the following chain of spiritual ancestors: MuÁ‘in al-Din Hasan, Uhmánh Harváni, Hâdji Sháhír Zámdânt, Mawaíd Cîshít, Abí Ýúsuf, Abí Muhammad b. Âhmâd, Abí Âhmâd b. Fárasana, Abú Íshâk. (The earliest lists of the great Cîshítl saints in the order of their spiritual succession are given in *Futak al-Salátin*, Madras, 7-8; *Khâyir al-Madädínt*, Aligarh, 7-8; *Siyar al-Awliyá?, Delhi, 124-145; Ahsan al-Áªrãh, MS personal collection).
Shaykhs (circa 597/1200 to 757/1356), (ii) Era of the Provincial Khatamaks (8th/14th & 9th/15th centuries), (iii) Rise of the Ṣabirīyya Branch (9th/15th century onwards), and (iv) Revival of the Niẓāmiyya Branch 12th/18th century onwards.

The saints of the first cycle established their ḳhānakhs mainly in Radżputāna, U.P. and the Pandjāb. Some of them, like Ḥamīd al-Dīn Shīrī, worked out the Cishtī mystic principles in the rural areas; others lived in kābars and towns but scrupulously avoided identification with the centre of political power. They refused to accept diwārs and government services; did not perpetuate spiritual succession in their own families and looked upon ‘learning’ as an essential qualification for spiritual work. Under Shaykh Fārid Gandj-i Shāhak and Shaykh Nizām al-Dīn Awliyā, the influence of the order was extended to the whole of India, and people flocked to their hospices from distant parts of the country. The silsilā possessed during this period a highly integrated central structure which controlled and guided the activities of those associated with it. Muhammad b. Tughluk’s policy (1325-1351) of forcing the saints to settle in the various provinces of India. Some of them had taken up their residence in provincial towns at the instance of their master; others were forced by Muhammad b. Tughluk to settle there. It is significant that the arrival of these saints in provincial towns coincided with the rise of provincial kingdoms. In these circumstances many of these saints could not keep themselves away from the provincial courts. The traditions of the saints of the first cycle were consequently discarded and the comfortable theory was expounded that mystics should consort with kings and high officers in order to influence them for the good. State endowments were accepted and, in return, spiritual blessings and moral support was given to the founders of the new provincial dynasties. The principle of hereditary succession was also introduced in the silsilā.

Shaykh Sirādī al-Dīn, popularly known as Akhlī Sirādī, introduced the silsilā in Bengal. His disciple Shaykh ‘Alī al-Dīn b. Aṣāīd was fortunate in having two eminent disciples—Sayyid Nur Kūṭī ‘Alam and Sayyid Ashraf Ḍihāṅgīr Simnānī—who played a very important role in popularising the Cishtī silsilā in Bengal, Bihar and eastern U.P. When Rādī Kāns established his power in Bengal, Sayyid Nur Kūṭī ‘Alam organized public opinion against him and persuaded Sultan Ibrāhīm Shākht of Dhavnūr (1402-1440) to invade Bengal. Nūr Kūṭī ‘Alam and his descendants had a share in creating that religious stir which ultimately led to the rise of the Bhakti movement in Bengal and Bihār.

The Čishtīyya order was introduced in the Deccan by Shaykh Burhān al-Dīn Qāhirī who settled at Dāwalītābād and propagated the Cishtī mystic principles. The city of Burhānpūr was named after him. His disciple, Shaykh Zayn al-Dīn, was the spiritual master of ‘Alī al-Dīn Hasan Shāh (1347-1359), the founder of the Bahmani kingdom. Later

Muhammad Ilyâs Kandhlawi (d. 1944) (Dîhlî)
on, a disciple of Shaykh Naṣīr al-Dīn Ṣirāgh, Sayyid Muhammad Gūsā Darāz, set up a Čishtī centre at Gulbarga. He was a prolific writer and a scholar of several languages. Through him the āliya spread in the Deccan and Gujūrāt.

In Gujūrāt, the āliya was introduced by two less known disciples of Khwāja Kuṭb al-Dīn—Shaykh Mahmūd and Shaykh Hamīd al-Dīn. Later on, three disciples of Shaykh Nizām al-Dīn Awlīyā—Sayyid Ḥasan, Shaykh Ḥusām al-Dīn Muṁtānī and Shaykh Barak Allāh reached there. But the work of organizing it on effective lines was undertaken by ʿAllāma Kamāl al-Dīn, a nephew of Shaykh Naṣīr al-Dīn Čirāgh. His son, Sirāḏ al-Dīn, refused to leave India. Dara Shukoh had great respect for and passing through Thanesar. Djiāhangīr forced him to leave India. Dara Shukoh had great respect for and carried on correspondence with Shaykh Muḥibb Allāh, but Awrangzhīb was very critical of his religious views. Shaykh ʿAbd al-ʻRahīm joined the movement of Sayyid Ahmad Shahīd and died fighting at Balakot in 1830. Hādī Imdād Allāh migrated from India in 1857 and settled at Mecca. He attracted a very large number of externalist scholars to his mystic fold. Many of the outstanding Indo-Muslim

Very little is known about the founder the Sabirīyya branch, which came into prominence in the 9th/15th century when Shaykh Ahmad ʿAbd al-Ḥakīm set up a great mystic centre at Rudwālī. The main centres of this branch of the Čishtī āliya were Kalyār (near Roorkee in the Saharanpur district of U.P.), Panipat, Rudwālī (38 miles from Bārā Bankī in Awadh), Gāngū (23 miles u.c. of Saharanpur, in U.P.), Thanesar (near Panipat), Dhān-gāhnā (in Muṣaffārānagar district, U.P.) Allāhābād, Amroha (in the Murādābād district of U.P.) Deoband (in Saharanpur district, U.P.); Thāna Bhawān (in Muṣaffārānagar district, U.P.) and Nānawātī (in Saharanpur district). Shaykh ʿAbd al-Kuddūs was the greatest figure of the Šabirīyya branch. He left Rudwālī in 1491, at the suggestion of the famous Afghān noble, Ṣāmīr Khān, and settled at Shahābābād, near Dīhlī. In 1526, when Bābur sacked Shahābābād, he went to Gūnghū and settled there. His epistolary collection, Maktūbat-i Kuddūsī, contains letters addressed to Sikandār Lūdī (1488-1517), Bābur (1526-1530) Humāyūn (1530-1556) and a number of Afghān and Mughal nobles. The relations of the Šabirīyya saints with the Mughal emperors were not always very cordial. Akbār (1556-1605) no doubt paid a visit to a šaykh Djiālāl-al-Dīn Fārūkī at Thanesar, but Djiāhangīr (1605-1627) became hostile towards his disciple, Shaykh Nizām al-Dīn Fārūkī, because he had met the rebel prince, Khwāsūr, when he was passing through Thanesar. Djiāhangīr forced him to leave India. Dārā Shukōh had great respect for and carried on correspondence with Shaykh Muḥibb Allāh, but Awrangzhīb was very critical of his religious views. Shaykh ʿAbd al-ʻRahīm joined the movement of Sayyid Ahmad Shahīd and died fighting at Balākot in 1830. Ḥādī Imdād Allāh migrated from India in 1857 and settled at Mecca. He attracted a very large number of externalist scholars to his mystic fold. Many of the outstanding Indo-Muslim

(iv) REVIVAL OF THE NIZĀMIYYA BRANCH:

Shāh Kalīm Allāh Djiāhānābādī (d. 1142/1729) (Dīhlī)
Shāh Nizām al-Dīn (d. 1142/1729) (Dīhlī)
Shāh Fakhr al-Dīn (d. 1199/1784) (Dīhlī)
Nūr Muḥammad (d. 1205/1790) (Mahārān, in Bahawalpur)
Muḥammad ʿAṣīl (d. 1229/1813) (Caṭrān, Panḍāb)
Hāfīz Djiāmāl (d. 1226/1812) (Mūłtān)
Gul Muḥammad Ahmādpūrī (d. 1243/1827) (author of Takhmīlāt-i Siyār al-Āliya)
Khudā Bakhsh (Mūltān)
Allāh Bakhsh (d. 1901) (Taunsa)
Hāfīz Muṣā (d. 1906) (Taunsa)

Shāh Niyāz Muḥammad (d. 1250/1834) (Bareilly)
Sayyid Nizām al-Dīn (Bareilly)
Shāh Muhīy al-Dīn (Bareilly)
Sayyid Muḥammād Sulaymān (d. 1267/1850) (Taunsa, near Dera Ḥafiz Khān)
Muḥammād ʿAllāh (d. 1267/1850) (Khiyārābād, U.P.)
Ḥādī Nādīm al-Dīn (d. 1287/1870) (Fathpur, near Dhiānghūnū, Rādīputnā)
of the post-1857 period, like Mawlana Rashid Ahmad Muhaddith of Gangu, Mawlana Muhammad Kāsim Nanawātī, Mawlana Aghraf Ali Thānawi, Mawlana Māhmed al-Hasan Deobandī, Sayyid Aḥmad Muhaddith Amrohī, Shaikh Mīrāt Ahmad Madani, Mawlana Khaļīf Ahmad, Mawlana Muhammād Ilyās Kandhīwāl, Mawlana Ahmad Ḥasan Muḥaddīth Amrohī, may be counted amongst his spiritual descendants. Almost all the great ulama of Deoband (q.v.) are spiritually associated with the Cīshṭīyya silsilah through him.

The Niẓāmiyya branch of the Cīshṭīyya silsilah was revitalised by Shaikh Kallīr Mawlānā Ḥājmānbādī. He belonged to that famous family of architects which had built the Tādīr Mahall of Agra and the Diwāni Masjīd of Dīhī, but he dedicated himself to spiritual work and infused new life into the almost defunct Cīshṭī organization. After Shaykh Naṣīr al-Dīn Cīrāgh, he was the greatest Cīshṭī saint who revived the old traditions and strove to build up a central organization of the silsilah. His disciples spread in the distant south also. His chief Ḥāfiṣa, Shaykh Niẓām al-Dīn, worked in Awarangābād. The latter's son, Shāh Fakhr al-Dīn, came to Dīhī and set up a mystic centre there. It was through his two Ḥāfiṣās, Shāh Nūr Muhammad of Māhrān and Shāh Niẓām Ahmad of Bareilly, that the Khalīfahs of Shāh Nur Muhammad of Māhrān and of Deoband [q.v.] are spiritually associated with the Cīshṭīyya silsilah at the following places in the Pandjab: Taunsa, Cārān, Kāt Mithān, Ahmādpur, Mūlān, Sīyāl, Gulra, and Dīsālāpur. Shāh Niẓām Ahmad worked mainly in Dīhī and U.P.

B: Ideology

The early Cīshṭī mystics of India had adopted the Šaurūrī or Maʿārīf of Shaykh Šīhāb al-Dīn Suhrawardī as their chief guide book. On it was based the organisation of the silsilah. His disciples spread in the distant south also. His chief Ḥāfiṣa, Shaykh Niẓām al-Dīn, worked in Awarangābād. The latter's son, Shāh Fakhr al-Dīn, came to Dīhī and set up a mystic centre there. It was through his two Ḥāfiṣās, Shāh Nūr Muhammad of Māhrān and Shāh Niẓām Ahmad of Bareilly, that the Khalīfahs of Shāh Nur Muhammad of Māhrān and of Deoband [q.v.] are spiritually associated with the Cīshṭīyya silsilah at the following places in the Pandjab: Taunsa, Cārān, Kāt Mithān, Ahmādpur, Mūlān, Sīyāl, Gulra, and Dīsālāpur. Shāh Niẓām Ahmad worked mainly in Dīhī and U.P.

The early Cīshṭī saints, however, did not write anything about wakhdāt al-wudjuḍ. Māḥfūẓ Bakkī's Mīrāt al-Arīfīn and his dīwān, Nūr al-Aʿlyn, gave currency to these ideas and his works became a popular study in the Cīshṭī khānaḏahs. Later on, Shaykh ʿAbd al-Kaddūs wrote a commentary on Ibn al-ʿArībī's books and he was followed by Shaykh Niẓām al-Dīn Thānesarī, who wrote two commentaries on Firaqī's Lāmāʿūd. One of his ʿHaflas, Shaykh ʿAbd al-Karīm Lūhāy, wrote a Persian commentary on the Fausq al-Ikhtāl. Shaykh Muhīb Allāh of Allāhābād was a very powerful exponent of the ideology of wakhdāt al-wudjuḍ. Awarangābād, who was more influenced by the school of Shaykh Ahmad Sirhindī, ordered his books to be burnt. (ii) The Cīshṭīs looked down upon possession of private property as a negation of faith in God. They rejected all worldly goods and material attractions (urūs tī dunyā) and lived on futāh, which were not demanded as charity. (iii) They

believed in pacifism and non-violence and considered retaliation and revenge as laws of the animal world. They lived and worked for a healthy social order—free from all dissensions and discriminations. (iv) In no form was contact with the state permitted. "There are two abuses among the mystics", says an early Cīshṭī mystic, "dírārat and muballāt. Muballāt is one who has no master; dírārat is one who visits kings and their courts and asks people for money". (v) The summum bonum of a mystic's life, according to Cīshṭis, is to live for the Lord alone. He should neither hope for Heaven nor fear Hell. Man's Love towards God may be of three kinds: (a) mahabbat-i Ḥaṣṣ, i.e., love which is the result of cosmic emotion. A mystic should develop the last one. (ii) The Cīshṭi mystics did not demand formal conversion to Islam as a pre-requisite to initiation in mystic discipline. Formal conversion, they said, should not precede but follow a change in emotional life. The Cīshṭī attitude contrasted sharply with the Suhrawardī principles in this respect.

C: Practices

The following practices were adopted by the Cīshṭīs in order to harness all feelings and emotions in establishing communion with Allāh: (i) Dīkhī Ḥāfez, reciting the names of Allāh loudly, sitting in the prescribed posture at prescribed times; (ii) Dīkhī Ḥaft, reciting the names of Allāh silently; (iii) Pār-i Afnās, regulating the breath; (iv) Murābā, absorption in mystic contemplation; (v) Cīlā, forty days of spiritual confinement in a lonely corner or cell for prayer and contemplation. The efficacy of audition parties (sama ʿi) was also emphasised. Some Cīshṭī mystics believed in Cīlā-i ṭakāts ("inverted Cīlā") also. One who practiced it tied a rope to his feet and had his body lowered into a well, and offered prayers in this posture for forty nights.

The literature of the Cīshṭīyya has been considered under five heads: (a) maḥfaẓāt (translations) of the saints, (b) maktūbāt (letters) of the saints (c) works on mystic ideology and practices, (d) biographical accounts of saints and (e) poetical works. Only major and representative works have been indicated here.

(a) Maḥfaẓāt: The maḥfaẓāt literature of the Cīshṭī saints throws valuable light on their thought and activities. The art of maḥfaẓāt-writing was introduced in India by Aḥmad Ḥasan Siddīqī, who compiled the conversations of Shaykh Niẓām al-Dīn Awliya ʿ in his Fawwūd al-Fuʿāda, Nawal Kishore 1302. Other important collections of maḥfaẓāt are the following: Khayr al-Mahdīūs, conversations of Shaykh Naṣīr al-Dīn Cīrāgh, compiled by Ḥamīd Kalandar (ed. K. A. Nizami, Aligarh); Surūr al-Ṣūdār, conversations of Shaykh Ḥamīd al-Dīn Sūfī, compiled by his grandson (MSS Habībqandī) and personal collection; see Proceedings of the Indian History Congress, Nagpur Session, 1950, 167-169; Aḥsan al-ʿAbūd, conversations of Shaykh Ḥuraḥ al-Dīn Ghāfīrī, compiled by Mawlānā Ḥamīd Nāẓīmī, MG (MS personal collection, see J. Pak. Hist., vol. iii Part I, 40-41).
conversations of Gisu-Daraz, compiled by Sayyid Muhammad Akbar Husaynl (Uthmangandj); ... to Rumeli; he became Shaykh al-Islam in the same year, and died in office (28 Dium. I 995/6 May 1587).

Lahore 1301; [27x133]Mirzdt al-Faridi, [27x133]Shamd'il-i Ankiyya (MS As. Soc. of Bengal); [27x29]bayn, [27x46]collection); Muhammad Husayn, [27x90]Iktibds al-Anwar, [27x116]Ma'dridi al-Mandfrib al-Mafybu (MSS, Storey 3, [27x125]AII Asghar Cishti, [27x142]personal collection); [27x142]Diawdhir-i Takmila to the Delhi 1312.

Delhi 1315; [27x98]Barnawl, (MSS., Storey 1008); [27x159](MS personal collection); [27x159]Risdla Delhi 1311; Nizam al-Din Yamam, [27x177]Siyar al-'Arifin, [28x263]Awrangabadl, (Delhi 1309); Fakhr Nizam al-Kulub [28x287]imad, [28x314]c [28x314]Abd al-Kuddus by Rukn al-Dln, Delhi [29x399]letters of [29x426]Agra 1348, are steeped in Cishti ideology.

Biography: Besides works cited in the article, see: [29x513]tudes: The two earliest Cishti works on mystic tendencies of the period. Mas'ud Bakk's [29x616]Khawdrik-i Hddwiyya, [227x219]Ciwi Ilyas of Menteshe (d. 900/1494-5).

Crit [see gahshiy] Cwii-żade, Ottoman family of scholars, two of whom held the office of Shaykh al-Islam in the roth/16th century; they take their name from the mudarris Ciwi Ilyas of Mentesh (d. 900/1494-5).

1. Muhyi al-Din Shaykh Muhammad (‘Kodja Ciwiżade’), the son of Ciwi Ilyas, b. 896/1491-2, was appointed Kadi of Cairo in 923/1517, and Kadi ‘asker of Andanolu in 944, and Shaykh al-Islam (on the death of Sa’dd Ef.) in Shawwal 945/Feb. 1539. He was dismissed (the first Shaykh al-Islam not to hold office for life) in Radjab 948 (1549). On the pretext that he had given an unsound (Lutfi Paşa, Ta’rīh, 390): the real reason was probably his hostility to tasawwuf (Shahbât [Megjid], 446, and cf. H. Kh. [Fligel], iv. 429). In 952/1545 he replaced Abu ’l-Su’d, now Shaykh al-Islam, as Kadi‘asker of Rumeli, in which office he died (Shab’ân 954/ Sept. 1547).

His brother ‘Abdî Celebi, who trained the young Feridûn [g.o.], was Bashi-Defterdar from 945/1547 (cf. L. Forrer, Russiem Pascha, 145) until his death in 960, and his son-in-law Hâmid Ef. was Shaykh al-Islam from 982/1574 to 985.

2. Muhammad, son of the above, b. 937/1531, was successively Kadi of Damascus (977/1569), Cairo, Bursa, Edirne and Istanbul, then Kadi ‘asker of Andanolu (983/1575) and of Rumeli (985), in which posts he won a great reputation for uprightness. Having incurred the enmity of Sokollu Mehmed Paşa, he was dismissed, but in 989/1581 he was re-appointed to Rumeli; he became Shaykh al-Islam in the same year, and died in office (28 Dium. 1 995/5/5 May 1597).
His son Muhammad Ef. (d. 1061/1651) and his grandson 'Abd-Allah Ef. (d. 1138/1725) both rose to be Kadi-fu'sh al-Fattakhs. 

COLOMB-BÉCHAR, chief town of the department of the Saoura (Organisation Commune des Régions Sahariennes), created by a decree of 7 August 1957.

This town is quite recent; before the French occupation, which dates from 13 November 1903, a few villages, with no historical importance, had been built unevenly along the banks of the Oued Bechar (Wadi Bashghar), which sustained a scanty group of palm-trees. From 1857 the region had been explored by Captain de Colomb, whose name has been used for the new town; to this has been joined the name Bechar which, according to local tradition, derives from the fact that a Muslim sent to explore the region by a Turkish sultan (?) of the 12th century, brought back a flask of clear water; hence the epithet, taken from the root بشر (to bring good news), which would be given to him and to the region from which he came.

The French occupation, following on Franco-Moroccan talks, was designed to protect southern Oran against incursions of Berber tribes from Tafilalet and neighbouring regions. At first a military post, Colomb-Béchar became in 1905 the terminal of a railway line from Oran Tell, and an important caravan centre, then in 1919 the main town of a mixed commune and in 1930 the main town of the territory of Ain Sefra (‘Ayn Šafra’) (territories of southern Algeria). At the time of the Second World War, the coal mines which had been discovered in 1917 in the neighbourhood of the town were fully exploited, from 1941; at the same time the decision was made to build the railway from the Mediterranean to the Niger, which gave a new stimulus to the town. Since the war the output from the surrounding coal basin has remained at roughly 300,000 tons a year; in 1956 plans were made to build a thermo-electric power station, and important mineral deposits were discovered in the region. Finally the French government has installed at Colomb-Béchar and in the surrounding district an important practice centre for guided missiles. The result of this is that the population has risen from 750 inhabitants in 1906, to more than 16,500 in 1954, 3,350 of whom are Europeans (according to the census of 1954).

CONGO, River and Country in Africa. The river forms the sole outlet of the great Central African basin, which is limited on the east by the western flanks of the Great Rift, on the north by the Monga mountains, on the west by the Cristal range, and on the south by the Lunda plateau. Since its tributaries drain areas both to the north and to the south of the Equator, the Congo maintains a relatively constant flow. Its waterways are broken here and there by cataracts, especially between Stanley Pool and the sea, but they nevertheless provide long navigable stretches which have permitted a certain amount of movement, both of people and of trade, through an otherwise impenetrable forest region. In the recesses of the great forests Africa's most primitive people, the pygmies, have maintained to this day a distinctive way of life based mainly on hunting and gathering. Along or near the rivers, and nowadays increasingly along the roads which are beginning to traverse the forest region, live negroid tribes, most of whom speak languages of the Bantu family, and all of whom use iron tools and are to some degree cultivators as well as hunters and fishermen. Doubtless on account of their relative inaccessibility, the forest tribes have in general remained the most backward of the Bantu peoples.

It is only the central part of the Congo basin, however, which is densely forested. The higher country all round its periphery is mostly covered with the light forest known as "orchard bush", in which grain crops can be grown by the simple "slash and burn" system of shifting cultivation. In the east and in the west there are even considerable stretches of open savannah grasslands suitable for cattle-raising. Above all, these peripheral regions have been relatively open to the influences of migration and conquest, and it is consequently in these regions that the indigenous peoples have achieved their most significant political groupings. To the north of the forest on the Nile-Congo watershed the multiple states of the Zande are the result of seventeenth and eighteenth century colonization and conquest from the southern fringes of the Sudan. To the east of the forest, in the highlands of the Western Rift, the Kingdoms of Ruanda and Urundi and the states on the east of the forest are the creations of conquering immigrants from the Nilotic Sudan or South-West Ethiopia, who appear to have been in the area since the fourteenth or fifteenth centuries. To the west of the forest, in the highlands of light bush and open savannah separating the Congo basin from the Atlantic seaboard, the important kingdom of the Bakongo, with which the Portuguese entered into relations towards the end of the fifteenth century, and which then extended its influence in some sense from the Gaboon to Angola, had been built by another immigrant minority, stemming perhaps from the direction of Lake Chad. The Congo kingdom had many southward offshoots, among them certainly the kingdom of the Bakuba on the upper Kasai. The Luba-Lunda states of the Congo-Zambezi watershed, were equally founded by immigrants, but whether these came from the west or the east of the forest is not yet established.

The ideas diffused into western Bantu Africa by these movements were essentially remnants from the ancient world of the Nile Valley. They came from the still unislamized southern fringes of the Sudan. Meanwhile, for nearly four hundred years, from the late fifteenth century to the mid-nineteenth, European influences played remotely on a Congo basin whose inhabitants were still solidly pagan and animist. The dominant European interest in the region was the slave-trade, which soon undermined and killed off the early attempts at Christian evangelization. Musulman mulatto traders, called pombeiros, operating from Loanda and other ports in Angola during the seventeenth and eighteenth centuries, penetrated deeply into the southern periphery of the Congo basin, and it is likely that in the copper-bearing region of the Katanga they occasionally encountered traders from the Swahili ports on the East African coast, who were probably no more seriously Muslims than the pombeiros were Christian. The indications are, indeed, that such early long-distance trade as there was in eastern Bantu Africa before the sixteenth century was conducted more by Africans from such interior tribes as the Nyanwezi and the Bisa than by coastmen whether Arab or Swahili.

It was not, therefore, until the nineteenth century, with the penetration of the southern Sudan by slave and ivory traders from Egypt, and still more with the penetration of East Africa by subjects of the Bāṣā'īdī dynasty of Zanzibar, that Muslims began in any numbers to reach the borders of the Congo basin. The Arab settlement at Ujiji, from which dhows crossed to the Congolese shore of the Tanganyika Lake, was founded within a few years of 1840. It was from then until the partition and occupation of tropical Africa by the European powers in the late 'eighties and early 'nineties of the century that the serious commercial exploitation of the eastern and central parts of the Congo Basin by Muslim Arabs and Swahili mainly took place. The foundation by King Leopold II of the Belgians of the Congo Independent State resulted in the suppression of the slave-trade and in the elimination of the Arab and Swahili war-lords whose activities had been so vividly described by Livingstone, Stanley and other explorers. But many of the Arabs and their East African followers settled permanently in the Congo under its new colonial administration, and, as in so many other parts of Africa, the transition from freebooting exploitation to a more settled form of petty commerce marked an intensification of religious proselytism.

The great majority of the Congo Muslims, who number to-day about 200,000, are Ṣạffī 'i and belong to the Kādirī tariqa. There are a few hundred Ḳhodjas [q.v.], mainly in Ruanda-Urundi and in the eastern part of the Kivu Province, also in Stanleyville and Kasongo; they are active in trade, and are well-organized and well instructed. The Almadīyya [q.v.], number only a few dozens, but are active in propaganda by distributing books and literature.

In the Eastern Province, the Kivu Province and Ruanda-Urundi there are at least 175 recognized mosques. There are Kurānic schools at Rumungwe, Lake Nyanza, Stanleyville, Ponthierville, Kirundu and Kindu. The great centre of attraction, however, is Ujiji, where there is an important madrasa, attended by young people who desire a little instruction in Arabic.

Islamized villages have a mosque, a brotherhood banner (drapeau de confrérie), a mu'allimu and an imām. Unlike the Zanzibaris, the Muslims of the eastern Congo are not well instructed. There are some who read al-Damlal or al-Suyutl. But in general their reading matter is limited to popular devotional books of the Kādirīyya. The initiation to the tariqa, in the form known as murādī, which is widespread in Sénégal too, is also highly esteemed.
by the negro, who finds membership both dignified and authoritative. The mosques...which is spoken as a mother tongue by the people of the Zanzibar coast. The negro Muslims who have started to enter the western Congo from the north, from the Middle Congo Republic and Chad, sometimes have a much higher cultural standard. Many of them are merchants, who sell books of devotion and talismans inscribed in Arabic. The Muslim customary courts are becoming increasingly subject to a Shafi'ite version of the sharī'a.

The limited cultural level to which black Muslims attain, leaves them with too little Arabic and even with too little Swahili to understand the Islamic propaganda broadcast by radio. Among the books currently in favour one finds, besides the Kur'ān, the Mū`addab of al-Dardir, a work by a Zanzibar Shaykh called Hasan b. Amir al-Şhrāzī; al-Iḥkām al-ṣāliḥāt Mawlid al-Diilānī; the Kitāb Dala'il al-Khayrāt, enriched with numerous accessory texts such as the Ḥiyāt al-Bār, the Ḥiyāt al-Bār, the Ḥiyāt al-Numr of al-Shāhīlīlīlī, etc. To this should be added the full or partial Swahili translation of the Kur'ān, published by the Ahmadiyya Society of Lahore, the sūrat Yāsin in Swahili, a treatise on Mirathī (inheritance) by Shaykh al-Şhrāzī, and a very popular treatise on prayer called "Sula nami Mannisho Yake".

CONSTANTINE [see KUSTANTINA]

CONSTANTINOPLE [see ISTANBUL]

CONSTANTINUS AFRICANUS (Constantine the African), who first introduced Arab medicine into Europe, was born in Tunis in the early 5th/11th century (1010 or 1015 A.D.), and died at Monte Cassino in 1087.

His arrival in Salerno marked the beginning of what historians have labelled the 'golden age' of its famous medical school. But about the life of the man himself singularly little is known, and the details can only be sketched in conjecturally.

Various facts relating to him are to be found in the works of Petrus Diaconus who entered Monte Cassino in 509/1115, less than 30 years after Con-
stantine's death. But they were adapted to suit the purposes of a story rather than set down objectively for their own sake. Like most other science historians, Petrus Diaconus traces Constantine's place of birth to Carthage (he probably means Tunis). By the age of 39 or 40, after many adventures, he had found his way to Italy. Petrus asserts that beforehand he had travelled to Egypt, Baghdad, India and Ethiopia, learning on the way the Hebrew, Syriac, Chaldean, Greek, Ethiopians and even 'Indian'. His great talents roused such jealousy upon his return to Tunisia that, in order to avoid any harmful consequences, he left the country for Sicily. Karl Sudhoff is at variance with Petrus, and maintains that he journeyed to Italy as a merchant. It is there that he is said to have become acquainted with the reigning prince's brother, who was a doctor. His experiences and observations were recorded in the forty medical literature in Latin, and he returned to study medicine for three years in Tunisia; then, having collected together several treatises on Arab medicine, he departed, with his precious treasure, for southern Italy. The ship ran into a storm off the coast of Lucania, outside the gulf of Policastro, and the manuscripts were badly damaged. Constantine managed to salvage some of them, and when he arrived in Salerno he became a Christian convert.

It is not yet possible to establish the exact date of these events. But it is certain that he translated into Latin the best works on Arab medicine which had appeared up to the 5th/11th century, albeit omitting to acknowledge the names of their authors and thus earning the reputation of a plagiarist. He adapted the writings to the conditions of his new homeland, Italy. Many passages which he considered prolix were condensed, and other parts where the meaning remained obscure were simply translated literally. Nevertheless, Constantine's work infused new life into the medical school of Salerno, and indeed into the teaching of medicine in Europe for centuries to come. The most important translations are: (i) works of Greek origin which had been translated into Arabic, especially by Ibn al-Isḥāk and his followers: maxims, prognoses and diet in the severe illnesses of Hippocrates, together with...
notes by Galen, the Great Therapeutics of Galen (megatechne) and the Small Therapeutics to Glaucon (microtechne), and pseudo-Galenian works; Ḥunayn b. Iṣḥāq’s edition of Galen’s introduction to therapeutics, with notes by ‘All b. Ṭūlūn (an Egyptian doctor of the 5th/11th century) (ii) works by Arab authors: the Oculistics (al-‘ażār maḥḍālāt fī ‘l-sayn) of Ḥunayn b. Iṣḥāq (Constantini liber de oculis); the works of Iṣḥāq b. Sulaymān al-ʿIṣrāʾīlī (about 286/900) on the elements, urine, fever and diet; the Žād al-Musāfīr of Ibn al-Dīzāz̄, translated under the title De Melanchole; the medical encyclopedia Kāmil al-Ṣind̄a al-Tibbiyya of ‘All b. al-ʿAbbās al-Maḍjīṣ̄ (Persian, 4th/10th century) translated under the title Panteche; Constantine’s book De Melanchole was originally the Kitāb al-Malāḥāqiyād of Ḥunayn b. ʾĪmrān (late 9th-early 10th century). Finally, Constantine translated and claimed the authorship of several less important works by al-Rāzī and others unknown by name.

The works were poorly translated into Latin and full of technical Arab expressions which had simply been transcribed. Constantine was nevertheless responsible for extending the knowledge of classical medicine as it existed in Europe at the beginning of the Middle Ages, and bringing into circulation many important Greek and Arab works.

CONSTANZA [see KÜSTENDES]

CONSUL (Arab. Kunṣul; Pers. Kunṣul; Turk. Konsolos), consuls as representatives of the interests of foreign states in Islamic countries (and similarly in Byzantium). The institution of the consul was formed in the 12th and 13th centuries in the Italian merchant republics. The Genoese put their possessions in the Crimea (see KHLIM; since 1266), nominally subject to the Kāhan of the Golden Horde, in the charge of a consul (B. Spuler: Die Goldene Horde, Leipzig 1943, 392-8, with further bibl.; E. S. Zevakin and N. A. Penčko: Očerki po istorii genuezskikh koloniy . . ., (‘Sketches on the History of the Genoese Colonies’) in Istorikoskiye Zapiski, 3, 1938, 72-229). For the most part called Balo [see BALYS] until the 15th century, these representatives of foreign states in Islamic countries (for the first time in 1238, when Venice had a representative in Egypt) were occupied above all with the protection of the merchants of their nations, the adjustment of difficulties among them, and the regulation of all questions having to do with trade. It was only when Ottoman hegemony extended over the entire east and south coasts of the Mediterranean as well as the Balkan peninsula, that it became necessary to grant to the ambassadors of the individual powers at Constantinople consuls in other places. For the first time in 1528, France obtained the right to provide its own consul in Alexandria, recently become Ottoman. He was able in all circumstances to negotiate directly on behalf of his countrymen with the local authorities, to adjust internal difficulties and to regulate financial conditions (including questions of inheritance). He might import his personal needs free of customs, and ships dispatched by him were not subject to distraint or injury. The right to maintain a consul was extended to other cities in the treaty between the Porte and France in 1535, thus granting the latter a considerable extension of its influence in the Levant, Naples and the Syrian-Lebanese coast as well as in Asia Minor (a consulate in Aleppo since 1557; cf. the maps of the French Consulates in 1715 in P. Masson, Histoire du Commerce Français . . ., Paris 1856, p. xxxviii of the appendix). In 1580 England received corresponding rights. Between 1606-15 the German Emperor followed and later in the 17th century Venice, the Netherlands and Sweden. Only after the Peace of Kūký Kāyনrdā [g.v.] in 1774, could Russia establish consulates (in particular in the Balkans and the Holy Land). Persia followed in 1839. All consuls, as well as ambassadors, were regarded as hostages to guarantee the behaviour of their home powers, and were repeatedly arrested and otherwise impeded.

Out of the consular rights the "Capitulations" developed, confirmed for the first time specifically in a treaty with France in 1740 (though in fact existing already in the 16th century). They conceded to the consuls extensive juridical and civil rights, and released foreign subjects more and more from local jurisdiction (for details see TÜRKİYE, History). Beside these, local Honorary Consuls appeared in growing intensity against the distortion of this
privilege, and a considerable limitation of the abuses was attained. After the gradual abrogation of the Capitulations combined with the renunciation of them by foreign states, the consuls in the Islamic world assumed the same position which they occupy internationally today.

In her own behalf Turkey first appointed consuls in foreign lands in 1802 (Turk. Şehkâhendâr; or, rarely at first, Konsolas), frequently from among Greeks and Levantines in the first decades.

(B. Spuler) **ÇOPAN-ATA** (Turkish "Father-Shepherd"), the name of a row of hills ½ mile long on the southern bank of the Zarafshân [q.v.], close by the city walls of Samarkand [q.v.]. There is no written evidence for this name before the 13th century; up to the 18th century, it was referred to in written sources (Persian) as Kûhak ("little mountain"); and the Zarafshân (only known as such in the written language since the 18th century) also sometimes carried this name. Under the name of Kûhak, the range is mentioned in İstakhrî (BGA I, 318), and it contained quarries and clay pits for Samarkand.

There is an etiological legend which gives the following explanation: "well over a thousand years before Muhammad" there was an enemy besieging Samarkand. The inhabitants of the town prayed fervently for deliverance, and in answer a mountain came and buried the attackers, having been transplanted from Syria, complete with a shepherd on it. Çopan-Ata is also regarded as a Muslim saint, and the shrine to him, which is on the summit of the hill, is attributed to Timûr (thus in al-Kândiyya, partly edited by W. Barthold, Turkistan, MSS. I, St. Petersburg 1900, 481f). Upon the Çopan-Ata the troops of the Khân of Bukhârâ made a vain attempt to oppose the advancing Russians under general Konstantin Petrovîc von Kaufmann on May 13th (new style) 1868. The latter succeeded in occupying Samarkand the following day, and since then it has belonged to Russia.

**COPTS** [see KIRT]

**CORAN** [see KUR'AN]

**CORBADJİ** (literally: soup-provider). (1) The title applied among the Janissaries to the commanders of the ortas and the ağa bülükleri, though in official Ottoman terminology the commanders of the djemât ortalari were known as Serpiyâdîn or (the Turkish equivalent of this Persian term) Yayabâgzi, while the commanders of the ağa bülükleri were called Odabâgzi.

As the roî djemât ortalari were prior in foundation to the 61 ağa bülükleri, the Çorbadîjs of the former had certain privileges over those of the latter: on frontier duty they kept the keys of the fortresses; they could ride on horseback in the presence of their superiors; they wore yellow gaiters and shoes. In the ağa bülükleri, on the other hand, yellow gaiters and shoes were the prerogative of the Odâbâgzi Kethâbîdî and the Muẖšir Ağa, the other Çorbadîjs wearing red.

The crested headdress generally worn on ceremonial occasions by the Çorbadîjs was called kalâfat or çorbadî kalâesi. The crest of the Yayabâgzi's kalâfât was of cranes' feathers, whereas that of the Çorbadîjs of the other bülükleri was of herons' feathers. The ordinary headdress of all Çorbadîjs was a red kalâfat narrow at the bottom and broad at the top. The Çorbadîj applied the bastinado to minor offenders among his men. His aide was known as the Çorbadîjs Yamagîj.

Sometimes the Çorbadîjs were entrusted with police duties, thus performing the function of the Sâbâtî. At the Cardak, the customs station by the Yemîgh quay in Istanbul, there was a Çarbak Çorbadîjî, who commanded the 56th Janissary orta, assisted the bâdî of Istanbul who supervised the city's food-supply, and was responsible for maintaining public order in this locality. Yayabâgzi was appointed to collect the davûrîme boys who were recruited into the "adâmî Odâbâgzi" from the provinces. The Çorbadîjs of the "Adâmî Odâbâgzi" were under the orders of its commander, the Istanbul Ağaštî.

(2) The title of Çorbadîjî was also given to the village notables called Muẖƛâr and Aẖ-sâhâli, who entertained travellers. Later, until a half-century ago, it became an appellation of merchants and rich Christians. In colloquial Turkish it is still used for 'bosse', 'skipper'.

**Bibliography:** Kawâ'nîn-i Yeniteriyân; I. H. Uzuncârslî, Kâpsülêri ocahlârî, Ankara 1943; idem, Tarîh Luke; Dîwâdî Paşa, Ta'rîhâ-ı
The Ivory Coast became a self-governing colony in 1893, then, in 1900, it became part of the Government-General of French West Africa. According to the 1950 census, the population was 2,500,000, including 12,000 non-Africans.

The village of Elvancelebi, some 20 km. east of Corum, belongs to the Kaza Mecitözü in the Corum district. There are the Tekye (mentioned by Kâtip Celebi, Djihdnnumd, 625, 1. 20, as Sheykh 'Ulwan Tekyesi, and also by Ewliya Celebi, Seyhâhat-nâmê, ii, 410, l. 8), turbe and mosque of Elvan Celebi, the son of the famous poet 'Ashîkh Pasha (died in 733/1333, [q.v.]), and descendant of Baba Ilyás, the founder of the Dervish Order of the Baba'îyya [see BABA'ÎYYA].

In some kadî's of the wilâyet of Corum there are famous Hittite excavations, particularly Boğazköy (Hattušaş) in the kadî of Sungurlu, and also Alaca Hüyük in the kadî of Alaca.

**COROMANDEL** [see ALI PASHA]

**COSTUME** [see LİBAŞ]

CÔTE D'IVOIRE, the usual name of the Ivory Coast, a Republic, and member of the French Community. It is situated on the coast of the Gulf of Guinea, adjoins Ghana to the east, Liberia and the Republic of Guinea to the west, and the French Sudan and the Upper Volta to the north. It extends over 519,000 square kilometres and has a population of 2,500,000, including 12,000 non-Africans.

Although the first French settlements on the coast were founded at the end of the seventeenth century, colonization dates only from the end of the nineteenth century. The Ivory Coast became a self-governing colony in 1893, then, in 1900, it became part of the Government-General of French
West Africa. In 1957 it enjoyed a semi-autonomous domestic régime within the group of territories, with its Territorial Assembly and Government Council. But its administrative organization is that of the rest of French West Africa: circles, subdivisions and communes. After the referendum of 1958 the Ivory Coast, with its new status of autonomous Republic, refused to federate with the new state of Mali (formed by the union of Senegal with the French Soudan), and formed with the former territories of Upper Volta, Dahomey and Niger the Benin-Sahil Alliance.

From south to north, it covers a narrow belt of lagoons, a densely forested belt about 300 kilometres wide, and, finally, a belt of Sudan type savanna. In the south, the population belongs to the Guinean and Apollonian groups, and, in the North, to the Sudanese and Voltaic groups.

The economy is based on agriculture (coffee, timber, bananas, cocoa, oil, cotton) with a little livestock-rearing and fishing. Industrialization has hardly been tackled, although some prospecting has been undertaken with a view to mining. The chief towns are: Abidjan, the capital and port (130,000), Bouaké (25,000), Grand-Bassam, Bondoukou.

The influence of Christianity is widespread in the south, with 160,000 Catholics, 65,000 Protestants, and syncretistic sects.

The number of Muslims is about 450,000, found mainly in the north, especially among the Malinké or Mandé tribes. But at the same time Islam seems to be making rapid inroads among the animist tribes of the Savannas and among the town immigrants.

The first Islamic settlement on the Ivory Coast must go back to the thirteenth century, at the height of the Mali ascendency throughout the north of the Savannas. The chief towns were Touba, Kong, Bondoukou, Odienné and Seguèla. Muslim influence seems to have reseeded after the collapse of the Malinké power (15th century). It had a reflux of strength during the first half of the nineteenth century, when the influence of El Hadj Omar Tall made itself felt throughout the whole of western Sudan. At the end of the century, Samory Touré lent his authority to proselytizing, and forcibly—at other times by the mediation of Shaykhs—directed the attention of the Senoufo animists of the North. But, at the same time, he massacred the Malinké Muslims that resisted his conquest, and, above all, annihilated, in 1897, the kingdom of Kong which had remained the main seat of Islamic culture in the region. After the defeat of Samory, Islam fell into another temporary decline, from which it recovered fairly quickly, thanks to the sociological conjuncture that arose out of colonization.

It was spread by the influence of the Dioula, Malinké, or sometimes Hausa, traders, who had settled along the great trade routes and dealt chiefly in cola with the farmers from the forest region. Every year it made further progress towards the South, and eventually converted courts even among the coastal population. In addition to the traditional centres are found to-day important centres at Man, Bouaké, Gagnoa, Bouna, Doloa, Samatéguela and Boundiala, as well as Abidjan.

The chief brotherhood is the Tidjaniyya, which forms the majority everywhere except at Man. Its adherents are divided more or less equally between the "twelve grains" who owe obedience to El Hadj Omar, and the "eleven grains" or Hamallists, followers of Shaykh Mama Allih. Hamallism has, in addition, given rise to a new way, known as Ya'kūbite after its founder, Yakouba Sylla, whose teaching is reminiscent of that of the Senegalese Mourns of Ahmadou Bamba (work of the Ibad Ibn El Hadj on the behalf of the Shaykh, importance of economic activity).

The Kādiriyya brotherhood exists in all regions, but is as important as the Tidjāniyya only in the Man district. It is considered favourable to the interests of the Wahhābīs, whose importance has developed considerably since 1946 under the influence of rich Mecca pilgrims and of karamoko (scholars) educated in Egypt or Arabia. The chief Wahhābī centre is Bouaké.

Occasional Mahdísts are to be found—these seem to be under Wahhābī influence. And, on the coast, is a small Ahmādiyya community, formed around natives of Ghana and Nigeria. Certain dissident sects of the coastal region show Christian, Muslim and animist influences.

The level of Islamic teaching has never recovered from the massacres of Samory Touré, in spite of the recent endeavours of the young Wahhābīs and of certain Hamallists.

CRUSADES. Originally applied to military and religious expeditions organized in Western Europe and intended to take back from and defend against Islam the Holy Places of Palestine and nearby Syria, the term was later extended to all wars waged against "infidels" and even to any undertaking carried out in the name of a worthy or supposed worthy cause; naturally these extensions of meaning are not part of our present concern.

The first Crusade (1096-99), following on from expeditions against the Muslims in the West, led to the establishment around Jerusalem, Tripoli, Antioch and Edessa of four States constituting (and later including Cyprus, then the Latin Empire of Constantinople) the Latin East, which from then on until the recapture of its last citadel Acre by the Muslims in 1291 was an essential factor in the history of the Middle East. The second Crusade started by the fall of Edessa bore no concrete results; the third, started by the fall of Jerusalem, ensured the maintenance of "Frankish" possessions on the Syro-Palestinian coast; the fourth was only concerned with Constantinople, the fifth failed at Damietta in Egypt, the sixth was more of a diplomatic journey by Frederick II and brought about the temporary restitution of Jerusalem to the Franks, the seventh led by St. Louis after the loss once more of the Holy City ended in another disaster at Damietta and the eighth, which brought the same king to Tunis, ended with his death. One might add to this traditional number of Crusades other less important ones and later Crusades against the Ottomans (Nicopolis, Varna, etc.). The Crusades...
in Syria-Palestine alone had a lasting effect on the history of Muslim countries, in view of the Frankish dominance in the East, uninterrupted for nearly two centuries, which was initiated by the first Crusade and maintained by those that followed.

In an encyclopaedia of Islam there can of course be no question of giving the history even of only these Crusades in its entirety; it would even be somewhat odd to speak of them at all, were it not that the Crusades when considered in terms of Islam give rise to certain problems which alone will be discussed here.

The specific character of the Crusades was not and could not be understood by Muslims. The very term, ḥarb al-salībīyya, used to designate them in modern Arab literature, was unknown to ancient authors, who referred to Crusaders by the plain ethnic term “Franks”, and seems to have made its appearance during the Ottoman period in Christian circles of the East influenced by French culture. The theory of the Crusade, a war for the defence or liberation of oppressed co-religionists, differs from the theory of the dhīhd, a war for the expansion of Islam; but in practice almost the very reverse appears to have obtained at the time of the first Crusade, dhīhd in the majority of Muslim countries being no more than a memory and Christendom from the time of Charlemagne onwards having elaborated campaigns for the expansion of Christianity by force of arms. No doubt, in one sense the Crusades appear as a reaction, which had gradually been desired and made possible, against the humiliation of four centuries caused by the Muslim conquest of half the Mediterranean basin; but the example of Spain and Sicily proves that the Christian West did not need any deterioration in the generally reasonable treatment of Christians in Muslim countries as a spur to move onto the offensive or counter-offensive. In the East it is true that the Turkoman invasion of Asia Minor revived amongst a particular social group the tradition of Muslim Holy War in the form of ghazwa, bringing disaster to Byzantine Christendom; but in the old Muslim countries and particularly in Palestine the forming of the Saljuq Empire brought no fundamental change to the lot of autochthonous Christians, save that of the presence of pilgrims: the precise motivation of crusading, however sincere it was, could not therefore occur to the Muslim mind. Muslims obviously saw that they were dealing with Christian warriors who as such were attacking Islam, but apart from the distance from which they came they saw in them roughly the equivalent of the Byzantines whose Christian-inspired attacks and counter-attacks they had been sustaining for two centuries.

The Crusaders’ conquests only affected territory which was incompletely Islamized, relatively small and quickly reduced by gradual Muslim reconquest, and even in Syria-Palestine did not reach any of the large Muslim centres. Nevertheless, the constant menace to vital sea and land routes between Muslim countries in the Middle East, the knowledge of Muslim abasement under Frankish rule, above all the repetition of Crusades, the non-assimilation of Franks into the native milīt and the permanence of a state of at least “cold” war finally conferred indisputable importance on the Crusades and the existence of the so-called “Latin” East in the history of Middle Eastern Islam. It would be interesting to examine more thoroughly than has hitherto been the case how Muslims, according to time and place, reacted to this phenomenon.

The Crusades found the Muslim Middle East in a state of division and dissension which alone made their initial success possible. Preceding generations had seen many examples of Islamo-Christian co-operation in Syria even against the Franks or Muslims. Although the Frankish invasion brought death or exile to many Muslims in Syria-Palestine, minor chieftains and certain isolated populations apparently at first assumed that it would be possible to adapt themselves to a state of small-scale war alternating with periods of peace, such as the former lord of Ṣhayzar, Usama b. Munjīkh, by drawing on his early memories, was able to depurate for us in his Memoirs. Soon, however, more directly threatened or more intensely Muslim communities, angered by the disgraceful indifference to the Frankish danger of Muslims beyond Syria-Palestine, attempted to rouse them from it by for example demonstrating in Baghda. Although individual volunteers, subsides (particularly for prisoners’ ransoms) and exhortations were sometimes forthcoming even in the rest of the Muslim world, the backbone of resistance came really from the immediate neighbours of the Franks. A necessary condition for that, and this was bound to be one consequence of the Crusades, was some degree of rapprochement between various Muslim elements which only recently had been suspicious of each other: Arabs from the plains and the towns, Turks from the official armies that had come into being under the Saljuqid regime, Turkomans lacking discipline but ready for ghazwa, warlike Kurds joining up with the Turkish armies that shortly before they had been fighting and so on. Dżazra constituted the hinterland, a source of manpower, such as Syria with its meagre resources could never be, and there followed a process of political unification between the two regions (remaining however somewhat incomplete in Dżazra). From a religious point of view, the Frankish menace certainly contributed without being its sole cause to the progress of Sunnism, which was already developed in the Saljuqid domains of Irano-Mesopotamia, but until then scarcely of any importance in Syria. For one thing, insinuating elements denounced the heterodox as accomplices of the Franks and were therefore the misfortunes of Islam more important, however, moderate Şhīfs and even sometimes the Fātimids, no longer sustained by unanimous Isma'īlism, in the face of common enemies rallied to the Sunni Turkish princes; the only group to remain outside this alliance were the Assassins, violent and irreconcilable enemies of Sunni orthodoxy, who were massacred by the Muslim majority and who sometimes collaborated with the Franks from their frontier strongholds. Naturally, the anti-Crusade movement never affected the whole of the Muslim population even amongst the neighbours of the Franks; devout Muslims lamented the fact that some of their brethren, who were subjects or neighbours of the Franks, found it less dangerous to come to terms with them than to fight them and minor princes were hesitant about involving themselves in coalitions which could only serve to increase the authority of the more important. The ability of Zengl, Nūr al-Dīn and Saladin lay in realizing, each in his own manner, that the struggle against the Franks, by necessitating and favouring the unification of Muslims, played into the hands of anyone able to lead such a movement, although it is not possible for us of course, any more no doubt than it was for them, to say how far they were prompted by ardent con-
viction and how far by self-interest. This policy appeared to reach its final objective when after Jerusalem Saladin conquered almost the whole of the Latin East.

It would be interesting to know whether in the Muslim States concerned the war against the Franks or their neighbours brought about any deeper or broader changes than this partial "moral rearmament". The period of the Crusades certainly coincides with a remarkable rise of inland Syria, starting with Damascus, then of Egypt which replaced Bagdad, linked too closely with the Iranian States, as the liveliest area of Arab Islam 5 could hardly contemplate further aggrandisement. The ancient themes of *djihad* were rediscovered, the old accounts (pseudo-Wakidi) of the Conquests and anti-Byzantine verse were taken out and developed, emphasis was laid on devotion to the holy places of Jerusalem: but there was nothing really new and it must be admitted that the struggle against the Crusaders did not give rise to any doctrinal study of holy war or any popular works comparable with the epics about the Conquests or anti-Byzantine wars.

Furthermore, diplomatically, whereas Saladin in particular took the part of Westerners and Byzantines against each other, no unity comparable with the unity, however slight, of Western Christendom against Islam was ever achieved between the East and West of the Muslim world, for each part was involved in its own struggles with neighbouring Christians. Even in the East, leaving aside the Iranians who were far away and shaken by successive crises, the Turks of Asia Minor, after involuntarily setting the Crusades in motion by their invasion, practically restricted their efforts to attacks against Byzantium and, showing little interest in Syria, only took some part in the struggle against the Crusaders in the first century of the Latin East, when the latter crossed their territory. The Caliphate itself does not appear to have taken a very deep interest in the anti-Frankish struggle.

Furthermore, at the end of Saladin's reign, the very seriousness of the Frankish defeat stirred the union, however slight, of Western Christendom against Islam, whereas before his death in spite of all efforts he had to resign himself to certain losses, and to the maintenance of a Frankish seaboard, emphasizing the extent of material sacrifices made practically in vain. Whence arose under the Ayyubids the desire for a new policy which, recognizing both the presence of the Franks in the peripheral zone to Syria-Palestine and the lessening of the Frankish menace, now that, left to their own devices, the Eastern Franks could hardly contemplate further aggrandisement, sought to set up a *modus vivendi* economically favourable to both sides. This policy, compromised by the Crusading policy of the West, continued a fairly successful existence for half a century, finding its most spectacular and in the eyes of the devout its most scandalous expression when, with certain reservations, Al-Kamil restored Jerusalem to Frederick II. Could such a policy have been kept up for a long time? The unleashing of the Mongol conquest made it in any case impracticable. That invasion, much more dangerous for the time being than the Crusades could ever be, produced in the Mamluk State, established in Egypt and Syria as the final redoubt of Muslim resistance, an uncompromising tension of all forces and the unquestionable predominance of an intransigent army. Some of the Franks had come to terms with the barbarians: their extermination or expulsion became a matter of supreme urgency and this time Europe did not prevent it.

With the exception of the Armenians in the North, native Christians had remained practically outside the Crusades; Muslims therefore did not at first change their attitude to local Christians and even occasionally supported members of the Greek Church who had serious grounds for complaint against Latin dominance, as well as the Jews. Tolerance of this kind contrasted with the treatment of Muslims under Frankish rule who, except in some special localities, had neither mosque nor *kadi* and were frequently considered as virtual enemies or spies. The over-quoted passage of Ibn Djibayr, shaming his co-religionists for Muslim satisfaction with good Frankish administration in the rich district of Tyre, cannot outweigh many cases where the opposite applied nor can it the legal status of Muslims: because of its warlike spirit, the Latin East was backward compared with the understanding which the Norman sovereigns of Sicily and the Spaniards were showing at the same time. In the long run the presence of Franks eventually jeopardized the native Christians of Muslim countries as well. For the lack of any future possibility of triumphing by the force of arms the Franks had to try to establish relations with Christians of Muslim states. It was inevitable that such a move should give rise to at least some suspicion amongst the Muslims. The most unfortunate individual case was that of the Maronites. This purely Lebanese minority living entirely within Frankish territory had rallied to the discipline of the Church of Rome and to a certain extent, in the coastal towns at least, had become intermingled with the Franks. Muslim reconquest did not wipe out the danger of Frankish attacks on the Syrian coast and, to prevent any Maronite complicity, the Mamluks had many of the Maronite districts along the coasts evacuated. The fortunes of the Armenians, who had been the Mongols' quartermasters and were linked politically with the Christian West, were even less happy; in the fourteenth century their Cilician kingdom was destroyed and its population decimated. Generally speaking, the hardening of the Muslim attitude was bound to undermine the position of Christians and it is necessary to realise that the Crusades alone must bear, if not the sole responsibility, at least the greater part of it, for a development completely opposite to their avowed object.

Did they at least help to increase the interpenetration of peoples, the knowledge of Islam in the

Encyclopaedia of Islam, II
West, or of the West in Muslim countries? It would of course be paradoxical to contend that among the members of the two geographically close populations there was no exchange of knowledge. But examination of institutions in the Latin East shows fewer borrowings from the Muslim past and less social intermingling than in the Christian States of Sicily and Spain. Similarly, from a cultural point of view, objective comparison leads to the categorical conclusion that where the West has acquired knowledge of Muslim civilization it has done so mainly through Spain or Sicily and not through Western settlements in the East or Crusaders from the West; moreover, Islam as such nearly always remained misunderstood and the few accurate ideas about it that the West finally acquired are due to the efforts of missionaries, in other words to work undertaken in an entirely different spirit from the spirit of the Crusades. As for the Muslims, although some showed a certain curiosity about the Franks in the East or about a Western leader as exceptional as Frederick II, it must be acknowledged that their historians, geographers and anti-Christian polemists still had after the Crusades the same few notions about the European West, gleaned from their collectivist-west, that they had had before. Therefore, and contrary to current opinion, it seems to me an anachronism to repeat with those who have worked on the cultural or political influence, indeed a very real one, of modern France in the East, or written within that context, that the Crusades laid their foundations; if in their own way they bore witness to the beginning of a process of interpenetration, the atmosphere they created proved subsequently more of a hindrance than a help.

**Bibliography:** The Arabic sources of the history of the Crusades are catalogued in C. Cahen, *La Syrie du Nord à l'époque des Croisades*, 1940, 33-94, without however certain elucidations which may be found particularly in (besides a forthcoming work by N. Elie'sef on Nūr al-Dīn) H. A. R. Gibb, *The Arabic sources for the life of Sa'id al-Dīn al-Murasli (1233-1292)*; B. Lewis, *The sources for the history of the Syrian Assassins*, cited, xxvii (1953); H. Gottschalk, *al-Malik al-Kāmil*, 1958, Introduction. The five volumes of *Histoires Arabyes* in the *Recueil des Historiens des Croisades* published by the Académie des Inscriptions suffer from lack of method in the choice of extracts and insufficient care in the establishment and translation of texts (not to mention their inconvenient format); they have still not yet however been replaced by editions or above all, for those who need them, by better translations. Since 1940 have appeared—and we quote only the essential—a French translation by R. Le Tourneau of Ibn al-Kalānī's *The Damascus chronicle* (*Damai* de 1075 à 1154, 1954, French Institute in Damascus, 1952), vol. i of a new and this time good edition of Abū Shāma's *K. al-Rawdatayn* by M. A. Hilmi (Cairo 1957), as well as an edition of his *Dhayl* (Cairo 1947); the first two volumes, less important than those to follow, of a good edition of Ibn Wāṣīlī's *Mujarrād al-Kurāb* by Šāhyāl (Cairo 1953 and 1957); an edition of the *Ayyūbīd* part of *Makān b. 'Amid*’s chronicle by C. Cahen (in *BEO*, Damascus, xv, 1953-57); the edition of part of Ibn ʿAbd al-Ṣāhib’s *Life of Betha* by the same editor (C. Cahen and F. Sadeque, Oxford and Dacca 1956; the first two volumes out of the three of the excellent edition of *Kamāl al-Dīn* Ibn al-ʿAdīm’s *Zubđa* by Šāmy Dāhān (Fr. Inst. Damascus, 1953 and 54) and, by the same editor, the part on Damascus of Ibn Shaddād, 2 vols. 1954-55, of the part of *Yūnīl* covering the years 1646-670; and finally for the years 689-698 an analysis of Dājari by J. Sauvaget, 1949. None of these authors of course deals specifically with the Crusades. A good number of selected and translated texts, together with useful introductions, has been given by Fr. Gabrieli, *Storici Arabi delle Crociate*, 1957.

(C. CAHEN)
In 776, the Karuk [q.v.] occupied the valley of the Cu and that of the Taraz (Talas), and the area along both sides of the Alexander Mountains. The Tughidi also settled there (Hudūd al-ʿĀlam, 300; Barthold, Vorl., 75). Suīyāb [q.v.] was the capital of the Cu valley (Kāshgarī, iii, 305; Huṣain-Cuang, ed. St. Julien, Paris 1857-8): the residence of the ruler of this area was usually in Kūz Ordu (Balasāghūn; [q.v.]). Judging from the traces of settlements found, the valley was well populated at that time. The inhabitants developed a particular multi-coloured form of ornamental Kufic writing. There was a marked distinction between them and the other Transoxians (Bernstamm, 157, 161/66).

Islamic armies reached the western part of the Cu valley only once, in 958/10 (battle against Kūlān, cf. Ibn al-Athir, vi, 104), and the name of the river is not mentioned in Muslim sources of pre-Mongol times, although there is mention of some of the places in the region (Ibn Khurramoddībībī [BGA VI, 29]; Kūdāmā, K. al-Khārājī [BGA], 206). Islam reached the population only in the 4th/10th century, and even around the year 672/682, only a part of the inhabitants of Taraz and Nawēḵaḵād became Muslims (Hudūd al-ʿĀlam, 119, no. 93; 338, with mention of individual places); Nestorian Christianity was widespread for a considerably longer time. The rule of the Karā Khādīyī [q.v.] followed that of the Karūks in 1353/1414. Thus there was a renewed influence of Chinese cultural elements (Nephrīt, Sung porcelain) in the area, and these mixed again with those of Transoxania (Bernstamm, 168, 171 f.). Meanwhile, the numerous wars of the 6th/12th and 7th/13th centuries resulted in a decrease of the population of the Cu valley. Where the Chinese traveller Cang Cūn still met several towns and villages in 61/1221, and crossed the Cu by a wooden bridge (E. Bretschneider, Med. Researches, i, London 1888, 71 f., 129 f.; A. Waley, The Travels of an Alchemist, London 1931), many ruins are reported already in 678/1253. At that time (651/1253), the region formed the border line between the areas of influence of the two Mongol Khāns Batu [q.v.] and Mongke (Mangü [q.v.]). Sihibar (Shaybān), the founder of the “Blue” (White) Horde (see Bārtoʿids) had his winter quarters here. But the main cause of virtual de-population of the area, was war amongst the Mongols in the 8th/14th century (see Āqāhātāy), plague (according to epitaphs of 739/1338), and the campaigns of Timūr [q.v.]. Our sources for these last already fail to mention any place-names in the Cu valley. The Nestorian settlements near Pīshpek and Tomaḵ (q.v.), of which we have epitaphs of the 7th/13th and 8th/14th centuries, also seem to have perished at this time. Muhammad Ḥaydar Dughlāt, Taʾrīkh-i Raḵštī, ed. N. Elias and E. D. Ross, London 1895-98, 364 f., ca. 1546, mentions only ruins with a minaret rising above them. The modern name Burana for a tower in the ancient Tomāḵ also derives from Mandara (according to Perovskiy in the Zap. Vost. Otd., viii, 352).

Later the Cu valley occasionally came under the Kalmuks and the (Kara-) Kirghiz. Then it came under the rule of the Khāns of Khokand, who founded the fortresses of Pīshpek (in the Khokand historians’ writings: Pīshke) and Tomāḵ on the Cu. These came into Russian hands in 1860. Since then the Cu valley has belonged to Russia, and has become a target of eastern Slav settlement (cf. Herrmann, Atlas, 66-67). The upper course is in the Kirgiz S.S.R., the middle and lower reaches in the Kazak S.S.R. Since 1932, a great agricultural combine (hemp and other fibre plants) has developed in the area of the middle Cu. Two arms of the “Great Cu Canal” have been under construction since 1941; these should irrigate a further area. The Turkish railway crosses the river near the station of Cu, thus opening it up to traffic.

Shira of the Sulduz tribe who had once saved the life of Cingiz Khan. The most notable members of this family were:

1. Amir Čuban. An able and experienced military commander, Amir Čuban, according to Hamd Allâh Mustawfi, fought his first battle in Rabî’ II 688/ April-May 1289 (Târîh-i Guṣûda (GMS), 588); thereafter he served with distinction under the Ilkhâns Arghun, Gâykhâtû, Čâhân and Udîjâtû [q.v.]. He was appointed āmîr al-usrû in by Abu Sa’îd in 717/1317, and married the latter’s sister Sâ’îd, who succeeded Udîjâtû at the age of twelve, Amir Čuban acquired great power in the affairs of state; in addition, all the important provinces of the Ilkhânî empire were governed by his sons. In Râdjab 719/Aug.-Sept. 1319 a group of amîrs plotted to assassinate Amir Čuban, but the latter, supported by Abu Sa’îd, crushed the revolt with great severity.

After the death of Dûldê, Amir Čuban married Abu Sa’îd’s other sister, Sâ’îd Beg (719/1319). In 725/1325 Amir Čuban prevented Abu Sa’îd from marrying his daughter Bâghdât Khûtûn [q.v.], who was at that time the wife of Shaykh Ḥasan Buzurg Bûzûrj-i Khârâ. Abu Sa’îd determined to break the power of the Čubânis and, two years later, when Amir Čuban was absent in Khurâsân, he put to death Amir Čuban’s son Dimashk Khwâjâ and issued orders for the execution of Amir Čuban at Harât and of his family throughout the Ilkhânî dominions. Amir Čuban, forewarned, advanced as far as Ravy and attempted to negotiate with Abu Sa’îd, but without success. Deserted by most of his troops, he fled back to Harât and took refuge with Malik Ghiyât al-Dîn al-Dinî in the Kurd. A few months later (Oct.-Nov. 1327, or perhaps in Muharram 728, which began on 17 Nov. 1327), the rewards offered by Abu Sa’îd induced Malik Ghiyât al-Dinî to put to death Amir Čuban and his son Dîljâl Khân. Their bodies were taken to Medina for burial.

2. Dimashk Khwâjâ. The third son of Amir Čuban, Dimashk Khwâjâ remained at court in Râdjab 726/1326 when his father left to defend Khurâsân against the Mongols of the house of Câhâtây, and became the virtual ruler of the Ilkhânî empire. His dissolute nature provided Abu Sa’îd with the excuse for destroying the Čubânis and which began on 17 Nov. 1327), the rewards offered by Abu Sa’îd induced Malik Ghiyât al-Dinî to put to death Amir Čuban and his son Dîljâl Khân. Their bodies were taken to Medina for burial.

(2) Dimashk Khwâjâ. The third son of Amir Čuban, Dimashk Khwâjâ remained at court in Râdjab 726/1326 when his father left to defend Khurâsân against the Mongols of the house of Câhâtây, and became the virtual ruler of the Ilkhânî empire. His dissolute nature provided Abu Sa’îd with the excuse for destroying the Čubânis and which began on 17 Nov. 1327), the rewards offered by Abu Sa’îd induced Malik Ghiyât al-Dinî to put to death Amir Čuban and his son Dîljâl Khân. Their bodies were taken to Medina for burial.

3. Timûrţâsh. The second son of Amir Čuban. He had acted as wâli to Udîjâtû. In 716/1316 he was appointed by Abu Sa’îd governor of Rûm, and for the first time carried Mongol arms to the shores of the Mediterranean. In 721/1321-2 he rebelled; he minted coinage in his own name, had his name included in the Khutbâ, and styled himself the Mahdi. His father Amir Čuban took him a prisoner to Abu Sa’îd, but the latter pardoned him for the sake of Amir Čuban. After the execution of his brother Dimashk Khwâjâ, he submitted to the Sultan Tûnûlû. At first this Mamûlûk served Al-Nâşir Muhammad treated him with great honour, but the intrigues of enemies of the Čubâni family, and Abu Sa’îd’s repeated demands for the extradition of Timûrţâsh, were a source of embarrassment to the Mamûlûk sultan, who eventually decided to put him to death on 13 Shawwâl 728/21 August 1328.

(4) Hasan b. Timûrţâsh, known as Hasan Kučûk to distinguish him from his rival Shaykh Ḥasan Buzurg the Dîjlâirîd. After the death of Abu Sa’îd in 730/1330, he gained the support of his father’s followers in Rûm by a ruse, and in Dhu’l-Hijjâd 738/July 1338 he defeated Hasan Buzurg near Nakhjûwân. He then gave his allegiance to the princess Sâ’îd Beg, the widow of Amir Čuban and Arpa Khân, at Tabrîz (739/1338-9), and came to terms with Hasan Buzurg. The following year he transferred his allegiance to a descendant of Huleyû, Sulaymân Khân, to whom he married Sâ’îd Beg. For some years he continued to wage war on his rival Hasan Buzurg and the various puppet khâns nominated by the latter, but on 27 Râdjab 744/15 December 1343, he was murdered at Tabrîz by his wife ‘Izzat Malik. See further the article Čubâniš.”

CUENCA [see KUNKA]

ÇUKA [see KUMAGI]

ČUKUROVA [see GLICIA]

ČULIM. The term ‘Tatars of Čulim’ (in Russian ‘Culimt’sel’, a word invented by Radiolf, Aus Sibirien, i, 211) includes several small Turkish-speaking groups of Central Siberia whose ancestors would have been Selkups of the Ob and Ketes of the Yenisei brought under Turkish influence by the Altaic tribes originating in the south and by the Tatars of Baraba [q.v.] and of Tobol’ [q.v.] originating in the west. The Tatars of Čulim form three principal blocks: 1. On the river Kiya, tributary of the Čulim, in the oblast of Kemerovo who were formerly called ‘Ketz’ (to the south of the town of Marinzh) and ‘Kûer’k (to the north of that town). 2. On the Central Čulim in the district of Aţinz in the Kerc of Krasnoyarsk, whom ancient ethnographers called ‘Tatars of Meletzk’. 3. On the lower Čulim and the Ob, in the districts of Asino and Ziryan of the oblast of Tomsk, formerly known as ‘Tatars of Tomsk’.

The present number of the Tatars of Čulim is unknown. The Russian census of 1897 counted 11,123. The censuses of 1926 and 1939 included them with the ‘Tatars of the Volga’. S. A. Tokarev, Etnografiya narodov SSSR, Moscow 1958, 428-429, estimates their number at 11,000. They speak a Turkish dialect akin to the Kızıl speech of the Hakas, but strongly Russianized.

Previously Shâmanists, the Tatars of Čulim officially adopted orthodox Christianity in the 18th century. Sunnî Islam of the Hanafi school was brought to them in the 19th century by the Tatars of Kazan, but it has made no appreciable progress.

Nowadays the Tatars of Čulim are dispersed among the Russian villages and are exposed to Russian cultural influence; they adopt Russian as their chief language, and merge fairly quickly into the Russian masses.

Bibliography: Ivanov, Tatari Čulimskie, in Trudi Tomskogo oblastono Muzeya, ii, Tomsk 1929;
Though the verbs kii-, kiiidez-, kuzet- etc. were in general use in Old Turkish with the meaning of 'protect' 'guard', it is clear that they had not yet acquired the meaning of 'tend animals'; cf., e.g., koyug ked kudezip yon (KB 1413); kuzu ked Mdezgil 'guard the sheep well'. The fact that there is no general word for 'shepherd' in Turkish can be explained in the light of the historical development of Turkish society: in the economic life of the nomadic Turks stock-raising was the main activity of the whole tribe, and thus the idea of the herding of beasts as a distinct occupation had not developed. When later, with the increasing complexity of society, the occupation came into existence this task must have been delegated by the Turks, who formed the governing class, to non-Turks, as the Iranian origin of the word indicates.

Among the Kazan Turks the word kiiü (kiiü, Ott. güü; kiiü = Ott. sara, but Ott. sariçü has developed with a different meaning) is used; from which no doubt comes the Cuvash kiiüt or kiiüt pdxaka. Among the Kazak and the Kirghiz, for whom stock-raising still constitutes the main activity, the words malts (< mal-ti) and bañits are generally used instead of coban, or, if greater precision is required, the expressions köyül, gülü (gülık), syyrük, tüyel etc. are employed. The examples given by W. Barthold in ETI for the use of the word coban for the inferior classes and for the ruling members of society are not of general application: the first belongs to a very late period, while the name of the Amir Coban, who was viceroy in Iran in the reign of Abd al-Salām (1316-1327), is more probably connected with the word çoban, defined by Māḥmūd Kāshgarī as 'village headman's assistant'.

In Turkish languages in which the word coban is used, it is found not only in the derivatives cobanlı, cobanlı, but in a number of compounds, chiefly for 'villager-name' (many of them no doubt calques from Persian), e.g., coban değneği (layağ, tarāğ) 'knotgrass', ç. tıskulı 'lex aquilum, holly', ç. düdüklu 'hazel', ç. dağğölük 'a creeper', ç. kaltüran 'lychnis calcedonica', ç. kalhân 'caltrop', ç. iğnès 'cranesbill'; ç. képnī, 'sheepdog', ç. kulu 'a bird like a sparrow', and especially coban aldatan (ç. aldatış, ç. aldatşī, ç. aldatšī, cf. TTS IV).

The expression of particular interest for cultural history is coban yıldız 'the planet Venus', in which one sees the mutual influence of T. colban and P. classicum. Colban (Çagh. Ott. Tar. Ö.T.), colbon (Kur.), colban (Kazan), solban, sulban (Kaz.), solmon (Tel.), solmon (Alt.), solban (Shor), solbon (Tob. Leb.) and tolbam (colban, colman, colban) (Mong.). Colban (ç. yıldız (or yıldızas), tah solmonu thi solmonu 'morning- and evening-star') has in this case presumably been identified with coban.

With Coban-Ata, the name of a line of hills on the S. bank of the Zarafshān near Samarkand (which derives, according to W. Barthold in ETI, from a legend of a shepherd seen on the hills, or from the name of a Muslim saint) cf. Kirghiz Colban-Ata 'the guardian of the sheep' and hence 'sheep', Kaman-Ata 'guardian of the horses', Colpan-Ata 'guardian of the goats', Oysul-Ata 'guardian of the camels' (and hence 'horses', 'goats', 'cames' respectively).

(Pr. Rahmeti Arat)

ČUPAN-ATA [see čopan-ata]

ČUVASH (Čavas), native name Čavas), is a Turkish-speaking people of the Middle Volga, numbering (in 1939), 1,569,000, who form the Soviet Socialist republic of the Čuvash (18,300 square kilometres, 1,095,000 inhabitants in 1956), situated on the southern bank of the Volga, to the west of the Autonomous Soviet Socialist Republic of the Tatars. The Čuvash also inhabit the neighbouring regions: the Autonomous Republics of Tatarstan and Bashkiria, the oblasts of Ulianovsk, Kuybyshev, Saratov, and of Western Siberia.

The name Čuvash only appears in its present form in Russian chronicles of later than the 15th century, and is not found in such Arabic writers as Ibn Faḍlan, al-Mukaddasi, Yākût, etc., yet the Čuvash are according to general opinion, one of the oldest established peoples in the Volga region. Their origin is still the subject of controversy. According to a theory which has now been abandoned, the Čuvash were descendants of the Khazars (Hunfalvy, Die Ungern Magyaren, 1881; Fuks, Zapatki o Cuvashkh i teremisakh Kazanskoy Gubernii, Kazan 1840). Other writers trace their descent to the Būrūs [qv] or the Huns (for example W. Barthold, Sovereigns of 1111 sostenoyanie i bilâšyje tezdi sâzâniyati istoriyi tureç- shish narodos, Moscow 1926, 5). More popular and more likely is the theory that they are of Bulghar origin, which is based, among other things, on the analogy between the present-day Cuvash language and the burial inscriptions found in the ruins of the town of Bulghar and on the Danube. Several historians and linguists have defended this theory and it still has many supporters: Husein Feizkhanov, II'minkiy, O fonetischenkh otnosheniyakh mel'du čuvashskim i türkismi yazikami, in Izv. Arkh. Obshč. v, (1962) 80-84. N. I. Ašmarin, Bolgari i Čuvash, St. Petersburg 1902, Howorth, etc.; A. P. Kovalevskiy, Čuvash i Bulgar po dannym Čavasam
ibn Fadlana, Čeboksar 1954, and P. N. Tretyakov, Vopros o proizkhozdenii Čuvashskogo naroda v svete arkeologičeskikh dannikh, in SE, iii, 1950, 44-53. trace the descent of the Čuvash from the Bulgār tribe of the Savak (or Savaz) who, contrary to the Bulgārs properly so-called, refused to adopt Islam and remained animists.

Finally, according to a new theory, based on the existence of a pre-Turkish Finno-Ugrian substratum in the Čuvash language which has been recognized for some time by the majority of Soviet ethnologists, the ancestors of the Čuvash were Finno-Ugrian tribes who were influenced by Turkish culture through various Turkish tribes originating in the south or the south-east, before the arrival of the Bulgārs on the Middle Volga in the 7th century.

The infiltration of Turkish culture among the Finno-Ugrians continued during the Bulgār era until the 17th century or even later, under the Golden Horde and the Khanate of Kazan. Whatever their racial origins may be, the Čuvash, a Turkish-speaking people, but animists (they were converted to Christianity in the 13th and 19th centuries) were exposed to the influence of Islam by contact with the Muslims, the Bulgārs, and then the Tatars; this influence is be found particularly in certain terms such as "psemelle", the word by which prayers begin, "pikhampar" (payghambar), 'wolf-god', 'kiremet', 'spirit'. Other Čuvash, placed in immediate contact with the Tatars of Kazan, were converted to Islam. This phenomenon, which began at the time of the Khanate of Kazan, continued almost to the present day. It is impossible to appreciate its extent, for the Čuvash who were converted to Islam adopted the language of the Tatars, at the same time as their religion, and were "Tatarized". Tokarev, Etnografija narodov SSSR, Moscow 1958, considers that at the beginning of the 19th century the Čuvash were three times as numerous as the Tatars in the "government" of Kazan, while in the census of 1897, their number was twice as small as that of the Tatars. According to him, this decrease is due to the fact of "Tatarization" alone. Finally among the Čuvash who are animists or Christians, and the Muslim Čuvash there were still to be found at the beginning of the 20th century several semi-Muslim groups, such as, for example, the Nerekhdžeme Krayasen of the district of Kaybyzaz of the Autonomous Soviet Socialist Republic of Tataristan, who are semi-islamized animists, or again the Čuvash group of the region of Ulianovsk, who were considered before 1917 as Christians of the Orthodox church, while still observing the Muslim festivals and the fast of Ramađan.

CYPRUS [see KUBRUS]

GYRENAICA [see BARKA]

AL-DABARAN [see NUDJUM].

DABB, the thorn-tail lizard (Uromastix spinipes). Cognate synonyms exist in other Semitic languages.

The animal, found in abundance in the homeland of the Arabs, is often mentioned and described in ancient poetry and proverbs. Much of the information on the animal derives from just these sources which are freely quoted in later zoological works. The dabb was eaten by the ancient Arabs who relished it as tasty food; still it is reported that the tribe of Tamīn, who were especially fond of eating it, were ridiculed on that account by other Arabs. In Islamic times, the lawfulness of its use as human food was expressly pointed out by some hadiths. Bedouin eat it to the present day.

The dabb is described as clever but forgetful; it may even not find its way back to its hole, wherefore it chooses a conspicuous place for its habitation. It digs its hole in solid ground—whereby its claws become blunt—lest it collapse under the tread of hoofed animals. It does not brood over the eggs but lays them in a small cavity of the soil and then covers them with earth. The young hatch after forty days and are able to take care of themselves (autophagous). The dabb lays seventy eggs and more, which resemble the eggs of the pigeon. Its tail is jointed. It has such great strength in its tail that it can split a snake with it. If it is killed and left for one night and then is brought near a fire, it will move again. It devours its young when hungry and eats its vomit again; yet it is highly capable of enduring hunger, being second, in this respect, only to the snake. It likes eating dates. Its teeth are all kind has two tongues. The dabb drinks little or does not drink at all and voids one drop of urine in every forty days.

Some of the fabulous accounts have their origin in ancient popular tradition, mainly laid down in poetry and proverbs, as pointed out in the zoological works themselves.

Various medicinal properties were ascribed to the heart, spleen, skin, blood, fat and dung of the dabb. Its significance when seen in dreams has been
treated by Damīrī in special works on that subject.

**Bibliography:** Abd al-Ghanī al-Nabulusī, *Taʾtrib al-Anām*, Cairo 1354, ii, 58; Damīrī, s.v. (transl. Kopf, 59); Labīd, no. 16, 41-42; Antara in *Six Poets*, ed. Ahlwardt, no. 7, 19). Some years later al-Aswād, 71

**DABBā, (plur. DAWBBā), any living creature which keeps its body horizontal as it moves, generally quadruped. In particular, beast of burden or pack-animal: horse, donkey, mule, camel (cf. Lane, s.v.).**

Burāk, the legendary steed ridden by the Prophet at his ascension (*miʿrddi*) is given the name DABBā by al-Ghitlī and in the commentaries. The word acquired a particular significance from its use in the Kurān, XXVII, 82 in the sense of the archetypal “Beast,” equivalent to the term θῆρον in the Apocalypse of St. John. The text is laconinc and gives no explanation: “And when the final word has been spoken against them (cf. XXVII, 83), we shall call forth before them the Beast spring from the earth, that shall tell them that mankind had no faith in our signs”. The formula is no doubt based purely on recollections of the Apocalypse: καὶ έπον ἄλον θήρον πνευματίου ἐκ τῆς γῆς . . . (Rev., xiii, 11). Exegesis carried out in the course of time has derived from the text, which has been reconsidered in respect of certain images relating to the Day of Judgement. Commentaries by al-Tabārī, al-Zamakhshari, al-Rāzi, and al-Baydawī repeat each other. The key point is, apparently, a *hadīth* which has been traced back to the Prophet (al-Tabārī): “I said: Oh Prophet of God, where will it (the Beast) appear? He answered: from the greatest of mosques, a thing sanctified by God. While Jesus shall perform the *Tawwil* in the House of God, and with him the Muslims, the Earth shall tremble beneath their feet at the movements of the vast Beast. And Saḥā shall be torn apart at the place where it will appear”. The Beast will emerge at Ṣafā. The forefront of its head will have a hairy mark, and its ears will be entirely covered with hair. Those who try to capture it will not succeed, nor will those who take to flight escape from it. It will speak Arabic. It will name people as either “believers” or “ungodly”. The believers it will leave, their faces gleaming like stars, and between their eyes it will inscribe the word “believer”; as for the ungodly, it will set between their eyes the black mark of the ungodly.

Other traditions have extended this last part: it is with Moses’ rod that the Beast will mark the believer with a white spot, which will expand until its gigantic size: “only its head will appear, which will reach the clouds in the sky” (al-Zamakhshari; Fakhr al-dīn al-Rāzī), a conception which seems to be influenced by the description of the appearance of Gehenna recorded in the Ps. Ghazzall, *al-Durrā al-fıkhira*, Brockelmann, i, 538, no. 6; 51, 746, no. 6; cf. comm. on Kurān, XVIII, 100). Abd al-Hurayra (al-Rāzī) says that the horns on its bull-like head are a parasang apart. It will appear three times. Al-Zamakhshari makes it travel in turn through the Maghrib, the East, Syria and the Yemen, proclaiming the vanity of all religions foreign to Islam. Al-Rāzī speaks of a long period of hiding in the mosque at Mecca between its second and third appearances.

All these descriptions which, one after another, betray the influence of vague notions deriving from the Scriptures, popular and apocalyptic accounts, are of late date. Al-Rāzī stresses that “out of all this there is nothing authentic in the Book, unless the words attributed to the Prophet are genuine”. In any case, it is not the Beast of the Apocalypse since it arrives after judgement has been pronounced (al-Rāzī states that the **marrās** interpret the words “and when the final word has been spoken against them” in this sense). This is confirmed by traditions which depict it denouncing the futility of sinners seeking too late to be converted, after the time when, according to the Kurān, repentance will no longer avail. This explains the confusion with the idea of Gehenna in the Ps. Ghazzall. (A. ABEL)

**DABBā b. UDD b. TABBĪA b. AL-YĀS (KHINDĪF) b. MUḌRĀ b. NIṢĀR b. MAʿADD** was the eponymous hero of the well known Arab tribe of that name. With their “nephews” Ukl b. Awfī, Taymī, Adī, and Tjawr b. Abī Manābīt b. Udd, Dabbā formed a confederacy called al-Ribāb. The Ribāb were in alliance with Saʿd b. Zayd Manāt, the greatest clan of Tamīm. This alliance has never been broken by the other confederates. These, indeed, were formations of rather moderate size, whereas the Dabbā by means of their power sometimes were able to follow their own policy. Of the three clans of Dabbā, Shuraym had in the course of the 7th/13th century shrunk to a small number of families. But the second, Bakr, had vastly increased, thus leaving the once powerful Banū Ṣulamī far behind.

From the second half of the 6th/12th century onwards, the domiciles of al-Ribāb were in the region al-Shurayf between the right bank of Wādī Taṣrīr and the depression al-Sīr. In the spring they used to migrate to (Bāṭnī) Fājdī and to the sands of the Dāhnā by way of Tiṣḥār (= Kayjiyya?) or Wādī al-Ṣḥāf farther south. But as their spring pastures lay as late as the eighties far in the N.W., in regions held in other seasons by Asād [q.v.] and Dhūbyān, we may conclude that their domiciles before this time were farther in the west than they were later on.

We find al-Ribāb mentioned for the first time in the *Dawān* of Abīd b. al-Abraš (no. 17, 12) as fighting against Asād (not later than 540). In the eighties Dabbā and Tamīm stood their ground in a long battle against the Kilāb (b. Rabīʿa b. Amīr b. Saʿṣaʿa [q.v.]) and Abs (yawn al-Kurnatayn = al-Subān, Aws b. Ḥadīr, no. 1, 9; 16; 30, 3-15; Labīd, no. 16, 41-12; Antara in *Sūr Post*, ed. Ahlwardt, no. 7, 19). Some years later al-Aswād,
brother to al-Nu'man III of al-Hira, began to restore by several campaigns in Arabia the lost prestige of the dynasty. The Ribâb hesitated to surrender until al-Aswad set on them Asad and Dhubyân. Next year Asad and Dabba again defeated the Kilâb and other ʿAmir b. Saʿaḍa (al-Aʾṣâḥ, ed. R. Geyer, no. 1, 62-74; The Naḥâṣ of Dârâr and al-Faraḍâd, ed. Bevan, 240, 18-19; Yâlūt, 1, 229; The Muʿaddalîyyah, ed. Lyall, no. 96, 8-19; 99, 9). Their last feat in the Diṭhilîyya was the murder of Bistâm b. Khayr, the hero of the Shaybân (of Bakr b. Wâli [g.n.]), who were driving away their herds (E. Bräunlich, Bistam Ibn Qais, Leipzig 1923).

There is hardly any information on their conversion to Islam. In the first division of the population of al-Kûfâ Dabba seem to be missing. Mentioned are only "the remaining Ribâb". That is to say, Dabba together with Bakr and Tayyâr formed a version to Islam. In the first division of the population of Dabba.

Abbasid times, e.g., Abu Hatim but a number of soldiers, judges and administrators of Dabba. In the quarter missing in the enumeration Tabarl, mentioned are only "the remaining Ribâb". That is to say, that Dabba together with Bakr and Tayyâr formed a version told by al-Shabushti conflicts with this (K. al-Diyardî, Baghdad 1951, 149).

In the Ayyubid era pilgrims visited a monument called makâm Dâwûd on Mt. Barâsâyân near Dabîb. The spot today has the name Nabi Dawûd.

Dabîb is known above all for the decisive battle which was fought there on 15 Rabîʿa 292/24 August 1516 between the armies of the sultan Kanshâh al-Qaher and the Ottoman sultan Selîm I. The Ottoman artillery proved superior, the bravest elements of the Mamlûk cavalry were decimated, and Kanshâh himself was killed. The Ottoman victory paved the way for their occupation of Syria and Egypt.

DABÎB, a locality in the ʿAzâz region of northern Syria. It lies on the road from Manbîdî to Anṭâkîya (Tabari, iii, 1103) upstream from Aleppo on the river Nahr Kuwayk. In Assyrian times its name was Dabûg, to become Dabekhî in Greek. It lies on the edge of the vast plain of Mârj Dabîb where, under the Umayyads and ʿAbbâsids, troops were stationed prior to being sent on operations against Byzantine territory. The Umayyad caliph Sulaymân b. ʿAbd al-Malik lived in Dabîb for some time, and after his death and burial there in Safar 99/Sept. 717 his successor ʿUmar b. ʿAbd al-ʿAzîz was appointed caliph. According to al-Masʿûdî, his tomb was descereated by the ʿAbbâsids, but the version told by al-Shubshtî conflicts with this (K. al-Diyaṣârî, Baghdad 1951, 149).

In the Ayyubid era pilgrims visited a monument called makâm Dâwûd on Mt. Barâsâyân near Dabîb. The spot today has the name Nabi Dawûd.

Dabîb is known above all for the decisive battle which was fought there on 15 Rabîʿa 292/24 August 1516 between the armies of the sultan Kanshâh al-Qaher and the Ottoman sultan Selîm I. The Ottoman artillery proved superior, the bravest elements of the Mamlûk cavalry were decimated, and Kanshâh himself was killed. The Ottoman victory paved the way for their occupation of Syria and Egypt.

DABÎB, ABDU DJAFAR AHMED B. YAHYA B. AHMED B. ʿAMIRA, an Andalusian scholar of the 6th/12th century. According to the information that he gives us in his works concerning himself and his family, he was born at Velez, to the west of Lorca, and he began his studies in Lorca. He travelled in North Africa (Ceuta, Marrakûsh, Bougie) and even reached Alexandria, but he appears to have spent the greater part of his life at Murcia. He died at the end of Rabi I 599/beginning of 1203. Of his writings only a biographical dictionary of Andalusian scholars is preserved, preceded by a short survey of his history of Muslim Spain which continues and completes the introduction of ʿAbd al-Wâhid al-Marrakûshî (Histoire des Almohades, ed. Dozy). In addition al-Dabîb was closely connected with the Diṭhilîyya al-maktabîs al-Humaydî, which goes as far as 450/1058, and which he completed with the help of later biographical works. His collection of biographies, entitled Bughyat al-multamis fi Taʾrîṣh Rîḍîl Aḥî al-Andalus, was edited in 1885 by Codera and Ribera (vol. iii of the Bíbl. Arabico-Hispana).

Bibliography: Maḥṣuf, Analectes, ii, 714; Amari, Bíbl. ar. sec., i, 437; Wüstenfeld, Geschicht- schreiber, no. 282; Pons Boygues, Ensayo, no. 212; Brockelmann, S I, 580. (C. F. Seyerbold*)

DABIK, (variant forms Dabba and Dabbi), was a locality in the outer suburbs of Damietta, noted for the manufacture of high quality woven material, which it exported to the whole of the Muslim empire. The location of Dabîk cannot be fixed more exactly. It is found mentioned along with other cities that have disappeared, such as Shatâ, Tinnûs, or Tûnâ, which were probably on the islands of Lake Menzâleh.

Fine cloths embossed with gold were made there, and, during the Fāṭimid period, turbans of multicoloured linen. These textiles were so sumptuous that dabîk soon became known, and its fame grew to such an extent that the word came to designate a type of cloth that could be manufactured more or less everywhere, at Tinnûs and at Damietta, in the Delta, at Asyût, in Upper Egypt, and even in Persia, at Kâzîrûn. The quality of the cloth made at Dabîk must have dropped, because, according to al-Iдрîsî, although these materials were very fine, they could not be compared with those of Tinnûs and Damietta, and this fact can already be deduced from the customs tariff of Dcheda, given by al-Muʿâṣâdî.
At the present moment, three fragments of material are known—one Abbasid and two of Dablk. The place name is not mentioned by Ibn Mannamat, who, however, mentions the dabbl.

Ibn Duksam (v, 89) and Ibn Djoftan (76; ‘Abd al-Latif, Relation de l’Egypte, 638) mention a place called Dablk in the province of Gharblya, but this cannot be the town in the Damietta neighbourhood, which these two writers treat separately (Ibn Duksam, v, 76; Ibn Djoftan, 62 and ‘Abd al-Latif, 639).

For the same reason of distance, one could not possibly identify the old Dablk with the modern Dablj, twelve kilometres south of Sinballawayn, which could, on the other hand, well be the Dablk of Ibn Duksam and Ibn Djoftan.

**DABBL [see dwn]**

**DABIR, SALAMAT ʿALI,** an Urdu poet, who devoted himself to writing and reciting highly devotional elegies on the death of the martyrs of Karbalā. He was a son of Mirzā Ghulām Husayn, who is claimed to be a grandson of Muīla Ḥākim Shīrāzī (a brother of the famous Ahlī Shīrāz, d. 934/1529-30). Salamat ʿAli was born in Ballimārān, Dihlī on 11 Dhu’l-Mahādī 1218/29 August 1803; he accompanied his father as a child to Lucknow and there received a good education. He studied all the usual Persian and Arabic texts on religious and foreign sciences (manbūl wa maṣāḥīl) from well-known ‘ulamā of the city. He had finished his studies by the time he was 18. He began composing poetry at the age of 20 (c. 1231/1813-14, 1232) and continued doing so along with his studies, under the guidance of Mir Muṭṭaffar Husayn Dāmlī of Gūrgān. He soon acquired fame and won the appreciation of the rulers of Awadh, members of their family and the noblemen of the Court. For about 60 years of his life he wrote marthiyas (elegiac poems).

Towards the end of his life he became almost blind. He, therefore, gladly accepted the suggestion of Wājidī ʿAll Shāh, then living in Calcutta in exile, that he should go there for treatment; he reached there about Pahul ‘U-Sudīnah 1290/1874. A successful operation by a German eye-specialist, who was staying with Wājidī ʿAll Shāh in Calcutta, restored his sight. He returned to Lucknow, where he had spent the major part of his life, and which he had only left for short periods in the disturbances of 1857 he had moved to Sitapur for a while; about 1858 he went to Kānpūr and in 1859 to ʿAzmābād; he visited ʿAzmābād again in 1292/1875 and died there on 30 Muharram 1292/8 March 1875, he was buried in his own house in a lane which is now known as Kāmār ʿAdbīr, after him. In his old age he suffered much tribulation on account of his loss of sight, and he was grieved by the death of a grown-up son and of a brother.

Dablr is described as a pious, ascetic, generous, hospitable and serious-minded person. As a poet he was extremely prolific, and had the gift of composing good verses quickly. His compositions consisted mostly of marthiyas, Salāms (for them see al-Misān, 485) and rubā’īs (Hayāt-ī Dablr, i, 272). His rival in this genre of poetry was his contemporary Mir Anīs, who appeared in Lucknow long after Dablr had established his fame as a poet. Their rivalry divided their admirers into two rival groups called Dablris and Anīsās and a considerable literature was produced on their comparative merits and failings (see, for example, Shihbū Ṣuḥāna, Mawṣulān ud Dablr, Āgra 1907; Sayyid Nāṣir al-Fāwak Ṣawādī, al-Misān, ‘Allgaḥ n.d.; ‘Abd al-Ḥaẓīr Khān Ṣaṣālā, Iṭīḥād-i Nabi 1879; Mir Muḥammad Ṣaḏā Ṣawī, Taḥīr al-Awṣādī; Mir Ḥafiz Jī ‘All Dāw, ‘Radd al-Muwāṣāta, etc. etc.).

While Anīs is usually praised for the simplicity of his style, easy flow of his verse, and his relatively eloquent (fasīḥ) descriptions, Dablr is eulogized for his brevity, freshness of his poetical ideas (maḏālim) and frequent and full use of rhetorical figures, and his touching laments and wailings (Urdu: bāyān). As an Arabic and Persian scholar he drew freely on the literatures of these languages, incorporating in his poems materials taken from the Kurān, Ḥadīth and the works on Maṣūli, etc. (cf. a comparative view quoted in Hay. Dab., i, 290: The Mir is eloquent and sweet [fasīḥ wa namakẖul]. The fact remains that it was due to the efforts of these two poets that marthiya attained such an important position in Urdu Poetry.

**Works:** Most of Dablr’s poems have been lithographed, though some are still unpublished. These editions are marred by interpolations, e.g., (1) an edition of marthiyas in 2 vols. (Hay. Dab., i, 624); (2) Daftar-i Māmāt, 20 vols. Lucknow 1897. For an analysis of the contents see Hay. Dab., i, 376 ff. These marthiyas etc. were lost in the disturbances of 1957 and after, and were collected again later; (3) Marthiya-i Dablr, 2 vols. (ibid. i, 490, 493; (4) Marthiya-i Mirzā Dablr, 2 vols., Lucknow 1875-76 (several editions in the following years), Kānpūr 1890-99 (several editions in the following years); (5) Marthiya-ī-yī Mirzā Dablr, Lucknow 1882 (several editions in the following years)); (6) ‘Abū al-Maṣāḥīh, a prose work, relating to the story of Joseph, compared to the story of the martyrs of Karbalā, Dihlī (Hay. Dab., i, 280); (7) Rubā’īyāt Mirzā Dablr, Lucknow n.d., containing 197 rubā’īs. A smaller collection of these was also published along with those of Anīs in Āgra.

In his younger days the Mirzā also composed three dīvāns of ghasābī, but later destroyed, lost or withdrawn them.

(Mohammad Shafī)
DABISTAN AL-MADHAHIB, "The school of religions", a work in Persian describing the different religions of and in particular the religious situation in Hindustan in the 11th/12th century; it is the most complete account in the Persian language, later than the Bayān al-adāyān (6th/12th century), which is accurate but concise, and than the Taḥṣīrāt al-ṣawāmīm (7th/11th century), written from the Shi‘ī point of view. The sources of the Dabistān derive partly from the sacred books of the different religious persuasions, partly from verbal information given to the author, and partly from personal observations. In many chapters he also makes use of the earlier Arabic literature concerning these matters. First of all the religion of the Parsis is examined extensively; for a long time Muḥsin Fānī was thought (mistakenly) to be the author of this work; in some manuscripts he is mentioned solely in his capacity as the author of a work (which is called Dabistān, i.e., a school or school of manners, in Persian manuscripts). (J. HOROVITZ-[H. MASSE])

Bibliography: Dabistān al-madhdhib (Calcutta 1822/1809; other editions from Tehran, Bombay, Lucknow; The Dabistan or school of manners, trans. David Shea and Anthony Troyer, Paris 1843, 3 vols. (not always accurate); J.A., vi, (1845) 406-11; Rieu, Cat. Persian MSS. of the British Museum, i, 141 & 147; 1067/1657. (Other catalogues of manuscripts and to old translations of isolated chapters): Ţēţē, Cat. of the Persian MSS. of the India Office Library, i, no. 1369 (useful references to other catalogues of manuscripts). (J. HOROVITZ-[H. MASSE] in Persian, and acquired some knowledge of the west and south of India. The Dabistān was finished no doubt between 1064 and 1067/1654-57.

DABIT, in Turkish zabīyye, a late Ottoman term for the police and gendarmerie. Police duties, formerly under the control of various janissary officers, were placed under the jurisdiction of the Serasker (q.v.) see also Bāb-ı Serasker in 1241/1826, and in 1262/1846 became a separate administration, the Zabīyye Memluk-i İmam (Lufti vilī 27-8). At about the same time a council of police (meğli-i zabīyye) was established, which was later abolished and replaced by two quasi-judicial bodies, the diwān-i zabīyye and meğli-i lâkkīb. After several further changes the mukhtariyyet became a ministry (nezaret) of police in 1286/1870. On 17 July 1909 the name ministry of Zabīyye was abolished and replaced by a department of public security (Emniyyet-i Umamiyye) under the Ministry of the Interior. Bibliography: "Oğmân Nûr, Meğli-i Umârı Beldeleyiyye, i, Istanbul 1338/1924, 934 ff. Laws and regulations on police matters will be found in the Destür (French translations in G. Young, Corps de Droit Ottoman, Oxford 1905-6, and G. Aristarchi, Législation ottomane, Constantinople 1873-85. See further Karakol, Şurta, Persia, and V. A. Gibb and Bowen, i, 259, and Dozy, Suppl. s.v.). By the 12th/18th century the term was already in common use in this sense (e.g. Resmi, Khulāṣat al-Fīhār, 5, "rizāq-ı zabīyye") and documents cited by Diewdet (i, 350; vi, 367 etc.). From the time of the westernizing reforms onwards it becomes the standard Ottoman equivalent of the European term 'officer'. In the Turkish republic it has been replaced by subay, but it remains current in the Arab successor states of the Ottoman Empire. (B. LEWIS)

DABT, assessment of taxable land by measurement, applied under the later Dihll sultanate and the Mughals; land so measured is called dabt. See DABISTAN AL-MADHAHIB — DABOYA

DABTIYYA, in Turkish zabīyye, a late Ottoman term for the police and gendarmerie. Police duties, formerly under the control of various janissary officers, were placed under the jurisdiction of the Serasker (q.v.) see also Bāb-ı Serasker in 1241/1826, and in 1262/1846 became a separate administration, the Zabīyye Memluk-i İmam (Lufti vilī 27-8). At about the same time a council of police (meğli-i zabīyye) was established, which was later abolished and replaced by two quasi-judicial bodies, the diwān-i zabīyye and meğli-i lâkkīb. After several further changes the mukhtariyyet became a ministry (nezaret) of police in 1286/1870. On 17 July 1909 the name ministry of Zabīyye was abolished and replaced by a department of public security (Emniyyet-i Umamiyye) under the Ministry of the Interior. Bibliography: "Oğmân Nûr, Meğli-i Umârı Beldeleyiyye, i, Istanbul 1338/1924, 934 ff. Laws and regulations on police matters will be found in the Destür (French translations in G. From the time of the westernizing reforms onwards it becomes the standard Ottoman equivalent of the European term 'officer'. In the Turkish republic it has been replaced by subay, but it remains current in the Arab successor states of the Ottoman Empire. (B. LEWIS)

DABUYID, the founder of the Dabuyid dynasty in Gīlân (q.v.). The tribe claimed to be of Sāsānid extraction through Dabuya's father, Gil Gāwbāra. Their residence was the town of Fūman (q.v.). The dynasty clung to Zoroastrianism for a long time, and repeatedly defended the land against the Arabs, until the last ruler, Khurshīd II (758/60, 141 or 142 A.H.) had to flee before the superior force of the 'Abbāsids, and put an end to his own life in Daylam (Tabari, iii, 139 f.). One of his daughters, whose name is unknown, became the wife of the Calif al-Mansūr.

The names of the members of the dynasty are as follows: Dāboč, 40 to 36/660-1 to 676.—His brother Khurshīd I, 56 to 90/676 to 709.—His son Farrukhan, 709 to 721-22, 90 to 103 A.H., who took the title Işıpbâbd (q.v.) (“leader of the army”), and warded off an Arab assault in 717.—His son Dābdūrzmehr (Dābdūrzmehr), 103 to 116/721-22 to 734.—His brother Sārūyâ (Sārūyā), for a few months in 116/721-22.—Khurshīd II, the son of Dābdūrzmehr (Dābdūrzmehr), 116 to 141 or 142 to 147/721-22 to 750-55 (see above). A dynasty descended from Dabuya's brother Fādūspān (title), ruled until 15/637 and 1576 respectively (from 1453 in two branches) in Kūyān (q.v.) and some neighbouring districts.

The most probable is: voiced lateralized velarized interdental fricative (see J. Cantineau, Consonantisme, in Semitica, iv, 84-5). According to the Arab grammatical tradition: rigaika maqhiura mutbaka. For the makhari, the daghiriyya of al-Khalil (al-Zamakhshari, Mufassal, 2nd ed. J. P. Broch, 190, line 20) is difficult to define exactly (see De Sacy, Gr. Ar., i, 26, n. 1; M. Bravmann, Materialien, 49 and 51). The most plausible meaning for shidr is 'commissure of the lips' according to al-Khalil’s own explanation (Le Monde Oriental, 1920, 45, line 8): masfaraj al-fam (repeated in Mufassal, ibid.; Radi al-Din al-Astarabadi, Sharh al-Shafi’iya, iii, 254, line 6); d is thus in the lateral position.

Sibawayh represents d as a lateral simply, and thus describes the makhradi; between the beginning of the edge of the tongue and the neighbouring molars' (Sibawayh, Paris edition, ii, 453, lines 8-9): a retracted lateral, for this beginning is to be taken as starting from the root of the tongue, and lam follows d (ibid., lines 9-11; Mufassal, 188, line 19). This does not indicate, for the peculiarity of sisida of d, a great extent for the place of articulation but rather a dwelling on it, a special prolongation of it. In modern Arabic dialects the passage from d to f is known (Landberg, Hadramout, 637), but the almost universal treatment of d is its confusion with z (voiced emphatic interdental fricative), whose evolution it shares [see z][7]. One is thus led to include in the articulation of d an activity of the tip of the tongue in the region of the teeth similar to the corresponding lateralized articulation in the Semitic languages (Mehri, Shihwari, but not the lateralized occlusive of Sohotri), whence the definition proposed above.

A lateral character is to be claimed for d, as N. Youshmanov, G. S. Colin, J. Cantineau, and others have done (J. Cantineau, Consonantisme, 84). The d phoneme of Classical Arabic continues an autonomous phoneme of common Semitic which is even more difficult to define precisely. M. Cohen sees in it a consonant 'of the dental region of which the articulation was doubtless lateral: d [conventional transcription]. As an emphatic, this consonant may anciently have formed one of a lateral series (triad?) (Essai comparatif, 149). In Classical Arabic d is isolated.

In ancient Semitic, the South Arabian inscriptions assign a special character (of unknown pronunciation) to the phoneme corresponding with the d of Classical Arabic. Gee does the same, but in the traditional nunciation it is a z; j in South Ethiopic. It is represented in Akkadian, Hebrew, and Ugaritic, by s, but in Aramaic by h in the oldest texts (preserved in Mandaean), then by s, a special evolution which represents a thorny problem. See the Table of correspondences in W. Leslau, Manual of Phonetics, 128.

For the phonological oppositions of the d phoneme in Classical Arabic see J. Cantineau, Essisse, in BSL (No. 126), 96, 71; for the incompatibles, ibid., 134. In view of the latter, J. Cantineau would see in d a lateralized rather than a lateral consonant (ibid., 130).

D undergoes few assimilations in Classical Arabic (see J. Cantineau, Cours, 69).

The Arabs saw in d one of the khiyds ‘special features’ of their language (Ibn Djinni, Sirr ṣnda’a, i, 222; Al-Suyūṭī, Muṣḥir, i, 326) and boasted of it (see the line of al-Mutanabbi quoted by Ibn Djinni, ibid.). But Sibawayh (ii, 452, lines 14-5, 17 f.) already registers a corrupt pronunciation: al-dād al-da’dha (M. Bravmann, Materialien, 53). In fact the articulation of dād has disappeared in the modern dialects and Kurānīc recitation and either (voiced velarized interdental fricative) or d (voiced velarized dental plosive) is used, according to the treatment of the phoneme in dialect.

In Persian and in Urdu, dād is a voiced alveolar fricative, and no differentiation is made in pronunciation between dh, z, and ẓ. Bibliography: in the text and s.v. Hurof al-Hidrî (H. Fleisch)

DADALOGHULU, ṢÎR MÛṢÂ-OĞLU WELT, 19th century Turkish folk poet (1797-1870?), was a member of the Afşar tribe which lived in the Taurus Mountains in S. Anatolia. His father was also a poet and took his makhris from the same family name. It is said that for a time Dadaloglu acted as imām in the villages and as secretary to the tribal chiefs. As a result of government action against his tribe, which rebelled because it was unwilling to undergo conscription or taxation, he was transported with the rest of the Afshars to the village of Sindel near Ažiziyeye in the province of Siwās (1866-8). It is difficult to establish how well founded are reports that at the end of his life he returned to the Cukurova region and recited his poems in the bazaars of Adana. His poems were not collected during his lifetime. Among them are to be found the chief forms of folk poetry such as türkî, koşmâ, semai, warsagh, and destân. He embellished and enriched the story of Genç Oğmân in a number of poems with a local setting. His poetry is harsh and emotional in manner and shows the pure and sincere odyssey of a bold, daring, upright, and sensitive tribesman. From passages in his poems one can understand the warlike psychology and nomadism of the society in which he lived. He was one of the last powerful representatives of epic, lyric, and pastoral Turkish folk poetry and story-telling which had continued ever since the composition of Dede Korkut and which Körküşlu and Karadja oğlan are the leading examples.

**DADJADJA**, the domestic fowl. The word is a noun of unity which, according to Arab lexicographers, may be applied to both the male and the female. Alternative pronunciations are *dadjadja* and *dadjidadja*. In more recent local usage (cf. Jayakar, Malouf), *dadjadat al-bahr* and *dadjadat al-kubba* denote certain kinds of fish, just as the corresponding Hebrew भें.

The animal, which is not mentioned in the Hebrew Bible, was known to the Arabs from pre-Islamic times. *Džiž* reports (II, 277 f.) that it was given to poets as a reward for their literary achievements. Although it eats dung, it is permitted as human food by Islamic law because the Prophet was seen partaking of it.

The ample information on the fowl and its eggs, which is given in Arabic zoological writings, can partly be traced back to Aristotle's *Historia Animalium*. The fowl has no fear of beasts of prey except the jackal, an inherent enmity existing between the two. It is fearful at night and therefore seeks an elevated sleeping place. It shares the characteristics of both birds of prey and seed-feeding birds, since it eats flesh as well as grains. The hen lays, mostly one egg a day, throughout the year, except in the two winter months (in Egypt, according to Nuwayrî, all the year round without interruption); if she lays twice a day it is a portent of her approaching death.

The chicken is produced from the white of the egg, while the yolk provides the nourishment for the embryo. From elongated eggs female chickens are born and males from round ones. Two chickens are produced from double-yolked eggs. If the hen while sitting hears thunder, the eggs are spoiled; if she is old and weak, the eggs have no yolk and produce no chickens. She also lays eggs without being covered by the cock (wind-eggs), but such eggs produce no chickens. When hens become fat they no longer lay, just as fat women do not become pregnant.

The sources mention and describe several kinds of *dadjadja*, some of them reaching the size of a goose. Numerous medicinal uses of eggs, fat, bile, gizzard, dung, etc. are mentioned by Arab zoologists and pharmacologists, partly from classical sources. The meat was considered a wholesome food, although its continuous eating was said to cause gout and piles. Half-cooked eggs were credited with special efficacy as an aphrodisiac. The significance of fowl when seen in dreams has been treated in pertinent works.

The Arab astronomers give the name *al-Dadjadja* to the constellation of the Swan, which is also called *al-Ta'dir*. The sources mention and describe several kinds of *dadjadja*, some of them reaching the size of a goose. Numerous medicinal uses of eggs, fat, bile, gizzard, dung, etc. are mentioned by Arab zoologists and pharmacologists, partly from classical sources. The meat was considered a wholesome food, although its continuous eating was said to cause gout and piles. Half-cooked eggs were credited with special efficacy as an aphrodisiac. The significance of fowl when seen in dreams has been treated in pertinent works.

episode of the righteous men denouncing him. The apocalypse of Sibylla believes that the decisive proof of his imposture is his inability to raise up the dead.

In considering these eschatological documents it appears that, from the 11th century at least until the 16th century, Judeo-Christian traditions regarding Daḍīdjał remained alive and formed an indispensable element in descriptions of the period preceding the Judgment. Conflating two traditions, the apocalyptic of Sibylla believes that the decisive proof of his imposture is his inability to raise up the dead; the apocalypse of Abd al-Kahir al-Baghdadi, K. al-Farq bayan al-Firaq (Cairo 1930, 266 and 332-333) regards him as the ultimate term of comparison to describe false doctrine and going astray—though his sedition is only to last 40 days—and recalls that Christians believed that he would perish at the hands of Jesus who, in that way, would be converted to Islam after killing pigs, scattering wine and taking his place for prayer at the Ka‘ba.

The body of legend about Daḍīdjał is completed by statements about his origin. Apocalyptic texts make him come from the most remote regions. In St. Ephraem and the apocalypse of Abd al-Kahir (Ms. Paris, 2539), he comes from Khurāsān (cf. Ibn al-Wardī, al-Bīrūnī). According to Ps. Kāb al-Abharār and the Şayḥat al-Būm (Ms. ar. Paris, 2502), he must come from the West. Geographers and travelers of the classical period state that he dwelt in the countries which the “Agīḏah al-Hind” habitually populated with extraordinary beings, following the traditions of the Alexander Romance. Generally it was the East Indies which were the chosen place, from the time of Ibn Khurram al-Bihāb and al-Maṣūḏī to Ibn Iyās. A giant, false prophet, king of the Jews, representations of him vary according to the degree of literary information available or the predominating prejudices. It is interesting to note the allusion to the legend of Frometheus which makes him live chained to a mountain on an island in the sea (Muḥāṭasar al-Aḍīdah, 130; Al-Maṣūḏī, Muruḍī, iv, 28) where demons bring him his food. (A. ABEI)

DADFAR, an important, purely nomadic camel-breeding Sunni (Mālīk) tribe of south-western ʿIrāq, whose dīra has been for the last 150 years in the steppe of the Gerāb-Ezarān and ShaʿArān from the neighbourhood of Zubayr to that of Samawa. Their immigration into ʿIrāq, dating from about 1220/1805, was caused by bad relations with the then powerful and fanatical rule of Ibna Saʿūd, who forcibly demanded their obedience. Their earlier history traces legendary origins in Naḍlīd and even in the ʿIbidjār; but in fact the modern tribe represents evidently a conglomerate of various badw elements from many parts of Arabia, more or less unified by the ruling family of Ibn Suwaiy. Tribal traditions record many wars and raids of the usual Arab type, with the Muṣṭafī, Banī Ḥāšid, Shammar and others. They were, while still in Naḍlīd, occasionally tributary to the Shammar, the Shaykh of Kuwait, and the family of Ibn Saʿūd. Administratively, the Daffar are now grouped under the Īnid headquarters of Baṣrah, but move seasonally into Kuwait territory or that of Saʿūd Arabia. Their relations with the Turkish and ʿIrāq Governments since the early 13th/19th century have been fairly good, with lapses especially when they habitually looted caravans on the Naḍlī-Hāʾī road; and they have now lost much of their wild and inaccessible, though not their nodrīmic, character. Varieties of traditions have been maintained with the Muntāfik, their eastern and riverain neighbours; bad, with the Muṣṭafī and Shammar and Ḍānīza. The tribe was heavily involved in the serious raiding into ʿIrāk by Saʿūd (chiefly Muṣṭafī) forces in the period 1340/1344 (1921/25).

(S. H. Longrigg)

DADFAR, a stitched or bound booklet, or register, more especially an account or letter-book used in administrative offices. The word derives ultimately from the Greek diaphora "difference," and hence prepared for writing. It was already used in ancient Greek in the sense of parchment or, more generally, writing materials. In the 5th century B.C. Herodotus (v, 58) remarks that the Ionians, like certain Barbarians of his own day, had formerly written on skins, and still applied the term ἰδίβερα for papyrus rolls; in the 4th Ctesias (in Dietericus Siculus, ii, 32; cf. A. Christensen, Heideludina und Festiattinlitteratur hos Imamene i Oldtiden, Copenhagen 1935, 69 ff.) claimed, somewhat unconvincingly, to have based his stories on the βασιλέως διαβερα—presumably the royal archives—of Persia. The word also occurs in pre-Islamic and even pre-Christian Jewish Aramaic texts (V. Gardthausen, Griechische Paläographie, Leipzig 1911, 91 f.; M. Jastrow, A Dictionary of the Targumim, de'ar, New York 1926, 304. Attempts to derive it from an Iranian root meaning to write (also found in ḏābur, ḏaʿw) are unconvincing; on the other hand, in view of the testimony of the Arab authors, it is probable that the word reached Arabic via Persian.

I. The Classical Period

In early Islamic times dafar seems to have been used to denote the codex form of book or booklet, as opposed to rolls and loose sheets. It was at first applied to quires and notebooks, especially those said to have been kept by some collectors of traditions as an aid to their memories; later, when sizable manuscript books come into existence, it was applied to them also (N. Abbott, Studies in Arabic Literary Papyri, i, Chicago 1957, 21-24; cf. Goldzieher, Mah. St., iii, 50-52 and 180 ff). Stories of personal libraries and record collections in the first century A.H. must be treated with caution, cf. the comments of J. Schacht on the spurious tradition of the archives of Kurayb, On Musd b. ʿUba's Kitāb al-Maghāzī, AO, 1953, xxxi, 296-7. On the earliest Arabic papyrus quires see A. Grohmann, The Value of Arabic Papyri, Proc. of the Royal Soc. of Hist. Studies, i, Cairo 1931, 43 ff.).

The creation of the first Islamic record office is usually ascribed to the Caliph ʿUmar, who instituted the muster-rolls and pay-rolls of the fighting-men (see ḏīʿān). The initial form of these is not known, but before long they were probably kept on papyrus, which after the conquest of Egypt became the usual writing material in the administrative offices of the Caliphate. The papyri show that records of land, population, and taxes were kept in Egypt; surviving documents include quires as well as rolls and loose sheets, though the latter seem to have been the usual form, and no quire in Arabic appears until a comparatively late date (see A. Grohmann, New Discoveries in Arabic Papyri. An Arabic Tax-Account Book, BIE, xxii, 1951, 159-170). In general, the Umayyad Caliphs seem to have followed Byzantine bureaucratic practices, and kept their records on papyrus. This did not lend itself to the codex form. There was, however, also another bureaucratic tradition. The Sāsānīds clearly could not have relied on supplies of imported Egyptian papyrus for
their administration, and made use of a variety of prepared skins as writing materials (cf. Ibn al-Nadim, Fihrist, 90). According to Ḥasan ibn Ḫumm, quoting Ḥamadānī on the authority of al-Maḥmūd (Ṭabarî’s K̲h̲amm 180), the Sāsānīd Emperor K̲h̲obād kept a land-tax office at Ḥuwān; this is indirectly confirmed by Yaḥyā’s story (Ṭaʿrīḥ, ii, 258) of the procuring, in Muʿāwiyah’s time, of lists of Sāsānīd domain lands from Ḥuwān (A. K. S. Lambton, Landlord and Peasant in Persia, London 1933, 15 n. 1). It is possible that some of the army lists of the earlier period, at least in the ex-Persian provinces, were already in codex form. Balādhūrī (Futūḥ 459; ed. Cairo 1901, 455) has ‘Umar say to the Banū ‘Adī ‘if the daftar is closed (yudḥāb on you), and explains it as meaning “if you are registered last”’. Abū Muslim is said to have prepared a pay-roll called daftar instead of the usual dawān of his followers in Khūrāsān in 293/707-8 (Ṭabarî, ii, 1957, 1969; see further N. Fries, Das Heerwesen der Araber zu Zeiten der Omaiyaden, 1921, 9; W. Hoenerbach, Zur Heeresverwaltung der Abbāsiden, Isi., xxix, 1949-50, 263). These may, of course, be no more than a projection backwards, by later historians, of a term common in their own time, though it is significant that the first example comes from the East.

According to the bureaucratic tradition, it was Khalīd ibn al-Ashwād who, during the reign of al-Ḥārūn, introduced the codex or register into the central administration. Until that time, says Ḥajāshīvārī (fol. 45 b; ed. Cairo 89) the records of the dāwān were kept on ṣuḥūj; Khalīd was the first to keep them in daftars. Makrīzī (Khitat, i, 91) goes further and says that the ṣuḥūj muṭārā (7 papyrus rolls, cf. Khalqashādib, Ṣuh, i, 433—aldrāṣī min ḥaṣāb dāftar) which had hitherto been used were replaced by ḥaffāfī min al-gīlādī—parchment codices. In the time of Hārūn al-Rashīd, Khalīd’s grandson, Dīyār b. Yāḥyā al-Barmakī, was responsible, it is said, for the introduction of paper. In this story there is some element of exaggeration. An incident told by Ḥajāshīvārī (fol. 79 b; ed. Cairo 138) shows that under Muḥāṣṣar papyrus was still in use—a fact which had hitherto been unknown—and that supply from Egypt was simply redirected; shows the debts owed by individual persons, according to the Kāmān, and the instalments paid until they are settled. (On Alwulūd see V. Minorsky in his edition of Taḍḍikirāt al-Muṣul, London 1943, 144; to be modified in the light of W. Hinze, Rechnungswesen, 120 ff.).

(4) Al-Ruṣnma—a day-book; the daily record of payments and receipts.

(5) Al-Khāṣmathe statement of income and expenditure presented monthly by the Dīyāshī.

(6) Al-Taṣrīḍ—an annual register, showing the entries in the previous register, and the instalments paid and received.

(7) Al-ʿArda—a subtraction register, for those categories where the difference between two figures needs to be shown. It is arranged in three columns, with the result in the third. Such is the ʿArda showing the difference between the original and the revised figures, the latter being usually smaller, (that is, presumably, the estimates and the amounts actually received). It seems to be the meaning of asl and istikhrādī, rather than income and expenditure, as assumed by Cevedt and Uzunçarşı. On istikhrādī in the sense of revision cf. Uzunçarşı, Medhal, 278 and Hinze, Rechnungswesen 18. On Al ʿasl cf. Mawardi, al-ʿAṣl al-Ṣulṭāniyya, ed. Enger 373, ed. Cairo 209. The expression dafṣīrī al-ʿasl wa istikhrādī occurs in a text from Sālāţūk Anatolios—O. Turan, Türkei Selçuklu kahrba Resmi Vehsiklar, Ankara 1958, text xxvi). These are itemized in the first and second columns, with the differences between them in the third column. Grand totals are shown at the foot of each of the three columns.

(8) Al-Barāʿi—a receipt given by the Dīyāshī or Kuṭāin[.][1] to taxpayers. (It is not clear whether Khāriṯīzī lists a register of copies and receipts, or is merely naming the barāʿa as a kind of document).

(9) Al-Muṣāqaba wa Iqīsām—the annual statement.

(10) Al-Diʾardīr al-Uṣāda—presumably a comprehensive account, showing the names of the soldiers, their pay, and the instalments paid and received.

(11) Al-Qalʿat al-Dāhīn—records of the soldiers, their wages, and the instalments paid and received.

(12) Al-Muḥāṣṣar wa Iṣbīṣī—which need to be seen in context. Those categories where the difference between two figures needs to be shown. It is arranged in three columns, with the result in the third. Such is the ʿArda showing the difference between the original and the revised figures, the latter being usually smaller, or in which the estimates and the amounts actually received. The word seems to be the meaning of asl and istikhrādī, rather than income and expenditure, as assumed by Cevedt and Uzunçarşı. On istikhrādī in the sense of revision cf. Uzunçarşı, Medhal, 278 and Hinze, Rechnungswesen, 18. On Al ʿasl cf. Mawardi, al-ʿAṣl al-Ṣulṭāniyya, ed. Enger 373, ed. Cairo 209. The expression dafṣīrī al-ʿasl wa istikhrādī occurs in a text from Sālāţūk Anatolios—O. Turan, Türkei Selçuklu kahrba Resmi Vehsiklar, Ankara 1958, text xxvi). These are itemized in the first and second columns, with the differences between them in the third column. Grand totals are shown at the foot of each of the three columns.

(12) Al-Barāʿi—a receipt given by the Dīyāshī or Kuṭāin[.][1] to taxpayers. (It is not clear whether Khāriṯīzī lists a register of copies and receipts, or is merely naming the barāʿa as a kind of document).

(13) Al-Muṣāqaba wa Iqīsām—the annual statement.

(14) Al-Diʾardīr al-Uṣāda—presumably a comprehensive account, showing the names of the soldiers, their pay, and the instalments paid and received.

(15) Al-Qalʿat al-Dāhīn—records of the soldiers, their wages, and the instalments paid and received.
DAFTAR 79

(12) Radfa— a requisition (hisâb) issued by the paymaster (mu'min) for certain troops stationed in outlying areas, for one issue of pay (lama') on receipt of the order.

(12) Al-Radfa al-Dîâmi'a— a global requisition issued by the head of the army office for each general issue (lama') of army pay, rations, etc.

(13) Al-Šâh— an inventory ('amal—cf. Dozy, Suppl. ii, 175) required for every fama showing the names of the payees, with numbers and amounts, and bearing the signed authority to pay of the sultan. The Şâh is also required for the hire of muleteers and camel-drivers.

(14) Al-Mu'âmar— an inventory of orders issued during the period of the fama, bearing at its end a signed authorization (igunga) by the sultan. A similar mu'âmar is prepared by every diwân.

(15) Al-Isbîâr— an inventory of the supplies remaining in hand after issues and payments have been made.

(16) Al-Muâdaqâ— a list ('amal) showing the circumstances and causes of any changes occurring, i.e., transfers, dismissals, deaths, promotions, etc.

(17) Al-Dîjiradâ al-Muadigjlâla— the sealed register. The Sadjil (seal) is the letter given to an envoy or messenger, authorizing him, on arrival, to recover the expenses of his journey from any 'Amil. The Sadjil is also the judicial verdict (mafradar) prepared by a kâli.

(18) Al-Fezîrist— a repertory of the inventories and registers in the diwân.

(19) Al-Dastûr— a copy of the djama' made from the draft.

Finally, Khârîzmi gives the names of three registers (daftar) used by the scribes of Irâk. They are (as given in the edition) (1) al-dârûn (2) al-âlûn (3) al-adârûn

The third is explained as a register of the land measurement survey (misâha). Khârîzmi, Majâ'îr al-Ulam, ed. Van Vloten, 54-8, cf. Mez, Renaissance, 103, Eng. tr. 109, where however Mez's meaning is not very clearly rendered. An abridged Turkish paraphrase of Khârîzmi's text was made, in the light of Ottoman bureaucratic experience, by M. Cevdet, Defter, 88-91; there is also a rather more rapid Turkish summary by I. H. Uzungarsili, Osmanli Devleti Tezkireti Medhal, Istanbul 1947, 479-480. This last has been translated into German by B. Spuler, Iran in früh-islamischer Zeit, Wiesbaden 1952, 33â n. 1.

It is probable that Khârîzmi's account refers to Samanid rather than 'Abbâsid offices in this first instance. It is, however, almost certainly applicable in great part to 'Abbâsid administration, and much of what he says is attested by passing references in the historians of Irâk and Persia.

Khârîzmi's registers fall into two main groups, the former being in the diwân, the latter in the land-tax office, and may now be considered separately.

Fiscal Registers.

The most important register of the tax-office is the Kânûn, the survey of land and taxable crops, (this would seem to be the meaning of the term kânûn in Mawardî, Al-Akbâm al-Suljâniyya, ed. Enger 370, ed. Cairo 207).

This served as the basis for the assessment and collection of the land-tax and was thus the main instrument and authority for the department's activities. The term Kânûn, already recognized by Khârîzmi as arabicized Greek (yânâniyya mu'arrabah), was employed chiefly in Irâk and the East, and was made, in use in the 9th and 10th centuries, when it designated a kind of cadastral and fiscal survey (M. Minovi and V. Minorsky, Nasîr al-Dîn Tûst on Finance, BSOAS, x, 1940, 761, 773, 781; Hinz, Rechnungswesen, 134 ff.). In later times the term kânûn in this sense seems to have fallen out of use, and was replaced by others. In Egypt the term mukhâlafe was used to designate the land survey registers, which were prepared by a mâshîk and arranged by villages (Grohmann, New Discoveries . . ., 163). According to Makrizi, Khâlîl, i, 82, a new survey was made in Egypt every thirty years. (For specimens of land-tax registers from Egypt, on papyrus rolls, see A. Dietrich, Arabische Papyri, Leipzig 1937, 81 ff. (see further DAFTAR-I KHâSANI, MISâBA, RAWK, TAHRîR and TAPo).

The Rûznâmâdi or Rûznâmî is mentioned in an anecdote attributed to the time of Yâhâyâ b. Khâlîd al-Barmâkî. A Persian taunts an Arab with the dependence of Arabic on Persian for terms and nomenclature, "even in your cookery, your drinks, and your diwân", and cites the word Rûznâmâdi, as an example in the last-named group. (Muhammad b. Yâhâyâ al-Sûtî, Abû al-Kîdîb, Cairo 1431, 193). A passage in thickest light on how the Rûznâmâdi was kept, in the treasury, in early 4th/10th century Baghdad. In 515/927, he tells us, the wazir 'Ali b. 'Isâ relied on 'Ibrâhîm b. Ayyûb (a Christian treasury official, appointed head of the Diwân al-Dîahbadh in the following year—Aarb, Tab. Cont. 135; on him see also Sûtî, Abû al-Kâdîb 199; Hûlîl al-Sûtî, Wuzurâ', 136, 279, 290) to report to him on financial matters, to instruct the Treasurer (Sâkhît bayt al-mâdî) concerning his daily disbursements, and to require of him the weekly presentation of the Rûznâmâdî, so that he might quickly know what had been paid out, what received, and what the deficit was (mâ hâla wa-mâ habâda wa-mâ bâbîya). The previous practice in making up the account (khâima) had been to present a monthly statement due to the diwân; the new method reduced this to a"mid month". (Taghîris al-Umân, ed. Amedroz, i, 157-2).

Two other passages in the same work indicate that the functionary in the treasury whose task it was to prepare the khâima was the Dîahbadh [q.v.] (ibid., 155 and 164. The rendering of these passages in the English translation of Miskawayh by D. S. Margoliouth does not bring out their technical significance). Two documents of the time of al-Mukta'dî, quoted in the Tarîkh-i Kûmm, shows how the Rûznâmâdi functioned in Kûmm and Fârs. Here the writer (Kâtil) of the Rûznâmâdi is distinct from the diwân of the Kûmm, and is a government official. His task is to register the sums received in taxes and issue receipts, called Barâ'a [q.v.], and to act as a kind of auditor on the operations of the Dîahbadh (Tarîkh-i Kûmm, 149 ft.; cf. Ann K. S. Lambton, An Account of the Tarikhi Qumm, BSOAS, xii, 1948, 555; C. Cahen, Quelques problèmes économiques et fiscaux de l'Iraq Buyide ... AIEO, x, 1952, 355. On the Rûznâmâdi see further F. Lekkegaard, Islamic Taxation in the Classic Period, Copenhagen 1950, 149 and 159). In Ayyûbîd Egypt Ibn Mammât still includes the preparation of the Rûznâmâdi and the Khâima among the duties of the Dîahbadh (Kitâb Kawdân al-Da'wûnî, ed. A. S. Atiya, Cairo 1943, 304; Persia; of the Land-tax from Egypt see Grohmann, New Discoveries . . .; for a discussion of the systems of accountancy they reveal, C. Leyerer,
Die Verrechnung und Verwaltung. See further HISAB and MUIIASABA. Many scattered references to the daftars kept in ‘Abbâsid offices will be found in the writings of Miskawayh, Hilâl, and others especially interested in administrative affairs. Some idea of the scale and presentation of the accounts of the state may be gathered from a few individual balance sheets of imperial revenue and expenditure that have been preserved by the historians. The earliest, dating from the time of Harûn al-Râshîd, is preserved by Dibajjâyîrî (fol. 179a-182b; ed. 281-5) and in a variant version, by Ibn Khaldûn (Mubî i, 321-4 = Rosenthal), i, 361-5. See further R. Levy, The Social Structure of Islam, Cambridge 1957, 317-320. A budget for 306/908 is given by Hilâl, Wusârâ, i, 31-22, and was analysed, together with other sources, by A. von Kremer, Über das Einnahmebudget des Abbassiden-Reiches, Denkschrift d. Phil. hist. Kl. d. Wiener Ak., xxxvi, 1888, 283-362. A statement of the revenues of the privy purse (Bayât mûl al-Khâssâ) in the 4th/10th century is given by Miskawayh (Mez 115-6. See further BAYT AL-MÂL.

Military Registers.
The muster-rolls of fighting-men date back to the beginnings of the tribal state. These were, however, of quite a different character from the regular army lists described by Khârîzî. It may be that Abû Muslim was the first to introduce the daftar of soldiers; certainly the practice became general under the ‘Abbâsids. Besides Khârîzî’s notes, we have a fuller description of the army lists kept in the dîwân al-Ǧâyâh in Khûdâma’s treatise on the land-tax, and in a late anonymous treatise on tactics (Tr. Wiistenfeld, in Das Heerwesen der Muhammedaner, Göttingen 1880, 1-7. Both are examined, with other evidence, by W. Hoenerbach, Zur Heeresverwaltung ... 269 ff. See further *al-tâkhîl.*

Similar lists were kept in the dîwân al-Ǧâyâh and dîwân al-rasâîl (army office and pay office) of the Fâtimidoh in Egypt (Kâlkašândî, *Ṣabîh*, vi, 492-3 = Wüstenfeld, Die Geographie und Verwaltung von Ägypten, Göttingen 1879, 240-1). The common term for the army lists was *Diwârâ.*

Diplomatic Registers. *Khârîzî*’s description is confined to financial and statistical registers—to accounts, inventories and the like in the tax and pay offices. Besides these there were also letter-books and other diplomatic registers, used in the chancery offices. A description of those kept in the Fâtimid chancery (dîwân al-rasâîl) is given by the Egyptian scribe Ibn al-Sâyrafi (463-542/1070-1147). In the 12th chapter of his *Kâfûn Dîwân al-Rasâîl* (ed. ‘All Bahjat, Cairo 1905, 137-141, Fr. trans. by H. Massé in BIFAO, xi, 1914, 104-8; cf. Kâlkašândî, *Ṣabîh*, i, 133-5, where they are given in a slightly different order, and Björkman, Beiträge, 24-5), he considers the registers (daftar) and memorandum (lajûhîrâ; Massé translates ‘bulletin’) which should be kept in this office, and the qualities of their keeper. This, he says is one of the most important tasks in the dîwân. The registrar must be reliable, long-suffering, painstaking, and work-loving, and should keep the following memorandum and registers.

(1) Memoranda (lajûhîrâ) of important matters (muhîmmî ‘al-mârîr) which have been dealt with in correspondence, and to which it may be necessary to refer. These memoranda (lajûhîrî) are much easier for reference than papers in bundles (aqâfîr; Massé translates ‘dossier’). All letters received must therefore, after being answered, be passed to the registrar, who will consider them and record what is needed in his memorandum, together with any reply sent. He will assign a number of sheets (awrâh) in his memorandum to each transaction (jafta), with an appropriate heading. He will then register incoming letters, noting their provenance, date of arrival and contents, together with a note of the reply sent or, if such be the case, of the fact that no reply was sent. He will continue this to the end of the year, when he will start a new section of his memorandum. In the year 575/1179, the Fâtimid registers at Cairo were, however, of quite a different character from East Asian examples (see for example Diuwaynî, i, 24-5 = Boyle, i, 33-4, and Râshîd al-Dîn, *Dâsam al-Tawârîbh*, ed. Blouchet, 39-40, 56-7; cf. ibid. 483 on the *daftars* of Pekin), but this whole question is still in need of further investigation.

Despite the evidence of reorganization under the Great Tâlûq, the registrars and book-keepers of the Sultanate, as well as of Sâlúqûdân Anatolia and Ayyûbiq Egypt, seem to have continued many of...
the practices of the preceding period. What development there is seems to be in technical matters, especially in the collection and presentation of statistical data. Some idea of bureaucratic practice in the Sultanate of Rum can be obtained from Ibn Bibi, Al-Asāmīr al-`Alāʾīyya, facsimile ed. Ankara 1956 (ed. N. Lugul and A. S. Erzi, part 1; Ankara 1937; abridgment. Houtsma, Recueil, ii; German trans. H. W. Duda, Copenhagen 1959; Turkish adaptation by Yazidiélugu `Alī, Houtsma, Recueil, iii). Registers were kept at the Dīwān-i `Aḍāʾ, and dealt with land and tax matters. As new territories were acquired or recovered, new surveys were conducted (Ibn Bibi, 146, Antalya; 153-4, Sinop; 428, Akhīāt). An addition by Yazidiélugu (Recueil, iii 105—not in Ibn Bibi) tells that during the reign of Izz al-Dīn Kaykāwūs the office of Sāḥīb-i Dīwān in the care of the finance registers (emva’dī al-falāḥ) were entrusted to Khāṣa Badr al- Din Khurāsānī, who was unequaled in the lands of Rūm in his knowledge of khatt, balīqba, ingād, siyyāb, and ḥisdb [qq.v.]. At the same time Khāṣa Fakhr al-Dīn `Ālī Tabrīzī was put in charge of ingād and maktuṣbāḥ, and each of the 12 dafṭars in the dīwān-i waṣrāṭ entrusted to a competent master (ustāḍ). On another occasion the office of amir-i ārād was entrusted to Ṣahm al-Dīn, also a specialist in ingād and siyyāb (Ibn Bibi 127), Yazidiélugu (Recueil, iii 105) explains how this office involved the control of the military registers (lerı seri) Recueil, iii, 109. For similar appointments to the dīwān al- ārād by Sandjār see K. `Atabat al-Kutub, edd. Muḥ. Kāzawānī and `Abbās Ibkāl, Tehran 1329, 39-40, 72-3). Another passage in the same work (Recueil, iii, 210 speaks of 24 registrars, 12 in the dīwān-i waṣrāṭ dealing with land and taxes, and 12 in the dīwān-i ārād dealing with the lists of soldiers, pay and fees. A poem cited by Yazidiélugu (254-5) repeats these figures, but awakens doubt of their authenticity by linking them with the recurring figure 12 in the Oghuz legend. The same poem claims complete coverage in the registration of lands (Cevdet 91-3).

From the 11th-12th period we have, for the first time, detailed treatises on public accounting. Two important works, the Safadat-nāma of Farak al-`Alāʾī Tabrīzī (compiled 707/1307) and the Risāla-f-i Fakahiyya of `Abd Allah b. Muḥammad b. Kiyā al-Māzandarānī (ca. 767/1363) were discovered and analysed by Zeki Velidi Togan (Moğollar devrinde Anadolu’nun İktisadi Vaziyeti, TİTH, i, 1931, 1-42). A Timūrid manual, written in Herāt ca. 845/1441, was discovered by Adnan Erzi (W. Hinz, Ein orientalisches Handelsunternehmen im 15 Jahrhundert, Welt des Orients, 1949, 313-40) and a complete budget (Djami al-Ḥisdb) of 738/1337-8 found by Z. V. Togan. The first two were studied in great detail by W. Hinz (Das Rechnungswesen), to which the annual financial reports were prepared.

(6) Djamî al-Ḥisdb—the master-ledger, from which the annual financial reports were prepared.

(7) Khâṣa—the survey and assessment book, or Domedly Book of the Empire.

(For a full discussion of these registers, and of the variations in usage and nomenclature, see Hinz, Rechnungswesen, 113-137).

III. The Post-Mongol States.

As in so many other respects, the Muslim states of the post-Mongol period seem to have followed, to a very large extent, the bureaucratic practices of the Il-Khâns, some of which can be recognized as far afield as Mamluk Cairo, Ottoman Istanbul and Mughal Delhi. Of these states only one, the Ottoman Empire, has left a collection of registers that has survived to the present day, though individual dafṭars have come to light in other parts. The Ottoman dafṭars have been discussed elsewhere (see RASVEKALET ARSIVÎ, DAFṬAR-I KHÂNÂNÎ, DIPLOMATIC, MUHİMME DEFTERÎ, SİLHÎ, etc.), and need not, therefore, be described here. Numbers of Ottoman registers have also come to light in the ex-Ottoman territories in Europe, Asia and Africa. For a description of their material form see L. Fekete, Die Siyaqat-Schrift, 1, 70 ff.

villages and towns of the Empire, giving, by the side of their names and the names of their fathers, their legal status, their obligations and privileges according to the economic and social class to which they belonged, and the extent of the lands which they possessed.

These registers also contain a great deal of information on the way in which the land was used (fields, orchards, vineyards, rice-fields, etc.), on the number of mills, on sheep and bee-hives, with an indication of their approximate fiscal value in aspers.

Nevertheless the fiscal information contained in the registers is not confined to this agricultural inventory. They also refer to fisheries and mines as well as to the proceeds from customs, fairs, markets and weighhouses, with their locations, their regulations and the volume of the transactions carried out.

We can also, by referring to the daftar-i ḫākānī, obtain an exact idea of the distribution of the revenues of the country as between the imperial domain, the military fiefs, waḵfs and private properties (mulk). These registers in fact constitute a survey showing the form of ownership of each estate with a summary of the successive changes which it underwent.

The compilation of the registers arose from the administrative organization of the Empire. The great majority of Ottoman officials, both civil and military, did not draw salaries from the budget of the central government but were allowed, in return for their services, to levy taxes on a given region on their own account. Thus at the beginning of the 10th/16th century the possessors of timars alone, whose numbers had risen to about 35,000, appropriated more than half of the taxes levied on the territory of the Empire. This proportion moreover went on increasing throughout the 17th century together with the number of timariots.

In order for this system to operate successfully it was essential to know every detail of the different sources of the Empire's revenues, and to follow their modifications step by step through a given period. In this way it was possible to examine whether the emoluments, whose amounts were entered in the registers, and the deeds of grant (berād [q.v.]) issued to the beneficiaries, tallied with the taxes they actually levied. During the period of expansion, when the population and the resources of the Empire were constantly increasing, the frequent surveys always disclosed new surpluses in the State revenues.

But from the 11th/17th century onwards the central power, as a result of the anarchic mismanagement of State affairs, did not possess the authority necessary to carry out these surveys. The disorganization of the institution of timars moreover rendered the value of these measures illusory.

In addition to these “detailed registers” (daftar-i muwaṣṣal) in which were listed the results of the surveys, auxiliary registers were also required, in which were noted, as they occurred, changes in the distribution of the timars, thus avoiding the additions and corrections which would otherwise have had to be made in the “detailed registers”. For the system in force at the beginning of the 10th/16th century two or even three kinds of auxiliary books were used:

1. Daftar-i ʾidjmāl or “synoptic inventory”. This register was a summary based on the detailed register, omitting the names of the inhabitants and giving the revenues only as lump sums for each unit.

2. Daftar-i derdest or “book of changes”. This register was a list of the villages or towns constituting the nucleus of the military fiefs. It showed the successive changes which each fief had undergone and the authorities could, on consulting it, easily determine the fiefs escheated or without possessors.

3. Daftar-i rūznāme or “daybook”, into which were copied as they occurred the deeds of grant (berād) issued to new fief-holders.

Each time a new survey was made, the old registers were replaced by new and consigned to the archives of the register-office (daftarḵhāne). The greater part of the old registers were lost or destroyed during their removal from one repository to another. There remain nevertheless over a thousand in the Başvekalet Arşivi [q.v.] at Istanbul as well as a few in certain Turkish and foreign archives and libraries. Among these registers are some which date from the time of Murād II (824-55/1421-51) and of Meḥmed II the Conqueror (855-56/1451-82), and which allude to still earlier surveys.

The archives section of the survey and land register office, at Ankara, includes a complete collection of the registers relating to the last surveys made during the reigns of the sultans Selṭm II (974-82/1566-74) and Murād III (982-1003/1574-95). To these registers have been added the results of the surveys made in such provinces as Crete, conquered after this date, or the Morea, recaptured from the Venetians. Even today this collection is, on rare occasions, consulted in lawsuits.

In this collection the “detailed registers” number 254, the “synoptic inventories” (ʾidjmāl) 116, the “books of changes” (derdest) 169, and the “daybooks” (rūznāme) 1363 volumes. The “detailed registers” contain about 300 pages, 15 cms. across and 42 cms. down.

During the period of more than three centuries which has elapsed since the last survey, these records have been brought up to date each time it has been necessary to register the modifications which have occurred in the legal status of certain lands upon the creation of new waḵfs. The fact that certain judgments made in favour of privileged individuals and relating to law-suits concerning the boundaries of villages and pastures have been entered in these registers only increases their value. Nevertheless it would be wrong to believe that all the transactions carried out by the registry office have found a place in these documents.

Certain writers have suggested that the daftar-i ḫākānī constitute a land-register. But in the system of domain-lands (arādā-i mīriyye), the peasant has never been the owner of the land which happens to be in his possession, and he could not therefore dispose of the title-deed. He could indeed transfer the possession of the land which he occupied, but this act, which took place under the control and with the approval of the local lord (ṣṭūḥā), was not made the subject of an entry in the imperial registers. Only from the second half of the 19th century onwards was a land register, in the modern sense of the word, established in Turkey.

(Ö. L. BARKAN)

DAFTAR-DAR, in Turkish defterdar, keeper of the deftar [q.v.], an Ottoman term for the chief financial officer, corresponding to the Mustafa [q.v.] in the eastern Islamic world. According to Kalkanlı (Subh, iii, 485, 494, 525, 526), the title Şahib al-Dafar already existed in the Fatimid administration, for the official in charge of the Dafar al-Madjís, that is, of accounts and audits. The title Dafarbhân—Defter-reader—appears in the time of Saladin (B. Lewis, Three Biographies from Kamal ad-Din, in Fuad Körprüli Armâna, Istanbul 1953, 343), and reappears in the Muslim West (Mağşarî, Analectes, i, 660). The title Dafardar origins with the liyân-nejâhs, who appointed a defterdar-i divân-i mamlûk or defterdar-i mamlûk to make and keep the registers (Uzuncaşılı, Medhal, 229-30; Körprüli, Bismans 204-5; Hammer, Geschichte der Goldenen Horde, Pest 1840, 497-501).

The Ottoman kânûnnames, from the 9th/15th century onwards, show the development of the office of defterdar in the Ottoman Empire. In the Kanûnname of Mehmed II, the chief Defterdar is already a high ranking official who, under the general supervision of the Grand Vezir, is the officer responsible (wekîl) for the Sultan's finances (Kânûnname-i Âl-i 'Othmân, TOEM suppl. Istanbul 1330, 10). He is named immediately after the Grand Vezir, and is comparable with him in status. At the Divân he sits immediately after the Grand Vezir and the two Kâddîsikars, and shares with them the right to issue ferman on matters within his jurisdiction. He has the right of personal access to the Sultan, who rises to greet him (ibid., 10-11, 16-17, 23-5). His duties include the presentation of an annual report or balance sheet of income and expenditure, for which he is rewarded with a robe of honour. His emoluments may be an appanage (right [q.v.]) worth 600,000 aspers, or a Treasury stipend (sâyâde) of from 150,000 to 240,000 aspers a year. In addition, the Defterdar or başdefterdar (headdefterdar) presided over a hierarchy of lesser financial officers; first the ordinary finance officers (Mîl defterdarî), then, under them, their adjutants (Defterdar hâkûbdâsî), and under them the registrars of timârs (Timar Defterdarî), all with a recognized and established ladder of promotion. From the time of Bayezid II the Başdefterdar was based at Rumelia, and was also known as Rumeli Defterdarî. A second Defterdarî, the Anadolu Defterdarî, was appointed to deal with the revenues of Anatolia. In the early 16th/16th century a further defterdar's office was set up in Aleppo, to look after the remoter provinces of the Levant. This office was later subdivided, with separate offices in Diyarbakr, Damascus, Erzurum, Aleppo, Tripoli, and elsewhere. In the mid-16th century a separate office for Istanbul was established, and at the end of the century yet another for the Danubian provinces. This last was of short duration. The three main offices came to be known as the first, second, and third divisions (şikbi-i ewvel, ûlûnî, ûlûhî) corresponding to Rumelia, Anatolia, and the remoter provinces. A fourth division was set up by Selim III to deal with the budget of the new style army (see İZAM-İ DERE). It was abolished with the latter. In 1833/1838 the office of the Defterdar was renamed Ministry of Finance (Maliyye [q.v.]), but the term Defterdar remained in use for provincial directors of finances.

DÂGH, the tâlkâlius of Nawwâb Mirzâ Khân (originally called Ibrâhîm, Âlînâ Dâgh), one of the most distinguished Urdu poets of modern times. He was a son of Nawwâb Shâms al-Dîn Khân, ruler of Firûzpur Dihlî, and Wazir Begam (usually called Chôtî Begam). Nawwâb Mirzâ was born in Cânînâ Cawk, Dihlî on 12 Dhu 'l-Hijjah 1246/25 May 1831 (cf. his horoscope in Dâluâ-i Dâgh, 9). When Shâms al-Dîn Khân was hanged (Oct. 1835) for his part in the murder of Mr. W. Fraser, Resident of Dihlî, Nawwâb Mirzâ Khân's mother remarried, and he went and lived in Râmpûr in 1844, because of the influence of his aunt, Umdâ Khanam, a member of the karm of Nawwâb Yûsuf 'Ali Khân. There he studied Persian with Mawlâ Ghiyâth al-Dîn. His mother, in the meanwhile (1844), entered the karmîn of Mirzâ Muhammad Sulûn Fath al-Mulk (Mirzâ Faîhrî), a son and the heir-apparent of Abû Zafar Bahâdur Shâh. Nawwâb Mirzâ (then 13 or 14 years old) also came to the Dîlî Fort and received his regular education there. He studied the usual Persian texts, learned calligraphy from Sayyid Muhammad Amir Panjâ Kâsh (d. 1857, Ghulâm Muhammad, Tadbîrîn Khwânsavâsîn, Calcutta 1920, 71 f.) and Mirzâ İbâd Allâh Bâg (ibid., p. 73); he also learned horsemanship and the use of various arms. But above all his sojourn in the Fort brought him into contact with the famous poets of the day, who assembled in the Fort for the mughâbaras (poetical contests). This environment developed his latent aptitude for writing poetry. He began to write ghâsâsî in Urdu at an early age and when Shahî Muhammad Ibrâhîm Dhwâk adopted him as his pupil, his genius blossomed fully. The tutelage of Dhwâk lasted from 1844 to 1854 and in this period Dâgh took part in the mughâbaras both of the Fort and the City. But Fath al-Mulk's death (10 July 1856) forced him to leave the Fort. About ten months later followed the upheaval of 1857, after which Dâgh once again went to his aunt in Râmpûr but
occasionally visited Dihll and sometimes stayed there. When Kalb 'Ali Khan succeeded Nawwab Yusuf 'Ali Khan (d. 21 April 1865) as Nawwab of Rampur, Dagh had the honour of becoming his companion (14 April 1866). He was also appointed Superintendent (daragha) of the stables and carpet stores (fardkhana) at Rs. 70 p.m. Towards the end of the same year he had the privilege of accompanying the Nawwab to Calcutta and a few years later (1289/1872-3) of performing the hadjdi in the retinue of the Nawwab. Rampur in this period was a rendezvous of distinguished poets, such as Amir, Djalal, etc. His pleasant personality, with a fine sense of humour, and an intense love of music, made his appeal direct and vehement. His command of language is remarkable. He uses idiomatic phrases frequently and with masterly aptness (cf. Wall Ahmad Khan, Mukhawar-i Dagh, Dihll 1944). In 1312/1894 he received from the Nahwab the titles of "Bubuli Hindustan, Dijdin al-Mulk, Nawwab Mirza Khan Bahadur". He appears to have been signing his name only as Fasih al-Mulk Dagh Dihlawi (see Nurf opp. 12). His only son died at Rampur; he adopted relatives to Asaf Djah VI.

In 1312/1894 he received from the Nizam the titles of "Bulbuli Hindustan, Dijdin al-Mulk, Nawwab Mirza Khan Bahadur". He appears to have been signing his name only as Fasih al-Mulk Dagh Dihlawi (see Nurf opp. 12). His only son died at Rampur; he adopted relatives to Asaf Djah VI.

the three religions each had their adherents, and finally the country of the Christian prince of Sarir (which corresponds to present-day Avaristan), who bore the title of Filângâhâr or Kilângâhâr. According to Ibn Rusta, only the inhabitants of the royal castle, built on a high mountain, were Christian; the prince's other subjects were pagan. According to al-Iṣṭâkhri, Sarir's frontier was only two farsâkh away from the seashore town of Samandar. Governed by a Jewish prince related to the king of the Khazars, Samandar lay four days' march from Derbend according to al-Iṣṭâkhri, eight days' march according to al-Masûdî. The town of Sarir is situated in the northern part of the coastal region where the town of Târkhâr or Târkûn was later built. It is described as a flourishing city where there were, some say, 4,000, others, 40,000 vineyards; there the Muslims had their mosques, the Christians their churches, and the Jews their synagogues. On the west the country of Samandar bordered the land of the Alans. The Muslims seem to have given the name of Lâzk (Lezgians) to the people of southern Dâghîstân, whose geographical position they do not elsewhere indicate with any precision. According to al-Balâdûri (De Goeje ed., 208), the land of the Lâzk lay in the plain which stretched from Samur to the town of Shâberân, south of present-day Dâghîstân. According to al-Masûdî (Munâjât, ii, 3), on the other hand, the Lâzk people dwelt in the highest mountains of the region. Among these were the "infidels" who were not subject to the prince of Shirwân. "Strange stories" went round about their family life and customs. The mention of Shirwân shows that they were still not subject to Islam. According to al-Shirwân (Munâjât, ii, 3), the Lâzk people were the "infidels" who were not subject to the prince of Shirwân. "Strange stories" went round about their family life and customs. The mention of Shirwân shows that they were still not subject to Islam.

During the succeeding centuries, Islam seems to have made but slow progress in Dâghîstân. In 354/965, the power of the Khazars was shattered by the Russians. The southern part of this state itself suffered the ravages of war. It was the Christian Alans who, it seems, profited from this upheaval, for their territory, at the time of the Mongol conquest, stretched farther to the east than in the 4th/10th century. At the time of their first incursion into these countries, according to Ibn al-Athîr (xii, 252), the Mongols encountered north of Derbend first the people of the Lâzk who then included "Muslims and infidels", further north some other half-Muslim tribes—ancestors of the Avars—and lastly the Alans. According to William of Rubrub who visited these countries in November 1254, the mountains were inhabited by Christian Alans; "between the mountains and the sea" lived the Saracen Lâzgians (Lesgi), that is to say Muslims; however Rubrub himself gave the name of "castellum Alanorum" to a fortress situated only one day's march north of Derbend. The Mongols at that time had still not succeeded in subjugating these tribes. It was necessary to assign to special detachments the defence of the passes leading from the mountains to the plain, in order to defend the herds grazing on the steppe against the raids of the highlanders (cf. Fr. M. Schmidt, Rubrub's Reise, Berlin 1885, 84 ff.).

In the 13th and 14th centuries, the region which stretched to the pass of Derbend, and partially the territories situated to the south of this town also, formed part of the empire of the Golden Horde. It is in the history of the campaigns of Timur (797-798/1395-1396) that the names of the two chief peoples of Dâghîstân, the Kaytâk (or Kaytâkh) and the Kâzî-Kûmûk (now Lâks) appear for the first time in their modern forms. The territory of the Kaytâk, next to the pass of Derbend, belonged to the empire of Tokhtamish. Sharaf al-Din Yazdî (Zafar-nâmâ, India ed. i, 742 sqq.) describes the Kaytâk as people "without religion" (bi-dîn) or of "bad faith" (bad hâsî) which shows that they were still not subject to Islam. According to Barbaro (Ramusio, Viaggi, ii, 109-a), there were among the Kaytâk even in the 15th century many Greek, Armenian or Roman Catholic Christians. On the other hand, the prince of the Kaytâk (Khâali Beg), mentioned by Afanasîd Nikîtin in his account of the voyage (1466), bore a Muslim name.

The Kâzî-Kûmûk were Muslim and were regarded as the champions of Islam against the pagan peoples around them. Their prince was called Shawkal. North of the Kâzî-Kûmûk lived the Ashkûdja (modern Darghins), who had not yet become Muslim. The account of Timur's campaigns also mentions the town of Târkhâr. Between the Kâzî-Kûmûk and the Kaytâk, and therefore in the land of the present-day Kâbêlî, dwelt the Zîrîgharân who had retained their ancient fame as smiths and who offered to the conqueror coats-of-mail of their own making.

The Timurîd conquest and the Ottoman occupation (from 865-1015/1461-1605) marked the further advance of Islam into Dâghîstân. By the beginning of the 10th/16th century, the Muslim faith won over the infidel populations in Dâghîstân, often by recourse to force. From this period dates the somewhat superficial conversion to Islam of the Darghins (Ashkûdja) people and the permanent conversion of the Kaytâk. The Avars as well were gradually brought over to Islam, but Christianity survived amongst them throughout the 15th century, whilst the Andîs and the Didos peoples remained firmly pagan. The Zîrîgharân (Kubâcis), converted to Islam in the 15th century, preserved traces of Christianity until the end of the 18th century. The Lezgians were also superficially converted after the Timurîd period.

The Islamic conversion is not the only aspect of the historical evolution of Dâghîstân at this time, in which we must include the formation of the feudal principalities which provided Dâghîstân with the political structure which remained until the 19th century. The feudal principalities which appeared or developed at that time claimed ancestry from the Arab conquest, but these fanciful allegations are today strongly disputed.

The account of Timur's campaigns shows decisively that the situation in which the Ottomans found Dâghîstân during their short domination dates from the 9th-15th to 10th/16th centuries only. Nevertheless this situation has been carried back to the first centuries of the hidjra by a historical tradition only invented during this era. Just as the Jews, perhaps before the Arab conquest, had located in Dâghîstân certain events in their legends and history (cf. Marquart, Streifzüge, 29), just as today those called Dâgh-Cufût or "mountain Jews" still claim that their ancestors were formerly led into these regions by the conquering Assyrians or Babylonians, so also did the Muslim peoples all claim to have been converted to Islam by Abû Muslim and the princes all claim to have been descended from the Arab governors whom he left in Dâghîstân. The title of Ma'âsîm, borne by the prince of Tâbarsarân, was
identified with the Arabic word *ma'sum*. Likewise, Arabic etymologies were invented for the Kaytak title of *usmi* ("renowned", from *usm* "name") and for the Kazl-Kumuk, claimed to derive from Sham = Syria. The word *shdmkhdl* was alleged to derive from *shdmkhdl* or *shawkal* as in *shawkal* "name") = "name") = “name”). The word *shdmkhdl* was considered a “great audacity" (şawkal or *shawkal*) as in Sharaf al-Din Yazdi. The influence of the etymology described above. The subjects of the *shdmkhdl*, the Kazl-Kumuk, claimed to have been distinguished under Abü Muslim as defenders of the faith and to have won at that time from the Arabs the title of “*Ghái*" or victors.

Three great feudal principalities dominated Daghistan in the 9th-10th/15th-16th centuries: the the *Shâmhâlat* Kazl-Kumuk, the Usmilat of Kaytak and the Ma'sumât of Tabarsaran.

The first historical Kaytak prince who bore the title of *usmi* seems to have been Aşmad Khân, who died in 996/1587-88. He is credited with having founded the village of Madjlâs, where the representatives of the people assembled to discuss their affairs. He is supposed to have ordered the bringing together of the statutes of the popular law in a code to which the judges or *kâdis* had to conform, a measure which was considered a "great audacity" (dişdarat-i *zâsima*) by Mirzâ Hasan Efendi, the author of *Aṭhar-i Daghistan*, (65).

Towards the middle of the eleventh century (1050/1640), a number of the Kaytak separated from their compatriots and proceeded to the regions south of Daghistan. Husayn Khân, leader of these emigrants, succeeded in setting up a new principality at Sâlyân and Kôba. The Ottoman traveller Ewliya Celebi (Sîyihat-nâma, ii, 292 ff.) met these Kaytak emigrants in 1051/1641 between Shâki (today Nühe) and the Caspian. The glance of Ewliya Celebi proves that the Kaytak did not then, as today, speak Lezgian but Mongol.

The *shâmhâlîs* of the Kazl-Kumuk (today the Laks) extended their domination little by little beyond their mountains north-east as far as the coast, into Turkish country (Kumik). In the 10th/11th century, these princes used to spend the winter at Bûynâk, a village on the coastal plain, and the summer at Kumukh in the mountains. In 986/1578 at Bûynâk died the *shâmhâlî* Cûbhân, whose possessions were then divided among his sons. These divisions naturally weakened the power of the dynasty. The Kazl-Kumuk who stayed in the mountains slowly proceeded to make themselves entirely independent of their ruling house. After the death of the *shâmhâlî* Sûrkhây-Mirzâ, in 1049/1639-40, the *shâmhâlîs* only ruled the coastal region, at Bûnûk or Târkî (Träk). None of the later *shâmhâlîs* ever returned to Kumukh, where the tombs of the first princes are still to be seen.

It was at this time that the Russians revived their efforts to seize, after Astrâkhân, the countries of the northern Caucasus, among them Daghistan. In 1594 a Russian detachment commanded by Prince Muşâev occupied and proceeded in taking Târkî and in constructing a fortress on the Koi-Su or Sulak. It was not long, however, before the Russians suffered defeat by the sons of the *shâmhâlî* and were compelled to withdraw over the Sulâk. A fresh attack in 1604, directed by Buturlin and Flegiöev against Târkî, was still less successful.

The period between the Ottoman occupation and the Russian conquest is distinguished in Daghistan by the flowering of the Arab culture which attained its zenith in the period of Şâmîl. During the 17th century a galaxy of Daghistan scholars gathered round Şâyây Şâhîl-Al-Valami (born in 1637—died at Mecca in 1696): his most famous disciple was Muhammad Esmail of Madjlâs, who disseminated his teachings in Daghistan and died in Aleppo in 1708. In the 18th century parties of Daghistan scholars went to Damascus and Aleppo to learn there the Arab language and the şarîa. This period of cultural renascence was also a period of juridical organization—a codification illustrated by the Code of Umma Khân, the Avar, and the laws of Rustum Khân, *usmi* of Kaytak.

With this flowering of Islamic culture in the Arabic language there coincided on the political level an anarchic dispersion when Daghistan, divided into manifold clans and rival kingdoms, wavered between Turkish and Persian influence, passing alternately from one to the other. This political dispersion confirmed the weakness of Daghistan and inevitably provoked a foreign confrontation.

Towards the middle of the eleventh century (1050/1640), a number of the Kaytak separated from their compatriots and proceeded to the regions south of Daghistan. The native princes allied themselves now with one, now with another, of these three powers. Not until the 19th century was the contest finally terminated, to Russia's advantage. After 1867/1578 the prince of Tabarsaran, following the example of the *shâmhâlî* and of the *usmi*, made his submission to the Sultan. When, in 1058/1648, Şâh Abbâs restored Persian power in these regions, the *usmi* joined with him, whilst the *shâmhâlî* remained loyal to the Turks. One of the clauses of the peace treaty concluded in 1021/1612 stipulated that the *shâmhâlî* and the other princes loyal to the Porte would not suffer any reprisals on the part of Persia. The *usmi* Rustam-Khân having crossed over to the Turks in 1048/1638, his rival the prince of Tabarsaran submitted in favour of the Şâh, who confirmed him in his honours. He had moreover already received a similar investiture from the Tsar Michael (*Aṭhar-i Daghistan*, 81).

When, under the feeble government of the Shah Husayn, the Saâvîd empire fell into decline, Daghistan itself became the stage for a movement directed against Persian domination. At the head of this movement there was Cûlak-Sûrkhây-Khân who had just founded a new principality in the land of the Kazl-Kumuk. Allied with the *usmi* and the *mudârîs* Hâddîl Dâwîd, the leader of a popular movement, he succeeded in taking Şâmâhî in 1124/1712. Then the allies sent to Constantinople an embassy which obtained for them robes of honour from the Sultan, titles and diplomas and the favour of being received into the number of the subjects of the Porte. It was then that the intervention of Russia altered the course of events. Three hundred Russian merchants had been killed at Şâmâhî, and Peter the Great seized this as a pretext for intervention. He directed an expedition against Persia and occupied Derbend in 1722. Soon afterwards the other provinces on the west coast of the Caspian sea had themselves to submit to Russia. By the treaty of partition of 1724, Russia's rights over this coast were likewise recognized by the Persian government.

The Russian occupation was not at that time of...
very long duration. Nadir Shah succeeded in restoring the unity of the Persian empire, and Russia gave back to him, by the treaty of 1732, all the countries of the South of the Kura, and also, by the treaty of 1735, the territory contained between the Kura and the Sulak. When the Russians had contrived to defeat an expedition of Tatars from the Crimea into Daghistan, the Porte likewise gave up its claims. As for the native population, it opposed the new Shah with unyielding resistance, especially in the mountains. It was only on the coast that Nadir Shah succeeded in establishing his power in any lasting fashion. In 1735, Adil Giray had taken an oath of loyalty to Peter the Great and had aided him in his campaign of 1722; as, however, he later revolted against the Russians, he had been deported to Lapland in 1725 and the dignity of shāhmāl had been abolished. Nadir Shah restored this dignity and conferred it on Khas Fūlākh-Khan, the son of 'Adīl Giray. The people of the mountains remained independent, owing to persistent attacks, particularly those of 1742 and 1744.

After the murder of Nadir Shah in 1160/1747, Persia was for half a century without a government strong enough to maintain its power in this frontier region. The provinces of the empire themselves could not be defended against the incursions of the princes of Daghistan. In this way the town of Ardabil was sacked by the 'āsim Amir Ḥamza. In turn the Russians, in spite of the treaty of 1735, began to wield influence in Daghistan once more. The traveller Gmelin was captured in the country of the 'āsim and put to death in 1774, and in 1775 a Russian detachment commanded by Madem came and devastated the region. In 1784 the shāhmāl Murtaḍa 'All once more joined Russia. In 1785 the establishment of the post of governor of the Caucasus consolidated Russian domination over these countries. A religious movement instigated by Turkey and directed by Shaykh Mansūr affected Daghistan only superficially; most of the princes refused to support the movement.

The Kādārs, when they had succeeded in reuniting all the Persian provinces in one empire, strove once more to annex the lands of the Caucasus. But this time Russia was not disposed to give up her position in the struggle, and the Russians were aided by Nadir Shah. The war began in the last year of the reign of Catherine II, in 1796, Derbend was occupied by the Russians but soon after evacuated by command of the Emperor Paul. In 1806 the town was recaptured, and this put an end to Persian domination in Daghistan. It was, however, only by the peace treaty of Gulistān, in 1813, that Persia finally renounced her claim to sovereignty over the country.

The resistance offered to the Russians by the native princes and by their peoples in particular continued longer. In 1818 nearly all the princes of Daghistan, with the exception of the shāhmāl, formed an alliance against the Russians. This rebellion was not put down by the Governor Yermolov without difficulty. The title of 'āsim of the Kāyāl was abolished in 1819, that of muš'in of Tabarsarān in 1828. After 1830 the princes who were allowed to retain their independence were espoused by the Russians and had to accept the rule of Russian doctors and teachers. The Avars resisted the Russians but soon after evacuated by command of the Emperor Paul. In 1806 the town was recaptured, and this put an end to Persian domination in Daghistan. It was, however, only by the peace treaty of Gulistān, in 1813, that Persia finally renounced her claims over the country.

languages are not set down in writing, and form with them one sole Avar “nation”.

(b) The Darghino-Lak group (cf. Darghin, Lak, Kaytak, Kubachi) which numbered 150,000 in 1959 in the west-central part of mountainous Daghستان, and which contain the Darghins (formerly Aškūdja), the Lak(s) (formerly Kāzī-Kūmūgh) and two small peoples, Kaytak and Kubachi (formerly Zirlgärān).

The Darghin and the Lak possess literary languages; the Kaytak and the Kubachi are without these and have merged into the Lak and in the Khinalug main language.

(c) The Samurian group in southern Daghستان (cf. Lezg, Taškurt, Rutul, Tabarsarān and Shād-Dāgh peoples), 270,000 strong in 1959, contain two nations with a literary language, the Lezgians (223,000) and the Tabarsarān (35,000), and three small peoples destined to merge into the Lezg nation: Agul (8,000), Rutul (7,000) and Taškurt (6,000). To this group are connected the five peoples of Shah-Dāgh (numbering about 15,000) in northern Ādharbaydān (Djek, Kūf, Khaputq, Budukh and Khinalug), who have been greatly influenced by Turkish and who are merging into the Ādharī nation.

II. The Turks are represented in Daghستان by the Ādharīs in the plain round Derbend and in the low valley of the Samur; by the Kūnmlq [q.v.] who numbered 135,000 in 1959 in the cis-Caspian plains north of the Derbend and by the Nogays [q.v.] (41,000 in 1959) in the steppes between the Tereq and the Kuma. The Kūmlq and the Nogays, like the Ādharīs, possess literary languages.

III. The Iranophone peoples are represented by the Tāts [q.v.] who numbered several thousands around Derbend, and the mountain Jews or Dāgh-Cufut (about 12,000) in the villages of the plain, Jewish in religion but speaking Tātī.

Daghستان is a multi-national republic, the only one in the Soviet Union which was not founded on one nation or one dominant nationality (narodnost’). In the terms of the Constitution (art. 78), she possesses ten official literary languages: Avar, Darghin, Lak, Lezg, Tabarsarān, Kūmlq, Nogay, Adari, Tāt (in its Jewish form used by the Dāgh-Cufut) and Russian. These languages are used as teaching languages in the primary schools, but of these four nations are destined to become poles of attraction and that in the end they will absorb one in the Soviet Union which was not founded on Jewish in religion but speaking Tātī.

Cufut (about 12,000) in the villages of the plain, who numbered several thousands that these four nations are destined to become poles of attraction and that in the end they will absorb one in the Soviet Union which was not founded on Jewish in religion but speaking Tātī.

Languages are not set down in writing, and form with them one sole Avar “nation”. After that, Ībāyḍ Allah had him recognized in Damascus as well.

In this way, it was possible for Marwān to lead al-Dāḥ;kāh and al-Dāḥ;kāh — together with the governors of Hims and Khinnasān — went over to the side of the rival caliph ʿAbd Allāh b. Khālid b. Ṭasdī, but deposed him again in 58. In 60/660, Muʾawiyah was dying, and made al-Dāḥ;kāh and Muslim b. ʿUqba joint regents; he dictated his last will to them, charging them to give it to the hands of his successor Yazīd, who was away from Damascus at the time. Al-Dāḥ;kāh led the prayer for the dead, and worked for the succession of Yazīd, being recognized by him as governor. During his illness, Muʾawiyah II had chosen him to lead the prayers in Damascus until such time as a new Caliph should be elected.

During the time of general strife and intrigue after the death of Muʾawiyah II in 64/668, al-Dāḥ;kāh — together with the governors of Hims and Khinnasān — went over to the side of the rival caliph ʿAbd Allāh b. al-Zubayr. At first he did this secretly, but later openly. Ibn al-Zubayr then made him governor of Syria, putting under him the other governors with pro-Zubayri leanings. Marwān b. al-Hakam, who had attended Muʾawiyah II’s funeral, and was at that time the oldest and most respected of the Umayyads, considered the position so hopeless that he left for Mecca, to pay homage to Ibn al-Zubayr, and to intercede for an amnesty for the Umayyads. On the way, however, he met ʿUbayd Allāh b. Ziyād in Aḍhrāʾ. The latter was on his way from ʿIrāk to Damascus, and reproached him severely, finally deciding him to turn back, which he did, going first to the Tātīs, but on the autochthonous languages only Avar, Darghin, Lak and Kūmlq have newspapers. It thus appears that these four nations are destined to become poles of attraction and that in the end they will absorb the other groups.

Bibliography: As well as general works on the Caucasus, there is a rich literature on Daghستان in Russian. A bibliography (134 titles of works and articles) will be found in A. Bennigsen and H. Carrère d’Encausse, Une République soviétique musulmane: le Daghستان, aperçu démographique, in REI 1955, 5-76, and another more complete version appended to the work Narodi Duguastana, Moscow, Acad. Sc., 1955 (137 titles of which 79 are of pre-revolutionary works and titles and 58 later than 1918); Turkish sources in JA s.v. (by Mirza Bala). For further details see the bibliographies of the articles on the peoples mentioned in the text. [W. BARTHOLO—A. BENNIGSEN]

AL-DAḤ;kāh b. ʿUakās (or Abū ʿAbd Allāh al-Raʿāf, son of a blood-letters (baghdām, Ibn Rusta, BGA vii, 215), head of the house of al-Dāḥ;kāh). He is reported to have been of a vacillating character (dijāʿaʾa yakuddimus ridāʾa wa-yuʾaḥkhkhiru uhrā, Aghānī xvii, 177) and this is
the warriors assembled in al-Djabiya, and all his followers from Damascus, against al-Dahhak. In 649/1253, a momentous battle took place near Marghi Râbit, lasting for 20 days and ending with a victory of the Kalb over the Kays. Al-Dahhak himself was killed in battle and his followers fled. His son Abd al-Rahmân b. al-Dahhak, however, became governor of Medina under Yazid b. 'Abd al-Malik. Ibn 'Asâkir still knew the house and the beautiful bath of al-Dahhak near the city wall of Damascus (Ta'rikh Madinat Dimashk, ed. Ş. Munadîdîd, iii, Damascus 1954, 140), and even al-Dahhak (died 981/1573) tells of a mosque, supposedly that of al-Dahhak b. Kays, on the southern side of the citadel (H. Sauvage, in JA, 9e sér., tome vi, 1895, 442, and vii, 1896, 386).

The course of events following the death of MuÂ«awiyâ II is by no means as clear cut as might appear from the above: accounts vary considerably, but Ibn Sa'd's report is, for factual reasons, the most acceptable on the whole.

(A. Dîtrich)

AL-DÂHâHAK b. KAYS AL-SHAYBÂNÎ, Khârijîte leader, opponent of Marwân b. Muhammâd (= Marwân II). During the disturbances which followed the murder of the Caliph al-Walîd II, the Khârijîtes resumed their campaign in Dîzîra and pushed forward into Irâk, their leader at first being the Hârûrî Sa'id b. Bahdal, and, after his death of the plague, al-Dâhâhak b. Kays al-Shaybânî, an adherent of the above-mentioned Ibn Bahdal. Several thousand fighters assembled under the standard of al-Dâhâhak; there were even among them Sufrîtes from Shahrazûr, who, at that time, according to al-Baladhurî, Fawqâ, 209, were contesting, with Marwân, the possession of Armenia and Æthiopie, and there were also old women who, dressed in male armour, fought bravely in his ranks. For some months in Irâk, two governors had been at war with each other; one of them, 'Abd Allâh, son of 'Umar II [q.v.], represented the Caliph Yazîd b. al-Walîd (= Yazîd II) and was supported by the Yemenites, and the other, al-Nâdîr b. Sa'id al-Hârâshî, was the nominee of Marwân b. Muhammâd, and had the support of the Mu'âshirites. When the Khârijîtes advanced, these two governors joined forces against the threat. In spite of their joint efforts, they were beaten in the month of Radjab 127/July-August 745, and al-Kûfa was evacuated. Ibn al-Harashi returned to the domain of Marwân, and Ibn 'Umar withdrew into the fortress of Wâsît, but in the month of Shahân of the same year, he was besieged there by al-Dâhâhak. After a few combats he ceased all resistance (Shawwâl 127/July-August 745), and, although a Kurayji and a member of the ruling family, paid homage to Ibn Kathîr, obviously struck by the enormity of this, diminishes its seriousness; he says that Ibn 'Umar pressed the Khârijîte to oppose Marwân, promising to follow him if he killed the latter. Al-Dâhâhak, now master of al-Kûfa, did not delay there; invited by the inhabitants of al-Mawshîl, he entered that town and expelled the government officials (according to Ibn Kathîr, he marched against Marwân, and, on the way, he seized al-Mawshîl, at the invitation of the inhabitants). It is certain that he was popular. The sources imply that people flocked to his banner because he paid extremely well, but the real reason must have been that those of the Khârijîtes filled the masses with enthusiasm; the movement had acquired towards the end of the Umayyad dynasty a scope and an intensity that it had never known. Al-Dâhâhak's army is said to have numbered 120,000 men. Even the Umayyad Sulaymân, son of the Caliph Hishâm, took his place alongside the Khârijîtes, with his mawllî and his soldiers, although he had been proclaimed Caliph Marwân, then busy besieging Hims, asked his son 'Abd Allâh, whom he had left at Harrân, to march against al-Dâhâhak, but 'Abd Allâh, beaten, retreated into Nisibîn and was besieged there by the Khârijîte. Finally Marwân, who had meanwhile seized Hims, himself marched against al-Dâhâhak. The battle took place at al-Qa'llah on the territory of Kafartughî (al-Mas'ûdî, Murûdî, vi, 62; between Kafartughî and Ra'â al-Ayn) towards the end of 128/Aug.-Sept. 746. Al-Dâhâhak fell in a fray, and his body was not discovered by Marwân's men until the following month. His success in having numbered 120,000 men. Even the Umayyad Sulaymân, son of the Caliph Hishâm, took his place alongside the Khârijîtes, with his mawllî and his soldiers, although he had been proclaimed Caliph Marwân, then busy besieging Hims, asked his son 'Abd Allâh, whom he had left at Harrân, to march against al-Dâhâhak, but 'Abd Allâh, beaten, retreated into Nisibîn and was besieged there by the Khârijîte. Finally Marwân, who had meanwhile seized Hims, himself marched against al-Dâhâhak. The battle took place at al-Qa'llah on the territory of Kafartughî (al-Mas'ûdî, Murûdî, vi, 62; between Kafartughî and Ra'â al-Ayn) towards the end of 128/Aug.-Sept. 746. Al-Dâhâhak fell in a fray, and his body was not discovered by Marwân's men until the following month. His success in having numbered 120,000

(L. VECCHIA VAGLIERI)

DAHISTÂN, erroneous spelling of DHIUSTÁN [q.v.]

DAHLAK ISLANDS, a group of islands off the west coast of the Red Sea, opposite Musawwa' (Eritrea), with their centre about 40° 15' E., 15° 45' N. They represent an Ethiopian base with an admixture of Arabs, Danakil, Somalis and Sudanis. The islands
afford miserable grazing for goats and camels, with some humble sea-trading, fishing, recovery of oil... extending from al-Nafud generally south-eastward (see DJA-ZIRAT AL-£ARAB, esp. p. 5361). According to tribal affiliations in the 19th century. The most successful of his controversial topical questions, and became the active as an author. He not only covered the traditional subjects but also wrote many recovered documents and elegant Kufic inscriptions testifying. Allied at times with (or menaced by) the Mamluks of Egypt, and with claims to rule part of the neighbouring mainland including Mrusawwa, the Dahlan amirs (called “kings”) by Maktirim still fell intermittently under Egyptian or Yemeni suzerainty. The Amir ruling when the Portuguese appeared in 910/1513 was Ahmad b. Isma’il, whose opposition to the newcomers was punished by a devastation of his islands; but he was later restored as a Portuguese vassal. Adhesion to the cause of the Muslim conqueror and liberator Ahmad Grañ against the Portuguese led, after temporary success and the appointment of Ahmad Isma’il’s successor as Governor of Harkiko, to a second devastation and a mass evacuation of the islanders. Reoccupied, the islands fell easily to the Turkish fleets later in the century, and their fortunes were thereafter those of rarely-asserted Turkish suzerainty, actual or nominal dependence on Mrusawwa, and temporary Egyptian Government in the second half of the 13th/19th century. When the Italians colonized Eritrea in 1885, the Dahlan Islands had long since ceased to offer any claims to interest. They became a Vice-Residency, with headquarters at Nokra, in the Commissariato of Bassopiano Orientale. This was abolished as a separate administrative unit under British occupation of Eritrea (1896-1941-52) and that of Ethiopia from 1936/1952 onwards. Bibliography: C. Conti Rossini, Storia d’Etiopia, Milan 1928, Vol. 1; Issel, Viaggio nel Mar Rosso, Milan 1889; R. Basset, Les Inscriptions de l’Ille de Dahlab, in JA, Paris 1893; A. DILGHAN, SAYYID AHMAD B. ZAYNI, born in Mecca towards the beginning of the 19th century, from 1288/1871 Muttif of the Sha’i and Shaykh al-Ulama (head of the corporation of scholars and therefore of the body of teachers in the Hijrah) in his native city. When the Grand Shaykh ‘Awn al-Rafik, because of a dispute with the Ottoman Governor Uthman Pasha, removed himself to Madina, Dahlan followed him there but died soon afterwards from the fatigue of the journey in 1304/1886. Particularly in his later years, Dahlan was very active as an author. He not only covered the traditional Islamic sciences which were studied in Mecca in his time, but produced a number of treatises on contemporary affairs, who were often printed. His al-Durar al-Saniyya fi ‘l-Radd ‘ala l-Wahhabsya provoked a chain of pro-Wahhabi replies and counter-replies. His polemics against Sulaymân Effendi, one of two rival Turkish Shaykhs of the Nakshibandî turbiya in Mecca, who competed for the leadership of the Nakshibandîs in Indonesia, and against the learned Shaykh Muhammad Hasab Allah of Mecca, whose scholarly reputation equalled his own were not free of personal interest. Of his works on history, al-Futuhât al-Islamiyya, a history of the Islamic conquests until the time of the author, is remarkable for the light it throws on his attitude to the contemporary Mahdist rising in the Sudan, and his history of Mecca, Khulüsât al-Kalâm fi Bayân Umard al-Balad al-Harîm, until the year 1093/1684 a short extract from the chronicle of al-Singîrî (Brockelmann, II, 502), is a most valuable source for the events in Mecca during the following two centuries, including the rise of the Wahhabi, their first rule over the Hijaz, the fight of the Sharifs against them, the restitution of Ottoman rule by Muhammad ʿAlli, and the disorders in Djidda of 1274/1858. Being a friend of the family of the ruling Sharifs, Dahîn had access to the best written and oral information. The giving of fatwas formed, of course, an important part of his activities, and some of his decisions were incorporated in the contemporary handbooks of Sha’i doctrine; in his last years, however, he handed over this routine work to his assistant or amîn al-fatawâ, Sayyid Muhammad Sa’îd Bâbasîl (Brockelmann, II, 650, S II, 811). Snouck Hurgronje has drawn a detailed picture, based on close acquaintance, of his person and background. Bibliography: Snouck Hurgronje, Verspr. Geschr., iii, 65-122 (with two extracts from the Khulüsât al-Kalâm); Brockelmann, II, 640 f., S II, 810 f.; ʿAbd al-Hâyy al-Kattâni, Fihrist al-Fahâris, i, 290-2; Sarkis, Muṣājîm al-Muṣâjîm, 990-2. (J. SCHACHT)

AL-DÂHNA—in Sa’dî’s Arabia—a long, narrow arch of nafud or dune desert, varying in width from 10 to 75 km., extending around an eastward curve for a total length of over 1,000 km., connecting the Great Nafud of the northwest with the Empty Quarter (al-Rub’ al-Khali [q.d.]) of the south, lacking in natural water sources except along the fringes, but furnishing a favourite area of pasturing. In the past separating the interior area of al-Yamâma from the coastal region of al-Bahrayn, al-Dâhna today serves as an informal boundary between the Province of Najd and the Eastern Province (until 1953 the Province of al-Ahsâ’), its western edge formed a major sector of the westerly boundary of the petroleum concession granted in 1933 to American interests, although an area of potential priority extended still farther west. Beginning with the first well in 1957, an oil field has been discovered in the sand belt itself and adjacent easterly thereunto—the Khurays field, some 120 km. west of the immense Ghawâr field and ca. 150 km. west of al-Hulûf (in the oasis of al-Hasa). Al-Dâhna is the easterly and much more continuous of two parallel strips of sand desert extending from al-Nafud generally south-eastward (see DJA-ZIRAT AL-ÂRAB, esp. p. 536). According to tribal
The excellence and amplitude of the pastureland of al-Dahna are described by Yākūt, who says that it has been mentioned by many poets, especially Dhu ‘l-Rumma. Groups now pasturing regularly in al-Dahna are of the following tribes: in the north, from al-Nafūd to the wells of al-Bushūk, Shammar, and from al-Bushūk to Wādī al-Adrāji and the sabābīr of al-Sayyāriyya, Harb; thence from Darb al-Mubayhis, Muṭyar; thence to the crossings of the main north-south motor track and Darb al-Aʿaraf, Subay4 (with also some of Subul); thence through all the remaining portion of al-Dahna4 and through ‘Urūk al-Rumayla, al-Dawāsiṣ, Groups of al-Uḏajmān and of Kahtān also range in the southern part of the pasture area of Subay4 and the northern part of that of al-Dawāsiṣ—i.e., east of the waves of Ḥaḍar al-ʿAṯk, Ramūḥ and al-Rumbiyya, and Ramlān, al-Ṭajīfyya, and Siḍī. In addition, some of al-Ṣulaba range in the northerly area of al-Dahna4.

There is little use in attempting to identify the "mountains" or "swords" of sand in al-Dahna4 as mentioned by various sources, especially Yākūt. The names have changed too much. Likewise, there is no profit in belabouring the question of the origin and meaning of the name al-Dahna4 itself. The name has often been explained as meaning "red". For the root DHN, there persists the sense of paucity of moisture (as in dhāhn al-matar al-ard), from which has been derived the senses connected with ointment and oil, including cooking-fat and in modern times, oil-base paints. The people use 'tabl (or ar āfā)—which grows widely in al-Dahna—for tanning, but the resulting colour is expressed by HMR, not by DHN, which is reserved to the application of fat to make the leather pliable and soft. One association of redness in the language of the people concerning this desert may be found in the occasionally heard
expression *ṣad maḍhīna, which is explained as distinguishing the sands of al-Dahna3, as of a brownish or a duller red, from those of al-Nafud, which are said to be of a lighter shade of red. At the same time, the people also equate *dahnadīn with *ard madhuna, land only lightly or superficially moistened by rain.

Yākūt, in both the Muṣṭafī and the Muḥāṣarī, lists several other places and topographical features under the name *al-Dahna3 or *al-Dahna.

AL-DAHNA3 — DAHOMEY 93

copper to form layers. Its colour is compared to that of the chrysolith ( zabāriyyād), although it does appear in different shades: dark green, veined, the shade of peacock’s feathers, and pale green, with all intermediate shades. Frequently all the shades appear in one piece, as it developed in the earth, layer by layer. The stone is a soft one, and therefore loses its gloss with the years. *Ṭifṣāḥī, following *Ballānās (Apollonius of Tyana), explains how the very best copper is gained from it. There is new malachite and old, from Egypt, Kirmān, and Ḫūrāsān. The very best kind is the old Kirmānī. The stone has been found in Egypt, Kirmān, and Ḫūrāsān, usually in the form of amulets (scarabs), statuettes, and cut stones. Our detailed description of malachite comes from al-Rāzī, who also treats of the following: 1) its calcination (i.e., its decomposition and the burning up of sulphur and oils which it contains), which can take place in 4 different ways; 2) its curation, due to salts and borax, each again in 4 different ways; 3) its composition; 4) its use in medicine, etc.

Taken in powder form and with vinegar, it is regarded as a powerful antidote to poison; on the other hand, it will harm a person who has not been poisoned, and then causes serious inflammations. If rubbed on the sting of a scorpion or a bee, it will reduce pain; it has also been used against leprosy and to cure diseases of the eye. Evidence in poetry can be found in al-Ḥammāmī (L.A., s.v. *dahma). Bibliography: Rasʾīl Iḥwān al-Safī (ed. Bombay), ii, 82; *Ṭifṣāḥī, *ʾAbhūr al-ʾAjhār (new edition of the translation by C. DAHOMEY, a corridor 418 miles long by 125 miles wide, between Togoland and the Nigeria of the Gulf of Guinea. The coast is low-lying, fringed with lagoons, while the central zone is formed of table-land and isolated mountains; the northern part is higher, slanted across by the mountains of Atacora, which rise to about 800 metres. In the south especially, the humidity is high and the temperature fairly constant although there are two rainy and two dry seasons.

The population of Dahomey, nearly two million inhabitants, is chiefly composed of Fon (central region), Goun and Yoruba (south-east region), Adja (south-west), Bariba, Somba, and Fulani (northern region).

The principal town is Cotonou (87,000 inhabitants), although Porto-Novo has always been the administrative capital.

In contact with Europeans since the seventeenth century, Dahomey was particularly affected by the slave trade, which helped also to increase the wealth of certain of its kingdoms, notably that of Abomey.
It was this last which put up the longest and fiercest resistance to French penetration (1894).

Dahomey, which entered the federation of French West Africa in 1895, played a great part in its development, through the agency of its elites who had emigrated to the various other territories. Together with Senegal, it was one of the first to form political movements, which demonstrated their strength well before the second world war.

Dahomey, like most of its neighbours on the Gulf of Guinea who have been influenced by the Benin cultures, has retained the strong animistic foundation upon which rests the life of its civilization.

The social and religious organization of the country, where animism was the state religion, forbade the introduction of any foreign doctrine and it was not until the fall of the kingdom of Abomey that Christianity began to spread.

Islam could nowhere take root very deeply nor bring about large conversions as the chiefs and the local princedoms were better than the end of the nineteenth century never willing to renounce their beliefs, neither among the archaic clan societies of north-west Dahomey called Somba, nor in the feudal Bariba societies of the north-east region which was still crossed by the caravan routes marked out by the Islamic caravanserais, nor in the kingdoms of the south, absolute monarchies where the king was the all-powerful repository of the ancestral traditions which he revived each year in honour of his predecessors.

The Muslim penetration probably began from the north-east; a little commercial colony of the Mali Empire was set up in the thirteenth century in the region which is today Sokoto: the travellers of the time called it Guangara. It was from there that the waves of caravans departed for present-day Ghana, land of the kola. Salt, slaves and other products from the north, sometimes even from Libya, came down to the south-west while kola nuts passed up to the Nigerian and the Hausa lands, crossing North Dahomey. Thus there were quickly established little Muslim colonies called Wanga or Maro (in Dahomey) which soon blossomed into important centres like Parakou, Djougou or Kandi.

These foreign settlements remained near the local chiefs, whose domains were crossed by the caravan routes; they founded families and so introduced Islam, which slowly developed, by the simple device of local marriages.

Later on, the conquest of the Songhai empire by the Moroccans, at the beginning of the 17th century, brought about the withdrawal towards the Niger of a group of Muslim Songhai called Dendi. These established themselves probably in the extreme north of modern Dahomey and formed the second wave of the Islamic influence. The third wave corresponded to the immigration of the Fulani shepherds, who spread out during the 18th century over the whole of the northern half of Dahomey. Although their religion was still tinged with traces of animism, it formed none the less an Islamic centre which converted a great many of the former slaves or Gando, with whom they maintained permanent contact.

At length, in the last years of the eighteenth century, Islam also entered by the south-east and Porto-Novo, the present capital of Dahomey, soon contained some Muslim Yoruba merchants, who had come from Ilorin and from the west of modern Nigeria. They quickly increased, converted certain Yoruba families of Dahomey and also some descendants of the slaves who had returned from Brazil bearing Portuguese names.

Although it is difficult to draw up statistics, we can reckon that, of a total Dahomey population of 1,800,000 inhabitants, between 230 and 240 thousand are Muslim, of whom only 100,000 are practising devotees.

The greater part of them are Tidjâni; some, particularly among the older people, belong to the Kâdiriya order. There are a few Hamallists in the north. In spite of this near-unity of sect, a difference of belief set some Muslims, Yoruba in origin, against the natives of the northern regions (Hausa-Zerman-Fulani-Dendi), who claimed to practise their religion with greater orthodoxy. These two aspects of Islamic Dahomey are to be met chiefly at Porto-Novo (Islamic Yoruba) and at Parakou (the Islamic north), which were soon called upon to become the two great Muslim capitals, Djougou having slowly to give place to its neighbour Parakou, where some conversion movements had already been born and where there were established some of the masters of the Kurân who possessed a new and more dynamic conception of their religion.

It is probable that, in the years to come, the religious leaders and the imâm will be chosen more and more from among the most educated notables and no longer, according to heredity, from the families connected with the animist chiefs. This explains the rise today of the schools of the Kurân in North Dahomey in particular, where religious learning is always an object of prestige.

(J. Lombard)
DAHR — DAHRYYA

The word has as yet no philosophical specification; it is used in one sense only in LXXVI, generally called the dahr, a Kur'anic word meaning a long period of time. In certain editions of the Kur'an it occurs in connexion with the infinities, or rather the ungodly, erring and blinded, who believe in the eternity of the cosmos, as opposed to those who attribute to it a creator and a cause.

In the Mutakallimun in general, the Judeo-Arab theologian Sa'adya (d. 942) calls them the azhaliyya, those who believe in the eternity of the cosmos, as opposed to those who attribute to it a creator and a cause.

In this respect the Mutakallimun are opposed to them, affirming the beginning in time and bodies of the world created by God, and to this adding an affirmation of the divine attributes, God being alone eternal and alone powerful (ibid, Bombay 35-40 and Beirut 456). Like the azaliyya, the existence of angels and demons, the significance of fire and the powers of sorcerers, are independent of pre-Islamic Arab sources (cf. al-Dihiz, Kitaab al-Hayawdn, ed. M. Pococke, Cairo 1325-6/1906-7) in which, in an over-wide generalization no doubt made under the influence of the first literary use of the word has been noted, in the Kitaab al-Hayawdn by al-Djahib (Cairo 1325-6/1906-7) in which, in an over-wide generalization no doubt made under the influence of the first literary use of the word has been noted, in the Kitaab al-Hayawdn by al-Djahib (Cairo 1325-6/1906-7).

The dahr is defined in the Mutafath al-ulsam (ed. Van Vloten, Leyden 1805, 35) as "those who believe in the eternity of the course of time"; the dahryya (dahr yamurru) is called them the azhaliyya, those who believe in the eternity of the cosmos, as opposed to those who attribute to it a creator and a cause.

In this respect the Mutakallimun in general, the Judeo-Arab theologian Sa'adya (d. 942) calls them the azhaliyya, those who believe in the eternity of the cosmos, as opposed to those who attribute to it a creator and a cause.

In this context the Mutakallimun are opposed to them, affirming the beginning in time and bodies of the world created by God, and to this adding an affirmation of the divine attributes, God being alone eternal and alone powerful (ibid, Bombay 35-40 and Beirut 456). Like the Mutakallimun in general, the Judeo-Arab theologian Sa'adya (d. 942) refuses their doctrine, first in his commentary on Seter Ye'asher (ed. Lambert, Paris 1892), and later in the first book of his Kitaab al-Amannit wa-l-'Ithdahai (ed. Landauer, Leyden 1880), in three pages (63-5) on the doctrine known by the name al-dahr, which regards not only matter as eternal but the beings of the world which we cannot observe; this sect limits knowledge to the perceptible: "no knowledge save of what is accessible to the senses" (64, l. 13). Its trans-
Al-Ghazâlî for his part also looked on the dahrîyya rather as an order of philosophers who throughout the centuries expressed a certain current of thought which was never without some representative. He does not always regard them in the same way. In the Mu'khtâr al-Dalâ'il (ch. III, Cairo 1925, 96-97), he speaks of them as forming the first category (sâyiţ) in chronological order. They were then a "sect (fāsîţa) of the ancients", denying a Creator who governs the world and the existence of a future world, professing that the world has always been what it is, of itself, and that it will be so eternally. He likens them to the sanâdîcks, who also included another, and more numerous, branch, the tabî'îyyun, naturalists. The dahrîyya seem to make the perennity of the world the centre of their doctrine, whilst the fâsîyya insist upon the properties of temperaments and deny, not creation but paradise, hell, resurrection and judgement. Against these two categories there stands a third, the deiîts, iâhîyyun, who came later and included Socrates, Plato and Aristotle. They refuted the errors of the first two groups, but they were not always followed by the Muslim philosophers, such as Ibn Sînâ and al-Fârâbî. Both were particularly singled out in the Tahdîfut al-Falâsîfîa by al-Ghazâlî (ed. Bouyges, Beirut 1927, 9) who with reference to them demonstrates the "Incoherence of the philosophers" (according to the translation preferred by M. Bouyges to " Destruction" of the philosophers), at the same time proving the incapacity (ta'dîqîz) of the adversaries. For the two Muslims strove against those who ascribed the Divinity, though not without avowing theologies which led them to be classed by al-Ghazâlî among the dahrîyya. To the latter, who are also given the name dahrîyyun, are attributed the following theses: they deny a Cause which might be "causative of causes" (65, 1. 3-4); the world is eternal and has neither cause nor creator; new things alone have a cause (133, 1. 6 and 206, 1. 5). Here there are only two groups of philosophers and not three, that of the "followers of truth" (âbi al-bakhî) and one other, that of the dahrîyya (133, 1. 6). Now there are philosophers who believe that the world is eternal and, nevertheless, demonstrate that it is the work of a Creator (jâmî'), a reasoning which al-Ghazâlî declares to be contradictory (133, 1. 6 ff.). In fact, Ibn Sînâ returns to this subject on many occasions, and he was clearly persuaded of the forces of the opinion (sîrîz) which in the dahrîyya is devoted to "those who say that the world is eternal", with the four elements on one hand, on the other the fifth, incorruptible element which forms the celestial bodies; all of these are reasons for al-Ghazâlî to hold the theses of the dahrîyya (206, 1. 5 ff.). In the Tahdîfut al-Tahdîfut (ed. Bouyges 1930), Ibn Rûshd does not make the same strictures as al-Ghazâlî; he does not name the dahrîyya (see Index, 654) who only appear under this denomination in the summary of al-Ghazâlî's theses (414, 1. 3), but he uses dahr not only in the original sense of "period of time" (95, 1. 1 and 120, 1. 3) but also in the sense of the well-known philosophical doctrine wrongly attributed to the falsâfîs (415).

The dahrîyya appear as a sect, properly speaking, in the definitions of Ibn Hazm and al-Shahrastânî. The former ascribes to the dahrîyya the doctrine of the eternity of the world, and the corollary that nothing rules it, whilst all the other groups think that there was a beginning and that it was created, mukhâdath (Kitâb al-Fisal, Cairo 1317, 1. 9). He starts by giving the five arguments of the dahrîyya who are called (11, 1. 9) "those who profess the dahr", al-âhîlân bi 'l-dahr. These may be summed up as follows: 1. "We have seen nothing which was newly produced (hadaţîga) unless it arose from a thing or in a thing". — 2. What produces (mukhîd) bodies is, incontestably, substances and accidents, that is to say, everything that exists in the world — 3. If there exists a mukhîd of bodies, it is either totally similar to them or totally different, or similar in certain respects and different in others. Now a total difference is inconceivable, since nothing can produce something contrary or opposite to itself, thus fire does not produce cold. — 4. If the world had a Creator (âfîl), he would act with a view to obtaining some benefit, of redressing some wrong, which is to act like the beings of this world, or else by nature, which would render his act eternal. — 5. If bodies were created, it would be necessary that their mukhîd, before producing them, should act in order to negate them, negation which itself would be either a body or an accident, which implies that bodies and accidents are eternal (10-11). After refuting these arguments in turn, Ibn Hazm gives five counter-arguments of his own, continuing the discussion (11-23) into the following chapter which is devoted to "those who say that the world is eternal and that, nevertheless, it has an eternal Creator".

Al-Shahrastânî begins the second part of his Kitâb al-Milal wa 'l-Nihal in which the philosophical sects are enumerated, with those who "are not of the opinion" that there is "a world beyond the perceptible world", al-labîsîyyun al-dahrîyyun, "the naturalists who believe in dahr, who do not expound an intelligible [world]", lâ yuṭûbûn maḥbûl, this last word being in the singular (ed. Cureton, 202, 1. 2). A second passage, "sometimes, on the other hand, . . . they also admit the intelligible, (ed. Cureton, 202, 1. 5-9) seems to apply to these two philosophers who, for their part, strenuously affirm that an intelligible world exists. Thus the dahrîyya, while having features in common, on the one hand with the naturalists, and on the other with the philosophers, could not be identified with
either. The passage, however, remains obscure. In the Kitáb Nihyát al-ifradd (ed. Guillaume, Oxford 1932, with partial translation) al-Shahrastání records several discussions between the dahriyya (trans. materialists) and their critics. In a famous episode (l. 137, l. 123, l. 10, 126, l. 9), on the origin of the world, including the theory of atoms moving about in primal disorder. The mode of reasoning of the dahriyya appears sophistical, but the refuters who rely on the movements of Saturn aduce no proof. The origin of the world through the fortuitous encounter of atoms wandering in space is an opinion also attributed to the dahriyya by Djàmlàl al-Din al-Kazwini, Muṣfaḍ al-ulām wa-mubtād al-humām, Cairo 1310, 37.

The 19th century brought definition to a word that for so long had been somewhat loosely used. European natural sciences, penetrating the East, gave rise to a stream of very simplified but materialistic ideas which were the source of unexpected problems in Islam. (For an Ottoman ferman of 1798, refuting the Dahri doctrines of the French Revolution, see Amir Abdù, 'Abduh and first published (ist. ed. Beirut 1303/1885) €...)

While materialism was spreading, particularly in Islam, where the term was evidently used by the early Mu Hazílites [q.v.], later to be a University, combining English culture with the study of Muslim theology. Deeply impressed by the concepts of conscience and nature, he took the laws of nature as criteria of religious values. This new conception spread, giving, with the Arabic termination, the qualifying word naturi, which became nayárí, plural nayáríyin, from transcription of the English pronunciation; in Persian naye'riréyi. It was presented as a sort of new religion, appearing in the Census of India, where its followers were called nelari. These events exercised considerable influence on the whole of India, and made it necessary for orthodox Islam to take position.

Djàmlàl al-Din al-Afghàni [q.v.] wrote a violent reply in Persian, as early as 1298/1878, with his Refutation of the Materialists, the translation of which into Urdu was lithographed in Calcutta in 1883; it was translated into Arabic by Muhammad 'Abdul and first published (1st. ed. Beirut 1303/1885) under the title Risàla fi bid'a màsh'áh al-dahriyyin wa-bayân màsh'áhdihih wa-tábdîl anna 'l-din as-sul al-nadvíyya wa 'l-khàrîj fàsàd al-'umrân, then (2nd. ed., Cairo 1312, 3rd ed., Cairo 1320/1902) under the title al-Radd 'alâ 'l-dahriyyin (French translation A.-M. Goichon, Paris 1942), while the original title included al-nayıgáriyín, clearly denoting the meaning given to dahri which is therefore the translation of naturalistic-materialistic. In this short work Djàmlàl al-Din traces back this doctrine to the Greek philosophers in terms recalling those of al-Ghazâlì; he traces its history, such as he represents it, in the first chapter; it finishes with Darwin. His refutation is, throughout, superficial.

While materialism was spreading, particularly through Arabic translations of European works like Büchner's Kraft und Stoff, translated by Shibil Shumayyl (Alexandria 1854), a contrary movement was taking shape. The history of this struggle between two irreconcilable conceptions is far from finished; considerable research, but has no place here. In the various works mentioned above, the terms maddiyya and maddîyyáin have, in fact, always been used as synonyms of dahriyya and dahriyyin; these latter finally disappeared, replaced by the more exact term. They no longer occur in the Arab press in this sense. So long as the doctrine of the naturalists was accepted (information supplied by R. F. Jomier) and, without being in a position to make the same observation in respect of other countries, we cannot nevertheless remark that they are no longer found in certain publications in Muslim India. Bibilography: in the text; see also W. L. Schneider, Über den Fatastizmus der osmanischen Araber, Bonn 1875, 12-22; M. Horten, Die philosophischen Systeme der spätislamischen Theologen im Islam, Bonn 1932, index s.v. Dahriten.

Recent bibliography: I. Goldziher-A. M. Goichon) (G. Wiæt)
al-da'il, at the head of all official religious matters, seems to have been on a level with the waqir, if not united with him in one person, the da'is in other lands often had adventurous lives and sometimes ended bloody. Many served as military leaders, particularly before the Fātimid state was established (for instance, the Karmātīn leaders; and Abū Ḥābid Allāh al-Shīrāzī, who led Berber tribesmen in the revolt which established al-Mahdī in the Maghrib). Later, they still had to have a gift for political intrigue (some tried to convert the leading figures at the local court, or even the amīr himself; thus al-Mu'tayyid fi 'l-Dīn al-Shīrāzī at the Bāyūr court), for they were not only preachers but agents of the Fātimid state. Nevertheless, the da'is were often independent scholars; vigorous theological and philosophical controversies were carried on among them, and the chief Ismā'īlī books seem to have been written by da'īs, many of the most important by those labouring in hostile Iran.

In the parallelism drawn between the Ismā'īlī hudūd, religious ranks, and the principles of cosmic emanation from the One, the dā'ī was sometimes associated with "time" or with the kha'yāl, "fantasy". For such purposes, the hudūdīa formed a separate rank between the dā'ī and the imām, as did the bāb (q.v.).

The title dā'ī came to mean something different in each of the sects which issued from the classical Fātimid Ismā'īlīsm. Among the first Druzes, the da'īs performed similar functions, but formed a rank directly dependent on the fifth of the great hudūd, the tālī (Bahā' al-Dīn); cosically, they embodied the dīdī ("effort"). Subsequently they became superfluous. The Nizarīs ("Assassins") inherited the Ismā'īlī organization in the Sādīqūkī domains, which seems to have been headed by the dā'ī of Ḥaṣānān; dā'ī became the ordinary title for the chief of the sect, resident from the time of Ḥaṣān-i Ṣabāh at Al-Amūn (in the name of an unknown imām), until in 559/1164 the then dā'ī proclaimed himself the actual imām. (Ḥaṣān-i Ṣabāḥ was evidently also regarded as dādīa in a special sense). The Ṣayyībī dā'īa of the Yaman separated from the Ismā'īlī organization under a dā'ī mulājah, an "absolute" or sovereign dā'ī, who claimed to be the representative of the true line of imāms, themselves in sā'tr, occultation. The dā'ī had full authority over the community, and the Ṣayyībīs split more than once over his person; in the mid-twentieth century there are two main rival dā'īs, one seated traditionally in the Yaman (Ṣulaymān) and one seated in Bombay (Dā'ūddī).

For bibliography, see ismā'īlīs.

DA'Ī, AHMAD B. IBRĀHĪM, Turkish poet of the end of the 8th/14th and the beginning of the 9th/15th century. The scanty information about his life is scattered in his works and in tādīkhīrīs. A bādī by profession, he began to gain prominence as a poet at the court of the Gerīmān in Kūṭahya under princes Sulaymān and Yaḥyā b. ʿAbd Allāh. He seems to have travelled a great deal in Anatolia and in the Balkans. During the chaotic years of struggle between the sons of Bāyızīd I after the battle of Ankara (804/1402), he entered the service of one of them, ṣamīr Sulaymān in Edirne, whose court had become a gathering place for many famous men of letters of the period such as Ahmadī, his brother Ḥanżawāl and Sulaymān Cebelī. He continued to flourish at court under Muhemed I (818/1413-824/1421) and became tutor to his son, the future Mūrūd II. The sources do not agree on the date of Dā'ī’s death; Ḥādīdī Khallīs gives the year 820/1417, but there is evidence that he might still have been living during the first years of Mūrūd II (824/1421-848/1444) (I. H. Uzunparisi, Kūṭahya Şehrı, Istanbul 1932, 213). With the exception of Sehī Tēđḵ̣hire (50) who has a short but appreciative note on him, until recently both Ottoman and modern scholars have considered Dā'ī a minor poet as but a few of his works were known. Since many of his works, especially an incomplete copy of his dīwān and his remarkable muḥaṣṣaṣ Cēnḡ-nāme, have come to light (Ahmed ʿAtīq, Türk Dīvān ve Edediyatsı Dergesti, 3-4, 172-4) Dā'ī has proved to be an outstanding poet of his period, without doubt superior in richness of inspiration, originality, mastery of technique and fluency of style to many of his contemporaries.

Apart from various religious treatises (I. H. Ertaylan, Ahmed-ī Dāʾī, Istanbul 1952) Dā'ī is the author of: (i) Dīwān; the only known copy is in Būrdur Wākî Library no. 735; it is incomplete and not arranged alphabetically, containing his later poems: six hasīdas two of which are dedicated to Muhemed I and 199 ḡazāls. (ii) Cēnḡ-nāme, called wrongly Dinḵ̣ānānume by some sources (Gīb, Ottoman Poetry, i, 256) and confused with Sharḵhūgūl’s Fārābānḵ̣ānā (Kūṭahyaḵ̣ānā-nume) by others (ʿAll, Khūn al-ʿAbbār and Būrsah Muhemed Tābīr, Ṣehīl Mūttaqīlān, 1-2); is maḥnawī, dedicated to Ṣubūrī Sulaymān in 808/1405. In this allegory, the human soul is symbolized by the harp, whose heavenly music is a sign of its divine origin and which seeks the mystical paths of return to oneness with God. In a cheerful play on a flower-strewed lawn in spring, the poet asks the harp why it is so sad yet plays joyful melodies. Thereupon the four parts of the instrument tell him their stories: the silk of the strings came from worms which fed on the flesh of Job before eating the leaves of mulberry trees; the wood of the frame was a beautiful cyprus; the parchment covering the wood a gentle gazelle which was cruelly killed by hunters, and the hairs of the key were from the tail of a magnificent horse killed by the Tatars. This maḥnawī full of vivid descriptive imagery, told in a moving and colourful style of unusual fluency compares favourably with the best contemporary narratives and even with those of the classical period. (iii) Taḵrās, a letter-writer which became a classic and long remained a popular hand-book (Sehī, Tēdīḵ̣īre, 50); (iv) Muḥyī, a small book of 12 light poems; (v) Wāsiyyīl-ī Nāẓurmān-ī ʿĀṭīr, a short didactic maḥnawī, probably translated from the Persian; (vi) ʿUḥd al-Dīnḵ̣āhīr, a short Persian rhyming vocabulary, written for the use of his princely pupil, the future Mūrūd II; (vii) Persian Dīwān, autograph copy written in 816/1413 is in Bursa, Orhan Library no. 66; it is dedicated to Khayr al-Dīn Ḥādīdī Khallīs Bey; (viii) Taṣfīr, translation of Abu 'l-Layth al-Samarkandi’s Kurān commentary, with an introduction in verse, both in simple language and unadorned style, dedicated to Ummay Bey b. Timūr-ḵ̣aṣ (Université Library T. Y. 8248); (ix) also attributed to Dā'ī, a translation of the Taḏḥīḥat al-Awliyā, ʿĀṭīr’s well known biographies and sayings of Muslim mystics.

DAFIF (see Al-Dijair wa'ta'â'il).

DAKHLIYYA, name of an Egyptian province in the eastern region of the Delta. It owes its name, which is an Arabicized form of the Coptic Tkheli, to the town called Daqahla which was situated between Damira and Damietta, a little closer to the latter than the former. At one time famous for its paper mills, it is now but an insignificant village.

The province was created at the end of the 15th/16th century and it has survived till today with some changes in its boundaries. At present it extends along the eastern bank of the Damietta branch of the Nile, which marks its western boundary, and ends on the south-east at the province of Sharqiyya. Its chief town is now Mamura.

Bibliography: Ibn Khurrazad ad-Dhibi, 82; Ku'dama, 48; 'Ali Pasha, xi, 17; Maspero and Wiet, Matériaux pour servir à la géographie de l'Égypte, 90, 186-91. (G. Wiet)

DAKAR [see Supplement].

DAKAN (DECCAN). This word is derived from the Sanskrit word dâkána 'right (hand)'; hence 'south', since the compass points were determined with reference to the rising sun. The conventional line dividing north India from the south is formed by the south-western spurs of the Vindhyas along with their continuation called the Satpurâs; peninsular India to the south of this line is usually further divided into (i) Deccan proper, extending up to the Tungabhadra, and (ii) south India extending right up to the southernmost tip of the peninsula. Physically also these two parts form two distinct units. For, while the Deccan plateau is formed by the great lavaic upland slowly rising from a point a few miles west of the deltas of the Godavâri and the Krishna ending abruptly in the Western Ghâfs, the country lying to the south of the Tungabhadra and touching the port of Goa has a distinct crystalline character. The Deccan proper, therefore, may be said to consist of five sections, viz., (i) the western section enclosed by the sea and the Western Ghâfs, called the déth, the original home of the Marâshâs; this has extended beyond the Ghâfs to include the whole territory with Ahmadnagar and Poona as its principal towns; (ii) the area known as Berar during the Middle Ages and which is now known according to the ancient appellation of Vidarbha, with Nagpur as its principal town; (iii) Marathâwada, the Marâshâ-speaking part of the old Haydarâbâd State with its centre at Awrangâbâd; (iv) Tâlangâna where Telugu is the mother-tongue of a large part of the population, with Hâydarâbâd as its historical and cultural capital; (v) the south-western portion populated mainly by the Kannadigâs, with Bijeâpur as its chief town.

Even if we disregard the legendary war between Râma and Râvana, the Aranyization of the Deccan up to the far south must have been complete by the end of the Mawrya rule. There is little to relate between the fall of the Mawryas and rise of the Andhras who ruled practically the whole of the Deccan plateau for five hundred years. We also know of the Ikshvakus of Nagardjunakonda, the Vâkañjas of Berar, the Western Çâlukyas of Badâmi and Kâlyani, the Râkhratukâs of Malkhed, the Eastern Çâlukyas of Vengi, the Yâdavas of Deogiri and the Kâkatiyas of Warangal, who ruled in different parts of the Deccan during the centuries preceding the Muslim conquest.

The first contact of the Deccan with the Muslims of the north was in 693/1294 when 'Allâ al-Dîn, nephew of Sultan Djâli al-Dîn Firuz Khâlidî of Dihîl, marched to Deogiri (see DÂLÂTABÃD) and forced the Yâdava Râja Râmaçandra to pay tribute. It was, however, not till 718/1318 that this kingdom, which extended to most of the Marâshâ country, was annexed to the Dihîl Empire. Sultan Muhammad b. Tughluq did not merely secure the dominion of the Balufs of Warangal to his Empire but annexed a large portion of south India as well, making Deogiri his second capital and renaming it Dâlatabâd [q.v.]. But he could not control his far-flung empire effectively, and in 740/1345 his Deccan nobles, the amirân-i sadâh, revolted and chose Ismâ'îl Mûgh as the first independent Muslim ruler of the Deccan. He was replaced by Zafar Khán as king, with the title of Alâ' al-Dîn Hasân Bihârân Khân in 748/1347, who thus became the founder of the Bahmanî kingdom [see Bahmanids]. The Bahmanids spread their Empire over the whole of the Deccan from sea to sea and ruled it first from Ahsanâbâd-Gulgarga [see Gulgarga] and then from Muhammadâbâd-Bîdar [see Bîdar]. Towards the end of the 15th and the beginning of the 16th centuries the governors of the Bahmanid provinces became first autonomous and then independent, and the Deccan was finally divided into five kingdoms of Ahmadnagar, Bidjâpur, Berâr, Bîdar and Golkânda under the Nizâmshâhs, 'Adîshîhâ, 'Imâdshâhâ, Barîdshâhâ and Kûthshâhâ dynasties respectively. Berâr and Bîdar were soon absorbed into Ahmadnagar which was itself annexed to the Mughul Empire during the reign of Shah Dâhân in 1043/1633. The turn of the extinction of Bidjapur and Golkonda did not come till 1097/1686 and 1098/1687 when the Emperor Awrangâbî 'Alâmîr annexed these two kingdoms to his vast Empire. But the Mughul authority in the Deccan was undermined by the continuous raids of the Marâshâs who established a separate kingdom under Shahvâdî in 1083/1674 and which forced the Emperor to direct his strategy from Awrangâbâd where he died in 1115/1707. The next important date in the history of the Deccan is the capture of Nilgiri by the Nizâm al-Mulk 'Asaf Dîjâ [q.v.] defeated Mubâriz Khân at Shahkarkhera and established his hegemony over the whole of the Deccan. The dynasty of the 'Asafjâhâs ruled the Deccan first from Awrangâbâd and then from Hâydarâbâd [q.v.]. Immediately有效 1948 when the Hâydarâbâd State was integrated into the Indian Union. The Nizâm, Sir Mir 'Uthmân 'All Khân, 'Asâf Dîjâ VII, was appointed Râkhratukâs of the Deccan under the Nizâm, 'All Khân, 'Asâf Dîjâ VIII, for constitutional head of the state by the President of the Indian Union and acted as such till 1956 when the Hâydarâbâd State was partitioned between Andhra Pradesh, Bombay State and Mysore State more or less according to linguistic affinities.

Dakhani — al-Dakkan

Dakhani [see urdu], Al-Dakkhil [see 'Abd al-Rahman].

Dakkhil. The dictionaries (LA, TA, etc.) give a general meaning, “interior, inward, intimate,” and two particular derived meanings, (1) guest, it, whom protection should be assured, and (2) stranger, passing traveller, person of another race. The first of the particular meanings relates to an institution of nomadic common law which guarantees protection, in traditional ways, to whoever requests it. Although the concept has at all times existed, it has never been incorporated into Islamic law, which has no technical term corresponding to it. In its practical application, the institution combines elements of the complex system of ties of hospitality to which general opinion seems to assimilate the rights of the dakkhil and of a very old law of refuge in private households which is attested all over the Semitic world (cf. QRWAR). See in particular the detailed analysis by A. Jaussen, Coutumes des Arabes au pays de Mosai, Paris 1948, 202-20, and Burckhardt’s notes on the same subject in Notes on the Beduins, London 1831, i, 329-338; also Layard, Narrative of a second expedition to Assyria, London 1867, ch. VI, 139-62, and Caskel, apud Oppenheim, Die Beduinen, Leipzig 1939, i, 29.

From this last meaning, several meanings of the word as a technical term in philology, regarded as “late” by the lexicographers, have been derived, notably (1) “a foreign word borrowed by the Arabic language”, “aarkam”, and (2) metrical term denoting the consonant preceding the rhyming consonant, the dakkhil itself being preceded by an aif (cf. a'rud).

Dakhlja wa Khardja [see Al-Warati].

Dakhni [see urdu].

Dakki, ‘Abd Mansur Muhammad b. Ahmad (or Muhammad b. Muhammad b. Ahmad), the poet to whom we owe the oldest known text of the national epic in the Persian language. His place of birth is uncertain (Tus, Bukhara, Balkh or Samarqand); he was born between 318 and 329/930 and 940, for he was at least twenty years old when he began this work, at the behest of the amir Nuh. b. Mansur, 366-387/976-997; Dakki therefore himself in one of his poems, epic in style and metre, scattered the deeds of Zaridt (Zoroaster), and the war against their Chionite enemies.

The Zoroastrian faith of Dakki seems to assert itself in one of his ruba‘is and in other of his poems, in spite of his Muslim names. Did he remain Zoroastrian at heart? If he had been sincerely attached to Islam, would he, in undertaking the composition of the Shdh-nama on the order of the Samanid amir (a strictly orthodox Muslim), have straightforward extolled the rise of Zoroastrianism and the war which it provoked? Howbeit, it is very probable, if not certain, that he chose this episode because he had at his disposal a copy of the Memorial of Zaridt (Ayatkahr-i Zaridt), a text from the Sasanid period in Pahlawi verse (as E. Benveniste has shown) from which he drew direct inspiration. It may be that he had also put into verse other episodes from the Shdh-nama, if we take into consideration some of his poems, epic in style and metre, scattered through the anthologies (tadhghira).

What remains of Dakki’s lyrical poems shows his remarkable ability to vary his inspiration according to the descriptive, bacchic or amorous styles; quotations from his verse, numerous in the Persian anthologies and dictionaries, give proof of the lasting fame he enjoyed after his too-short career. Indeed his collaboration in the Shdh-nama is important for its own value as for the light it throws on the sources of the great national poem of Iran.

(C. Huart-H. Massé)

Al-Dakka, ‘Abd ‘Abd Allah, Moroccan saint born at Sidjilmassa. He and a certain ‘Abd Allah Muhammad b. ‘Umar al-Ashamm who was assassinated in 542/1147-8 belonged to one of the small circles of Sufis generally disapproved of by authority. This Abu ‘Abd Allah had already been imprisoned at Fez at the same time as some of his companions, among whom one was al-Dakka, who on the orders of Tashshufin b. ‘Ali the Almoravid was afterwards released.

No one knows the date of birth of this saint, nor that of his death. All the same, one can be sure that towards the middle of the 6th/12th century he had become known as a disciple of Sufism at Fez, where his akhawat had aroused the kindly sympathy of Ibn al-Arif and Ibn Barradjas, both of whom died in 396/1104.

If we may believe al-Tadidi, al-Dakka went to and fro between Sidjilmassa and Fez. It was in Fez that he met Abu Madyan at a time when the latter, seeking instruction, was studying the Rihya of al-Muhasibi under the direction of Abu ‘l-Hasan b. Hizirihim and the Sunan of al-Tirmidhi with Ibn Ghalib. Al-Dakka and a person of the name of Abu ‘l-Salawi initiated him into Sufism (Tashawwur, 319). It is because he was one of the masters of Abu Madyan that al-Dakka has not sunk into obscurity.

He led a life of renunciation, and was, it seems, before all else, a disciple of Sufism rather than a scholar. His manner of claiming sanctity and the satisfaction which he felt when it was acknowledged has something displeasing about it. He died at Fez, most probably, according to A. Bel, at the latest in the last quarter of the 6th/12th century. He is buried in the cemetery of Bab al-Gisa.

DALÎL (or Dâkû), a small town in the Djazira province of the Abbasid empire, some 25 miles S.E. of Kirkuk on the Mosul-Baghdad trunk road, was known to the later Arab geographers and perhaps emerged into urban status, though never eminence, in the 5th/11th century. Some medieval brickwork and a minaret survive. The later and present name (from 9th/15th century, or earlier) was Tâwûk or Tâûk. The town, on flat ground immediately west of the foothills, stands healthy and well provided with bathrooms. The Chay, a trickle in summer but a formidable flood after winter rains: this now flows into the Azaim river, and thence to the Tigris, but passed into the great Nahrawân canal when that existed. In modern 'Irák Tâûk, with some 2,000 Kurdish and Turkish-speaking inhabitants, is today a nakhûya head-quarters, partially modernized, and an agricultural and market centre for the surrounding Kurdish tribesmen (Dâ'dyâla and Kâka?) and Turkoman villages. The 'Irák Railways line, and the main road, cross the Tâbûk Chay by modern bridges. A well-known shrine of Zayn al-Âbidin b. Âhuyan is 1.5 miles distant. Bibliography: Le Strange, 92, and the Arab authorities there noted. Abd al-Razzâk al-Âssânî, al-'Irâk Kâtîmî, Sîdî, 1367/1946, 197. Undersigned's own observations. (H. LONGRIGG)

DALÌ, 8th letter of the Arabic alphabet, transcribed $d$; numerical value 4, in accordance with the order of the letters in the Syriac (and Canaanite) alphabet, where $d$ is the fourth letter [see ARBAB]. It continues a $d$ of common Semitic.

Definition: voiced dental occlusive; according to the Arabic grammatical tradition: nāâdâ, madhâra. For the makhrajj, nâfiyya according to al-Kâhîl (al-Zamakhshari, Mufassal, 2nd ed. J. P. Broch, 191, line 1), who places the point of articulation at the anterior part of the hard palate, 'its stripped part' (Ibn Ya'âqîb, 1460, line 19) and so: prepalatal. This articulation has left traces in modern dialects (Lebanon, Syria: M. Brahmânn, Malâsîm, 69; H. F. Le Strange, 92, 1924, 555-84; idem, The Sindhi recusatives . . ., BSOS, xxii/2, 1924, 301-15; Mohiuddin Qadri, Hindustani Phonetics, Paris n.d. (1937?) — also the articles Pâstû, Sînâv, Urûdî, (J. BURTON-PAGE)).

DALÎL, (Gr. σημείον) is an ambiguous term; it can mean sign or indication, every proof through the inference of a cause from its effect or the inference of the universal from the particular in opposition to the proof from a strictly deductive syllogism in which the particular is deduced from the universal; and finally it is used as synonymous with proof, ḥudûs, ābûrān generally. Aristotle treats the "proof from a sign" in the last chapter of his Analytica Priora. According to him "proof from a sign" is an enthymeme, i.e., a syllogism in which one premis is suppressed ($δ̄v ṣ̄m̄avaş̄, ḥiyyâs idâmûrî or ḥiyyâs lâdûtî) in which from a fact another fact, anterior or posterior in time, is inferred (although Aristotle says "anterior or posterior", the example he gives infers an anterior fact and for the Arab philosophers the inference is always the inference of a cause from its effect). He gives as an example that from a woman having milk it is inferred that she has conceived. He states that this enthymeme can be fully expressed in the following way: all women who have milk have conceived, this woman has milk; therefore she has conceived. This would seem to imply that for the type of reasoning the enthymeme is not a necessary condition and that the conclusion provides absolute evidence, although a "sign", according to Aristotle, is always an accident and there is no necessary proof for the accidental. We find in Avicenna the same definition and the same example (Nâzîdî, p. 92) and he adds that dalîl can mean both the middle term of the syllogism (in this case "having milk") and the enthymeme itself. This type of reasoning is the only one for which Aristotle reserves the name of "proof from a sign". The Arab philosophers, however, give the term a wider meaning, based on the distinction made by Aristotle in his Analytica Posteriora between the proof that a thing is, dÎtâ, burhân anna and the proof why a thing is, the proof of its cause or reason, dÎâtâ, burhân lima. The proof why a thing is is preceded by the proof that a thing is, for one can ask only why a thing is, when one knows that it is. The proof that a thing is starts from the particular, the fact, the effect perceived, and infers the cause from its effect, and it is for this reason that the Arab philosophers call it a dalîl; on the other hand the
proof why a thing is starts from the universal, the cause, and deduces the particular effect from its cause. The distinction is confused through the ambiguity of the term "cause" which in Aristotelian philosophy can mean both the logical reason of a thing's being such and such, its formal cause, e.g., the reason that Socrates is mortal is that he is a man, and the ontological cause of a thing's becoming, e.g., this fire is the cause of the burning of this wood. I cannot discuss this here in extenso, but will give only Avicenna's examples from his Nadjât (103, 105) which show clearly the confusion between the logical and the ontological, so usual in Aristotle. As an example of the burhân lima he gives: a great heat has changed this wood, everything a great heat has changed is burnt, therefore this wood is burnt; and as an example of the burhân anna: this wood is burnt, therefore a great heat has burnt it. According to Avicenna the difference between the two syllogisms is that in the former the middle term (i.e., a great heat) is both the cause (i.e., the logical reason) of our conviction of the truth of the conclusion and the cause (i.e., the ontological cause) of the major term (i.e., the being burnt) in reality, whereas the latter gives us only the subjective conviction of the truth of the conclusion. That is to say in the burhân anna we can, purely logically, infer from the particular effect to its cause, for being burnt implies the act of burning, and since being burnt is but the actualisation of the potentiality of heat, heat and the fact of being burnt are practically identical; in the burhân lima the ontological cause and the logical reason are identified.

The Arab philosophers hold also with Aristotle (Anal. Prior., ii, 23) that through a syllogism based on a perfect induction of particular facts, that is the enumeration of all the particular cases, we can arrive at a universal proposition (cf. e.g., Avicenna, De demonstratione [from his Shifâ], 31-2).

There is still another type of reasoning mentioned by Aristotle (Anal. Prior., ii, 24) in which from a particular case a general principle may be inferred, reasoning by example, e.g., avâdâla, mahlâl. Avicenna gives in his Nadjât, 90-91, as an example an argument of the middle term produced in time, because it is composed of parts, therefore it is like a building; now the building is produced in time, therefore the world is produced in time.

Aristotle had neglected in his logic the hypothetical and disjunctive syllogisms which were studied in his school by Theophrastus and Eudemus, but the Stoics for whom all argument is based on the inference of an event from another event, on the inference of the posterior from the anterior (or the reverse in prognostics), on the inference of a particular cause from a particular effect, that is on the inference from signs or symptoms, στῦματα, a concept which becomes one of the most important elements of their logic, are chiefly concerned with the study of the hypothetical and disjunctive syllogisms and, indeed, inferences from actual events which imply a time-element, find an easier expression in a hypothetical than in a categorical syllogism. The example of στῦματον given by Aristotle, becomes in Stoic logic a stock example in their syllogism: if this woman has milk, she has conceived, now she has milk, therefore she has conceived, and Avicenna in his Ishârât, 84-5, gives an example of the difference between burhân lima and the burhân anna in a hypothetical form. Reasoning by example, regarded by Aristotle as a categorical syllogism, or as de al-dallâl that the Stoics call it reasoning by analogy (âyâs), takes in their logic a hypothetical form and becomes one of their principal arguments, since according to them all knowledge transcending the evidence of the senses proceeds by way of analogical inference. The analogical syllogism was the first one the Arabs became acquainted with (it may well be that because of this the term âyâs becomes later the general name for syllogism, just as the term dâlî becomes the general term for proof), the Mu'tazilis, the rationalistic theologians in Islam, called by their adversaries ahî al-âyâs, used analogical reasoning for their interpretation of the Kûrân and as a basis for criticizing traditions, and Schâtî was aware that âyâs is based on signs, dâlî and examples, mîthâl (cf. J. Schacht, The Origins of Muhammadan Jurisprudence, London 1950, 124 and 128). Ghazzâlî in his logical works emphasizes the importance of the hypothetical syllogism in all juridical matters and the Ash'aris, nominalists like the Stoics and who with them deny the existence of Aristotle's forms and formal causes, base their arguments on analogical reasoning or as Averroës says (Tâhâjût al-Tâhâjût, Bouyges, p. 522) on what they call "sign".

Bibliography: in the text.

DALLÂL (ar.) "broker", "agent". Dâlî, literally "guide"; is the popular Arabic word for a man skilled in business dealing, for being the person who arranges the purchase and sale by bringing the seller against his customer. Their profession which, since the time of the Mamluks, the 2% and the account given by C. H. Becker in Hisâl, 106, i, was invested with an official character, was known as dâlîla. The word al-dâlî occurs in early times as a surname (Tâdâl- al-Ârâş). Under the Fâtimids, certain articles could only be sold through the intermediary of dâlîl (al-Ârâshaddast, 215). In the time of the Mamlûks, the 3/4 commission which from the earliest days had been paid to these brokers was made subject to a charge, as a result of which the dâlîl had to give up half his profits in taxes: the loss, naturally enough, he speedily passed on to his clients. This operation was known as nâsîf al-sâmsara (Makrizi, Khâfat, i, 894). A somewhat similar custom was to be found in northern Syria (cf. Soverheim in the Corpus Inscriptionum Arabicarum, ii, no 55 and the account given by C. H. Becker in Hisâl, i, 100). The principal transactions were concluded in the maritime customs offices. There the dâlîl acted at the same time as interpreters when any dealings with the Franks were required. Commercial treaties fixed precisely what fees were due to these agents and interpreters (Amari, Diplomii Arabi, 106, 203). Heyd, Leaenethandel, i, gives a wide range of details about this kind of transaction. For the Western Mediterranean one should consult de Mas Latrie, Traité de passe de commerce, Paris 1866, 189. Later it was the West which monopolized
questions of brokerage (cf. Schaub, Handelsgeschichte der romanischen Volker des Mittelmeergebietes, 761).

It was, however, not only for their transactions with merchants, but also for taking on themselves, that the Eastern peoples made use of the dalāls (see, for example, the notes on Ottoman brokerage dues in B. Lewis, Studies in the Ottoman Archives, I, BSOAS, xvi, 1954, 455 ff.). Furthermore, the latter also acted as independent traders, selling, for example, old clothes on their own account (Descripción de Egipto, État moderne, xviii/II, 321). The name dalāl was also applied to the hawkers auctioning goods in the secondhand clothing market and, still more frequently, to the small intermediary and agent. The way of life of these agents has been well described by Lane, Manners and Customs of the modern Egyptians, ii, 13. Women are also found taking the part of agents. Known as dalāla, they act as intermediaries for harem's of a superior sort (Lane, op. cit. I, 200, 239, 242). For other meanings of the word dalāl cf. Dozy, Supplement, s.v.

(C. H. Becker*)

II. — In the Muslim West, the dalāl is exclusively an intermediary who, in return for remuneration, sells by public auction objects entrusted to him by third parties. In the large towns the dalāls are grouped in specialized guilds, supervised by a syndic (amin) who compels them to give a guarantee of good faith (damāl), and, as chiefly merchants themselves, to merchandise with manufactured goods sold by artisans to the shopkeepers: slippers, locally woven fabrics, carpets, jewellery etc.; industrial raw materials such as hides (green or tanned), wool (untreated or yarn); commodities sold in bulk, such as oil, butter, honey, local soap, henna, eggs, fruit and vegetables; live-stock, animals for both riding and baggage; furniture, books and old clothes. Before the French Protectorate was established in Morocco they were also engaged in the sale of slaves of both sexes.

The word has passed into Persian and Turkish (telli) and, from the latter, into various Balkan languages (modern Greek telīdē). Besides dalāl (delli in Granada), Spanish Arabic used sawēd.

In the Muslim West today dalāl is quite distinct from bāddar, "towncrier" and from simār (s.v.) "broker, business agent".

In the large towns the feminine dalāla denotes a "dealer in women's clothes" who frequents the houses of the rich, offering the women fabrics, clothes and jewellery.

DALTĀWA, the head quarter town of the Kaddā of Khālīṣ in the Irāq of Diyalā, central Irāq (44° 30' E, 33° 50' N). The population of the town —all settled Irāqī Arabs, with Shīʿ predominance over Sunnī—was some 10,000 in 1367/1947, and that of the kaddā 70,000; the two dependent nābiyās are those of Khān Banī Sa'd and Manṣūriyya (formerly Dal b'Abba). The name Daltawa is said to be a corruption of an original Dālatābaḥ. Surrounding by date-gardens, the town is watered from the Khālīṣ canal, an important offtake from the Khalis canal, an important offtake from the Diyala, right bank. Though still largely old fashioned, and never very healthy, the town now contains a number of new streets and buildings, especially on the north side. The modern services and communications were greatly developed during the last 30 years. Though nowhere mentioned in mediaeval writers, because then of little importance, the town is certainly of some antiquity, and was watered from the Nahrawān-Diyālā canal also for amongst themselves.

AL-DALW [see Nūḍūm].

DĀM, [see sīkka].

DĀMĀD, a Persian word meaning son-in-law, used as a title by sons-in-law of the Ottoman Sultans. Under the early Sultans, princesses (sultān) of the reigning house were occasionally given in marriage to the vassal princes of Asia Minor, for example, to the Karamānghūl, and even to the vezirs and generals of the sovereign; the case of the saint Amīr Ṣūltān of Bursa, who married a daughter of Bāyazīd I, is, however, unique not only for that but also for later periods. We afterwards find Grand Vezirs, Kapudan Paḫās, Ağās of Janissaries, Bostāndjābāhs and other high officials as sons-in-law of the Sultan; the best known are Ibrāhīm Paḫā, the favourite of Sulaymān I, Rustem Paḫā (husband of Mīhrīmāh), Soksul Mehemmed Paḫā (husband of Asmākhan), Ibrāhīm Paḫā (son-in-law of Mehemmed III), Ibrāhīm Paḫā under Ahmed III etc. (cf. Hammer, GÖR, index s.v. Sulṭānī). The title dāmād was applied to some of them both by their contemporaries and in historical writings and remained current to the end of the empire (e.g., Dāmād Mәhmūd Paḫā, Dāmād Ferid Paḫā [q.v. etc.]).

The marriage ceremonies were celebrated with great splendour and are minutely described in the Ottoman chronicles as well as by western travellers (cf. Hammer, GÖR, index s.v. Hochzeit und Vermählung); the dowry had been fixed by Sulaymān I at 100,000 ducats and the appanage (khaṣās) brought in 1000-1500 aspers daily. (Venetian Relazione of 1608, in Barozzi-Berchet, 72; Hammer, viii, 211); in addition a large palace was usually bestowed on the princesses. Till the time of Sulaymān I the Dāmāds were usually sent into the provinces as governors to prevent them having any personal influence on the affairs of the Sublime Porte, (Koĉbeâ, ed. of 1928, 94, 97). Etiquette compelled the Damad to put away the wives he already had and to take no further wives (cf. the Venetian Relazione already quoted, 103 ff. and Hammer, iv, 103); he became the slave of his wife and this relationship finds expression in the form of address used between the spouses (cf. the above reports, 72, 104; de la Mottraye, Voyages, 338 ff.; Hammer, Staatsverfassung, i, 476-84 = GÖR, viii, 211-13; C. White, Three Years in Constantinople, iii, 180 ff.). The statement that sons born of such marriages were done away with at birth (Eton, Survey of the Turkish Empire*, 101; Hammer, GÖR, iv, 463), may be disproved (cf. Djeuwed, vi, 196 ff., Relazioni loc. cit., 181, 372); only in earlier times they were debarred from all public offices (Relazioni 181).

Bibl. in addition to that given in the article: Ismail Hakki Uzuncarsih, Osmaniş Dersлетинên Saray Teşkilâtî, Ankara 1945; A. D. Alderson, The Structure of the Ottoman Dynasty, Oxford 1956, 97-8. On the use of the title Kuregen by the sons-in-law of Mongol rulers see Djuwayni-Boyle, 174 n. 11; Mostaert and Cleaves, Treas Documents Mongols, HJAS, 1852, 474; and article GÖRŞAN.

(J. H. Mordtmann*)

AL-DAMĀD, "son-in-law", an honorific title given to fils musulmān princes, among them Muḥammad al-Ḥusaynī al-ʿAstārabādī, called also al-Muṣallīm al-Thāliḥ, the "third teacher" in philo-
sophy after al-Farabi. This title properly belongs to his father who was the son-in-law of the famous Shi'i theologian 'Ali b. al-Husayn b. 'Abd al-‘Alî al-Karaki, called al-Muhallabī al-Dhâlî (Brockelmann, S II, 574), but it was extended to the son, who is more correctly called Damâd or Ibn al-Damâd.

A noted divine, he is, however, chiefly esteemed for his attainments as a scholastic theologian (muqallid), and two of his numerous works, al-Uṣūf al-Mubin (also called by the author, at four places in the text, al-Sîrîd al-Mustâhîm) and al-Sâbî al-Sabîn, are still prescribed, in spite of their being outrightly condemned by the Shâfi’îs. Specimens of his poetry are given in the Râyâ al-Arîfîn and the Bayât al-Hikâht al-Ufâr al-Mubîn, which has been the subject of numerous commentaries. Mawlawi Fadl-i Kâbir b. (A. S. BAZMEH NASARIO)

DAMAD FERD PASHA, one of the last Grand Vizirs of the Ottoman Empire. Mehmed Ferd, son of Hasan Izzet, a member of the Council of State (Shârâ-yi Dewlet), was born in Istanbul in 1853, served in minor diplomatic posts, and, upon his marriage (1886) to ‘Abd al-Hamîd II’s sister Medîha, was made member of the Council of State and senator, and given the rank of Pâsha. In 1917 he became co-founder and chairman of the Hürriyet we îltifât dâbî ile (see), After the Ottoman defeat he served his brother-in-law Mehmed VI as Grand Vizir (4 March to 2 October 1919 and 5 April to 21 October 1920). His policy of accommodation to the victor powers in hopes of winning lenient terms proved as futile as his attempts to suppress the national resistance movement in Anatolia under Kemal (Atatürk). Nationalist pressure forced his resignation in October 1919. Restored to office after
the reinforced Allied occupation of Istanbul, his
government was responsible for issuing the well-
known anti-nationalist fetwds (signed by the šayḫ al-
DjebraiI). The DjebraiI and his staff were accused to the
army against the nationalists in Anatolia. On
10 August 1920 his cabinet signed the peace treaty of
Sèvres, but the growing strength of the national-
ists soon caused his final dismissal. In September 1922 he left Istanbul for Nice, where he died on 6 October 1923.

(D. A. Rustow)

**DAMAN (A.),** in Islamic law, the civil liability in the widest meaning of the term, whether it arises from the non-performance of a contract or from
**DAMANHt)R,** a town derived from the ancient
pagarchy suppressed in 755/1354 and the relic burnt.

According to Sonnini the town was “large but
form of a
hasîd, literally “transgression”).

Prominent particular cases are the liability for the loss of an object sold before the buyer has taken
possession (dâman al-âbâdî), for eviction
(dâman al-mabi al-adjir, d. al-sunnd).

In a wider sense, dâman is used of the risk or responsibility that one bears with
an act or not. Questions of

la responsabilite' dtlictuelle en droit musulman,
Paris 1926; F. M. Goadby, in
*Revue Algerienne,* 1-24, 51-75. (ED.)

**DAMANHÎR,** a name derived from the ancient
Egyptian Timnîrèh, the city of Horus. It is not surprising that a number of cities of this name are to be found, almost all in the Nile Delta.

I. Damânîr al-Shâhid, Damânîr “of the
Martyrs”, one of the northern suburbs of Cairo. This
name was also called Shubrâ ‘l-Khayma or Shubrâ ‘l-Khiyâm,
Shubrâ “of the tents”.

There was once a Christian reliquary in this place containing the bones of a martyr. On 8th Bashâ’ar (3rd May) each year, the town celebrated a holiday
while the people accompanied this casket in pro-
cession to the Nile, into which it was plunged in
the hope of promoting the success of the river’s annual flood.

There was no doubt excessive drinking on this
day and the feast was forbidden in 702/1302. It
was re-established in 738/1338 but was definitely
suppressed in 755/1354 and the relic burnt.

II. Damânîr, the capital of the province of Buhayra,
the ancient Hermopolis Parva of the Byzantine era.

Since the name is ancient it can hardly be called an
Islamic creation, but nothing is heard of it in the
chronicles until the time of the Arab conquest. The
important locality is Karatsa, the only name known
to the ancient authors, who mention it as the capital of a pagarchy (hâra).

The oldest reference is to be found in Ibn Mammâti,
who calls it Damânîr al-Wâhâb. Ibn Djubayr and
Yâkût passed through it. To them it was an urban
centre of medium size surrounded by a wall. Ibn
Mammâti mentions a canal named after the city,
the Bahar Damânîr. The sultan Barkûk restored its
fortifications, in order better to resist the in-
cursions of the Bedouin; furthermore the town had
suffered greatly in the earthquake of 702/1302.

Damânîr increased in importance and according to
Ibn Dukmâk, it possessed a Friday mosque, schools,
caravanserais and covered markets. It was,
then, not only the capital of the province of Buhayra,
but also the residence of a senior Mamlûk officer
commanding the whole of the Delta. The post road,
skirting the desert from Cairo to Alexandria, had
a stage post there and there was also a carrier
pigeoncote.

According to Sonnini the town was “large but
badly built, almost all the houses being made either of mud or of bad quality brick. It is the centre of the trade in cotton, which is gathered in the vast and beautiful plains surrounding it.

On 30th April, 1799, a French company was massacred there by the troops of Mahdi Ahmadi; the reprisals were terrible.

Damannah is now a heavily populated town. The railway between Cairo and Alexandria has a station there, and it is the centre of a network of secondary railway routes.

Other places of the same name are mentioned in geographical lists but not described.

**DAMASCUS** [see *DAMASCUS*].

**DAMAWAND**, the highest point in the mountains on the borders of Northern Persia (cf. *Alburz*), somewhere below 36° N. lat. and about 50 miles north-east of Tehran. According to de Morgan it rises out of the plateau of Râhne to a height of 15,000 feet above it. The various estimates of its height differ: Thomson estimates it at 21,000 feet (certainly too high), de Morgan at 20,260, Hedin at 18,187, and in the last edition of Stieler's *Erdkunde*, it is given as 18,830 feet. Its internal activity of the central volcano had not then just below the summit of the mountain, where it is collected in the summer months by the people of Ask and Damawand and sold by them. Around the foot of Damawand rise numerous mineral springs, of which two in particular—one in the little town of Ask, the other somewhat further north on the Herâz (Herhaz)—enjoy a great reputation as baths. The majority deposit considerable sediment; for example Ask is built on such alluvium (Polak, *op. cit.*, ii, 229). The apricots grown in the valleys of Damawand are highly esteemed in Persia. (Polak, *op. cit.*, ii, 146).

Like the other giants of Eastern Asia, such as Ararat, Damawand was long regarded as inaccessible; this opinion, which was widely held, is found repeatedly in the Arab geographers, although one successful ascent is mentioned (see *'Ali b. Râzîn's statement in Kazwîn*, 159). Oliver (1798) was the first European traveller to visit the mountain, without however being able to reach the summit. The first complete climb was by W. Taylor Thomson in 1837; he was followed in 1843 by the botanist Th. Kotschy and in 1842 by the Austrian engineer Czarnotta. H. Brugsch and Baron Minutoli seem also to have reached the summit in 1860; (see Petermann's *Geographische Mitteilungen*, 1866, 437). In more recent years a number of further successful ascents have been undertaken by Napier and others, usually from Ask; cf. particularly Sven Hedin, *Der Damawand*, v, 436; *Der Gesellsch. f. Erdkunde*, Berlin, xix, 304-22.

In the ancient history of Persia Damawand is the scene of the legendary history of the Pêshêhûd and Kayân rulers. Even at the present day the people of Mâzandaran point out the different places which were the scenes of the wonderful deeds of Djamshîd, Faridûn, Sâm, Zâl, Rustam and other heroes immortalized in the *Shahname*. Damawand is also the abode of the fabulous bird Simurgh. From ancient times the prison of the cruel king Dabâkk (O. Iran. Dahâka, also Bêwarasp) has been located here. Faridûn (O. Iran. Orâetâna) is traditionally said to have shut him up in a cavern on the summit of this mountain, and here, in the belief of the local populace, the imprisoned tyrant lives to this day; the dull sounds which are periodically heard inside the mountain are thought to be his groans, and the vapour and smoke which escape from fissures and springs on the mountain-face are his breath. Obviously the volcanic properties of Damawand have been responsible for these legends. According to another story the demon Sakhr, imprisoned by Solomon, is also locked in Damawand. As the highest mountain in Persia, Damawand is thought by the Persians to be that on which Noah's Ark rested. On the wealth of Damawand legends cf. Yâkût, ii, 606, 610; Kazwîn; Melgunof, 22 ff.; Grünbaum in ZDMG, xxxi, 328-9.

Formerly on the slopes and in the valleys of Damawand there were many fortified places. Nowadays the most important place is the small town called Damawand after the mountain and situated on its south-western spur (according to de Morgan, 6425 feet above sea level). It is said to be very ancient, and according to Mustawfî was formerly called Pishâyân. The beautiful valley of Damawand, watered by two rivers and including ten villages as well as the town of Damawand, no longer belongs to Mâzandaran but to *'Irâq *'Adîjami. Because of its elevated situation the climate is very pleasant; for this reason the *Shâhs* of Persia used to delight in spending the summer in its valleys. The ultra-ashîrî sect of the *'Ali Ilahi
The name of Damawand appears in Persian and Arabic sources in a number of different forms: from the 3rd/9th century. Attached to this name, generally, contain discussions of the following items: i) philological aspects of the animal's name; ii) the anima names which are often at great length, all that pertains to the animals mentioned in any way whatsoever. In addition, he occasionally treated, but also a store house of Muslim folklore, described in prayers and vigils and performed the pilgrimage he stayed in Cairo until his death. He was buried in the Sufi graveyard beside the Djami of Al-Zahir, the madrasa of Ibn al-Bakari, the Kubba of Baybars II, etc., where he held lectures and delivered sermons and exhortations, apportioning his time in turn to the different institutions. A member of the Sufi community established in the Kānḳāh Saḥaḥīyya (previously known as Dār Sā'īd al-Su'ā'ādā), the maqṣūr al-Mubarak, iv, 102, Makrizī, Khiṣṭ, Būlāk 1270, ii, 415), he was celebrated for his ascetic life and credited with performing miracles. Although as a youth inclined to gluttony, he later made it a habit to fast almost continually, indulged in prayers and vigils and performed the pilgrimage six times between the years 762-799/1361-97. During his stay in Mecca and Medina he completed his education with several local scholars, held lectures and gave fatwās, and married twice. After his last pilgrimage he stayed in Cairo until his death. He was buried in the Sufi graveyard beside the Djami of Sā'īd al-Su'ā'ādā (cf. Al-Mubarak, iv, 102 ff.). Al-Damīrī's fame as an author rests on his Hayāt al-Hayāwān, a para-zoological encyclopedia, through which he became known both in the east and the west. He wrote it, as stated in the preface, not because of a natural disposition for such an undertaking, but in order to correct false notions about animals which were entertained even by the learned of his time. The work, completed in draft in 773/1371-2, is not only a compendium of Arabic zoology but also a store house of Muslim folklore, described in part in the researches of J. de Somogyi. The author did not restrict himself to the purely zoological aspect of his subject matter but also treated, often at great length, all that pertains to the animals mentioned in any way whatsoever. In addition, he made frequent digressions into other fields, the most remarkable of which is a survey of the history of the Caliphs (s.v. iswar), which occupies about the thirteenth part of the whole work.

The articles, arranged alphabetically according to the first letters—not the radicals—of the animal's name, generally contain discussions of the following items: i) philological aspects of the animal's name;
2) description of the animal and its habits; 3) mention of the animal in the literature; 5) proverbs bearing upon it; 6) medicinal and other properties (khawaṣṣ) of its different parts; 7) its meaning when occurring in dreams. The work contains 1069 articles but treats of a much smaller number of animals, real and imaginary (among them the Burād [q.v.]), since one and the same animal is frequently entered under different names. Being no professional naturalist, the author often entertained superstitious notions about nature with little attempt at criticism. He merely transmitted and rearranged traditional knowledge basing himself on hundreds of sources which have been analysed, though not quite satisfactorily, by J. de Somogyi. There are three recensions of the work—a long, a short and an intermediate one—of which the long one is available in at least 13 Oriental impressions, of which, however, he entitled [q.v.], extends only to the article (about three quarters of the whole) and is not quite satisfactory from the philological point of view.

Of al-Damiri's other writings only three are extant (see Brockelmann). His last work was a five volume commentary on the Sunan of Ibn Mādjda [q.v.], entitled al-Dībādīja, of which, however, he was not able to finish a clean copy before he died.

DAMNAT (Demnate, Demnat), a small Berber town situated on the edge of the Great Atlas in Morocco, 120 km. east of Marrakush, at an altitude of 960 m., on a small hill overlooking the fertile valley (barley, beans) of the Oued Tassawt, the slopes of which are covered with olive-trees and vines. The town is surrounded by a rectangular wall and includes a mollaah (Jewish quarter); in fact almost half the population, which stands at about 4,000, consists of Jews, whose numbers however are diminishing regularly. Local trade on a large scale in oil, leather and livestock is carried on at the market which is held on Sundays; in addition, tribes from the Atlas and Sahara used to bring their products (hides, wool, dates), bartering them for such manufactured goods as they needed. Demnat thus appears to have owed part of its prosperity to its situation on the route leading from Marrakush to Meknes and Fez in one direction, and to the Draa (Dar'a) and the Tafilalt in the other; but, without exception, the Arab geographers made no mention of it although its foundation certainly dates from ancient times. Leo Africanus appears to be the first to mention it, though he does not give the name of the town (according to a suggestion put forward by G. S. Colin, Adimmei which appears in Épaulard's trans. on p. 115 may be a mistake for Adimnatt) and only mentions a place named El Madina (trans. Épaulard, 130-1), the description of which does in fact correspond closely with that of Demnatt. Leo stressed the importance of the Jewish community and of the local leather-work; he also noted the lack of security on the roads, every merchant finding it necessary to maintain "an arquebusier or a crossbowman." For the rest, the history of the town is little more than a series of disturbances caused either by jealousy of the Jewish population's wealth, or by dynastic rivalries in which the town was the stake. During the 19th century Demnatt began to be of concern to the Western Powers who were obliged to intervene to protect the Jews from persecution by the authorities; as a result, on 17 Sha'bân 1304/11 May 1887, sultan Mawlay Hasan resolved to give them a separate mollaah, which they still occupy and which formed the subject of a monograph by F. Flamand, Un Mellah en pays berbère: Demnate (IHEM, Notes et Documents, x), Paris 1913 (see further, idem, Les communautés israélites au Sud-Morocain, Casablanca 1959). Some years earlier, however, Ch. de Foucauld who stayed at Demnatt on the 6th and 7th October 1883 was able to note (Reconnaissance du Maroc, Paris 1888, 77-8) that the Jews were treated with exceptional generosity by the Muslims with whom they lived "pellemeli." The two elements of the local population in fact lived together on good terms with each other; their long-standing association had given rise to affinities in practical matters, particularly in regard to the veneration of saints, even though one could not always tell if they were Muslim or Jewish or in fact if they had ever existed (see L. Voinot, Pêlerinages judéo-musulmans au Maroc (IHEM, Notes et Documents, iv), Paris 1945, 25 sqq., 60-1); 4 km. south-east of Demnatt there still exists a grotto known by the name of Imi n-Hift (opening of the grotto) where Jews and Muslims celebrate a pagan ritual at a miraculous spring (L. Voinot, op. cit., 27-8; E. Douxtt, Missions au Maroc: En tribu, Paris 1914, 216-17).

Seven years before the capture of Demnatt by Col. Mangin (1912), Said Boulifa stayed there and made a study of the Berber dialect of the Ahl Demnatt (Textes Berb., in dial. de l'Atlas marocain (Pub. École des Lettres d'Alger, [XXVI], Paris 1908-9); as a result the local dialects, which are important by reason of their situation at the edge of the two large groups in the South (taslih-bisit) and Centre (tamasghit), have been the subject of research carried out by E. Laoust (Étude sur le dialecte berbère des Nija, Paris 1918, and Mots et Choses Berbères—an ethnographical work—Paris 1920).

Leo Africanus noted that Demnatt possessed a number of legal experts, but the true Damnatt rarely figure in Arabic literature; however, we may note 'Ali b. Sulayman al-Dammatt, author of a commentary on the Sunan of Abî Dâwûd entitled Darajat mikbat al-'uwdî ila Sunan Abî Dâwûd, published in Cairo in 1928.

Bibliography: given in the article.

(Ch. Pellat)

AL-DAMURDASHI, 'Ahmad, Egyptian historian of the 12th/13th century. Nothing is known of his life beyond the fact that he held the post of hâkhûd of the 'Azâbân regiment in Cairo, but he may have been a relative of the family of Hasan Efendi al-Damurdashi, who flourished in the early 12th/17th century, and about whose doings he is well informed). His chronicle, al-Durra al-musûma fi aqâyîd al-hînâna, extends from the period 1099-1169/1688-1755. It reveals unfamiliarity with Arabic, and the sense is sometimes garbled or obscure. Nevertheless it is valuable, both as a detailed record of events in Cairo, and as perhaps the sole extant chronicle of Ottoman Egypt composed by a member of the military élite. There are considerable differences in phraseology, and even in the data, between the British Museum and Bodleian manuscripts: the former is unique among known copies in giving the name of the author. One recension of al-Durra seems to have been used as a source by al-Djabarti for his 'Adja'dî a-l-dâhk; for example, Djabarti's second legend of the origin of the Dhu-'l-Fâkriyya and Kâsimiya factions, and his list of the sandja'h boys at the beginning of the 11th century H. are closely paralleled in al-Durra: (Djabarti, i, 23-44; BM. Or. 1073, 5a-6b; Bodl. MS. Bruce 43, 2a-3a). (P. M. Holt)

DANAâm [see SIKKA].

DANANKIL, DANKILA [see DANANKIL].

DANCE [see RAKE].

AL-DAâmNî, 'Abû 'Amr 'Uthmân b. Sa'îd b. 'Umar al-Umawi, Mâlikî lawyer and above all, "reader" of the Kûrân, born at Cordova in 371/981. After having made his pilgrimage to Mecca and spent some time in Cairo between 397/1006 and 399/1008, he returned to his birthplace but was soon forced to flee, first to Almeria and finally to Denia (Dâniya, whence his nisba), where he settled down and died in 444/1053.

Among more than 120 works which he wrote and enumerated himself in an urjûqâ, only about ten are known (see Brockelmann, I, 407, S. 1, 719); two of them deal with questions of grammar, and the others with matters connected with the "readings," a science in which Abû 'Amr al-Dânî had become famous. His most celebrated works are the K. al-Muđâlî fî Ma'rîjat Rasm Maşûkî al-Amsâr (see S. de Sacy, Notices et Extraits, viii, 290) and al-Tâysîr fî 'l-Kirdâî al-Sâbî (ed. O. Pretzl, Istanbul
1930), which was the one most studied according to the evidence of Ibn Khaldun (Prolegomenes, ii, 456); al-Muhkam fi Naṣīḥ al-Maṣāḥīḥ has recently been edited in Damascus (1939/1960) by 'Uzzāt Ḥasan.

Dānishghā (see Dānimā').

Dānishmendīds, a Turcoman dynasty which reigned in northern Cappadocia from the last quarter of the 5th/11th century until 573/1178. The origins and first conquests of its founder, Ṭāhir Dānishmend, are obscure. Appearing in Cappadocia during the year of anarchy which followed the death, in 781/1085, of the Seljukīd Sulaymān b. Kutlumuş, he became involved in the events of the First Crusade. When historians became interested in him they resorted to legends or imagination to fill the gaps in their knowledge. But it was above all the epic romance of which he was the hero that gave rise to an imbroglio of historical facts which is difficult to unravel. The oral epic tradition about Dānishmend was put into writing for the first time in 643/1245 by Mawlānā Ibn ʿAlāʾ; this first romance, now lost, was rewritten in 761/1360 by ʿArīf ʿAlī. This romance which attributes to Dānishmend a legendary relationship with the famous epic heroes Abū Muslim and Sayyid Bāṭṭāl and which is conceived as a sequel to the Romance of Sayyid Bāṭṭāl, very soon gave rise to error through the fault of certain Ottoman historiographers who could not distinguish between historical truth and legend. The chief culprits were the historians of the 19th/6th century, ʿIlī and Dīnābāḏ who, by treating the romance as a historical document, mingled legendary elements with history in their works. These errors which were to be repeated by historians in succeeding centuries, Karamān, Kabīr Čelebi, Mūsā-īdīn-bāḏī, and others have been reproduced in the works of orientalists who made use of these sources. Those scholars who attempted to determine which parts of the story were, in their view, in disagreement with historical data often succeeded only in further confusing the facts. When Dānishmend appears in the historians' account of the First Crusade he is already master of Sebaste, the Iris Valley with Eudoxias (Tokat), Comana, Amasya, Neocaesarea where he resided, and Gangra; he controlled the route from Ankara to Caesarea, the towns of the Pontic coast paid him tribute, and his foraging parties laid waste the shores of the Black Sea, making incursions into Georgia and Armenia. Later he was to make a further conquest, Melitene, and it is in connexion with Kūlāḏī Arslan b. Sulaymān's expedition against this town in 490/1097 that Dānishmend is first mentioned in history. The sultan having laid siege to Melitene which was defended by the Armenian governor Gabriel, Dānishmend appeared on the scene and made peace between the opposing leaders. These events were interrupted by the capture of Nicaea by the Crusaders in 490/1097. In the summer of the same year Dānishmend, together with the other Turkish amirs, took part in the harassing attacks to which the Crusaders were to be subjected throughout their march across Anatolia. But soon afterwards an important occurrence was to bring him into prominence: in 494/1098, Ramazān b. ʿAlī, one of the most eminent of the Crusaders' leaders, Bohemund of Antioch, when going to the help of Melitene which was besieged by Dānishmend, fell into the hands of the amir who imprisoned him in the fortress of Neocaesarea. The following year the Franco-Lombard Crusade coming to the rescue of Bohemund took the Cappadocia route and was defeated by Dānishmend. In September of that year the amir took part in the massacre of the Crusade's last army, made up of contingents from Aquitaine and Bavaria, which was wiped out near Heraclea in Cappadocia. A year later, Dānishmend entered Melitene after a siege lasting for three years and, by his generosity, won the praise of a population made up of different races and creeds. In Şaḥbān 496/May 1103 the amir freed Bohemund with whom he had concluded an alliance against their common enemies, Byzantine and Seljuk. But the death of Dānishmend which took place in the year 497/1104 prevented Bohemund from reaping the benefits of this alliance and allowed Kūlāḏī Arslan to take part of his rival's territory, as well as the town of Melitene. Dānishmend's eldest son, Amir Ghażal, succeeded his father. Intervening in the dynamic struggles which divided the sons of Kūlāḏī Arslan, he was defeated in 510/1112 by his son-in-law Masʿūd. In 510/1112 he defeated the amir of Erzindan, Ibn Mengükjek, and his ally the duke of Trebizond; but he set free his prisoner Ibn Mengükjek who was also his son-in-law, an act which was a source of dissension between the allies. In 518/1123, on the death of Balak, Amir Ghażal recaptured Melitene. Intervening in the war then being waged between Masʿūd and his brother Malik 'Arab, prince of Ankara and Kašāmunu, he defeated the latter and in 521/1127 captured Caesarea and Ankara from him. 'Arab appealed for help to Byzantium, but Amir Ghażal also took Gangra and Kašāmunu and imposed his authority over Cappadocia. In 523/1129, on the death of the Armenian prince Thoros, Amir Ghażal intervened in Cilicia, in the following year defeated Bohemund II of Antioch, brought the Armenian prince Leon into subjection and ravaged the Count of Edessa's lands. He then had to turn against John Comnenus who in 527/1132 took Kašāmunu from him. Amir Ghażal who had given refuge to Isaac Comnenus, then revolted against his brother, and recaptured the town in the following year. In reward for his victories over the Christians the caliph al-Mustarshid and the sultan Šanḏar granted him the title of Malik, but when the envoys reached Melitene they found the amir on his deathbed and it was his son Muḥammad who was invested in his place, in 528/1134. John Comnenus at once resumed hostilities and, in 529/1135, recaptured Kašāmunu and Gangra, but these two towns fell once more into the hands of the Turks as soon as the Emperor had withdrawn. The reign of Malik Muḥammad is marked by a series of unsuccessful attempts by John Comnenus, in both Cilicia and the pontic region at different times, to recapture the strongholds which had been taken by the Dānishmendids, as well as by the amir's inroads into the territories of the count of Marash. In 536/1142, Malik Muḥammad died at Caesarea which he had rebuilt and where he had resided. It was his brother Yaghībāhān, governor of Sebastea, who proclaimed
himself amīr at the expense of his nephew Dhu l'-Nūn, and who married the dead man's widow. By thus usurping power, the new amīr caused the father-in-law of Mas'ūd and subsequently, with his brother-in-law Killiđ Arslan II. The emperor Manuel who had at first allied himself with the Saldjūkids as a means of preventing the Dānishmendids' incursions into Byzantine territory, in 553/1158 took Yaghbhāsān's side against Killiđ Arslan II and imposed his authority over Dhu l'-Nūn. The following year marks the opening of hostilities between Killiđ Arslan and Manuel, while at the same time war flared up between the rival dynasties as a result of Yaghbhāsān's abduction of Killiđ Arslan's fiancée, the daughter of the Śalṭukid amīr of Erzūrm, who was married to Dhu l'-Nūn. But the death of Yaghbhāsān in 559/1164 gave rise to dynastic quarrels which provided Killiđ Arslan with his opportunity to destroy the amīrate. Yaghbhāsān's widow married Dhu l'-Nūn's nephew Ismā'īl b. Killiđ Arslan, who then proclaimed him amīr. In order to protect the interests of Dhu l'-Nūn, against whom he was afterwards to turn, Killiđ Arslan invaded the Dānishmendids' territories. In 567/1172, as a result of a palace revolution during which Ismā'īl and his wife perished, Dhu l'-Nūn was called to Sebastea and proclaimed amīr. He was at once attacked by Killiđ Arslan, and appealed for help to his father-in-law Nūr al-Dīn, aābek of Damascus, whose intervention compelled Killiđ Arslan to hand back the territories he had taken from Dhu l'-Nūn. Nūr al-Dīn withdrew, leaving a relief garrison in Sebastea. But Nūr al-Dīn died in 569/1174 and Killiđ Arslan at once seized Sebastea, the Iris valley with Tokat and Comana, then Amasya, and proceeded to lay siege to Nāc, the eastern district of the province of Alicante, the most southerly of the three present-day provinces which were defeated, the Saldjūkids took possession of Nāc, and Dhu l'-Nūn's Dukrūr was put to death by poison on Killiđ Arslan's orders in 570/1175. In the surviving Melitene branch discord reigned among the three sons of Dhu l'-Kurnnayn b. ʿAyn ad-Dawla, who had died in 557/1164. The eldest, Nāṣr al-Dīn Muḥammad, was dethroned in 567/1170 in favour of his brother Fakhr ad-Dīn Kāsīn; but the latter, who was barely fifteen years old, was killed in a riding accident on his wedding day; and it was from the third brother, Afridūn, that Nasr al-Dīn Muhammad took back the town in 570/1175 and reigned for three years under Killiđ Arslan's suzerainty. But in 573/1176 the Saldjūkids occupied Melitene, and so came the end of the Dānishmendids. According to Ibn Bībī, Yaghbhāsān's three sons Muṣaffar al-Dīn Mahmūd, Zahrīr ad-Dīn Illī and Badr al-Dīn Yūsuf entered the Saldjūkids' service and helped Ghiyāṭ al-Dīn Mugeto, at first with the assistance of the learned Muṣaffar ad-Dīn Kaybghūraw I to regain his throne; in gratitude the monarch rewarded them by giving them important positions and restoring some of their possessions (cf. al-ʿAwdmir al-ʿAldHyye, Ankara 1956, 76 ff.).

Bibliography: Matthew of Edessa, Chronicle, trans. E. Dulaireur, Paris 1858; Michael the Syrian, Chronicle, trans. J. B. Chabot, iii; Anna Comnena, ed. B. Cato achieved a victory over the Spanish in the neighbourhood of this town before 195. The liberator of Spain, Sertorius, found his last point of support there, as well as a powerful naval base; according to the most likely evidence it was there that he was assassinated in 73. Caesar punished the town with Pompey (Danismendiler, in Atlas, II, 1956, 89-103; 1. Mėlikoff, La Geste de Melikh Danismend, i, Paris 1960 (see bibliography). (I. Mėlikoff) 

DANISHMENDIDS — DANIYA

DANIYA, Span. Denia, capitol of the north-eastern district of the province of Alicante, the most

southerly of the three present-day provinces which were occupied Melitene, and so came the end of the Dānishmendids. According to Ibn Bībī, Yaghbhāsān's three sons Muṣaffar al-Dīn Mahmūd, Zahrīr ad-Dīn Illī and Badr al-Dīn Yūsuf entered the Saldjūkids' service and helped Ghiyāṭ al-Dīn Mugeto, at first with the assistance of the learned Muṣaffar ad-Dīn Kaybghūraw I to regain his throne; in gratitude the monarch rewarded them by giving them important positions and restoring some of their possessions (cf. al-ʿAwdmir al-ʿAldHyye, Ankara 1956, 76 ff.).

Cato achieved a victory over the Spanish in the neighbourhood of this town before 195. The liberator of Spain, Sertorius, found his last point of support there, as well as a powerful naval base; according to the most likely evidence it was there that he was assassinated in 73. Caesar punished the town with Pompey (Danismendiler, in Atlas, II, 1956, 89-103; 1. Mėlikoff, La Geste de Melikh Danismend, i, Paris 1960 (see bibliography). (I. Mėlikoff)
was a distinguished commentator on the Kur'an. Denia was at that time one of the most important cities of the Levante and the country round it, where the fields were cultivated almost without interruption throughout the year, was very rich. The semi-insular kingdom of Denia played a very important part also as a naval base and in its dockyard was constructed the greater part of the fleet which Muhammad used for piracy and with which, after he had seized the Balearic Islands, he undertook his celebrated expedition to Sardinia (406/1015). His son, *Ali, called Ibn al-Athari, was taken prisoner by the Germans at the same time that his father was put to flight and pursued by the Christian coalition which retook the island. Ransomed after several years of captivity, he succeeded his father in 436/1044, and reigned for 32 years until 468/1076. Born of a Christian mother and brought up in captivity, he became a Muslim, but possessed none of his father's qualities. Dissolute, miserly and a coward, he confined himself to warring all he could out of his subjects, and his only undertaking consisted of sending a large ship full of food in 446 or 447 (1054-55) to Egypt, where famine was raging; it came back full of money and jewels. When his brother-in-law, al-Mukta'dar, wanted to enlarge his frontiers on the Denia side, *Ali was incapable of resisting him, and his subjects abandoned him, delivering the town up to al-Mukta'dar who sent *Ali to Saragossa where he died in 474/1081-2. Al-Mundhir succeeded his father, al-Mukta'dar, in the kingdom of Denia, and his son, Sulaymân, continued to rule under the suzerainty of the Banû Batr until 484/1091. In the same year the Moravians had just taken Almería, which they seized along with Murcia, Játiva and Denia, all of which fell later into power of the Almohads. In the spring of 599/1203, these last concentrated in the harbour of Denia a powerful squadron and landing party, who, on their way to attack the Banû Ghâniya [g.v.] at Majorca, put in at Ibiza and seized Palma in September of the same year. Denia was at that time governed by Muhammed b. Ishaq, who had succeeded his father Ishaq b. Ghâniya on the throne of Majorca but had been deposed by his brothers because of his adhesion to the qanûr [q.v.]. He was recommended him strongly in his will. In 641/1244, Denia was finally taken from the Muslims by James I of Aragon (Don Jaime el Conquistador), and one of his captains, the German Carroz, undertook the redivision of its lands. In 726/1325, it was given to the Infante, Don Pedro, whose descendants, the royal dukes of Gandia, ruled the County from 1356 up to the time that the Catholic Kings made it a Marquisate. In 1560, it lost most of its population through the expulsion of the industrious Moors by Philip III, and from that time on was of no importance. However, in the War of the Spanish Succession, Denia, whose harbour was fortified, fought stubbornly on the side of the Archduke, was besieged three times by Philip V, and taken in 1708. In 1812-3 it was occupied by the French.

The most famous Arab scholar of Denia is the great commentator on the Kur'an, al-Dâni [q.v.]. Abu 'Amr Uthmân b. Sa'îd.

Apocalyptic revelations are attributed to Daniel the Elder, it being suggested that a book recording such predictions was found in the coffin supposed to contain the remains of Dâniyâl (whoever he might be) which was brought to light at the time of the Muslim conquest of Tustar, and buried again with the body at the command of Caliph 'Umâr; according to a legend told by al-Birûnî, Dâniyâl acquired his knowledge in the Treasure Cave; Muslim sources moreover hand down, besides a garbled version of chapter xi, some authentic quotations from the Book of Daniel. Perhaps it is this Daniel whom the K. al-Tâdînân (70) places on the same footing as Lukmân [g.v.] and Ibn 'Kar- nayn [g.v.]; three characters considered by some as prophets not apostles or simply as just but not inspired men.

Other traditions treat as two characters the Daniel of the destruction of the first Temple in Jerusalem and the Christian Babylon: an elder Daniel and a son of the same name; the former, son of the Judaean king Jehoiakim, the latter becoming an uncle to Cyrus by marriage (a garbled reference to the marriage of Ahasuerus and the Jewess Esther; moreover, another tradition has Ahasuerus converted to Judaism by Mordecai and taught by Daniel and his three companions).

Muslim tradition has retained, somewhat distorted, episodes related in the Book of Daniel: the presence of Daniel and his companions in the court of Buhlgh- Naṣṣar [g.v.];—Nebuchadnezzar; Nebuchadnezzar's dreams; the friction between Daniel and his detractors (here presented as Magi) and his miraculous delivery from the lions' den; Belshazzar's feast and the deciphering of the mysterious writing. Nebuchadnezzer's being driven temporarily to dwell with the beasts of the field is also to be found here and al-Tha'lâbî is even able to narrate the king's death in a version forming one of the numerous variants of the folk theme used by Schiller in his ballad *Der Gang nach dem Eisenhammer* (see Stith-Thompson, *Myth-Index*, K. 1612, iv, 414). The character of Daniel is also introduced in the framework of stories which in the Bible centre round Ezra and Nehemiah: Ahasuerus did not allow Daniel and his three companions to return to the Holy Land, but
he permitted Daniel, a great judge and a viceroy throughout his reign, to take from the royal treasure all that Nebuchadnezzar had taken from Jerusalem and restore it to the Jews.

DĀNĪYĀL, called Sultan Dānīyāl in the histories, the youngest and favourite son of the Mughal emperor Akbar, born Adjmer 2 Dīnārādī 979/22 September 1571. In 1608/19 he was appointed military governor of the Deccan, and after his conquest of the city of Ahmadnagar (1009/1601) he was honoured by Akbar and given the province of Khāndēgh, fancifully named Dānīyāl after him. He is described as well-built, good-looking, fond of horses, and skillful in the composition of Hindūstānī poems. He figures in Abu ‘l-Fadl’s lists of the grandees of Khandesh, fancifully named Dandesh after him. He died of delirium tremens at Burhanpur on 9 Dhu ‘l-Hijja 1013/28 April 1605.

Bibliography: see AKBAR.

DANKALI, plural Danakil, a tribe occupying the western Red Sea coast from the neighbourhood of Zālā (39° 15' E, 15° 10' N) to French Somaliland, and spreading inland over territory of extreme heat and desolation to the foot of the main escarpment of Ethiopia—that of a relatively small ruling caste divided between 1303/1885 and 1372/1952 between Eritrean (that is, Italian and British) and Ethiopian rule, the people had at no time—or have now no remaining claims of political unity or any more cohesion than can be based on common language, religion, and living-conditions; the only potentate commanding more than sub-tribal or group prestige has been the Sultan of Asssa, resident at Sardo. The Danakil in 1934 numbered probably about 50,000 to 80,000 souls.

The Danakil language, also called 'Afar, can be placed as a dialect of the lower-Kushite branch of the Southern Hamitic group. It is close to the Saho language (of the plateau-dwelling tribes west and south of Zālā), and has links with the Somali dialects.

Buxton, Travels in Ethiopia, London 1949. (S. H. Longrigg)

DĀR, a Persian word meaning “door” or “gate”, found in many Iranian and Turkic languages. It is synonymous with Arabic bāb and is used similarly, e.g., dar-e Tabriz, dar-e Erbil, dar-e India dar-bār (darbar). In a special sense it refers to the ruler’s court, or in extension, to a government bureau, already in pre-Islamic Iran. In Pahlavi it was usually written with the heterograft BB’. (R. N. Frye)

DĀR, (dwelling place), house. The two words most commonly used to designate a dwelling place, bayt and dār, have, etymologically, quite different meanings. Bayt is, properly speaking, the covered shelter where one may spend the night; dār (from dārā, to surround) is a space surrounded by walls, buildings, or nomadic tents, placed more or less in a circle. Dārām is the tribal encampment known in North Africa as the dwuur. From the earliest times there has been in Muslim dwellings a tendency to arrange around a central space: the park, where the shepherd’s flock will be sheltered from the blows of enemies; the courtyard, where the non-nomadic family will live cut off from inquisitive strangers. The first house which Islam, in its infancy, offers for our consideration, is that built by Muḥammad, on his arrival in Medina, as a dwelling place for himself and his family, and as a meeting place for believers. The courtyard surrounded by walls is its essential feature. A shelter from the sun, intended to protect the faithful at prayer, runs alongside the wall on one side. Rooms built along another side were occupied by the Prophet’s wives and were added to as a result of his subsequent unions.

Tradition brings us an interesting detail on the subject of these rooms. Their entrance on to the courtyard was fronted by a porch of palm branches which could be shut off, if required, by curtains of camel-hair. This front annex of the room, which recalls the rūṣāb, the movable screen of the nomadic tent, which keeps the dwelling in touch with the outside world, and plays the part of a vestibule, was to be perpetuated in the Muslim house.

This arrangement, of a central open space, surrounded by habitable rooms, certainly does not belong exclusively to the Arab world. This disposition is also characteristic of the nomad homes, with its atri um, and the Hellenic house with its peristyle; it must have been adopted very early by

Encyclopaedia of Islam, II
the Mediterranean countries. But this type of
domestic architecture seems to offer an ideal frame-
work for the
rigorous symmetry of the rooms which surround
them. Five rooms exhibit flat-based ledges cut into-
rich, presents a most sober external appearence—
offer the builder a rich and varied aesthetic theme,
on the other hand the Muslim dwelling, however
one which
even more clearly from the climatic conditions which
affect the majority of Muslim countries. The latter,
as is well known, almost all occupy a long east-west
region in which rain is rare, the sun fierce, and the
heat of summer intense. The scarcity of rain and the
steppe-like arid character of these countries make
water, be it pool or fountain, a much appreciated
element of comfort and adornment—one which
plays its part in the decoration of palaces as well as
in more modest dwellings. The fierce sun and hot
summer motivate the arrangement of underground
recesses such as the sarādb (sing. sarādb) of ʿIrāk
and Persia, or the buildings of rooms which are well
ventilated but lit only by a subdued light, such as
the iwān. The iwān is a room enclosed by three walls,
opening out in the whole width of the fourth side,
as an enormous gaping flat-based ledge, and is
generally roofed by a cradle-vault (semi-cylindrical).
Open to the space of the courtyard, it recalls the
risāk of the Arab tent; it can act as a reception
room and is not without similarity to the proostas
of the ʿAbbasid, which it resembles in its genuine
Iranian creation. In the Parthian palace of Hatra
(2nd. century A.D.) it is revealed in all its majesty.
It was to become a characteristic theme of the
architecture of the Sāsānids. The most famous
example is the Tāb-i Kislār, the palace of Ctesiphon,
built by Ḵirosaw Anūshirwān (531-579 A.D.). The
Mesopotamian architects working for the ʿAbbasids
were to make the iwān one of the essential elements
of their monumental compositions. The palace of
Ctesiphon clearly inspired the builder who created,
in 227/836, the great iwān of the palace of al-Muʿtaṣīm
at Sāmān [q.v.]. It is to be found on a smaller scale
in 147/764 in the palace of Ṣuyyūḥ; this princely
dwelling exhibits courtyards surrounded by buildings.
In two of the courts, two iwāns open out face to face,
each preceded by a gallery, along the whole width of
the courtyard. This symmetrical arrangement, with
two wide galleries facing each other and the iwāns
opening out in the far wall, used according to the
season—summer and winter—and has been perpetuated
in the houses of modern ʿIrāk. The gallery, or wide
room, giving on to the courtyard through three bays,
is called a türām; the türām is flanked by two small
rooms (called ʿada) which re-establish the rectangular
scheme. However, by the 3rd/9th century this
architectural idea (wide ante-room, deep iwān with
lateral rooms whose doors open on the ante-room)
moved towards the West and began to reach the
Mediterranean world. In some houses of al-Pusṭāl
(old Cairo) generally attributed to the ʿAbbāsids, the
türām plays an important role. The courtyard, which
one reaches by one of the corners, is framed by
walls, and the four sides contain türāns, some deep,
others shallow and rather like wide, flat-based
ledges. On one of the sides there is an ante-room with
three bays, and at its far end we find a central türām
and the two flanking rooms. The arrangement of the
wide ante-room and the türām forms a characteris-
tic T shape. These Tulūnid dwellings, built in
brick like the monuments of the period, comprise
several storeys. They were provided with a system
of conduits which brought fresh water and carried
away dirty water. Their courtyards were decorated
with pools and plants. In two houses, a fountain is
built into one of the rooms and the water is channeled
into the courtyard pool. In the rooms of rectangular
shape, the short sides of the rectangle and the long
wall facing the entrance are often cut into by level
ledges, a sort of atrophied türān, where seats could
be placed.
Before following up the westward migration of
these elements of domestic architecture shown by the
Tulūnīd houses, it seems worthwhile to indicate
how they have changed on the spot, and what can
be found of them, modified by Turkish influence, in
the modern dwellings of Egypt. The courtyard is
still an important element in these dwellings, but it
is no longer in the centre of the building. It stands
in front of them, accessible by a curved corridor.
The visitor can be received here, in a low room
(takhlahbāgh), opening out widely on the ground
floor, or in a loggia (mašʿād) which stands above it
and dominates the courtyard. If the visitor is
entering the interior of the house, he will be received
in the selāmilḵh. Its principal element is a large room
(mandara) whose central part, a substitute for the
courtyard, is paved, adorned with a fountain and
surrounded by two or three türāns—or rather,
lwāns, as the word has come to be used in local
parlance. These lwāns, raised above floor level, are
furnished with carpets and divans. The šarīm is
completely separate from the selāmilḵ and is acces-
sible by a door opening onto the courtyard and by
a staircase. The ḳāṭaʾ, its principal room, is not
dissimilar to the mandara, for here, too, one finds
a central space and lateral extensions. But it is dif-
ferent, and derives more evidently from the ancient
courtyard, for the walls surrounding the central
space rise to the level of the terraces, and carry a
lantern which lights the interior.

The dwelling with the central courtyard, with
the characteristics inherited from the Iranian
tradition being adapted to the domestic theme of
the Roman world, spread early across the Medi-
terranean countries of Islam. Evidences of this expan-
sion have been found in archaeological researches in
recent years. Excavations lately undertaken at
Ṣabra-Mansūriyya, the town founded in 335/947 by
the Fāṭimid al-Mansūr at the gates of al-Kayrawān,
have revealed a palace with walls of clay once
decorated with ceramic marquetry. Here we find
the arrangement of the wide ante-room and the deep
lwān with two rooms alongside. From the same
period, or possibly a little earlier, the castle of the
Ṣanḥāḏīl Amir Ziri at ʿAshš, dated about 324/935,
is interesting for the use of courtyards and for
the rigorous symmetry of the rooms which surround
them. Five rooms exhibit flat-based ledges cut into
DAR — DAR-I AHANIN

the wall facing the entrance; these inner recesses are fronted on the outside by rectangular fore-parts.

About a hundred years later, at Ṣanḥāḏa in the Berber territory, the palaces of the Ka‘fa‘ of the Banū Ḥadid were being constructed. Three of these royal dwellings have been excavated. Dār al-bahr, the largest, owes its traditional name to the sheet of water which entirely occupied a large courtyard. Above the huge pool were the state rooms. A second courtyard was surrounded by buildings presumably for domestic use; storerooms for provisions and a bath intended for guests. The flat-based ledges, probably derived from the ʿaiwan which certainly was already well known to Sassanid architects, give variety to the interior construction of the rooms. In another Ḥammādīd palace, the Ksar al-Mandār, castle of the Fanāl, the four sides of a central room, once no doubt roofed by a cupola, are hollowed out in this fashion: a similar cruciform plan is seen in Palermo in the pavilion of the Zīza, built by the Norman kings (Twelfth Century). One of these ledges contains a fountain whose water flows in a canal across the room as in Tulunid houses in al-Fustat, already mentioned.

The survival of the Asiatic elements taken over by domestic architecture in North Africa can be seen in Sedrata, a town in the Sahara founded by the Khārijī Berbers south of Ouargla, which was inhabited from the tenth to the twelfth centuries. Houses recovered from the sand contain rooms giving on to multiple courtyards. In addition to buildings provided with storerooms for provisions, the house includes state-rooms richly decorated with plaster sculptures, sometimes roofed by a cradle-vault which joins two half-cupolas on shell-shaped corbels. Some of the rooms are preceded by galleries opening, as at al-Fustat, by three bays onto the courtyard. The room follows the T-plan, consisting of a wide shallow room, and the ʿaiwan in the wall facing the entrance. The two ends of the wide room each show a raised couch framed by an overhanging arch.

We do not know when and how this type of house, with its combination of Persian and ʿIrākī elements, reached Muslim Spain and the Maghrib. Many fashion designers from Bagdād or from Sāmarrā were imported by the Western Caliphs, especially in the 3rd/9th century, and made a mark in Andalusia. Perhaps in this way we can explain certain of the architectural elements revealed by the Castilejo of Murcia, attributed to Ibn Mardanīsh (541-66/1147-1171). Here we find wide rooms, at the end of which there is a narrow room preceded by a fore-part. The inner rectangular courtyard is designed in the manner of a garden divided by two paths intersecting at the centre—a characteristic Persian theme. Two overhanging pavilions on the shorter sides of the rectangle mark the position of the paths. This type of dwelling, transplanted into Muslim Spain, takes on an incomparable beauty and amplitude in the Alhambra, the palace of the Nasrid kings of Granada. It is known that the principal buildings of this royal habitation, the work of Yusuf I (735-55/1335-1354) and of Muḥammad V (755-93/1354-1391) are arranged around two rectangular patios. One of them (Patio de los Liones) is divided by two paths in the shape of a cross, dominated by two overhanging pavilions on the shorter sides of the rectangle, as at the Castilejo of Murcia. Water plays an important part in the décor of these courtyards, filling the pool of Alberca and playing over the ʿaiwan of the Lions. Galleries and wide ante-rooms opening on to the court-yards lead to state-rooms, such as the splendid Ambassadors’ Room which is in the Comares tower, the outstanding feature of the enclosure. The wide rooms have, at each end, a recess, a lateral ʿaiwan, bounded by an overhanging arch, as in the houses of Sedrata.

This theme of garden-courts, with fountains, and crossing paths, which certainly seems to have come from Irāk, must have reached Magrib even in the Middle Ages. It survives in the charming ʿiryadās, the interior gardens found in Fez and Marrakesh. The Algerian house, especially in Algiers itself, is quite different. The vestibule (ṣabīla), very long, and bordered by seats, leads on through a curved corridor, or by a staircase, into the courtyard. The latter is enclosed by the columns and horseshoe arches of four galleries; a fountain plays in the centre. The rooms beneath the galleries, on the ground floor or on the upper storeys, are very wide and rather shallow, the limited height being necessitated by the weak bearing of the ceiling beams. Opposite the door is a recess containing a divan. In this we can see a degenerate form of the ʿaiwan, whose movements we have traced from ʿIrāk. In Algiers, this median recess has a fore-part supported by arms set at an angle into the façade. This, there can be little doubt, is an eastern fashion, imported by the Turkish masters of the town. In the villas of the suburbs, the less restricted space makes this overhang unnecessary; the fore-part rises from ground-level. On the upper storey, it develops into a sort of small salon, a belvedere with windows on the three sides, and frequently surmounts the entrance porch. The Tunisian house is a little different, the rectangular court-yard having galleries only on the two shorter sides. The principal rooms follow the T-plan, with the wide room (bayt), the deep laqūn (kkhāl), and the two small rooms alongside, (maḥṣura, plu. maḳāsir).

DÅR-I AHANIN. Persian “the iron gate”, also called Derbendi-ī Ahānīn. The Arabic form is Bāb- al-Ḥadid, old Turkish Tāmīr qapî. A name used for various passes in the eastern Islamic world. The most famous pass called dar-i āhanin, is the pass in Māwarā al-Nahr (Transoxiana), in the Baysuntau Mountain Range near the modern village of Derbent located on the old road between Samarqand and Tirmidh.

Perhaps the earliest mention of this “Iron Gate” is in the account of the Chinese pilgrim Hsian Tsang who went through the pass in 630 (570 D.). He described it briefly. The first mention of this
pass under its Persian name is in al-Yaqubi, Caldun, 290, 5. In later times this pass was considered the boundary between Mā warā the Nahr and the lands dependent on Balkh. The pass is frequently mentioned in Islamic literature, but the first European to visit the site was Clavijo who passed here in 1404 and mentioned a customs house from which Timur received revenue. The pass is mentioned by Sharaf al-Dīn Yazdī, al-Mawardi, ed. M. Ilahday, Calcutta, 1887, 1, 49, and the Bādburnāma, ed. Bevideger, 124, under the Mongolian name qa'ūla (in Arabic script kalhalgh). The pass is also mentioned by Buqdhālshī, later a governor of the pass, is first mentioned by Muḥ. Wafā Karmāngh, Taḥfīlat al-Khānī (unpublished, in the former Asiatic Museum, London, f. 184), in the description of a campaign by Muḥ. Rāḥfī Khān in 1171/1172. A road runs through the pass today but it is no longer of any importance.

DĀR AL-AHĐ, "the Land of the Covenant", was considered as a temporary and often intermediate territory between the Dār al-Islām [q.v.] and the Dār al-Harb [q.v.] by some Muslim jurists (see Al-Shāfi`ī, Kāmil al-Umm, Cairo 1932, iv, 103-104; Yaḥyā b. ʿAbd, Kītūb al-Khurādī, trans. A. ben Shenemah, Leiden 1958, 58). Al-Mawardi (Kītūb al-Khākām al-Sulṭāniyya, trans. E. Fagnan, Algiers 1915, 291) states that of the lands which pass into the Dār al-Islām, there can be no other territory other than the Dār al-Islām and the Dār al-Harb. If people in such a land break the agreement they are to be considered as rebels.

But, there existed, even in early Islam, a type of tributary lands which could be considered as part of the Dār al-Islām, and there can be no other territory than the Dār al-Islām and the Dār al-Harb. If people in such a land break the agreement they are to be considered as rebels.

Abū Ḥanīfah, however, holds the opinion that such a land can be considered only as part of the Dār al-Islām, and there can be no other territory than the Dār al-Islām and the Dār al-Harb. If people in such a land break the agreement they are to be considered as rebels.

More precise information on the conditions affecting such lands is provided by the examples in Ottoman history. In the ʿahdīnāmes granted by the Ottoman sultans to the tributary Christian princes (see Fr. Kraelitz, Osmanischen Urkunden in türkischer Schrift, Vienna 1899, 12-426; Fr. Babinger, Beitrag zur Frühgesch. der Türkennerrschaft in Rumelien, Munich 1944, 21; Feridūn, Munšaḵāʾ al-Salṭānī, ii, Istanbul 1926, 351-380) we find that such submission and the payment of a yearly tribute (kharadī) by the Christian prince, with the request of peace and security on the one hand and the Sultan's grant of ṣāḥī wa amin [q.v.] on the other, are the essential points for the conclusion of an ʿahd. It is absolutely an act of grant on the part of the Sultan. In the ʿahdīnāmes it is often stipulated that the tributary prince is to be 'the enemy of the enemies of the Sultan and the friend of his friends'. Besides these, further conditions were usually imposed, such as the sending of hostages to pay homage in person to the Sultan every year, and the provision of troops for his expeditions. In his ʿahdīnāme the Sultan promises by oath peace, protection against the internal and external enemies of the prince, of the respect, of the religion, laws and customs of the country (cf. Feridūn, ii, 355), no colonization of Muslim people there, and no interference by Ottoman officials in internal affairs. A ḡāf-i-khāhābi of the prince represents him at the Court. His people could freely enter and trade in Ottoman territory. Following Ḥanafī opinion, the Ottoman Sultan considered them as his own kharadī-paying subjects and the land as his own land (cf. Kraelitz, 57, doc. 7); Feridūn, ii, 358). If the circumstances changed, the Sultan could increase the amount of the tribute. If the prince failed to fulfill any of his obligations toward the Sultan, he would declare him a rebel and his land Dār al-harb. If the Sultan saw fit, he could bring the land under his direct rule. But the first step in expanding the Dār al-Islām was usually to impose a yearly tribute. Most of the Ottoman conquests were achieved through it (cf. İnci, Ottoman Methods of Conquest, in Stud. Isl., ii, 193). See also DĀR AL-ṢULṭĀN.

lished his residence in Casablanca, Sultan Mawlay Sulayman closed the port to commerce in 1794, and summoned back to Rabat the Christian traders who had set up business there. It was not reopened until 1830. 

European traders began to return from 1840 onwards, and the influx was particularly great in 1852. The first ones were representatives of French manufacturers in Lodève. They were sent in quest of raw wool, in an attempt to free themselves of dependence on the English market. They were followed by English traders from Gibraltar, by Germans, Portuguese, and French Asians. 

The port's traffic (imports plus exports valued at 14 million gold-francs) exceeded that of Tangier.

Following the loan of 1904 and the Conference of Algiers in 1906, French officials took over control of the Casablanca customs post, and a French company undertook improvements to the port facilities. These events constituted a threat to the Şa'wiyah tribe which inhabited the surrounding countryside, and on 30 July 1907 they attacked and killed some European workers in a quarry outside the city walls. The intervention of a French warship provoked the sacking of the city, during which the Jewish quarter suffered particularly severely. The French replied by a bombardment on August 5th, and two days later 2000 troops under the command of General Drude were sent ashore from a French squadron. Spain also sent a squadron of assault troops. The French expeditionary force gradually occupied the whole of the Şa'wiyah territory by driving back the warlike tribes, and the train of events ended with the establishment of the French Protectorate in 1912. 

As a result of the decision of its first Resident General, Lyautey, to make it the principal port of Morocco, the city underwent an enormous expansion. No doubt the decision would have been very different if Casablanca had not already known considerable economic prosperity. This arose in part from the presence of a sizeable European colony, in part from the need to supply material to the Expeditionary Force. The modern port is completely man-made. It has 4,870 m. of deep-water quays, and is protected from the open sea by a breakwater 3,180 m. long by the European vice-consul in Casablanca, and a French customs post, and a French warship killed some European workers in a quarry outside the city walls. The intervention of a French warship provoked the sacking of the city, during which the Jewish quarter suffered particularly severely. The French replied by a bombardment on August 5th, and two days later 2000 troops under the command of General Drude were sent ashore from a French squadron. Spain also sent a squadron of assault troops. The French expeditionary force gradually occupied the whole of the Şa'wiyah territory by driving back the warlike tribes, and the train of events ended with the establishment of the French Protectorate in 1912.

As a result of the decision of its first Resident General, Lyautey, to make it the principal port of Morocco, the city underwent an enormous expansion. No doubt the decision would have been very different if Casablanca had not already known considerable economic prosperity. This arose in part from the presence of a sizeable European colony, in part from the need to supply material to the Expeditionary Force. The modern port is completely man-made. It has 4,870 m. of deep-water quays, and is protected from the open sea by a breakwater 3,180 m. long. In 1956 it registered 81½ million tons of traffic.

The census of 1952 showed a population of 680,000 (to be compared with 20,000 in 1907): 472,920 Muslims, 74,783 Jews (more than a third of the total Jewish population in Morocco), and 132,719 foreigners (of whom 99,000 were French).

The old city consisted of 3 districts: Medina (middle-class), Taqer (working-class, not entirely built-up), and Mdâhid (Jewish). Today the whole area, its walls still in part intact, is called Old Medina, and to the W. and S.W. it has extended beyond the walls. The whole of the Jewish population lives there, mingled with the Muslims. The European districts have grown up around Old Medina, particularly to the E. and S., and further Muslim districts have been built outside these, the principal one being an immense area of 200,000 inhabitants, New Medina. The shanty-towns on the outskirts of the city, to which countryfolk fled in search of work, have now been largely replaced by working-class dwellings, constituting quarters such as Muḥammadīyya to the E. (formerly the 'Central Quarters'), Sidi 'Uṯmān to the S. (formerly Ben Mīlī), and Ḥasanīyya to the N. and N.E. (al-Ǧādir). The S.W. The main centre of industry is in the N.E. along the road to Rabat. It contains the headquarters of most of the country's light industries, and is the most important industrial region in Morocco.

DAR AL-DARB, the mint, was an indispensable institution in the life of mediaeval Middle Eastern society because of the highly developed monetary character of its economy, particularly during the early centuries of Muslim domination. The primary function of the mint was to supply coins for the needs of government and of the general public. At times of monetary reforms the mints served also as a place where obliterated coins could be exchanged for the new issues. The large quantities of precious metals which were stored in the mints helped to make them serve as ancillary treasuries.

Soon after their conquest of the Middle East, the Arabs made use of the mints inherited from the former Byzantine and Sasanid regimes. It was only during the Umayyad period that the Muslim administration began to interfere with the minting organization. This was manifested in the setting up of new mints (e.g., Kūfa, Wāṣit) by al-Hādiḍi, in the famous coinage reform of ʿAbd al-Malik [see DINAR], and in the centralizing measures of Hīṣām who drastically reduced the number of mints. The policy of Hīṣām, obviously influenced by Byzantine minting traditions, could not be maintained for long by the ʿAbbasid caliphate. During the reign of Hārūn al-Rashīd the office of nāṣir al-sikha (inspector of coinage) was set up. Although by this measure the caliphate relinquished its direct authority over the mints in favour of a subordinate agency, it still defended the principle of a centralized minting system. But this office seems to have disappeared with the shrinking of the political and administrative authority of the ʿAbbasids. The increased number of mints whose operations were necessitated by rapidly expanding trade and industrial activities, and the rise of many petty rulers asserting their control over these mints, led to a complete decentralization of minting, a situation closely resembling that which existed under the Sasanids.

The assumption of control over the mints was one of the elements indicating the assertion of independent power by rulers. It was symbolized by the inclusion of their names in the inscriptions on the issues of their mints, hitherto an exclusive pre-
rogative of the caliphs. By this measure, also, they declared themselves responsible for the quality of their coinage. To safeguard the integrity of the coinage and consequently the interests of the general public, the mints were submitted to the legal authorities (e.g., hādi al-buṭūd in Fātimid Egypt and Syria, and a hādi in 11th century Baghdad) whose agents personally assisted at the minting processes. In spite of this system, the confidence of the general public was abused by the rulers who exploited their mint prerogatives by illegal monetary speculations. The usual method was to declare the coins in circulation invalid, and order their exchange against the new, secretly debased issues, obtainable in the official mints.

The staff of the mint consisted of clerical and manual employees. The former were in charge of book-keeping and of internal security. The manual workers, such as the subhakān (melters) and darrābān (minters), carried out the actual coining operations. A special position among the craftsmen was occupied by the nakkāsh (die-sinker) whose professional activities were restricted to engraving only.

Coins issued by Muslim mints were struck of gold, silver and copper (see dinār, dihram, fals). Precious metals for coining consisted of bullion which was supplied by the official authorities as well as by private customers. The latter delivered also obliterat coins and ‘foreign’ coins which were prohibited on local markets. A prescribed percentage of such deliveries was retained by the mint as a coining levy. The money cashed from the customers was spent on the wages of the minters, on the costs connected with minting operations, as well as on a special government tax. During the period of flourishing trade activities which entailed intensive minting operations, the proceeds from the mints yielded a substantial income to the government.

But the economic regression of the late Middle Ages drastically diminished the demand for coinage, with detrimental effects on the position of the mints and the profits derived from them. It then became practicable to farm out the mints, an expedient resorted to, for instance, by Mamluk Egypt.

Ottoman period. — The Ottoman mint is generally known as *Darbkhāne-i Şâmîre* but also *darrbhān*, nubrākhān, and dār-al-darb. The first coin from an Ottoman mint was an *âbre* [g.pr.] struck in Bursa probably in 727/1326-7 (cf. I. H. Uzuncarşılı, *Belleten* xxxiv, 207-221). On the *âbres* and *manglars*, copper coins, of Murād I and Bayâzîd I no place-name is found (H. Edhem, *Meskîhâ-i Oltamyiyya*, Istanbul 1334, nos. 1-58), but we know that under his sons there were mints in Bursa, Amasya, Edirne, Sivas and Ayasuluğ (Ephesus) (see H. Edhem, nos. 59-138).

In their expanding empire the Ottomans established new mints in the commercially and administratively important cities and in the centres of gold and silver mines. Thus, under Bayazîd II, new mints were established in Ankara, Karatova (Kratovo), Kastamonu, Gelîbullu (Gallipoli) in addition to those in Istanbul, Bursa, Edirne, Sivas, Ayasuluğ, Novarberda, Novobrod, Üsküb (Skopje), Amasya, Tire and Rûsiyya, which existed already under Mehmed II. Under Süleyman I, gold coins were struck in his name in Aleppo, Damascus, Misr (Cairo), Amid, Baghdad and Algiers. In Şâîhâl 953/October 1546 a new mint was established in Djjandja, a small town to the north of Erzînджân, when rich silver and gold mines were found there. The mints in Morava (Gilan), Novaberda, Sidrekapsa and Serebnica (Srebrenica) owed their existence to the rich silver and gold mines (see R. Anhegger, *Beiträge zur Geschichte des Bergbaus im osmanischen Reich*, in BSOAS, xiv, 1953, 231-242). The Ottoman laws required that all bullion produced in the country or imported from abroad be brought directly to the *darbkhânes* to be coined. Also upon the issue of a new *âbre* those possessing the old were to bring it to the mint. The special agents, yaṣâk-kulüs, were authorized to inspect any person for bullion or old *âbre* (see Belleten, xxiv, 669, doc. 2, and Anhegger-Inalcik, *Kânannâme*, no. 2, 5, 58) and the gold or silver was exempted from the customs duties. The state levied a duty of one fifth on all silver coined at the *darbkhâne* which corresponded to the difference between the real and face values of the *âbre* (Belleten, xxiv, 679 and Anhegger-Inalcik, no. 58).

As a *mukâfa* [g.v.], this revenue was usually farmed out at auction to the highest bidder. The contractor, *şâmil*, was to pay it in regular instalments to the public treasury (see Anhegger-Inalcik, no. 15). Spandugino (ed. Ch. Schefer, Paris 1896, 57) tells us that each new issue of *âbre* under Mehmed II brought a revenue of 800 thousand gold ducats. The *mukâfa* of the Bursa *âbre* mint alone amounted to 6000 ducats in 892/1487 (see Belleten, xxii, 56). All the mints in the empire could be farmed out as one single *mukâfa* (Anhegger-Inalcik, no. 13). But an *şâmil* in turn could farm out at his own responsibility the local *darbkhânes* to others. The *şâmil* employed *emins* and *wehbîs* to assist him. Though he was responsible for the revenue of the mint its actual operation and control were in the hands of the employees appointed by the state, namely an *emin* or *neșir* who had its supervision (Anhegger-Inalcik, no. 13), a *şâhî-i *âsîr* who was the director and in this capacity responsible for all the technical and legal requirements (Anhegger-Inalcik, no. 14).
and, Ewliyâ Celebî, Seydîhatnâme, x, 135) and an ustdd or usta who supervised the actual minting processes. Under him the technicians and workers were divided into several groups, the kâleddns who prepared the standard ingots by melting the metal, the kehleddns or kelleddns who made them into the sikke-zens or sikke-kâns who, under strict supervision, prepared the steel plates to be minted and the didebdns, sikke-zens or sikke-kiâns who made them into the didebdns, sikke-kâns.

Minting was arranged on the basis of newbet, a system that at each turn 13065 dirhams [g.v.] of silver were delivered from the capital out of which 3000 were placed in the khaçine, treasury, and 10,000 were delivered to the ustdd to be minted, 65 dirhams were accepted as the legal metal.

The general supervision of the darbkhdнане and of its accounts was the responsibility of the local kâdi who kept there his own emîn (Anhegger-Inalcik, no. 13). It was the kâdi’s duty periodically to see the accounts and send the balance sheets, muhasâbât-i darbk hd ne, to the central government (a deler of the muhasâbât-i darbk hd ne-i Bursa of the first half of the 10/16th century is now in Belediye Kütüphanesi, Istanbul, Cevdet yazm. no. 0.59).

In the berâts given to the âtimls and emîns it was made clear how much they should pay for the bullion purchased and how many coins should be minted from each bullion, and all this reflected the monetary policy of the state.

Until 865/1460 out of each 100 dirhams of silver 265 or 278 âble were struck, but it was 355 or 400 âble under Mehmed II, 500 under Süleyman I and 1000 in 995/1588. The original Ottoman monetary system based on âble was disrupted from this time on (for the causes, see Bellast, lx, 656-664). The spoiled and adulterated (ûday and ârûb) âbles invaded the market. The renewed attempts to put right the quality and value of it, the so called tâşıhid-i sikke, failed (see M. Belin, Essais sur l’his. économique de la Turquie, Paris 1883, 118 ff.; I. Ghalîb, Tabwumî Mesâkkâh-i Oltâmîyânî, Istanbul 1307, 220-226). In 1010/1601 the use of bad and old âble was prohibited once more and the rate of sağh (“good”) âble was raised to 120 ûday and 2 ârûb. In the following period the Ottoman mints showed little activity and many of them were closed down. In the 11th/17th century only were the mints of Istanbul, Cairo, Baghdâd, Tripoli, Tunis and Algiers steadily active. The main reason for this situation was that Europeans, realizing the big profit to be made from the differences in price of silver, began increasingly to import their silver coins in the Levant (in 1614 the French alone imported 7 million écus). First rêydâls, Spanish reales, then in the 17th/18th century arslân, esedi or aber kalb gurûş, Dutch Lowen riksdaler, and the hany-gurûş, German thalers, invaded the Levantine markets. The import of these coins was free of duty, but the mark sağh had to be struck on them in the Ottoman darbk hd ne as a condition of free circulation, because Europeans were increasingly importing counterfeit coins especially struck for the Levant. In 1010/1601 one gold coin was rated officially at 400, and one gurûş (piaster) at 160, âble (Başbuğâlet Arşivi, Fekete tashî, no. 3043).

Eventually the gurûş was made the Ottoman monetary unit, as the âble became too small in value as a result of the continual devaluations and devaluations, and the abundance and cheapness of the commercial silver. The first Ottoman gurûş of 6 dirhams of silver was struck in imitation of the German thaler in 1099/1688 (see I. Ghalîb, 237, 254). It was rated 4 para (pâre), which was struck first under Murâd IV. Pieces of half a gurûş, nişîfiye, and a quarter of a gurûş for gold and others at Tawuhan-taftî in Istanbul and in Bosna-Saray for copper coins in 1100/1691.

The new system opened a new era in the history of the Ottoman coinage. The âble ceased to be the basic unit, though it was struck until 1234/1819; special care was then taken to improve the quality of the coins struck (see I. Ghalîb, 230). New darbk hd ne were opened in Edirne, Izmir (Smyrna) and Erzurum for gold and others at Tawuhan-taftî in Istanbul and in Bosna-Saray for copper coins in 1100/1691. New machines and techniques were adopted (Râşid, Ta’rikh, Istanbul 1282, ii, 443). During the same period, for better control, the provincial darbk hd ne were again closed down. In 1312/1720 the silver coins struck were the gurûş of 8 dirhams and 12 kârs, the solota of 6 dirhams and 10 kârs, the para of 2-3 1/4 kârs and the âble of 3/4-1 3/4 kârs in weight. The gurûş and solota contained 60% pure silver (I. Ghalîb, 280).

As the Ottoman government always considered minting as a source of revenue to meet its financial difficulties, the value of the silver coin subject to adulteration, and all attempts at reforms (tâşıhid-i sikke), failed (I. Ghalîb, 303, 327, 407; A. Dewedt, Ta’rikh, iv, Istanbul 1275, 122; v, Ist. 1278, 289).

The situation became most confusing under Mahmiid II, and, eventually under ‘Abd al-Megjid, by the firman dated 26 Safar 1250/29 April 1840, Western principles of monetary policy were accepted as a guide by the government (see the text in S. Soûf, Usâlî Mesâkkâh-i Oltâmîyânî ve edînegiîyânî, Istanbul 1311, 76-114). Enlarged by the new buildings, the darbk hd ne-i âmir was completely modernized by the machines and specialists brought from England (see H. Ferid, Nâkî ve 5 tartîb-i mîlî, Mesâkkâh, Istanbul 1333, 215-222). In 1259/1643 new gold and silver coins known as Medjîdi were struck (see I. Ghalîb, 422).

India. — The earliest coins of Muslim rulers to circulate in India—disregarding the insignificant issues from the early Arab kingdom of Sind in the rst/8th century—were the bilingual lankas struck at Lahore by Mumûd of Ghazni in 418/1027 and 419/1028; after Lahore became the residence of the Ghaznawid princes small billion coins were occasionally struck there, but nothing is known of the mints they employed. Murîzî al-Dîn Muham- mad b. Sâm struck coin at Lahore, Dîhil and
'Parashawar' (Peshawar) as well as at Ghazni and, after the conquest of Kanawdj (q.v.) in 930/1523, there also; these coinages were assimilated in weight series as well as in design to the existing coinages of north India, and included gold money—a convenient way of using the proceeds of plunder and war booty to maintain the local currency and simultaneously proclaim the victor's success. Muhammad b. Sām's lieutenant Yldız struck coin in his own and his master's joint names, small dānnās as well as large dānnās assimilated to the local billon currency, first at Kārmān, including also some gold and silver, and later in billon only at Dihli. The outline of the Cawhnān horseman was retained in the designs, frequently also the Kārmān bull of Shīva, which seems to indicate that Hindu craftsmanship were still employed in the production of coin. Up to the death of Muhammad b. Sām no gold or silver money had been struck in India, with the exception of the Kanawdji gold pieces. Silver appears to have been coined first by Shams al-Dīn Iltutmish; silver lānksas of an original weight of 175 grs. His reign clearly brought a time of experimentation for his mint, for the weights and designs of his early coins are very diverse; by 632/1234 a stable design for the silver coinage seems to have been reached, which was taken as a model for his later gold coinage. Bills of exchange were issued by the mint, remained the most frequent currency, supplemented by smaller coin in copper. The silver struck up to this time was very impure. His mint, for the weights and designs of his early coins clearly brought a time of experimentation for his successor, his-ed Din's successor, Ala al-Dīn; his ed-Dīn's Dihli coinage was 10.5 parts in 12.

There also; these coinages were assimilated in weight series as well as in design to the existing coinages of north India, and included gold money—a convenient way of using the proceeds of plunder and war booty to maintain the local currency and simultaneously proclaim the victor's success. Muhammad b. Sām's lieutenant Yldız struck coin in his own and his master's joint names, small dānnās as well as large dānnās assimilated to the local billon currency, first at Kārmān, including also some gold and silver, and later in billon only at Dihli. The outline of the Cawhnān horseman was retained in the designs, frequently also the Kārmān bull of Shīva, which seems to indicate that Hindu craftsmanship were still employed in the production of coin. Up to the death of Muhammad b. Sām no gold or silver money had been struck in India, with the exception of the Kanawdji gold pieces. His reign clearly brought a time of experimentation for his mint, for the weights and designs of his early coins are very diverse; by 632/1234 a stable design for the silver coinage seems to have been reached, which was taken as a model for his later gold coinage. Bills of exchange were issued by the mint, remained the most frequent currency, supplemented by smaller coin in copper. The silver struck up to this time was very impure. His mint, for the weights and designs of his early coins clearly brought a time of experimentation for his successor, his-ed Din's successor, Ala al-Dīn; his ed-Dīn's Dihli coinage was 10.5 parts in 12.

In the reign of 'Alī al-Dīn Muhammad Shāh, 695-715/1295-1315, the expense of the army caused him to contemplate reducing the silver lānka from 175 to 140 grs.; but gold lānka remained at the nominal 175 grs., often crudely struck, and the gold huns of his southern conquests seem to have been re-struck as camp currency, with no attempt to bring them up to the standard of the northern mints: their average fineness is described in the A'in-i Akbari, i, 5, as 8.5 parts in 12, whereas 'Alī al-Dīn's Dihli coinage was 10.5 parts in 12. Devagiri now appears as a mint-town, including a gold issue in 714/1314-5. 'Alī al-Dīn's successor Kūṭb al-Dīn Mubarak Shāh, 716-20/1316-20 struck at 'Kutbabad' (= Dihli?) new square silver and gold pieces of standard weight, also square copper pieces of 66 and 33 grs.

Ghiyāth al-Dīn Tughluk continued the Dihli series almost unchanged, and also struck coin on his expedition to Bengal in 724/1324; but his son, Muhammad b. Tughluk, has been called a "prince of moneymen": his numismatic types are characterized by novelty of form and variety of weight as well as by perfection of execution. Gold coin was struck at Devagiri, later renamed Dawlatbad (q.v.), and at Sultānapur (= Warangal), up to the 200 grs. dīnār; the Dihli coinage was much subdivided: the lānka was reckoned at 64 kānis, and coins of 1, 2, 6, 8, 12, 16 and the full 64 kānis are known. The kānis was further divided into 4 copper fals. Besides this system there was a partial decimal system of 25, 50 and 100 kānis: the 50-kānis piece, called 'adāli, of 140 grs. silver, replaces the silver lānka as the largest silver piece of the coinage; the new dīnār exchanged at 8 old silver lānksas or 10 'adālis, a fictitious rate in terms of the relative values of gold and silver. The complete scheme of the sub-divisional currency was later conflated to mix silver and copper in arbitrary multiples to produce coins of similar size but different intrinsic values; this brought in the 'black lānka', containing only 16.4 grs. silver, valued at one-eighth of the old silver lānka. According to Abu l-Fadl (A'in-i Akbari, i, 7, s.v. Darrāb) the metal was cast into round ingots and cut by hand; since the black lānka was of the same size as the silver lānka, the same dies could be—and were—used for both, thus speeding and easing the work of the mint workmen. The uniform small size of the dies required less labour in the striking and resulted in increased efficiency of the mint.

In 731/1331-2 appeared Muhammad b. Tughluk's 'forced currency' - the new black tokens nominally valued at one 'adāli; the experiment failed owing to inadequate precautions against forgery. Tokens were turned out in thousands by local artisans, but after three years all were called in and redeemed. The whole operation thus became virtually a temporary loan from the sultan's subjects which was repaid at a swingeing rate of interest. The issues reverted to normal after this, except for some gold and silver coins of 741-3/1340-3, struck in the name of the Egyptian caliphs.

Firuz Shāh Tughluk, 752-90/1351-88, continued the 175 gr. gold lānka, but not its silver counterpart. Gold coin became more plentiful, thus relieving silver of its earlier responsibility, and mints concentrated on fractional issues, including small pieces in mixed silver and copper; assays of the 140 gr. pieces show 17.85 or 24 gr. of pure silver. The later Tughlukid sultans, and the Shāhī sultans of Dīawnpur, followed the Firuzian tradition with little change.

After the sack of Dihli by Timūr the mints were in decline. Gold largely disappeared, thanks to Timūr's depredations, and the Sayyid Khizr Khān struck coin in the names of Firuz and other of his predecessors, (but not in Timūr's name, as Ferishta asserts), using the original dies.

In the Deccan, mints were first established under the Bahmanīs (q.v.); before these were set up at Aḥsanābād-Gulbarga and elsewhere, goldsmiths and dealers in bullion had been authorized to make money without reference to a royal stamp, and the currency was protected by the guild of craftsmen. Interesting among the later Deccan coinages are the silver lārin, 'fish-hook' money, struck by 'Alī II of Bijāpur, which became a standard Indian Ocean trading currency in the 10th/16th century (see G. P. Taylor, On the Bijapur lārin or lārin, JASB, NS vi, 1920, 687-9).

The Mughals. Bābur's reign, 932-7/1526-30, was virtually a military occupation, and Humāyūn's was hardly a period of stability; this is reflected in their coinage, which seems to have been struck irregularly and to follow Central Asian patterns and a Central Asian system, probably depending on imported workmen. Both struck silver adalis at Agra,
of sand-hills. To the west lay Waddal. The Libyan

Geography and inhabitants.
Dar Fur was one of the chain of Muslim states
composing bilād al-Sudān. Its eastern neighbour was
Kordofān, from which it was separated by a tract of
sand-hills. To the west lay Waddāl. The Libyan
desert formed a natural boundary on the north,
while the marshes of the Baḥr al-Ghāzāl (q.v.) marked
the southern limits. Dar Fur comprises
three main zones: a northern zone, the steppe fringe
of the Sahara, providing grazing for camel-owning
tribes but little cultivation; a central zone (14° 30' N
to 12° N) with rainfall ranging from 12" to 25" (in the mountains), a country of settler cultivators;
a southern zone of heavy rainfall (25'-35')

company, and Shāh 'Alām's coinage with wreaths of
roses, shamrocks and thistles, commemorating Lord
Lake's entry into Delhi in 1863, shows a very
extravagant imitation of the French coinage.
The Mughal coinage in general shows great
diversity of mints—well over 200 are known—and
a constant search for variation. The inscriptions
could vary for each month of the year; for some
years Dājāngūr struck round and square rupees
in alternate months, and later varied the month
names by zodiacal signs. Emblems appear on the
coins from the time of Humāyūn; sometimes these
appear to have marked a change of mint-masters,
sometimes they were distinctive mint-marks.
That the practice of the later Mughal mints was
substantially the same as that recorded by Abu l- Faḍl
is shown by the Ḥidāyat al-bawā'id of 1126/1714-5
which records the current mint rules (quoted by
W. Irvine, Mint rules in 1126 A.H., in Proc. ASB.,
1898, 149-52) and prescribes a differential revenue
to be exacted from Muslim and Hindu merchants:
the latter when specially appointed (makhudānān ki
mubarrari bāghand) pay less than the Muslim rate of
1/4, on average, 1/5 per cent more.

(D. Burton-Page)
and the western bidâd al-Suddân. The route to Kordofân and the east was a pilgrimage road, although some pilgrims preferred the long route through Egypt. Besides such articles as ivory and ostrich feathers, Dar Fûr exported slaves, obtained from the pagan lands to the south. Many of these were sold to the Beylik of Deyrûl-Zafra, to the south. The construction completed in 1911, of a railway linking El Obeid (al-Ubayyid) in Kordofân with Khartoum and Port Sudan, followed by the annexation of Dar Fûr in 1916, ended the importance of the old routes to the north. The capital was finally settled in 1206/1791 at its present site of El Fasher (al-Fashir [q.v.]).

The discrepancies in the traditional genealogies of the Kayra were noticed by al-Tunusi, Nachtigal and Shukayr. These genealogies are more or less associated with folk-heroes, the chief of whom are Bush ibn Muhammad Fadl and Shukayr, an intelligence official of the Condominium, whose principal informant was Shaykh al-Tayyib, (d. 1902), formerly smâîm to sultan Ibrâhîm.

Traditions of the early sultanate. In the absence of any native chronicle, we are dependent for information on foreign observers. Of these, the most important are the Tunisian Arab, Muhammad b. 'Umar al-Tûnusi, whose visit of eight years began in 1218/1803; the German, Gustav Nachtigal, who was in Dâr Fûr in 1894; the Austrian, Rudolf v. Slatin, governor 1881-3; and the Lebanese, Na'âm Shukayr, an intelligence official of the Condominium, whose principal informant was Shaykh al-Tayyib, (d. 1902), formerly smâîm to sultan Ibrâhîm.

The discrepancies in the traditional genealogies of the Kayra were noticed by al-Tunusi, Nachtigal and Shukayr. These genealogies are more or less sophisticated attempts to schematize traditions associated with folk-heroes, the chief of whom are Ahmad al-Ma'kûr, Dâlî, and Sulaymân Solong (i.e., "the Arab"). The many variants of tradition cannot be detailed here. Ahmad al-Ma'kûr, an Arab of Tunis, of Hilâl or 'Abbâsîd descent, is represented as the ancestor of the Tundjur rulers who preceded the Kayra, or as the link (by marriage) between Tundjur and Kayra. His son (or more remote descendant), Dâlî, was the organizer and legislator of the Furawi state. A descendant of Dâlî, Sulaymân Solong, usually described as the son of an Arab woman, is credited with the introduction of Islam, and is the first of the historical rulers. Ahmad al-Ma'kûr may represent a genuine memory of Arab intermixture with the Tundjur (or Fûr) or may be a late invention to antedate the coming of the Arab element. The epithet al-Ma'kûr, "the Lame" is probably the arabicization of a non-Arab name: it is explained in Slatin and Shukayr by an obvious legend. Dâlî (or Dalî Bafr) may have been an historical individual, or may embody the traditions of the Kayra rulers before the coming of Islam. Sulaymân Solong, a warrior and administrator, is Dâlî's Muslim counterpart and may have absorbed traditions originally connected with him. Sulaymân was probably not the founder of the Kayra dynasty, but simply the first Muslim ruler. The claims that the royal clan was descended from the Banû Hilâl or the 'Abbâsîs are sophistications, reflecting North African and Nilotic Sudanese influences respectively. The two claims are, of course, incompatible. There is more verisimilitude in a tradition that the Kayra, together with the Musabba'ât and the ruling house of Waddal, were descended from the Faṣâra. This
is in harmony with the tradition that Sulaymân’s conquests were achieved in alliance with the nomad Arabs.

While Sulaymân may have begun the introduction of Islam into Dâr Fûr, the full islamization of the region was a slow process. The persistence of non-Islamic customs into the 19th and 20th centuries is noted by all observers. The religious teachers (fâhî for fâhî; jukarâ is invariably used as the plural), came mainly from the western bîlât al-Sudân, and from the Nilotic region, both areas where the Malikî school predominates. Little is recorded of the sultans who immediately followed Sulaymân: his second successor, Ahmad Bakr, is remembered as the father of many sons, five of whom were sultans after him. The traditions of both Dâr Fûr and Waddâl preserve the recollection of a series of wars between the two sultanates, beginning in the time of Ahmad Bakr and continuing until Muhammad Tayrâb, early in his reign, made peace with sultan Djawdâ of Waddâl. Both ‘Umar and Abu ‘l-Kâsim are said to have been killed in these wars, in which the advantage generally lay with Waddâl.

The later sultanate.

Fuller traditions begin with the reign of Muhammad Tayrâb, who died only 16 years before the visit of al-Tûnûsu. He is represented as luxury-loving and pacific, but his reign ended in war against sultan Hâshim, the Musábbârîw ruler of Kordofân. The pretext for hostilities was found in Hâshim’s aggression against the eastern frontier of Dâr Fûr, but al-Tûnûsu suggests that Tayrâb’s real motive was to secure the succession for his son, Ishâk, at the expense of the surviving sons of Ahmad Bakr. Ishâk, entitled al-khâlijî, “the successor”, was left as regent in the capital, while the sultan’s brothers and ministers accompanied Tayrâb on campaign. Hâshim was expelled from Kordofân and sought refuge with the Fundjî sultan of Sinnâr, while the Fûrawî army occupied his dominions. The legend that Tayrâb advanced as far as Omdurmân (Umm Durnâm) and defeated an ‘Abdalâlî army is not mentioned by al-Tûnûsu or Nachtigal, and is a later elaboration, probably of the Mahdist period. Tayrâb died at Bâra in Kordofân, poisoned, it is said, by his grandees.

Tayrâb’s death was followed by a succession struggle between the partisans of Ishâk and those of the sons of Ahmad Bakr. The latter finally chose as their sultan the posthumous son of Ahmad Bakr, ‘Abd al-Rahmân al-Rashîd, a pious and scholarly youth. His election was brought about by Muhammad Kurra, a eunuch of the late ruler, whom ‘Abd al-Rahmân appointed as his chief minister. Kurra succeeded by a pretender, Muhammad Abu Madyan, a son of sultan ‘Abd al-Rahmân. Muhammad ‘Ali Paşâ, who claimed Dâr Fûr by virtue of a farman of sultan ‘Abd al-Màqîd (13 February 1841; see J. C. Hurewitz, Diplomacy in the Near and Middle East, New York, 1956, i, 120), supported Abû Madyan, and an expedition was prepared. The project was abandoned on the death of the ambitious bàkînmâr of the Egyptian Sudan, Ahmad Paşâ Abû Widân, in Ramadan 1259/Sept.-Oct. 1844. Relations between Hûsuyan and the viceroyes Saîd and Ismâ’îl were friendly. In the later years of Hûsuyan’s reign, his sight failed, and affairs were directed by his sister, the iya basî Zamzam.

His successor, sultan ‘Ibrahim, soon became involved in hostilities over the Rizaykât with al-Zubayr Rahmân Manşûr, the Sudanese merchant-prince who controlled the western Bahr al-Ghazál. Al-Zubayr invaded Dâr Fûr from the south, in collusion with the bàkînmâr Ismîlî Paşâ Ayyûb, who brought a force from the east. ‘Ibrahim was defeated by al-Zubayr, and killed at the battle of Manawâshl on 24 Oct. 1874. Dâr Fûr was annexed to the Egyptian Sudan.

The Khedivial and Mahdist Periods.

Fûr resistance, based on Dj. Marra, continued under a series of shadow-sultans. The first, Hasan Allâh b. Muhammad Faḍl, surrendered to al-Zubayr in 1879, and was sent, with a large number of Fûrawî princes and notables, to Egypt. His brother and successor, Bûsh, raised an alarming revolt, but was killed by al-Zubayr’s son, Sulaymân. A further revolt, in 1877, against newly imposed taxation, found a leader in Hârûn, a grandson of Muhammad Faḍl. He besieged El Fasher, the provincial capital, but was driven back to Dj. Marra, and was killed in 1880 by al-Nûr Bey Muhammad ‘Aŋkâra, subsequently a Mahdist officer. Another grandson of Muhammad Faḍl, ‘Abd Allâh Dûd Bandjîa, next assumed the sultanate in Dj. Marra.

The outbreak of the Mahdist revolution in 1881 produced a critical situation in Dâr Fûr, since many of the Mahdist sympathizers with the Mahdi, like them a riverain Sudanese, while both the Fûr and the Rizaykât wished to throw off khedivial rule. After the Mahdi’s capture of El Obeid and defeat of the Hicks expedition (January and November 1883), Slatin, the Austrian governor, was isolated, and he surrendered in December to Muhammad Bey Khâlid, formerly sub-governor of Dûr, whom the Mahdi had appointed as his agent in Dâr Fûr.

‘Abd al-Rahmân’s young son, Muhammad Faḍl, was installed as sultan by Muhammad Kurra in 1215/1800-1, but a rift grew between the ruler and his minister, and Kurra was killed in Radjâb 1219/Nov.-Oct. 1804. Faḍl’s long reign was a period of declining power. An expedition sent by Muhammad ‘Ali Paşâ of Egypt, under his son-in-law, the daftârdar Muhammad Bey Khâsurw, defeated the Fürwî viceroy of Kordofân, the màhûmûn Musallâm, at Bàrâ in 1821, and annexed the province. Revolt in the Nile valley, however, defelected the daftârdar from the conquest of Dâr Fûr. Muhammad ‘Ali ‘Abd al-Kârim Sàbûn, the sultan of Waddâl, devastated the vassal state of Dûr Tâma and laid it under tribute. Faḍl assisted a brother of Sàbûn to obtain the throne of Waddâl after his death, but failed to establish a protectorate. The Bûkûkàra, especially the Rizaykât, also gave much trouble.

Faḍl’s successor, Muhammad Hûsuyan, was threatened by a pretender, Muhammad Abû Madyan, a son of sultan ‘Abd al-Rahmân. Muhammad ‘Ali Paşâ, who claimed Dâr Fûr by virtue of a farman of sultan ‘Abd al-Màqîd (13 February 1841; see J. C. Hurewitz, Diplomacy in the Near and Middle East, New York, 1956, i, 120), supported Abû Madyan, and an expedition was prepared. The project was abandoned on the death of the ambitious bàkînmâr of the Egyptian Sudan, Ahmad Paşâ Abû Widân, in Ramadan 1259/Sept.-Oct. 1844. Relations between Hûsuyan and the viceroyes Saîd and Ismâ’îl were friendly. In the later years of Hûsuyan’s reign, his sight failed, and affairs were directed by his sister, the iya basî Zamzam.

His successor, sultan ‘Ibrahim, soon became involved in hostilities over the Rizaykât with al-Zubayr Rahmân Manşûr, the Sudanese merchant-prince who controlled the western Bahr al-Ghazál. Al-Zubayr invaded Dâr Fûr from the south, in collusion with the bàkînmâr Ismîlî Paşâ Ayyûb, who brought a force from the east. ‘Ibrahim was defeated by al-Zubayr, and killed at the battle of Manawâshl on 24 Oct. 1874. Dâr Fûr was annexed to the Egyptian Sudan.

The Khedivial and Mahdist Periods.

Fûr resistance, based on Dj. Marra, continued under a series of shadow-sultans. The first, Hasan Allâh b. Muhammad Faḍl, surrendered to al-Zubayr, and was sent, with a large number of Fûrawî princes and notables, to Egypt. His brother and successor, Bûsh, raised an alarming revolt, but was killed by al-Zubayr’s son, Sulaymân. A further revolt, in 1877, against newly imposed taxation, found a leader in Hârûn, a grandson of Muhammad Faḍl. He besieged El Fasher, the provincial capital, but was driven back to Dj. Marra, and was killed in 1880 by al-Nûr Bey Muhammad ‘Aŋkâra, subsequently a Mahdist officer. Another grandson of Muhammad Faḍl, ‘Abd Allâh Dûd Bandjîa, next assumed the sultanate in Dj. Marra.

The outbreak of the Mahdist revolution in 1881 produced a critical situation in Dâr Fûr, since many of the Mahdist sympathizers with the Mahdi, like them a riverain Sudanese, while both the Fûr and the Rizaykât wished to throw off khedivial rule. After the Mahdi’s capture of El Obeid and defeat of the Hicks expedition (January and November 1883), Slatin, the Austrian governor, was isolated, and he surrendered in December to Muhammad Bey Khâlid, formerly sub-governor of Dûr, whom the Mahdi had appointed as his agent in Dâr Fûr.
In 1884, a Mahdist force captured Dûd Bandâja, who subsequently became a Mahdist officer. After the Mahdi's death in 1885, Muḥammad Khalîd contested a plot with the Aḥrâf (the Mahdi's relatives), to oust the new sovereign, the Khalîfa, ʿAbd Allâh b. Muḥammad [quoted]. He marched on Omdurman with considerable forces, but was intercepted and arrested at Bâra (April 1886). He had left to govern Dâr Fûr a son of sultan Ibrâhîm named Yûsus, who in 1887 revived the sultanate. A force under ʿUmmân Ādâm, the governor of Kordofân, defeated and killed Yûsus early in 1888. ʿUmmân Ādâm now assumed the governorship of Dâr Fûr also.

A few months later, Mahdist authority in Dâr Fûr crumbled, in consequence of a revolt, originating in Dâr Tâma under a messianic ḥâkîm, Abû Dûmmayyâ. He was joined by the shadow-sultan of the Fûr, Abu ʿl-Khayrât (a brother of Yûsus b. Ibrâhîm) with his supporters. The Mahdist forces were heavily defeated in two battles, but Abû Dûmmayyâ died of smallpox and his followers were routed outside El Fisher (February 1889). Abu ʿl-Khayrât fled to Di. Marra, where he was killed by his slaves in 1891. ʿUmmân Ādâm re-established his authority in the province, especially over the Baḫƙâra, who had supported the Mahdiya against the khedivial administration, but were now resentful of Mahdist control. The Khalîfa's tribal policy, executed by ʿUmmân Ādâm, rested on three bases: the substitution of new nominees for the hereditary chiefs, the enforced migration (ḥidjâra) of tribes to Omdurman, and the exploitation of tribal rivalries. The great migration of the Taṭîsha, the Khalîfa's own tribe, was set on foot by ʿUmmân Ādâm in 1888, and had important consequences for the Mahdist state.

ʿUmmân Ādâm died in 1891, and was succeeded as governor by Muḥammad Ḥâmid, like himself a relative of the Khalîfa. In 1894, a Belgian expedition from the Congo reached the southern fringe of the province and concluded a treaty with the chief of the Farîḫî tribe, but withdrew shortly afterwards, (see A. Abel, Traduction de documents arabes concernant le Bahr-el-Ghazal, in Bull. de l'Académie royale des Sciences coloniales, xxv/5, Brussels, 1892, 1385-1409). In 1896, Muḥammad was recalled to Omdurman, to command the forces sent against the Anglo-Egyptian invasion.

The reign of ʿAlî Dinâr and subsequent history. When the Mahdist state fell in 1898, ʿAlî Dinâr, a grandson of Muḥammad Fadîl, who had had a chequered career in the Mahdia (see A fragment from Alî Dînar, in Sudan notes and records; xxvii/1, 1953, 114-6), seized El Fisher and installed himself as sultan. Nominally a vassal of the Condominium government in Khartoum, he long imitated as success the Khalîfa's policy of excluding Europeans from his dominions. He was challenged by a survivor of the Mahdist régime, Sanîn Hûsâyn, who had held Kaṣkâbiyyâ since ʿUmmân Ādâm's time and now assembled a force of tribes north of the Kordofân province. Sanîn was not finally defeated until 1908. Like his predecessors, ʿAlî Dinâr had difficulty in asserting his authority, on the one hand over the Baḫƙâra, on the other, over the buffer states between Dâr Fûr and Waddâl. This western frontier problem became more serious with the French occupation of Waddâl in 1909. The French, while accepting Dâr Fûr proper as within the British sphere of influence, wished to occupy the buffer states. Although the British, through the Condominium government, vigorously supported Fûrîwîlî claims, the sultan, after prolonged hostilities, succeeded only in holding Dâr al-Masâlît. Finding himself pressed by the extension of French power, and exasperated by a series of local grievances against the Condominium government, ʿAlî Dinâr was sympathetic to the Ottomans in the First World War. On the pretext of forestalling an attack from Dâr Fûr, the Condominium government sent a force against him. The sultan's army was defeated near El Fisher on 21 May 1916. and he himself was killed on 6 November.

The removal of ʿAlî Dinâr, was followed by a settlement of the western frontier with the French. The final compromise in 1919 allowed Dâr Fûr to retain Dâr Kûmr and two-thirds of Dâr al-Masâlît, part of which had been ceded by its ruler to the French in 1912. The delimitation of the boundary was completed in 1924. The pacification of Dâr Fûr did not prove difficult, although there was a belated rising under a messianic ḥâkîm at Nyala in 1921. As a consequence of its late annexation, Dâr Fûr did not share in the early phase of development of the Anglo-Egyptian Sudan: it remained an isolated and backward province until the last years of the Condominium. The opening-up of air communications from 1947, the development of schools, and the construction of a railway line through southern Kordofân to Nyala (completed in April 1959) are indicative of the fuller integration of Dâr Fûr in the modern Sudan.

Administrative history.

The administrative system under the Kayra sultans was described by al-Tûnûsî and, more systematically, by Nachtigal. It had few Islamic features. Almost all the titles were Fûrîwîlî, not Arabic; the chief exception being the sultan's personal representatives (mâdâdûm, pl. mabâdâm), who were usually appointed for a term of years and exercised overriding powers in their provinces. The royal women (sing., mayâm) held a dignified position; the queen-mother was the second person in the realm, but more real power was possessed by the queen-mother and the sultan's sister. Slaves and eunuchs played an important rôle: the chief minister, who was also ex officio governor of the eastern province, was a eunuch. The powers of this functionary were reduced after the death of the kingmaker, Muḥammad Kurra. A tradition that sultan Abu ʿl-Kâsim was desertected in battle by his relatives because of his inclination to the blacks probably marks an increase in the military rôle of the ruler's slave-household at the expense of the free clansmen.

A reorganization of the slave-army was carried out by sultan Muḥammad Hûsâyn, who equipped his troops with firearms. Besides the slave-soldiers, the forces included warriors summoned at need to the black; probably marks an increase in the military rôle of the ruler's slave-household at the expense of the free clansmen. A reorganization of the slave-army was carried out by sultan Muḥammad Hûsâyn, who equipped his troops with firearms. Besides the slave-soldiers, the forces included warriors summoned at need to the black; probably marks an increase in the military rôle of the ruler's slave-household at the expense of the free clansmen.
allowed, to that of other parts of the Egyptian Sudan. A governor (mudir umum Ddr Fur) had his headquarters at El Fasher, while sub-governors (mandib) were stationed at El Fasher, Shakkâ (to control the Rizaykât territory), Dârâ (on the route from the south to the capital), and Kâkbâbîyya (on the route to Wадdâl). The governors have been listed by R. L. Hill, *Rulers of the Sudan*, 1820–1885, in *Sudan notes and records*, xxx/1, 1951, 85–95.

The Mahdist régime inherited the problems and administrative structure of its predecessor. Dâr Fur, later combined with Kordofan in the Province of the Darfur and its neighbours under Sultan ʻAlî Dînâr, is to appear in *Sudan notes and records*. The government archives in Khartoum contain a very considerable body of material relating to the Mahdist, the rule of ʻAlî Dînâr and the Condominium period.

(F. M. Holt)

**Dâr al-Hadîth. I. Architecture**

II. Historical development. The name Dâr al-Hadîth was first applied to institutions reserved for the teaching of hadîth in the sixth century of the Hijra. The conclusion that until that time hadîth were taught in the ‘an-Nâsir al-Muhammadi al-Madînî’ bi-tâliq ad-‘Arab wa l-Suddn, one of the centres for hadîth-study and their distribution in different centuries throughout the Muslim world. Interest in the science of hadîth and the study of it had continued for centuries without intermission in Syria, where the first Dâr al-Hadîth was founded, one of the centres (with an interruption of 90 years) being Jerusalem (op. cit., 93b).

In his treatise *al-Amâsir dhawât al-‘itârah* (MS Velyeydîn 645/3, 908–909), al-Dâhâbî (d. 748/1347–8) gives us comprehensive information about the centres for hadîth-study and their distribution in different centuries throughout the Muslim world. The government archives in Khartoum contain a very considerable body of information about the government officials and their distribution in the centre of the government council is the most important function. For the administration under ʻAlî Dinâr and the Condominium, see G. D. Lampen, *History of Darfur, in Sudan notes and records*, xxxii/2, 1950, 203–8.

The first institution to be called specifically Dār al-Ḥadīth was founded by the Atabeg Nur al-Dīn (d. 569/1172-3) (al-Numayrī, al-Dāris fi 'tarrākh al-madāris, Damascus 1946, i, 99, cf. Msh. Studi., ii, 187). Though Nur al-Dīn was himself Hanafi, he limited this school to Shafiʿīs (Wüstfenfeld, Die Akademien der Araber und ihre Lehrer, 69), and set over it the historian and mubaddith ʿAbd Allāh b. ʿAsṣākir (d. 571/1175-6) (al-Numayrī, op. cit., i, 100). There were many madrasas for this institution and the people attached to it (Abū Shāma, al-Raṣūdatayn, Cairo 1956, i, 23). Ibn ʿAsṣākir was succeeded by his son al-Kāsim (d. 600/1203-4) (al-Numayrī, op. cit., i, 100). Al-Numayrī gives the names of the rectors of this hadīth-school down to Ibn Rāfīʿ (d. 718/1318). The opening of this first Dār al-Ḥadīth was followed by the establishment of numerous similar institutions to which leading historians and mubaddiths were attached, mostly in Damascus and its neighbourhood (for which al-Numayrī records the names of 152), but spreading immediately all over the Muslim world: thus ʿAbd al-Latīf al-Baghdādī (d. 620/1223-2), on going to Mosul in 585/1189, found such a dār al-ḥadīth on the ground floor of the Madrasa of Ibn Muhādīr (Ibn Abī ʿUsaybīʿa, ii, 204); in 622/1225 al-Malik al-Kāmil Nāṣir al-Dīn founded in Cairo a dār al-ḥadīth inspired by the Dār al-Ḥadīth al-Nāṣiriya, setting over it Abū ʿAlī al-Ḥaḍrāt b. Dībāy. Madrasas of Jerusalem, over 40 in number, were set up by Sayf al-Dīn al-Malik al-Nasīrī (Khitat, ii, 123-8). Al-Malik records the names of 16), cf. al-Nuṣayri, op. cit., i, 100). There any who have refused to be converted after being duly invited on the best terms, and against whom any kind of warfare is henceforth permissible in keeping with the rules of ḍiḥḍa ḳaṭib or, more especially, al-dār al-ḥarb is rebel: the emperor of Byzantium is malik al-Tā𝐿īyīn (al-Ṭabarī, Annals, passim). Classically, the dār al-ḥarb includes those countries where the Muslim law is kept in force, but where dhimmīs no longer enjoy any protection there, and the protection of the faithful and dhimmīs. A territory of the dār al-Īslām, reconquered by non-Muslims of any description, thereby becomes a territory of the dār al-ḥarb once again, provided that (1) the law of the unbelievers replaces that of Islam; (2) the country in question directly adjoins the dār al-ḥarb; (3) Muslims and their non-Muslim dhimmīs no longer enjoy any protection there. The first of these conditions is the most important. Some even believe that a country remains dār al-Īslām so long as a single provision (ḥukm) of the Muslim law is kept in force there. The definition of the dār al-ḥarb, like the concept of dhimmī, has in the course of time been modified by the progressive loss of unity and strength in the Muslim State. The notion of dhimmīs as non-Muslims of any description, thereby becomes a territory of the dār al-Īslām to be converted after being duly invited on the best terms, and against whom any kind of warfare is henceforth permissible in keeping with the rules of ḍiḥḍa. Dār al-Ḥarb, ‘the Land of War’. This conventional formula derived from the logical development of the idea of the ḍiḥḍa [q.v.] when it ceased to be the struggle for survival of a small community, becoming instead the basis of the “law of nations” in the Muslim State. The ʿUmmān, in its latest texts on the holy war, IX, 38-58, 87, makes this “holy war” a major duty, a test of the sincerity of believers to be waged against heathen communities as long as they are to be found (IX, 5). This war must be just, not oppressive, its aim being peace under the rule of Islam.

The ʿUmmān does not as yet divide the world into territories where peace and the faith of Islam reign, (dār al-Īslām [q.v.]), territories under perpetual threat of a missionary war (dār al-ḥarb), or, of course, territories covered by agreements and payment of tribute (dār al-ʿahd, dār al-ṣulh [q.v.]).
writer al-Shâbushtî (d. 388/998). The vizier of al-
€Aziz, Ya'qüb b. Killis (d. 380/990), organized
dr al-frikma which was administered by the
dr al-dâr, numerators, logicians and mathematicians. The Cairo
dr al-Hâkim housed in the north-western
building, to the south of the eastern part of the
or 461/1068, in the reign of al-
€Muntasir during the civil wars, and during the
or 576/1180, the library was once more closed. Šalâb al-Dîn sold the
palaces, but the books, unfortunately some of them were re-purchased by
men such as al-Kâšî al-Fâdîl.

Dâr al-Ilm, 'the Land of Islam' or, more simply, in Muslim authors, dârrud, 'our Country' is the whole territory in which the law of Islam prevails. Its unity resides in the community of the faith, the unity of the law, and the guarantees assured to members of the umma [q.v.]. The umma, established in consequence of the final revelation, also guarantees the faith, the persons, possessions and religious organization, albeit on a lower level, of dâmmis, the followers of the creeds of Christianity and Judaism which sprang from earlier revelations, and of the Zoroastrians (Madjûs) [cf. dâmâmm, dâmm]. Until the beginnings of contemporary history Islam's ocular
aspirations were maintained. Hadîçis go back to the Prophet, e.g., a dâhm, on the capture of Rome (al-Bukhari, Dîhâd, § 135-139), are the source of these aspirations. In the classical doctrine, everything outside dâr al-Islam is dâr al-barb [q.v.]. However, the historic example of Nadjîrân (al-
€Balâdîjûfî, Futâh, section ii, s. 852 Nadjîrân) and, at a later date, that of Nubia are proof of the permibility of truces (budnâ, salûk) concluded with the sovereigns of neighbouring territories, who preserve their internal autonomy in exchange for tribute which constitutes an external and formal recognition of the Muslim sovereign's authority (cf. Dâr al-

models of calligraphy, on all scientific subjects. It was
governed by two şâfirî and a hâdî, and after Sâbi'ûr's death the Shî'î poet al-Shârif al-Murta'dî is thought to have taken over its administration. We also have the names of some of those who were appointed librarians, such as the grammarian Abû Âmmâd 'Abd al-Sâlim, otherwise known as al-
€Wâdîjîkâ (d. 405/1014) (a friend of Abu l-'Alâ' al-
€Ma'arî) and the secretary Abû Mansûr Muhammad b. Alî (d. 418/1027). Sâbi'ûr's library was used by
numerous scholars, in particular by Abu l-'Alâ' al-
€Ma'arî during his stay in Baghdad (393-400/1009-1010), and it also received the works of con-
temporary writers such as the Fâtîmid secretary Abû b. Khâyrân (d. 431/1040). It was finally burnt down when the Saldâjûks reached
Baghdâd in 447/1055-56. The vizier 'Amîd al-Mulîk al-Kundurî was able to save only a few books from destruction.

It is thought that a Sunni Dâr al-Ilm was founded at Fustât in 400/1010 by the Fâtîmid caliph al-
€Hâkim; it was governed by two Mâlikî scholars, but after three years they were put to death and the library was suppressed (Ibn Taghîbirî, ii, 64, 105-106).

Dâr al-Ilm, 'house of science', the name
given to several libraries or scientific insti-
tutes established in eastern Islam in the 3rd/9th and 4th/10th centuries. After the disappearance of al-
€Ma'arî's Bayt al-Ilm (q.v.), a man of letters called Allâb al-Dîn Ya'âvî al-
€Munadidiim (d. 275/888), friend of al-Mu'tawakkil and, later, of al-
€Mutawakkil, appointed librarians, such as the grammarian Abu 'l-
€Alâ' al-
€Harîrî and the secretary Abu Mansur Muhammad b. Alî (d. 418/1027). Sabûr's library was used by
different scholars, in particular by Abu 'l-
€Alâ' al-
€Ma'arî after his stay in Baghdad (393-400/1009-1010), and it also received the works of con-
temporary writers such as the Fâtîmid secretary Abû b. Khâyrân (d. 431/1040). It was finally burnt down when the Saldâjûks reached
Baghdâd in 447/1055-56. The vizier 'Amîd al-Mulîk al-Kundurî was able to save only a few books from destruction.

DAR AL-MA'FUCZÂT AL-UMMÂYYA. The Egyptian State Archives, consisting of the administrative records of the governments of Egypt from the start of the sixteenth century until the present time, and stored at the Citadel and in the Abidine Palace in Cairo. The extant archives of the Ottoman treasury and administration in Egypt from the time of its conquest by Selim I in 922/1517 until it became autonomous under Muhammad 'Ali at the start of the nineteenth century are located at the Citadel (al-Ka'da) archives, which were built by Muhammad 'Ali in 1242/1827 to store the materials remaining after a disastrous fire in 1235/1820. A very few late-Mamlûk documents and registers, less important nineteenth-century administrative records, and all registers of births and deaths in Egypt are also kept at the Citadel, but the bulk of the nineteenth and twentieth century Egyptian government records are kept at the Abidine Palace in Cairo.

Materials remaining from the Ottoman administration fall into two broad classifications—registers (daf'dat) and individual documents (awrâk). There are two basic types of Ottoman administrative registers, those containing copies of orders and decrees, written in the Şiyâdât script, and those containing financial data, written in the Şiyâdât script. Most of the registers of Ottoman orders and decrees stored in Egypt were destroyed in the fire of 1820, and such materials are available only in the published collections of Feridun and Hayrun Efendi (see bibliography) and in the Mümümm-î Mişr registers kept in the Bayvekkâlet Arjâvi [v.q.] in Istanbul. The materials remaining in the Citadel archives are principally financial registers and a few individual documents. In addition, the archives possess numerous private collections seized by the State upon the death of their owners. The nineteenth and twentieth-century archives kept in the Abidine Palace are far more comprehensive and complete and include copies made in recent times of materials concerning Egypt found in the principal European archives.

Registers of the deliberations of the Dâwân of Ottoman Egypt and of judicial archives since late Mamlûk times are found in the archives of the religious courts (al-Maâîma li 'l-Ahwdl al-Shakh-šiyâya) in Cairo.

(R. Paret)

DAR AL-Sâ'ÂDA [see SARAY].

DAR AL-SALÂM, "Abode of Peace", is in the first place a name of Paradise in the Kur'ân (vi, 127; x, 26), because, says Baydâwî, it is a place of security (salâma) from transitoriness and injury, or because God and the angels salute (salâma) those who enter it. Hence it was given to the city of Baghdad by al-MA'Nî, as well as Mardinat al-Salâm (cf. BAGHDA, and also the geographical lexicon of Yâqût, ad init.). For the capital of Tanganyika see DAR-ES-SALAM.

(T. H. Weir*)

DAR-ES-SALAM, capital of the British administered United Nations Trusteeship Territory of Tanganyika, formerly German East Africa, lies in Lat. 6° 49' S. and Long. 39° 16'E. The settlement of
DAR-ES-SALAAM — DAR AL-SHIFA

DAR-AL-SHIFA? [see SIMKHASTAN iii].

DAR-AL-SINA’ (also, but more rarely: Dār al-ṣanʿa). Etymologically, this compound can be translated "arsenal" establishment, workshop. In fact it is always applied to a State workshop: for example, under the Umayyads in Spain to establishments for gold and silver work intended for the sovereign, and for the manufacture and stock-piling of arms. But the sense most widely used is that of "arsenal for the construction and equipment of warships"; dār ṣin’a li-ṭīnḍā al-sufun; or simply dār al-ṭīnḍā, which also occurs. This does not indicate the arsenals which we would consider later, while the construction of private merchant ships is not dealt with. See BARRIYYA, MILĀḤA, SAFINA, USTūL.

From the Arabic compounds dār al-sin’a, dār al-ṣanʿa the words for "arsenal" and "wet-dock" in the "mediterranean" languages are derived: Castilian alaraza, arsenal, darsena; Catalan darsanera, darsena; Italian arsenale, darsena; Maltese tarżara, tarsnar. It is probably from an Italian dialect that Ottoman Turkish borrowed its tersūn (sometimes "returkized" as tarsẖāne, on the analogy of topẖāne "arsenal for artillery"); the word passed into several languages from the early Ottoman Empire: modern Greek τερσάνα, Syrian Arabic tarsẖāne, Egyptian Arabic tarsūn and tarsẖāne.

Eastern Mediterranean. It was naturally in the eastern Mediterranean that the first arsenals in the service of the Muslims operated, partly inherited from the romano-byzantine Empire. Victorious on land, the Arabs remained exposed to reprisals by sea, which they tried to prevent by making use of the experience of the indigenous populations until, before long, they themselves took the offensive. Muʿawiyah, when still governor of Syria, was the first to organize an arsenal at Acre, in 28/649, for the Cyprus expedition; the arsenal was later transferred to Tyre, where it was combined with a fortified dock, closed at night with a chain, in which vessels took refuge. Nevertheless, al-Mutawakkil thought it expedient to restore the arsenal to Acre, and Ibn Tūlūn, when he was put in charge of it, had it fortified (by the grandfather of the geographer al-Mukaddasī) in the model of the one at Tyre. It is possible that smaller establishments also existed at times at Tripoli and Lāḏīğiyya (Latakia); however, apart from the sea they were eclipsed, in the extreme north, by the riverside works at Tarsus which combined the activities of the holy war on land and sea until, as the result of a revolt, the Caliph al-Muqtadī had its fleet burnt in 287/990 and, fifty years later, the Byzantines regained possession of it. The Crusades gave the final blow to these establishments which were probably already weakened by disorders and political divisions, and it does not seem that the Mamlūks subsequently restored them even at Beirut, which had become the chief town on the littoral.

Egypt. It was also Muʿāwiyah, when Caliph, who was responsible for the reopening of the Egyptian arsenals which the autonomous rulers of Egypt were, from the 3rd/9th century onwards, to bring to their fullest and most lasting development. The first to operate were those which the Byzantines had owned, at Kulzum (Clysma)—later to be replaced by Suez—which, thanks to the restoration of the canal linking it with the Nile, served both the Red Sea and the Mediterranean, and at Alexandria. Other naval centres were later established at Rosetta, Damietta and Tinns on the mouths of the Nile, and to protect

Encyclopaedia of Islam, 11
them from Byzantine raids the 'Abbasids (al-Mutawakkil in particular) had them fortified and equipped with enclosed harbours like those in Syria. Numerous faptive expeditions of troops of men and materials, made from the Umayyad period onward, to meet the needs of these arsenals. Nevertheless, the most secure, and consequently most highly developed, arsenal was the one established on the Nile near Fustat (later Cairo), at first on the island of Rawda, in 54/674; probably damaged by Marwân II who had the ships burnt to prevent the 'Abbasids from pursuing him (129/750), it was reorganized during the naval struggles of the 3rd/9th century with the Byzantines by al-Mutawakkil (238/853); the island at that time was called Dîazîrat al-šînâ‘a. The fortifications which it had possessed in the time of the Byzantines (under the name of Babylon), and which had fallen into disrepair since the conquest, were restored by Ibn Tuḫdî, who also carried out the work of rebuilding the fleet. The decisive effort was however made by the 1khsbîddîs in the following century, to meet the Fātimid threat. As it was at that time impossible to defend the arsenal from attack owing to its insular position, Ibn Tuḫdî had the island made into a garden, and gave orders for another arsenal to be set up on the river bank at Fustat at the place then called Dâr bint al-Фâth. It seems however that under the Fatimids the two arsenals operated alternately or simultaneously; the wâzîr al-Ma‘mûn al-Baṭâbîlî in 516/922 tried to rationalize shipbuilding by making the arsenal at Misr (Fustât), now enlarged, specialize in ghaḍândî and “State vessels”, and the Island arsenal in gâlândisyyât and barbîsyyât. A third arsenal operated in the quarter known as al-Maks, north of the town, at the time of the early Fātimids, but we know nothing more about it; a fleet fitted out against Byzantium was burnt there in 586/996. The events of the Crusades and the troubles at the end of the dynasty proved fatal to the fleet and to the Cairo arsenals which disappeared in flames. Salâdîn attempted to re-establish shipbuilding at Alexandria, and in the Mamlûk period we once again hear of a fleet fitted out at the time of the Cyprus expedition; but these were sporadic efforts occurring at long intervals and, roughly speaking, although there had been sudden fluctuations in shipbuilding even earlier, it is safe to say that the Egyptian arsenals disappeared in face of the Italian domination over the Mediterranean.

The Muslims in Crete had an autonomous naval base at Khandak in the 3rd-4th/9th-10th centuries. The West. The oldest arsenals in the West were necessarily somewhat newer than those in the East, but some of them were perhaps to survive longer, and the East at times tried to make use of the West in this respect as a reserve of materials and equipment.

Ifrîkiya. The oldest arsenal in the West was at Tunis [q.v.]. It was founded in about 75/694 by the governor Ḥassân b. al-Nu’mân on the orders of the Umayyad Caliph in the East, 'Abd al-Malîk b. Marwân (who also reorganized the arsenal on the coast of Ifrîkiya and, in particular, to conquer Sicily.

Other maritime arsenals were recorded at Al-Mahdiyya, Sousse (= Sûsa) and Bougie (= Bigûiya).

Al-Andalus. It was only in the first quarter of the 4th/10th century that the Umayyads in Spain built arsenals. In fact they needed fleets, firstly to resist the Norman attacks, and subsequently to support their policy of intervention in North Africa against the Fâtimids. The most important arsenal was at Almeria (= al-Mârîya). Others are recorded at Tortosa (= Turtûsha), Denia (= Dânîya), Almuñecar (= el-Munakkab), Málaga (= Mâlalâ), Gibraltar, Saltés (= Shaltîsh), Santa Maria de Algarve (= Shantamariyya), Silves (= Shîlîb), Alcacer do Sal. There was, perhaps, one at Cadiz (= Kâdîs), a fief of the Banû Maymûn, whose family provided several shâdîs for the Almoravid fleets, and also in the Lusitanian.

Western Magrib. The two oldest are those at Ceuta and Tangier, on the straits of Gibraltar, intended at first for merchant ships. With the advent of the three great Berber-Moroccan dynasties, the Almoravids, Almohads and Marinids, these arsenals became military establishments. They supplied warships and transport vessels, making it possible to keep command of the straits and to allow the passage of armies sent to defend Muslim Spain.

The other principal arsenals known in the Middle Ages were at Algiers (this was to be particularly developed later, after the Ottoman occupation), Oran, Hunayn, Bâdis, al-Ma‘mûra (now al-Mahdiyya at the mouth of the Subû), Salé and Anfa (now Casablanca).

Sicily. We cannot say if the Muslims established arsenals in the places they occupied on the island or the Italian mainland in the 3rd/9th and 4th/10th centuries. It is probable that there were some in Sicily, at Palermo and Messina.

Indian Ocean and neighbouring seas. In general, the Indian Ocean with its Muslim branches the Red Sea and the Persian Gulf were peaceful areas compared with the Mediterranean; many pirates were to be found there, but no hostile naval power. Police forces consequently proved sufficient, and it is probable that merchant ships, built as we know without nails, were often used by them; there seems to have been no true arsenal of the Mediterranean type. However, apart from Kuluzum which has already been referred to, it is certain that the Fâtimids maintained a fleet with ʻAyyûb as its base, to safeguard pilgrims and merchants in the Red Sea on their way to the Yemen. There is little doubt that shipbuilding was carried out in the large eastern commercial ports: Aden, at an earlier period Basra (or rather its outer harbour and precursor Ubulla), Sirf, later replaced by Rîsh, Shâhîr then Mascat in ʻUmân, and perhaps also in Muslim towns on the coast of west India and east Africa; apart from Ubulla, it is difficult to be certain of their status and political character, and even there the dockyards were not able to remain in operation after the 5th/11th century when the maritime activity of Başra and Sirf began to decline considerably.

The Timber-Supply. The arsenals were naturally set up either within a short distance of districts producing timber for shipbuilding (pine and cedar, oak, acacia labak or sam in Egypt, sycamore and to some extent palm and fig) or else in a favourable situation for importing it from Italian, Indian (teak, coconut palm) and East African merchants, not to mention the raiders of the Anatolian coasts. Of the various causes of the decline in ship-building after the 5th/11th century, one may be the increasing shortage of timber.

DAR AL-ŠINA — DAR AL-ULTUM

DAR AL-SULH 'the House of Truce', territories not conquered by Muslim troops but by buying peace by the giving of the tribute, the payment of which guarantees a truce or armistice (huadana, sulh). The two historic examples of such a situation, which were evidently the starting-point for the whole theory, are Nadjran and Nubia. Muhammad himself concluded a treaty with the Christian population of Nadjran, guaranteeing their security and imposing on them certain obligations which were later looked on as khardad (q.v.) by some, and as diizya (q.v.) by others (for the whole question see Baladhurî, Futâh, 63 ff.; Sprenger, Leben Mohammeds, 3, 502 ff.; M. Hamidullah, Documents sur la diplomatie musulmane, 78 ff., Corpus, no. 79 ff.). In the course of events this protectorate proved to be of no use to the inhabitants of Nadjran on account of their geographical situation. For Nubia it was somewhat different. Thanks to their skill in archery the Nubians were able for centuries to defend themselves against the Muslim attacks and to preserve their independence. As a result, ʿAbd Allâh b. Saʿd in 31/652 concluded a treaty (sulh) with them imposing not a poll-tax (diizya) with them. On the other hand, some were not prepared to admit that, besides the Ddr al-Isldm and Ddr al-harb, (q.v.), there existed a third category of territories excluded from Muslim conquest, and they held that in this instance it was in reality a question, not of a sulh or ʿahd, but merely of an armed truce (huadana) and the implementation of reciprocal undertakings (see Baladhurî, Futâh, 236 ff.; al-Makrizî, Khatif, ed. Wiet, iii, 290 ff.; Ibn ʿAbd al-Ḥakam, Futâḥ Muṣr, ed. Torrey, 189). This somewhat vague theory also provided a basis upon which it seemed possible to establish contractual relations with Christian countries; presents sent by the latter were consequently looked on as a khardad. The legal theory was expounded as follows by al-Īmârî. All the territories more or less directly under Muslim control can be divided into three categories; (1) those which have been conquered by force of arms; (2) those which have been occupied without battle after the flight of their rulers; (3) those which have been acquired by treaty, this third category including two instances which depend on whether the property (a) becomes common property (waḥîf) of the Muslim community, or whether (b) it remains in the hands of the former proprietors; in the first instance the former proprietors can in fact remain on their land and become dhimmis; they pay khardad and diizya and their country becomes Ddr al-Isldm; in the second instance, the proprietors of the land keep their estates by contract and from their revenues pay a khardad which is considered as a diizya, and collected until they are converted to Islam; their territory is considered neither as Ddr al-Isldm nor Ddr al-sulh or Ddr al-harb; and their estates can always be alienated or mortgaged without restriction; if the property is transferred to a Muslim, the land is no longer liable for khardad; this state of affairs will continue as long as the proprietors observe the clauses of the treaty, and the diizya for which they are liable cannot be increased since they are not in the Ddr al-Isldm. However, according to Abu Ḥanîfa, if their territory became Ddr al-Isldm they would then be dhimmis and subject to diizya. As regards the situation created by a rupture of the treaty, the various schools are not in agreement. According to al-Ṣâḥîfi, the country, if it is then conquered, belongs to the first category, that is to say, territories acquired by force; and if it is not conquered, it becomes Ddr al-harb. Others, on the contrary, claimed that in both cases it becomes Ddr al-sulh (see al-ʿAbkâm al-sulhdnîyya, Cairo 1298, 131 ff.). It is evident that the position was irregular and ambiguous. Al-Īmârî himself (150 and 164) includes this Ddr al-sulh in his enumeration of Muslim territories (bîldî al-Isldm) and al-Balâdhurî does not observe this distinction when discussing khardad.

In the period immediately following the Crusades numerous treaties, the details of which we possess, were concluded with Christian princes or princelings (treaties with the king of Armenia, the princes of Tyre, the Templars of Anjarâf, etc.; cf. al-Makrizî, Histoire des Sultans Mameluks, trans. Quatremère, ii, 201 ff., 206 ff., 218 ff.). For details and forms, and the traditional justifications of truce agreements concluded between Muslim sovereigns and non-Muslim princes, see al-Kâlqângî, Suḥâ, xii, 321 ff.; xiv, 7 ff.

DAR AL-TAKRIB [see ʿIKṬĪLĀS]

DAR AL-TIBĀʾA [see MATRĀʾA]

DAR AL-TIRĀZ [see TIRĀZ]

DAR AL-ULTÜM or the "House of Sciences", (a) an establishment for higher instruction founded in 1872 by ʿAli Pasha Mubârak [q.v.]. Its aim was to introduce a certain number of students of al-ʿAzhar [q.v.] to modern branches of learning by means
of a five year course, in order to fit them for teaching in the new schools. In fact, as other centres were created in Cairo for the teaching of science, its curriculum was remodelled a number of times and the exact sciences were relegated to the background. The length of the course was reduced to four years. Attached as a Faculty since 1946 to the University of Cairo (formerly Fu'ād), Dār al-Ulūm endeavours to be at the same time Arabic and Islamic, and is proud to be the great Muslim Teachers' Training College of Egypt, influential through the teachers and inspectors who have been trained there. The students are divided into sections: four for Arabic language and three for Islamic studies. The diploma given on completion of the course is equivalent to a Bachelor's degree, and can be followed by a Master's degree or a Doctorate. Since 1951-2, apart from the students of al-Azhar, men who have passed the government secondary schools' 'Baccalauréat' (lawgik) have been admitted, and since 1953-4, a certain number of women students. Formerly, as at al-Azhar, the teaching was free and a modest sum was given to the students monthly, but now teaching fees are charged, with special concessions for those who undertake to become teachers. In 1957-8, there were 1,715 students as well as some scholarship holders completing their education in European universities.

(b) the religious institution at Deoband (q.v.).

c) Fārangi Mahāll. In a house known as the Fārangi Mahāll in Lucknow, granted by Awrangzīb to his family as compensation for loss of property on the murder of his father in 1103/1691, Nizām al-Dīn started two years later a madrasa which came to be known as Dār al-‘Ulama Fārangi Mahāll. Muḥāf al-Nizām al-Dīn's fame rests mainly on the introduction of a syllabus of religious instruction called dārs-i Niṣāmīya, an improvement on the syllabus said to have been originally drawn up by Faṭḥ Allāh al-Shirāzī, a well-known scholar of Akhīr's circle of the sīra of the Prophet, and this syllabus on the rules of Arabic grammar, logic, and philosophy, while practically no attention is given to modern disciplines. There has more recently been a persistent demand for a change in the curriculum, so far unsuccessfully.

With the establishment of the Dār al-‘Ulama at Deoband the Fārangi Mahall institution lost the pre-eminence it had enjoyed since the time of Awrangzīb, and has now receded into the background; in recent times it has been politically active: in the agitation in the late 1930s for the creation of a University of Allah-abad, it nominated Shibli Muhammad, and failed to imbibe either the spirit of orthodoxy characteristic of Deoband or the purely rationalistic attitude of 'Alligār. Its foremost scholar was Sayyid Sulaymān Nadwī, whose completion of the Urdu biography of the Prophet, started by Shibli, is a blending of the seemingly divergent views of East and West in the field of historical research. The Nadwa, however, was not successful in the religious sphere; its leaders were not orthodox, and could not instil into their students the spirit of classical Islam. The result was that the Nadwa came to be known merely as an educational institution with Arabic as the medium of instruction, and its reputation as a seat of learning and Islamic research is now on the decline.

DĀRĀ, DĀRĀB, Persian forms (adopted by Arab writers) of the name of the Achaemenian king familiarly known under the hellenized form Dareios (Darius). Dārāb, and its abbreviation Dārā, are directly derived from the ancient Persian Darayavahvah- (Bartholomae, Altiranisches Worterbuch, 738; the different grammatical cases attested by Persian inscriptions, in Tolman, Ancient Persian Lexicon and Texts, 1008, s.v. darayvanah; for the ancient historians of these kings, Gr. I. Ph., ii, index, s.v. Dāreios).

The sources of information about these princes collected by Persian and Arab historians are legendary rather than historical (cf. preface by J. Mohl, Livre des Rois, 19th ed., v, 1877). The Persian poet Firdawsi (op. cit., v), of later date than the Arab historians, was inspired by their accounts particularly in regard to the reign of Ardashir (Iskandar), but he combined them with elements from Persian legends. His account, even when stripped of poetic elaborations, is fuller than those of the Arab historians, even the earliest in date, al-Ṭabarī. A short summary follows (Dārāb and Dārā are Darius II and Darius III respectively).

Goshtāsp (Vishtasp, the Greek Hystaspe), king of Persia, named as his successor his grandson Bab-
man, son of Isfandyar (Vahman, derived from the Avestan Vohu Manah, “Good Thought”), in whom we recognize Artaxerxes (Artakhshatra) Longhard. In accordance with the hēvēr-dar (hastaveda) practice, Bahman married his own daughter Homay (“he who appears to represent in popular legend Parsatis”), historically the wife of Darius II, to quote J. Mohl; Bahman got her with child; before his death, he declared her to be Queen of Persia, and named as his successor the child whom she was to bear. From the time of its birth, the mother entrusted her child to a nurse who reared it secretly: when it was eight months old, the queen placed it in a box filled with treasure and committed it to the waters of the Euphrates; two spies set by the queen to keep watch brought her news that a washerman had rescued the baby. He and his wife, having lost their son, adopted the child and named it Dārāb (Persian: dar ăb, “in the water”, popular etymology); he grew up and questioned his parentage. A war broke out; he took part in it, came to the notice of the queen, then won great renown; the Persian commander—in-chief spoke to the queen of him and led her to recognize a jewel which she had fastened on her infant’s arm. On Dārāb’s return she had him proclaimed king. He founded Dārābgird, defeated first the Arabs and then King Fāykalōs (Philip of Macedon); he compelled him to pay tribute and married his daughter. He was however repelled by her foul breath and sent her back, pregnant, to her father. She gave birth to a son whom she named Iskandar. Dārāb had Iskandar recognized as his own son. Dārāb for his part had had by another wife a son named Dārā. Then the two young princes became kings. Iskandar, refusing to give Dārāb the requisite tribute, conquered Egypt and invaded Persia which he hoped to take over from his half-brother; disguised as an ambassador he came to Dārāb’s camp and was received with great pomp; he was, however, recognized, took to flight and succeeded in escaping; subsequently inflicting four defeats on Dārāb. Dārāb was assassinated by his minister who informed Iskandar; horrified by the news, the latter hurried to his half-brother whom he found on his death-bed. Dārāb spoke with nobility of God’s almighty power, and asked Iskandar to marry his daughter Rusḥanak ( Roxane) and to treat the Persians well. Iskandar who became king of Persia made further conquests. (The Deeds of Alexander, Iskandar-nāma, written by the Persian poets Nizāmī, Amir Khusraw, Dāʿīml, only describe Dārāb’s defeat, with further moralizing upon the fickleness of fortune.

Accounts given by the Arab historians differ only in certain details from that of Firdawš. In the Chronicle by al-Ṭabarī (Persian version, trans. Zotenberg, i, 508 ff.), the infant Dārāb was saved from the water by a miller; Homay, when told of this, entrusted her son to him with the words (in Persian): dar ("look after him!"); whence the name Dārā (another popular etymology); “it is also said that he was called Dārāb because he had been found in the water” (dar ăb); Homay voluntarily told her son the secret of his birth when he reached his twentieth year; on Iskandar’s refusal to give tribute, Dārā had a symbolic message sent to him (racket, ball, sack of sesame) very similar to that sent by the Scythians to Darius I (Hecdotus, iv, 131-33; and cf. E. Dobrée, Le dechiffrement des ecritures, French trans. 1959, 24); as a result of Dārā’s injustice and wickedness, his soldiers deserted and his two chamberlains murdered him with the complicity of Iskandar who was hypocrite enough to be present at Dārā’s death-bed and then to punish his assassins. Hamza of Khorasan (probably a nephew of Dārā) to the throne and Iskandar was crowned as Dariush III. In al-Tha’labī’s History of the kings of the Persians (ed. and trans. Zobtenberg, 393 fl.), there is the same fanciful derivation of the name Dārāb, an account practically identical with al-Ṭabarī’s, also insisting upon Dārā’s wickedness and Iskandar’s duplicity. The same account appears in al-Makdisī’s Book of the Creation (ed. and trans. Cl. Huart, iii, 154-9), with the exception that Iskandar, after refusing to pay tribute, thought better of it and sent it with an apology: Dārā gave him his daughter’s hand.

Just as the Pseudo-Callisthenes had made Alexander heir to the kings of Egypt, so the legendary history of Persia made Iskandar a half-brother of Darius III with whom he disputed the throne (possibly a confused allusion to Cyrus the Younger’s revolt against his brother Artaxerxes II in 401). Dārāb (or Daras-Anastasiopolis) is a fortress situated between Mardin and Nasbīn, captured from the Greeks by Chosroes I during the campaign in 540 (Nöldeke, Gesch, der Perser ... zur Zeit der Sassaniden, 127, 372 and 445).

DARĀ. This is the name both of a river of south Morocco which rises on the southern slope of the High Atlas and flows into the Atlantic south of the Djebel Bānī, and of a Moroccan province which stretches along the two cultivated banks of this water-course from Agdz as far as the elbow of the river Darā, for a distance of about 120 miles in a generally north-west to south-east direction. This province is traditionally divided into eight districts corresponding with the wider parts of the valley which are separated by mountain barriers forming narrows. From north to south these are: Mazgīta, Ayt Sadrā, Ayt Zarī, Tinīlzīn, Tarnāṭa, Fazwāṭa, Ktāwa and Māhimād. It is populated by generally Berber-speaking tribes and by coloured people who can be divided into ‘āblāt, slaves imported from the Sahara and negro countries, and ḫārātīn, who have a dark skin but whose features are not negroid, and who are thought to be the most ancient occupants of the region. Jews, apparently of Berber origin, complete the sedentary population of more than 100,000. At least up to the submission of Darā to the French Protectorate in 1932, the sedentary population lived in subjection to the sometimes Arab, but mainly Berber, nomad tribes of the surrounding mountains.

Darā has been inhabited from a very early date and must certainly have had an eventful history since it is a productive region in the midst of areas which are almost desert. Traditions lead us to believe that the Jews played an important part politically up to the 10th century and that Islam was brought there by a descendant of the founder of Fes in the first half of the 3rd/9th century. Later, at the end of the 9th century Darā came under the domination of the Maghrābīs (belonging to the Zenāta) who had settled in Sidjīlmāsā.
With the Almoravids, Dar'a really enters on to the historical scene, for it served as an important fortified town which dominates Zagora. From the second half of the 10th/11th century on, Dar'a was part of the Moorish empire created by the Almoravids, then by the Almohads and the Marinids. The Ma'ūlī Arabs infiltrated there towards the end of the 7th/13th century and exercised a dominating influence.

In the 10th/16th century, this province was the cradle of the first Shī'īte dynasty of the Sa’dīs [q.v.] and was the place from which the sultan Ahmad al-Mansūr started on his expedition to the Sudan (1591). This shows, in a very striking manner, the role of Dar'a as a point of contact between Morocco and the Sahara. Thanks to the trade with Gao and Timbuctoo at the beginning of the 11th/17th century, this region enjoyed a brief period of prosperity.

To-day, this overpopulated and poor region provides Casablanca and various other towns with a considerable number of workers, for its almost stagnant agriculture is very far from being able to support its growing population. This emigration is usually a temporary one, linked with the vicissitudes of its climate and agriculture (Naissance du proU-tariat marocain, Paris, n.d., 67-9).

(R. LE TOURNEAU)

DAR'A — DARA SHUKOH

DAR'A SHUKOH, eldest son of Shah Djiwan and Mumtāz Mahall, was born near Adjmer on 19 Safar 1024/20 March 1615. He received his first mansāb [q.v.] of 12,000 dāli (6000 savār) in 1042/1633, as also the dīdār of Hisār-Fīrūzā, regarded as the appearance of the heir-apparent. The same year he was given the command of an army sent to defend Kandahār which was threatened by the Persians, and again in 1052/1642 when the threat was renewed. The attack, however, did not materialize. In 1053/1643, he was given the governorship of the sūbah of Ilāhābād to which were added the sūbahs of Lahore in 1053/1643, and Gujjārāt in 1059/1649. Though he took some interest in Lahore and constructed a number of buildings and market-places, he left the other sūbahs to be governed by deputies, himself remaining at the court. By 1058/1648, he had attained the mansāb of 30,000/20,000, which incidentally was the highest rank attained by Shāh Djiwan before his accession.

Following the failure of two attempts to recover Kandahār from the Persians (who had captured it in 1059/1649), Dārā was deputed to lead a third expedition for its recapture in 1062/1652. Although the siege was vigorously pressed, and forts in Zamin-dāwar taken, Kandahār itself defied capture. The failure of the campaign, due partly to a division in Dārā's camp as also his lack of experience, adversely affected his prestige as a political and military leader.

On his return, Shāh Djiwan associated him more closely than ever with the affairs of the state, bestowing upon him unprecedented honours, and the rank of 60,000/40,000 (1067/1657). It seems that Shāh Djiwan, having clearly marked out Dārā as his successor, wanted to avoid a struggle for the throne on his death, a position which his younger sons were not prepared to accept. In 1067/1657, when Shāh Djiwan fell ill, his younger sons, fearing that Dārā might use the opportunity to seize power, advanced towards Agra on a plea of meeting the Emperor, thereby precipitating a war of succession (see AWRANGZIB). Awrangzib and Murād raised the slogan of Dārā being a heretic (mulhīd) and the orthodox faith being in danger from his constant association with Hindu yogis and sanyāsīs. However, the slogan of religion does not seem to have influenced significantly the actual alignment of the nobles. Dārā was defeated, first at the battle of Sāμmhār near Agra (7 Ramadān 1068/8 June 1658), and then at Deora (28 Djamād I 1069/23 March 1659). Shortly afterwards he was captured by an Afghan noble, Malik Dīlwān, with whom he had taken shelter. He was brought to Delhi and executed (22 Dhu 'l-Hijjah 1069/10 Sept., 1659), a formal charge of heresy being laid against him. Dārā's elder son, Sulaymān Shukoh, soon followed him to the grave, a younger son, Sipīr Shukoh, being imprisoned at Gwālīyār.

Although Dārā had an undistinguished political and military career, he was one of the most remarkable figures of his age. A keen student of sufism and of tawḥīd, he came into close contact with leading Muslim and Hindu mystics, notably Miyyān Mīr (d. 1045/1635) and Mūllā Shāh (d. 1071/1661) of the Kādiri order (becoming a disciple of the latter in 1050/1640), Shāh Mūḥibb Allāh Ilāhābādī, Shāh Dīrūbā, Sarmad the famous heterodox monist, and Bāhā Lāl Dās Bayrāgī, a follower of Kābir. A number of contemporary paintings showing Dārā in the company of sūfis and sanyāsīs have been preserved.

Dārā was a prolific writer. His works include: Saifīn al-awliyāyā (1050/1640) and Saikīn al-awliyāyā (1052/1642), dealing with the lives of sūfī saints, the latter with those of the Kādiri order; Risāla-i Ḥākh numā (1056/1646) and the rather rare Tarbhīyat-i Ḥakībī, both based on well known sūfī works; his Dilwān, also known as Ishtir-i asam, recently brought to light, containing verses and quatrains in a pantheistic strain; Hassābīt al-āṣīfīn (1062/1652) containing the aphorisms of sūfī saints belonging to
DARĀ SHUKOH — DARABUKKA 135

various orders; Mukhālama-i Bābā Lāl wa Dārā Shuḵoh, a record of his discussions with Bābā Lāl in 1065/1655; Masmaʿ al-bakhrayn, (1065/1655), perhaps his most remarkable work, being a comparative study of the technical terms used in Ṣeddānta and Sūfism; and the Sirr-i akbar (1067/1657), his most ambitious work, being a translation of fifty-two regional variants: principal Upāniṣhads which Dārā claims to have completed in six months with the aid of learned pandits and sāwaddīs. In addition to this, with Dārā's patronage and support, four translations into Persian were made of a number of Hindu religious works such as Yōga-Vaṭaṅga, the Gīta and the mystic drama Prabhūda-Candradaya. Dārā was also a good calligraphist, and patronized the arts: the: an album (Marabhāq) of calligraphic specimens and Mughal miniatures was presented by him to his wife Nādira Begām (d. of Parwiz) in 1051/1641-42 with a preface written by him.

In some of his later writings, Dārā shows considerable acquaintance with Hindu philosophy and mythology. He was attracted by a number of ideas which have obvious parallels in Hindu philosophy, such as the trine aspect of God, the descent of spirit into matter, cycles of creation and destruction, etc. However, he was opposed to the practice of physical austerities advocated by the exponents of yōga and favours mysticism by praying to God desired not to inflict punishment but that He should be approached with love. Like a number of eminent Muslim thinkers (cf. Mir Abd al-Wāḥīd, Ḥabābīk-i Hindi, 1566) Dārā came to the conclusion that there were no differences except purely verbal in the way in which Vedānta and Islam sought to comprehend the Truth. Dārā's translation of the Upāniṣhads which he regarded as "the fountain-head of the ocean of Unity", was a significant contribution in the attempt to arrive at a cultural synthesis between the followers of the two chief faiths in the country, being the first attempt to comprehend and to make available to the educated Muslims these fundamental scriptures of the Hindus.

It may be doubted if Dārā's interest in gnosticism was motivated by a pastoral considerations. From an early age, Dārā felt that he belonged to the circle of orthodox opinion had accused him of heresy and apostasy as early as 1062/1652, it does not seem that Dārā ever gave up his belief in the essential tenets of Islam, affirming them at more than one place. Nor does the undoubted pantheistic strain in his writings go beyond what had been considered permissible for sīfī. The opposition of these orthodox elements to Dārā stemmed from a deeper conviction, viz., that emphasis on the essential truth of all religions would in the long run weaken the position of Islam as the state religion, and effect their privilege. It was thus closely related to Dārā's position as an aspirant for the throne.

Dārā occupies a pre-eminent place among those who stood for the concept of universal toleration and who desired that the state should be based on the support of both Muslims and Hindus, and remain essentially above religion. His defeat in the war of succession did not, by any means, imply the defeat of the trend he represented.

DARĀBDĪR (modern Darāb), a town in the province of Fārs in the district of Faith, situated 280 kilometres east of Shīrāz at an altitude of 1188 metres and with a population of 6,400 people (1950). In Iranian legend the foundation of this town is ascribed to Dārā, father of Dārā (Darius III Codomannus). The Sāsānīd ruler Ardashīr rose to power by revolt from his post as military commander at Darābdīr. The stone-strewn remains of the Sāsānīd town lie 8 kilometres south-west of the modern village. The outline of the fortification walls exist as does the debris of a fire temple, located at the centre of the site. Six kilometres south-east of the modern village is a Sasanid rock-cut relief known as the Nakgh-ī Rustam or as the Nakgh-ī Shāpūr. In the immediate vicinity is a spacious cruciform hall hewn into a rocky hillside, known as the Masjīd-ī Sāngi. Although it bears inscriptions dated 652/1254 and the title of the Sultan Aḥāb Bakh, the hall is probably of the approximate period of the rock-cut relief.

Bibliography: Muhammad Nasir Mirzā Aḥkām, Fursat Husaynī Shīrāzī, Āgāh-ī Aḥdām, Bombay 1314/1896, 97-9; Le Strange, 288 f.; A. Christensen, L'Iran sous les Sassanides, Copenhagen 1944, 86-7; Farhang-i Dīvāngīyā-ī Īrān, Tehrān 1330/1951, vol. 7, 95. (D. N. Wilber)

DARABUKKA, a vase-shaped drum, the wider aperture being covered by a membrane, with the lower aperture open. The body is usually of painted or incised earthenware, but carved and inlaid wood, as well as engraved metal are also used. In performance it is carried under the arm horizontally and played with the fingers. The name has regional variants: darbukha (or darbukha), dirbakh and darbūkha. Dozy and Brockelmann derive the word from the Syriac ardabak, but the Persian dambak is the more likely, although the lexicographers mistakenly dub the latter a bagpipe. The name darbukha, and its variants, is quite modern although a darbukha (a copyist's error for darbukha) is mentioned in the Alf layla wa layla. The type is to be found in ancient Egypt. The dirūdja is mentioned by Al-Mufadjad al-Salama (d. 319/930) although he wrongly thought that it was a kind of tumbak, as do many Arabic lexicographers, but we know that it was a drum from Al-Maydāni (d. 518/1124). Ibn Mukarram (d. 710/1311) says that the correct vocalization is ‛urrūdja, and that form—with variants—is to be found in the Magrib. The word has no counterpart in Al-Maḳkaf, are doubtless misreadings of ‛urrūdja. Al-Shukundi (d. 628/1231) uses the Berber name aguwayl for this drum, and that is still the name used in the Magrib, although Fost calls it akwa, whilst it is the gallal of Algeria. In Tripolitania the name tabdaba is popularly used, and in Egypt tabke. Bibliography: EI, Suppl., s.v. tabk, 215-6;

**AL-DARAKUTNI**

Abu l-Hasan ‘Ali b. ‘Umar b. Ahmad b. Mahdi b. Mas‘ud b. al-Nu‘man b. Dīnār b. ‘AbdAllāh, was born in Dār al-Rutn, a large quarter of Baghdad, whence he got his nickname, in 366/978. He was a man of wide learning who studied under many scholars. His studies included the various branches of Hadith learning, the recitation of the Kur‘ān, fiqh and belles-lettres. He is said to have known by heart the diwan of poets, and because of his knowing the traditions of the Kur‘ān, and belles-lettres. He is known as an expert on traditions from one man or from one hadith. He wrote in which Sahihayn, the earliest book on the subject. Among other books on the science of Tradition. His *Kitāb al-Kirdhat*, on Kur‘ān readings, in which he began by stating the principles of the subject. He was the first writer to do so.

**DARAN (DEREN)** [see the article ATLAS].

**AL-DARAZI, MUHAMMAD b. ISMA‘IL**, was one of a circle of men who founded the Druze religion [see DURU]. He was not an Arab, and is called Naṣṣātkin in the Druze scriptures; according to Nuwayri (who calls him Anuṣṣātkin), he was part Turkish and came from Bukhārā. He is said to have come to Egypt in 407 or 408/1017-18 and to have been an Isma‘ili dā‘ī [see dā‘ī and ISMA‘ILYYA], in high favour with the Caliph al-Hākîm, allegedly to the point that high officials had to seek his good graces. He may have held a post in the mint (Hamza accuses him of malpractices with coinage). He is said to have been the first who proclaimed publicly the divinity of al-Hākîm; he is also accused, as heretics commonly were, of teaching tawā‘līkh (reincarnation) and ṣabā‘a (antinomianism) regarding the rules against wine and inceṣj, though this latter is most unlikely. It is possible that his doctrine was a popularizing version of Isma‘îlisms such as the dā‘īs often warned against. His key treatise is said to have taught that the (divine) spirit embodied in Adam was transmitted to ‘Allî and (through the imāms) to al-Hākîm. This would differ from orthodox Isma‘îlism presumably in exalting ‘Allî over Muham- mad, imāmate over prophesy; and then in making public the secret ta‘wil (inner meaning of scripture) and probably recognizing the contemporaneity and validity of the letter of revelation *tanzil*. For the commentator of Ḥamzā’s letters calls his followers Ta‘wilīs, who are accused by the Druzes of altogether rejecting the *tanzil*. Ḥamzâ himself deems it necessary to remind al-Darazi that the inner truth and its outer form are always found together. He also accuses him of recognizing only the humanity of al-Hākîm, not his divinity; which would follow, in Ḥamzā’s eyes, from his identifying al-Hākim with ‘Allî, the āsād, who is a mere imām, leader of men, and far from the indefinable One, to Whom as such no functions can be assigned.

Al-Darazi seems to have gained a number of followers among al-Hākim’s admirers, evidently with the approval of al-Hākim himself. Ḥamzâ, evidently claiming priority with al-Hākim, regarded al-Darazi as insubordinate and acting rashly on his own initiative; for instance, publicly attacking the Ṣāḥibah though warned against this. Ḥamzâ refused to let him see his doctrinal writings; he criticized the symbolism of the title al-Darazi first assumed, “sword of the faith”, only to be worse offended when al-Darazi assumed instead a title, *sayyid al-Ḥādīyyin*, “chief of the guided”, which overreached Ḥamzâ’s own title, al-Ḥādî, “the guide”. He claims that some of al-Darazi’s followers had at one time acknowledged Ḥamzâ’s claims to leadership in the
movement, and that al-Darazi himself had done so, having been converted by an agent of Ḥamza, 'Alī b. Aḥmad al-Ḥabbāl—who subsequently supported al-Darazi. Sacy thinks Ḥamza regarded him as the Dād, Ḥamza’s Rival as Ḥimān, and would as such have a major cosmic rôle. But many of al-Darazi’s followers, most notably a dādī al-Barṣāfī, had from the first rejected Ḥamza as unauthorized by al-Ḥakīm.

It seems that al-Darazi, probably in 408/1017-18, took the step of making public, with al-Ḥakīm’s private but not open blessing, a demand for his acceptance of the divinity of al-Ḥakīm—according to Sibt Ibn al-Djawzi, by reading his treatise in the main mosque of Cairo. This occasioned several riots, which engulfed Ḥamza also, and which evidently caused the whole movement to lose favour; it was probably this which forced Ḥamza to suspend his own preaching during 409. The Druze accounts are allusive, and other accounts seem to confuse several episodes, leaving the riots and the manner of al-Darazi’s death unclear. Ḥamza’s letters in 410/1019-20 seem to presuppose his death, which the Druze commentator places in 410, and imply that it was Ḥamza himself who—having denounced al-Darazi and others to al-Ḥakīm—brought about his death on al-Ḥakīm’s orders. Ḥamza then tried to win over his followers, promising to intervene with al-Ḥakīm if the followers would commit some sin which he could recognize.

Sibt Ibn al-Djawzi makes al-Darazi withdraw secretly, on al-Ḥakīm’s orders, to Syria to preach, because people there readily accept novelties—which sounds like a later explanation of Druze geography. His name, in the form Durzī, was applied to the Druze community, probably not because it was he who first converted those of Syria—local tradition assigns this task to others—but because the whole movement was first associated with him in the public mind; thus al-ʿAntāḳī applies the name “Darazīyya” to Ḥamza’s own followers. The notion sometimes found, that either licentious teachings or loose moral practices among subsequent Druzes are to be traced to al-Darazi, is unsupported.

**DARB** (see MADĪNA).

**DARB** [see DĀR AL-DARB and SIKKA].

**DARB AL-ARBA’IN** [see DĀR AL-DARB].

**DARB AL-ARBA’IN**, one of the principal routes linking bilād al-Ṣūdān with the north, obtained its name from the forty days’ travelling-time required to traverse it. W. G. Browne, the only European to have gone the whole way (in 1793) took 58 days from Assūṭ to “Sweni” (al-Suwayna) near the southern terminus. Muhammad ‘Umar al-Ṭūnusī in 1803 covered the same distance in 60 days. Starting from Assūṭ, the route ran to the Khārdjī oasis, an outpost of Ottoman Egypt. Thence it proceeded across the desert to al-Shabb, a watering-point where, as the name indicates, alum is found. At the next oasis, Salīma, a branch diverged to the Nubian Nile, which it attained a little above the third Cataract at Mūḫāl, the frontier-post of the Fundūl dominions. This route was followed in 1698 by Ch. J. Poncet (see his Voyage à l’Aethiopie, ed. Sir William Foster, in The Red Sea and adjacent countries at the close of the seventeenth century, (Hakluyt Society, Second Series, no. C), London 1949). From Salīma the Dār al-arba’īn proper continued across the deserts to al-Suwayna, the frontier post of Dār Fûr, where the caravans were held to await the sultan’s pleasure. The route ended at Kubayh (Cobbe, Browne), about 33 miles NW of the sultan’s residence at al-Fāshir. Kubayh, which is now deserted, was in the 18th and early 19th centuries an important town, principally inhabited by merchants, many of whom were vellum dealers. The Darf al-arba’īn was the route followed to Egypt by the kāfījat al-Ṣūdān, which brought slaves, camels, ivory, ostrich feathers and gum, and returned with metal manufactured goods and textiles. During the 19th century, in consequence of the political changes of the eastern bilād al-Ṣūdān, and the decline of the slave-trade, the Dār al-arba’īn lost its importance, and only sectors of it are now occasionally used.

**DARB-KHĀNA** [see DĀR AL-DARB].

**DARBAND** [see DERBEND].

**DARBUKKA** [see DARABUKKA].

**DARD**, one of the four pillars of Urdu literature and one of the greatest of Urdu poets, Khādīja Mir (with the tahgalīs of Dard) b. Khādīja Muhammad Nasir “Andalib” al-Husayni al-Būqhārī al-Dīlahwī, claimed descent from Khādīja Bahā’ al-Dīn Nakghbandī and in the 25th step from the Imām Ḥānīf al-Ṣakārī. Born in 1133/1720-21 in the decadent Imperial Dihlī, Dard received his education at home, mostly from his father, a very well-read man and the author of Nīlā-i ‘Andalib, a voluminous Persian allegory dealing with metaphysical and abstruse problems and of another Sūfī work, Risāla-i Huqūq Afṣā (still in MS.). Casual references in Dard’s work (‘Ilm al-Ktb, vide infra) show that on the com- pletion of his studies he had attained proficiency in both the traditional and rational sciences. Starting life as a soldier he tried hard to secure a dājdījī, but soon withdrew from everything worldly and devoted himself, when barely 20 years of age, to a life of privation, austerity and asceticism. In 1172/1758-9, when he was 39 years old, he succeeded his father as the spiritual head of the local Čūghtīs and Nakgh- bands, and, despite the disturbed conditions prevailing in the capital in the wake of Nādir Shāh’s invasion of 1152/1739 and Ahmad Shāh Abdalī’s incursions of 1175/1761, he did not leave Dihlī, being the only Urdu poet of note not to do so. A great Sūfī, he passionately loved music and contrary to those who believed in the maxim “al-giml iṣrāʾīl min al-ṣawād” (music is more heinous than adultery), he was completely familiarized with the leading musicians of the town but also regularly held musical concerts (madājil-i samā‘) twice a month at his home, which were attended, among others, occasionally even by the ruling monarch Shāh ʿAlam Bahādūr Shāh I [q.v.]. In one of his works Nīlā-i Dār (p. 37) he describes devotional music (samā‘) “as ordained by God”.

Essentially a Sūfī writer, Dard’s first work Asrār al-Ṣāḥīb, was written during Fīkhā, while he was
still a lad of 15 years of age. It is a small tract dealing
with the seven essentials of al-Salat. In, however,
the 'Im al-Kitāb, a voluminous commentary on
Risāla-i Wūriddā, comprising 648 very closely-
written large-size pages. It is entirely on sulūk and is
profusely interspersed with long Arabic quotations.
Its style is sober and staid but powerful and the argu-
ments adduced are cogent and sound. This book can
safely be ranked with some of the outstanding works
of Shahjahanabad, outside the Turkoman Gate.

His other works are: Shams-i Makbī (composed
1195-99/1780-84); a short Persian diwan (Dihil,
1309/1891-2); an Urdu diwan (first published at
Dihil in 1272/1855 and later frequently printed);
Humāmāt-i Chānīā in defense of devotional music and
Wūridt-i Dard, also on mystic problems. All these
works have been published.

For an estimate of his quality and importance as
a poet see urdu literature.

Dard died at an advanced age on 24 Ṣafar 1199/6
January 1785 and was buried in the old cemetery
[now abandoned and converted into a public park]
of Shahjahanabad, outside the Turkoman Gate.
His tomb, along with that of his father and the
attached small mosque, is still preserved and visited
by the local Muslims.

DARDANELLES (see Ġana 'qal' ē boğazi).

DARDIC AND KÄFIR LANG UAGES, the
description now generally applied to a number of
the Dardic and the Kāfīr languages and
dialects, spoken in the mountainous N.W.
corner of the Indo-Aryan (IA) linguistic area,
in Afghanistan, Pakistan and Kashmir. With the
exception of Kashmiri, they are numerically insigni-
ficant, and have no written history. The others are
known only from vocabularies and grammatical
sketches, etc., the oldest dating from about 1830.
There is still a great lack of adequate grammars,
vocabularies, and collections of texts.

In the following account there is a departure from
the normal transcription conventions of the Encyc-
lopaedia: the symbol ʃ is used for a voiceless
retroflex sibilant (retroflex, e.g., ʃuq); similarly
the symbol ʃ is used for the retroflex nasal.

The Dardic and Kāfīr languages may be roughly
grouped as follows:

I. Kāfīr Group. (a) Kāti (Bāshgall), spoken,
in two main dialects, in the Ramgul, Kulum, Kītīl
and Bāshgall valleys in north Nūrīstān (Kāfīrīstān);
(b) Prasūn (Waśi-veri; Verōn) in a small
valley wedged in between the Kātīl in Kītīl
and Bāshgall; (c) Aškōn (with Wāmālī), south of Kāti,
between the Alishār and Peś rivers; (d) Wāigāl
(Wai-alā), in the Waigal valley, south-east of
Prasūn. There is a not inconsiderable dialect
variation, and especially Gāmbīrī, spoken in the
Tregam valley east of Waigal towards the Kunar,
differs in many respects from ordinary Waigall.
The Kāfīr languages have certainly occupied their
isolated valleys since very ancient times. (c) and (d)
have been more exposed to outside influences than
(a) and (b); the last language has undergone such
violent sound-changes that it has become incompre-
hensible to its nearest neighbours.

Dardic group. II. (e) Kālaša, spoken in two
dialects by the Kālaš tribe, who are still mainly
pagan, in the upper Chitral (Cīrāh), chiefly in the west
valleys. Closely related to Kālaša is Kītīl, the
principal language of Chītral, spoken, with
little dialect variation, by the Khō tribe (see
Chītral, ii). Khōwār has adopted a number of
words from Wākhi, as well as from some Middle
Iranian languages (cf. BSOS, viii, 294 ff.). These
two languages represent the earliest wave of IA
penetration into the Hindu Kush region.

III. (g) Dīrāt, in one village in an east side
valley of Chītral, between Mīrkhanī and Aranūd. It
has adopted a number of Kāfīr words, and has
little connexion, except the geographical one, with
(h) Gāwar-Bātī (Nārisātī), spoken in a few
villages on the Kunar river, on both sides of the
Chītral-Afgān frontier. There is a tradition that this
language was brought in from Šawāt a few hundred
years ago. (i) Remnants of dialects of a some-
what similar type are found further south, in
Ningālām on the Peś (nearly extinct), and in
Shūmāshī in N. E. Pašāt territory.

IV. (j) Pašāt, spoken in numerous and widely
differing dialects, from the lower Kunar in the east,
through Lāghmān, and right up to Gūlhārān on the
Pašīndā. The number of speakers may well run
into the 100,000 guessed at in the LSI. Pašāt is
descended from the ancient languages of Hindu
and Buddhist civilization in Nagarāhār, Lāmpāka
and Kapīshā, and there is still a marked difference
of vocabulary between the east and west dialects.
A few numerals of Pašīt type have been recorded in
Al-Bīrūnī's India.

V. (k) Bāškharīk (Gāwrti/Gārwī), in the
upper Paṇḍjakora valley, above Dīr, and in three
villages at the head-waters of the Swāt valley;
(i) Torwāl in the upper Swāt valley, below Bāshk;
(m) Maīyā, with a number of related dialects
(Kanyawālī, Dūbērī, Cilīs, Gōwo, etc.), in the
Indus valley region between the Šīnā and the
Pašīt speaking areas. Maīyā is also called Kōhi-
štānī, but this term is also used for (k) and (l); in
some respects it approaches (p); (m) Wōpadōrt
(nearly extinct) and Kafārkālā, on and near the
Peś, just above Čīgha Sārā on the lower Kunar.
Connected with (k) and (l), but containing forms of
a more ordinary Lahnda [q.v.] type, is (o) Tirahi, in a few villages S.E. of Diallabād, driven out of Tirāh by the Afridis and probably the remnant of a dialect group once extending from there, through the Pashtūwar district, into Swāt and Dīr. VI. (p) Sinā, spoken in many dialects in Gilgit, Čilās, etc., as far south as Gurez in Kashmīr, and towards the east isolated in Drās and Dāh Hanū in Baltīstan, formerly even beyond Leh; (q) Phalūrā, an archaic offshoot of (p), spoken in a few villages in S. E. Chitrāl. A related dialect, Sāwāli, is spoken south of Gāwār-Bātī; (r) Dumākī, the speech of the Dāms (musicians and blacksmiths) in Hunza, speaking Burūshaskī [q.v. in Supplement]. It is influenced by (p), but has complex affinities with languages further south. VII. (s) Kashtāwārī, in the Kashmīr valley, with Kashtāwārī as a true dialect, and other dialects strongly influenced by Dōgīrī, etc. The nomenclature and classification of these languages have been much discussed. E. Kuhn, in an important article in the Album Kern (1882) used the nomenclature and geographical term "Hindū Kush dialects". Pischel, Grammatik der Prākrit-Sprachen, 28, called them "Dārdū and Kāfīr dialects", employing the name Dārd in the extended sense, accepted since. He thought that they were related to the so-called Pāścā dialect of Prākrit. This theory was further elaborated by Grierson in a series of publications, but no cogent linguistic arguments have been offered in support of it. According to Grierson the Dārdic (or "Modern Pāścā") languages are not IA, but contain a number of Iranian features, and constitute a separate third branch of Indo-Iranian (IIr). Grierson divides the Dārdic and Kāfīr languages into four Kāfīr groups (= I, III, IV + e) and (o); (B) Khowār (= fj); (C) Dārd group (= V, VI, VII). His classification has, in the main, been accepted in such recent works as Les langues du monde (2nd. ed. 1952), and Mhd. Shahidullah's article in Indian Linguistics, Turner Jubilee Volume, ii, 1959, 117. On the other hand, S. K. Sen (JRAS, 1911, 1 ff.), drawing attention to some undoubtedly un-Iranian features of Bāshgāti (Kālī), came to the conclusion that this language was of Iranian origin, and agreed with Grierson that the whole group must be separated from IA. Finally, S. K. Sen (ibid., LXXIV) went so far as to contend that the real Kāfīr group (I) was not at all IIr, but a separate branch of the IE family. In order to avoid confusion, it is important to distinguish between I (Kāfīr group) and the rest (Dārdic, II-VII). The latter languages, apart from some Kāfīrī admixtures in (g), and in a few isolated cases in (e) and (b), contain absolutely no features which cannot be derived from Old IA. They have simply retained a number of striking archaisms, which had already disappeared in most Prākrit dialects. Thus for example the distinction between three sibilant phonemes (s, ś, sh), or the retention, in the western dialects, of ancient st, śf. The loss of aspiration of voiced stops in some Dārdic dialects is late, and most of them at least some trace of the aspiration has been preserved. There is not even a single common feature distinguishing Dārdic, as a whole, from the rest of the IA languages, and the Dārdic area itself is intersected by a network of isolgloses, often of historical interest as indicating ancient lines of communication as well as barriers. Dārdic is simply a convenient term to denote a bundle of aberrant IA hill-languages, which in their elative isolation, accentuated in many cases by the invasion of Pashtū tribes, have been in a varying degree sheltered against the expanding influences of IA Midland (Mādhyādeśa) innovations, being left free to develop on their own from the beginning. In the Kāfīr group (I) the situation is an entirely different one. Although very heavily overlaid by IA (Dārdic) words and forms, these dialects have retained several decidedly un-Iranian features. The complete loss of aspiration of voiceless as well as voiced stops (e.g., Kālī kur 'ass'; dyūm 'smoke'; S. Kalaṣa khār; dhūm) must go back to an extremely remote past, when we also find, e.g., Kālī (d)ār 'to kill': cf. Sanskrit hrim-; han. Cf. also Kālī (d)ār 'to know'; dī 'bowstring', both with unaspirated dī in Sanskrit. In this respect Kāfīr follows Ir. as against IA in abolishing the distinction between aspirated and unaspirated sounds, while retaining the one between ancient IE palatal and palatalized velar stops. In most other respects, however, as in the preservation of s, it agrees with IA: Kāfīrī c ( = ts) corresponding to Skt. ṭ, Av. Avestan s (e.g., in Kālī dac 'ten') is an archaic feature, and still more so is the retention of dental s after u, as in musā 'mouse'. The vocabulary of Kāfīrī contains a number of words not known from IA; some of these appear also in Iranian, e.g., kān-, etc., 'to laugh', cf. Pers. bhand; wæŠgātī, etc., 'wasp', cf. Ir. Pamir dialect, Yidgāh wofstå; Prasun yase 'belt', cf. Av. yāh-; etc. Other words are found only in Kāfīrī, and, in a few cases, in some of the adjoining Dārdic dialects. We are, therefore, entitled to posit the existence of a third branch of IIr, agreeing generally with IA, but being situated on the IR side of some of the isoogloses which, taken as a whole, constitute the borderline between IA and Ir. This branch had also retained archaisms of its own, and must have separated from the others at a very early date. The present-day Kāfīrī languages represent, so to speak, the decayed ruins of this original building, largely rebuilt and reconstructed with the help of foreign (IA) material, but with the outlines of the original structure still visible. DARDISTAN, the name given to the area, lying between the Hindu Kush and Kâghan, between lat. 37° N. and long. 73° E., and lat. 35° N. and long. 74° 30' E., the country of the Dardas of Hindustan. In the northwest sector it embraces the Shâina-speaking territories, i.e., Gilgit, Astor, Gurayz, Cîlás, Hódur, Dârâl, Tangir etc., or what is now known as Yâghistan. In a wider sense the feudatory states of Hunza, Nâgar and Chîtrâ (q.v.) (including the part known as Yâšîn), now forming the northern regions of Pakistan, comprise Dardistân; in the widest sense parts of what was till very recently known as Yâghistan. In a wider sense the feudatory regions of Pakistan, comprise Dardistân; in the

"placing it on the frontier of Kashmir and in the vicinity of modern Afghanistan". He, however, does not use the name "Dard" while referring to the country; on the other hand Strabo (xv) and Pliny (Natural History, xi) call the people inhabiting the area as Dardae or Dardai. The Dards are the "Darda" of the Sanskrit writers, a region to which Buddha sent his missionaries and bhikshus. Those whom they take prisoners in these raids, they sell as slaves" (Voyages par Mir 'Izzetulla in 1812 in Klaproth's Magasin Asiatique, ii, 3-5).

Strange enough the Dards have no name in common, each tribe inhabiting a different valley carrying a different name, derived mostly from the areas inhabited by them.

The history of Dardistân, a name first given to the entire country by Dr. G. W. Leitner after his visit in 1866, is the history of its component parts, namely Hunza, Nâgar, Chîtrâ, parts of Baltistân, Ladakh, Gilgit etc. (q.v.). The main enemy of the Dards, otherwise a peace-loving people, was the Dôrâ State of Kazhmîr under its first ruler, Gulâb Singh. He led a number of expeditions against the Dards. In 1850 a large Sikh army sent against Cîlás met with an ignominious defeat. Next year, a force of 10,000 strong, under Bakhshâlî Harr Singh and Dîwân Hari Cand succeeded in destroying the fort of Cîlás and scattering the hill tribes who had come to the assistance of the Cîlásis.

A little-known fact about the outlying states of Hunza and Nâgar is that they never owed any allegiance to Kazhmîr except that they occasionally sent a handful of gold dust to the Mahâraížâ and received substantial presents in return. These two states have rather more than once been hostile to the Dôrâ Kingdom.

The prevailing religion in the whole of Dardistân is Islam; a form of Shi'â is met with in most of the lands. The Mawla'îs, as they call themselves, profess to be good Muslims with strong leanings towards the seventh Shi'-îimâm. They, however, owe allegiance to the Āghâ Kânân. The Kalâm-i Pir, a book in Persian, an edition of which was published by Ivanov (Bombay 1935), is held in high esteem among the Mawla'îs. (See further ISMA'ILYYA).

Camâr-khân in Yâghistan became the centre of the remnants of the Mûdshîdhân, the followers of Sayyid Ahmad Barâli (q.v.) after their defeat and dispersal in 1246/1831 at Bálîkîlî in the Kâghan valley, at the hands of the Sikh forces led by Prince Shîr Singh, a son of the Lahore Chieftain, Ramdîlî Singh. Because of the suspected revolutionary and subversive activities of these Mûdshîdhân and their descendants, entry into Yâghistan from British India and subsequently from Pakistan was regulated by permits. This system was, however, abolished by the Pakistan Government in 1959.

AL-DARDJINI, ABU L-'ABBÂS AHMAD B. SA'ID B. SULAYMÂN B. 'ALLI B. ISKÎLAF, an Ibâdí jurist, poet and historian of the 7th/13th century, author of a historical and biographical work on the Ibâdí, the Kitâb Tabâbât al-Mašâ'ûbîhîh. He belonged to a pious and learned Berber-IbadI family from TâmîdÎr, a place in the Dîjâbâl Nafúsâ in Tripolitania. His ancestor, al-Hâdíj Iskîlaf b. Iskîlaf al-Nâfusî al-Tâmîdîrî, an eminent fâkîh, lived in the neighbourhood of Nîfā' in the Dîjârd (q.v.). Son of Iskîlaf, the pious 'Ali, who lived in the second half of the 6th/12th century, earned his living by trading with the Sudan. In the course of one of his trading journeys, in the year 575/1179-80, he is said to have converted the pagan king of Mâli in the western Sudan to the Ibâdí faith, but this is a legend (cf. J. Schacht, in Trauxes de l'Institut de Recherches Sahariennes, xi, 1954, 21 f.). His son, the famous lawyer Sulaymân, who was the grandfather of Abu l-'Abbâs, lived at Kanûmâ in the Dîjârd; he was regarded as a saint. The father of Abu l-'Abbâs, Sa'id, who was a distinguished traditionist, settled at Dârîdîn al-Sufla l-Djâdida near Nefîth.

We do not know much about the life of al-Dârîdîn. He must still have been very young when he went to Ouargla in 616/1219-20, where he spent two years studying with the Ibâdí shaybhs of this city. Afterwards he returned to the Dîjârd, where we find him engaged in historical studies at Tûzér in 633/1235-6. Later he lived for some time on the island of Djîrâba, where he was highly regarded by the 'açâdâh (Ibadî scholars). It was at the request of these that he conceived the idea of writing the Kitâb Tabâbât al-Mašâ'ûbîhîh.

The Kitâb al-Dawwâhir al-Muntakhtâbîh, of Abu l-Kâsim b. 'Ibrâhîm al-Barrâdî (q.v.), gives some information on the origins of this work.

"Here", says al-Barrâdî, "are the circumstances in which Abu l-'Abbâs came to write his book. Al-Hâdíj Isâ b. Zakariyyâ' had just arrived from 'Oman bringing various works with him. . . . His brothers in the east had asked him to send them a work containing biographies of the earliest Ibâdîs and recounting the virtues of the western forebears. Al-Hâdíj Isâ consulted the learned 'âzâdâh who were then to be found in Djîrâba and told them of this desire of their co-religionists in the east. They thought first of the book of Abu Zakariyyâ, but they recognized that it was not sufficiently complete, and that the style of the author, who was accustomed to the Berber language and hence not very accurate
in the rules of Arabic grammar or the propriety of its terminology, was often defective. They thought then of having a new work compiled on the history of the Rustumids and the vicissitudes of the ancient doctors. No-one was more suitable than Abu l-"Abbās to fulfil this task worthily and it was to him that it was confided".

The Kitāb Tabakāt al-Maghribiyyāh exists only in some manuscript copies (a few in the Mzb and one in the collection of the late Z. Smogorzewski). It consists of two distinct parts of which the first is merely a reproduction of the Kitāb al-Shahābūrānī, taken in as Athībī al-"Imāma of Abū Zakariyāyy. Yahyā b. Abī Bakr al-Wardjāmi, or rather of the first part of this chronicle. It contains a history of Ibadī penetration into North Africa, of the installation of the Ibadī imāmāte and of the imāmāt of the Banū Rustum family, and finally some biographies of Ibadī doctors of Maghribi origin. The second part, the original work of al-Dardjīnī, is a collection of biographies of doctors and other celebrated Ibadīs, divided in the customary way into twelve classes, each class covering a period of fifty years. The first four classes of the work cover the biographies of the eastern Ibadī doctors of the 1st/7th and 2nd/8th centuries. The author found it pointless here to give biographies of famous personages from the Maghrib, retaining the reproducing the corresponding part of the work of Abū Zakariyāyy. The sources of the biographies of these eastern scholars are sometimes very old. The eight classes which follow, on the other hand, are confined to biographies of Ibadī doctors of Maghribi origin. The last 4 classes, indeed, deal only with persons from Ouariga, the Oued Righ, the Oued Souf, the Djerda and the island of Djebra, and are therefore of no more than a local importance.

Al-Dardjīnī used a large number of sources in the second part of his book, among others the historical and biographical works of Mahbūb b. al-Raḥlī al-"Abdī (2nd/8th century) and Abu l-"Irāfī Sulaymān b. Abī al-Sālim al-Wisayyūn (6th/12th century). He included in his work some curious passages which are of great value for students of Ibadī history, for example the rules concerning the constitution of the khul'a laid down by the great Ibadī scholar, Abū 'Abd Allāh Muḥammad b. Bakr al-Nafāṣī (5th/11th century), and the khul'a pronounced at Medina by the famous Ibadī chieftain, Abū Ḥaṣma al-Shārī (2nd/8th century). The exquisite language of the Kitāb Tabakāt al-Maghribiyyāh surpasses by far in elegance all other Ibadī works of North African origin, and the author has corrected the style of his Maghribi sources, as can be seen from a comparison with the original text of the chronicle of Abū Zakariyāyy.

Al-Dardjīnī is also the author of a dāwān and of letters in verse. As a jurist, he decided a number of questions on the division of inheritances, which al-Ḥittālī (gg.) put together afterwards.

The date of his death is unknown, but it was undoubtedly in the second half of the 7th/13th century.

introduced (called the new aq'lm, with 43 letters). This gave way in 1928 to the Latin alphabet which in turn was replaced in 1938 by the Cyrillic alphabet. In written Dargin, based on Arabic, there is also a script called Farsi or New Persian. The fact that New Persian literature arose and flourished in Khurasan and Transoxiana because of political reasons (Iranian dynasties of the Tahirids and Sâmanids) has caused some difficulty. The language was basically a West Iranian dialect, hence the name Farsi after the province. In Islamic times, if not before, elegant Dari diverged more and more from the rather stilted language of the tabhavi books, kept alive primarily by Zoroastrian priests. By the time of the Mongol conquest of Iran the term Dari had gone out of use.

(R. N. Frye)

DARI, one of the words most generally used to denote a tax, applied in particular to the whole category of taxes which in practice were added to the basic taxes of canonical theory. These latter (sakti or uşur, djiysa and kharddi, etc.) and their yield in the "classical" period, have been covered in a general survey in an earlier article, BAYT AL-MAL, and a detailed description of the methods of assessment and collection will be given under their respective titles, in particular under Kharddi; along with kharddi and sakti will be included associated taxes and payments linked with them or levied on other categories of agricultural or pastoral wealth; finally, in the article Djiysa will be found a discussion of the problem of the original distinction between djiysa and kharddi. Apart from djiysa which, as a poll-tax, is not concerned with the nature of the wealth, the above-mentioned taxes which form the basis of the official fiscal system of Islam are essentially concerned with agriculture and stock-breeding; only the theoretical definition of sakti makes it possible to include the products of industry and commerce, but only with the Muslims and, as we shall see, is far from embracing all the effective forms of taxes to which they were subject; and no canonical tax covers the fiscal dues which the State arrogates to itself in the pursuit of certain causes, an aspect of its administration. It is of this whole group of taxes, usually called darâ'ib or rûsun, and often stigmatized by theorists, on account of their more or less extra-canonical character, under the name mukâs, that we shall attempt to speak here although, precisely because they are poorly represented in doctrinal treatises as well as in papyri, any research into them is made under more difficult documentary conditions than is the case with canonical taxation, and they have been scarcely noticed by historians.

In the practice of the last years of the Prophet's life, treaties concluded with certain communities of dhimmis had allowed them to make payments in kind with goods useful to the Muslims, if they produced them; after the conquest, and on a larger scale, stipulations of the same sort had again been expressed for the benefit of the army of occupation; and for many centuries the same element occurs in the taxes paid by certain provinces with important specific products, either natural or manufactured. It is however clear that it was always a question of the method by which the total contribution from the province was compounded, and not of specific taxes on industry or the trade of individuals. As regards sakti, this of course includes a levy on...
possessions in the form of precious metals (money included) or merchandise, as on other categories of goods as well. In the case of the dhimmis, the state levies a tax on the basis between "rich" and "poor"; but in fact it amounted to a preferential tariff granted to Muslims within the framework of a more general tax levied on traders of all faiths: it was to be confirmed in the rule that the Muslim should pay 1/40 = 2.5%, the dhimmis 1/50 = 2%, and the foreign merchant 1/10 = 10%. Indeed, it seems clear that, whether or not under the pretext of zakāt, the State levied certain dues in its very nature; the schedule that such a conception implies, with an official fixing of values and a distinction between consumer goods and those intended for trade, obviously presents great difficulties particularly to a merchant when travelling, for, on introducing himself to officials in a new province, he has to prove that he has already made the obligatory annual payment, since it is impossible to determine the amount of his sakāt himself and even to pay it direct to the "poor"; the conception of an annual payment became impracticable at the time of the political fragmentation of Islam, no State being prepared to be deprived of the proceeds of a tax on the ground that it had already been paid to another. Even if in Byzantium, for example, complaints that the Alexandria customs-post taxes pilgrims without enquiring whether they have already paid their sakāt, and moreover without distinguishing between goods for private consumption and goods for trade, and between pilgrims and merchants. All this helps us to understand that what was taking place was a reorganization and development of the kind of taxes which had been known to the pre-Islamic empires and which more or less must have survived the conquest in the framework of local institutions, particularly for towns enjoying a "treaty" which left them free to dispose of certain goods which were well organized, on the great international trade routes, and from the very first naturally at the ports (Ubulla, the fore-port of Māsurah, the tithe-man. The "tithe" levied there can only have been taken in kind on certain merchandise, and for the most part it was therefore necessary to pay in cash according to an official estimate of value; in this way there were evolved certain kinds of customs tariffs such as the one preserved in the Mulakhsās (see Diak.). In theory no customs-post should exist except on the frontiers of Islam, for the foreign merchant is in law indebted only to the Muslim community as a whole; in fact, from the start the large region it seems to have had autonomy in customs, and this state of affairs became general everywhere, imme-

DARlBA 143

credibly so after the establishment of many separate principalities. In addition there were often town
dues at the gates of towns, and tolls on the trade routes, particularly the water-ways, from which the khard迪 itself was not exempt. The theoretical justi-
fication for such dues, insofar as one was looking for argument, is in this case less clear than for customs; it may in certain cases, as also for other dues to be discussed later, be a question of taxes for the use of a route belonging to the State; in general, variations of this "protection", hīmāya or khaṣāra, became widespread and, although the normal taxation implied such protection, payments had to be made to the zandh, to local authorities of all kinds and, in bedouin countries, to the tribes, according to immemorial custom; payment generally is calculated on a "load" of an ass or camel. Finally, although the jurists ignore the point, we must add that in addition to dues for the import of goods others, for export (to obtain authorization), were sometimes imposed or substituted, as in other mediaeval societies. The result of all this was that, contrary to what one might expect, the Muslim world, even at the time of the whole great political unity, did not allow goods to circulate with any real freedom from those restrictions which so impeded them in, for example, the more divided European communities.

A second category of dues can be grouped under the heading of the renting of lands or buildings belonging to the State. The State, rediscovering ancient habits or regulations under the Aṣbahān, sometimes looked upon itself as the proprietor perhaps of the whole territory of a town, but invariably of the ramparts and public highways, calculated on the basis of a width of forty cubits; everything that had in fact been established or built on this land had to recognize the ownership of the State by paying rent; in practice all the shops in the souks and markets in public places were subject to this charge. Dionysius of Tell-Mahre again provides us with evidence from the reign of al-Mahdi, of whom we know in particular from al-

Ya'kubī that he introduced dues on the saḥīs in Bagdad, and from others that he made the same innovation in Egypt. This did not however signify that the State did not recognize some sort of ownership by occupants of shops or houses standing on rented land, since in fact it left them free to dispose of them normally by inheritance, sale, waṣf etc. It regarded itself as having a more direct ownership of the khāns and fundūs, to enter which it was of course necessary to pay; in Egypt, this was true of many shops.

With regard to the khāns, there was also hīmāya, protection of goods, to be provided. The same justification was given for the dues which the State required from individuals wishing to make use of the post (barād), weights and measures, as well as certain instruments in which it retained a monopoly and, of course, the profit made from minting money. Ovens, presses, and mills also came into this category although private ones also existed, which were subject to taxes similar to those applying to trades in general.

Indeed, it seems clear that, whether or not under the pretext of sakāt, the State levied certain dues
collectively on various organized trades or industrial establishments—without prejudice to secondary taxes on regulation, poisoning, etc. in the case of goods in which it had a monopoly or whose export it regulated (fabrics from Egypt and Fars, among others). In addition, dues were charged on certain sales (especially of livestock) and on the exercise of brokerage which was particularly indispensable in commercial dealings with foreigners. We make no mention here of manufactures in which the State retained a monopoly, or of the fifth on mines, treasure troves, etc.

Dues for himdya appeared frequently, though it is not always possible to distinguish between those which do or do not merge with certain of the dues noted above. Originally it was, generally speaking, a matter of demands from individuals or from local police, but subsequently the State replaced these beneficiaries, while keeping up their demands. We leave aside the question of State duties and legacies. The drawing up of any written legal deed also of course incurred a tax.

The waqfs in principle were independent of the State, on condition that taxes were paid to it unless they had been renounced; but it tended to take over control, paying a fixed allocation to the parties concerned, while keeping the surplus: a kind of manipulation of property in mortmain.

It should not be imagined that the various sorts of taxes and dues that we have just noted always coexisted everywhere and to the same degree. Of course it was Egypt which was the fiscal paradise, following the tradition of Antiquity. It is possible that at the start the conqueror, satisfied with the payment of poll-tax and other taxes and grants of land agreed upon by the terms of surrender, failed to pay attention to other sources of revenue which had been added by earlier regimes; subsequently, when equivalent measures were re-established, the Muslims accused the Copts of having appropriated them, though one cannot be certain if they meant that these revenues had fallen into private ownership, or that the local powers had embezzled the proceeds. Tradition, simplifying a complex process that had been considerably confused by the contributions of Ibn al-Mudabbir, head of Egyptian finances on the eve of the Tulunid régime (mid 9th/10th century), the particular responsibility for introducing the policy of new extra-canonical taxes. Succeeding régimes, according as to whether they were compelled by a desire for legality and popularity or by financial needs, alternately abolished and re-established all or part of these taxes which no doubt reached their fullest development during the difficult times of the last Fatimids; part of them (but not the customs) was later abolished by Saladin, with the loss of 100,000 dinars, and the report which has been preserved is one of the principal sources of our knowledge; but Saladin's successors re-established and perfected them (al-Maqrizi, Akhlaq, I, 103 ff., Ibn Mammât, ed. Atiya, chap. 5).

In 'Irak, tradition and the strength of custom did not allow such a fiscal system to be established as the fact that the 'Abbasids had not the ability or the means to utilize for their own advantage the revenues from commerce like those from agriculture perhaps forms a part, which is difficult to evaluate, of their financial difficulties. Ibn Râ'îq was said to be the first to set up a toll-house at the very gates of Baghdad. It was naturally the Buyids who in particular made repeated efforts to introduce in 'Irak a system similar to that of the Fâtimids; 'Abûd al-dawla, the best organizer of the dynasty, and his immediate successors tried to impose dues on the fine textile products which were the livelihood of great numbers of Baghâd artisans: popular riots compelled them finally to abandon the project, and the same was true of the attempt to place dues on mills, etc. In the time of the Bûyids, Basra was notorious for the severity of its dârâbî, as was Fars; in Iran, on the other hand, Isfahan in particular and the whole territory of the Sâmanids had moderate dârâbî.

This very diversity raises a problem. It is indeed found in all sections of the fiscal organization, which was adapted to economic conditions and inherited different traditions, according to the region. But here there is another point. In principle, the Muslim has the right to pay his sakât direct to the "poor", and if, as happened in fact, he paid it to specialized agents, it was understood that the money had to go direct to the true beneficiaries, and not pass into the coffers of the State, which was taken to imply that it was spent on the spot and not centralized in the capital; furthermore, we have indicated that various taxes had to be regarded as himdya, which clearly meant that the beneficiaries were those who provided this himdya, the local authorities. It can hardly be doubted that the police, either in their official form as shurta, or as shâhidî militia etc. were the recipients of particular of these fiscal taxes in particular. From all this it emerges that the Bayt al-Mal was not the recipient of all the taxes that we have noted. We must not, however, go too far in the opposite direction. In fact, all the mukâs abolished by Saladin had very clearly been profitable to his treasury, and it was no less clear that, to swell his own fortunes, 'Abûd al-dawla in Baghâd made the fiscal efforts to which we have referred. Customs, which affected Muslims and non-Muslims alike, were in fact regarded as being unrelated to sakât and profited the Treasury. The same was true of the proceeds from rents. However, it was a principle of the Muslim fiscal administration that local expenditure was met from the proceeds of local taxes, only the surplus being sent to the Treasury; the latter did not provide any means of evaluation for the dârâbî and other basic taxes. In fact, without exception, the dârâbî do not appear in the 'Abbasid "budgets" that still survive. However, the proceeds from certain dârâbî perhaps formed part of the revenues of the caliph's or sovereign's private treasury, with which he thus contributed to the obligatory "good works".

Economic and international circumstances have sometimes brought about appreciable modifications in the system of dârâbî and, more particularly, customs. Al-Ghazâlî granted that the tariff could be lowered, even for infidels, if it was advantageous to the community to encourage the import of certain goods. From the 6th/12th century, this was in fact the object of the treaties concluded with the "Franks", setting up differential tariffs according to the goods, and sometimes even conferring on those nations' merchants advantages superior to those legally enjoyed by the Muslims. Naturally, this was not a practice peculiar to the Muslim States: Byzantium concluded similar treaties. It appears indeed that certain Muslim groups like the Kârimis with the Indian Ocean trade were allowed to enjoy preferential tariffs at the end of the Middle Ages (according to the Malaqallāh, see 252).

Bibliography: neither books nor papyri
provide documentation on the aspect of financial history considered here (apart from the doctrinal definition of commercial zakāt and taxes on the non-Muslims which fīkh approximates to it). Information is to be found either in geographers such as Muhammad or, for certain countries, in various chroniclers and authors of technical treatises on administration, of which only a few examples can be quoted here; for Mesopotamia, Dionysius of Tell-Mahre, Syriac Chronicle, ed. trans. J. B. Chabot (see Cl. Cahen, Fīkhī, etc., in Arabica, 1954), Miskawayh, Tadjīrī, ed. trans. Margoulouith (The eclipse of the Abbāsid Caliphate), with sequel by Abū Shudā'ī Rushawārī; for Egypt, in addition naturally to the materials in Maḥrī, Khaṭṭāt, particularly i, 103 ff., Ibn Mammātī, Kawkāwīn al-dawwarīn, ed. Aṭīya 1934, Nābuluslī, Abhār al-Fayyūm ed. B. Moritz (see Cl. Cahen, Impôts du Fayyum, in Arabica, 1956; for Arabia, G. Wiet, Un Décret du sultan Mālik Asårī à la Mecca, in Mélanges Massénon, III, 1957, and in particular the Yemeni Mulkhabbās al-jītān, on which see the article by Cl. Cahen and R. B. Serjeant in Arabica, 1957; on Syria, Kāmil al-Dīn b. 'Abd al-Adīm, Zubāda, ed. S. Dahan, i, 163 ff. (on the treaty of 358/969 with Byzantium), and *Ita al-Dīn b. Shadī, ed. S. Dahan, 1950 (see Sauvaget, Aţeq, 253-4), and, for the Diţāra, the same, provisionally in REI, 1934, 111-2.

The treaties with the Franks are given in Mas Latrie, Traittés concernant les relations des chrétiens avec..., l'Afrique septentrionale, 1866; G. Müller, Documenti sulle relazioni della città toscana coll'Oriente, 1879; Tafel and Thomas, Ursuchungen zur alteren Handelsgeschichte Venedigs, 3 vols. of Fontes Rerum Austriacarum, 2nd s., xii-xiv, 1856-57. For the later Middle Ages, see the Italian technical treatises such as the Pratica della Mercatura by Pegolotti, ed. A. Evans, Cambridge Mass. 1936.

As regards the modern literature, besides the information given earlier in Aghnides, Mohamm. Merch. Fīkhī, etc., B. Ifren, etc., the same, provisionally in REI, 1934, 111-2. A. Mez, Renaissance, viii; R. Heffening, Das Islamische Fremdenrecht, 1925, various works by Arabic-speaking scholars should now be added: 'Abd al-'Azīz Dūrī, Ta'rīkh al-İrāq Kidsi'da fi al-kār al-rābī' al-hīdarī, Baghdād 1948; Abābās al-Azāzīlī, Ta'rīkh al-dārīb al-ṣāhibiyya, Baghdād 1959; M. Awwād, al-Muṣafīr fi l-İslām, Baghdād 1950; Ṣāhib al-Barawī, Ḥalālat Miṣr al-khāṣṣīyyiya fi ahd al-Fātimiyyn, Cairo 1943.

(C. CAHEN)

(2) — West. The history of fiscal systems in the Maghībī is still to be written, and perhaps may never be written. The texts are few and difficult to interpret, the terminology vague. The turbulent history of the country gave no opportunity for the establishment of a lasting fiscal tradition. Tax-collection, like the other functions of government, was generally acknowledged to be the only proper regulator of finance. There seems to have been only one at any time or another, the government accepted payment in this form. There is some evidence that certain taxes were occasionally farmed out, but this seems in the Maghībī to be a late development first reported under the Almoravids and sporadically mentioned thereafter. There is no clear distinction between the privy purse and the public treasury.

West. Governor General, or the Caliph.—There are no contemporary texts. They collected ṣadaqa and ʾakār and diżīya but there is no clear indication of what these terms implied; later writers tend to interpret them in the light of legal doctrines which became established later. It seems as though the multitude of newly-converted Muslims led to the same difficulties in Ifīrkīya as it had in ʿIrāk 20 years before, and there was an ill-fated attempt by Yazzīd b. Abī Muslim to deal with them as Ḥādirī Ḥādirī had done. In the earliest decades the khums had some importance and there were even attempts to treat the vanished populations themselves as booty.

Aghlabīds.—New tax names (masāqlīm, ḥabbālī) appear, without definitions, and a distinct reference to the conversion of the tithe from a proportion, in kind, of produce to 10 ḥālīm per area.

İdrīsīds.—Little information. The Jews of Fez were obliged to pay the diżīya.

Rustamīds.—This period affords the only (and probably idealized) account of the distribution of the agricultural produce accruing from taxation. Fātimīds.—The taxation system seems to take on a better-organized aspect, though this may be an illusion due to the nature of the sources. For the first time we hear of a cadastral survey and of ṭawwil or ṭawwi (“apportionment” of tax?), and an attempt to establish the fiscal system on a rational and regular footing. Customs or octroi dues are first mentioned.

Zirīds, Hammādīs, Berber Principalities (Maḥrāwa, B. Ifren, etc.), Almoravids.—Information is very sparse, but Ibn Khallīkān describes the Almoravids' tax-collecting detachments composed of European mercenaries.

Almohades.—'Abd al-Muṣin is traditionally remembered as the one who introduced ħarādī into the Maghībī. However this may be understood it probably symbolizes some striking innovation on his part. These in fact are obscure account by Ibn Abī Zarī' of a land-survey which preceded the levying of ħarādī.

The zāhī al-ażāghī (first mentioned in connexion with Maḥrūr) was an important official in charge of finance. There seems to have been only one at any
given time and he is always mentioned among the high officers of state. The mushrif, on the other hand, was...

| 39x153 | Le Regime douanier du Maroc et le developpement du commerce marocain [(J. F. P. HOPKINS), 1958; Michaux-Bellaire, in Les impots marocains, xi; idem, in Les origines jusqu'a nos jours, Paris; J. Ganiage, Les origines du protectorat francais en Tunisie, Paris 1959. (J. F. P. HOPKINS)] | 92x153 | (3) — OTTOMAN EMPIRE. In the Ottoman system the taxes were divided into two groups, hukuk-i 'urfiiyye and rusum-i 'urfiiyye. The former included 'urf [q.v.] or ondasik, Sharidi, dziya [q.v.], hums-i 'urfii levied on mir, rams mined and khanima [q.v.]. Other Islamic taxes objected to by some legislators, such as maks [q.v.], were included rather among the 'urfii taxes by the Ottomans (for the 'urfii taxes dealt with by the Ottoman legis see Molla Khusrw, Durar al-hukkdm fi sharh gharur Al-akbam, Istanbul 1258, 1259-39). On the other hand they added to the 'urf an 'urf tax called saldiriyye or saldirik which raised it from one-tenth to one-eighth, and collected some additional dues, rusum or 'addi, on hives, fisheries, hay, and vegetables. Also dziya was somewhat modified in its application in the Ottoman empire. The 'urfii taxes [see 'urf] were those assessed by the Sultan and, in origin, were mostly pre-Ottoman local taxes. They were recorded by the Ottoman tabirir [q.v.] emins and proclaimed in the kanunnames (see Kanuns) of the sandjak. With the development of 'urf this kind of taxation grew in importance, though from the 10th/16th century there appeared a strong tendency to accommodate these taxes, at least formally, to the Sharia. The 'urfii taxes, generally called rusum or 'addi, were divided into various categories: 1. Up to the late 10th/16th century the basic 'urfii taxes were biti resmi and ispenji [q.v.]. The latter was paid by every adult non-Muslim at the rate of 25 akce [q.v.] per person. Widows paid it at the rate of 6 akce under the name of blue resmi. 2. Of the taxes levied on livestock the most important was 'addi-i agnim or koyun resmi which was usually 1 akce for two sheep, collected directly for the central treasury. The pastureage due, called yasih resmi, oluk resmi or resm-i lenagah was usually one sheep or its money equivalent for each flock of sheep of 300 | 146 | DARIBA |
which passed over to another sandjak, kadi or timar. It was paid to the person holding the land as timar or bahis (see Timar). The dues called bid-i hauz [q.v.] or haviyâdet were principally such dues levied on occasional cases as djerid-im or kanluk, fines, išerisâne or gerdeh resmi or nikâh ahesi bridegroom duty, yava and baqubun, dues paid while running away cattle or slaves, tapu resmi, [q.v.] (see Timar). A third such item, the dues called kanluk, or djerdâm, market dues, paid per load; kapan (bâbûn) and mişvin or terâza rusâmû, duties levied at the public scales. There were also gümûrûk, customs duties, getâ resmi, tolls levied at mountain passes and river fords, koprû bâbûl, bridge-toll. The state established monopolies on the trade of such commodities as salt, rice, wax-candles, soap, sesame and tobacco. The monopoly of minting was also a large source of revenue [see Dar al-Dur]. In the provinces became more and more arbitrary, and from the late 10th/16th century this made them virtually autonomous. As the central authority weakened the abuses of the system grew and most of the other ʿurfî taxes were assigned as timârs to the members of the ʿaskeri class who collected them themselves in their respective timâr lands. In view of the difficulties for the central government in collecting taxes in kind, such as ʿurfî, and of the lack of adequate means of communication, this system was maintained as the best possible method at that time. In essence timâr was a form of hauzla. The distribution and assignment of timârs were made by lâtirr and all this made a vast department of financial administration called deltar-i hawdulâ [q.v.] under a nisibâğı [q.v.]. The total sum of the revenues in this section was about 200 million akçe or about 3.5 million gold ducats in 933/1527-934/1528. Income unrecorded in the delters [see Başvelkâlet Arşivi] was to be collected by officers of the Sultan called mewbûldijî or mewbûldâji, under the defterdar, directly for the treasury. Except for the ʿahdîr, ʿahdi taxes, resmi-berat and tebdhîre and bâyi al-mîl (that is, escheated properties), mewbûlât, and the revenues from the imperial domains [see Kuiss] were collected for the central treasury, khâmis-ı ʿtimir, either directly by kuls, men of slave origin at the Porte, or through the ʿiltizâm system. The following is an official statement of the revenues from these sources for the provinces of Rumel, Anadolu, Karaman, Dhuhaul-Kadriye and Rum in the fiscal year of 933/1527-934/1528 (Istanbul Univ. İktisat Fakültesi Mecmuası, x, 1-4, 269).

This was about one fifth of the total amount of the state revenues in the same year. The most important item in it, mukdaṭaṭ, included the revenues of the Imperial domains (Khaṣṣ-i ʿHumayun), state monopolies, khâmsi-ı şarî, customs duties and imposts on trade. The mukdaṭaṭ were usually farmed out to the müllezîms or mukdaṭaṭ ʿısmil under the system of mukdaṭaṭa [q.v.], and their accounts were kept in the mukdaṭaṭa defterleri in the defterkhâne-i ʿtimir (one of the oldest and most important of these defters covering the reign of Mehmed II is in the Başvelkedel Archives, Istanbul, nos. 176, 6222, 7387). The ʿiltizâm system was essential for the Ottoman finances from the beginnings of the state and was also used by the big timâr-holders. Upon an order, hauzla, of the Sultan payments were made for state expenses directly by the müllezîms. From the 10th/ 16th century onwards, the ʿiltizâm system became dominant throughout the empire and the mukdaṭaṭa began to be farmed out for much larger sums. By the 12th/18th century the governors of some provinces became müllezîms at the same time, which made them virtually autonomous. As the central authority weakened the abuses of the system grew until in 1255/1839, by the rescript of Gülshânê, ʿiltizâm, termed a "destructive instrument", was abolished. The system of emôn, a system of collection of mukdaṭaṭa revenues directly by salaried employed called emûn, was made general and
mulações, financial heads in the sand [q.v.] with full responsibilities, were appointed. But the decrease in the state revenues under the new system compelled the government to restore ilçizams which lasted to the end of the Empire.

(4) — Post-Ottoman Egypt. In the years immediately preceding the Napoleonic invasion of Egypt in 1798, the Egyptian government’s principal source of revenue was derived from numerous taxes levied on the land. These fell into three main categories: (1) al-mâl al-hâr; (2) al-mâl (or bûjdmat) al-kûşâﬁyya; and (3) supplementary taxes, the _mudâf_ and _barrânî_. The government farmed out all these land taxes to _mulaçâms_ who collected them through their agents, most of whom were members of the Copt corporation.

The first of these taxes, al-mâl al-hâr, was composed of the mirî and the _jâzâ_. The _mirî_ was a fixed tax, part of which was destined for the Sultan’s Private Treasury in Istanbul while the remainder was kept in Egypt to support the cost of local government. The _jâzâ_ went to the concessionaires of _iltizâms_ (tax farms), the amount of this tax being fixed by the terms of the concession. To increase their profits, the _mulaçâms_ eventually demanded the payment of extraordinary taxes ( _mudâf_ and _barrânî_), collecting them regularly despite their illegality. The _mâl al-kûşâﬁyya_ was paid for the military and administrative expenses within the Egyptian provinces. All these taxes were paid either in specie or in kind.

The government’s other sources of revenue included a succession tax ( _hulûn_ ) paid by those heirs of _mulaçâms_ who desired to inherit tax farms; the _djîzâya_ [q.v.]; fixed tax on customs duties, which the tax farmers of customs were required to remit to the government; a tax levied on certain government officials whose functions involved the collection of recognized dues; duties on boats navigating Egyptian waters; duty on the corporation of goldsmiths; various levies on trades, merchants, and _wikâlas_, i.e., buildings designed for the reception of merchants and their goods; the proceeds from grants of tax farms on the sale or manufacture of various products; and profits from the mint. About a quarter of the revenue obtained from these sources was sent to Istanbul along with the _mirî_ on land and some Egyptian produce for use in the _saray_ and naval arsenal.

This fiscal system remained substantially the same during the three-year period of the French occupation of Egypt. Napoleon announced shortly after his arrival in Cairo in July 1798 that he wished to change none of the existing institutions or traditional taxes but planned only to eliminate arbitrary exactions and to introduce a regular system of tax collection. Indeed, the only change he made at the outset was to join the lands formerly held by Mamlûk _mulaçâms_ to the state domain for the profit of the French Republic (approximately two-thirds of the land of Egypt). Napoleon then confirmed the non-Mamlûk _mulaçâms_ in their _iltizâm_. Taxes continued to be collected by the Copts, under the supervision of French inspectors.

When Muhammad ‘Ali became Pasha of Egypt in 1805, he altered the fiscal system radically by expropriating the _mulaçâms_ and the beneficiaries ( _mulaçârrîfî_ ) of _al-risâba al-ahbâsîyya_, state lands which had been illegally endowed with the characteristics of _waḥî_ property. _Waḥîs_ on houses and gardens, i.e., endowments based on _waḥî_ property, were not affected, however, since they were considered sound or legal _waḥîs_. As compensation for their loss, the _mulaçâms_ received a pension and the right to cultivate their _waṣîyya_ lands (the portion of the _iltizâm_ which had been assigned to _mulaçâms_ for their exclusive enjoyment). Neither was heritable; upon the death of the _mulaçâms_, these pensions ceased and the _waṣîyya_ lands reverted to the state. The beneficiaries of _riwa_ lands also received a life pension while the state assumed the responsibility of maintaining mosques and charitable institutions, which had depended for their support upon revenues from these lands.

A cadaster of all cultivated ( _mâ’ûn_ ) lands was carried out in 1813-14; registers were prepared, listing the names of landholders, the quantity of land held, and the amount of the _mirî_, now a single tax replacing the former complex schedule of taxes and rated according to the fertility of the land and ease of irrigation. The only lands excluded from the cadastral registers were the _waṣîyya_ lands of the expropriated _mulaçâms_ and the uncultivated or uncultivable land (the so-called _abâdîyya_ land). The rate of the land tax did not remain fixed at
the 1813-14 level, but was augmented periodically as the Pasha’s need for revenue mounted; nor did all the land remain under direct government supervision. Instead, Muhammad ‘Ali assigned estates to members of his family, to favourites, and to foreigners. Some of these estates were known as ūdāsiyya (q.v.); others as ṣab‘idāsiyya (estates reclaimed from lands uncultivated at the time of the 1813-14 cadastre and granted on favourable terms); and ṣuhdās, estates consisting of bankrupt villages whose taxes were collected by their new landholders (sawsu‘a’akhkūds) rather than by members of the government hierarchy. The substance of the land (rabāba) of all these estates was retained by the state, the landholders possessing only usufructuary rights (tasāruf).

Along with his land reforms, Muhammad ‘Ali also monopolized all money crops (cotton in particular), creating in consequence of this new policy an important source of revenue for the government.

Other innovations, as well as the retention of taxes antedating Muhammad ‘Ali, are reflected in the extant budgets of this period. Receipts fell into three major categories: (1) direct taxes; (2) customs and appaltos, farms for the collection of duties on sundry items granted by the government for one or more years; and (3) profits from agriculture and industry. Direct taxes incorporated taxes on property, i.e., mūri (land tax), tax on date trees, on cities and towns, on gardens, and duties on wakkīlas, bazaars, and houses; taxes on persons, called ṣurdat al-rū‘ās, a personal tax amounting to 3 per cent on known or supposed revenue of all the inhabitants of Egypt, which was paid by all government employees, including even foreigners, by Egyptian employees of non-government establishments, by fāllāhin, and by artisans and merchants, the dā‘iyā, and a duty on dancers, prostitutes, jugglers, and conjurers; taxes on things, i.e., duties on boats navigating Egyptian waters, fish of the Nile, salt, oil, fruit, and butter;

Revenues from customs and appaltos included customs collected at Damietta, Rosetta, Būlāk, Old Cairo, Deraouli, Asyût, Dijdja, al-‘Uṣayr, and Cairo, Deraouli, Asyût, Suez, Djidda, al-‘Uṣayr, and al-‘Rū‘ās.

In general, Muhammad ‘Ali’s fiscal system endured until the British occupation of Egypt. Ibrahim Pasha introduced nothing new during his short reign, while ‘Abbās altered the system very little, although he economized on those projects begun by his grandfather which seemed wasteful. He abolished those ṣuhdās whose proprietors had failed to comply with the terms of their concessions, and suppressed the octrois. He also relieved the tax burden of the peasants by removing a large part of the ṣurdat al-rū‘ās.

His successor, Sa‘d al-Pasha, changed the existing fiscal system, somewhat, by ending the monopoly system and opening the country to free trade, allowing foreign merchants to deal directly with the Egyptian peasants. To compensate for the loss of revenue from government monopolies, he introduced a new policy regarding land taxes. Former tax-free lands were now taxed, some with the ḥalādí, and others with the ʻuṣur, the rate of taxes being substantially increased as well. In 1853, during ‘Abbās’s reign, the revenues from the land tax had amounted to 346,296 pures or £1,741,995; by 1858, Sa‘d had increased them to 501,985 pures or £2,509,492, almost a 50 per cent increase on land taxes alone (Green, May 1, 1858, in F.O. 78/1401). In addition, Sa‘d reinstated the entire ṣurdat al-rū‘ās, adding it to the land tax.

Sa‘d’s Land Law of 1858 introduced an important innovation of long-range significance. Under this law, the right to inherit, mortgage, and retain land permanently was granted to existing landholders, provided they paid their taxes. If these taxes were not paid within five years, the landholders were deprived of their lands permanently. This time limit, imposed by the new land law, was a direct change from traditional practices. Formerly, a peasant who had failed to pay taxes on his aṭhar land (land held on usufructuary tenure but passed from father to son for generations) was dispossessed until such time as he was able to meet his obligations. In this way, he could always hope to recover his land, and the peasants were particularly felt in the next reign. Those peasants who had over-extended their credit during the cotton boom of the 1860’s were greatly in debt when the market collapsed at the end of the American Civil War. Consequently, many peasants, unable to pay their taxes, lost their land.

The Khedive took advantage of the peasants’ plight to add more and more of their land to his private estates, until he eventually possessed one-fifth of the agricultural land of Egypt, which he exploited for his own profit.

Khedive Ismā‘il resorted to numerous expedients to increase his revenues. Among these was his Mukibbala Law of 1871 which provided that all landholders agreeing to pay six years’ taxes in advance would be permanently exempted from 50 per cent of their land tax, whether ḥalādí or ʻuṣur. This fiscal device failed to meet Ismā‘il’s expectations because many landholders refused to take advantage of it. Ismā‘il was no sooner removed from office when the law was abrogated (1880) and taxes reimposed on all land. With the British occupation of the country in 1882, the fiscal functions of the Egyptian government passed into the hands of the British administrators.

There is, on the whole, a remarkable continuity of practice in the matter of taxation in Persia from early Islamic times down to the 20th century; but whereas there was in early times an attempt to reconcile existing practice with Islamic theory and sporadic efforts to abolish non-ghari taxes, after the break with tradition in early Mongol (Ilkhanid) times, in spite of the Islamization of the administration under Ghāzān Khān and his successors, the general tendency was away from the Islamic theory of taxation towards a multiplication of taxes and dues and a greater variety of usage. Moreover, since there was no longer even an outward attempt to make the tax administration conform to the ideal of Islamic theory, the tendency towards arbitrary action increased; but the general principles of the tax system, the methods of assessment and collection, and the main problems to be faced did not vary greatly and such changes as took place prior to the 20th century were of degree rather than of a more fundamental kind. New dynasties and new rulers did not involve fundamental changes in the tax administration. The tax regime of Uzun Hasan, laid down between 874/14670 and 882/1477, is alleged still to have been operative in Safavid times. Many of his main features of the Kāḏār tax administration are already to be seen under the Safawids, the period of Afsār and Zand rule having brought little that was new in the field of taxation. At no time, however, did the government make the effort to overhaul the whole system. In general the amount of money in circulation was limited; commerce was not highly developed and there was difficulty in transporting and remitting large sums of money, all of which affected the system of administration in general and of taxation in particular. Further, the tendency for the silver currency to depreciate makes it difficult to evaluate accurately the changes which took place in the amount of tax levied and its relative incidence. Money going into the Royal Treasury is alleged by various foreign observers to have been hoarded and seldom to have reappeared in circulation; but as against this the money thus accumulated would seem not infrequently to have been dissipated on military expeditions, accession gratuities to secure the throne against rival claimants, and other emergencies; while the frequency with which the pay of the army and the official claimants, and other emergencies; while the frequency with which the pay of the army and the official

To what extent the revenue of the state and the ruler's private income; any surplus eventually found its way into the royal purse. In the Safawid period there was a broad distinction between funds belonging to the state (māli-i māṣāliḥ), administered by the mustaʿfī al-māmālīk under the Grand Vazir, and the funds belonging to the royal household (māli-i bẖāṣa), administered by the mustaʿfī of the diwān-i bẖāṣa, corresponding roughly to the earlier division between the āḥkār and the dargāh. How early this distinction is found is uncertain. Chardin affirms that it was first introduced by Shāh Sūfī (A.D. 1629-42); in any case there was considerable overlapping between the two divisions. By Kāḏār times the distinction between them such as it was had disappeared. The general tax structure and the broad division into "fixed" taxes (māli wa gẖâlāt and later māliyāt) and extraordinary levies and requisitions, and the purposes to which the revenue was devoted, namely the payment of the army, salaries of officials, pensions, and the upkeep of the royal court, were largely the same. Whereas, however, under the Šafawids large areas of the empire were alienated from the direct control of the central government and little supervision exercised over the tax administration of these areas, there was an attempt under the Kāḏār to centralize the tax administration; but the farming of the taxes to governors and others made nonsense of this and by the 20th century chaos prevailed in the tax administration. Collection was profoundly unsatisfactory; such checks and controls as had been devised had broken down, and the system was oppressive in its operation.

The most important of the "fixed" taxes were those levied on the land or its produce. A great variety of practice existed as regards both the method and rate of assessment. Moreover the extent of the area subject to the payment of land tax varied considerably. Much of the land as stated above was alienated from the direct control of the government in the form of tiyāūs and suyārḡāls, which carried full or partial immunity from taxation. The latter were granted mainly on crown lands, waḥf land, and dead lands. According to Chardin the Safawid empire was divided into "provinces" (māmālīk), i.e., into directly administered areas, and indirectly administered territory (bẖāṣa); the governors of the former, he affirms, remitted to the central government only a lump sum by way of a present (piyḵāsh) at the new year and a proportion of the produce and products of the province for the use of the royal court and workshops, retaining the remainder of the provincial revenue for the expenses of the provincial administration. To what extent
such provincial governors under the Şafawids and those of the provincial governors who farmed the revenues of their provinces under the Kâğıtars exercised freedom of action in the assessment and collection of taxes is not entirely clear. In either period the mustawfls of the central government prepared and sent, usually annually, to the provinces detailed assessments of the provincial districts, known as dastâr al-‘amal, according to which, or on the basis of which, the mustawfls in the provinces allocated the tax demand among the provincial population. It is also not clear to what extent the tax demand was paid in kind, the grain thus obtained being stored in government granaries and held against emergencies such as military expeditions and famine, or in some cases sold at fixed prices to the local population. Where the tax demand was made in kind as a fixed proportion of the crop it was presumably usually levied on the threshing floor before the division of the crop between the landlord and the peasant.

The extent of crown lands fluctuated. In cases where they were directly administered land tax as such was not levied, the whole of the produce after the deduction of the tenant’s share going to the treasury. If leased, the rent paid by the tenant presumably included, or was in lieu of, tax, and resembled an ordinary crop-sharing agreement. Under the Şafawids the land round Işfahân was largely crown land and administered by a special diwân under the mustawfl-i Ḵâṣṣa.

In addition to the tax on the land or its produce water dues in the case of large rivers were levied. Pasture dues and a herd tax were also collected in some areas from both the settled and the semi-settled population; but their incidence and method of assessment varied. Among the other ”fixed” taxes was a tax on real estate (other than agricultural land), such as baths, shops, water-mills, and caravanserais etc. (mustaghalldt), computed in early Kâğıtâr times at 20 per cent of the estimated annual profit. Malcolm alleges that there had been large increases in crown property of this nature owing to confiscations after the fall of the Şafawid and later dynasties. Where such property was rented by the crown to tenants, the rent presumably included, or took the place of, the tax levied on privately owned property of this kind. A poll-tax was paid by non-Muslims, Jews, Armenians, and Zoroastrians; and by foreigners unless granted special immunity. This derived from the canonical poll-tax of džiya. Various other sections of the community, including settled or nomadic, paid also what amounted to a poll-tax (sârāna, sar-shumdâr). There are references in various documents to some kind of house or family tax (ḥûnâ-šumār). Poll-taxes were finally abolished by the law of 20 Âḏâr 1305 A.H. (solar)1926.

Taxes were levied on the craft guilds, except where special immunities were granted, by a group assessment, also known as bunila. In Işfahân in Şafawid times the kalântâr and nakhb of Iṣfahân would assemble the guilds in the first three months of the year and the nakhb would fix their bunila with the hadkhûlî of the guild, this being subsequently allocated among the individual members of the guild. In practice, however, in the same way as the assessment of the land tax tended to become out of date so too was the bunila of the guilds often out of date. Craft guilds were also subject to tax on the tobacco trade. Market taxes were also in some cases levied. The main fixed taxes to which merchants were subject were road tolls (rîhdârî) and customs in the main some 20% of the crop; though a tradition affirms that prior to the reign of Fath ‘All Şâh the rate was one tenth. This rate seems unlikely, however, to have been generally current. In any case a wide variety of practice existed. On grain crops the tax demand was paid in kind, the grain thus obtained being stored in government granaries and held against emergencies such as military expeditions and famine, or in some cases sold at fixed prices to the local population. Where the tax demand was made in kind as a fixed proportion of the crop it was presumably usually levied on the threshing floor before the division of the crop between the landlord and the peasant.

The land tax was assessed in three main ways: by measurement, as a proportion of the produce, or in a lump sum. The assessments were not made at regular intervals and were frequently hopelessly out of date; though where the tax due was assessed as a definite proportion of the crop, the income therefrom could be estimated. Tax collectors of necessity estimated this annually. The most common form of assessment by Kâğıtâr times was the computation of the revenue due from a town or village in a lump sum; this had the advantage of avoiding annual visits by the tax collectors to assess the amount of the crop. The tax due, assessed partly in cash and partly in kind, was known as the bunîla of the town; it included from about the middle of the 19th century also the number of soldiers which the area was required to provide or a sum equivalent to the wages of a given number of soldiers. The final allocation of the tax demand among the population of the town or village was made locally. Special remissions on account of natural calamities or in return for some special service were granted from time to time and occasionally the tax was remitted wholly or partly. Moreover levies were made on account of arrears or to meet some emergency or special need, and the general tendency was for these to become part of the regular assessment. Further by the manipulation of the conversion rates (fasīr) by which taxes assessed at an artificial currency rate or in kind were converted into cash, the rate of taxation was increased.

The assessments being usually out of date, it frequently happened that a village which had declined in prosperity and whose inhabitants had decreased on account of war, famine, emigration or some other cause, would be over-assessed and the amount of taxation due from the individual taxpayers automatically raised. Conversely villages which had increased in prosperity or had been newly developed were often under-assessed.

The rate of taxation levied on each plough-land varied from 14 to 20 per cent of the produce; in addition dues were levied on each plough-land. Under the Şafawids a somewhat similar situation presumably prevailed; Chardin, however, states that the tax on silk and cotton was one third of the produce. The rate in Kâğıtâr time seems to have been
dues. The former were usually levied at so much per
animal load at each town, the rate at which they
were levied varying. Customs duties were paid on
merchandise at the port of entry or exit. In the
Šafawid period a duty of 10 per cent was levied by
the customs houses in the Persian Gulf; on other
frontiers the duty was levied per load. Certain
exemptions and reductions were granted to various
foreign merchants. By the Treaty of Turkomanaşcay
(1828) an ad valorem tariff of 3.5 per cent was imposed on
imports and exports by Russian merchants; in due
course equivalent treatment was demanded by and
given by Russia. In Persia the granting of grants and
only 2 per cent but were subject in addition to road
tolls. The revision of the custom tariff in 1903 was
prejudicial to Persia and partial to Russia. The
customs and road tolls were usually farmed in each
district.

A levy on mines and pearl fisheries was made at
the rate, in Šafawid times, of one third of the produce.
The payment of “fixed” taxation; perhaps the due
that revenue in Kadiar times. In the latter part of the
19th century the post and telegraphs became an
additional source of revenue.

Numerous other dues made up the “fixed”
revenue. Here again a great variety of practice
existed and there is little detailed information on
the rates at which these various dues were levied.
Many of them were still levied in the 20th century.

The liability of the taxpayer was not limited to
the payment of “fixed” taxation; perhaps the most
onerous were levies on agriculture, called (pishkash),
or a money payment taken in lieu of this. The
liability did not necessarily begin at the birth of the
individual, but descended to his descendants.

The exaction of such service however could not fail
to degrade the station of the peasant and artisan
and to be levied not only on the amount of produce
but also as a special charge for the
administration of the country, abolish certain of the
irregular taxes and requisitions, increase the revenue,
and improve collection. A decree of 1303/1885-6 laid
down certain changes in the collection of the revenue
and attempted to define the financial responsibility of
the governor. Instructions were issued for a new
land survey and the levy of land tax at the rate of
10 per cent of the produce and various dues in
1307/1889-90. These and other measures were not,
however, attended by any marked degree of success
and were not operative throughout the country.

full figures cannot be given for the total revenue
owing to the impossibility of computing the extent of
the revenue outside the “fixed” taxes. According to
the Tadbirat al-Muluk the state revenue (i.e.,
excluding revenue from the Kādijār) in late Šafawid
times amounted to 8,000,000 tumdans. 82 per cent
of this came from taxes registered in the awquirā,
which Prof. Minorsky thinks may have been land
taxes; levies including rents from real estate excluding
agricultural land, etc. accounted for 14.5 per cent,
mines for 2 per cent, and produce and products
remitted to the royal workshops for 1.5 per cent.
According to the same source the total cost of the
army and administration was 491,965 tumdans which
were levied in order to meet the financial deficit of the
country. According to the nature of the occasion the
whole country or a district or section of the community
was subject to the levy. Its incidence was
arbitrary and the average levied great
scope for the show of partiality and the exercise of
injustice. Suyürğalis consisted of levies made for
the keep and expenses of military forces, government
officials, and foreign envos passing through the
country and like the žähriā bore heavily upon the
peasantry. Presents (pīshkash) were of two kinds,
“casual” and “regular.” The latter were remitted
annually at the New Year and in some cases to
certin religious festivals, such as the ūd-i mawālid,
by provincial governors, chiefs of tribes, and high
officials. The amount of these presents was fixed
broadly by custom. The occasions for the levy of
such presents were various. On the assumption of
office by governors and high officials a payment,
comparable to the equivalent of purchase money, was
often expected. Presentations to the governor in the
gift of money in many cases would cost its recipient a sum commensurate
with his position in society; the progress of the shah
through a district would involve the presentation of
presents by all and sundry; similarly the visit
of the Shah to the house of a favoured minister would
impose upon the latter and his family and retainers
heavy expenses in the form of presents; further,
the fees of the numerous body of persons who
received pensions from the state had frequently to
purchase the renewal of these grants, as did also
the holders of tiyals and their heirs. This system of
pīshkash extended throughout the administration;
not only did the Shah expect and receive pīshkash,
his governors and ministers also demanded and
received similar treatment in the areas under their
jurisdiction and from their subordinates.

A further charge on the peasants and some of the
trade guilds was labour service exacted by the state
or a money payment taken in lieu of this. The
incidence of labour service varied from place to
place and it is difficult to assess it in money terms.
The exact amount of service required could not fail
to degrade the station of the peasant and artisan
and to emphasize his subjection to authority.

The liability of the taxpayer was not limited to
the payment of “fixed” taxation; perhaps the
most onerous forms of taxation to which he was subjected
were constituted by extraordinary levies, of which
žähriā and suyürğalis were the most widespread and the
most burdensome, and “presents” (pīshkash),
casual and otherwise. Žähriā comprised levies made to
meet special expenditure such as that occasioned
by a military expedition, the construction or repair
of a royal building, or some special festivity, or
simply on the occasion of another financial
deficit of the revenue. According to the custom of the occasion the whole
country or a district or section of the community
was subject to the levy. Its incidence was
arbitrary and its levy gave great
scope for the show of partiality and the exercise of
injustice. Suyürğalis consisted of levies made for
the keep and expenses of military forces, government

DARĪBA
was any surplus remaining remitted to the central treasury. According to Malcolm the “fixed” revenue in the early 19th century A.D. amounted to about three millions sterling. Local estimates put the receipts from Naw Ruz presents at two fifths of the “fixed” revenue, from fines one fifth of the “fixed” revenue, and the sum levied by public requisitions two fifths of the “fixed” revenue, the total revenue of the Shah being thus estimated at c. 6 millions sterling, only a proportion of which was paid in cash and large deductions being made for the expenses of collection before remission to the central government. Fines present on the “fixed” revenue at 45,169,516 tumâns (or £ 1,652,820, converted at 33½ kirans to the £ sterling, the rate prevailing in 1888), comprising taxes in cash 36,076,757 tumâns, in kind (converted at government rates) 10,100,983 tumâns, customs 8,000,000 tumâns, and posts, mints, telegraphs, etc., 1,191,776 tumâns. Expenditure, excluding local charges for the collection of revenue, reductions for bad harvests, etc., he estimated at 42,233,472 tumâns (£ 1,260,700), comprising maintenance of government buildings 2,633,472 tumâns, the army, the central administration, pensions, allowances, and the Shah’s establishment, etc. at 21,600,000 tumâns, showing a surplus of 13,136,044 tumâns (£ 392,121). These figures, however, do not give a true picture of revenue and expenditure since not only is the revenue derived from sources other than “fixed” taxes and dues omitted, but also expenses for military expeditions and equipment, foreign journeys, and unforeseen emergencies. The total picture was far less favourable and such reserves as may have been accumulated were rapidly dissipated in the second half of the 19th century A.D. and the early years of the 20th century. Foreign loans were contracted to make good budgetary deficits, for the servicing of which the customs were mortgaged. By 1911 there was an annual deficit of c. 6,000,000 tumâns, which in fact was usually increased to some 11,000,000 tumâns because the “fixed” taxes were not collected in full. By 1922 there had been considerable changes in the proportions of the total revenue derived from different sources; nearly half the revenue was derived from the customs tariff, and oil royalties constituted a not inconsiderable part of the national revenue.

The grant of the Constitution in 1906 marks the beginning of a new phase in the tax system of Persia. Under the constitution the approval of the National Assembly was necessary for the regulation of all financial matters, the preparation and execution of the budget, the imposition of new taxes, the reduction for bad harvests, etc., he estimated at c. 6,000,000 tumâns, which in fact was usually increased to some 11,000,000 tumâns because the “fixed” taxes were not collected in full. Their fiscal administration, therefore, was based upon precedents developed by the Muslim administrators and judges of the Eastern Caliphate with an admixture of Hindu tradition. The reconciliation of Islamic law and patterns with native tradition did not prove too difficult because of certain similarities between the two.

A group of taxes payable only by the Muslims came under the category of zakāḥ. The State does not seem to have levied the zakāḥi on personal property, but left it to the discretion of the individual to pay. In the case of non-Muslim merchants the rate was doubled. This was the only tax paid by non-Muslims which was classified as zakāḥ.

Property left by Muslims dying without heirs belonged to the State and was earmarked for charitable purposes. The property of a dhimmī dying in similar circumstances was handed over to his community.

Dīzya was levied in accordance with the rulings of the Ḥanafi jurists. Buddhists and Hindus were recognized as dhimmis along with 'the peoples of the Book'. Muhammad b. Ḥāsīm, the conqueror of Sind, first extended the status of dhimmis to Buddhists and Hindus and no subsequent ruler withdrew it. The sultans of Dīlī assessed dīzya in their own money; they charged ten, twenty, and forty lānchas per annum, in accordance with the income of the assesses (Shams-ī Sīrādī ʿAṭīf, Taʿrīkh-i Firāzgāhī, Calcutta 1896, 383). Imbecile old men, cripples, the blind, and those who had not enough to pay the tax after defraying the cost of their living, were exempt. Women and children also were exempt. Non-Muslim servants of the State also were not required to pay the dīzya. The Brāhmans remained exempt most of the time.

Imbecile old men, cripples, the blind, and those who had not enough to pay the tax after defraying the cost of their living, were exempt. Women and children also were exempt. Non-Muslim servants of the State also were not required to pay the dīzya. The Brāhmans remained exempt most of the time. Only Firūz Šah (752-90/1351-88) demanded dīzya from the Brāhmans, who protested and made a demonstration in front of the palace (ibid., 382-4). The sultan did not forego his profit, but he relented to the extent of assessing all Brāhmans according to the lowest rate. Even this assessment was paid by charitably inclined rich Hindus who wanted to relieve the Brāhmans of the burden. This is the only instance on record of a public protest against dīzya. The Hindus perhaps did not find the idea of a poll-tax difficult to accept because it was also embedded in their own tradition.

The spoils of war, technically called ḡanīma, were shared between the State and the soldiers. Legally the State was entitled to a fifth of the yield; because of the increased expenditure upon the army on account of Mongol pressure, ʿAṭīf-al-Dīn raised it to the maximum allowed under the sharē': a half (I. H. Qureshi, The Administration of the Sultanate of Dehle, Karachi 1958, 103 ff.). Ghiyāṭī al-Dīn Tughluk again reduced it to a fifth. When his son Muḥammad b. Tughluk (725/1325-51) tried once more to increase the level in the Dōrāb by ten to twenty per cent, there was rebellion. A fourth of the gross yield seems to have been stabilized as the recognized demand before Shīr Šāh (945/1538-45) came to the throne (ibid., 111-9).

The Hindus perhaps did not find the idea of a poll-tax difficult to accept because it was also embedded in their own tradition. The Gaharwars of Kanawdī had levied turushkabandika, either from the Muslims resident in their dominions or from all their subjects, as a contribution to defence against the encroachments of the Turks. Even during the British period a poll-tax was levied by some Rajput states.

The principle of the kharḍāl al-mubāsama was applied to the kharḍāl lands. This was found convenient because the Hindus were used to various forms of sharing the produce of their lands with the State, as they recognised that the State was entitled to a share of the agricultural produce. As the share of the State was traditionally considered to be a defined percentage of the actual produce, the basic principle of kharḍāl al-mubāsama was acceptable to the Hindus. Thus the requirements of the ghazī and Hindu tradition could be easily reconciled and there was no need to create confusion by any radical change in the principles of assessing the State demand on agricultural produce. The Hindus had developed various methods of sharing the produce with the State before the establishment of Muslim rule. These included actual sharing through grain heads of equal size, appraisement and the division of the field. Through long experience appraisement gained considerable accuracy and, because of its convenience, was widely adopted. Gradually the average yield in a unit of homogeneous area came to be so well established in popular knowledge that it was sufficient to measure the area under cultivation to calculate the yield. All these developments were intended to spread the time of assessment so that the harvest would not lie in the open field awaiting the arrival of the assessment team. The village accountant, the pāwārī, kept a record of the area cultivated and the crops raised in every season. He also kept a record of the average yield. These traditional methods, called Sharing, Appraisement and Measurement, were left almost intact by the sultans of Dīlī. The sultans encouraged Measurement, because they found this device a more convenient method of accounting and collection. Its great weakness was that it worked satisfactorily only in normal seasons. If the rains failed or the area suffered from other disaster, the normal yields could not be expected. It was then necessary to revert to Appraisement or Sharing. If the peasant felt that the Appraisement was not fair, he could always elect Sharing. This was an insurance against excessive assessment.

The proportion of the State demand to the gross produce varied in accordance with local tradition. In the areas conquered and brought under effective administration up to the reign of ʿAlāʾ al-Dīn Kahlīlī (695-715/1296-1316) the prevailing proportion was a fifth of the yield; because of the increased expenditure upon the army on account of Mongol pressure, ʿAlāʾ al-Dīn raised it to the maximum allowed under the sharē': a half (I. H. Qureshi, The Administration of the Sultanate of Dehle, Karachi 1958, 103 ff.). Ghiyāṭī al-Dīn Tughluk again reduced it to a fifth. When his son Muḥammad b. Tughluk (725/1325-51) tried once more to increase the level in the Dōrāb by ten to twenty per cent, there was rebellion. A fourth of the gross yield seems to have been stabilized as the recognized demand before Shīr Šāh (945/1538-45) came to the throne (ibid., 111-9). However, in certain desert areas, the demand was as low as a seventh; there also seem to have been certain outlying provinces, such as Gudjarāt, where it was a half.

The spoils of war, technically called ḡanīma, were shared between the State and the soldiers. Legally the State was entitled to a fifth, but because the soldiers were paid salaries out of the Public Exchequer, the sultans considered it fair to give a
fifth to the soldiers and to deposit four fifths in the public treasury. Under Firuz Shah the legal ratio was restored (‘Ayn al-Mulk Mährū, Inšgād-i Mährū, Letter xv. [MS. in Bankipore Public Library, Patna, India]). The State was also entitled to a fifth of all minerals, provided they were capable of being melted and bearing an imprint. The same applied to treasure trove, if it consisted of unstamped bullion or money minted before the Muslim conquest.

In addition to the above taxes, local imposts were continually imposed in spite of repeated abolitions by the State. These went mostly into the pockets of the local authorities and did not contribute to the income of the State. They had come down from very early times and were so deep-rooted in the habits of the people that their effective abolition was difficult. They were not excessive and were generally petty levies on certain professions and the sale of a few commodities (Qureshi, op. cit., Appendix H, 244 ff.).

The fiscal administration of the Sultanate was vested in the diwan-i ważrat, which was presided over by the ważir. He was assisted by a deputy. The mušir-i mašālik was the accountant-general, and the mušawvi-i mašālik the auditor-general (‘Affī, op. cit., 419-20). Every provincial capital had its own diwan-i ważrat which was a replica of the central diwan-i ważrat and functioned under its control (Qureshi, op. cit., 200-1). Every pargana, the smallest unit of revenue administration, consisting of a number of villages, had its ‘ilādī under whom there was an accountant, a treasurer and a field survey and assessment staff. The village accountant and registrar, called pāteswāri, kept all records concerning cultivation, assessment and yields (ibid., 208, 209).

The zakāt on imports was assessed and collected at the local sarā-i ādām. ‘Aqlām was administered by the diwan-i sarā; the property of Muslims dying heirless went to the office of the local hādī. (b) The early Mughals. No conspicuous modification of the system described above was attempted until the time of Shīr Shāh. Bābur and Humāyūn made no changes in the existing system, largely the result of Sikandar Lodī’s improvements, which they adopted in its entirety; the statistical returns of Bābur’s times were based on the rent-rolls of Sikandar Lodī, and all calculations were made in accordance with Sikandar’s prescriptions on standards and computation. Both Bābur and Humāyūn granted new diwāns. The account of the reconstruction of the central administration in Humāyūn’s reign (Khānd Amlī, Humāyūn-nāmā, see Bibliography) suggests that there was no change in the work of the revenue ministry, now called diwānis.

The interrex Shīr Shāh was the first ruler to rationalize taxation, especially in respect of the chief source, the land. He tried to counteract the recurring tendencies to impose extra-legal taxes on the cultivators, but there is no evidence that he conscientiously applied the Islamic principles of taxation: gīzāya and zakāt are not mentioned in contemporary records, although the later Ta’rīkh-i Dīwānī gives an extensive list of the sources of state income under heads other than land-revenue: sales tax, conveyance duty, ground rent from market vendors, tax on sugar refinery, ferry tax, grazing tax, cattle tax, profession tax from various artisans, gambling tax, and gīzāya and pilgrim tax on Hindus. Shīr Shāh is said to have forbidden the realization of transit dues and octroi, but how far this prohibition was effective is doubtful; it is probable that a distinction was made between diwānī and khāṭīṣa territories. Property of intestates most probably escheated to the state. Presents to the Emperor do not seem to have been exploited by Shīr Shāh. The changes he introduced in respect of khāṣṣa lands seem to have been the result of the practical experience he acquired in administering the diwānī his father had been assigned under the Lodīs. Sharing of the ripened crop (ghallābakhshī) and appraisement (kankāt, mukThirty years the entitled to a fifth of all accounts, and at the land frontiers. Certain internal
transit duties were also levied, including terry taxes. Other regular taxes included those on salt—in some districts accruing to the provincial revenue, in others to the central administration—; fisheries, particularly the Bengal fish-tanks; rādārī, a road tax for merchants in exchange for protection; and pandārī, a sales tax. Regular revenue from non-tax sources included that from copper, zinc, and silver mines (Aṭīn, index); mint (6,174,500 dān is mentioned as mint income in the Mīrālī-i Aḥmadī, i. O. Ethé 3599, f. 728b), which were established in the principal towns of the empire (R. B. Whitehead in JASB, N.S. viii, 1972, 425-531; N.S. xi, 1975, 325-77; G. P. Taylor in JASB, N.S. x, 1974, 179-97; see also Dār al-Dār, c.); and tribute from vassal chiefs (e.g., the revenue of the sūba of Aṭīmī around amounted to over 7,200,000 rupees, three-quarters of which comprised tribute from Rādī īvī chief; other tributary domains were in Gudjarāt, Uṣrā and Central India). Irregular revenue included presents on appointment (salāmi), escheat through intestacy or forfeiture, and other private estate, and a five-fifth of war booty reserved for the imperial exchequer.

The greatest single source of recurrent revenue was from the land, demanded under several different systems during Akbar's long reign, and documented in great detail in the Aṭīn-i Akbarī and other contemporary texts (see Bibliography). The old methods of khallābābākhī (which prevailed in Sindh when the Aṭīn was compiled, for where there are no records of any survey or measurement) and kankūl remained in force for some areas, but the most favoured system, dābi, was subject to a number of experiments in the first twenty-four years of the reign. First Shih Shah's schedule of assessment rates was adopted for general use by the regent, Bayrām Khān, on the basis of a demand of a prevailing rate of one-third of the average produce, stated in grain. "From the beginning of this eternal reign, every year unavari-
cious and high-minded experts used to ascertain prices and lay them before the royal court; and taking the schedule of crop yield and the prices thereof, used to fix the schedule of demand rates (dastār); and this caused great vexation" (Aṭīn, i, 347, trans. I. H. Qureshi in JPhH, ix, 1953, 208); but by the tenth year the uniform schedules gave place to differential schedules based on local prices. Rates, the measuring instruments had been standard-
dized, and land had been classified in accordance with the time it had been cultivated (banjīdūr, uncultivated for five or more years; pulaḍī, cultivated for more than five years; pulaḍī land lying fallow for a short time was patawūlī, but for three or four years was called ṭalār; when banjādūr land was brought under cultivation the demand was one-fifth of the norm for the first year, increasing yearly until the full pulaḍī rate was attained; there was a similar differential rate for ṭalār; patawūlī was untaxed but paid the full pulaḍī rate on being taken into cultiva-
tion again). The dābi system was abolished in the khālisā lands in the thirteenth year (976/1569) under the specially appointed Shihāb al-Dīn Ahmad Khān, who discontinued the annual assessment and established a nasab (Aḥkār-nāma, ii, 333), not precisely defined but assumed to be a form of assessment analogous to kankūl administered through the muḥaddaws (according to Moreland, Appx.D, "group-assessment", where the term is discussed). A new system was introduced in the fifteenth year (978/1571) when Muẓaffar Khān and Rādī Ṭādīr Maḷ were appointed to the wīsārā, having been set in motion in the eleventh year (on the dating question, see Moreland, Appx.E), described in Aṭīn, i, 347: khānsāngos ("interpreters of customs", accountants and registrars of the pargānas (q.v.) prepared new schedules of produce separately for each pargāna, and on the basis of returns for the whole empire (akhsimāt al-mult) a new mākigel was determined by estimate, and hence a new valuation (джām) made by applying the new schedules to actual or estimated crop areas (actual areas being on hand for the khālisā lands).

In the nineteenth year (982/1575) Akbar, requiring to pay salaries by cash rather than by assignment, decided that the areas of the pargānas of the Empire should be re-examined, and the extent of all land, including that bandīgī or ṭalār, which on cultivation could be expected to yield one crore (hārūṭī, 20 million) tankūs should be separated and entrusted to an official called karkūtī, who was to be responsible for effecting the cultivation of the bandījī land and realizing the correct demand (Tabakdt-i Akbarī, B.M.O. 2274, f. 203), so that in the course of three years all the waste land should be brought under cultivation, improving the condition of the rīḍīya and benefiting the treasury (Aṣbāb-i Ṭādīr, Al-mulâkāt). After a successful start the system broke down under the rapacity of the karkūtī and the corruption of their collectors and clerks. The period of this breakdown coincides with Shāh Mansūr's de facto tenure of the diwanī in the absence of Ṭādār Maḷ on military duty. On Ṭādār Maḷ's return in the twenty-
sixth year (985/1577) he resorted to forcible measures to bring the collectors to account, and the following year an Imperial commissioner (amin al-
mult) was appointed in Ṭādār Al-iūbī, invited from the court of Bidjapur, to both of whom the final system is due.

Previously, in the twenty-fourth year (981/1579-80), the practice of assignment of ḡijāfrīs having been re-established, a new valuation was made, calculated on the data of the previous ten years' operation of Ṭādār Maḷ's assessment rates, described in a notoriously difficult passage of the Aṭīn (i, 347), known as Aṭīn-i ḡāsīla (tr. Qureshi, loc. cit.; see Bibliography for earlier translations and interpretations): the ministry held the correct figures for the preceding five years, and those for five years before were taken from reliable sources. One-tenth of the total was declared to be the average produce (hāsīla) and would be taken as the basis of valuation for the ensuing year; deductions were made for partial or complete failure of crops in any area. This decennial average was re-computed each year; demand rates were now fixed in cash, not grain, thus obviating the necessity for yearly revision of the commutation rates. In the provisions the pargānas are grouped into assessment circles, each with its own schedule (dastār). This system is attributed to Akbar himself.

The final system maintains this ideal of valuation but improves its administration (Aṭīn, i, 285-8). Ṭādār Maḷ's proposals of the twenty-seventh year are incorporated in a code of practice which was periodically amended. Village records are kept by the patawūlī, but were available to the State officials. The collector was required to familiarize himself with local agriculture and to extend cultivation wherever possible; to this end the headman was to be allowed up to 21/2 per cent share in the returns, and was authorized to reduce the sanctioned rates on high-
grade crops, and to depart from the system of dābi if the rīḍīya elected khallābābākhī, kankūl, or
nasak; the rūḍāna was to know in advance the extent of his liability to the State. These regulations were applied, successfully, in the ḥāliṣa lands; there is insufficient information on their operation in dijualgī.

(c) The later Mughals. The schedules of cash-dividend, as now understood, in the Mughal empire, in accordance with the principles of Islamic Law. This latter is based on the description of practices than for Dāwūdī’s, although the account in the Maḥdīh or ‘Al-ʿUmārī indicates that on his accession he designated ḥāliṣa sufficient land to yield a revenue of 150 lakhs of rupees, and fixed the expenditure ceiling at 100 lakhs; the expenditure limit greatly exceeded this figure, but the ḥāliṣa income was correspondingly increased. A later writer (Bindrāba, Lubb al-Tawārīḵ-i Ḵᵛān, tr. in Elliot and Dowson, vii, 170 ff.) refers to agrarian orders having been issued by the emperor, but these have not been discovered, and the nature of his systems can best be inferred from Awrangzib’s early orders, referred to below. There is, however, a record of the practice in this reign in one area: the Deccan provinces had been brought almost to economic ruin as a result of the wars of conquest, and during Awrangzib’s second viceregal period their revenue systems were reorganized, from about 1652/1653, by Murshid Kuli Khān that retained plough rents where the state of agriculture was primitive, and elsewhere introduced ḥāliṣa and ḍabt, the former being introduced on differential scales for the first time in India, varying with the nature of the crop and with the nature of the source of water on which the crop depended; assessment rates were fixed at a low figure and were accompanied by positive measures to restore prosperity by repopulating and reorganizing the ruined villages and by capital advances. His achievements in the Deccan had apparently no reaction on the administration in the north.

The state of the revenue system when Awrangzib came to the throne, and his measures towards a reform, can be gauged from two early jāmāns of the 8th and 11th regnal years (1076/1665-6 and 1079/1668-9), with preambles containing descriptions of the systems of assessment then in force, with their defects, and the procedures to be adopted in the future (see Rashīd-ud-Dīn Sārkhā, The revenue regulations of Awrangzib . . ., in JASB, n.s. ii, 1906, 223-55); the former constitutes a manual of practice addressed to the provincial diwān and his staffs, but intended to be applicable also for the staffs employed by ḍājīrg-holders, while the latter was issued with the object of ensuring an assessment and collection of revenue, throughout the whole empire, in accordance with the principles of Islamic Law. This latter jāmān is based on the Fatawa-i ‘Alamgiriyya (q.v.) of contemporary jurists, whose authorities were the law-books and commentaries of the central Islamic lands rather than the practical conditions of agriculture in India, with consequent distortions of interpretation of the situation: e.g., reference to peasants as though they held proprietary rights over the land; to a distinction between ṣagr and ḍabt land, not applicable in India; and detailed rules for land under dates and almonds, irrelevant in India.

The first jāmān is the more practical: revenue from the ḥāliṣa lands was expended by the emperor, not the viceroy, and was assessed and collected by the central diwān through the provincial diwāns. There is to be increased control over the local staffs, and the central authority must be kept informed of actual agricultural conditions by more detailed
annual returns from each village; there is set out a development policy through extension of cultivation, increase of the area under high-grade crops, and the erection and maintenance of irrigation works; the old standard demand of one-third became the new minimum demand, with the maximum raised to one-half—in practice presumably generally demanded, since the officials' primary duty was to increase the revenue. Assessment was usually by nasab, usually of a whole village but on occasion of an entire pargana; the nasab could be refused, in which case revenue could be obtained by dab or ghallande, a disposition of local officials; cash-payments of revenue were usual, although Sarkar has shown (Studies, 217) that in parts of Ufisa revenue was paid in kind. The demand was assessed as a lump sum at the beginning of the year, distributed over the peasants by the headmen; these were paid as the crops matured, and passed their collections to the officials after having set aside their own portions as "village expenses"—a further exaction on an already oppressed peasantry. Provision was made for the occurrence of such calamities as drought, frost, or low prices (the second farman makes a distinction between calamities occurring before and those falling after the crops were cut). That these regulations were intended to set a standard of procedure in the dājīgīr-lands is shown by a provision requiring the provincial dājīn to report on the loyalty and efficiency of the officials, and the large tax-farms in Bengal became the forerunners of the system of zamindāri [q.v.]. The revenues thus passed out of the control of the imperial authority as such, and the later fiscal history more properly belongs to the period of British India.

DARIM [see TAMIM].
AL-DARIMI, 'ABDALLAH B. 'ABD AL-RAHMAN
B. AL-FADL B. BAHRAM B. 'ABD AL-SAMAD ABU
MUHAMMAD AL-SAMARKANDI belonged to the B.
Dārim b. Malik, a branch of Tamīm. He travelled
from a number of authorities in al-Īrāq, Syria and Egypt.
Among those who transmitted traditions on his
authority were Muslim b. al-Hajdāj and Abū
'Isa al-Tirmīdī. Al-Dārimī lived a simple, pious life
devoted to study, and acquired a reputation for
knowledge of Ḥadīth, reliability, truthfulness and
soudness of judgment. He was asked to accept office as
ḥāfīz in Samarkand but refused. The sūltān insisted,
so he accepted the office, but after acting once he
was asked to be excused and this was granted. He was
born in 181/797 and died in 255/869. His writings
have been edited. Dārim shows remarkable mastery of
books, but he is also
credited with a Kurʿān commentary. Al-Ḵaṭṭāb
al-Baghḍādi says he compiled al-Musnad and al-
Qiṣa, but one wonders whether these may not be
alternative titles for the same work. His collection of
traditions is commonly called al-Musnad (publ.
Kānpur, 1329, Ḥaydarābād 1330, Dihī 1337, Damas-
cus 1349), but this work is appropriate only if under-
stood in the wider sense common in earlier times.
It should be called al-Sunān, as the material is arranged
according to the subject-matter. This work has not
been treated on an equality with the other canonical
books, but Ibn Ḣadāj al-ʿAṣḵalānī considered it
superior to Ibn Māḏaʿa Sunān. It is much shorter
than any of the six books. Ḥadījī Khalaʾī mentions
three other works, two of them excerpts from his
Musnad, but they have not survived.

DARİR, MUSTAFA, Turkish author of the
7th/14th century. Very little is known of his life.
He was born blind (darîr) in Erzurum where he studied;
later he travelled in Egypt, Syria and Karaman.
His works which have come down to us are: 1. Tar-
duwar al-Darīr, an enlarged free translation, inter-
spersed with many original verse passages, of Abū
ʿAbd al-Bakri al-Basīri (6th/12th century)
version of the sira of Ibn Isḥāk, filled with stories
and legends borrowed from various sources. It
consists of five volumes and was written by
the order of the Mamlūk sultan of Egypt Abū-Muṣṭafā
ʿAlāʾ al-Dīn ʿAllī; it was completed in 790/1385
and presented to the sultan al-Sāliḥ Saḥlab al-Dīn Ḥadījī.
The chapter on the birth of the Prophet seems to
have been inspired by the biography of the Syriac
Celebī ʿAlī in Rasul, compiled in Aleppo in 793/1385;
2. a free translation of Wajīḥīs Futuh al-Shīm, which relate the conquest
of Syria by the caliph Abū Bakr and ʿUmar,
completed in Aleppo in 795/1392; 3. a translation of
the Hundred Ḩadīth; 4. ʿUṣūf wa al-Ṣūliyya, a recently
published mathnawī (Istanbul Univ.
Library no. 311, 862). None of these works has yet
been edited. Darīr shows remarkable mastery of
verse; his verse is fluent and he often reaches the
heights of lyric poetry. His pleasant and simple
prose is one of the best specimens of early Turkish
narrative style.

DARIYYA, a village and a watering place in
Najjd located at 42° 56′ N., 24° 46′ E., on
the Dar al-Sulṭānī pilgrim route from al-Baṣra to Mecca
(Handbook, ii, 150). The village was a much
frequent halting place for pilgrims, for the junction
with the route from al-Baḥrayn was here. The
district of Dariyya, according to Ibn Bulayhiṣ, was
a wide territory in Najjd celebrated by the poets
in pre-Islamic times for its sweet water and pasture.
The famous Ḥimā Dariyya is said to have been
named after the village and was part of the district
(ʿYākūt, iii, 44). There is some doubt as to when the
himā was first reserved. ʿYākūt states that Dariyya
was set aside by Kulayb [q.v.], the legendary hero of
the War of Baṣūs, whose burial ground, according
to traditions handed down by the Tāyyī, lies within
the confines of the himā in the mountains of al-Nīr.
The site of this grave was well known among the
Arabs as late as the 15th century, for al-Samḥūdī,
who completed his work in 886/1481, reports that
Adwāb d. Zāmil d. Dājrī, the lord of al-Ḥasā and
al-Kaṭāf (called by the author, Raʾīs Aḥl Nadhīd),
had heard of the shrine from the local Arabs and visited it
(al-Samḥūdī, ii, 227). Al-Bakrī, however,
claims that Ḥīmā Dariyya was first reserved for the
state by ʿUmar b. al-Ḵaṭṭāb for the camels given as
ṣadaqa or taken in battle. The statement by al-
Hamdānī (772, 24) that Ḥīmā Dariyya and Ḥīmā
Kulayb are not the same but are separated by
the mountains of al-Nīr, which ʿYākūt himself recognizes
as an independent himā, supports al-Bakrī. It is
likely that Dariyya was one of the many himās
of the dhāhilīyya epoch which later changed their
names (Ibn Bulayhiṣ, iii, 244). The Hemmey on
Doughty's map is probably an approximation of the
older Ḥīmā Kulayb. According to al-Ṭabarī (i, 1709)
and ʿUṣūf wa al-Ṣūliyya, Dariyya derives its name from
Dariyya, the mother of Ḥulwān, the son of ʿUmar
and grandson of Kūṭā ʿdī. Al-Hamdānī says that
Dariyya was the daughter of Raʾīs b. ʿNīzār.

The himā reserved by ʿUmar originally extended
6 miles in each direction from the village of Dariyya.
Owing to the continuous increase in livestock, which
reached a total of about 40,000 in the time of ʿUgmān
the himā was enlarged about 10 miles in at least one
direction (al-Bakrī, iii, 860). The land, which was
under the control of the Amīrs of Medina, was released
by the ʿAbbasīd Caliph al-Mahdī and is said to have
yielded, as private property, an annual tribute of
8,000 dirhams in the early ʿAbbasīd period. At
this time the territory was chiefly inhabited by the
Kūlib, against whom Muḥammad had sent troops in A.H. 6
and 7. Dariyya was not without strife, for al-Abdāl
mentions that al-Rabīḥa, a neighbouring pilgrim
station and himā, was destroyed in the year 359/951
through continuous warfare between its people and
those of Dariyya.

Today, by-passed by modern roads, Dariyya is
a poor settlement with about 20 wells and only a few
scattered palms, lying in desolate steppe terrain at
the edge of one of the dikes in the granite shield
underlying the western plateau. Western writers have
frequently confused it with al-Dirīyya [q.v.], the
former Wahhabi capital (cf. Wüstenfeld). Among European travellers in the area, Philby is the first to have visited and described Dariyya and its companion village Miska, about 6 kilometers to the north (The Land of Midian, 9, 52). He mentions Kufic inscriptions found on rocks in Dariyya, attesting to its former prominence as a pilgrimage station. Dariyya is in territory now occupied by ‘Ubayba and Idris, tribes which figured as makeweights in the struggles of the late 18th and early 19th centuries among the Sharifs of Mecca and the ruling families of Rashid and Sa‘ūd for domination of Najd.

**AL-DARIYYA** [see AL-DIR'YYA]

**DARKAWA** Spiritual head of the misha Darkawā, a religious brotherhood founded in north Morocco at the end of the 18th century by an Idrīsī șarīf, Mawālī al-‘Arbī al-Darkawī. His name is supposed to come from the appellation of one of his ancestors who used to be called Abū Darka, the man with the leather shield. He was the pupil at Fas of another Idrīsī șarīf, ‘All b. ‘Abd al-Raḥmān al-Djamal, an adept of the mystical doctrine of al-Shadhili (q.v.), and after the latter’s death, he organized and binded inspiration by this doctrine. The seat of this group was at first the șawīya of Bū Brijī in the tribe of the Ban Ẓawālī (on the right bank of the Oued Wargha), then, after 1863, the șawīya of ʿAmajdīt (Amjot) not far from there, where it is still located and where each year at the end of September the annual festival (mawṣūm) of the brotherhood is celebrated. Many pilgrims go there on this occasion.

The Darkawā brotherhood has spread above all in the north and east of Morocco and in the west of Algeria. In Morocco especially it has brought together adepts from every kind of social class, including the Sharifian court: the sultans, Mawālī ‘Abd al-Raḥmān (1822-1859) and Mawālī Yūsuf (1912-1927) belonged to it. At the end of the 19th century, the number of Darkāwā in Algeria was estimated at 1,450, and in 1939, at almost 34,000 in Morocco.

The doctrine of the Darkāwā appears perfectly orthodox; it insists essentially on the necessity of man’s consecrating himself as far as possible to the contemplation of divinity and to the mystic union with God. To attain this the Darkāwī must pray as often as he can, and particularly during the sessions of prayer (qibūr) which are held regularly in the customary meeting-places of the brotherhood. These sessions aim at provoking ecstasy by means of the recitation of pious formulas, mystical poems, song and dance. An excellent description of them is to be found in the *Essai sur la mystique musulmane* of E. Dermenhem, the preface to his translation of the Șamārīyya of Ibn al-Fārid (Paris 1931, 64, n. 1). In order better to detach themselves from the world, certain adepts go so far as to live as wanderers, that is to say, they have left the world and those of others killed in the battle, were well-known. Under the guidance of the Arabs Darkawa, a rosary of a hundred beads round their necks. The majority content themselves with paying as little attention as possible to worldly matters, and with taking no part in any form of public life.

Nevertheless, on several occasions the Darkāwā have played a part in politics: one of them, Ibrīs al-Sharīf, provoked serious agitation in the Turkish province of Oran which lasted for several years (1803-9); but for the moderation of the sultan Mawālī Sulaymān (1792-1822), this agitation might have ended in the annexation of western Algeria by Morocco. Soon afterwards, various groups of Darkāwā took an active part on the Berber revolt of the last years of Mawālī Sulaymān’s reign, and the head of the brotherhood was even imprisoned for a time. After the death of Mawālī Sulaymān, the Darkāwā took hardly any further part in the political life of Morocco, even in the troublesome years at the beginning of the 20th century. On the other hand, they played a certain part during the first years of the French conquest of Algeria by opposing the Amir ʿAbd al-Kādir, who was accused of making common cause with the French after the Desmichels (1834) and Tafa’in (1837) treaties.

**DARNA,** in modern pronunciation Derna, a town on the northern coast of Cyrenaica which is to-day the second most important in the region after Benghazi. It is situated in a little plain along the banks of a wādī of the same name, bounded by the plateau of the al-Djabal al-Akhdar, which forms a steep slope to the south and touches the sea to the east and west, but thanks to its never-failing springs it is rich in palms (8,000) and in orange and other fruit trees. Darna owes its origin to the Greeks who founded one of their colonies in the neighbourhood. Darnis, as their trading post was called, did not become a polis and was not one of the five cities combined into a federation in the time of Alexander the Great, which gave the country its name, Pentapolis. It is probable that it developed only in the time of the Hellenistic Ptolemies. Darna shares the fate of the Pentapolis and it became a Roman possession in 96 B.C., in accordance with the will of Ptolemy Apion, who renewed a decision already made in 155 B.C. by Ptolemy Ptolemy Physcon (= Ptolemy VII, Euergetes II Neoteros); concerning these facts, an important inscription discovered at Cyrene, and the bibliography, see Romanelli, *Cirenaica*, 1-24. Under the Byzantines, Darna was the seat of a bishopric which already existed at the time of the Council of Nicea in 325. On the conquest of Pentapolis by the Muslims, see ȘARKA. According to Yâkūt, it was at Darna that the governor of the country, Abū Shaddād Zuhayr b. Kays al-Balawi, was killed in 76/695 (or in 74/693?), as he was hastening to meet the Greeks who had disembarked there in an attempt to recapture the region. Yâkūt says that his tomb, and those of others killed in the battle, were well-known. Under the guidance of the Arabs Darna has ended in the annexation of western Algeria by Morocco. Soon afterwards, various groups of Dârkawā took an active part on the Berber revolt of the last years of Mawālī Sulaymān’s reign, and the head of the brotherhood was even imprisoned for a time. After the death of Mawālī Sulaymān, the Dârkawā took hardly any further part in the political life of Morocco, even in the troublesome years at the beginning of the 20th century. On the other hand, they played a certain part during the first years of the French conquest of Algeria by opposing the Amir ʿAbd al-Kâdir, who was accused of making common cause with the French after the Desmichels (1834) and Tafa’in (1837) treaties.

merchants and pilgrims, which passed about 90 kms. to the south (by Cāy al-Ghazala, al-Tamīmī and al-Maghīlī). It was from the end of the 17th century on, or even later, that Darna revived thanks to the immigration of Andalusians, coming less from Spanish origin goes back to the 17th century: even later (see Ibn Ghalbūn), after they had already found refuge. Accurate information on the arrival of these farmers of Andalusia than from other places in North Africa was continual struggle between the inhabitants of the cities of Cyrenaica, made an expedition against Darna (30th September 1921), one of the first actions was the bombardment of Darna (30th September) and its occupation (16th October). The population of the town was then about 9,500. Under the Italians, Darna became a frequent enough in this country, weakened the town had been in ruins for a long time. It had therefore begun to prosper again when the Dey of Tripoli, Muhammad (1041/59-1632-49), who wanted to keep all the threads of trans-Saharan trade in his own hands, and did not like foreign expansion in farthest than Darna, for a treaty between Yusuf and the United States put an end to this American fleet against Tripoli had met with failure; he had persuaded the elder brother of the Pašha, Ahmad, (Ahmet, Hamet, in the western sources), who was considered the legitimate ruler, to join the expedition. Nevertheless, these troops did not advance much farther than Darna, for a treaty between Yusuf and the United States put an end to this American fleet against Tripoli. In 1835, after the long interval of Karamanlī rule, Cyrenaica came back under the direct government of Constantinople, and Darna, one of the three kaḍās of the sandjak of Benghāżī, was useful to it in exercising a precarious control, which grew gradually stronger, over the interior and Marmarica. The government did its utmost to develop the land between Marsā Sūsa and Darna. When Italy decided to take possession of Libya and declared war on Turkey (49th September 1911), one of the first actions was the bombardment of Darna (30th September) and its occupation (16th October). The population of the town was then about 9,500. Under the Italians, Darna became a very beautiful and well cared for city even tried to attract tourists. During the first world war it remained in Italian hands, and one of the places from which later the reconquest of Cyrenaica began. During the second world war, it passed several times from the hands of the Italians and Germans into that of the allies before its final occupation by the English in January 1943. It suffered much damage and the proclamation of the kingdom (24th December, 1951). Notwithstanding the importance that the Sanisīyā has in Cyrenaica, this tarīkā has only one zdwiya in Darna, whereas 14 other tarīkās are represented there, some of them for as long as 150 years. One of the 70 warriors killed at the side of the above mentioned Zuhayr al-Balawi, Sidi Bu Mansūr al-Farisi, whose tomb stands in the cemetery, has given his name to that part of the town which stretches along the right bank of the wādī. DARSHAN, also less correctly DARSAH, A Samir word (darsana, from the root dr “see” meaning “showing, being visible”; hence, the ceremonial appearance of a king to his subjects. This Hindú practice was adopted by the Moghul emperor Akbar (A’in-i Akbari, i, 73) and his immediate successors. The English traveller Coryat says that Ddhanag in Agra used to present himself three times a day from a canopied window. The failure of Shahjahan to appear during his illness at the end of 1627/Sept.-December 1627 led to rumours of his death. The practice of darsan was at first followed by Awrangzib, but abandoned by him in 1678/1668 as savouring of idolatry.

(D. BURTON-PAGE)

DÁRGHA. The word is derived from the Mongol daru-, ‘to press, to seal’ and was used to denote a chief in the Mongol feudal hierarchy (K. H. Menges, Glossar zu den Volkskundlichen Texten aus Ost-Asien, ii, Wiesbaden 1955, 714 s.v. dargha). In 617-8/1221 the term dargha was not, however, applied exclusively to an official whose functions were those of a town or village police officer. There are several instances of the appointment of a dargha as a tribal chief, whose functions were clearly rather different from those of the dargha of a town or the dargha of the bazaar. For example, ‘Abd al-Razzak states that Timur used sometimes to send a dargha and a mubassil to collect the taxes due from the Hazara near Herat (Malik al-Salādayn, ed. Muhammad Shafi’, ii, 1297). There was also a dargha of the Turkmans in Astarabad in Safavid times (cf. Ḥasan Rūmī, Aḥsan al-Tawārikh, ed. and tr. C. N. Seddon, Baroda, 1931-4, 346-7); and under the Kājārs the taxes of various Turkmun tribes appear to have been collected by a dargha (cf. Rūmān-ya Dowlat-i A‘līyya-i ʿIrān, 2 Rabi‘ 1280, 26 Muharram, 1287). There are other cases also of a dargha being appointed over special sections of the population. Thus, the dargha of the Majdūṣyān of Yazd is mentioned c. 1054/1644 (Muhammad Mufid, Diwān-i Muḥfiz, B. M. Or. 210, f. 363b). It is not stated what his functions were; they may well have been to collect the taxes due from the Zoroastrian community and to enforce any special regulations relating to that community.

Under the Safawids the term dargha was also used to denote a kind of head clerk controlling the staff of the larger government departments; such were the dargha of the farrākhnāna and the dargha of the daftarkhnāna (Tadhkīrat al-Mulk, fl. 91a-b, 141; Tavernier, 222). This usage of the term dargha continued in the Kājār period.

In Muslim India the term dargha was used to denote an official in the royal stables (Abru I-Fadl, A’in-i Akbari, tr. Blochmann, i, 53). In British India it was used to designate the native head of various departments; and from 1793 to 1862-3 the local chief of police was also known as the dargha (H. Y. and C. B. Burnell, Hobson-Jobson, London 1903, 297-8). In George in Safavid times the dargha was a police officer working in conjunction with the mawārisi (constable) and mešīk (Armenian burgomaster) and the hādīkhāna (see the charters...
analyzed by M. F. Brosset in Histoire de la Georgie.

Al-DARUM, the name of a coastal plain in Palestine, and in later particular in the name of a famous fortress of the time of the Crusades, is to be found in the works of Arab authors with both these meanings. The Hebrew dÅrôm from which it is derived and to which it corresponds in the Arabic version of Deuteronomy, XXXIV, 3, appeared in a few passages of the Old Testament for south as a cardinal point, or in any country situated in the south (F. M. Abel), and it was later applied especially to the south-west of Judea, a low-lying region distinct both from Sephela which bordered it on the north and the southern, desert territory of the Negeb. The Byzantine name Daromas, which corresponded to this ancient Darom, was equally applied to the south-west section of the vast district of Eleutheropolis (see BAYT DJIBRIN), while not including the town itself. However, this distinction was forgotten in Arab times and al-Darum, according to the evidence of al-Muyaddadi, was identified with the territory surrounding Bayt Djibrin, and it shared its history from the time of its conquest under the Caliphate of Abü Bakr.

As to the Palestinian citadel of al-Darûm, the Darum of the Crusaders, it stood on the road from Gaza to Egypt on the site marked to-day by the ruins of Dayr al-Balah, to assure the defence of the Latin kingdom of Jerusalem from this side. Attacked especially by Salâh ad-Dîn, then conquered by him in 1183/1187 at the time of his re-occupation of the greater part of Palestine, it was later besieged, taken, and then dismantled by Richard Cœur de Lion and the Franks of the Third Crusade in 1188/1189, but was still counted in the Mamlûk period as one of the fortresses depending directly on the nâdîb of the district of Gaza, on the coastal border of the province of Damascus.

DARûRA, necessity (also Îdírâár), in works of fîkh has a narrow meaning when it is used to denote what may be called the technical state of necessity, and a wider meaning when authors use it to describe the necessities or demands of social and economic life, which the jurists had to take into account in their elaboration of the law which was otherwise independent of these factors.

I. The state of necessity, whose effects are on those of violence, does not result from threats expressed by a person, but from certain factual circumstances which may obligate an individual, finding himself in a dangerous situation which they have brought about (shipwrecked, dying of hunger or thirst in the desert, for example), to do some action forbidden by the law, or to conclude a legal transaction on very unfavourable terms in order to escape from the danger which threatens him. The Kurâ念 contains numerous verses which, directly or indirectly, legitimize on grounds of necessity certain acts which in principle are forbidden (II, 166; V, 5; VI, 119; XVI, 116). Ibn Nujäyd derived from this a maxim which became famous: al-dârûrâ tâhâ al-mâshârâr, which the Ottoman Madjâla (art. 21) reproduced literally and which may be translated: "Necessity makes lawful that which is forbidden".

The effects of the state of necessity of which the writers have fixed the conditions and limits, are more or less drastic according to the domain of fîkh in which they occur.

a) In what concerns prohibitions of a religious character (the prohibition against eating pork or dead animals, or against drinking blood or other liquids regarded as impure, for example), it is admitted without difference between the Schools, that necessity legitimizes the non-observation of these rules. It follows—and this is the opinion which has prevailed in doctrine—that one is even obliged to disregard them in a case of danger.

b) Most of the offences committed under the rule of necessity (for example, the theft of food, a shipwrecked person's throwing into the sea the goods of another shipwrecked person in the same boat if it is too heavily laden) are excused and do not give rise to any punishment, but do not cancel any civil responsibility. Three offences are never legitimized, let alone simply excused, whatever may be the circumstances in which they are committed (apart from legitimate defence). They are: murder, the amputation of a limb, or serious wounding likely to cause death; in these cases the evil inflicted is equal, if not superior, to that which the perpetrator of the offence has endeavoured to avoid, and there is no reason to favour him rather than the victim.

c) Jurists have not paid much attention to the effect of legal transactions (sale, lease) committed under necessity. They regard it only as a case of fikr (ikrâh) to be decided according to the rules which govern violence in general. Nevertheless, in treatises on fîkh rules are found relating to a sale concluded in a state of necessity, when one of the parties (buyer or seller) exploits the circumstances which force the other to buy or sell. The Hânsâfîs call such a sale fâsid; the writers of the other schools decree that the price should not be the same as usual, but the habitual price of something equivalent (qâman al-mîthâb).

II. Darûra is used in a much wider sense by the commentators when they try to justify by practical necessity, solutions which the lawyers of the first
centuries of the Hijra adopted by istihsan or istislah rather than by the rules of reasoning (biyās). In these very numerous cases, the word is no longer synonymous with constraint, but signifies practical necessity, the exigencies of social and economic life. This is why other expressions such as ḥadīṣ or tawāmul al-nās or maṣlaṭa are frequently used. It is almost exclusively in Şafi’i law, which does not recognize istiḥsan, that these divergences from biyās had to be justified by reason of necessity, then taken in its narrower sense (al-ḥiṣb). An individual basis. Beyond the single soul seeking a "path", method of tarlka [q.v.,...ness. But there go also with the hypnosis, either as excitants or consequents, certain physical states and phenomena which have earned for dervishes the ridicule, either as madmen or scorpions and glass, of passing needles through their bodies and spikes into their eyes. But besides these phenomena, there appear amongst dervishes automatic phenomena of _al-Dīn al-Rumi_ (d. at Konya in 672/1274), stimulate the organized expression of religious life in Islam. For centuries that religious life (see _taṣawwuf_) was on an individual basis. Beyond the single soul seeking its own salvation by ascetic practices or soothing meditations, there was found at most a teacher gathering round himself a circle of disciples. Such a circle might even persist for a generation or two after his death, led by some prominent pupil, but for long there was nothing of the nature of a perpetual corporation, preserving an identity of organization and worship under a fixed name. Only in the 6th/12th century—the troubled times of the Saljuq break-up—did continuous corporations began to appear. The _Kādirites_, founded by _Abd al-Kādir al-Dīlānī_ [q.v. (d. 561/1166), seem to have been the first still-existing fraternity of definitely historical origin. Thereafter, we find these organizations appearing in bewildering profusion, founded either by independent saints or by split and secession from older bodies. Such historical origins must, however, be sharply distinguished from the legends told by each of their peculiar ritual and devotional phrases. As the origin of Şafi’ism is pushed back to the Prophet himself, and its orthodoxy is thus protected, these are traced down from the Prophet (or rather from Allah through Gabriel and the Prophet) through a series of well-known saints to the historic founder. This is called the _silsila_ or "chain" of the order, and another similar _silsila_ or apostolic succession of Heads extends from the founder to the present day. Such a dervish must know the _silsila_ which binds him up to Allah himself, and must believe that the faith taught by his order is the esoteric essence of Islam, and that the ritual of his order is of as high a validity as the _ṣalā_. His relationship to the _silsila_ is through his individual teacher (shaykh, mursid, ustād, pir) who introduces him into the fraternity. That takes place through an _āhd_, "covenant", consisting of religious professions and vows which vary in the different bodies. Previously the neophyte (muriid, "willer", "intended") has been put through a longer or shorter process of initiation, in some forms of which it is plain that he is brought under hypnotic control by his instructor and put into rapport with him. The theology is always some form of Şafi’ism, but varies in the different _farkas_ from ascetic quietism to pantheistic antimaniacism. This goes so far that in Persia dervishes are divided into those _bi-šarh_ "with law", that is, following the law of Islam, and those _bi-šarh_ "without law", that is, rejecting not only the ritual but the moral law. In general the Persians and the Turks have diverged farther from Islam than the Syrians, Arabs or Africans, and the same _farka_ in different countries may assume different forms. The ritual always lays stress on the emotional religious life, and tends to produce hypnotic phenomena (auto and otherwise) and fits of ecstasy. One order, the _Khalwatiyya_ [q.v.], is distinguished by its requiring from all its members an annual period of retreat in solitude, with fasting to the utmost possible limit and endless repetitions of religious formulae. The effect on the nervous system and imagination is very marked. The religious service consists of the organized expression of prayer and meditation. These fraternities (ṣura, plural of _farka_ [q.v.], "path", i.e., method of instruction, initiation and religious exercise) form the organized expression of religious life in Islam. For centuries that religious life (see _taṣawwuf_ was on an individual basis. Beyond the single soul seeking its own salvation by ascetic practices or soothing meditations, there was found at most a teacher gathering round himself a circle of disciples. Such a circle might even persist for a generation or two after his death, led by some prominent pupil, but for long there was nothing of the nature of a perpetual corporation, preserving an identity of organization and worship under a fixed name. Only in the 6th/12th century—the troubled times of the Saljuq break-up—did continuous corporations began to appear. The _Kādirites_, founded by _Abd al-Kādir al-Dīlānī_ [q.v. (d. 561/1166), seem to have been the first still-existing fraternity of definitely historical origin. Thereafter, we find these organizations appearing in bewildering profusion, founded either

**DARUormal DARWISH**

(DARWISH) is commonly explained as derived from Persian and meaning "seeking doors", pronounced _us-l-a_ and meaning "seeking doors", derived from Persian and meaning "seeking doors", i.e., _Ikhwan_, fraternity, but in Persian and Turkish rather from the singular _rāsh_ or _ristihsan_ or _istihasan_ rather than by the rules of reasoning (biyās) to have condemned, but which the "necessities" imposed, for instance contracts of hire and lease ( _idāra_ ) and of mercantile partnership ( _ṣara_ ), loan of money ( _bard_ ), the agricultural ( _kard_ ), and lease ( _muzdra'a_ ) or _istihsan_, law, which does not recognize _istihsan_, or the historic founder. This is called the _silsila_ or "chain" of the order, and another similar _silsila_ or apostolic succession of Heads extends from the founder to the present day. Such a dervish must know the _silsila_ which binds him up to Allah himself, and must believe that the faith taught by his order is the esoteric essence of Islam, and that the ritual of his order is of as high a validity as the _ṣalā_. His relationship to the _silsila_ is through his individual teacher (shaykh, mursid, ustād, pir) who introduces him into the fraternity. That takes place through an _āhd_, "covenant", consisting of religious professions and vows which vary in the different bodies. Previously the neophyte (muriid, "willer", "intended") has been put through a longer or shorter process of initiation, in some forms of which it is plain that he is brought under hypnotic control by his instructor and put into rapport with him. The theology is always some form of Şafi’ism, but varies in the different _farkas_ from ascetic quietism to pantheistic antimaniacism. This goes so far that in Persia dervishes are divided into those _bi-šarh_ "with law", that is, following the law of Islam, and those _bi-šarh_ "without law", that is, rejecting not only the ritual but the moral law. In general the Persians and the Turks have diverged farther from Islam than the Syrians, Arabs or Africans, and the same _farka_ in different countries may assume different forms. The ritual always lays stress on the emotional religious life, and tends to produce hypnotic phenomena (auto and otherwise) and fits of ecstasy. One order, the _Khalwatiyya_ [q.v.], is distinguished by its requiring from all its members an annual period of retreat in solitude, with fasting to the utmost possible limit and endless repetitions of religious formulae. The effect on the nervous system and imagination is very marked. The religious service consists of the organized expression of prayer and meditation. These fraternities (ṣura, plural of _farka_ [q.v.], "path", i.e., method of instruction, initiation and religious exercise) form the organized expression of religious life in Islam. For centuries that religious life (see _taṣawwuf_ was on an individual basis. Beyond the single soul seeking its own salvation by ascetic practices or soothing meditations, there was found at most a teacher gathering round himself a circle of disciples. Such a circle might even persist for a generation or two after his death, led by some prominent pupil, but for long there was nothing of the nature of a perpetual corporation, preserving an identity of organization and worship under a fixed name. Only in the 6th/12th century—the troubled times of the Saljuq break-up—did continuous corporations began to appear. The _Kādirites_, founded by _Abd al-Kādir al-Dīlānī_ [q.v. (d. 561/1166), seem to have been the first still-existing fraternity of definitely historical origin. Thereafter, we find these organizations appearing in bewildering profusion, founded either
clairaudience and clairvoyance and even of levitation, which deserve more attention than they have yet received. These, however, appear only in the case of accepted saints (waisis: [q.v.]), and are explained as harāmāt [q.v.] (χαράματα) wrought by Allāh for them. But besides the small number of full members of the orders, who reside in the monasteries (ḵhānḵāh, ribāt, zāviya, tābiyya or takya) or wander as mendicant friars (the Kalanderis, an order derived from the Baktāshis, must wander continually), there is a vast number of lay members, like Franciscan and Dominican tertiary friars, who live in the world and who have, apart from any religious significance in the essential context of intuitionists on the one hand and traditionists and rationalists on the other. For this division see further under ṭašawwūf. Now their numbers are drawn mostly from the lower orders of society, and for them the fraternity house is in part like a church and in part like a club. Their relation to it is much more personal than to a mosque, and the fraternities, in consequence, have come to have the position and the importance of the separate church organizations in Protestant Christendom. As a consequence, in more recent times, the governments have assumed a certain indirect control of them. This, in Egypt, was exercised by the Shaykh al-Bakr, who was head of all the dervish fraternities there (Ḵhāb bāyī al-Siddīqb, 379 ff.). Elsewhere there is a similar head for each city. The Sandis (q.v.) alone, by retiring into the deserts of Arabia and North Africa and especially by keeping their organization inaccessible in the depths of the Sahara, have maintained their freedom from this control. Their membership is also of a distinctly higher social order than that of the other fraternities. As women in Islam have generally the same religious, though not legal, status as men, so there are women dervishes. These are received into the order by the Shaykh; but they are instructed and trained by women, and almost always hide their dhwirs by themselves. In mediaeval Islam such female dervishes often led a cloistered life, and there were separate foundations and convents for them with superior's of their own sex. Now, they seem to be all tertiaries. To give a complete list of fraternities is quite impossible here. Besides the separate articles referred to above, see, also, the articles on the various Sufi leaders and orders.

D. B. Macdonald, Dervish in Encyclopaedia Britannica, ed. xi, but to be corrected by above, also his Religious Attitude and Life in Islam, Chicago 1909, and Aspects of Islam, New York 1911, both by index; Ahīm Amlī, Ḳūma al-ṣadād ... al-misriyya, Cairo 1953, 199; For the present state of the brotherhoods, L. Schulze, Die Persisch-Islamische Miniatur-malerie, pl. 156, 165; pl. 188 (caricature).

DARYA-BEGI, DERVĪY-BEYI, sea-lord, a title given in the Ottoman Empire to certain officers of the fleet. In the 9th/10th century the term deryā-bey or derīs-beyi is sometimes used of the commander of Gallipoli [see ṢELĪBUL], who had the rank of Sandjak-beyi, and was the naval commander-in-chief until the emergence of the Kapudan Paša [q.v.]. In the 10th/11th century the Kapudan Paša became, as well as an admiral, the governor of an eyal of, which consisted of a group of ports and islands [see PAZLIR-I BAHİR-I ṢAPİF]. This province, like others, was divided into Sandjakis, the governors of which were called deryā-beyis instead of sandjak-beyis. The deryā-beyis and the officers under them held appanages and fiefs like the feudal cavalry; they were required to serve with the fleet, and to supply, equip, and man one, two, or three galleys, according to the importance of their sandjakis. Their fiefs were administered by the department called Deryā Kalem, sea office, which also handled the mensākbāt [q.v.]. The deryā-beyis usually held their appointments for life, and transmitted them to their sons. Their ships were auxiliary to the main fleet.

DARYA-YI ŞAHĪ [see URMIYA]

DASKARA, name of four places in ʿIrāk, viz.: 1. a town on the Diyālā N. E. of Bahgdād, 2. a village in the district of Nahr al-Malik W. of Bahgdād, 3. a village near associate, S. of Bahgdād, 4. a village in Kūhīzāstān (cf. Yāḵt, ii, 575; Marsjad, i, 402; cf. Muḥaddasa, 26).

Daskara is arabized from the Pahlavi dastāka (Dastkarta, Dastakrta), modern Persian Dastājkard [q.v.]; it means a post, a village, a town or simply level ground [see Herzelf, Geschichte der Stadt Samarra, Hamburg 1948, 44]; J. Markwart, A catalogue of the provincial capitals of Eranshahr, Rome 1937, 59; Diwālīkī, Muʿarrab, 67; A. Geiger, in WZKM, xii, 1935, 124; Eddi Shīr, al-ʿAlīf
DASKARA — AL-DASÖKI

The best known is Daskara I, 16 parasangs (c. 88 km.) by the post road east of Baghdād (Ibn Khurra- dādbih, 18-19) just above the 34° N. Lat. It is the most succinct of Sasanian Dastadjird (q.v.), probably a caravan post which developed into an important town. Its association with Hurmizd I (272-3) who very probably rebuilt it (cf. Vālūt, v, 575 and Hamza al-Iṣfahāni, and with Khusrūw Parvēz (590-608) who made it its permanent residence, account for its name Daskarat al-Malik (The King's Daskara) (Hersfeld, Samarra, 44; Ibn al-ʿAlīr, i, 348, 363).

In 628, Heraclius reduced it to a heap of ruins, and a few years later the Arab conquests followed. In the Islamic period, Daskara (or Daskarat al-Malik) was the centre of an agricultural district (fassād) in Astān Shāhī Kubdān, and a caravan station of some importance on the Khorāsān road. (Ibn Khurra-dādbih, 13, 41; Ya’qūbī, Buldān, 270). In early Islamic history Daskara became a Khāridji stronghold (Ibn al-ʿAlīr, ii, 290, 313; Tabāri, i, 336, 398; ii, 590, 866. Even in the 9th and 10th centuries Daskara was associated with it, ibid. iii, 1689-90, 2108).

Daskara, as a village or small town, grew gradually and attained some prosperity in the 3rd/9th century (see Kudāma, 238 for the revenue of the fassād of Daskara). Ibn Rusta considered Daskara a big town (164). Iṣṭaḥkhrī (318-321/930-933) and Ibn Ḥawkal (c. 367/977) describe it as a flourishing town, surrounded by date groves and abundant cultivations. They refer to a clay fortress probably constructed by the Arabs. (Iṣṭaḥkhrī, 87; Ibn Ḥawkal, i, 246). However, Muḥaddasī (375/985) found it a small town with one long market (121; cf. 53). Daskara declined further and in the 7th/13th century. Yālūt followed by the Mārāṣid spoke of it as a mere village (Yālūt, ii, 575; cf. ii, 227; Mārāṣid, i, 402). It is not known when Daskara was deserted.

Arab geographers were impressed with the ruins of old Dastadjird. Ya’qūbī (Buldān, 270) refers to the wonderful buildings of old Persian kings, while Ibn Rusta of Dastagard, the name of a number of towns in the Sasanian empire, also known as the Burhaniyya or Burhamiyya, the followers being generally called Barāhim. Born most probably at the village of Mārūs in the Gharbīyya district of Lower Egypt in the year 639/ 1241 according to Shārānī in Lawdāsī (but 644/1248 according to Maḵrīzī in Kitāb al-Sulāk) and 653/1255 according to Hasan b. ʿAll Shāmī the commentator on his biḥṭ) he spent most of his life in the neighbouring village of Dasık or Dusık where he died at the age of 43 and was buried. His father (buried at Mārūs) was a famous local wāli and his maternal grandfather Abu ʿl-ʿAṣfāṣī al-Wāṣītī (Shaʿrānī, Lawdāsī, iv, 173) as the leading Riḍāʾī ʿAbdallāh in the Gharbīyya district. It would seem that Wāṣītī, in conjunction with a disciple of his, Muḥammad b. ʿHārūn (ibid., ii, 3), possibly in rivalry to İbrahim’s father, were the first to start a legend concerning the saintliness of İbrahim when they credited him with having certified to the beginning of Ramadān by refusing to take his mother’s breast on the day of his birth at the end of Shaʿbān. After a brief study of ʿAbd’s law, İbrahim became a mystic. He left no children but was succeeded after his death by his brother Şayḫ Muṣā (Ibn Ḥawkal).

His works include al-Diwaḥīr (quoted at length in Shaʿrānī’s Lawdāsī) a collection mostly of instructions to novices and homiletic injunctions, al-Diwaḥīr, which enumerates his karāmāt, and al-Ṭabāḵī, a record of intimate conversations (munda-dādī) with God. İbrahim was also the author of several kāsidās, two of which are quoted in Lawdāsī (see also Dar al-Kutub, Cairo, Fihrist Taṣawwuf no. 319 Māḏāmī) a salah (ibid., no. 2593) and a biḥṭ. Al-Diwaḥīr, his major work, consistently argues the compatibility of ḥabṭa and shariʿa. Only in ecstasy is taklīf dropped. Inner purity is the central theme. Adherence to the shariʿa is not by word of mouth, nor is Şūʿism a matter of outward garb or residence in zīwāyas. It is the inward action “ṣamāl diwaḥīnī” that counts, inasmuch as one’s real sīyāya is one’s heart. The ṣilāt is in intimate communion with God “mutaṣāṣīn”, and the strictest obedience to him is enjoined. Love, tasīm (complete trust, i.e., in the ṣilāt) and self-mortification “ṣabḥ al-naṣīr” are the true path of the Şūfī. Although the karāmāt listed in the Diwaḥīr are extravagant, yet they were not unusual for the times. In his ṣawm İbrahim makes the moving prayer that İbrahim made to God that his body be so enlarged that it should fill up all Hell to ransom mankind. It is evident that İbrahim owed no allegiance to any other Şūfī. In the Diwaḥīr he stated that at the age of seven he had exceeded in rank all the other saints with the exception of ʿAbd al-ʿKādir (thus affirming his independence of Riḍā’s and Badawi) but later he stated that at a ceremony in heaven God ordered him to invest all saints with the ḥāṭa saying: “O İbrahim, you are the nakb over them all”. The Prophet at the time was by his side but ʿAbd al-ʿKādir was behind him and Riḍā behind ʿAbd al-ʿKādir.

İbrahim receives the briefest note from Maḵrīzī (Kitāb al-Sulāk, i, 739) and commenting on a certain Khayr al-Din Abu ’l-Karam, the Dasık ʿkhālīfa was died in 890/1485, Ibn Iyās (ii, 228) merely said “la ba’aṣa bīhī”. But Kaʿṭt Bay seems to have had great respect for İbrahim, for he visited the sanctuary in 88/1479 (ibid., ii, 189) and enlarged the building (Murābak, Kaṭṭ, xi, 7). Shaʿrānī devotes more space in the Lawdāsī (i, 143-58) to İbrahim (mostly quotations from al-Diwaḥīr) than to any other saint and it is possible that this was the starting point of a Dasıkī revival. In 1168/1754
AL-DASÜKI  — DATHINA 167

Hasan b. 'All Shamma wrote the first commentary on Ibrahim's hizb entitled Masarrat al-'aynayn bi-
frizb, 'Ali Shamma wrote the first commentary on Ibrahim's frizb, entitled Masarrat al-
Hassan Shamma (ibid., 2097). Another commentary on the frizb is by Muhammad al-Bahi
(ibid., 2593). It would seem that Ibrahim's reputation rested to a large extent on his frizb and its
accuracy of his knowledge of

![DATHINA](image)

This image contains the text of a page from a book. The text is in Arabic and includes information on the history and cultural aspects of a place called Dathina. The text discusses various aspects such as the history of the Dathina area, its geographical location, and its significance in the context of Egyptian history. The text also mentions the work of Muhammad al-Bahi, who wrote a commentary on Ibrahim's frizb, and the role of various scholars and researchers in the study of Arabic philology and Egyptology.

The text is divided into several sections, each focusing on different aspects of the study. It includes references to various works and authors, such as Doreen Ingrams, a survey of social and educational aspects, and the work of other scholars like Ahmad al-Sayrafl, who contributed to the study of Arabic literature.

The text mentions the significance of the Dathina area in the context of educational and religious institutions, and its role in the life of various scholars and intellectuals. The text also highlights the importance of the study of Arabic language and literature, and the contributions of various scholars to this field.

The text concludes with a bibliography, listing various works and authors who have contributed to the study of Arabic and Egyptology. The bibliography includes works on Dathina and its surrounding areas, such as the work of Doreen Ingrams, a survey of social and educational aspects, and the work of other scholars like Ahmad al-Sayrafl, who contributed to the study of Arabic literature.

The text is rich in historical and cultural information, and provides a comprehensive understanding of the Dathina area and its role in the history of Egypt and the study of Arabic literature.
economic conditions in the Aden Protectorate, Eritrea, 1949, 27, 34; v. Wissmann and Hofner, \[see ADWIYA.\]

In the religious sense, the \textit{da'wa} is the invitation, has the primary meaning call or invitation. In the Kur'an, XXX, 24, it is applied to the call to the dead to rise from the tomb on the day of Judgement. It also has the sense of invitation to a meal and, as a result, of a meal with guests, \textit{wulima}: al-Bukhari, \textit{Nikah}, 71, 74; LA, xviii, 285. It also means an appeal to God, prayer, \textit{vow}: al-Bukhari, \textit{Da'awat}, beginning and 26, \textit{Wuha}, \textit{Anbiya}, 3, 26, (Abraham's prayer, cf. Kur'an, II, 125), 40 (Solomon's prayer, cf. \textit{Kur'an}, III, 44; see also \textit{Kur'an}, II, 182: X, 89; XIII, 5; XV, 46 (to which al-Tabari, \textit{Tafsir}, 24, 45, gives a gloss \textit{du'd}). The \textit{da'wat al-mazlum}, prayer of the oppressed, always reaches God: al-Bukhari, \textit{Ma'adil}, 9 (cf. \textit{Dhikr}, 180). The \textit{da'wa} of the Muslim on behalf of his brother is always granted: Muslim, \textit{Dhikr}, 88. The word is applied to a vow of any kind (e.g., al-Mas'udî, \textit{Murûd}, v, 361; Ibn al-Mu'tazz, \textit{Rasa'il}, Cairo, 1365, 53; \textit{da'wa} \textit{bi l-\^hijd}). It can also have the sense of invitation to a meal or to a prayer \textit{(d^*w}).

Thus it was in this way that it was embarked to embrace Islam before fighting could take place: see Abû Yusuf, \textit{Kisâb al-khadir}, Fr. trans. Fagnan, 295; al-Mawardi, \textit{Askhâm}, ch. 4, \textit{bi\^sm}; al-Bukhari, \textit{Siyar}, 101. Elsewhere De Goeje, \textit{BGA}, iv, 235 noted \textit{da'wa} in al-Mukaddas, 311, 5 in the sense of \textit{invitatio ad islam bestiam} and Goldzihier, \textit{Muh. St.}, i, 61 in the meaning of \textit{\^hijr}.

The word \textit{da'wa} is also applied to the propaganda, whether open or not, of false prophets: see, e.g., al-Di\^abis, \textit{Kisâb al-tarbi\^h}, ed. Pellat 75.

By a natural extension \textit{da'wa} also denotes the content of this appeal, the religious law, and the words \textit{da'wa}, \textit{sunna}, \textit{\^hara\^a}, \textit{din}, are often used interchangeably. Lastly the word can be applied to those who have heard this appeal by the Prophet Muhammad, the Islamic community, considered as a united body as a result of this appeal, and to some extent the \textit{da'wa} becomes a synonym of \textit{umma}. Thus in al-Mukaddas, \textit{BGA}, iii, 244, n.c.; cf. Abû Hanifa al-Nu\^man, \textit{Sharh al-\^ah\^b\^r}, in \textit{Ivanow, The Rise of the Fatimids}, text, 4. Note also \textit{id\^ijm\^a} \textit{al-da'wa} in the sense of \textit{id\^ijm\^a al-halima} (\textit{BGA}, iv, 236).

In the politico-religious sense, \textit{da'wa} is the invitation to adopt the cause of some individual or family claiming the right to the imamate over the Muslims, that is to say civil and spiritual authority, vindicating a politico-religious principle which, in the final analysis, aims at founding or restoring an ideal theocratic state based on monotheism. The whole organization responsible for attracting the greatest possible number of people to this idea and for giving power to their representatives, as well as propaganda for this purpose, is thus called \textit{da'wa} which can often be translated as mission or propaganda. The \textit{da'wa} is one of the means of founding a new empire, as Ibn Khaldun noted in \textit{Ibn al-Dja\^hiz} and his master. Abu Hanifa al-Nucman's book describing the beginnings of Fatimid propaganda in the Yemen and North Massar. 
Africa and the establishment of the dynasty in the Maghrib is entitled Kitāb iṣḥāf al-daʿwa waḥdātīyya al-dawla. When the imām was strong enough and at the head of a state, he made his daʿwa public (ażhara daʿwatiyya): Ibn Khaldūn, Proleg., i, 363, Rosenthal, i, 413). Unlike the ʿAbbāsīd al-daʿwa which ceased once the caliph and another over, esoteric side (ażhara), the daʿwa did not cease but, on the contrary, became organized and even more extensive from the time the dynasty was established in Cairo. Though overt in the Fātimid possessions or in territories won over to the doctrine, it continued in secret in other parts, except that it was proclaimed openly in favourable districts (thus the dāʿī al-Muʿāwiyah al-Din preaching to the Buwayhid Abū Kāliq): see the Sīra Muʿayyad-yanīyya, ed. M. Kāmil ʿUsayn, Cairo 1949, 43 ff.). Missionaries were each entrusted with some specified province, denoted by the term island (dijāṣrā: for this name and these divisions see ʿIyān, Rīṣa, 20 and M. Kāmil ʿUsayn, Fiʿl adab Misr al-Fāṭimidyya, Cairo 1950, 19). In Persia it was known by a name recalling its Egyptian origin, daʿwat-i Misrīyān (1941, p. 5). There, as in other periods, the esoteric side (ażhara) of this propaganda could be effected by those who were merely sympathizers, but for doctrinal matters it was carried out by means of preaching by the dāʿīs whose head, dāʿī al-duʿāʾ or chief missionary—whose duties were also called daʿwa (al-Kalḵashandī, al-Sūbūb, x, 434)—had his headquarters in Cairo. In general, the political aim was to convince the Muslims that the imām alone, divinely inspired, aided by God and guardian of the secrets transmitted to ʾAll by the Prophet, could give mankind good guidance, and that dynasties other than the Fātimids descended from Ismāʿīl b. ʿAbū Ṭāfar were usurpers and illegitimate, rotten with vices and neglectful of the most sacred duties of religion. The expression biyām (iẓīmat) al-daʿwa al-ḥādiyya clearly shows the task of directing humanity undertaken by the imāms and upon which their missionaries had to insist. It occurs, for example, in letters from caliph al-Mustansir to the Sulayhīd Arnūs: ʿImām, Cairo 1954, no. 46, p. 157) or in missionaries’ investiture diplomas (al-Kalḵashandī, al-Sūbūb, ix, 19, 8, x, 435, 7 a f.) or in an Ismāʿīlī oath (Shiḥāb al-Dīn al-ʿUmarī, Taʿrifī, 158; cf. B. Lewis, The origins … 59-66, Arabic trans. by A. al-Ḥūsainy, Rosenthal, iv, 597-8). In addition, M. Canard, L’impérialisme des Fāṭimides et leur propagande, in AEO, Algiers, iv, (1942-1947), gives a survey of the methods used by Fāṭimid propagandists to demonstrate the justice of the dynasty’s claims and its exclusive merits, and to denigrate and weaken its enemies, whether Byzantine, Umayyad or ʿAbbāsīd.

The propaganda was also concerned with education and initiation in doctrine. The doctrine of the sect is indeed a combination of political, religious, juridical and philosophical instruction forming a secret, esoteric side (ażhara), whence the name Bāṭinīyya also given to the sect and misinterpreted by Ibn Khaldūn, i, 363, Rosenthal, i, 413, who makes it refer to the saʾir of the imām), founded upon the allegorical interpretation of the Kurʾān and the laws of Islam to attain their ends, and the different methods used, according to the religion of those whom they were trying to win over. Accepting to the Bāṭinīyya which is found in al-Makhrīzī, i, 101 ff., and with greater detail in al-Nwawrī (translation in S. de Sacy, Exposé de la religion des Druzes, i, Introduction), the initiation of neophytes (al-madāʾūn) was only completed after nine periods of instruction, each one of which was called daʿwa. This system was attributed to the alleged founder of Ismāʿīlīsm, ʿAbd
Allah b. Maymūn al-Kaddāh. In it we see how they proceeded gradually to reveal the secrets of the doctrine, the ta'wil and the ta'wil al-ta'wil (for this last expression see the Masūdī, Tanbih, 395, trans. p. 60, and cf. Golzihz, Vorlesungen, 266; Fr. trans. 206). Ivanov has on several occasions (An Isma'iliastic Work by Naṣūr d-Dīn Ṭustī, in JRAS, 1937, 534; The organization of the Fatimid propaganda, in JBRAS, xxv (1939), 11 and Rise, 133 in the chapter The Myth of ‘Abdu ‘l-Ilāh b. Maymūn al-Qadddh) challenged the existence of these nine degrees of initiation for converts to Ismā’iliism with a gradual revelation of the mysteries. According to him, this is a misinterpretation of the hierarchy of the ḥādīd al-dīn, a kind of Fātimid “clergy” (for this expression see Ivanov, Organisation, 8, and a note in M. Canard’s translation of the Sirāt Jauhdar, 52); these nine degrees have no connexion with either the ancient or modern grades of initiates, there is no trace of it either in the literature of the sect or in controversial literature; he similarly rejects any comparison with initiation in Masonic lodges and their secret ceremonies. It is however difficult to believe that it is merely an invention. The nine degrees were known before al-Makrīzī and al-Nuwayrī, from Sunnī sources, not as stages in initiation but as stages (marātīb, darajāt) in the Machiavellian tricks (hiyal) to recruit new adherents and detach them from their religion (Sunnī interpretation, as opposed to the true religious fervour of the Fatimid). Each stage bears a name corresponding to the dialectical and psychological method used; the names given to these stages by al-Baghdaḍī, Īrāb, ed. Cairo 1367/1404, 179 ff. are: tatarrus, ta’nūs, taškhīk, ta’līk, raḇīt, tāḍīs, ta’sīs, after which come the oaths (ayyām), and then complete detachment (ḥalīl). (See also al-Qāhrahī, Khābādāt al-Bāṭinīyya (Goldzihz, Streitschrift des G. gegen die Bdtinijja Sekte, 19 ff.), and a note in M. Canard’s translation of the Hādīd al-dīn, 161 ff.)

The question remains obscure. Various methods of propaganda and discussion were used, but the period of their full development can hardly be taken back to the time of the beginnings of Ismā’iliism. The outline given by al-Nuwayrī and al-Makrīzī seems to be of later date.

The word da’wā does not only have the sense of appeal and propaganda. We have seen above its use to denote the Islamic community. Similarly, in connection with the Fātimids and Ismā’īlīs, it has the sense of doctrine, religion, community, sect, party of the imām. Ivanov, Organisation, 18-19, noted this polyvalence. Da’wā can even be equated with zone of obedience, empire, dynasty. Ibn Ḥawḡālī says (57-8) that the lands of the Maghrib are in the da’wā of the Commander of the Faithful al-Muʻizz li-Dīn Allāh, and that (221) Kirmān is in the da’wā of the people of the Maghrib. In the Kitāb al-Himma by Abū Ḥanīfa al-Nu’mān, chap. 7, man ghamalatu da’wāt al-imām denotes the caliph’s subjects, as a whole. Shuyūk al-da’wā in the Sirāt Jauhdar (trans. 54, cf. Ivanov, Rise, V 9) is synonymous with shuyūk al-dawla. For this use in the sense of dynasty see also al-Ṭālkhārī, 36, 4 and 382; muwadda da’wāt ‘l-Dawla; the black colour of the Ābdāsib dynasty (BGA, iv, 236); al-Makrīzī, Sulhā, i, 18. Finally we may note that da’wā is the equivalent of muddahab among the Wahhībībāt who call themselves ahī al-muddahab or ahī al-da’wā (T. Lewicki, La répartition géographique des groupements bid‘ātis dans l’Afrique du nord au Moyen Âge, in RO, xx, 1957).

In the Ismā’īlī community there was a schism after the death of al-Mustanṣīr in 487/1094, when his son Musta’īl was proclaimed in opposition to his other son Nizār. A group of Ismā’īlīs refused to recognize Musta’īl, and there were two branches or parties in the community, the Musta’īlīs and the Nizārīs. The former were called al-da’wā al-Nizārī, the old, and the latter al-da’wā al-Nīzārid, the new da’wā. This schism became permanent. When Āmīr, Musta’īl’s successor, was assassinated in 524/1130 by the Nizārīs, before dying he handed over his authority to ‘Abd al-Majīdī, the future Hāfīz, his cousin, as his son Ṣayyīb was a minor. The latter disappeared or entered the sāt. The da’wā Nizārī was also called al-da’wā tayyībiyya, and was perpetuated in the Yemen where the ‘Ṣulayhīdīs supported the second claim for the imām al-Tayyīb. It is this da’wā Nizārī, or Musta’īlian or Šayyībī da’wā, which is today represented by the Bohorars in India, whilst the da’wā Nīzāridī or Nizārī da’wā, made famous by Ḥasan b. ‘Ṣababa and the Šaḥīḥīyya (Assassins), is today represented by the Ṣafadīs. For these two branches of the Ismā’īlīs see Ibn Khaḍīlūn, i, 361, Rosenthal, i, 413, al-Shaḥrāštānī, ed. Cureton, 147, 150-152, ed. Cairo 1347, ii, 26, 28-31, Hodgson, The Order of Assassins, index. The Nizārīs or Assassins of Syria, also called Fidā‘īyyīn, who with their fortresses played an important part at the time of the Crusades, were conquered by the Mamlūk Baybars in 671/1274. They continued to occupy a certain number of places. These were then known by the name al-ta’līl al-ismā‘īliyya bi-bīlal al-da’wāt; they called themselves azhāb al-da‘wāt al-rādīya, or muqjīdāt, and had at their head an atābēk appointed by Cairo (see al-Ḳallāshāndī, i, 122; iv, 146, 235, 309; ix, 254). For modern Islamic propaganda and the propagandist school founded by Rashīd Rīdī in the island of Rūḍa near Cairo, called Dār al-da‘wā wa-tīršād ("House of propaganda and direction"), see Goldzihz Richtungen, 343-4.

(M. Canard)

Dā‘wā, action at law. According to a well-known formula the da‘wā is defined as: “the action by which a person claims his right, against another person, in the presence of a judge” (Madżalla, art. 1613). A case submitted to an arbitrator is, equally, a da‘wā. The plaintiff is termed muḍdhah, the defendant muḍḍād al-aṣbāb and the object of the claim
mudda' or, more popularly—though less accurately,—mudda' bihi. We also meet, particularly in the Mālikī madhhab, the terms jālib (plaintiff) and mašlub (defendant). The parties to the suit are called, in the dual, hāsimu and in the plural, khāsimu or khāsuma (opponents)—(singular khasim); more concretely each party is the khasim of the other. The contentious argument itself is the khāsumā (additional synonyms, though of a slightly less technical character, are nīsīn, munānā’u and tāndu).

The fact that the da‘wa envisages two contesting parties excludes from this notion the process in which the magistrate effects ex officio the exercise of certain rights such as measures to safeguard the public welfare.

But in every case which involves the three essential elements of contentious process there is a da‘wād, whatever the judicial authority before whom the action is brought and whatever the nature of the interest in issue.

A da‘wād exists, therefore, in the following cases: in the suit brought by an individual, the victim of an offence against the person, who claims the application of the law of talion (biṣās [q.v.] or the payment of compensation (diya [q.v.]); in the case of prosecutions for various “legal” offences sanctioned by public penalties (huḍūd) (see ḥadd) when brought in the exclusive or partial interest of the victim, such as the offences of theft or fornication; in the case of criminal prosecutions ex officio where the victim intervenes as plaintiff as well as in every case of the exercise of the so-called hisba action, a kind of actio popularis, based on the principle that every Muslim, apart from any personal grievance, is authorized to stand in the rôle of prosecutor for any infringement of the law (see hisba); and finally in the action brought in accordance with the extraordinary procedure of the masālim [q.v.].

Certain conditions are required for the “validity” (ṣihā), that is to say the acceptability, of the da‘wād: there must be an adequate determination of the object of the claim, of the identity of the parties, and of their capacity. The person who does not possess ordinary legal capacity, but who simply has the ability to discriminate, may go to law, provided, however, he is authorized to do so by his guardian or the judge. In a real action the defendant must necessarily be a person in possession of the object in dispute (ṣibāṣ al-yad).

A da‘wād which does not satisfy all these conditions may, however, be subsequently rectified by the fulfilment of the condition(s) in question, such rectification being termed tashīṣ al-khuṣūṣama. This may be accomplished solely upon the initiative of the plaintiff or upon the order of the judge.

The parties may appear in person or through a representative, who may be either appointed by the party (ṣaktī) or, as in the case of the guardian (waṣī) or the wali of those lacking capacity, required by the law. In the case of things which are open to the use of the general public such as sea-water or the public highway, every person is entitled to go to law to defend his right of use. In the event of litigation between defined groups, such as villages in relation to communal property, such as forests, pastures, etc., a single member of each of the groups may go to law in the name of the group whether as plaintiff or defendant, provided, however, it is a question of groups whose number is “unlimited” (hāsem khayr mašlūr), such a group being, according to the general opinion, one whose number exceeds one hundred persons.

Certain estates of property, such as waḥāfs, which are regarded as a legal entity, appear in process of law through the medium of their qualified representatives. The same applies to an inheritance prior to its distribution: in principle each heir may appear as plaintiff or defendant in the name of the succession.

The court which is competent to entertain a da‘wād is the court of the domicile or of the place of simple residence of the defendant. This rule is equally applicable in the case of immovable property. In the Mālikī madhhab, however, it is admitted that in this latter case competence also belongs to the court of the situs of immovable. Where there exists in the same locality a number of judges—as will be the case when judges are appointed for the different madhhab—, or when there is an ordinary judge and a judge appointed to hear suits concerning military personnel (bhūdī ‘askar [q.v.]), the choice of the competent court rests with the defendant. However, all these rules of competence are not of a peremptory nature; they may be avoided by the common agreement of the parties.

The appearance of the parties, is, in principle, a necessary condition precedent to the fighting of the issue; there does not exist, in Islamic Law, a procedure of judgment in default of appearance. Further, various procedures of indirect coercion are laid down with the object of securing the appearance of a recalcitrant defendant. As a last resort, the judge will appoint for such a defendant an official representative (ṣaḥīlī ṣuṣāhkar).

In another system, followed notably in the Shī‘ī madhhab and in the Ṣūfī doctrine, the view is maintained that the appearance of the duly named defendant is not a necessary condition of the da‘wād: the procedure runs its course in the ordinary way in his absence, but without being for that reason considered as a procedure of default; further the judgment delivered will have precisely the same validity as a judgment delivered in the presence of the defendant.

Essentially the process is an oral one; and while the parties may be allowed to present their pleas in written form, the writing never has any validity until it is orally confirmed by the litigant before the judge.

The term da‘f is used for the reply which tends to traverse the da‘wād—and, by extension, for every reply made by a party in contradiction of a plea raised by his opponent.

It is upon the plaintiff that the burden of proof falls. The methods of legal proof are acknowledgement or confession (ibrār), the oath (yamin), testimony (ṣahāda), which is the normal proof for excellence, writing (ḥaff) and legal presumptions (kard‘in).

One particular form of testimony is the tawdur. This consists of the affirmation of a fact by a number of persons (a minimum of twenty-five according to a fairly widespread opinion) so large as logically to exclude any possibility of fraud or lying. It is not necessary in this case that the strict conditions of testimony properly so-called—such as the condition that the witness should have personal knowledge of the attested fact, or the condition of moral integrity (‘addāl, [q.v.])—should be observed. But in spite of this the tawdur is superior to all other modes of proof with the exception of confession.

Writing in itself has no evidential value; it is a
valid mode of proof only in so far as it is orally confirmed by duly qualified witnesses.

In the event of the defendant failing to put in a voluntary appearance with the plaintiff it is a matter of controversy whether the suit is to be regarded as started by the simple action itself of the plaintiff; or whether there can be no question of continuing the process further and naming the defendant until there has first been a preliminary enquiry by the judge to establish that there is at least a prima facie ground for the action.

The system of proof is a 'legal' system, in the sense that the plaintiff bears the burden of proof, according to the dictates of the law and in conformity with the facts alleged, it binds the judge, whatever his own inner conviction may be. Hence one arrives at solutions like the following: in the case where two co-owners in equal shares; or even, according to one opinion, it will be necessary to draw lots (kur 'a) to determine the title to the property.

The trial terminates with the judgment (hukm). Since the system of Muslim judicial organization is a system of a single jurisdiction, the judgment of the hadji is not subject to an appeal before a superior jurisdiction, which does not exist. This principle, however, is subject to two important reservations.

In the first place, in periods or in areas where there exists an organized procedure of mazālim, any person who feels himself a victim of injustice as a result of the workings of the public services, may demand redress by presenting a petition to the sovereign authority. In the second place, the suit may be reopened either before the same judge or before another judge—the successor in office of the judge who may be on other grounds competent—in order to determine the case afresh. Furthermore the principle of res judicata is, to a large extent, unknown to Islamic law. Although it would be difficult to indicate here the precise scope of this rule, which is, indeed, beyond a certain point a matter of controversy, it may simply be pointed out that the authorities are unanimous in holding that a judgment may be contested and, in suitable circumstances, withdrawn or annulled where there is an infringement of an undisputed rule of law.

The right of action at law is extinguished by prescription, the period of which varies, according to different opinions, from three to thirty-six years. In the Ottoman Empire the period was fixed at fifteen years, except in certain cases, such as those relating to a waṣf fund, where the period was extended to thirty-six years. The law further recognizes certain causes of suspension or interruption of the period. Prescription functions as a procedural bar, which-paralyses the exercise of the right of action; it does not affect the substantive right itself.

In the final stage of Islamic law in the Ottoman Empire, as represented by the code known as Medellî-i ahkâm-i 'ulûm yetâ'înî, which was promulgated between the years 1870 and 1877, the old system of the da'wa was reformed in a number of particulars, notably by the recognition of the intrinsic probative value of writing (art. 1736), by the acceptance of the principle of res judicata (art. 1837), and by the introduction of procedure in default of appearance (art. 1833 ff.). These modifications ran parallel with the modernization of the judicial organization, established in accordance with European models and based upon the principles of the doctrines of the judges and the institution of a hierarchy of courts in both systems of appeal.

DAWA'DAR, ala DAWADAR, also DAWATDAR and AMIR DAWAT, the bearer and keeper of the royal inkwell. Under the 'Abbâsids the emblem of office of the waстр was an inkwell. The post of dawadur was created by the Saljuqs, and was held by civilians. Sultan Baybars transferred it to a Mamlûk Aml of Ten: Under the Bahri Mamlûks the dawdâr did not rank among the important amirs, but under the Circassians he became one of the highest amirs of the sultanate, with the title Grand Dawdâr (dawdâr habîr), and with a number of dawdârs under him. The office of dawdâr ranked among the seven most important offices of the realm. There was competition between the ra's naseba and the dawdâr hadîr for the fifth and sixth places, possession of which alternated irregularly between them. Some dawdârs even became sultans. One of the dawdâr's duties during the later Mamlûk period was to decide which of the members of the bâlka (q.v.) were fit to join in military expeditions; in addition, he regularly visited Upper Egypt, and sometimes the regions of Djabal Nâbulus, al-Sharkiyya, and al-Ghârbiyya, in order to collect taxes and gather in the crops. These trips would take place amid great pomp, and the sources discuss them at great length. They were accompanied by cruel oppressions of the local population. At the close of the Mamlûk era, enormous emigrants came to the hands of the dawdâr; thus for example Amir Yâshbak was, in addition to his duties as dawdâr, also amir silâh, wâsit, ustâdât, kâshfâh al-khawshâf (inspector-general), mudabbir al-mamlâka, and ra's al-maysara; no previous Mamlûk amir had accumulated such a great number of offices, though exactly the same offices were accumulated by the dawdâr Tûmânîy, who later became sultan. In the Ottoman and Safavî empires the dawdârs (called divistâr and dawdârs) were functionaries with scribal duties in the chanceries.

DAWA'IR, plural of da'îr, group or family of tribes or families attached to the service and the person of a native chief in Algeria. Before the French conquest, the name of dawâîr (local pronunciation dwâîr) was borne especially by four tribal groups encamped to the south-west of Oran and attached to the service of the Bey of that city, although there were other dawâîr, for example in the Titteri. They were organized as a militia, living on the products of the
land put at their disposition by the Turkish government, and the profit from expeditions against tribes who were unruly or refused to pay their taxes. The Zmāla, their neighbours, played the same part.

Local tradition, as discovered after the French conquest, held the members of these groups to be the issue of troops whom the Moroccan sultan, Mawlay Isma'il, had brought to Tiemcen to fight against the Turks in 1701. The campaign having failed, a number of Moroccan soldiers passed into the service of the Turks and formed a makhzen tribe, placed under the command of two local families. By conquest, they had the privilege of levying the taxes only in the district called Yaqūfīyya in the southern region of Oran, which extended from the neighbourhood of Mascara and the mountains of Tiemcen to the Diabal Amur. Apart from this task, the Dawa'ir were charged with policing the tribes of the western region of Oran, and accompanied the Bey on all his expeditions. They were completely devoted to the Turks.

When the Turkish régime collapsed suddenly after the French expedition of 1830, the Dawa'ir found themselves deprived of their chief reason for existence and sought someone else under whom they could serve. They first embraced the cause of the envoy of the Moroccan sultan, Mawlay 'Abd al-Rahmān, who had come to occupy Tiemcen in 1830 at the request of part of the population, but the Moroccan régime did not last long and they found themselves once again out of employment.

The Amir 'Abd al-Kādir tried in his early days to enrol them into his service, but their chief, Muṣṭafā b. Ismā'il, had already entered into negotiations with the French general in command at Oran, and did not respond to the Amir's advances. Nevertheless, a part of the tribe joined 'Abd al-Kādir. He tried to win over the rest in 1833 and seemed at one time to have succeeded, but Muṣṭafā b. Ismā'il, already an old man, found the authority of the young Amir difficult to bear and separated himself finally from him. He shut himself up in the citadel of Tiemcen with fifty families of the Dawa'ir and the Kūlūghīq [q.v.] of the town. At that time, other groups of Dawa'ir were submitting to the French and were settled around Miserghin. The whole tribe treated of Tlemcen with fifty families of the Dawa'ir.

The name Wadi al-Kasr (Kasr Kamakish in al-Hadjarayn) is said to have been the first to introduce the slaves into the Dawa'ir. The Bedouin tribes of Saybān and al-Dayyin in the highlands showed great reverence for the shaikhīs of this family, but the religious basis of its influence did not keep the tribe from squabbling among themselves, and they could not resist the expanding power of the Ku'ayti Sultanate of al-Mukallā. Later the upper valley became the stronghold of Āl al-'Ammūdī, whose ancestor, al-Shaykh Sa'id b. 'Īsā (d. 671/1272-3 and buried in Kaydun) is said to have been the first to introduce Shi'ism into Hadramawt. The Bedouin tribes of Saybān and al-Dayyin in the highlands showed great reverence for the shaikhīs of this family, but the religious basis of its influence did not keep the tribe from squabbling among themselves, and they could not resist the expanding power of the Ku'ayti Sultanate of al-Mukallā at the close of the 19th century. Dawa'ir now forms a liwā in the Sultanate with al-Hadjarayn as the northern limit. The house of Bā Şūrā of Saybān provides the provincial governors, but Āl al-'Ammūdī has recovered something of its old standing, its main centre now being at Bīda in al-Aymān.

Many of the people of Dawa'ir have emigrated to Aden, East Africa, and Java. For sentimental reasons a number of the rich emigrants maintain houses and gardens in the valley, the only export from which is honey.

AL DAWANI, Muhammed b. Asad Djalal al-Din, was born in 830/1427 at Dawan in the district of Kazarun, where his father was Kadi; he claimed descent from the Calif Abu Bakr whence his misha al-Ṣiddiq. He studied with his father and then went to Shiraz where he was a pupil of Mawlānā Muhyi l-Dīn Gūsha Kāriyūn and Mawlānā Humām al-Dīn Gūsha Bakkīr and Šafi al-Dīn Iḍīj. He held the office of ʿadr under Yusuf b. Dījahānshāh, the Kāri Kāriyūn, and after resigning this office became Mudarris of the Begum Madrasa, also known as the Dar al-Madrasa. Under the Āk Kāriyūn he became Kādi of Fars. During the disorders which occurred in Fars at the time of the break-up of the Āk Kāriyūn kingdom and the wars between them and Shāh Ismāʿīl Šafāwī, Djalāl al-Dīn took refuge in Lār and Dūrān; and when Abu l-Ṣafāth Beg Bayndur took possession of Shirāz, he set out for Kazarun but died some days after reaching the encampment of Abu l-Ṣafāth in 908/1502-3. He was buried at Dawan. He left numerous commentaries on well-known works of philosophy and mystical literature and a number of dogmatic, mystical, and philosophic treatises in Arabic. His commentary on the Tahdhib al-Manṭīk wa l-ʿKalām of al-Taftazānī (d. 791/1389), Lucknow 1264, 1293 (with glosses by Mīr Zāhīd), and his Risālat al-Zawarī, completed in 870/1465 (Cairo 1326 with Taʿlīṣi) have been printed. His best known work is the Lawdmi al-Tadhrib li Maqārim al-Akhlaq, better known as the Aḥkām-i Djalālī, which he wrote in Persian (lith. Calcutta, 1283/1866-7, translated into English by W. T. Thompson, Practical Philosophy of the Muhammadan People, London 1839).

It is a "modernized" and "popular" version of the Aḥkām-i Nāṣiri of Naṣīr al-Dīn Šūš, made at the command of Uzūn Ḥasan, the Āk Kāriyūn ruler, to whom it is dedicated (Persian text, 16). Djalāl al-Dīn admits his debt to Naṣīr al-Dīn, like Naṣīr al-Dīn, like Naṣīr al-Dīn Ṣūš, argues the necessity of a supreme law, a governor, and a monetary currency. The law he interprets to be the Shariʿa and the governor that person distinguished by the support of God and possessing such qualities as would enable him to lead individual men to perfection. Government was either righteous, in which case it was the imāmāte, or unrighteous in which case it was the rule of force. He does not lay down any conditions of election or deposition for the ruler. Any righteous ruler was the shadow of God upon earth, His representative (bāḥth al-allāh), and the deputy (nāʿīḥ) of the prophet Muhammad (236). It is, doubtless, in this sense that Djalāl al-Dīn addresses his patron, Uzūn Ḥasan, as " calmly this " in the poems and the description of the equipage of the world, for the preservation of which cooperation between men was needed. Djalāl al-Dīn recognizes two types of civilization, righteous and unrighteous, which, following al-Farābī and Naṣīr al-Dīn Ṣūš, he calls the "good city" (madīna-i fādila) and the "unrighteous city" (madīna-i ghar-i fādila); and subdivides the latter into the "ignorant city" (madīna-i gāhīla), the "profligate city" (madīna-i ḡābiša), and the "wicked city" (madīna-i dūlāla) (260-1). Within the good city there were several intellectual grades among the citizens and a differentiation of function. Equity demanded that each class should be kept in its proper place and each individual engaged in that occupation to which he was fitted and wherein he could attain to perfection (266). Righteous government, the imāmāte, consisted in the ordering of the affairs of the people in such a way that each might arrive at that degree of perfection which lay in him (269). Unrighteous government was force, and consisted in the subjugation of the servants of God and the devastation of His territories (270). In order to preserve the equipage of civilization, society was to be resolved into four classes; (i) men of learning, such as the ʿulamāʾ, fazlāb, ḥādis, scribes, mathematicians, geometers, astronomers, physicians, and poets; (ii) men of the sword; (iii) merchants, craftsman, and artisans; and (iv) agriculturists, without whom Djalāl al-Dīn states, the continued existence of the human race would be impossible (277-8). He then, still following Naṣīr al-Dīn Ṣūš, divides men into five classes according to their moral nature: (i) those who were by nature righteous and who influenced others, whom Naṣīr al-Dīn describes as the choicest of creation, whom the ruler should treat with the utmost respect and consider to be over the other classes; and whom Djalāl al-Dīn declares to be such people as the ʿulamāʾ of the Shariʿa, the shaykhāhs of darwīsh orders, and mystics; (ii) those who were by nature good but had no influence over others; (iii) those who were neither righteous nor unrighteous; (iv) those who were evil but had no influence over others; and those who were evil and had an influence over others (279-81). He then discusses the means to be adopted to coerce the evil and the need for the ruler to enquire personally into the affairs of his subjects (282 ff.). The final section of the work, also based on the Aḥkām-i Nāṣiri contains a number of political maxims attributed to Plato and Aristotle.

Djalāl al-Dīn's ʿArūd Nāma, written for Sulṭān Qulālī when he was governor of Fars on behalf of his father Uzūn Ḥasan, has been translated into English by W. T. Thompson, ʿArūd Nāma, in the British Museum, ii, 442b; Brockelmann, Cambridge Political Thought in Medieval Islam, Cambridge 1958, 210-23. On Dawānīl's influence in the Ottoman empire, see S. Mardin, The Mind of the Turkish Reformer 1700-1900, in The Western Humanities Review, xiv, 1960, 418 ff. (Ann K. S. Lambton)
DAWAR — AL-DAWASIR

and geographers of the middle ages. In the East, the exact form of the word is dawar or dawar; in the Maghrib, it is dawdr or dawwar (pl. dawdir). The number of tents of which a dawar is composed can vary greatly; it can be as many as several hundreds, or no more than ten. Many different reasons, such as abundance or scarcity of pasturage, security or the lack of it, etc., bring about the splintering of the same Bedouin group into dawars of little importance, or its reunion into dawars of considerable size. Beside this term, which has in a way become the generic one, one finds for less important groups or dialectal representatives rasm, hilla, nazla, farifr, etc. In the administrative language of Algeria, the word douar no longer bears its original primitive meaning, but is employed to designate an administrative area, either nomadic or sedentary, placed under the authority of the same chief, bâ'id, or shaykh. The word dawar was known in Arab Spain. The Vocabulary (ed. Schiaparelli) gives it as the equivalent of the Latin dux, without further definition. In modern Spanish aduar means a gipsy camp.

DAWÁRO, one of the Muslim trading states of southern Ethiopia. It was a long narrow strip of territory lying immediately east of Bâli, and included the great Islamic centre of Harar. It seems to have reached the Webi Shabelle in the south, and the edge of the Danakil lowlands in the north, where, with Bâli, it met the state of Ifat. It is clear, however, that for a time at least, and as far as sent in the rasm, hilla, nazla, farifr, etc., bring about the splintering of the same Bedouin group into dawars of little importance, or its reunion into dawars of considerable size. but the ordinary tribesman knows him only vaguely as one of the Şahaba. In legend both Zayid and the Taghlība are associated with Sadd Mārib (pronounced Mārīd), and Zayid is said to have led the tribe from there into Wādī al-Dawāsir. Rather early sources speak of the Dawāsir as an offspring of ʿĀṣidh, which may be plausible if ʿĀṣidh was in fact a branch of ʿUqayl (q.v.), as ʿAdnānite ʿUqayl once occupied the valley now known as Wādī al-Dawāsir. Against this identification are various indications, admittedly inconclusive, that ʿIyāl Zayid are ʿĀṣidhī rather than ʿAdnānite. ʿIyāl Zayid are sometimes called ʿUqaylī. In legend hold in that Zayid's mother had been falsely accused of adultery.

The other principal division, the Taghlība, has a firm tradition of descent from Taghlīb (pronounced Tughlu) b. (not bīn) Wāyil, which is not impossible, as this ʿAdnānite tribe was in the forefront of eastern Arabian affairs well beyond the heyday of the Karmātīs. For unclear reasons the Taghlība, particularly the section of the Khiylāt, are referred to as ʿĀṣidh al-Dawāsir. The union between the two principal divisions is traced back to al-ʿIrārī, the ancestor of Āḥūbān of the Taghlība, whose daughter is said to have been Zayid al-Mašālmī's mother.

The most important sections of ʿIyāl Zayid are the Masāʿīra, Āḥūsān, the Ḥiylāt, the ʿAṣirān, the Wādāʾīn, the Bādārīn (including the Sadārān), the Ghayyārān, the Sharāfān, and the Ḥarāfīlān. The foremost chief is Ibn Kuwayd of the Masāʿīra, who leads a semi-nomadic life in the hamlet of al-Kuwayz in Wādī al-Dawāsir. The Taghlība consist of five sections: the Umūr, the Mašārīya, the Mašāfīya, Āḥūbān, and the Khiylāt.

The Dawāsir first appear by name about the 7th/8th century, when they were in contact with Āḥ Fadl of Tayyiʿ, the Amir of the Syrian Desert, and with the Māmlūk Sultans in Cairo, who got horses from Arabia. The Dawāsir are called a tribe of the Yemen, and Ibn Bādrān (of the Bādārīn) is named as their chief.

Beginning in 851/1447-8, details on the history of the Dawāsir become more abundant and precise. In that year Zāmil b. Dījāb, the Dījābī (q.v.) lord of al-Ḥaṣā and al-Ṣaʿīf, defeated the Dawāsir and ʿUqaylī (q.v.), the Āḥūbān, and the Khiylāt. In the following year Zāmil led a large force of Beduins and townspeople against the Dawāsir in their own valley (the first mention of the valley as Wādī al-Dawāsir) to punish them for their many raids on the nomads of al-Ḥaṣā. Later Zāmil's son Adīwād launched four separate expeditions against the Dawāsir without reaching their valley on any of them. With the decline of Dījābī power, the Dawāsir multiplied their attacks on caravans carrying merchandise from al-Ḥaṣā to Najd.

Of the 43 battles involving the Dawāsir which are recorded for the period between 851 and 1164/1751, fifteen were fought against Kahtān. Other principal opponents were Subayʿī, Āḥ Maḥrīta, ʿAḥ Kāhirī, and the Fuqūl. Usually the Dawāsir had fewer friends than foes; no other tribe stood by them steadfastly, but on occasion even some of their opponents mentioned above, such as Kahtān, joined their side, which being the evanescent loyalties of desert warfare.

The favourite battleground for the Dawāsir was the watering place of al-Ḥarmāliyya near al-Ḥuwayriyya, where no less than six encounters took place. In the broader district of al-Khiylār the Dawāsir fought seven or eight battles, and four in al-ʿArāma. The Dawāsir engaged in most of their strife on territory not of their own; other tribes seem to have lacked the temerity to assault them in their homeland.

About 1100/1689 pressure by the Dawāsir forced Āḥ al-Ṣaʿīf (q.v.) and Āḥ al- Ḥuṭaita (q.v.), both of Ṣanāʿa, to migrate from al-Haddārī in al-Aflāḥī to the Persian Gulf, where they in time became the rulers of Kuwait and Bahrayn. As the power of Āḥ Saʿīd (q.v.) grew during the 12th/13th century, the Dawāsir were among the last of the great tribes of Najd to adhere to the reform movement of Shaykh Muḥammad b. ʿAbd al-Wahhāb. In 1197/1784-5 Rubayyiʿ b. Zayīd of the Makhārīm swore allegiance to Āḥ Saʿīd, who regained al-Aflāḥī and remained for the rest of his days. The Ḥiylāt and the Wādāʾīn resisted the progress of the reform movement in the valley, supported firstly by the Ismāʿīlī lord of Najrān and then by Ghalib, the Sharīf of Mecca. As the domains of Āḥ Saʿīd expanded, the Dawāsir fought for them in the west side by side with their old enemies Kahtān. In 1212/1809 Dawāsir were among the Beduins who raided Nadra. The large army annihilated by Muḥammad ʿAllī of Egypt at Bisl in 1320/1851 contained a contingent of Dawāsir.

When Āḥ Saʿīd returned to power after the capture of al-Dīrīyya by Muḥammad ʿAllī's forces in 1233/1818, both Turki b. ʿAbd Allāh and his son Faysal maintained Amīrs in Wādī al-Dawāsir. The tribesmen were not always obedient subjects; in 1243/1827-8, for instance, Turki disciplined Beduīn elements of the Dawāsir for their lawlessness.

About 1845 a number of Dawāsir arrived in Bahrayn, having come from Najd by way of the island of al-Zahhānūnīyya, where they sojourned for a few years. In Bahrayn they settled in the towns of al-Budayyī (cf. the Dawāsir town of al-Badīʿī in al-Aflāḥī) and al-Zallīk.

During the civil war between Faysal's sons ʿAbd Allāh and Saʿīd, the chief of al-Sulayyīl in Wādī al-Dawāsir and the Ismāʿīlī lord of Najrān championed Saʿīd's cause. In 1285/1866-7 ʿAbd Allāh's forces under his brother Muḥammad crushed Saʿīd and his partisans at al-Muʿtalā in Wādī al-Dawāsir and during the next year ʿAbd Allāh himself spent two months in the valley inflicting condign punishment on its inhabitants. After the death of Saʿīd in 1293/1875-6, al-Ḥuṭīti of Nājd expanded, and the turbulent elements of the Dawāsir, who if not quickly brought back into the fold, though ʿAbd al-ʿAzīz had no easy time in keeping the peace among the turbulent elements of the Dawāsir, who if not fighting with each other were often at war with Āḥ Murra to the east or Āḥ Murra's cousins of Yāmān to the south-west.

In 1336/1918 Philby became the first Westerner to visit Wādī al-Dawāsir and provide an accurate description of it. The valley in recent years has remained a backwater of the new Kingdom of Saudi Arabia, scarcely touched by the material progress being achieved in many other parts. Wādī al-Dawāsir, once an important way station for the coffee trade between the Yemen and Najd, has been replaced by Bishā in the 20th century. The present centre of influence of the Dawāsir is in their government positions and their new towns on the Persian Gulf.
In the old days Dawasir would go from their valley to the Gulf to work as pearl-divers every summer. Now many who reside on the Gulf shore are landowners, merchants, contractors, and laborers in the oil industry.

In Nadji the Dawasir have been Hanballas since the time of Ibn 'Abd al-Wahhāb. Along the Persian Gulf some are Mālikīs, while on the Iranian side a number have embraced Shī'ism.

Wādī al-Dawasir is one of the great eastward trending channels which cut through the long wall of Tuwayk. The Wādī's ancient tributaries, the valleys of Bīsha, Ranya, and Tāthīth, descend from the Hidżād mountains and meet in the basin of Ḥadjiyat al-Mukhatmiyya (for al-Mukhtātimiyya?), where a sand barrier now prevents their waters from reaching the Wādī save in exceptional years (the Tāthīth sayl flooded the Wādī the year before Philby's first visit). The name Wādī al-Dawasir is sometimes restricted to the western part of the valley, in which are found the capital of the whole district, al-Khamasiyya; its sister town, al-Lidām (incorrectly shown as Dam on many maps); and the westernmost settlements known as al-Far'sa. Like al-Khamasiyya, a number of other towns bear the names of units of the tribe, such as al-Sharafa and al-Tabarl, i, 735). It is occasionally replaced by occurrences of ‘Askar or Kasr Kunara, as the Turkish occupation of al-Dawha, which may be roughly estimated at 20-30,000, forms the major part of the total population of Qatar. The city possesses a modern hospital and a small airport which affords connections with international flights out of Dhabran (al-Zahrān) in Saudi Arabia and al-Muharrak in Bahrain. The British Political Agent is the only representative of a foreign government resident in al-Dawha. British Bibliography: Ibn Bīshār, ‘Umān al-madīd, Cairo 1373; Muhammad al-Nabānī, al-Tubāh al-nabānīyya, Cairo 1342; C. U. Aitchison, A Collection of Treaties ..., xi, Dihl 1933; J. G. Lorimer, Gazetteer of the Persian Gulf ..., Calcutta 1908-1915. (R. L. Hadley) DAWLA, 1) an Arabic word signifying the period of an individual's rule or position; it is also often employed in the meaning of 'dynasty'. The root d-w-l may occur in Akkadian dūlu 'to wander around aimlessly' (The Assyrian Dictionary, i, 59) and Syriac dāl 'to move, to stir' ( Brockelman, Lex. Syr., 144 b). However, the basic meaning of Arabic d-w-l is clearly "to turn, to alternate" (relating it to d-w-l). The Kurān says (2.7). It appears to have been the starting point for the development of the meaning "family". How dawla acquired this meaning remains to be investigated. There is nothing to indicate a pre-Islamic origin. Tribal terms, such as bānū or āl, continued to be used in Islam. Genuine verses antedating

Encyclopaedia of Islam, II
ing early ‘Abbāsid times and containing dawla in the meaning of “dynasty” have not yet been signalized. Prose references are open to the suspicion of anachronism. Thus, it seems unlikely that an Unnayyad general should have blamed a son of the caliph ‘Uṯmān in these words: “we are fighting for your dynasty (dawlahikum) while you betray it” (al-Balāḏūrī, Ansāb, IVB, 39). An increase in the use of the word is noticeable in the earliest ‘Abbāsid documents, some of which may have been transmitted with literal accuracy. In his speech to the Kūfans upon his accession, al-Saffāḥ said: “...you have raised the rope of the dawla (sayyidah ‘alā dawla)”. This has later, in al-Mansūr’s time, become a frequent feature of titles. However, no conscious application of any dated 290 is doubted by G. C. Miles. Muslim authors stress that this is the first occurrence of dawla meaning “victory”). In a paraphrase of al-Mansūr’s last will, reference is made to the dawla (reign) of al-Mahdī (ibid., iii, 454). The evidence is inconclusive. It seems that at the beginning of the ‘Abbāsid period, the term dawla was by no means well established in the meaning of “dynasty”. However, the word was frequently used by the ‘Abbāsid with reference to their own “turn” of success. Thus it came to be associated with the ruling house and was more and more used as a polite term of reference to it. Soon, one could speak of the supporters and members of the dawla, the supporters and members of the dynasty; again, the precise date of the earliest occurrence of such usage as yet eludes us.

It has been assumed that Persian political speculation along the lines of the Polybian αυκτών πολιτείας contributed to the formation of the concept dawla “dynasty”. Such an assumption may find some slender support in the suggestion advanced by al-Rāzī, Adjectival formation from dawla—dawli—duwali—dawla has not yet been made. In the twelfth century, occasional dawla titles upon their highest officials. But the tenth century was hardly over when dawla titles lost greatly in significance. They were at first supplemented and eventually replaced by other similar titles; this marked the beginning of the excessive use of titles in Muslim countries, which we find occasionally criticized by Muslim authors. A comprehensive study of post-Buyid occurrences of dawla has not yet been made. In the twentieth century, for instance, a court physician was called Aml al-Dawla “Trusted Supporter” (Hibat Allah b. al-Tilmīdī) for dawla titles of non-Muslims, cf. al-Kālkhāndī, Shubh, v, 490 f.; H. Zayyāt, in Al-Masīkhī, xli, 1948, 8 f.). However, while composites with dawla were reduced to merely honorific appellations, it can fairly be said that they always denoted high standing in the community. In India, for instance, they continued to be used by some rulers, and, until the abolition of honorary titles in 1935, Persian cabinet ministers often received titles composed with dawla.

**Bibliography:**

3) From its original meaning, dawla developed quite a few specialized connotations (cf. Dozy, Suppli, i, 476 f., and the dictionaries of Muslim languages other than Arabic; for further, for instance, A. J. Maclean, A Dictionary of the Dialects of Vernacular Syriac, Oxford 1901, 62 b). In modern times, an adjectival formation dawli or dawali—dawla, or its pl. duwali, in the meaning of “nation” (< state < government < dynasty)—has become accepted in Arabic as the current term for “international”.

(FOBENTHAL)

DAWLAT GIRAY (918/1512-957/1577), styled the Taht-alghan or Daghlt-alghan (Conqueror of the
DAWLAT SHShah was also called Dawlat-Shah; born at Nawâ in 7 Rabii‘ II 1203/6 January 1789, he was for many years governor of Kirman-shah and Dihl, as well as Safar 1236/3 December 1820 on his return from his campaign against Mahmud Pasha; he has left a number of poems.

**Bibliography:** editions: Bombay, 1887; *The Tadhkiras-i-shuwarâd*, ed. E. G. Browne, London 1901. Translation: *Geschichte der schönen Rede- künste Persiens* . . . by J. von Hammer, Vienna 1818. Rida Kull Khan, *Madjma al-fusâd*, i, 26; Belin, in *Belleten*, no. 46, 390. He died in Safar 1236/April-May 1577. His reign was marked by the vital struggle of the Crimean Khânate against Russia for the heritage of the Golden Horde in the Volga basin, and by the further integration of the Crimea in the Ottoman empire. Mention should be made of the Great Mosque that he built at Gozleve in 779/1571. Six of his eighteen sons became Khân after him (see Giray in *IA*).

**HALIL INALCIK**

DAWLATABAD, a hill fort lat. 19° 57' N., long. 75° 15' E., ten miles N.-W. of Awrangâbâd, now in Maharashtra State, was called Deogiri (properly Devagiri), “the Hill of God”, in pre-Muslim times as the capital of the Yâdavas, originally feudatories of the Western Câlukyas but independent since 1183 A.D., after which they continued to rule the territory from Deogiri independently. ‘Alâ al-Dîn, nephew of Sultan Djalal al-Dîn Firdus Khâldjî of Dihl, acteduated by reports of the immense wealth of Deogiri, reached there by forced marches in 693/1294 and invested the fortress. Râmchandra, the then Râjâ, taken by surprise, was ultimately forced to surrender to the invaders huge quantities of gold, silver and precious stones, which became ‘Alâ al-Dîn’s bait to lure Firdus to his death, as well as agree to the cession of Elipîr to the Dihl Empire. Râmchandra failed to remit the revenues of Elipûr and in 706/ 1307 a force commanded by Kâfûr Hazârdînî, then Malik Nâ’îb, was sent against him; but on making his submission to Kâfûr he was courteously sent to the capital where he offered sumptuous gifts in lieu of tribute. His ready pardon and official appointment as governor of Deogiri, with the title of ‘Alâ al-Dîn, has been attributed to ‘Alâ al-Dîn’s superstitious regard for Deogiri as the talisman of his wealth and power. But his son and successor, Shanka, having defied the Dihl hegemony, Kâfûr was again sent south in 713/1313, where he assumed the government of the state having put Shanka to death. Shanka’s son-in-law Harâpâla proclaimed his independence some three years later, and the new Dihl sultan, Kutb al-Dîn Mu‘ârak Khâldjî, personally led an expedition south, slew Harâpâla, re-annexed the Deogiri lands, and built in 718/1318 the great Mosque that he built at Gozleve in 779/1571. Six of his eighteen sons became Khân after him (see Giray in *IA*).

**Translation:**

This concise anthology of poems which for the most part are well chosen is very useful in literary history, especially for the study of 8th/14th and 9th/15th century poets; but many mistakes have been detected in the notes on the princes and poets, while the judgments expressed on their talents are very often lacking in critical sense.

The next important date in the history of Deogiri was when Muhammad b. Tughluk decided in 727/1327 that, since Dihl was not sufficiently central in his dominions, Deogiri should be renamed Dawlatâbâd and become his capital. Officials were at first encouraged to settle there, but in 729/1329 the entire population was compelled to move to Dawlatâbâd as a punitive measure (Barâni, 481 ff.; Ibn Battû- ta, iii, 314 ff.), and from there as a base of operations order was restored in the Deccan. But shortly afterwards Mughal raids in north India necessitated Muhammad’s return to Dihl and Dawlatâbâd re-
verted to its status as a southern garrison. It was at Dawlatabad that Isma'il Mukh was elected their leader by the Amir-i-Sadah in 1346 and it was again there that a year later Zafar Khan, who had defeated the Dhilli army, superseded Isma'il and became the first Bahmanid sultan. The Bahmanis retained Dawlatabad as a garrison on their northern frontier and improved its defences; the conspicuous Când minâr dates from their occupation. It passed to the Nizâm Şâhîs of Ahmadnagar in 909/1500, becoming their capital in 909/1600. The Mughal emperor Şâhâjâhân clearly considered possession of Dawlatabad to be the key to dominion over the Deccan, and in 1043/1633 it was taken for the Mughals by Mahâbat Khan after a fierce siege ('Abd al-Ḥamîd Lâhawri, Bâyâqa-nâma, Bibl. Ind., 496-536). Salâbat Dîng secured Dawlatabad for the Nizâm Şâhî of the Nizâm Shâhîs of Ahmadnagar in 980/1512, but lost it three years later to the Mârâthâs.

Dawlatabad once boasted of the Fathabad mint (for the name Fathabad given to Dawlatabad in the time of Muhammad I Bahmanî, see Burhân al-Mâthârî, 1936 ed., 47) where coin was struck from 763-6 A.H.; it was also the centre of a paper-making industry.

Bibliography: In addition to references above, see Bilgrami and Willmott, Historical and Descriptive Sketches of H.H. the Nizâm's Dominions; T. W. Haig, Historical Landmarks of the Deccan; Imperial Gazetteer of India, Hyderabad State.

(ii) Monuments. The earliest building work at Dawlatabad (apart from the rock-cut caves of the 1st century B.C.) is the scarping of Devagiri, a single conical hill of rock some 200 m. high commanding a natural pass. This scarping, dating at least from the early Yâdava times, results in the entire circuit of the rock presenting a vertical face 50 to 65 m. high, above a water-filled moat of rectangular section dug a further 15 m. into the rock (a causeway across the moat leading to a rock-cut shrine shows its Hindu provenance). The utilization of stone of the early Yadava times, results in the entire monument. Largely an improvisation out of temple material, it has tapering fluted corner buttresses and a corbelled dome, and is some 78 m. square in overall plan (illustration in Ann. Report, Arch. Dept. Hyd., 1925-6, Pl. III); the minârâb has since been filled with an idol.

The minârâb has no minaret; fulfilling this function, however, is the Când minâr, 30 m. high, of about 840/1435, similar in shape to the towers of Mahmûd Gâwân's madrasa at Bîdar [q.v.] but with three galleries supported by elaborate brackets. In addition to its function as a minâr of the mosque, it was also an observation post, since it commanded the dead ground on the north-east.

The palaces are mostly in ruins; noteworthy are the bârdarâi mentioned above, built for Şâhâjâhân's visit in 1046/1636, and the Cînl maâhll in Mahâkot, of the Nizâm Şâhî period, with fine encaustic tile-work; the latter was used as a state prison for the last Kutb Shâhî ruler, Abu 'l-Ḥasan (Khâliq Khan, Mumtaqâb al-Lubâb, ii, 371 ff.).

Bibliography: There is no monograph on Dawlatabad as a site; in addition to references in the text, see S. Piggott, Some ancient cities of India, Bombay 1945, 78 ff. (including sketch-map).

(J. BURTON-PAGE)

AL-DAWLATABÂDI, Shihâb al-Dîn Aḥmad b. Shâms al-Dîn b. 'Umar al-Zâwuli al-Hindi, an eminent Indian scholar of the 16th century, was born at Dawlatabad in the Deccan. He completed his studies in Dihli at the feet of Kâddî 'Abd al-Mukhtâdî and Mawânâ Khâdîjî, two eminent disciples of Shihâb al-Maślîf al-Nâṣîr. Shahjâhân, the Delhi sultan, when Timur invaded India, Shihâb al-Dîn left Dihli and settled at Dijawnpur where Sultan Ibrâhîm Sharâkî (804-844/1435-1440) received him with honour and appointed him as the kâddî al-kudâlî of his kingdom. Later on he conferred upon him the title of Malîk al-Ulamâ'. Forigahta says that he was held in such high esteem by the Sultan that a special silver chair was provided for him in the court. He died at Dijawnpur in 848/1445.

Shihâb al-Dîn was a prolific writer. According to Shâykh 'Abd al-Hâkî Muhammad Dihlawi and Muhammad Ghawî Shàtârî he enjoyed some reputation as a Persian poet also. Of his compositions, the following are particularly noteworthy: Shârîk al-Hindi, a commentary on the Kâfyûa (for Ms, Contribution of India to Arabic Literature, Zâbîd Ahmad 401); Shârîk al-Badawû, (Ms, in possession of M. Abû Kâlâm Azîdî); Shârîk al-Islâmîyya, (on scholastic theology (Ms, Rampur, 314); al-Irshâd, on Arabic syntax, (printed at Hydârâbâd); Msâdîd al-Idât, commentary on the famous Kasîfâ Bânât Suîd, (printed at Hydârâbâd); Bâb al-mawwâbî, a Persian commentary on the Kûrâ. DAWLATABAD "AL DAWLATABADI
Dawrak, formerly a town in south-western Khuzistan, was also called Dawrak al-Furs, ‘Dawrak of the Persians’ and sometimes al-Madina, ‘the Town’. The original Persian name was Darak. In the middle ages Dawrak was the capital of a district which was sometimes called after it and was sometimes known as Surraq. Dawrak lay on the banks of the river of the same name, which was a tributary of the Drâhâh; it was connected by canal with the Kârûn [q.v.]. It was famous for its veils and for its sulphur springs. Pilgrims from Kirmân and Fârs used to pass through Dawrak on their way to and from Mecca. As late as the 4th/10th century a fire-temple and some other remarkable buildings dating from the Sassânid era were still to be seen in the town. Dawrak was described in the Hudud al-‘Alâm (130) as a pleasant, prosperous and wealthy town. Towards the close of the 10th/16th century the Bahri Timur occupied Dawrak and the surrounding area, but they were ousted by Sayyid Bârakâr, of the Mughâshâd dynasty of Hwîzâ, the well-known Wilâ‘î of Abârâstân (Khûzistan) about the year 1000/1591-2. In 1029/1619-20 the Beglerbey of Fârs conquered Dawrak and its district (see the Ta‘rîkh-i ‘Alâm-yi ‘Abbâsî, 675). Subsequently the district was occupied by a branch of the Afshâr tribe [q.v.], but they were displaced by Shâykh Sâlûmân of Nâšrabad (see below). Shâykh Sâlûmân [q.v.]. Shâykh Sâlûmân Sâlûmân built a new town, which he called ‘Abbâsîyâ, five miles to the south of Dawrak, which thereafter fell into ruin. In order to protect ‘Abbâsîyâ against the Huwala and other hostile tribes, Shâykh Sâlûmân erected a strong fort there and built a mud wall two miles in circumference round the town. When Layard visited ‘Abbâsîyâ a century later, he found this wall in bad repair; he stated, however, that the many canals and watercourses surrounding it would provide a formidable barrier to invasion if strongly defended (Description of the province of Khûzistan, in J.R.G.S., 1846, xvi, 39; see also his Early adventures in Persia, Susiana and Babylonia, London 1887, ii, 57). In 1933 the name of ‘Abbâsîyâ was changed to Shâh-dagan; it is the capital of the Shâh-dagan district, which was also called the Shâh-dagan district, is about 20,000. The swampy area between Shâh-dagan and the coast of the Persian Gulf is still known as Dawrakistan. The name is also preserved in the Khwar Dawrak, a northern arm of the Khwar Mûsâ, the large inlet of the Gulf which bounds Dawrakistan on the east.

---

**DAWD, the biblical David.** David is mentioned in several places in the Kurʾān, sometimes together with his more famous son and successor Solomon (Sulaymān). He kills Goliath (Dā’llūt, Sūra II, 251). God grants him the rule of the kingdom (ibid.) and enforces it (XXXVIII, 20). He makes him a “ḳhāṣṣa fi l-ard” (i.e., the successor of an earlier generation of rulers, XXXVII, 26). He gives him knowledge (ṭibb, with hamza) because of the ability to do justice (ḥukm, esp. XXI, 78 f.; XXXVII, 21-24, 26; jasī al-khāṣṣ, XXXVII, 20). He gives him a zabur (book, psalter, IV, 163; XVII, 55), and makes the birds and mountains his servants, so that they unite in his praise (XXI, 79; XXXIV, 10; XXXVII, 18 f.). God also instructs him in the art of fashioning chain mail out of iron (XXIV, 20 f.; XXI, 80). Together with Solomon, he gives judgment in a case of damage to the fields (XXI, 78). The failure of the rich man and the poor man, which Nathan tells the king (2 Sam, xii, 1-4), is retold in a somewhat modified form (XXXVIII, 21-23). There is no mention of the wrong David did to Uriah, but the subsequent verses show that the king feels himself to be guilty. His prayer for forgiveness is heard (24 f.).

The ḥadīth stresses David's zeal in prayer, and especially in fasting. Kurʾān commentators, historians, and compilers of the “Tales of the Prophets”, specifically mention David as a prophet and add further material from Jewish (and Christian) tradition, including the story of Saul's jealousy of David, and that of the wife of Uriah (this as proof of David's 'temptation', Sūra XXXVIII, 24), and the story of mawṣūla and lain (ibid. 39), a description which fits both the starting-point and the later development of his own doctrine, and he himself is called a fanatical adherent (muṣta'awṣib) of al-Ṣhāfi'i, a description which fits both the starting-point and the later development of his own doctrine, and he himself is called a fanatical adherent (muṣta'awṣib) of al-Ṣhāfi'i, a description which fits both the starting-point and the later development of his own doctrine, and he himself is called a fanatical adherent (muṣta'awṣib) of al-Ṣhāfi'i, a description which fits both the starting-point and the later development of his own doctrine, and he himself is called a fanatical adherent (muṣta'awṣib) of al-Ṣhāfi'i, a description which fits both the starting-point and the later development of his own doctrine, and he himself is called a fanatical adherent (muṣta'awṣib) of al-Ṣhāfi'i, a description which fits both the starting-point and the later development of his own doctrine, and he himself is called a fanatical adherent (muṣta'awṣib) of al-Ṣhāfi'i, a description which fits both the starting-point and the later development of his own doctrine, and he himself is called a fanatical adherent (muṣta'awṣib) of al-Ṣhāfi'i, a description which fits both the starting-point and the later development of his own doctrine, and he himself is called a fanatical adherent (muṣta'awṣib) of al-Ṣhāfi'i, a description which fits both the starting-point and the later development of his own doctrine, and he himself is called a fanatical adherent (muṣta'awṣib) of al-Ṣhāfi'i, a description which fits both the starting-point and the later development of his own doctrine, and he himself is called a fanatical adherent (muṣta'awṣib) of al-Ṣhāfi'i, a description which fits both the starting-point and the later development of his own doctrine, and he himself is called a fanatical adherent (muṣta'awṣib) of al-Ṣhāfi'i, a description which fits both the starting-point and the later development of his own doctrine, and he himself is called a fanatical adherent (muṣta'awṣib) of al-Ṣhāfi'i, a description which fits both the starting-point and the later development of his own doctrine, and he himself is called a fanatical adherent (μυστάκας) of the Ṣhafi'i school. In theology, he is reported to have held the opinion that the Kurʾān as it exists on the "well-preserved tablet", was uncreated, but as it exists in the actual copies, produced in time, and Ahmad b. Hanbal is said to have refused to meet him on account of this.

Dāwūd’s family came from a village near Ifṣāḥān; he was born in Kūfah in 200-2/815-8. He studied hadīth under well-known authorities in Bāṣra, Baghdād and Nīṣābūr, and then settled in Baghdād where he became highly esteemed as a teacher and mufti. His biographers praise him for his piety, humility and asceticism. Nothing is known of his teachers in ḥadīth proper; his father was a Ḥanafī, and he himself is called a fanatical adherent (muṣta'awṣib) of al-Ṣhāfi'i, a description which fits both the starting-point and the later development of his own doctrine, and he himself is called a fanatical adherent (μυστάκας) of the Ṣhafi'i school. In theology, he is reported to have held the opinion that the Kurʾān as it exists on the "well-preserved tablet", was uncreated, but as it exists in the actual copies, produced in time, and Ahmad b. Hanbal is said to have refused to meet him on account of this.

Dāwūd was the author of numerous treatises (see a more or less contemporary list in the Fihrist), some of them extremely long (up to 3000 folios), covering legal theory (ṣūrā) and all branches of positive law (furu); nothing of all this has survived, and we depend for statements of his doctrine on questions of detail on later authors (e.g., al-Ṣubkī, and particularly Ibn Hazm [q.v.], and some of the works on ṣḥāḥīḍ, which however do not always distinguish between Dāwūd’s own opinions and those of his followers. The Hānbal author Muhammad al-Ṣhafi (1307/1889-90), at the suggestion of the mufti of Damascus, Maḥmūd b. Ḥamza Effendī al-Ḥamzāwī (d. 1305/1887-8), collected many of these opinions and compared them with the corresponding Ḥanbalī doctrines (R. f. Maṣūf al-Imām Dāwūd al-Ṣhārī, Damascus 1330). The school of the Ṣhāhrīyya disappeared in due course, and for this reason their opinions and those of their imām, Dāwūd, are not
taken into account in establishing the consensus of the scholars, although a number of Shi'i scholars take, theoretically at least, a more accommodating view (Na'awat and, in more detail, al-Sukki).

Dawud died in Bagdad in 270/884, and was buried there. His son, Muhammad b. Dawud [q.v.], was a famous man of letters.

**DĀWŪD AL-ANTÀÞI [see al-ANTÀÞI**

(PL. H. MARTIN)

**DĀWŪD KHĀN KARARĀNĪ**, younger son of the governor of Bengal under Shīr Shāh, Sulaymān Kararānī, who later asserted his independence, was raised to the Bengal throne in 980/1572 by the Afghan nobles who had deposed his elder brother Bāyzid. Intoxicated by a sense of power he defied the Mughal emperor Akbar and attacked his outpost at Gāhpūr in 982/1574. Munīm Khān [q.v.], sent to oppose him, occupied his capital at Tāndā and compelled him to retreat into Uriśa; he counter-attacked at the important battle of Tukarō’t [q.v. (= Mughalmārī)], but when Mughal reinforcements arrived he sued for peace and paid tribute to Akbar, being permitted to retain the province of Uriśa. In 983/1575 Munīm Khān died and in the following confusion Akbar attacked and regained Bengal. Khān Dāwūd and Todar Māl renewed the Mughul attack in 984/1576, when Dāwūd was captured and executed, and Bengal finally passed into Mughal hands.

**DĀWŪD PAŠHA, KARA [i? = 1024/1613]**. Ottoman Grand Vizier. The year of his birth is uncertain, but, in a “relazione” submitted to the Signoria in 1612, Simone Contarini, who had been Venetian Bailo at Istanbul, mentions a Dāwūd Pašha, whom he describes as a Croat in origin and at that time about 46 years old. According to the Ottoman sources, however, Kara Dāwūd Paša was of Bosnian descent. He was trained in the Palace Schools, being appointed in due course to the office of lükâdar (lukadar). During the reign of Sultan Mehemmed III (1003-1022/1595-1603) he became Kapīdî Bahšl and later, in the reign of Sultan Ahmed I (1012-1026/1602-1617), was made Beglerbeg from the throne. On 3 Sha‘ban 1031/20 May 1622 he was dismissed from the office of Khāntār (khatār), and also in the Eriwan campaign against the Şafawids of Persia in 1021/1612, was held by the Grand Vizierate (9 Radjab = 9 January 1623). He was buried in the mosque of Murad Pasha at Istanbul.

(PL. H. MARTIN)
DAWUD PASHA

DAWUD PASHA, Köşka, Darwis, d. 904/1498, Ottoman Grand Vizier. Of Albanian origin, he came through the devşirme to the Palace School. In 876/1472, as beylerbeyi of Anadolu, he fought under Prince Muṣṭaфа, waļī of Konya, against the Ak-koyunlu ʿUṣufa Miẓār. In the battle against Uzun ʿHasan at Otluk-bel i in 878/1473, he was in command of the vanguard. He served in the Baghdad campaign of 881/1476 and, as beylerbeyi of Rumelia, in the operations in Albania and the siege of Içkhorā (883/1479). After the accession of Bayezid II he was made waļī of Constantinople in 888/1482, succeeded ʿIsā-Kaılan Pasha as Grand Vizier, remaining in this post for 15 years. During this period he went on only two campaigns, the operations against the Mamluks in 892/1487, when he re-occupied Adana and Tarsus and reduced the Wārsakš to obedience, and the Albanian campaign of 891/1492, when he took Tepedelen and defeated the Albanian forces though according to one source he remained at ʿUṣuk to guard against a possible Hungarian attack from the north). He was dismissed from the Grand Vizierate on 4 Ṣādžab 902/4 March 1497 and ordered to live at Dimetoka (with a yearly pension of 300,000 akçe). The reason for his dismissal was that the flight of the Ak-koyunlu ʿOṯmān Bey, a grandson of Mehmed II, to Tabriz was attributed to Dawud Paşa's negligence. Two years later, in 4 Rabī ʿi 904/20 October 1496, he died and was buried in the furque before the mihrāb of his mosque in Istanbul.

He is described as a capable and upright statesman and a patron of learning. In foreign policy he supported Venice. He was one of the richest statesmen of his time: the resmi kūsme due to the kāfīsaker on his estate amounted to no less than 2,000,000 akče. The mosque which he built in the quarter which bears his name exists today, together with an ʿismātel, a ʿalāmī, a school and a madressa. There are also an idārāt and a bār namā named after him. The Dāwūd Paşa Şahraşır, on which the Dāwūd Paşa Barracks now stands, was for centuries a famous camping-ground for the Ottoman army. His sons Muṣṭaфа Paşa and Mehemmed Bey are mentioned in the sources.

DAWUD PASHA (1818-1867/1827-1851), the last Manük ruler of Turkish Irāq, was acquired in Bagdad as a Georgian slave-boy by Sulaymān Paşa (the Great), marriage with whose daughter, together with his own good looks, charm, learning and ostentatious piety, assisted him in his downward career in the civil service under his patron, as confidential secretary, treasurer, daftarādār, and finally kāhyā. By opportunism, violence and a skilful balancing of forces—Kurds, Mamluks, the court, the mob, the tribes—Dāwūd, aged 50 years, obtained the Pashalk for himself in 1233/1817, and assured it by the assassination of his predecessor (Ṣaʿd Paşa), and by timely generosity. He ruled for fifteen years. He adopted a vigorous (at times a treacherous) tribal policy, preserved fair order, chastised the notoriously turbulent Yezidis and the mid-desert ʿAnza, kept a watch on endless Kurdish princely schisms and threats, and contrived to stop a serious Persian invasion (1239/1823). Under orders from Istanbul, he disbanded the Janissary forces in Bagdad, raised and armed new-type regiments, and—fitfully, jealously and inconsistently—permitted a marked increase of European methods, traffic and trade. He constructed numerous public works, and maintained a luxurious court and entourage. His decline and fall (1247/1831) was inevitable in the changing atmosphere of the Turkish government; immediately, it was brought about by his persistent insubordination to the Istanbul authorities, whose emissary (and his own successor as waļī) was able to evict and replace him thanks to a devastating flood in Bagdad and a terrible visitation of plague. Arrested and captive, Dāwūd was surprisingly well treated, re-promoted to important offices in both Europe and Asia, and, high in royal favour, became in 1261/1845 Guardian of the Holy Shrine at Madina. He died in 1267/1851, after a career of extraordinary vicissitudes.

Ministry of Interior. In 1857 he was put in charge of the government publications; and in the following year he became superintendent of the Telegraph Office. He introduced a number of improvements. In that same year, he assisted the Foreign Minister Fu’ad Pasha in applying for a foreign loan. Finally, in 1861, he was appointed to the governorship of Mount Lebanon by the Porte in conjunction with the European Powers. Sent to Beirut with the rank of Vizier, he established the seat of his government in Dayr al-Kamar and organized the new administration in a manner satisfactory to all parties concerned. Among other things, he organized the gendarmerie of Mount Lebanon, built roads and bridges, and established a number of schools, and his wise government soon restored peace, order, and good will in Lebanon. Appointed at first to govern the country for three years, the term of his administration was extended for five more years. During his second term, however, he met with a strong resistance from some of the traditional leaders in the Mountain, and was therefore advised to resign from the governorship in 1868, before the end of his term. He next served as Minister of Public Works, and was sent to Europe to negotiate a loan. But, having somehow incurred disfavour with the Porte, he preferred to remain in Europe. He died in Biarritz on 9 Nov. 1873—1292/1875 according to Sigüell-i Quli Khan.

Dawud Pasha was described by a contemporary as an able statesman and administrator, a good linguist, and a lover of learning. Among other things, he was a member of the Berlin Academy of Sciences. Dâwûdpotrôs, a rival branch of the family which to also belonged the Kalhörâs, one time rulers of former Sind. They and the Kalhörâs both claimed descent from Abu ‘l-Faqîl al-Abbâs b. ‘Abd al-Mu’tásîb. The rulers of the former princely state of Bahawalpur, where he said to be of West Pakistani origin, belong to the Dâwûdpotrôs, which unlike their collateral, the Kalhörâs, take pride in calling themselves the ‘Abbâsîs. Their claim to nobility and high birth appears, however, based more on tradition, hallowed through a long period of rulership and authority, than on unimpeachable information derived from reliable sources.

The genealogical tab’,s, contained in some of the local Persian histories, such as the Mâr‘îat al-dawlat-i ‘Abbâsî and the Dâwûhdhâr-i ‘Abbâsîyyâ, are defective and on close examination appear to have been hastily composed at the behest of royalty. However, some references in the older and more authentic works like the Mâ‘âdîr al-Umârâ, (i, 825) show that both the Dâwûdpotrôs and the Kalhörâs were commonly believed to be the descendants of al-‘Abbâs [q.v.].

The common ancestor of both the Kalhörâs and the Dâwûdpotrôs, of whom something is known to history, is believed to be one Muhammad Canney Khan (variants: Câynây Khân, Cínâ Khân, Cânî Khân, Dîhna alias Cnâh Khân), whose father Khânîm is said to have migrated to Sind from Iran via Râ ‘Umdân in c. 559/973, long before the advent of the Ghaznavids in the Indo-Pakistan sub-continent. But this date is both doubtful and improbable. Most of the works make no mention of Khânîm. They instead mention one Miyân Odnânà, who is said to have lived the life of a ghâyâb with numerous followers. In the fifth generation from him was one Thull Khân (Fatî Allah Khân?) whose son, Bhallâ Khân (Bahâ Allah Khân?) was the father of Canney Khan. Canney Khân was succeeded to the tribal chieftainship by his sons Muhammad Mahdî and Dâwûd Khân, the latter inheriting a copy of the Kurân, the tâbûf (rosary) and the prayer-carpet (muwâllî) belonging to his father; while the former and his heir fell to the share of Muhammad Mahdî whose descendants came to be known as the Kalhörâs after his son, Ibràhîm alias Kalhôrê Khân.

As a result of family feuds, Dâwûd Khân I had to leave the place and shift for himself. He is stated to have founded a new settlement near the town of Wânî, now untraceable. He was followed by his son, Mahmûd Khân and grandson Muhammad Khân as the leaders of the tribe. During the chieftainship of Dâwûd Khân II, a son of Muhammad Khân, the tribe had greatly multiplied and felt the need to enlarge its territory. The descendants and retainers of this Dâwûd Khân II came to be known as the Dâwûdpotrôs irrespective of the fact whether they were the issue of his body or had only spiritual or temporal attachment with him. This explains the fact why certain families were purely religiously engaged in the weaving profession and living in the Shikârpur and Dâdd districts of West Pakistan, still proudly call themselves Dâwûdpotrôs. Some foreign writers (for instance, R. F. Burton, A History of Scinde, London 1850, 410), not fully acquainted with the origins of the Dâwûdpotrôs, were led to believe that the Dâwûdpotrôs as a tribe were of indigenous origin and weavers by profession. In according recognition as equal members to all those who did not belong to the family or the clan of Dâwûd Khân II, the Dâwûdpotrôs simply revived the old Arab custom of admitting manumitted slaves (muwâllî) into the family fold or the clan. The prevalence of this Arab custom among them also lends support to their claim to being of Arab stock and descent.

Dâwûd Khân II was followed by eight chiefs, of whom only Muhammad Khân, Khân II deserves mention. He is credited with having laid the foundations of the town of Shikârpur in 1026/1617. The dates of birth and death of all the Dâwûdpotrôs chiefs who preceded Sâdîk Muhammad Khân I (1136/1723-1159/1746), the founder of the House of Bahâwâlpur [q.v.], are practically unknown, none of them being important enough for history to record his annals. One of the Dâwûdpotrôs chiefs, Mûbârak Khân I, assisted the Mughul prince Muhammad al-Dîn, a grandson of Awrangzîb, ‘Alâmgrî, and the then sâdâbâr of Multân [q.v.] and Lahore [q.v.], in crushing the uprising of the Mîrâns, a powerful Balúch tribe of Dêrâ Ghâzî Khân, in 1114/1702. As a reward for this military assistance, the towns of Shikârpur, Bahâtiyârpur and Khânpûrh were granted to him as a didâr. The town of Shikârpur became thereafter the seat of his administration. Most of the Dâwûdpotrôs were men of military spirit and were engaged in fighting fraternal battles against the rival Kalhörâ chief, Yâr Muhammad Khân alias Khudîs—Yâr Khân. A grim battle lasting over a week was fought in which both the sides lost heavily. Contemporary accounts show that the Dâwûdpotrôs suffered grievously and had to seek for a truce. It was purely a faction fight, a dynastic feud, which determined the future course of events. Coupled with subsequent encounters between the rival factions this battle
culminated in the separation and demarcation of their respective spheres of influence and control. The Dawudpuras, in the final phase, emerged in 1130/1723 in favour of his son Śādik Muḥammad Khān Ḍabbāsī I and died three years later in 1136/1723. An ambitious ruler, he first annexed Ucch [q.v.] followed by a part of the Mughal rába of Multan and the fort of Derāwār, wrested from Rawal Akht Singh of Djasalāmër, whose forefathers had held it for long. In 1152/1739 when Nādir Shāh Afsār invaded India, Śādik Muḥammad Khān I waited on him at Derā Gāzī Khān, and was granted the title of Nawāb. In addition to what he had added to his possessions by the sword he was granted the parganas of Siwāstān and Lārkānā. In 1155/1746 Shīkārpūr, his ancestral home, was attacked by the rival Khalīl Khān chief, Khalīdyār Khān. Śādik Muḥammad Khān,lost his life in the contest, and was succeeded by Muḥammad Bahāwāl Khān I who, the very next year, founded some towns including that of Bahāwālpūr, which ultimately gave its name to the state. It was during the rule of Bahāwāl Khān I that the state came to command respect and gained in political stature. The irrigation canals dug under his orders opened up a new era of prosperity for the otherwise arid regions of the state. Timing his invasion with the onslaught of Multān, which had been recaptured from the Amir of Baha-wālpūr, under detention. Thereafter complete peace prevailed in the state and people from Lahore, Dihīl, Dērā Gāzī Khān and Multān, etc., who felt insecure under the Sikh rule and the disturbed conditions in India, migrated to Bahāwālpūr.

On the death of Bahāwāl Khān in 1803 he was succeeded by his son ʿAbd Allāh Khān, in supersession to his elder brother, prince Wāhid Bāshā, who was put to death. As already mentioned, ʿAbd Allāh Khān assumed the title of Śādik Muḥammad Khān II, on his accession. The greater part of his reign of 15 years (he died in 1825) was spent in either repelling the attacks of the Amirs of Sind, suppressing the rebellions of his own umari or defending his conquered territories. Among other notable events of his reign was the capture of Dērā Gāzī Khān in 1834/1835 by Bahāwāl Shāh Ḍabbāsī assisted by the Amir himself. The very next year he was, however, dispossessed by Ranḍīt Singh, the ruler of Lahore, who made over Dērā Gāzī Khān (see Dērādār) to the Amir of Bahāwālpūr in consideration of an annual sum of 250,000 rupees. During the rule of his successor, Ṣāḥīb Yār Khān entitled Muḥammad Baḥāwāl Khān III (1825-52), Dērā Gāzī Khān along with Muṣṭafāghargh and Multān were irretrievably lost to Bahāwālpūr; having been conquered in 1839 by the French military adventurer, General Ventura, for his Sikh master, Ranḍīt Singh. The Nawāb wreaked his vengeance by providing a contingent 23,000 strong to the British for the capture of Multān, which fell in 1848 to Herbert Edwardes, the Governor General. The latter's coronation ceremony was performed by the Makhdūm of Ucch, a happy result of the reconciliation reached between the ruling family and the head of the most powerful spiritual group in the state. His harsh treatment of his brothers caused the eldest, prince Ḥāḍīḍī Khān, to rise against him. Subsequently Śādik Muḥammad

The threat of Durrānī invasion to his possessions over, he turned to aggression and began to annex the neighbouring areas. His territorial ambitions aroused the suspicion of the Makhdūm Khān of Gāndī Bāshā and the Amir himself. The very next year he was, however, dispossessed by Ranḍīt Singh, the ruler of Lahore, who made over Dērā Gāzī Khān (see Dērādār) to the Amir of Bahāwālpūr in consideration of an annual sum of 250,000 rupees. During the rule of his successor, Ṣāḥīb Yār Khān entitled Muḥammad Baḥāwāl Khān III (1825-52), Dērā Gāzī Khān along with Muṣṭafāghargh and Multān were irretrievably lost to Bahāwālpūr; having been conquered in 1839 by the French military adventurer, General Ventura, for his Sikh master, Ranḍīt Singh. The Nawāb wreaked his vengeance by providing a contingent 23,000 strong to the British for the capture of Multān, which fell in 1848 to Herbert Edwardes, the founder of Bānnū [q.v.], and was annexed to the dominions of the East India Company.

On his death in 1852 he was succeeded by Saʿdāt Khān entitled Śādik Muḥammad Khān III. The latter's coronation ceremony was performed by the Makhdūm of Ucch, a happy result of the reconciliation reached between the ruling family and the head of the most powerful spiritual group in the state. His harsh treatment of his brothers caused the eldest, prince Ḥāḍīḍī Khān, to rise against him. Subsequently Śādik Muḥammad

in 1234/1818 by Shah Shudia Al-Mulk. In 1201/1785 Timur Shah Durrani attacked and bestowed on him khil'at al-Mulk. In 1203/1788 Bahāwāl Khān II was engaged in mop-up operations against the Durrānī who, in close collaboration with the neighbouring chiefs, revolted in 1214/1799 against the Nawāb and defied attempts at his capture. He also incited the ruler of Bīkānī to invade the state, set prince Muḥārāk Khān free, and proclaimed him the Nawāb. After some sharp encounters with the rebels and the state forces under prince ʿAbd Allāh Khān (afterwards known as Nawāb Śādik Muḥammad Khān II), succeeded in restoring peace. The disgruntled Makhdūm, who wielded considerable influence in the state, again rebelled in 1221/1766 at the instance of Shāh Shudia al-Mulk of Kabul. This attempt also failed and two years later the Nawāb entered into a treaty of friendship with the British Government. Thereafter complete peace prevailed in the state and people from Lahore, Dihīl, Dērā Gāzī Khān and Multān, etc., who felt insecure under the Sikh rule and the disturbed conditions in India, migrated to Bahāwālpūr.

In addition to what he had added to his possessions by the sword he was granted the parganas of Siwāstān and Lārkānā. In 1155/1746 Shīkārpūr, his ancestral home, was attacked by the rival Khalīl Khān chief, Khalīdyār Khān. Śādik Muḥammad Khān,lost his life in the contest, and was succeeded by Muḥammad Bahāwāl Khān I who, the very next year, founded some towns including that of Bahāwālpūr, which ultimately gave its name to the state. It was during the rule of Bahāwāl Khān I that the state came to command respect and gained in political stature. The irrigation canals dug under his orders opened up a new era of prosperity for the otherwise arid regions of the state. Timing his invasion with the onslaught of Multān, which fell in 1848 to Herbert Edwardes, the Governor General. Khan was deposed and imprisoned in a grain silo in the fort of Derawar. A small allowance was later settled on him and he was deported to Lahore, where he lies buried. Šahidji Khan assumed the title of Fath Khan, but soon alienated the support of the Dāwūdpūtras, who continued to intrigue unsuccessfully against him. He died, after a rule of five years, in 1858. He was followed by Rājīm Yār Khan entitled Muhammad Bahāwāl Khan IV (1858-66), whose otherwise uneventful reign was marred by internal disturbances and commotions culminating in his death through poisoning. He was succeeded by his minor son, Sadīq Muhammad Khan IV. On attaining his majority in 1879 he was formally invested with the title of Fath Khan, but soon alienated the support of local chiefs by the Government of British India, the state having accepted British paramountcy in 1849 on the annexation of the Pandjāb. Close on his accession the Dāwūdpūtras broke out into a rebellion which was, however, ruthlessly suppressed and its leader put to death.

During the minority of the ruler the state was administered by the Chief Political Officer and Agent to the Lieutenant-Governor of the Pandjāb for Bahawalpur Affairs. A very popular ruler, he was known as "Šubh-i Šādik". The Šahādjišāhān of the House of Bahawalpur, he constructed a number of beautiful palaces, in the construction of which foreign and local artisans were employed. Of these, two, the Šādik-Gath Palace and the Nūr Mahāll Palace, deserve mention.

He was succeeded in 1889 by Mubārak Khan, entitled Muhammad Bahāwāl Khan V, a lad of 16 years and the first Bahawalpur prince to have received education at the Aitchison College, Lahore. He died in the prime of youth in 1907 at Aden while on his way back home from a pilgrimage to Mecca. He was succeeded by his infant son, Šādik Muhammad Khan V (1907-56), then only three years old. During his minority, the affairs of the state were managed by a Council of Regency presided over by the late Mawlavī Sir Rahlm Bakhsh, a native of Thāskā Mirāndžī (Gurām) near Ambālā. His efficient administration, anxiety for public weal combined with piety and philanthropy won him much admiration. In 1947 Bahawalpur acceded to Pakistan and rendered much useful service in the rehabilitation of the uprooted refugees from India, who were then pouring in in large numbers. In 1956 the state of Bahawalpur ceased to exist as an independent unit when it was merged with West Pakistan, on the creation of the One Unit.

surmounted by a dome 40 yds. high from which flew a huge red flag, overshadowing the entire town, housed a Buddhist stūpa (manārat al-buḍḍ) or the dīwāl, after which, it is supposed that the town itself came to be known as Dīwāl (Debal, pronounced by the Arabs as Daybul). A huge stone hurled by the mandjānit wrought havoc with the tower and brought it down with a thundering crash. The post and the gigantic flag, considered by the local population as a symbol of impregnability, fell to the ground. After the fall of the town Muhammad b. al-Kāsim b. Anbasa b. Ishāk al-Dabbi, governor of Daybul under al-Wāḥib Bītābh [q.v.], about 232/846. According to al-Balādhūrī, sub anno, Ibn al-Djawzi, Muntazam v/2, 143) a terrible earthquake destroyed a large part of the town in 280/893, at the same time killing thousands of the inhabitants. The town, however, survived the catastrophe and seems to have been rebuilt as it was long in existence thereafter having been visited, among others, in as late as c. 657/1259 by Radī al-Dīn Ḥasan b. Muhammad al-Šāhīnī [q.v.], who strangely enough refers to the old practice of the wealthy classes of Daybul of indulging in acts of piracy and buccaneering. In 618/1221 Djalāl al-Dīn Khārīzmshāh after his defeat at the hands of the Tātars came to Sind, attacked and captured Daybul and built a Dīmāni Masjid there on the site of an idol-temple. This means that even in the 7th/8th century idolatry was prevalent in Daybul and that there was a considerable number of non-Muslims residing there.

Various attempts have been made to identify and locate the ruined city of Daybul but they have met with little success. The description of the town, as given by Arab writers and travellers, beyond supplying useful information on the past glory of the town, has been of little use otherwise. The Pakistan Archaeological Department undertook large-scale excavation for the first time in 1958 at Bhabbor (Bābābhar), another ruined city, presented by some scholars to be the original town of Daybul. But the uncovered topography of the Bhabbor mound and the archaeological finds so far (1960) discovered there have failed to provide any conclusive evidence that the ruins of Bhabbor are those of Daybul. Iṣṭaḵrī makes separate mention of the town of Daybul and the idol temple of Bahamburā (Bābābhar).

During the early part of Muslim occupation it was a great centre of culture and learning and al-Samʿānī (Kīṭāb al-Amsāb, fol. 236 b) and Yākūṭ mention a large number of traditionists who flourished here.

The destruction of Daybul, its probable causes and the subsequent total disappearance of the town, despite its large size, a big population and its having been in existence till a very late date, are problems which have so far defied all attempts at a satisfactory solution.

in which the father of the Barbarossas is supposed to have told his sons to obey Khayr al-Din [q.v.] for "he will be your day!" (Venture de Paradis, Alger au XVIIIe siècle, in Ed., 1896, 257).

Another use of the honorific title was to designate a lower rank in the Janissary militia; towards the end of the 16th/17th century in Tunis, the name was born by the heads of the 40 sections of the militia. In 1571 these dayls elected one of their number to the command of the army; this supreme dayl held the whole of the power in the Regency of Tunis, at least from 1594, allowing the beylerbeyi-pacaba to remain in office but with only nominal power (Pierre Dan, Histoire de la Barbarie et de ses Corsaires, Paris 1637, 144-5). Hamâbîd Murâd, when he came into power in 1640 allowed the title of dayl to continue, but the person who bore it was no longer the head of the Regency, even if he remained one of its highest dignitaries.

After 1705, the word dayl is no longer to be found among the titles conferred by the Husaynid sovereigns, but still appears in the Tunisian hierarchy, in the ninth rank, according to Muhammad Bayrâm al-Kâmis al-Tûnisî (Sa'fat al-İ'tîbâr, Cairo 1302/1885, ii, 2-3); it is found in several diplomatic documents of the eighteenth century, particularly in the treaties drawn up between the Regency of Tunis and France on 16th December, 1710, 9th November, 1748, and 4 Ventôse, Year X. The word at that time referred to a high judicial officer. It seems to have continued up to the middle of the 19th century.

In Algiers, after 1671, when the Corsair Captains took over the power of the Aghas (see art. ALGERIA (ii) (2), the title of dayl was borne by the head of the Regency. This was not yet the case at the beginning of the seventeenth century, when Pierre Dan was in Algiers.

Elected at first by the company (ta'ïsa) of corsair masters, the dayl was elected by the officers of the army after 1689. Thirty days succeeded each other in power between 1671 and 1830. In theory their power was limited by the control of the diwan of the militia; in fact if the dayl had a strong personality, he enjoyed an absolute power.

The dayls were in Algiers, first in the palace of the Djanina, on the site where the archbishop's house at that time referred to a high judicial officer. It seems to have continued up to the middle of the 19th century.

Bibliography: No books or articles are specially concerned with the function of dayl; some scattered information can be found in sources relating to the Turkish regencies of Algiers and Tunis.

DAYLAM, geographically speaking, the highlands of Gîlan [q.v.]. In the south, the lowlands of Gîlan proper are bounded by the Alburz range; the latter forms here a crescent, the eastern horn of which comes close to the Caspian coast (between Lahijân and Čā友善). In the centre of the crescent there is a gap through which the Safid-rud, formed on the central Iranian plateau, breaks through
towards the Caspian Sea. Before entering the gorge at Mandjill the river, flowing here from west to east, makes a remarkable tributary, the Shäh-rūd, which, rising in the district of Tāfkalān and flowing east to west, skirts the southern face of the Alburz wall. On its southern side the basin of the Shäh-rūd is separated by a line of hills from the plain of Kazwin [q.v.], while on its right side it is fed by a number of streams flowing down the southern slopes of the Alburz. The principal of these tributaries is that watering the valley of Alamūt [q.v.]. The valleys of the Shäh-rūd and its tributaries seem to be the cradle of the Daylamite tribe. Though belonging to the basin of the great river of Gilan (the Safld-rūd), 'Daylam proper' [al-Daylam al-maḥd] is in fact separated from it by the Alburz wall. The Daylamites also occupied the northern slopes of the mountain and its ramifications stretching towards the sea (see Ḳūdhā al-'Alām], and Daylam formed here a wedge between Gilan and Tabaristān [q.v.].

While Gilan is marshy and unhealthy but highly fertile, the highlands of Daylam, much less favoured by nature, were inhabited by a robust and enterprising race of men ready to emigrate or serve abroad. The geographical term 'Daylam' followed the destinies of the Daylamite expansion in the 4th/5th century, and came to comprise many other neighbouring lands (see below).

The ancient period. The remote origins of the Daylamites are uncertain. They probably belonged to a pre-Iranian stock. The name of the peak of Dulfak (or Dulfak), which rises on the right bank of the Safld-rūd gorge to the north-east of the point, however, to his Daylamite connexions (see above, Muta). The name of the Daylamites is known to many classical writers. In the 2nd century B.C. Polybius, v, 44, mentions the northern neighbours of Media: "Δελμοκιοί, Ἀνω-πάσκαι, (non-Arians), Ἐπανωσίου, Ματιάνοι. In the 2nd century A.D. Ptolemy, vi, 2 mentions "Δελμο-κιοί to the north of Choromithrene (Khâr-e Ar u Waramin, to the south-east of Rayy), and to the west of the Tapuri (Tabaristān). On the Iranian side the information begins to emerge only in Sasanian times. Before the decisive victory of Ardāshīr the Sāsānian over Ardāvān the Arsacid the latter is said to have mobilized "the troops of Rayy, Damāvand, Dostpay, and Pāshākār Arūmān" [Kūrmīmāk-i Aṭībākhīr, tr. Nöldeke, 47]. This would suggest Arsacid influence extended over the population of the southern face of the Alburz range. At first the Sāsānians treated the Daylamites with caution (see Marquart, Erānsahr, 126) but gradually the latter became conspicuous both in the army and at the court. Kāwād sent an expedition against Iberia (Georgia) under the command of a "Persian" whose name Bošē (*Bošay) and title ʿOẓūrīq, ʿwahrīs) point, however, to his Daylamite connexions (see Procopius, De bello persico, i, 14). Under Khusraw Anāshrūwān a detachment of Daylamites is mentioned (ca. 552 A.D.) at the siege of Archeopolis (now Tšikhе- Godgor) in Lazica where they were used as expert cragsmen, while the Turic Sabirs were leading the frontal attack (see Procopius, De bello gotico, iv, 14 ed. Din- dorf, 259-50). A few years later the Daylamites were fighting side by side with the Persians and another corps of Sabirs employed by the Byzantines (see Agathias, i, 17) According to Procopius, the "Dolomites" lived in inaccessible mountains; they were never subjects of the kings of Persia, and served them only as mercenaries. They fought on foot, each man being armed with a sword and a shield, and carrying three javelins (acontia) in his hands, which corresponds to the later Islamic descriptions.

Khusraw's famous expedition to the Yemen (ca. 570 A.D.), consisting of 8,000 prisoners from Daylam and neighbouring places, and was led by an old man, also released from prison, bearing the title of wahris [q.v.]. When under Kāvād and Khusraw the passes of the Caucasus were fortified and military colonies settled near them, the names of the latter reflected their origin from Daylam and its neighbourhood (see below, Toponymy). The conspiracy against Khusraw's successor Hārnīz IV, which resulted in his overthrow in 590 A.D., was led by Zoanab, the chief of the "Dilimitic" people (Theophylactus Simocatta, iv, 3, 1).

Daylam and the Arabs. During the Arab invasion the Daylamites took up an indecisive position when the people of Kazvin invoked their help, but, supported by the people of Rayy, they opposed Nu'mān b. Mukarrin sent by the caliph 'Umar. Their efforts to make him their chief or king (chief? i Mūtā (or Mūrzā), were defeated on the river Wādī in Dastabāy (*Dastāb-pay, i.e., the "edge of the plain" stretching between Rayy and Hamadān) (Tabari, i, 265 [sub 32/642]), Balāghūri, 317-25, and other historians mention seventeen Muslim expeditions into Daylam, from the time of 'Umar I to that of al-Ma'mūn, which were reflected in Arabic poems (see Kasrawī, 4-20). The poet Ašā Hamdān (d. 82/942) was himself a Daylamite, though the place-names he quotes (Kǎršīn, Kayūl, Hāmīn, Lahzamm) seem to refer to the region of Damāwand (Wima?). Nevertheless Daylam preserved its independence. The Muslim strongholds against them were in the south: Kazvin; and in the north-east, on the frontier of Tabaristān: the fortifications on the rivers Kālar and Čālīs.

Language and religion. The name of the king Mūtā (?) sounds unusual, but when in the 9th and 10th centuries A.D. Daylamite chiefs appear on the stage in large numbers, their names are clearly pagan Iranian, not of the south-western "Persian" type, but of the north-western variety: thus Gūrāngēd (not Kūránjīd, as formerly deciphered) corresponds to Persian gūr-ângēs "chaser of wild asses", šēr-zīl to šēr-dīš "lion's heart", etc. Iṣṭāqhrī, writing between 9th and 10th centuries, speaks of a tribe called Daylam and adds that in the highlands of Daylam there was a tribe that spoke a language different from that of Daylam and Gilan.

There may have been some Zoroastrians and Christians in Daylam, but practically nothing is known about the pagan creed of the Daylamites. According to Birūnī, (al-ʿAthār, 224) they followed the law established by the mythical Afrīdu who ordered men to be masters in their family and called them kadbihudār. Rather enigmatically Birūnī adds that this institution was abrogated by the 'Alīd al-Nāṣīr al-Uṭrīsh (see below) and thus they reverted to the condition in which people were living in the time of the tyrant Dāhāk Biwarāsp, when "devils and demons" (al-ḥayāfīn wa l-marada) dwelt in their houses and they were powerless against them. Apart from the kadībākhās exercising the rights of pater patriae, the Daylamites had their local rulers of whose existence we can judge by such titles as Wārdān-šāh, wahris (cf. Hübschmann, Armen. Gramm., 78: waḥrīs vaḥrīs "wahris of Vahriz") and even kings (see above, Mūtā). The role of the latter becomes clearer only in the 9th and 10th centuries A.D. in connexion with their collaboration with the ʿAlids.
The ‘Alids. At an early date the mountain fastnesses of Daylam served as places of refuge for the ‘Alids who had been obliged to flee from the ‘Abbāsid. The earliest known refugee was Yāḥyā b. ‘Abd Allāh, whose two brothers had been executed and who himself joined a rebel brother of Hārūn al-Raśīd. He came to Daylam in 275/791, but soon surrendered to the Bārmakī Faḍl b. Yāḥyā. It appears that in the meantime the caliph used pressure on the king of Daylam both by threats and by offers of money (cf. Tabarī, anno 176; Ya‘qūbī, ii, 452).

The Djuṣṭānīs. When in 289/805 Hārūn arrived in Rayy he summoned the rulers of the Caspian region and let the lord of Daylam, Marzūbān b. Djuṣṭān, go with a gift of money and a robe of honour; no payment of tribute is mentioned in this case, while such an obligation was imposed on the other kings. Although this is the first time that we hear of the family of Djuṣṭān, it is likely that the leniency of Hārūn had a connexion with the events of 175/791 when the same king (or his father?) must have been the ruler. Provisionally we can take Marzūbān as the first in the list of the ruling Banū Djuṣṭān.

The next king known to us is Wahṣūdān b. Djuṣṭān; the interval between Marzūbān (who is mentioned in 289/805) and Wahṣūdān (who was still living in 298/812, cf. Tabarī, iii, 188) is too great to consider them as brothers. The consensus (Justi, Vasmārī, Kasrawī, Kazwīnī) is now to insert between them Djuṣṭān I (no. 2), putative son of No. 1, Marzūbān, and father of No. 3, Wahṣūdān. In fact under 201/816 Tabarī reports that ‘Abd Allāh b. Khurṣadūbbih in the course of his victorious campaign in Daylam captured a king called Abū Laylī. Laylī (or Līlī) is known in Daylam as a man’s name (cf. the adventurer Laylī b. Nūmān), and the question is whether he is identical with Djuṣṭān (no. 2) or whether he was a usurper or a local ruler (of Lāḥgīn?).

The situation in Daylam becomes clearer with the advent on the frontier of Daylam of the line of Ḥasanī sayyids, clever politicians and able warriors who succeeded in involving the Daylamites in their struggles and schemes, although no obligation of proclaiming Islam had yet been imposed on them.

Sayyid Hasan b. Zayd al-dā‘ī al-kabbīr (no. 1) stood at the head of a rising in Cālūs and Kulār in 250/864 and protected the inhabitants against the Tāhirīs who wished to appropriate the common lands which served for collecting fuel and as grazing grounds (Tabarī, iii, 1324). According to ʿIṣāqūrī, 205, before the time of Ḥasan b. Zayd, Daylam had been considered as the “territory of unbelief” (Dār al-khurāj) from which slaves had been taken, but the ‘Alids had intervened on behalf of the Daylamites. Wahṣūdān b. Djuṣṭān (no. 3) swore allegiance to Hasan b. Zayd, but soon after broke with him and died.

The Ta’rīkh-i Dīlī wa Daylam (quoted by Dinwaynī, iii, 271) reports that in 248/860 a Djuṣṭānīd began the construction of a building (ʿtimār) on Mt. Alamūt, in which the kings of Daylam took pride. It is more likely that this enterprise marked not the end of the long reign of Wahṣūdān but the beginning of that of his energetic son Djuṣṭān II (no. 4). The latter invited the dā‘ī to send his representatives to Daylam, and under the auspices of the ‘Alids took Rayy from the Tāhirīs and occupied Kazwīn and Zanglān. In 253/867 the caliph al-Mu‘tazz sent an army under Mūsā b. Bughā, who wiped out the successes of Djuṣṭān. In 259/872 the latter made a second, though unsuccessful, attempt to occupy Rayy, and continued to assist the dā‘ī in his struggle against the ‘Abbāsid. In 270/883 Hasan b. Zayd died and was succeeded by his brother Muhammad b. Zayd, called al-dā‘ī al-saghir, to whom also Djuṣṭān swore allegiance (no. II).

The worst experience befell Daylam ca. 276/889 when the Khurṣadūbīsian soldier of fortune Rāfī b. Ḥarīḥṣama, acting on behalf of the Sāmānī, ousted Muhammad b. Zayd from Djuṣṭān. The dā‘ī sought refuge in Daylam. The troops of Rāfī occupied Cālūs, but Rūmīdī, assisting Djuṣṭān, surrounded them. Then Rāfī himself moved forward. Muhammad b. Zayd retreated to Gīlān, while on the heels of Djuṣṭān Rāfī marched from Cālūs to Talaḵān, and for three months (summer of 278/891) this region was plundered by the invaders. Djuṣṭān gave a promise not to assist the sayyid, and Rāfī went on to occupy Kazwīn and Rayy (see Ibn al-Aḥbār, vii, 303, and Ibn Isfandīyār, ed. Eghbal, 252-4). In 279/892 Rāfī, seeing himself threatened from many sides, suddenly swore allegiance to the dā‘ī and returned Djuṣṭān to him, on the understanding that he would send him 4000 Daylamite stalwarts. By threats and promises the Saffārid Ṭām b. Laylī prevented the dā‘ī from helping Rāfī and the latter had to flee to Khūzdīzim where he was killed in 283/November 896. Four years later (287/October 900) Muhammad b. Zayd fell in a battle against a Sāmānī commander.

After a short interval the ‘Alid cause was taken up by the Ḥusaynī Sayyid Hasan b. ʿAll (Nāṣir al-Dīn, al-Thā’īrī, al-Uṯrūṣ “the deaf” (no. III), who despite the shortness of his reign (301/4904-7) is regarded as the greatest of the ‘Alid rulers. According to Tabarī (iii, 2296) the world had never known such justice as that of al-Uṯrūṣ. He had lived for thirteen years among the Daylamites, and succeeded in converting to the Sayyīd creed a considerable number of people “between the farther (eastern) side of the Safīd-rūd and Ḍū‘ulī”. To confirm this achievement al-Uṯrūṣ had the fortifications of Cālūs razed to the ground. He was recognized by Djuṣṭān, and although their first campaign against the Sāmānīs was a failure, the next year, after a pitched battle of forty days the Sāmānīs were driven out of the Caspian provinces.

The enigmatic phrase of Brūnī, referred to above, concerning Nāṣir’s action in disrupting the ancient authority of the Ḥadīkhudūbīsī may hint at the influence of Islamic institutions which had established control over isolated households. Such a trend of events must have been resident by the Djuṣṭānīs, and some historians (Walīyāb Amuli, Taʾrīkh-i Rūyān (750/1349), ed. Tehran, 77; Ibn Wāsīl, Taʾrīkh-i Dill wa Daylam) mention a period of struggles between Djuṣṭān and Nāṣir, though apparently before the latter’s advent in 301/913. He died on 5 Shahrāb 304/31 January 917, after having appointed as his successor his son-in-law, the Ḥasanī Hasan b. al-Kasīm (no. IV). At about the same time, after a reign of forty years, Djuṣṭān was assassinated. The perpetrator of this crime was his brother ʿAll b. Wahṣūdān (no. 5), whom in 300/912 the ʿAbbāsidīs had already appointed their financial agent (istāmāla) in Isfahān. He was disposed in 304, but in 307/920 the ʿAbbāsid commander Muḥīʾ, who had just taken prisoner Yūsuf b. Abī ʿĪsā, reappointed ʿAll as the governor of Rayy, Kazwīn, and Zanglān. In the same year he
DAYLAM

was killed in Kazwm by Muhammad b. Musafir (Kangarl, or Sallarl, of the second Daylamite dynasty of Tarom), who being married to the clever Khara-

suya, daughter of Djustan b. Wahsudan (no. 4) wished to avenge his father-in-law (not his "nephew", as in Ibn al-Athir, viii, 76). With his political attitude, 'Ali b. Wahsudan could hardly have been recognized in the whole of Daylam. However, we learn that when the Hasanid Hasan b. al-Kasim (the dā'ī no. IV) was captured in Tabaristan and delivered to 'Ali to be sent to Baghdad, 'Ali had him imprisoned in his "ancestral fortress" of Alamät (see Ibn Isfandiyar, Egb. 275). Immediately after 'Ali's death, his other brother Khusrav Frurzān, who apparently had acted as 'Ali's locum tenens, released the sayyid. Khusrav Frurzān (no. 6) marched against Ibn Musafir but was killed by him. Khusrav's son Mahād (no. 7) also took up arms against the Kangarid, but was defeated and took refuge with the new rising star of Daylam, Asfar b. Shīroya or Shīroya [q.v.].

The epigons. With this event (ca. 315/927) ends our direct information about the Djūstānids, but remnants of the dynasty may still have carried on, at least in a part of their dominions. When Ibn Musafir had dealt with his Djūstān idol opponents (nos. 5, 6, 7), the former amirs of the 'Alids and Djūstānids had already spread over the Iranian plateau, and Daylam proper lay at the mercy of Ibn Musafir. In a report in which an official (some time before 379/989) summed up the history of Shamlān (Tārom) for the Buyid minister Ibn 'Abbād (see Yākūt, iii, 140-9, as explained by Kasrawī, i, 130-4), he states that the Musafīrids ruled over the whole of the mountainous *Ustāniya and (thus?) appropriated a part of Daylam, whereas the descendants of Wahsudān (no. 3) b. Djustan had to content themselves with the region of *Lādiyya. The same terms appear in the anti-Daylamite and pro-Turkish tract which the secretary Ibn Hassūl presented (ca. 450/1058) to al-Kundurī, the waṣir of Tughril-beg (see Fadlāl al-Atrākh, ed. A. al-'Azzāwī, Belleten, iv/14-5; 1940, 31). Ibn Hassūl explains that *Ostān is the highlands, and *Lādiyya (wrongly printed Lādiyya) the lowlands of Daylam, the former being in the possession of the Wahsudānī (here Isfahān) rūmān and the latter in that of the Djūstānīs, kings. These independent reports indicate that soon after the death of Djustan b. Wahsudān (no. 4) his possessions were split up and the Wahsudānī (here children of the Kangarid Wahsudān b. Muhammad of Tārom) had taken possession of the highlands of Daylam (presumably the "ostān", i.e., "home, centre" of the Djūstānīs). The latter must have migrated to the neighbouring Lādiyya (i.e., the coastal area of Daylam, of which ten districts are enumerated in the Hudūd).

On the contrary, when Sulayf Tughril was operating near Kazwm (Ibn al-Athir, anno 434/1042) the king of Daylam appeared before him with a tribute; then separately Ibn al-Athīr mentions the submission of the Salār of Tārm (Tārom). We have to conclude either that the Djūstānīs had succeeded in reoccupying a part of their dominions, or that the tribute was paid by the Lādiyya branch, or that the latter is more likely, for Nāṣīr Khusrav in his Sāfār-nāma states that in 438/1046 a levy (bādī) was collected at the crossing of the Shāh-rūd (near its confluence with the Safīd-rūd) on behalf of the amir-i amrān who was "(one) of the kings of Daylamān". Nāṣīr describes then his visit to Shamlān whose ruler bore the title of Marzubān al-Daylam Dīl-i Dīlān (sic) Abū Śāliḥ; his name was Djustān Ibhrām and he possessed "many castles in Daylam". This must have been the great-grandson of Wahsudān of Tārom (see above, 191, no. IV), and it appears as though the bādī on the Shāh-rūd was levied also in his name.

The story of the dā'īs ends with the rule of the above-mentioned Hasanid Hasan b. Kāsim (no. IV), son-in-law (ḥaṭam) of al-Uṭrūsh. Although he was nominated by Nāṣīr himself, struggles for the succession began between him and the sons of Nāṣīr, and after the death of the latter the Daylamite amirs, involved in complicated struggles, fought for their own crown. Hasan b. Kāsim was killed ca. 316/928 by Mardawīdī b. Ziyār, then the ally of Asfar b. Shīroya.

Daylamite expansion. The result of the 'Alids' activities was that the Buyids, partly converted to the Zaydī creed, developed strong oppositionary tendencies with regard to the caliphate, and that in their numerous fights for the 'Alids they greatly improved their military skill and became conquering tribes. Under their stimulus the Saldjuks of Tārom appeared before him with a tribute; then

Hulwan and on the western slopes of the Zagros (380-478/990-1085), the Kurdish Hasanuyids (340-409/951-1018) and their branch of Ani (451-559/1055-695); the Kurdish 'Anārids [q.v.] in Hulwān and on the western slopes of the Zagros (351-511/961-1117); the Turkish Marwānīds [q.v.] of Mayyāfārīkān and Diyarbakr (380-478/990-1085), etc. The weakness of the Daylamite régime consisted in the dispersion of the not too numerous elements of Daylam over too vast an area; the splitting up of the dynasty into several rival branches; and finally the Turko-Daylamite antagonism in the area (see below). The first great blow to the Buyid power was the occupation of Rayy by the Ghaznavid Mahmūd in 420/1029; the definite end came under the impact of Tughril-beg who in 447/1055 arrested the last Buyid of Baghdad, al-Malik al-Rāhmī. In Fārs, the last scions of the Buyid house carried on for a few more years as vassals of the Saldjuks, (see Bowen in JRAFS, 1929, 229-43). Outside their
country, the Daylamites continued to serve as mercenaries. Nizam al-Mulk, Siydsat-nama, ch. xix, still recommends the employment of 100 Daylamites together with 100 Khurasanians as palace guards of the Saljuq. Isolated colonies of Daylamites survived in many places before they were absorbed by the local populations.

Toponymy. The area over which generations of Daylamites scattered throughout the ages is very wide, but, in view of the chronological difficulties involved, it is better to combine the references under a single heading. Thus the Babylonian name of the island of Dilmun (Bahrayn) still merits consideration, while the name of Bandar-i Daylam on the southern coast of Fars seems to date back to the Bâyid period. In the sub-Caucasian region the existence of military settlements of the Sasānian times is reflected in such names as Lāzān or Lāzân (now Lāhījī) connected with Lāhījān. The name of Shīrwān is probably linked with that of Shīr (in Arabic Shīrizz) lying at the confluence of the rivers of Talaḵān and Alamūt, cf. Hudud, ch. xxi, § 24, and Djuwayyin, iii, 425 (note of M. Kazwini). Even the title of the king of Sarīr (Avaria) figuring in Bālā- dhurl, 196, as Wahrāzn-šāh, may prove to be linked with the title wahriz, cf. Minorsky, History of Sharrūn, 1938, 23-3. The so-called “Zāzā”, living north of Dīyārbark to Pālū and Darsīm and still speaking an Iranian language, call themselves Dimlā, which name F. C. Andreas identified with Daylam. The (now turkicized) tribe Dumbuli, active in the region of Khoy by the beginning of the 19th century, seems also to be connected with the Dimlā. It is noteworthy that Agathias, i, 17, speaking of the Dīummitai troops fighting in Lasica, says that their homes (perhaps of that particular group?) lay in the neighbourhood of Persian lands "on the middle course of the Tigrīs", i.e., (if the "Tigris" is not a mistake for the Safīd-rūd) in the region where the Zāzā live nowadays. The traveller Aḥū Dūlah, ed. Minorsky, Cairo 1955, § 25, mentions a place called Daylamastān at seven jrasāḥēs east of Shahrārzūr whence “in the days of the ancient kings of Persia” the Daylamites used to send their raiding parties into the Mesopotamian lowlands. The name Lāhījān is probably linked with the title of the king of Sarīr (Avaria) figuring in Bālā- dhurl, 196, as Wahrāzn-šāh, which name F. C. Andreas identified with Daylam. The (now turkicized) tribe Dumbuli, active in the region of Khoy by the beginning of the 19th century, seems also to be connected with the Dimlā. It is noteworthy that Agathias, i, 17, speaking of the Dīummitai troops fighting in Lasica, says that their homes (perhaps of that particular group?) lay in the neighbourhood of Persian lands “on the middle course of the Tigrīs”, i.e., (if the “Tigris” is not a mistake for the Safīd-rūd) in the region where the Zāzā live nowadays. The traveller Aḥū Dūlah, ed. Minorsky, Cairo 1955, § 25, mentions a place called Daylamastān at seven jrasāḥēs east of Shahrārzūr whence “in the days of the ancient kings of Persia” the Daylamites used to send their raiding parties into the Mesopotamian lowlands. The name Lāhījān is probably linked with the title of the king of Sarīr (Avaria) figuring in Bālā- dhurl, 196, as Wahrāzn-šāh, which name F. C. Andreas identified with Daylam. The (now turkicized) tribe Dumbuli, active in the region of Khoy by the beginning of the 19th century, seems also to be connected with the Dimlā. It is noteworthy that Agathias, i, 17, speaking of the Dīummitai troops fighting in Lasica, says that their homes (perhaps of that particular group?) lay in the neighbourhood of Persian lands “on the middle course of the Tigrīs”, i.e., (if the “Tigris” is not a mistake for the Safīd-rūd) in the region where the Zāzā live nowadays. The traveller Aḥū Dūlah, ed. Minorsky, Cairo 1955, § 25, mentions a place called Daylamastān at seven jrasāḥēs east of Shahrārzūr whence “in the days of the ancient kings of Persia” the Daylamites used to send their raiding parties into the Mesopotamian lowlands. The name Lāhījān may be the witness of the transfer of the Daylamite centre from *Ostān (see above) to the region of Lāhījān. North-west of Lake Urmia the centre of Salmās was until recently called Dilmākan; south-west of Lake Urmia near an important Zagros pass one finds a district called Lāhījān (see sāwyu-’būlāk in ET). Several other villages bearing the name Lāhījān are known in the basin of Lake Urmia, north of Mt. Savalan (Lāhīl), etc.

Territory and peoples. The earlier Muslim geographers, such as Ibn Khurdaḏḏibh, Yaḵūbī, Ibn Rusta, Ibn Faḵhī, have little to say on Daylam, but ample information on the country and its inhabitants is supplied by the geographers and historians after the rise of the Daylamite dynasties in the 4th/10th century. Already Ḯāṯāḵhī had described under Daylam all the southern coast of the Caspian and the lands forming a belt to the south of the Alburz range (including Rayy and Kazwīn). Muḥaddas (who lived in the heyday of the Daylamite dominion) adds to it all the coasts of the Caspian comprising the Khazar kingdom at the estuary of the Volga.

Ḵāṯāḵhī (possibly following Balḵī) places the capital of the Dīstān family at Rūḏābār. The editor of Djuwayyin, iii, 434, M. Kazwīn, has presen-
The Isma'ili Fatimid Isma'ili propaganda had been rampant in the environs of Rayy even since the beginning of the 3rd/9th century (see S. M. Stern, in BSOAS, xxiii, 1960, 56-90). Asfár of Daylam and Mardawijd of Gilân had accepted the new teaching (Baghdâdî, Farh, tr. A. Hakîn, Tel-Aviv 1935, 113; Rashíd al-Dîn, Ismâ'îliydn, ed. Docker, Teheran 1936/1937, 152). Under the last Buyids the Daylamites approved endogamy within their tribes, and marriages were concluded by direct agreement between the parties (Mukaddasî, 368-9). It was the fact that the Isma'ili Fatimids had no heir to the throne of Baghdad that, with the accession of the Buyids, also brought about the end of Fatimid dominance in Khurâsân (see DAYR KUNNA).

The monasteries were also an important factor in the political and social life of the Islamic world. For instance, their own libraries, most of which were established in the 3rd-4th/9th-10th centuries by the Nestorian church, were frequently attached to them and contributed considerably to the cultural development, and drew revenue from the properties owned by the monasteries (e.g., vineyards and olive groves). Sometimes after the nearest town or village (Dayr al-Tabib, near Nishân, Dayr al-Za'farîn in Upper Mesopotamia). Monks, called dayrî or dayrînî, lived in the days (also known in 'Irâq as Yamûn, a word of uncertain origin). The monasteries were often no more than simple hermitages, particularly if they were located in remoter parts. Usually however they consisted of several buildings—a church (kantûs or bi'a), cells (bûlûya, pl. bûlûl or kirb, pl. akhûâr and ukuvâyûr, words of Syriac origin, the second being strictly speaking 'Irakî), and outbuildings such as shops and provision stores. Sometimes however they consisted of several buildings—a church (kantûs or bi'a), cells (bûlûya, pl. bûlûl or kirb, pl. akhûâr and ukuvâyûr, words of Syriac origin, the second being strictly speaking 'Irakî), and outbuildings such as shops and provision stores.

The most recent movement in the history of Daylam is the uprising of the Ahl-i Hâqq (q.v.) leader Sâyyîd Muhammad in Kâlîr-daghî in October 1891 (see Minorsky, Notes sur la secte des Ahl-i Hâqq, Teheran 1928, i, 23-37 (Djustanids) — a valuable work; V. Minorsky, La domination des Dailamites, Soc. des Etudes Iranienes, no. iii, 1932, 1-26; M. Kazwînî, annotations to Djuwaynî, iii, 306-9 ('Alîds), 432-45 (Djustanids); IA, s.v. Deilâm (A. Ates). (V. Minorsky)

DAYN [see supplement].

Dayr, a word of Syriac origin denoting the Christian monasteries which continued to function after the Arab conquest of the Middle East. If we are to believe the lists drawn up by Arab writers, they were very numerous, particularly in 'Irâq (along the Tigris and Euphrates valleys), Upper Mesopotamia, Syria (Stylite sanctuaries in the vicinity of the "dead cities"), Palestine and Egypt (along the whole length of the Nile valley). They were often named after a patron saint (Dayr Mûr Yûhanna near Takrit, Dayr al-Sam'ân in northern Syria) or founder (Dayr 'Abd al-În in 'Irâq), but also occasionally after the nearest town or village (Dayr al-Rûsafa in Syria) or a feature of the locality (Dayr al-a'lâ near Mosul, Dayr al-Za'farîn in Upper Mesopotamia). Monks, called dayyûr or dayrînî, lived in the days (also known in 'Irâq as Yamûn, a word of uncertain origin). The monasteries were often no more than simple hermitages, particularly if they were located in remoter parts. Usually however they consisted of several buildings—a church (kantûs or bi'a), cells (bûlûya, pl. bûlûl or kirb, pl. akhûâr and ukuvâyûr, words of Syriac origin, the second being strictly speaking 'Irakî), and outbuildings such as shops and provision stores. Sometimes however they consisted of several buildings—a church (kantûs or bi'a), cells (bûlûya, pl. bûlûl or kirb, pl. akhûâr and ukuvâyûr, words of Syriac origin, the second being strictly speaking 'Irakî), and outbuildings such as shops and provision stores.

The Christian monasteries were centres of religious and intellectual life during the early years of Islam. For instance, the liturgical rules adopted in the 3rd-4th/9th-10th centuries by the Nestorian church were formulated in the Dayr al-a'lâ near Mosul, Dayr al-Za'farîn in Upper Mesopotamia. Monks, called dayyûr or dayrînî, lived in the days (also known in 'Irâq as Yamûn, a word of uncertain origin). The monasteries were often no more than simple hermitages, particularly if they were located in remoter parts. Usually however they consisted of several buildings—a church (kantûs or bi'a), cells (bûlûya, pl. bûlûl or kirb, pl. akhûâr and ukuvâyûr, words of Syriac origin, the second being strictly speaking 'Irakî), and outbuildings such as shops and provision stores.
They were open without distinction to virtually all travellers, including notabilities, and indeed often provided a safer stopping-place than elsewhere. At the Dayr Murra‘n (q.v.) near Damascus, for example, there was a princely residence nearby (confused with the monastery by some authors), and sovereigns or governors were sometimes accommodated in the dayr itself. This was the case in the Dayr al-‘aIla‘ of Mosul, the Dayr Zakkl of al-Rakkka, or the monastery of al-Anbār where Ḥārūn al-Raṣḥid and his retinue stopped in 187/903—it was here that Dja‘far the Barmakīd was executed (Tabarl, ii, 111, 675, 685). After his arrival in 366/976, the Bā’atīkh, the Mu‘aṣṣa‘îm of Fāṭīmah, lived for some months in the monastery of al-Ǧīza. There are ample records showing that during their hunting excursions rulers and princes visited the local monasteries, where they were offered food and drink by the monks. Muslim visitors were also attracted to the monasteries on account of the taverns usually attached to them, and there they were free to drink as much wine as they wished. Each monastery solemnly celebrated an annual festival, and the buildings were generally surrounded by places of entertainment and even debauchery, particularly if they were situated near a large town. This explains why so many of the monasteries figure in bacchic and erotic poetry, and why there are so many stories relating to the questionable behaviour of some of their inhabitants. Indeed, Arab authors of the 3rd/9th and 4th/ioth centuries even wrote whole books about them by collecting poems and stories in which they were mentioned. Only one is still in existence, the Kitāb al-‘Idyrdrat of al-Shābuṣhtī (d. 388/998). But the names of several other books are known, written by Ḥiṣām al-Kalbī, Abu ‘l-Farājī al-‘Iṣfahānī, the poet al-Sarī al-Raṣṣāfī, the two brothers al-Khālidīyyān and al-Sumaysāṭī.

After the Arab conquest the monasteries and churches were subject to special conditions laid down by jurists. Although the existing monasteries remained intact, the monks were forbidden to put up new buildings, or even to repair damage incurred through wear and tear or accidental causes. In reality, however, the fortunes of the monasteries varied with the times, and periods of toleration were followed by periods of persecution. The tax regulations governing the occupants of the monasteries were subject to continual discussion. The monks were initially exempt from poll-tax (diizya), and the tradition was often later confirmed by jurists. But some maintained that exemption applied only to those living in poverty, and the ShāHIṣīs even went so far as to assert that the exemption was unjust. From the chroniclers it would seem that in the ‘Abbasid age some governors subjected monks in Egyptian monasteries to personal taxation, and others in the ‘Abbāsid age granted exemption only in certain circumstances. The question was raised again during the caliphate of al-Muktaḍar, when in 373/985 All b. Ḫisā, chief inspector of taxes in Egypt, demanded that exemption given to the monks of Wadī ‘l-Naṭruṣ be withdrawn; the caliph did not accede to his wishes, and in 366/976 al-Ta’n announced once more that the diizya should not apply to poor monks (see ǦIIMMA).

The 5th/11th century was the beginning of a period of increasing hardship for the Christian monasteries. They had to contend with successive Saljuq and Mongol invasions, a growing insecurity (e.g., Turcoman raids into Upper Mesoopotamia), the worsening of relations with the Muslims at the time of the Crusades, and the progressive disappearance of former small Christian communities.

In ʿIrāq the monasteries near Baḥdād and Samarrā perished, whilst many of those in Egypt were abandoned and became over-run by the sand (some of them have been discovered by recent excavations). After the Mongol invasion Christian monastic life was confined to a few groups of monasteries, primarily in Upper Mesoopotamia, the Mosul and Mardin region (the monasteries of Tūr ʿAbdin), the Sinai desert, and Egypt (at Wadī ‘l-‘Iṣbīh and near the Red Sea). In Palestine and Syria, great monastic centres before the Arab conquest, there remained no more than a few scattered monasteries, mostly near Jerusalem and in Anti-Lebanon. In the Lebanon itself on the other hand monasticism found a new lease of life, particularly in the 15th century when the Maronite patriarchate was established in the mountains at the monastery of Ḥanābīn.

During the age when they flourished, Christian monasteries took part in the artistic life of the region, and it is instructive to compare the decorative techniques used in some of them with Muslim works of the same period. Particularly interesting in this respect are the Dayr al-Suryān at Wadī ‘l-‘Iṣbīh in Egypt, containing stucco ornamentation influenced by the style of Samarrā, and the Mār Behnān monastery near Mosul, some parts of which date back to the 68th/12th century. Furthermore, the illuminating of some manuscripts copied in the monasteries bears a resemblance to that of the oldest Islamic miniatures, which seem to have inherited some features of their style and workmanship.

(D. SOURDEL)

DAYR ‘ABD AL-RAHMĀN, a place in the vicinity of Kūfah, next to Ḧanābīn Rās al-Ḥālūt (Tabarl, ii, 701), near Hammām A’yun (Tabarl, ii, 703). It was the assembly point of the Kūfan army which was sent by al-ḥādīdīhī under the command of al-Ḥājaj against the Khārābīts (Tabarl, ii, 902).

**DAYR AL-‘AKOL**

A town in ‘Irāk (13 parasangs (c. 6.5 km.) south east of Baghdad on the Tigris). (Tabarl, ii, 767-6). Mukaddasi, p. 174 gives the distance as two stages, while Ibn Faḍl Allāh al-‘Umari, Masūlīk al-‘Aṣwārī, Cairo 1924, i, 263, makes it 12 parasangs or c. 67 km.). The town probably grew around a Christian monastery, and was the centre of an agricultural district (fāsūd) in central Nahrawān.

Ibn Rusta (300/912) mentions its Friday mosque and its market, thus indicating some prosperity. Important town on the Tigris between Baghdad and Wasit. It was a well marked bend in the Euphrates as is expressly stated in Syriac sources (cf. Nöldeke, in SBAk. Wien, cxxiv, Abb. IX, 43).

**Bibliography:** References are in the article.

The following are to be noted: Sumer, x, 1954, 120; Le Strange, 35; idem, in JRASt, 1895, 41; K. Ritter, ErdKunde, x, 191, 232. (A. A. Dūrī)

**DAYR AL-A‘WAR.** A place in ‘Irāk named after a member of the clan of Umayya b. Hūḍhāfa of the Ḩayd tribe (Baladhair, Fudh, 283; Hamdānī, Buṭḥā, 182; Ya‘qūb, ii, 64). It is therefore an Ḥayd Dayr (Hamdānī, 135, quoting al-Hayḥami b. ‘Adī; Bakrī, 69, quoting Ibn Ṣabba). Hamdānī’s identification of it with Dayr al-Djamādīm, loc. cit., is probably an error, since no other source confirms it.

Dayr al-A‘war was mentioned in the description of the march of the Sāṣānīan general Rustam from Ctesiphon to Kūfa. It was described as a large and fine town with humid air, as it was surrounded by gardens and palm trees (Istakhrl, 87).

Istakhrl (318-21/930-3) speaks of it as being an important town on the Tigris between Baghdad and Wasit. It was flourishing, well populated, and had markets with many branches at a distance from the mosque (Mukaddasi, 123).

Dayr al-‘Aḵūl is famous in history for the decisive battle fought there in 628/627 between Ya‘qūb b. al-Layḥār al-Ṣafār and the army of the Caliph al-Muṭamīd, led by his able brother al-Muwaffak, in their fight between Baghdad and Wasit. It was flourishing, well populated, and had markets with many branches at a distance from the mosque (Mukaddasi, 123).

Maps of Arab geographers show the gradual change in its position in relation to the Tigris. Balkhi (308/920) and Ṣaḥīḥīḥ put it directly on the east bank of the Tigris. (Sousa, ‘al-‘Irāk’ i–‘Irāk–ad-dawr 283, ed. 1909, 67.) It is therefore an Ḥayd Dayr (Hamdānī, 135, quoting al-Hayḥami b. ‘Adī; Bakrī, 69, quoting Ibn Ṣabba). It was a well marked bend in the Euphrates as is expressly stated in Syriac sources (cf. Nöldeke, in SBAk. Wien, cxxiv, Abb. IX, 43).

**Bibliography:** References are in the article.

The following are to be noted: Sumer, x, 1954, 120; Le Strange, 35; idem, in JRASt, 1895, 41; K. Ritter, ErdKunde, x, 191, 232. (A. A. Dūrī)

**DAYR AL-DJAMĀDĪM.** A place in ‘Irāk, near Kūfa. It was originally owned by the Ḥayd tribe before its migration from ‘Irāk (Bakrī, 69, quoting Ibn Ṣabba; Hamdānī, Buṭḥān, 135, quoting al-Hayḥami b. ‘Adī).

Various etymological explanations of its origin have been given: Abū ‘Ubayda states that its name was derived from the wooden cups that were made in it (Naḥḥād, 412; Ibn Kūtaṭya, Maṣ‘ūrī, 156; Bakrī, Muṣ‘īm, 574; Ya‘qūb, ii, 112, 652). Other authorities assert that it was named after the buried skulls of the casualties of the battle between Ḥayd Bahrā (al-Shakrī, Futḥā, 283; Hamdānī, Buṭḥān, 182) or between Ḥayd and the Sāṣānīans (Ibn al-Kalbi, Fuṭḥā, 283; Ibn Ṣabba in Bakrī, 70; Mas‘ūdī, Tawābih, 175). Ya‘qūb (ii, 652) states that its name was derived from its well in a saline land.

Dayr al-Djamādīm is west of the Euphrates (Bakrī, 70, 573, quoting Ibn Ṣabba) on the highlands of Kūfa (Iṣfahānī in Bakrī, 573; Ya‘qūb, ii, 652) near ‘Ayn al-Tamr and Falludja (cf. [Tabarī, ii, 1073]) and is about 7 parasangs from Kūfa.

The description of the battle of Djamādīm (83/
702) shows that this Dayr is near Dayr Kurra, nearer to Kufa and the Euphrates (Isfahan!, in 837/702, the latter supported by most of the Arab Kufans as well as by some non-Arab Mawāli. The long negotiations had failed; al-Hādji-dād, supported by Syrian Arab reinforcements, defeated Ibn al-Ashārī, who retreated to Maskin, leaving al-Hādji-dād the unrivalled master of Kūfā and enabling him to assert his control over that city by taking severe measures against his opponents. On the battle see Tabari, i, 283, loc. cit. (cf. BakrI, 698, quoting Ibn Shabba), and is therefore to be considered as an Ḵyrad Dayr in origin (Hamdani, Futuh, 283).}

Dayr al-Djamakhdjim is known as the battlefield of the war between al-Hādji-dād and ʿAbd al-Rahmān b. al-ʿAshārī (see Ibn al-ʿAshārī in 837/702, the latter supported by most of the Arab Kufans as well as by some non-Arab Mawāli. The long negotiations had failed; al-Hādji-dād, supported by Syrian Arab reinforcements, defeated Ibn al-Ashārī, who retreated to Maskin, leaving al-Hādji-dād the unrivalled master of Kūfā and enabling him to assert his control over that city by taking severe measures against his opponents. On the battle see Tabari, i, 283, loc. cit. (cf. BakrI, 698, quoting Ibn Shabba), and is therefore to be considered as an Ḵyrad Dayr in origin (Hamdani, Futuh, 283).

Dayr Kurra is mentioned in early Islamic sources, and geographers of the 7th/13th century record that only the ruins then remained. On the occasion of the feast of the Holy Cross many converts to Islam, which came from there. The best known is the Banu ʿI-Dajrah family, of which the vīzīrs al-Ḥasan b. Maḥmūd b. Dāwūd and ʿAll b. Iṣā were members. The secretaries of Dayr Kurra played a considerable political role in the late 3rd/9th and early 4th/10th centuries. In al-Muʿtāmid’s reign they sought to obtain general recognition of the Nāṣrānī convention which granted certain privileges to Christians, and supported the conspiracy of Ibn al-Muʿtazz (966/908). Once converted to Islam, they were devout Sunnīs, tried to restore the waning authority of the Caliphate, and were influenced by the preachings of al-Ḥallādī (of whose disciples at least one was from Dayr Kurra). But the open hostility of the pro-Ṣḥīḥ groups frustrated all their efforts, and they were forced to restore the Sunni caliph’s authority and bring about a reconciliation between Christians and Muslims.

Dayr Kurra is a locality in ʿIrāq some 90 km. south of Baghdad and a mile from the left bank of the Tigris. The name comes from a large monastery still flourishing in ʿAḥbāṣid times; it consisted of a church, a hundred cells, and extensive olive and palm plantations, all enclosed by thick walls. On the occasion of the feast of the Holy Cross many converts to Islam, which came from there. The best known is the Banu ʿI-Dajrah family, of which the vīzīrs al-Ḥasan b. Maḥmūd b. Dāwūd and ʿAll b. Iṣā were members. The secretaries of Dayr Kurra played a considerable political role in the late 3rd/9th and early 4th/10th centuries. In al-Muʿtāmid’s reign they sought to obtain general recognition of the Nāṣrānī convention which granted certain privileges to Christians, and supported the conspiracy of Ibn al-Muʿtazz (966/908). Once converted to Islam, they were devout Sunnīs, tried to restore the waning authority of the Caliphate, and were influenced by the preachings of al-Ḥallādī (of whose disciples at least one was from Dayr Kurra). But the open hostility of the pro-Ṣḥīḥ groups frustrated all their efforts, and they were forced to restore the Sunni caliph’s authority and bring about a reconciliation between Christians and Muslims.

DAYR KURRA — DAYR AL-ZOR

Djamadjim [see DAYR AL-DJAMADJIM]. This Dayr is about 7 parasangs from Kufa; it is far from, and not on the borders of, Karbala, as A. Musil erroneously locates it in his study (Middle Euphrates, 413).

(SALEH A. EL-ALI)

DAYR MURRÂN, name of two former Christian monasteries in Syria. The name is of obscure origin; the Arab etymology dayr al-murrân, “ash-tree convent”, is suspect, and Syriac does not offer a satisfactory explanation. The better known of the two monasteries was near Damascus, though its exact location cannot be determined. It was on the lower slopes of the Diabal Kays (Tabari, ii, 1270, 1792; Yakut, ii, 672), overlooking the orchards of the Ghita, near the gateway of Bâb al-Farâdis and a pass (takababa) where we may see in all probability the Baradad [q.v.] gorge. It was a large monastery, embellished with mosaics in the Umayyad era, and around it was built a village and, one presumes, a residence in which the caliphs could both entertain themselves and keep watch over their capital. Dayr Murrân was in this respect a counterpart of Dayr Murran. It was in fact in the other direction, to Damascus to put down the revolt of the Kays. Dayr Murrân was made well-known in the 4th/10th century by the poets Abu l-Faradj al-Babbaghâ (al-Tha‘alîbi, Yatima, i, 180), and of it is known by historians and geographers, especially by a panegyrist to Damascus to Hasatche, Mosul and Baghdad. It was probably the site of the ancient town of Kufa on the way to Surâ (Tabari, ii, 644). Al-Ash’âth chose it as an assembly point for his troops after ‘Ali had sent him to fight the Khâridjites (Tabari, i, 3422-4). Al-Muhtâr reached this Dayr in his bidding farewell to Yazîd b. Anas whom he sent to occupy Mosul (Tabari, ii, 644).

(SALEH A. EL-ALI)

DAYR SAMÂN, the name of various places in Syria, often confused by writers past and present, which corresponded to the sites of Christian monasteries still flourishing during the first centuries of Islam. Among the monasteries to which the name Simeon, common in Syria, was given, were Dayr Murran and also incorrectly applied to the Dayr Murrân at Damascus, and the Byzantine constructions built on hill-tops (called in every case Diabal Samân) in the region of Antioch. The most important of the monasteries was 40 km. north-west of Aleppo, and owed its fame to a Styliote who lived there, Simeon the Elder. In the 4th/10th century it suffered severely during the wars between Byzantines and Arabs and, later, between Fatimids and Hamdanids. By Ayyubid times it had probably been abandoned. Nevertheless one of the most interesting archaeological sites in northern Syria today is the remains of the ‘basilica of St. Simeon’ together with the ruins of the extensive quarters which accommodated pilgrims (to which the modern word dayr refers in particular). In the Middle Ages the Muslims transformed the basilica into a fortress called Kal‘at Samân. A second monastery, situated on the road from Antioch to Suwaydïyya, commemorated the Styliote Simeon the Younger, and it is no doubt to this Dayr Samân that the description by Ibn Butlân, reproduced by Yâkût (ii, 672), applies.

(D. SOURDEL)

DAYR AL-ZÔR, a small Syrian town, 195 m. above sea-level, on the right bank of the Euphrates. A suspension bridge 450 m. long, completed in 1931, crosses the river a short distance down-stream from the town. In 1867 it became the chief town of a sanâq and later of a mukâ‘a, and today it has a modern aspect about it. The majority of its 22,000 inhabitants are Sunni Muslims, and the small Christian minority comprises mainly Armenian refugees from former Turkish possessions. There are three mosques and several Orthodox and Roman Catholic churches. It is an important military centre, and also a stopping-place on the road from Aleppo and Damascus to Hasatchê, Mosul and Baghdad. It thus takes the part played in the Middle Ages by Rahbat Makâ and Kârkâsiyä.

It was probably the site of the ancient town of Ausara, from which, via the transposition Auzara, the name Dayr al-Zôr is derived. Its meaning is now explained as “convent set in a grove”, referring to the clusters of tamarisks along side the river. We may suppose that in the immediate neighbourhood of Dayr al-Zôr lay the Dayr al-Rummân mentioned by Yâkût (ii, 662) between al-Râkka and Khâbrâb.
DAYR AL-ZOR — DEDE

DAYSANIYYA, Daysanites or Disanites, disciples of Bar Dişân, Bardesanes, Ibn Daysân, the celebrated syncretist heresarch of Edessa, 154 (or 134)-201 A.D., co-disciple and contemporary of Abgar the Great. Arab authors writing of the dualists have placed him among the false prophets, his dualist conception which, according to Arab writers, is the source of reverence given to the heads of Darwlsh communities, as alternative for ata and baba. The meaning “father” is attested in şhâz as early as the Divan lügâtü al-Turk (compare C. Brockelmann, *Middle Persian* (with Vortickas), Budapest and Leipzig 1928, under dâdê). In western Turkish heroic tales, the term is also used (again as an alternative for ata) for the rhapsodes, thus Korkut Ata, or Dede Korkut [q.v.]. During the period of the Roman Empire, as the *Diwdn lughdt al-Turk* (Leipzig 1928, under dado).

DEAD SEA [see BAHR LÜT].

DEBDOU [see DUBDO].

DECCAN [see DAKHAN].

DEDE, literally “grandfather, ancestor”, a term of reverence given to the heads of Darwh communities, as alternative for ata and baba. The meaning “father” is attested in şhâz as early as the Divan lügâtü al-Turk (compare C. Brockelmann, *Middle Persian* (with Vortickas), Budapest and Leipzig 1928, under dâdê). In western Turkish heroic tales, the term is also used (again as an alternative for ata) for the rhapsodes, thus Korkut Ata, or Dede Korkut [q.v.]. Concerning its use preceding a proper name in ancient Anatolian, cf. Ismail Hakki Uzunçarşı, *Osmans tekhâldına methal*, İstanbul 1941, 173 (Dede Bâlî in a Germiyan deed of foundation).

Dede, following the name, is used predominantly of a priest of the Syrian goddess, at the very time Lucian of Samosata described the ceremonies performed there (Lucian was born about 120 A.D.). It is, no doubt, in his interpretation of Salvation that the origin must be found of the myths about the mingling of light and darkness, as given by Ibn al-Nadîm and al-Şâhârstânî. The *Dialogue on the Laws on the Lands*, the principal surviving work of Bar Dişân—with the very remarkable text on Destiny preserved by Eusebius—allows us to understand his basic philosophy as distinguishing between the physical state of being, herologically dependent upon the stars (it is possible to find an echo of his argumentation against the belief in astrological determinism in the chapter Ibn Ḥazm devotes to refuting the astrologers, Cairo ed., iv, 24), and the moral destiny which, like the escape from darkness, results from the contradiction between the irremediably determined nature of matter and the free nature granted to man by his Creator, who made him in his own image. Moreover this God is, above all, the co-ordinator and creator of a hierarchy of beings whose original characters and affinities he has defined, and in conformity with which this world is constantly built up and destroyed. It is furthermore a world of failure—and here the Manichean spirit is revealed—where God in his patience allows confusion and promiscuity until, after the passage of 6,000 years, he will recreate a world all whiteness, light and good.

Bardesanes’ reputation as an astrologer, despite his own very clearly defined attitude, was finally fixed by St. Ephraem who fought against him in his own town of Edessa, wrote sermons against him and composed hymns which were destined to supplant those by Bardesanes. Posterity, while recognizing his attitude against Marcion, nevertheless included him in the line of Manicheans, alongside Marcion. The Arab authors followed suit. For the Christian heresiologists his philosophy, elaborated under the influence of Valentinism, is tainted with Manicheism.

Bibliography: Ibn al-Nadîm, Cairo edn., 474; al-şâhârstânî, on the margin of Ibn Ḥazm, Cairo, ii, 70-2; ʿAbâ v al-Mâhir al-Baghdâdi, Cairo 1910, 335; Bâkîlânî, al-Maqrîzî, Cairo 1917, 217; F. Nau, Bardisan l’Astrologue. Le livre des lois des pays, Paris 1899; idem, *Dictionnaire de Théologie catholique*, s.v. (with bibliography).

(A. ABE)
In 1950 Ettore Rossi discovered a second incomplete manuscript in the Vatican Library (Un nuovo manoscritto del "Kitāb-i Dede Qorqut" in RSO, xcv (1950), 34-43), which he published in facsimile with an Italian translation of the whole work and a 95-page introductory study. In 1958 Muharrem Ergin published a new transcription of the whole text with the facsimiles of both the original manuscripts and an introduction. A promised second volume will contain an index, grammar and notes. The work also aroused interest in Ağharbavdān (for a criticism, on ideological grounds, see Osi-Probleme, iii, no. 35, 1951). An edition of the text appeared in Baku in 1939, and a Russian translation, based on an manuscript left by Barthold, in 1950.

The publication of the complete text in 1916 gave great impetus to Dede Korkut studies, and since then a growing number of scholars have been occupied with elucidating many historical, literary, linguistic, ethnological and folkloristic problems of the work. Despite the remarkable contributions of the above-mentioned authors and other scholars (among them M. F. Köprüli, A. İnan, P. N. Boratav, Hamid Aralış, Walter Ruben, Faruk Sümer, M. F. Kirzögüler, etc.) these problems continue to be controversial and there is still disagreement as to the date, authorship, the origin of the existing text, the identity of the heroes and of the place-names, etc. As research stands at present, we can cautiously assume that these stories were collected from oral tradition and put together and polished by an unknown author, probably during the second half of the 9th/15th century. They seem to be mainly based on the reminiscences of the Oghuz Turks concerning their life in their original home in Central Asia. In the present text they relate the life of the Oghuz Turkish tribes in north-eastern Anatolia, the deeds of their prince Bayundur Khan and his chief Salur Kazan Beg, of his wife Burla Khatun, and his son Uruz and their companions, their battles against other Turkish tribes and against the Black Sea Greeks and Georgians. The effect of Islamic culture is superficial. The pre-Islamic elements have strong common characteristics, in expression, style and content, with Anatolian and Central Asian popular literature (e.g., Beyrek) still live in Turkish folklore in slightly altered versions, and two tales (Depegoz and Deli Dumrul) show striking resemblances to Greek legends (Cyclops and Admetus) (cf. C. S. Mundy, Polyphemus and Tegeboś, BSOAS, xviii, 1956, 279-302).

DEDE SULTAN, epitaph of a great religious fanatic by name of Bürdüliye Muṣṭafâ, who was prominent in Anatolia in the time of Meḥmed I (further information under BADE AL-DIN B. KĀDICMAWS). (FR. TAESCHNER)

DEFTER [see DAFTA].

DEFTER-I KHAḴĀNĪ [see DAFTA-I KHAḴĀNĪ].
DEFTERDAR — DELI

DEFTER EMINI, the title given in the Ottoman Empire to the director of the Daftar-i Khakan (q.v.).

DEFTERDAR — DELI

DEFTERDAR [see DAFTARDAR].

DEFTER EMINI, the title given in the Ottoman Empire to the director of the Daftar-i Khakan (q.v.). This area, especially the southern part, is dependent on the river for its irrigation and its consequent fertility—especially in the region of Balkh (Bamiyan district), and flows in a general northerly direction through several natural lakes, past Mad(ar) and Ribat-i Karwan, finally reaching the region of Balkh (q.v.). Today the river is called Balkh-āb. The neglect of the irrigation system in the late Middle Ages, however, this was also one name for the Amu Darya (q.v.).

The river is called Balkh-āb. Because of its importance for Balkh, the Delās was also called Nahr Balkh (e.g., Huddā al-Sā`ām. xi, 73, 211, no. 24); in the Middle Ages, however, this was also one name for the Amū Darya (q.v.). Today the river is called Balkh-āb. The neglect of the irrigation system in the late middle ages and in modern times has caused the once country-side to revert to marsh land, and brought about the complete decline of the Balkh region.

In ancient times the Delās was known as Bābxcptos or ζαιρατζες and reached as far as the Oxus (Strabo, xi, 4, 2 (516); Pauly-Wissowa, Real-Encyclop., ii, 2814). Since Islamic times its waters have become dispersed in canals or in swamps.

(B. SPULER)

DEHNNANI, KHOQA, Anatolian poet of the 7th/13th century, one of the earliest representatives of the dāwān poetry. Almost nothing is known about his life except that he came from Khurasan and was at one time at the court of the Seljuk sultan ʿAlī al-Dīn Kaykūbād III, for whom he wrote a Sāḥibkhāna of 20,000 couplets which has not come down to us (M. F. Köprüli, Anadolu Selçuklu Tarihinini Yerli Kaynakları, in Belleten, vii, 27, 396-7). Only ten of his poems survive; they have been assembled from various nasīra collections and published from 1926 onwards (see bibliography). Dēhnnānī, unlike his contemporaries, does not dwell on mystical or religious-didactic themes, but sings, with remarkable mastery of ḍurr and a flowing style, worldly love, wine and other set themes of dūrān poems.

DEIR EZ-ZOR [see DAWR AL-ZOR].

DELI, Turkish adjective, meaning "mad, heedless, brave, fiery" etc. In the Ottoman empire the dēlis were a class of cavalry formed originally in the Balkans (Runeli, q.v.) at the end of the 9th/15th or the beginning of the 10th/16th century. Although later official usage, abandoning their true name, styled them delis (guides), they continued to be popularly known by their original name until recent times.

The dēlis were recruited partly among Turks and partly from Balkan nations such as the Bulgars, Croats, and Serbs. At first they were private retainers in the suites of the Beylerbeyi (Beylerbeyi, q.v.) of Rumeli and of the border beys. They were called delis, "mad", on account of their extraordinary courage and recklessness. The caliph ʿUmar was considered the patron of their odeja. Their motto was yasṭalān gevr bağa, "what is written (i.e., destined) will come to pass".

The delis were armed with curved scimitars, concave shields, spars, and maces (bozdogan) attached to their saddles. They wore hats made of the skin of wild animals, such as hyenas or leopards, trimmed with eagles' feathers, and their shields were also decorated with such feathers. Their clothes and horsecloths were made of the skins of lions, tigers and foxes, and their breeches of wolves' or bears' skins, with the hairy side showing. Their calf-length spurred boots, pointed at the toes and high at the back, were known as serhaddi or border boots. Their horses were renowned for their strength and endurance. They received a fixed salary from the Beylerbeyi or the Beys whom they served. In his Ṭabaqāt al-Mamālik ʿī Darājūc al-Maslīk, Ǧīlamzāde Muṣṭafa Čelebi mentions the delis of the Bey of Semendere, Yαhya Pasha-zade Bālī Bey, in connection with the Mohacz expedition, and describes their clothes. In the first half of the 10th/16th century the forces of dēlis of Yāḥya Pasha-zade Bālī Bey and Mehmedmed Bey and of Ghiśl Khusrew, Bey of the sandjak of Bosnia, were famous in the Balkans; Khusrew Bey had 10,000 delis in addition to his other forces.

The cavalry organization of the delis spread later to Anatolia, where delis were numbered among the retainers of vezārs and Beylerbeyis. The clothes of dēlis were changed in the 12th/18th century, when they were seen to wear pipe-like hats some twenty-six inches long, made of black lambskin with a turban wound round them.

Fifty to sixty dēlis made up a company (under a standard, bayrak), groups of several companies being commanded by one delibashi. A new recruit was attached to the retinue of the agha (q.v.), i.e., after learning the customs of the odeja and proving his worth he took an oath to serve the Faith and the State and to be steadfast in battle. At the end of the ceremony, which included prayers, the recruit would then be entered as an agha-dragǎl (apprentice to an agha), a delis' hat being ceremonially placed on his head. Delis breaking their oath, failing to observe the rules of the odeja, or deserting from the battlefield, were expelled and deprived of their hat. In the middle of the 11th/17th century a delis' daily pay amounted to 12 or 15 aspers (akçe), according to Rycaut; Marsigli, writing at a later date, says that dēlis were paid only while on active service.

The delis served the state well in the 10th/16th and 11th/17th centuries, but later they became disorganized like the other military units. Delis deprived of a patron, either through the dismissal of the agha, or as a result of being paid off, wandered about in search of a new patron, raiding villages in the meantime. In the second half of the 12th/18th century their depredations were centred in the regions of Kūthayya and Konya. A delibashi by the name of Kōdja-Başghī, who stood at the head of a numerous band, was notorious at Kūthayya towards the end of the century. While the
**DELI — DELI-ORMAN**

**DELI** is the historical name of a district, the greater part of which lies in north-eastern Bulgaria and the remainder in southern Roumania. But as the term is a popular one, exact boundaries cannot be given. It is usually applied to the triangle, the apex of which is at the town of Ruse, and the two arms formed by the Danube and the Rusek-Varna railway, while the base is somewhat undefined and runs at a certain distance from the coast of the Black Sea. On the north-east, Deli-Orman is bounded by the Dobruja, in the south by the Bulgarian provinces of Tozkul and Gerlovo. The most important places in Deli-Orman are the towns of Buluun, Deli-Orman, Erzurum, Karaman, and Gerlovo adjoining on the south. The Turks of this district form a particular type; they are remarkable for their tall stature and athletic build. Their language reveals dialectical peculiarities which are not found elsewhere in the Ottoman Turkish system but can be paralleled among the Christian Gagauz of Bessarabia. These peculiarities form the reason why they are regarded by some students as descendants of the Turkish Bulgars (K. and Ch. V. Skorpil, Pametnici na gr. Odessos'arna, Varna 1898, 4-6) and sometimes as descendants of the Kumans (V. Moskov, Turetskiya plemena na Balkanskom poluostrvre, in Izv. Imp. Russk. Geogr. Ogledstvou, xi, 1904, 409-17). But a strict philological analysis proves no more than that their language shows certain North Turkish features which perhaps go back to an old North Turkish substratum in the population. This substratum was however assimilated in two waves of southern Turkish elements which came later (cf. T. Kowalski, Les Turcs et la langue turque de la Bulgarie du Nord-Est, in Memoires de la Commission Orientliste de l'Academie Polonaise des Sc. et des Lettres, no. 16, 1933). Nevertheless it is significant that in the Balkan Peninsula the most compact mass of Turks is found not in the south-east but in the north-east, which makes very probable the hypothesis of a very early Turkish settlement in the lands south of the lower Danube. Turkish immigration in the 13th/14th centuries, when they were a grave evil to the people of Anatolia. This prompted the Grand Vizier Yusuf Dii Pasha to decide in Aleppo, on his return from the Egyptian expedition, to recon- 

Deli-Orman only a generation ago was still inhabited predominantly by Turks, but since the middle of the 19th century Bulgarian colonization has been steadily increasing. Nevertheless the Turks still form a considerable percentage of the population. One hears Turkish spoken everywhere, as is also the case in the provinces of Tozkul and Gerlovo adjoining on the south.

Leipzig 1879 (with full indexes); C. Jireček, Das Furstenthum Bulgarien, ... The word Demirbash also means stubborn or persistent, and it is usually assumed that this was the sense in which it was in Albania. In Ottoman times sandiafi-bey of one single bazar street set in the midst of olive, lemon and pomegranate trees, surmounted by the Delvina (so in Turkish and Albanian; Gk. Άξιοστού, inhabitants numbered about 3000 before 1940, of miles from the shores of the Ionian sea, and consists sandjak of the same name, fisheries, olive plantations, and retail trade. Delvina, shown by the church of St. Nicholas (Kisha She’ni on the Ottoman globe-trotter. The largest mosque of all the Islamic places of worship of older times, with the exception of the mosque of Hadjiddi Ahmed Agha built in 1269/1852. In 1913 Delvina came within the newly established principality of Albania, having formerly belonged to Greece (cf. L. von Thalliczy, Illyrisch-albanische Forschungen, i, Munich and Leipzig 1916, 360 (Delvina in 1847), and ii, 240 (transfer to Albania); also Edith P. Stickney, Southern Albania 1912-1923, Stanford 1926, passim.

**Bibliography:** In addition to references above: Rumeli und Bosna geographisch beschrieben von Mustafa Ben Abdalla Hadschi Challa, tr. J. von Hammer, Vienna 1812, 130 (whence the misspelling “Delonia”); M. F. Thien, Die europäische Turkey, Vienne 1828, 58 ff. (also “Delonia”); Fr. Babinger in Karl Baedeker, Dalmatien und die Adria, Leipzig 1891, passim. Delvina was seldom visited and described by travellers, but cf. W. Leake, Travels in Northern Greece, i, London 1835; cf. here the important statements made by Frasheri, Kâmus al-s’lâm, iii, Istanbul 1308/1889, 2153, with detailed information on Delvina up to 1890. For the 19th century the most important source is Ewliya Çelebi, Sevâhîname, viii, 668 ff., on the opposition of the Albanian population to the Ottomans at the end of the 19th century cf. Fr. Babinger, Das Ende der Arianiten, SBBayr. Ak., ms., there enumerated. On the Delvina basin cf. H. Louis, Albanien. Eine Landeskunde, Stuttgart 1927, 9 ff., esp. 102. See further ARNAWUTLUK. The modern town of Delvina was also a centre of the Khalwet order of dervishes, which was spread in the direction of Albania about 937/1530 by one Ya’qûb Efendi of Yanina, to be later supplanted by the Efkâns. The Khalwets attracted a considerable following there, and some of the 12 mosques, two madrasas, and baths owed their beginnings to the adherents of this order. Yusuf Sinan, son of the same Ya’qûb Efendi, has expatiated upon this point in detail in his Memâhî-i Sherîf [sic] we tarîhname-yi pîrân we mehmedisî-i tarih-i âlîsî-yi Khalwatisiye, Istanbul 1290/1873; cf. H. J. Kissling in ZDMG, ciii, 1953, 121.

Delvina is depicted as a sizeable colony by Ewliya Çelebi in the Sevâhîname, viii, 668 ff.; it had first come into contact with the Ottomans in 835/1432-2 through the incursions of Sinân Paşa (cf. Hâddidi Khalifa, Tabawim al-tawârîkh, Istanbul 1146, 104), but was not definitely brought under sujukte 941/1537, by the Albanian Ayâs Paşa [a. n.] in the reign of Sulaymân the Magnificent (cf. Fr. Babinger, Rumelische Streifen, Berlin 1938, 9 ff.). The pentagonal castle, open towards the east, in the interior of which was the residence of the fort governor, a mosque, powder-magazine, and granaries, made a deep impression on the Ottoman globe-trotter. Nothing has remained of all the Islamic places of worship of former times, with the exception of the mosque of Hzâddidi Ahmed Agha built in 1269/1852. In 1913 Delvina came within the newly established principality of Albania, having formerly belonged to Greece (cf. L. von Thalliczy, Illyrisch-albanische Forschungen, i, Munich and Leipzig 1916, 360 (Delvina in 1847), and ii, 240 (transfer to Albania); also Edith P. Stickney, Southern Albania 1912-1923, Stanford 1926, passim.

DEMIR KAPI [see Dari Ahanin].

DENMAT [see Damnat].

DEMOKRAT PARTI, Turkish political party, registered on 7 January 1946. In the general elections held in July of the same year, the party put up 273 candidates for 465 seats; sixty one of them were elected, forming the main opposition group. The first party congress, held on 7 January 1947, formally adopted the party programme and charter. As a result of various internal disagreements, notably the secession of a group of deputies who formed the National Party (Millet Partisi) in July 1948, the strength of the Democrat Party in the Assembly had fallen by 1950 to 31. Their influence in the country, however, continued to grow, and in the general election of May 1950 they won a clear majority. The Democrat Party now took over the government of the country, and remained in power for the next ten years. A series of cabinets was formed, Celâl Bayar and Adnan Menderes retaining the offices of President and Prime Minister respectively. In the general elections of 1954 the D. P. won an increased majority, but in the election of 1957 they were able to win only a plurality, which, however, gave them a clear parliamentary majority over a divided opposition. After a period of mounting discontent, the Democrat Party was ousted from power by the reaction of 27 May 1960. It was formally dissolved on 29 September 1960.

DEMOTIKA [see Dimetoka].

DENEB [see Nugum’s].

DENIZLI, chief town of the wilayet of the same name, in south-western Anatolia. Situated in a fertile plain which has been inhabited since the earliest times, Denizli in the 14th century replaced Ladik, the ancient Laodicea ad Lyicum, whose ruins stand at Eski Hişar, on the Çürük Şu, a tributary of the Büyük Menderes, near the railway station of Gondjiali, 9 km. from Denizli. Built in the 3rd century B.C. by the Seleucid Antiochus II on the site of the ancient Dionysos (Pliny, v, 195). Laodicea controlled an important meeting point of trade routes, and in Roman times was ranked as one of the principal towns of Phrygia (Strabo, xii, 578). Until the end of the 11th century Laodicea was Byzantine, but it was then disputed between the Comneni and the Saljukid Turks who took possession of it on several occasions. Alexis I captured it from them in 491/1009 and held it temporarily (Anna Comnena, ed. Leib, iii, 407). In 513/1129, it was recaptured and fortified by John Comnenus (Cinn., 5; Nicetas, 172); although sacked in 553/1158 and 585/1189 by Turkish tribes who had settled at about that time, in the district, it nevertheless remained in the hands of the Byzantines (Cinn., 198; Nicetas, 163, 523) until 602/1206, on which date Theodore Lascaris was forced to cede Laodicea and Chonae (now Honaz) to Manuel Mavrokomnes, father-in-law of Gıyâth-ad-Din Kaykhusraw I (Nicetas, 842; Houtsmans, Rec. de textes ré. à l’hist. des Saljûq, iii, 66-7; iv, 26). However in 653/1257 Izz-ad-Din Kaykhusraw II gave the town to Michael Palaeologus in order to secure his help against his brother Rukun ad-Din and the latter's allies, the Mongols; but the little Greek garrison could no longer hold out (Acropolitius, 238-4) and two years later the town was once again in the hands of the Turcomans. It is at about this time, in eastern documents, that together with Ladik one comes across the name of Tohuzlu; this name was later to be changed to Delik, and it was to take the place of Ladik in the 14th century. In 659/1261 the chief Turcoman of the district, Mehmed Beg—who must not be confused with the Karâmâni of the same name who died in 675/1277, nor with Mehmed Beg Aydınoglu who died in 734/1334—rose in revolt against Izz-ad-Din Kaykhusraw and conquered the district; then, refusing allegiance to the Seljukid princes, he asked Hülagü for a charter of formal investiture for the towns of Tohuzlu, Khônâs (Honaz) and Tâłâmanî (Dalarman). Thus the first Turcoman principality of Delik was founded, but it was short-lived: in 660/1262, at the request of Rukun ad-Din, Hülagü marched against Mehmed Beg who was defeated and put to death. His son-in-law All Beg became chief of the Turcomans of the region, while the towns of Lâdik and Khônâs were included in the possessions which were granted, in 669/1271, to the sons of the vizier Fâhîr ad-Din Allî. It was, no doubt, in order to regain his independence that All Beg took part, in 675/1277, in the revolt of Djimîrî and Mehmed the Karâmânî; but he was defeated by the sultan’s army and put to death. However, as a result of the weakness of the central authority, the Tohuzlu-Ladik region fell into the hands of the Turcoman amirs of Germîyan who in the last quarter of the 13th century seized the town of Kütaiya and lost no time in proclaiming their independence. According to the accounts of Al-Umarî and Ibn Baṭṭûṭa who visited the town in 730/1330 and 732/1332, Tohuzlu and the surrounding districts were at that time in the hands of an amir of the Germîyan family, Ynânî Beg. However the town, though still prosperous, was no longer the centre of a principality; for the conquests of the Turcoman amirs of Menteshe, who, at the end of the 13th century, took possession of the coast of Caria; Tohuzlu which was disputed between the amirs of Menteshe and the Germîyan thereby lost its position as a frontier post and could no longer remain the centre of a principality of any great importance. In 792/1390, the district of Tohuzlu-Ladik was restored to the Ottoman empire at the same time as the amirate of Germîyan. Temporarily given back to the Germîyan by Timûr who stayed in the town in the autumn of 1402, Tohuzlu served as a residence, in the reign of Bâyezîd II, for one of his sons; it was at that time the chief town of a liwâ† attached to the eydâ‡ of Anatolia. In the 17th century it was reduced to the rank of bâdî† attached to the sanâqâ* of Kütaiya. It was at that time that the name Tohuzlu was replaced by Delik, under which name the town was mentioned in the accounts of Ewilya Celebi and Kâtîb Celebi. According to these travellers, Delizli was then divided into 24 districts and included 7 mosques; a small fort protected the bazaar, whilst the population was housed outside the town proper, in gardens and fields; this situation still remains to the present day and, despite the allegations of European travellers
in the 19th century, it is not the consequence of the terrible earthquake which struck the town in 1702, when 12,000 people perished. Although Denizli has never managed to regain the position of importance it enjoyed in the Middle Ages, since the Republic was established it has once again become increasingly prosperous. In 1891 a railway line was built connecting Deliizi, via Gondjall, with the Izmirt-Egirdir line; Deliizi, which since the end of the 19th century had been the chief town of a sanjak attached to the district of Aydin, after the Republic was established it became the chief town of the sanjak of Deliizi. The population consisted of 19,461 inhabitants in 1940 (compared with 15,787 in 1927). Deliizi now possesses a Lycée and is a centre for agricultural products (fruit, cereals, tobacco, cotton, sesame, poppy-seed) and handicraft industries (tanning, weaving, carpet-making). The remains of the ancient towns scattered about the region (ruins of Laodicaea, Hierapolis, Hydrela, Kolossai, Chonae) also make it an important tourist centre.

**DEOBAND,** in the Saharanpur district of Uttar Pradesh, is a place of great antiquity but its early history is shrouded in myth and romance. In one of the many groves which almost surrounds the site there is an ancient temple of Devi. On this account the name is supposed to be a corruption of Devi-ban, 'forest of the goddess'. The earliest recorded reference to it is found in the Ā‘in-i Akbari where Abu ’l-Fadl refers to a fort of 'baked bricks in Deoband'. Monuments of Deoband are, however, found in Deoband. The Češa Masjddie, which is supposed to be one of the oldest monuments of Deoband, dating back early to the 12th century. According to tradition, Shaykh ‘Ali al-Din known as Shāh-i Dīngal Bâsh, who lies buried there, was a pupil of Ibn al-Djawzi and a disciple of Shaykh Shihâb al-Din Suhrwardi. Some mosques and other buildings constructed during the reigns of Sikandar Lodî (894-923/1489-1527), Akbar (933-1024/1556-1605), and Awrangzib (1668-1185/1668-1707) are still extant.

Deoband is known to-day for its great seat of Muslim religious learning, the Dâr al-‘Ulum, founded by Hâjí Muhammad ‘Abid Husayn with the support of three eminent scholars in the Education Department, and to which Mawlavi Muhammad Kâsim was appointed as patron-principal in 1824/1867. During the last 90 years this institution has accomplished a great deal for the advancement of Muslim religious institutions. It combines the characteristics of three different types of religious institutions which existed in Dihli, Lucknow and Kâhyrâbâd during the 13th/19th century. The institutions of Dihli emphasized the teaching of tasvîr and h âdîq; the institutions of Lucknow [see Dâr al-‘Ulum, (c), (d)] took to šîkh, while Kâhyrâbâd [q.v.] specialized in ‘ulm al-kâlam and philosophy. Deoband represents a synthesis of these three experiments, but its main emphasis has been on the traditions established by Sháh Wali Allah and his Dihli school of muhaddithin. It attracts students from many different parts of the Muslim world. Residential accommodation is provided for nearly 1500 students. The buildings of the Dâr al-‘Ulum include a mosque, a library, and a number of separate lecture halls for hadîth, tasvîr, šîkh etc. Its library, though without a catalogue, is one of the biggest manuscript libraries in India. It comprises 67,000 Arabic, Persian and Urdu books, both printed and manuscript. The system of instruction is traditional and the emphasis is more on building up a religious personality than on imparting knowledge with a view to fulfilling the requirements of the modern age. The institution has, therefore, produced mainly religious leaders though its contribution in the political sphere cannot be ignored. Many of those associated with it have been in the forefront of the national struggle for freedom. The principal officers of the Dâr al-‘Ulum are: Sarprast (patron), mukhamim (secretary), Šadr mudarris (principal) and Muftî. Very eminent persons like Mawlânâ Rashîd Ahmad Ganguhi, Mawlânâ Muhammad Ya’qûb, Mawlânâ Agha Ser ‘Allî, Shaykh al-Hind Mâhmûd Hasan, Mawlânà Anwar Shâh Khâshmiri and Sayyid Husayn Ahmad Mâdâni have filled these posts. The present secretary, Mawlânà Muhmmad Tayyib is a grandson of the founder of the institution. The Dâmiyat ‘Ulumâ-i Hind, a very influential organization of the Indian Ulmâ, derives its main ideological strength from the Dâr al-‘Ulum.

**Dârâdjdât,** name of a tract lying between the River Indus to the east and the Suleymán Mountains to the west, including the modern districts of Dêra Is‘mâ‘îl Kân and Dêra Ghâzî Kân. The name Dârâdjdât is a supposed Persian plural of the Indian word dera, "tent, encampment", and means the "country of the deras", that is, of the three towns Dêra Is‘mâ‘îl Kân, Dêra Ghâzî Kân and Dêra Fâth Kân, founded by Bâhâ’i leaders in the early 10th/16th century. (See BALO£ISTAN). These three towns were all close to the R. Indus, and have been liable to damage by erosion; hence the modern towns show much rebuilding, especially Dêra Is‘mâ‘îl Kân which was largely destroyed under Sikh rule. The mints of Dârâdjdât and Dêra under
the Durrani kings were at Dera Ismail Khan and Dera Ghazi Khan respectively; copper coins were also struck at Dera Fath Khan. Afghan coins form the most important element in the minting especially in the Dāmān or western part, and the Bałād are numerous in the south. (M. Longworth Dames*)

**DERBEND**, a town of Daghstān [q.v.], called Bāb al-Abwāb [q.v.] by the Arabs in the Middle Ages. Only the modern period is described under this heading.

Having belonged to Russia from 1722 to 1735, Derbend was restored to the Persians, and Nādīr Shah attempted to transfer to its former importance; but after the death of this sovereign it passed into the hands of the K̄ān of Kōba, Fath ʿAll (1765). Recaptured by the Russians in 1796, it was soon evacuated, to be ultimately occupied on 21 June/3 July 1806.

Under Russian domination the town has lost its former military importance. It has, however, retained traces of its past as a fortified town, care fully preserved. Of the two walls which formerly enclosed the town and the citadel, the one most badly damaged is the south wall, now reduced to four gates and three towers, whereas the north wall, with its 8 gates and 30 towers, is still intact over almost all its length.

To the north of the town lies the Arab cemetery of Ḳīrḵār, which dates from the 8th/14th century. The old congregational mosque constructed in 728/1328-2 is a Christian church, several mosques of the 17th and 18th centuries, and a few very old caravanserais, remain practically intact. Remains of the old irrigation system bear witness to a very advanced technical civilization.

The economic development of the old fortified city is very remarkable. It is favoured by a well cultivated soil (supporting vines and fruit-trees), a sub-soil rich in petroleum and natural gas, the proximity of the sea which makes it an important railway which allows for the transport of merchandise.

Remains of the old irrigation system bear witness to a very advanced technical civilization.

The economic development of the old fortified city is very remarkable. It is favoured by a well cultivated soil (supporting vines and fruit-trees), a sub-soil rich in petroleum and natural gas, the proximity of the sea which makes it an important fishing-port, and finally the Bākū—Mākhač—Kala railway which allows for the transport of merchandise and the multiplication of food industries which make use of the local produce.

At the beginning of this century Muslims made up about 57 per cent of the population, against 18 per cent of Russians, 16 per cent of Greeks, and 7 per cent Armenians. At that time there was a penetration of socialist ideas under the influence on the one hand of the Bolsheviki organizations of Tiflis and Bākū, on the other of political exiles like L. V. Maligine and some others. The first agitators at Derbend were the Russian railway workers, whose rôle became apparent in the 1905 revolution. In December 1917 Soviet power was established in the town and entrusted to the workers' and soldiers' Soviet set up in the February revolution. From July 1918 to March 1920 the town was stricken with civil war; the power was in the hands of local nationalists ranged against the Bolsheviki, who had to appeal to the Red Army to establish their authority. Since the creation of the Republic of Dāḫistān, Derbend has become the capital of the district of that name, and in importance the second town of the Republic. In 1956 its population was 41,800.

**DERDĪLĪ, Ibrahim**, Turkish folk poet (1106-1161/ 1772-1845). In Şahānlar, a forest village in the province of Bolu, born near the death of his father. Having lost his fortune in Istanbul but was soon forced to go back to his native province. He then spent ten years in Egypt and travelled extensively in Anatolia where he became one of the leading poet-singers of the period. Again in Istanbul under Mahμūd II, he became a popular figure of the coffee-houses frequented by folk poets and wrote his famous hasāda on the fez, praising this newly introduced headgear, which enjoyed for a short time the favour of the court.

Falling into disgrace, he left Istanbul and wandered again in Anatolia and, after an unsuccessful attempt at suicide, died in Ankara.

In his poems in ārād, written in an awkward language, he is an unskilled imitator of dīwān poets, particularly of Fuḍlū [q.v.]. His poems written in the traditional Arabic metre, though not perfect in language and style, echo in sincere tones his vagrant poet, popularly given to certain rulers in Asia Minor who, from the early 12th/18th century, made themselves virtually independent of the Ottoman central government in Istanbul. The Ottoman historians usually call them mutaghallibe, usurers, or, when a politer designation was needed, Khānādān, great families. The derebeyes became in effect vassal princes, ruling over autonomous and hereditary principalities. In time of war they served, with their own contingents, in the Ottoman armies, which came to consist to a large extent of such quasi-feudal levies. Though given, as a matter of form, such titles as muktablābe, officials, or, when a politer designation was needed, Khānādān, great families. The derebeyes became in effect vassal princes, ruling over autonomous and hereditary principalities. In time of war they served, with their own contingents, in the Ottoman armies, which came to consist to a large extent of such quasi-

their rivals the Diânikli bitterly opposed them. While on the one hand the struggle between reformers and reactionaries in the capital was confused with the rivalries of the feudal chiefs, on the other the clash between the Capan-oglu and the Diânikli in central and eastern Anatolia assumed the appearance of a quarrel over the Sultan's New Order (see Niżâm-ı Diânî>). Where the derebey{s} did apply the New Order in their territories, they seem to have done so for their own purposes and to their own profit, using government money to strengthen corruption in the application of the New Order by their own armed forces. (For examples of abuse and corruption in the application of the New Order by the derebey{s} see Üşüm, i, 111-3; cf. Alaçura 140, Miller 100-101).

The leading derebeys played a role of some importance in the political struggles of 1807-8, and the victory of the Bayrakdâr Muṣṭâfa Pasha seemed to consecrate their power. One of his first tasks, after becoming Grand Vezir, was to convene a great imperial assembly in Istanbul, to which he invited dignitaries of various types from all over the Empire. The great derebeys from Anatolia came to Istanbul in person, with large forces of armed retainers, and seem to have played a considerable part in the proceedings. A deed of agreement (Sened-i Ittihat) confirmed their rights, privileges, and autonomies, which were now, for the first time, officially defined and ratified (Khânzâde, i, 66-73; Djewdet, Ta'rikh, ix, 3-7 and 278-83; Üzünçarşıli, Alemdar, 138-44; Miller, 283-91. On the Sened-i Ittihat see further A. Selçuk Özköçlik in Istanbul Univ. Hukuk Fak. Mec. xxiv, 1959, 1-12).

Sultan Maḥmûd II, who had thus been compelled, at the dawn of the 19th century, to recognize the privileges of a feudal barony, was determined to end them; the 19th century provided him with the means. After the conclusion of the war with Russia in 1812, he turned his attention to the task of establishing the authority of the central government in the provinces. By a series of political, military, and police actions he overcame rebellious pashas and autonomous derebeys alike, and replaced them by appointed officials sent from Istanbul. (For the impressions of a contemporary Western observer see A. Slade, Record of Travels in Turkey and Greece, etc., I, London 1832, 215 ff.). The work of centralization was continued under his successors; the last major military expedition was that of 1866, sent to subjugate the surviving derebey dynasties in the Çukurova district, such as the Menemendi-oglu, the Kükülü-oglu, and the Kozan-oglu of Kozan (Djewdet, Ma'raddî, in TTEM, 1491, 1926, 117 ff.). Though the autonomous principalities of the derebey{s} had disappeared, the term derebey remained part of the Turkish political vocabulary, used to designate large-scale hereditary landlords, especially in southern and eastern Turkey, who exercised quasi-feudal rights over their peasantry (for example for the remarks of K. H. Karpat in Social themes in contemporary Turkish literature, MEJ, 1960, 34-5).

The best known Derebe family{s} were:

1) The Kara Oğmân-oglu of Aydı'n, Manisa, and Bergama; they ruled the sanjak{s} of Saruhan and Aydı'n and their influence extended from the Great Menderes river to the coast of the sea of Marmara. [See KARA OĞMAN-OGLU].

2) The Capan (Çapar, Diabbârî)-oglu of Bozok, of Turkoman origin, practically contemporary with the Kara Oğmân-oglu. They ruled the sanjak{s} of Bozok (Vozgad), Kayseri, Amasya, Ankara, Niğde, and, at the height of their power, also controlled Tarsus. The first member of the family whose name is known is Ahmed Pasha, the mutasarrıf of Bozok, who was deposed by order of the Porter in 1178/1764-5. (Wsâli, i, 233 ff., 268). He was succeeded by his son Muṣṭâfa Bey, who was murdered by his body-guard in 1196/1781 (Djewdet, Ta'rikh, ii, 171-2); he in turn was followed by his brother Sulaymân Bey, the most powerful of the Capan-oglu, who played a rôle of some importance during the reign of Selim III, Muṣṭâfa IV, and Maḥmûd II. After his death in 1299/1884, his lands reverted to the direct authority of the Porter, who customarily held high offices under the Sultans as governors and generals. One of them, Çapanzâde Ağâh Efendi (1832-1885), played a pioneer rôle in the development of Turkish journalism (see ŞARDA). Another led an anti-nationalist band during the War of Independence. Their name survives in a Turkish proverbial phrase, with the meaning of a hidden snag.

3) The family of 'Alî Pasha of Diânik, in Trebizond and its neighbourhood. The founder of the family, Diânikli 'Alî Pasha [q.v.] was succeeded by his two sons Mikdad Ahmed Pasha (executed in 1206/1791-2) and Husayn Battâl Pasha (d. 1215/1801). After holding the offices of Kapîlî-bashi, governor of Aleppo, and governor of Damascus, Battâl Pasha became governor of Trebizond in 1202/1787-8. In 1201/1787 he led his forces against Russia, but in 1213/1803-4 was defeated and taken prisoner. The town of Battalpashinsk commemorates his name. After a period of disgrace, he was reappointed, thanks to Russian intercession, in 1215/1798-9. His elder son, Khâyır al-Dîn Râghîb Pasha, governor of Aţînân Kara Hisâr, was dismissed and executed in 1205/1792-3, when the independent political reforms of Selim III, which were supported by their rivals the Capan-oglu and the Kara Oğmân-oglu, ended. This family opposed the military reforms of Selim III, which were supported by their rivals the Capan-oglu and the Kara Oğmân-oglu. Ta'yûd Maḥmûd Pasha, a younger son of Husayn Battâl, was active against the reforms, and in 1805-7 was in exile in Russia. He returned to Turkey in 1809, and was appointed Karîma-ulmâmâk to the Grand Vezir during the brief interval of reactionary rule under Muṣṭâfa IV. A few months later he was dismissed and executed by Maḥmûd II.

These were the three most important derebey dynasties, and ruled in western, central, and eastern Anatolia respectively. Among lesser dynasties mention may be made of the İlyâs-oglu of Kugh Adasî (Scala Nuova, near Ephesus), who ruled the sanjak of Menteşe as far south as Bodrum from about the middle of the 18th century; the Kütûcük 'Ali-oglu, who ruled in Payas and for a while Adana, and the Yîlanı-oglu of Isparta and Eğirdir, and the region of Antalya.

Bibliography: The Ottoman chronicles pay some attention to the Derebey{s}, but tend to gloss over their independent status and represent them as servants of the Porter. More realistic information will be found in Western sources, notably in diplomatic and consular reports and in the writings of travellers and archaeologists. These may be supplemented, especially for names and dates, from the numerous local inscriptions. Some attention has been given to the derebey{s} in recent Turkish work on local history (as in the important studies of M. Çagatay Ulusay on Manisa), but the subject still awaits detailed examination.

On the Kara Oğmân-oglu, see Kgl. Museum, Altertümer von Pergamon, i, Berlin 1885, 84-91; F. W. Hasluck, Christianity and Islam under the Sultans, ii, Oxford 1929, 597-603; Ç. Ulusay,
so 8 DEREBEY — DERWISH PASHA

DERGÂH [see DARGÂH].

DERNA [see DARA].

The mountainous region of eastern Anatolia, densely wooded by oak, hornbeam, ash, chestnut and fir forests. Northwards the course of the upper course of the Dersim, the east by its tributary, the Piri Su. The area is of ancient origin with a line of prehistoric sites, the most notable being the Hozat and the Aşkale, which were already inhabited by Neolithic peoples. The district was in the possession of the Samarqand (3188 m.) and the Monzur Dagh (3166 m.). The Dersim had 63,430 inhabitants, of whom 15,460 were Protestant Armenians. In 1887 it became headquarters of the Vizierate. At this time, Ahmed Pasha—was born at Mostar in the Herzegovina and, after a course of his education, he revealed an interest and knowledge, could vie with the greatest of the scholars of the time. He was at this time Beglerbeg of Bosnia. Derwisch Pasha, again as Beglerbeg of Bosnia, shared also in the Ottoman conquest (1011/1602) of Istani Belgrade, which the Imperial forces had taken in the previous year (1010/1601). He was removed from the Beglerbeg of Bosnia in 1011/1602, the office being then given to Deli Hasan Pasha, lighthouse one of the Imperial Falconers. In 1015/1605, he was again as Beglerbeg of Bosnia, temporarily in the 11th century, the office being then given to Deli Hasan Pasha, lighthouse one of the Imperial Falconers. In 1015/1605, he was again as Beglerbeg of Bosnia, temporarily in the 11th century, the office being then given to Deli Hasan Pasha, lighthouse one of the Imperial Falconers...
DERWİSH MEHMEİ PASHA. (c. 993?-1065/1585? -1655?), Ottoman Grand Vizier, was of Çerkes (Circassian) origin. As kethêdd of Tabânî Yassî Mehmed Pasha, and from 1436, of the reign of Sultan Murâd IV (1233-40/1623-40), he shared in the Eriwan campaign of 1044/1635 against the Safawids of Persia and became there- after Beglerbeg of Şâm, an appointment that he held, according to Ibn Dümüa, in 1045/1637-6. At the time of Murâd IV’s campaign against Baghdad in 1048/1639 he was Beglerbeg of Diyarbekir, but in 1049/1638 he became Beglerbeg of Baghdad, resigning the following year to succeed Ahmed Pasha, who had died in 1639. Derwîsh Mehmed Pasha remained at Baghdad for three years. During the course of his subsequent career he served as Beglerbeg of Aleppo, of Anadolu, of Silistria and of Bosnia. Appointed to Silistria for the second time in 1059/1649, he held, according to Ibn Dümüa, in 1059-64/1649-54, when, disabled with paralysis, he was removed to it on 6 Ramadan 118/25 November 1774. On 3 Safar 118/5 April 1775 he became steward (kethêdd) to the Grand Vizier, being finally appointed Grand Vizier himself on 7 Dümüa I 1189/6 July 1775.

Having in this way come to power in the period which followed the conclusion of the treaty of Küçük Kaynarca, Derwîsh Mehmed Pasha made use of the authority which Sultan ʿAbd al-Ḥamîd I was in the habit of granting to his Grand Viziers, to procure a pleasurable life for himself instead of trying to make good the damage suffered by the Empire during the war. The laxity of his conduct of State affairs combined with gossip about him led to his dismissal on 8 Dhu ‘l-Ka’dâ 1190/19 December 1776 and to his exile in Gallipoli. Nevertheless, he was appointed Grand Vizier again 9 Dhu ‘l-Valî 1193/20 February 1779, to be wâli (governor) of Khînya (Canea in Crete). He fell ill, however, during his voyage out and died in Sakiz (Chios), being buried in the mosque of İbrahim Pasha. Derwîsh Mehmed Pasha was a man of quiet disposition whose services to the State were negligible. Nevertheless, he built or, at least, repaired some pious establishments in Istanbul (in the districts of Ereğ and of Üskûdar-Scutari), in Bursa and in Egypt. The fact that some of these were tekkes (teykes) suggests that he had šâyi sympathies.

DERWİSH MEHMEİ PASHA (1142/1245-1837), Ottoman Grand Vizier, son of Rûstem Agha from Anapoli (Anapou) in Morocco (Pelopon- nesus). He received his training as seal-keeper (mûhûrdar) of the Grand Vizier Abd al-Waḥṣu, also of Peloponnesian origin, thanks to whose protection he was appointed mir-i mirdâr (Pasha of the second class) and şâniyâh-beyi. He became later tax- collector (mûšâṣipîl) of the land of Ḥamîd, while in 1233/1817 he served as muṭâṣaparî (with the rank of wâṣir or Pasha) of Khüdâwândîgâr, Eskişehir and Kôşâ-ili. The most influential functionary in the Empire, Ḥâleî Efendi, wanted at that time to see a weak Grand Vizier and he, therefore, advised Sultan Mahmûd II to appoint Derwîsh Mehmed Pasha, who became Grand Vizier on 27 Safar 1233/January 1818. During his two-year tenure of office Derwîsh Mehmed Pasha did not succeed in imposing his authority: he was even unable to ensure the security of Istanbul, where he refrained from punishing the gang leaders, preferring instead to propitiate every one. Although this conduct was agreeable to the leading functionaries and particularly to Ḥâleî Efendi, the Sultan realized the Grand Vizier’s impotence, but chose to keep him for some time in order to safeguard the honour of the office. Finally on 19 Rabî‘ I 1235/5 January 1820 the Sultan Efendi entered the service of the State as assistant seal-keeper to the defterdâr (treasurer) Ḥeṣîtân Efendi. He then became defterdâr (secretary or steward) of Nâṣîr ‘Abdulâh Pasha, Silâdâr ‘Alî Pasha and Şâdî Mehmed Pasha, in that order. Promoted defterdâr hesedârî (treasury cashier), he became finance clerk (mûliyye tekbûredî) during the expedition of 1181/1768. On 22 Dhu ‘l-Ka’dâ 1185/26 February 1772, while the army was camped at Şûnmû (Şumen), he became defterdâr of the first division (ghišâ). Although he left that post when the army was ordered to Istanbul, he was re-appointed to it on 6 Ramadan 118/25 November 1774. On 3 Safar 118/5 April 1775 he became steward (kethêdd) to the Grand Vizier, being finally appointed Grand Vizier himself on 7 Dümüa I 1189/6 July 1775.

Having in this way come to power in the period which followed the conclusion of the treaty of Küçük Kaynarca, Derwîsh Mehmed Pasha made use of the authority which Sultan ʿAbd al-Ḥamîd I was in the habit of granting to his Grand Viziers, to procure a pleasurable life for himself instead of trying to make good the damage suffered by the Empire during the war. The laxity of his conduct of State affairs combined with gossip about him led to his dismissal on 8 Dhu ‘l-Ka’dâ 1190/19 December 1776 and to his exile in Gallipoli. Nevertheless, he was appointed Grand Vizier again 9 Dhu ‘l-Valî 1193/20 February 1779, to be wâli (governor) of Khînya (Canea in Crete). Nevertheless, he built or, at least, repaired some pious establishments in Istanbul (in the districts of Ereğ and of Üskûdar-Scutari), in Bursa and in Egypt. The fact that some of these were tekkes (teykes) suggests that he had šâyi sympathies.

DERWİSH MEHMEİ PASHA (1142/1245-1837), Ottoman Grand Vizier, son of Rûstem Agha from Anapoli (Anapou) in Morocco (Pelopon- nesus). He received his training as seal-keeper (mûhûrdar) of the Grand Vizier Abd al-Waḥṣu, also of Peloponnesian origin, thanks to whose protection he was appointed mir-i mirdâr (Pasha of the second class) and şâniyâh-beyi. He became later tax- collector (mûšâṣipîl) of the land of Ḥamîd, while in 1233/1817 he served as muṭâṣaparî (with the rank of wâṣir or Pasha) of Khüdâwândîgâr, Eskişehir and Kôşâ-ili. The most influential functionary in the Empire, Ḥâleî Efendi, wanted at that time to see a weak Grand Vizier and he, therefore, advised Sultan Mahmûd II to appoint Derwîsh Mehmed Pasha, who became Grand Vizier on 27 Safar 1233/January 1818. During his two-year tenure of office Derwîsh Mehmed Pasha did not succeed in imposing his authority: he was even unable to ensure the security of Istanbul, where he refrained from punishing the gang leaders, preferring instead to propitiate every one. Although this conduct was agreeable to the leading functionaries and particularly to Ḥâleî Efendi, the Sultan realized the Grand Vizier’s impotence, but chose to keep him for some time in order to safeguard the honour of the office. Finally on 19 Rabî‘ I 1235/5 January 1820 the Sultan
dismissed him and banished him to Gallipoli. On 11 Rabî‘ I 1236/16 January 1821 he was appointed nevertheless, governor of Damascus with additional jurisdiction over the lands of Nabûs and with the additional function of amir al-halâdî (official responsible for the pilgrims). In this capacity he quarrelled with ‘Abdullah Paşa, the wâli of Şaydâ (Sidon), whom he besieged in Acre in accordance with the orders of the Sublime Porte. When, however, the latter was pardoned, Derwîsh Mehmed Paşa was transferred to the eyâlet (province) of Anatolia, where the tyrannical behaviour of his son-in-law Ilâmî Bey led to complaints by the people of Kütahya (Çotyleaum), as a result of which Derwîsh Mehmed Paşa was dismissed, stripped of the rank of wadir, deprived of his property and exiled to Afyûn-Kara-Hisâr, whence he was later transferred, at his own request, to Bursa. In Rabî‘ I 1235/June 1837 he was appointed Şeyîx al-Ḫânam (governor of Medina), but died in (Ramadan)December of the same year at Yanbî‘ on his way there.

A man of weak and kindly temperament, Derwîsh Mehmed Paşa is one of the least forceful of the Ottoman Grand Viziers. Some pious works in Bursa and in Istanbul are ascribed to him.

DEVE BOYNU, literally “camel’s neck”, a Turkish geographical term used to designate certain mountain passes and promontories. The most celebrated mountain pass known as Deve Boynu is that between Erzurum ce, Turkish geographical term used to designate certain localities and a mountain. Similar place-names occur in Syria and Teûrân, which has been interpreted as...

DEVEŞLİ, a Turkish word meaning cameleer, the name given to certain regiments of the corps of janissaries (see JANS). In the 16th century this corps was called the Dîmédia’t, and performing escort duties with the supply columns. They were also called by the Persian term şu’urân. The Devedsîs originally formed the first five orlas of the Dîmédia’t (four according to D’Ohsson), and were later augmented to include many others. They wore heron’s feathers in their crests (see sorgûc); when attending the dhûna they were veiled, trimmed with sable and lynx fur. Devedsî officers enjoyed high precedence among the orlas. According to Marsigli, the captains of the first five orlas were always preferred to the command of garrison centres. Their chief, the Başdevedsî, ranked high in the ladder of promotion, after the Hâşekî Ağa and above the Yaya-bâshî (q.v.).

DEVELÎ KARA HİSAR [see KARA HISAR].

DEVŞİRME, verbal noun of T. devşîr- ‘to collect’ (with various spellings, cf. TTS s.v. dersürmek), Ottoman term for the periodic levy of Christian children for training to fill the ranks of the Janissaries (see YENİ ÇERI) and to occupy posts in the Palace service and in the administration (Gr. παραδόματα). The same verb is used in the earliest Ottoman sources (Giese’s Anon. 32, i, 12 = Uredo 22, i, 4) for the ‘collection’ of the fifth part of prisoners from the dâr al-barb due to the Sultan as pendiş (q.v.), from whom, according to tradition, the Janissary corps was first raised in the early years of the reign of Murâd I; but the date of the institution of the devşîrme in its narrower sense of a levy of dînimî children is still uncertain (Idrîs Bîdîî’s attribution of it to Orkhan is certainly anachronistic, although, having been followed by Sa’d al-Dîn and Hammer, has been generally accepted). The earliest contemporary reference to the devşîrme so far known appears in a sermon preached in 1393 (i.e. in the reign of Bâyezîd I) by Isidore Glaßas, the metropolitan of Thessalonica, lamenting the ‘seizure of the children by the decree of the amîr’ (‘Omulî perî AMESPACE TÔN PÂXIOV KATÔ TÔ AMûRRA’ EÔÎXÔRÎA, first noticed by O. Tâfrais, in Thessalonique au XIVème siècle, 1913, 286 f., and discussed by S. Vroniaûjs Jr. in Isidore Glaßas and the Turkish Devşîrme in Speculum, 1956, 433-43); the second oldest appears in Sinân Paşa’s letter of 1430, to the inhabitants of Ioannina, promising them that if they submitted exemption from maclitî (see DERSIIR) they...

Boynu promonitory on the southern coast of Lake Van (q.v.). (Bêsmi Ḟâkot)

stated by Ṭaṭā'ī I 33) and as part of his re-organization of the Janissaries (Sphantzes 92).

Although İdris Bidlisi maintained, on the ground that most of the dhimmis had been conquered by force (be-ṣawā'īn), that the devşirme was in accordance with the qār, this argument seems not to have commanded itself to Sa'd al-Dîn (cf. V. L. Ménage in BSOAS, xviii, 1956, 181-3), and the devşirme does appear in fact to have been an infringement of the rights of the dhimmîs (see dhimmâ). It has been suggested however that a justification of the devşirme might have been drawn from the Shaffî doctrine that Christians converted since the Descent of the Kurān (and hence most of the rural population of the Balkans, but not the Greeks) were not entitled to the status of dhimmî (cf. P. Wittek, Devşirme and Şarâfi, BSOAS, xvii, 1955, 271-8).

With certain exceptions (see below) all the Christian population of the European domains of the Empire, and later the Asiatic domains as well, was liable to the devşirme. In the 16th century, the devşirme was entrusted to a Janissary officer, usually a yaya-başılı (for the ranks eligible for this duty cf. İ. H. Uzunçarşılı, Kapüşaksı Oculoarii, i [hereafter KKO], 15), who went to the district where the levy was to be made, accompanied by a kâthî, and taking with him a letter from the Agha of the Janissaries, a berâî of authorization, and (according to Navagero [see BiBi]) a supply of uniforms. In each kadî criers summoned the children to gather, accompanied by their fathers and by the priests, who brought the baptismal registers. Under the supervision of the kâthî and the sipâhi, or their representatives, the officer selected the best of the children of the ages eligible. The age-limits reported in European accounts vary greatly, from as low as eight years old to as high as 20 (cf. Lybyer 49); relatively late Ottoman documents (of 1601, 1621, 1622 and 1666) prescribe the limits 15-20 (KKO, 95, 98; A. E. Vakalopoulos [see BiBi], 286 f.). For each group of 100-150 children two registers were made, listing their names, parentage, ages and descriptions; one remained with the recruiting-officer, the other went with the sürîâ (drover) who conducted the impressed children to Istanbul (see especially documents of 1619, 1630, 1632 and 1666). The devşirme was made up not only of townsmen and dwellers on main roads, or to some dwellers on waqf-lands (KKO, 109-14; Ö. L. Barkan, Kanunlar, 72, 85; relazioni di Garsoni [1573] in Alberi, 3rd ser., i, 396); these exemptions were strictly checked and liable to be withdrawn (KKO, 97-101).

The Muslims of Bosnia were in a special position. According to a late Ottoman source (Shâm'dânâ-zâde, Marî al-tawārîh, Istanbul 1338, 454) the Christian population embraced Islam en masse upon the Ottoman conquest in 867/1463, but requested that their children should nevertheless be eligible for the devşirme. Though the Islamization of the peasantry was not in fact instantaneous (cf. B. D jurdev, Bosna, 1265 b above), there is a record of a recruitment of 1000 lads for the Janissaries from the Muslim populations of Bosnia and Herzegovina as early as 921/1515 (Ferîdîn, i, 472). Here the converted Bosnians are called Poturmâk (cf. A. V. Soloviev, in Bysantion, xxiii (1953), 73-86); they are called Pioter pîvînt in a document of 1667 (KKO, 105-6). The Christians were obliged to pay a special tax to meet the cost of the uniforms (KKO, 17 l, 22 n.).

On arriving in Istanbul the children were inspected both for their physique and for their moral qualities as revealed by the science of Physiognomy (kiyâfa, [q.v.]; cf. Âli, Kûnh, v, 14 f.; id., Melâ'dîn-Neîfa'îs, Istanbul 1956, 21; Postel, iii, 3). The best were taken directly into the Palace service or distributed to high dignitaries; the rest were hired (for 25 àkbs a head) according to Navagero [1553]: one ducat according to Busbecq; two ducats according to Koç Beg) to Turks in Asia Minor, and later—already by the middle of the 16th century (Navagero, Busbecq, Chesneau)—in Rûmeli as well, to work on the land for some years, learn Turkish and assimilate Muslim ways (the term for this training period was Türk ticerinde olmak, cf. KKO, 115 ff.). The lads were cared in as required to fill vacancies in the ʿâdami odâb (see Şâdiyîm Ocloan).

In principle the devşirme was not applied to children of townsfolk and craftsmen, as being sophisticated and less hardy than peasant lads (KKO, 18, 59), though these rules were often abused: devşirme were levied regularly in Athens in the middle of the 16th century (cf. the chronicle of Echthesis Chronica, ed. S. Lampros, 1902, 86). As married lads were not taken, the Christian peasantry often married their children very young (Gerlach, 306). Regions which had submitted voluntarily to the Ottomans seem to have been exempt from the devşirme (cf. Des Hayes): certainly exemption is specified among the terms granted, for example, to Galata (cf. E. Dalleggio d'Alessio in Ṭu'mmînî xî, 1939, 115-24), Rhodes (cf. Charrière, Négociations, i, 92; Fonanus in Lonicerus [1584 ed.] i, 423) and Chios (cf. P. Argenti, Chiusi Vincita, 1941, cxiii, 208 ff.). The inhabitants of Istanbul, perhaps as being townsmen, were in practice not liable (Gerlach, 48; and cf. the story in the Historia Patriarchica [Bonn ed. 167, discussed by J. H. Mordtmann in BZ, xxxi, 1912, 129-144] that Mehemmed II had granted them amân). Moldavia and Wallachia were never subject to the devşirme (Cantemir, 1734 ed., 38, and cf. KKO, 14 n., Jorga, iii, 188); the Armenians seem to have been exempt at first (Thevet, 799 b, but cf. KKO, 17), but were so no longer in later years (Koç Beg). Freedom from the devşirme, temporary or permanent, was also included occasionally among the exemptions from taxes and ʿawârid granted to various groups of râyâ in return for services rendered directly to the State, e.g., miners, guardians of passes and dwellers on main roads, or to some dwellers on waqf-lands (KKO, 109-14; Ö. L. Barkan, Kanunlar, 72, 85; relazioni di Garsoni [1573] in Alberi, 3rd ser., i, 396); these exemptions were not in fact instantaneous (cf. B. Djurdjev, Bosna, 1265 b above), there is a record of a recruitment of 1000 lads for the Janissaries from the Muslim population of Bosnia and Herzegovina as early as 921/1515 (Ferîdîn, i, 472). Here the converted Bosnians are called Poturmâk (cf. A. V. Soloviev, in Bysantion, xxiii (1953), 73-86); they are called Pioter pîvînt in a document of 1667 (KKO, 105-6). The lads Potur ogullari in a document of 998/1590 (KKO, 108), which defines them as 'circumcised but ignorant of Turkish', and which warns the beylerbey against recruiting boys who are 'Türkîlesmiş', i.e., Turkish-speaking. An undated list preserved in the Topkapı archives (published by R. M. Meric in 1st. Enst. Dergisi, iii, 1957, 35-40) gives the names and descriptions of 60 boys (whose ages range from 13 to 19) recruited from the kadî of Yanipazar; the names show that 44 of them are Muslim-born and 16 Christian-born, the latter being identified both by their (new) Muslim names and by their (former) Christian names. It is said that these Muslims of Bosnia were not distributed for training, but mostly drafted straight into the Palace or into the ağaş of the bosânit (q.v.) (KKO, 19, referring to the Kâusînî-ye Yenîcerrâyân, (Gerlach, 42; and cf. Ahmed I—see BiBi).

Many of the European reports suggest that the devşirme was made at regular intervals, estimates ranging from every five years to annually (references in Zinkeisen, iii, 216 and Lybyer, 51). More probably it took place on an ad hoc basis according to need—infrequently in the reign of Mehemmed II, when the Janissaries were relatively few and pêndît prisoners abundant (cf. Cippico [1472] in Sathas, Docs. in-
édis . . ., vii, 281: ‘se non possono avere prigioni’ = Basle ed. 1544, ii, 51; Iacopo de Promontorio-Campis (ca. 1480) ed. Fr. Babinger, 1957, 36: ‘manchandali [i.e., prisoners] preda rapa de jifolgi de christianis subdisi soi’, then at more and more frequent intervals throughout the 16th century, until at the end of the century the ranks of the Janissaries were in effect opened to all comers; thereafter, when recruitment was no longer dependent upon the devshirme, levies were spasmotic.

Again, many reports maintain, erroneously, that the devshirme was recruiting an extensive proportion of children, often stated to be a ‘tithe’, though estimates range as high as one in five (Spandugino, Thevet) and even one in three (anon. report of 1582 in Albéri, 3rd ser., ii, 245; Palerne [also 1582]). A fermán, said to be of the early 16th century (KKO, 92 ff.) shows that—at that time, at least—the number of boys to be levied was calculated beforehand on the basis of one boy (aged 14 to 18) from every 40 households.

Reports of the numbers taken also vary greatly. Postel’s being as high as 10,000,000 a year. According to Gerlach (34) a devshirme of 1573 (documents in KKO, 103 ff. show that it covered both Rúmeli and Asia Minor) produced 8000 boys. Sa’d al-Din calculated that in the 200 years and more that it had been in force the devshirme had produced over 200,000 converts to Islam (i, 41), i.e., an average of 1000 a year, which is the figure given by Šah-e’dán-ládžáde (loc. cit.). However, there was much abuse by the recruiting officers, who levied more children than their warrants permitted, selling the surplus for their private profit (Spandugino); they also grew rich on bribes, both from Christians who bought their children off, and from non-Christians who smuggled their children in (Gerlach, 48, 306; Roe, Negotiations, 534; Selaník 263 f., referring to the devshirme of 998/1589-90, for which cf. the documents in KKO, 102 f.)

When the devshirme was extended to Asia Minor is not clear. In 1456 the Greeks of the west coast appealed to the Grand Master of Rhodes for help against the Turks ‘who take (Trepvouv) our children as prisoners’ (Miklosich and Müller, c 257). In 981/1573-4 there was an extensive devshirme, according to Lithgow (257). In 981/1573-4 there was an extensive devshirme of 534; Selaník 263 ff., referring to the devshirme of 981/1573-90, for which cf. the documents in KKO, 102 f.)

The devshirme reached its greatest extent during the 16th century. By the beginning of the 11th/17th century, the ranks of the Janissaries had become so swollen with Muslim-born ‘intruders’ that frequent recruitments by devshirme were no longer necessary. Although according to Lithgow (Rare Adventures, 1906, 106 and 149) the devshirme was ‘absolutely abrogated’ by Ahmed I, levies were made throughout the century, but sporadically: according to the relations of Foscarini (1639) there had then been no levy for twelve years (Barozzi-Berchet, v, vii, 86). There was a devshirme however in the next year, 1048/1638 (Fedhleke, ii, 211), and it was not, as Hammer believed (GOR, v, 244, and hence Zinkeisen, iv, 166), the last; for according to Rycaut (Present State, i, ch. iv) the Janissary leader Bektash Agha demanded (in 1061/1651) that henceforth the ‘yearly’ collection of children should be abolished, and only the children of Janissaries be admitted ‘to serve in the Grand Signior’s service’; and Ewliya Celebi (i, 598) speaks of a devshirme in Rúmeli every 7 years, when 7-8,000 boys were collected at Úsküb, brought to Istanbul, and placed directly into the various oğlaqs (the preliminary training in Anatolia evidently being by now abandoned, cf. KKO, 24 f.). Rycaut found that in his time (he was in Istanbul from 1660) the devshirme was ‘a great part grown out of use’ (op. cit., i, ch. 18) and ‘wholly forgotten’ (iii, ch. 8); so too Quirini (1676) reported that there had been no devshirme since 1663 (Barozzi-Berchet, vii, 160, and cf. Hammer GOR, vii, 555), and Morosini (1680) spoke of it as taking place only every twenty years or so (op. cit., 219); article 3 of the Ottoman-Polish treaty of Buczacz (1683/1672) provided that the inhabitants of Podolia would be exempt if ‘a devshirme is ordered’ (Rágáth, ii, 88 f., Hammer-Purgstall, GOR, vii, 91); there may be a connexion between this and an attempt to carry out a devshirme in Greece in April 1705 (Vakalopoulos, 292). This is the latest record of a devshirme so far known, though Uzunçarşı has found a berad of 1150/1736 exempting a Christian subject from taxes and his son from the devshirme.

References in European travel-books etc. must be treated with caution, for authors frequently borrow without acknowledgement from their predecessors: thus the reference in Rycaut (Present State, i, ch. 10) to an annual devshirme of
2000 boys mostly from the Morea and Albania derives, presumably via Withers, from Bon (Barozzi-Berchet, vi/1, 77), who was writing 60 years earlier, as does that in Baudier, and the account in B. de Vigenère's Illustrations (1650 ed., col. 49) largely from Postel. The following references seem to be independent: Spandugino, Petit Traité, ed. Schefer 1896, 102 ff.; 144 f.; = Sathas, Documents inédits, ix, 212 ff.; 225; J. Chesneau, Le Voyage de M. d'Aramon, ed. Schefer 1887, 44 f.; A. Geoffroy, Brieve Description (appendix to preceding) 242 f.; G. Postel, De la République ... 1560, iii, 22 ff.; A. Thevet, Cosmographie Universelle, 1575, 799 b, 808 b, 817 b (engraving); N. de Nicolay, Navigations, 1568, 79 ff.; S. Schweiger, Neue Reisebeschreibung, 1608, 168 ff.; Busbecq, De Aece ... 1581, 152 f. = Engl. tr. by N. Tate, 1694, 400 f.; J. Palerne, Peregrinations, 1606, 412 f., 502 f.; H. de Beauvoir, Relation Journalière, 1629, 68; L. Des Hayes, Voyage de Lévant, 1624, 137 ff.

These accounts can be controlled from the archival-material given by I. H. Uzuncarsılı in Osmanlı Devleti tarihünden Kapıdkulu Ocaklar, i, 1943, 1-141 (this includes nearly all the documents published by Ahmed Refik in Edebiyatî Fakültesî Medînu'stâv, v, 1926, 1-14, and on it is based I. H. Uzuncarsılı's article Devşirme in IA); Uzuncarsılı refers frequently to a work Kâsâin-i Yeniletmiş in his private library: this seems to be identical with the work, composed under Ahmed I, which is described in Ist. Kit. Tarih-Cografya Yâzmaları Kataloqları, i/io, 813 (MS Esad Ef. 1968) and of which MS Revan 1350 contains another copy (cf. L. Forrer in Isl., xxvi, no. 62).

DEWE' [see DAWLA].
DEY [see DAY].

DHABIHA: a victim destined for immolation according to Muslim law, in fulfilment of a vow, najhr, for example, or for the sacrifice of 'abiba, or on the occasion of the feast of the 10th day of Dhu 'l-hijja (then called 'abiyya), or in order to make atonement for certain transgressions committed during the hadid (the victim in this case being known as auda).

This dhabiha must be slaughtered according to a strict ritual known as dhahi'a. Its form does not differ from the ritual slaughter of animals permitted as food: hence it is with this type of slaughter that we shall now concern ourselves. The differences between the various schools of law in this regard are comparatively unimportant. However, on this question, as with the rest of fikih, in order to adopt not only a theoretical but also a sociological point of view, it would be necessary to show what the actual practice on this matter has been throughout the world of Islam as whole. On this subject we shall limit ourselves to a single observation.

The matter is briefly referred to in the Kur'an (V, 4, vi, 147) and dealt with at greater length in the collections of traditions and the texts of fikih.

1. What animals are proper subjects for ritual slaughter? The list does not coincide exactly with that of the animals that are permissible as food. For in the first place there are those animals which may be eaten without any necessity of ritual slaughter—grasshoppers or fish, for example (these latter, indeed, may be eaten even if found dead); in the second place there are special rules, which are not our present concern, applicable to hunting, and finally the foetus which is almost at term is permissible as food if its mother has been ritually slaughtered. On the other hand it is recommended that animals which are not lawful food should be slaughtered according to ritual in order to avoid any prolonged suffering. Nevertheless it is, in general, with a view to being able to eat the animal concerned that a ritual slaughter takes place, and this is the more so since the dhabiha, the sacrificial victim, is normally eaten. It may be remarked that a ritual slaughter makes the flesh of the animal lawful even if the animal is already sick or mortally wounded and the slaughter does no more than accelerate its end.

2. Who may perform ritual slaughter? It is lawful, although blameworthy, for the people of the Book to perform it on behalf of Muslims. On the other hand it is in no way prohibited, nor, even, is it reprehensible (contrary to a curious superstition which prevails in North Africa, for example) for a woman to kill an animal such as a chicken. (One observer has reported that at Tangier, if women are of necessity obliged to do this, there is a place a symbolic symbol between their thighs). All those authorized to act as slaughterers must be in possession of their mental faculties.

3. How is the slaughter (dhahi'a) effected? Four methods of killing may be distinguished of which only the first two need concern us: the dhahiha; the nahr or nafr (see below); the wounding or 'udhr (which is important with regard to the theory of hunting); any other method of killing. For the dhahiha to be validly put to death and the animal concerned to be permissible as food then either the dhahiha or the nahr should be employed according to the circumstances. Otherwise the dead animal will be regarded as carrion (mayta) and therefore legally unfit for consumption except in the case of absolute necessity. At the moment of slaughter it is obligatory to have the nahr, for the nahr is applicable only to camels (there are some differences of opinion among the schools as to the obligatory or simply praiseworthy character of these provisions). The dhahiha consists of slitting the throat, including the trachea and the oesophagus; (as for the two jugular veins there are divergencies between the schools); the head is not to be severed. Preferably the victim should be laid upon its left side facing in the direction of the kibla. As for the nahr, it consists of driving the knife in by the throat without it being necessary to cut in the manner prescribed above, the camel remaining upright but at the same time facing the kibla. There are some casuistic discussions regarding the nature of the instrument to be used. More important is the fact that many provisions of fikih bear witness to an anxiety that the victims should be spared any unnecessary suffering. In particular the knife ought to be well sharpened; the practice of collective slaughter is condemned, as too is that of cutting off part of an animal or removing its skin (except in the case of fish) before it is dead.

Bibliography: The collections of traditions contain chapters on the subject—of a greater or lesser scope—such as Buhâri, tr. Houdas and Marçais, iv, 72; so too do all the books of fikih, usually in the context of hunting (e.g., Khalli, Mukhtasar, tr. Guidi, i, 315 ff., and tr. Bousquet, i, 85 ff.; Shirazi, Tanbih (tr. Bousquet, i, 108 ff.). We might also note the classical treatises of 'ishrail, which have not yet been translated—for example, Ibn Rushd, Bidâya; Shâ'ranî, Musâm,
DHABİHA — AL-DHAHABI

The natural properties of gold were studied by Muslim alchemists. Although they still accepted the theory of transmutation of metals (cf. G. Sarton, Introduction to the history of science, 2/ii, 1045), they were well acquainted with various chemical processes, such as cupellation, the separation of gold and silver by means of nitric acid, and the quantitative chemical analysis of gold-silver alloys (cf. E. J. Holmyard, The makers of chemistry, Oxford 1931, 77).

In the pre-Islamic period, the use of gold in jewellery, ornamental crafts, in manuscript illuminations and in calligraphy, was widely practised during the Middle Ages (Ahmad b. Mir-Munghl, Calligraphers and painters, transl. V. Minorisky [Erer Gallery of Art Occasional Papers, vol. 3, ii], Washington, D.C., 1959). A prominent place in the gold-smithing production was held by Bagdad (cf. C. Cahen, Documents relatifs à quelques techniques tirées de la période des onzième siècle, in Ars Islamica, xv-xvi, 1951, 23-8). Gold woven robes and gold vessels, whose use was condemned by Muslim tradition, were also in demand. The fashion of collecting such luxury objects prevailed particularly because he could not subscribe to the conditions made by the founder of the institute concerning the canon law school of the Professor of Tradition.

The fields of research he mostly excelled in were Tradition, canon law, and history. He had an indefatigable energy, having been at his studies day and night for many years. It is certain that he was the most learned of his time and is greatly missed by his disciples. His life and work are a source of inspiration to all those who seek knowledge and wisdom. His memory will always be preserved in the hearts of those who knew him and in the annals of Islamic history.
and night, even when he was struck by blindness which befell him, according to Abu '1-Fida and 'Umar b. al-Wardl, in 743/1342-3, or, according to others, as early as 741/1340-1. He had a great many excellent pupils among whom we particularly mention 'Abd al-Wahhab al-Subki, the author of the Tabakdt al-Shafi'iyya al-Kubra, whose father Tafruz al-Din al-Subki, the famous Shafi'i doctor of law, was his most intimate friend.

His many-sided qualities were acknowledged both by his contemporaries and his later biographers. By the latter he was commonly referred to as muhaddith discourse of the age and kutubi al-huffds ("the seal [i.e., the last] of the huffds"). Al-Kutubi praised him with select poetical phrases. According to Salah al-Dln al-Safadi, "he had nothing of the rigidity of the traditionalists or the stupidity of the historians; on the contrary, he was a lawyer of spirit, and was at home in the opinions of people". Ibn Haidar al-'Askalani composed a beautiful haflde in praise of his excellent qualities.

On the other hand, we also find opinions adverse to his reputation. His own most eminent pupil al-Subki reproached him with reviling even his own authorities. According to Ibn al-Aswad before him and or al-Suyuti after him; however, some of his works have attained a high standard in East and West alike. Like practically all the post-classical Arab authors he too was a compiler, but his works are distinguished by careful composition and constant references to his authorities. It is for these peculiarities that his works on Tradition, especially on the 4im al-rij'ul, have become very popular.

A) History. His greatest work is the Ta'rikh al-Islam ("History of Islam"), printed together with the Tadhkirat al-huffd, i.e., the biographical list of Muhammad's Companions, based chiefly on the Usd al-ghdba [q.v.] and the Tabakdt al-frurrd al-mashhurin, published in 7 parts in al-Hiddya (an Arabic periodical in Turkey), iv, 1331/1912-3 and ff.

The tabakdi-works; they have far greater historical value than the general narrative has.

The Ta'rikh al-Islam was continued by at least six hands; three of these continuations are extant: 1) from 701/1301-2 to 740/1340-40 by al-Dhahabi himself; 2) from 701/1301-2 to 786/1384-5 by 'Abd al-Rahim al-Subki and his son Ahmad (died in 826/1422-3), only the latter's work being extant; 3) from 701/1301-2 to 790/1388 by Ibn Kadi Shuhba (died in 851/1447-8) in his Al-S'adam bi-ta'rikh al-Islam.

Owing to the voluminous character of the Ta'rikh al-Islam it was abridged many times. Six abridgments were made by al-Dhahabi himself: 1) Kitab duwal al-Islam or Ta'rikh al-saghir ("Small History"), published at Haydarabad in 1337/1918-9. 2) al-'Ibar fi sakhbor al-bashar mimman 'abar (Muntakhab al-ta'rikh al-kabir), an abridgment of the biographical "classes".

Whereas these two works combined give a fairly good synopsis of the whole of the Ta'rikh al-Islam, the following are extractions from the biographical "classes" (tabaks) only.

3) Ta'dkirat al-huffds, published at Haydarabad in 1332-3/1914-5 in five volumes. The best known abridgment and continuation of the work was done by al-Suyuti [q.v.] under the title Tabakdt al-huffds, published by F. Wustenfeld at Gottingen in 1833-4. Al-Suyuti's continuation was also published at Damascus in 1342/1928-9.

The Ta'dkirat al-huffds is also the basis of the Tabakdt al-Shafi'iyya of Ibn Kadi Shuhba.

4) al-Islaba fi ta'ddiri asm al-'Sakiba, an alphabetical list of Muhammad's Companions, based chiefly on the Usd al-ghdba of Ibn al-Azhfr, printed at Haydarabad in 1353/1871-2.

7) Ta'rîkh al-Islâm wa 'l- 'Abbâbid wa 'l- 'Abbâsîd, printed in 2 vols. at Cairo n.d.  
8) Siyar a'lam al-nubalâ', printed in 2 vols. at Cairo n.d.  
9) al-Mukhtasar min Ta'rîkh al-Islâm wa 'l-Maghrib wa 'l- 'Abbâsid wa 'l- 'Abbâsîd, published at Lucknow in 1301/1883-4, at Cairo in 1325/1907-8, at Haydarabad in 1329/1911-1331/1913-1, and the letter kamza only at Istanbul in 1304/1886-7. It was extracted by Ibn Hadjar al-Adili al-Ayyubi.

Two other historical works of al-Dhahabi are extant:

Muhassar il-Ta'rîkh Baghda'di li 'bn al-Dubayth, a synopsis of the history of Baghdad according to Ibn al-Dubaythi (died in 637/1239-40).

Muhassar akhbar al-nawaziyyin li 'bn al-Kifti, a transcript, c. 699-700/1299-1301, in the late 8th/i4th century, and for the fine muslin industry, which has had throughout history a premier position in this province of rivers and flooded plains. The city is situated at the head of the waterways about a hundred miles from the sea, in a region which has had throughout history a premier position in this province of rivers and flooded plains. The Hindî capital was at Vikramapura, then favourably situated on the Dâhshehwarji river, where the line of old fortification can still be seen, but more important are the Mosque and Mausoleum of the Mongols in 651/1253, and the Mosque and Mausoleum built by him in the provincial Mughal style, wrongly called by the people the Shâyista Khân style of architecture. Though the Mughal seat of government was transferred to Murshidabad in 1717, Dacca never lost its importance. It remained the centre of the flourishing muslin industry and many other luxury arts of the East, which attracted the foreign merchants, and as early as the middle of the 17th century we find here factories being established by the Dutch, French and British.

With the introduction of British rule and the growing importance of the city of Calcutta, Dacca lost its premier place in Bengal. In 1905 it was again made the capital of the newly created province of Eastern Bengal and Assam—an administrative measure to favour the Muslims which was annulled because of the growing opposition from Hindî nationalists. In 1906 Dacca witnessed the foundation of the All India Muslim League with the object of protecting the rights of the Muslims of the sub-continent. Many of the red-faced buildings of the newly-developed Ramna in Dacca were built at this time. In 1921 the University of Dacca was founded mainly to meet the demands of the local Muslims. It became a centre of both education and political training for the rising talents of Muslim Bengal. Today Dacca (population 432,853 in 1951) is the second capital of Pakistan and is fast growing century, for the lively court maintained by the romantic Sultan Ghâyib al-Din A'tâm Shâh in the late 8th/i4th century, and for the fine muslin industry through the period. The place is full of ruined tombs, mosques and minarets, which are all associated with the names of the Mughal officers. Of the princely governors Shâh Shudâ, the ill-fated brother of the Mughal emperor Awrangzib, and Muhammad A'tâm, the latter's son, had a great reputation in Eastern India. From their time have been inherited the Bâg Khât (the great market quadrangle), the Idgâh and the fort of Awrangâbâd, commonly called Lâ' Bâgh, the last still showing its terraced walls, bastions, gateways, a mosque and a beautiful mausoleum (partly in marble) of Bibi Parâ, one of the wives of Muhammad A'tâm. Of the other governors Mir Dâjumâl is better known for his conquest of Assam, and Shâyista Khân for his twenty-five years' service in Bengal, his last conquest of Câltgân in 1076/1666, his lavishly kept harem, and above all the numerous mosques and mausolea built by him in the provincial Mughal style, wrongly called by the people the Shâyista Khânï style of architecture. Though the Mughal seat of government was transferred to Murshidâbâd in 1717, Dacca never lost its importance. It remained the centre of the flourishing muslin industry and many other luxury arts of the East, which attracted the foreign merchants, and as early as the middle of the 17th century we find here factories being established by the Dutch, French and British.
into a modern city with its industrial suburban town of Narayanganj. The old Mughal city still survives with its numerous mosques and mausolea, but its lanes and by-lanes are being broadened, in line with the city's developments. Dhaka shares fully in the rebirth of the Muslims of Pakistan.

**Dhakir**, Kasm Bey, the foremost Adharbaydjan poet and satirist in the first half of the 19th century. He was born probably in 1786, at Penahabad in the Khânate of Karabag (eastern Azerbaijan). His foster father, Prince Konstantin Tarkhanov, who took advantage of illegal actions in which a nephew of the poet was involved, had to have him deported to Baku for some time. Upon the intervention of his friends he was allowed to return to his family estate, where he spent most of his lifetime.

In his satirical poetry he relentlessly castigated the religious fanaticism of the Mollâs as well as corruption and all kinds of abuses by the beyzade—the local aristocracy—and the Czarist administration officials. His criticism of the latter resulted in his being persecuted by the governor of Karabagh, Prince Konstantin Tarkhanov, who took advantage of illegal actions in which a nephew of the poet was involved, to have him deported to Baku for some time. Upon the intervention of his friends he was allowed to return to his family estate, where he spent most of his lifetime.

There have been preserved and partly published (see M. A. Resulzade in the bibliography to this article) a number of complaints and appeals for help (zîkayat-nâma) which Dhâkir addressed, in brilliant verse, to influential fellow-countrymen such as Mirza Fa'iz 'Ali Akhund-zâda (q.v.) and the first Adharbaydjan novelist Isma'il Bey Kutkashinlî (who had risen to the rank of general in the Russian army). His much esteemed style was obviously influenced by the great 18th century poet Molla Pushâr (1704-94), but he preferred the simple, popular lyric forms applied by the 'âbâi folk literature, such as "Koîma" and "Kerayil" but he also wrote a number of poems in Persian and in traditional metric forms, as well as some pieces in rhymed prose (e.g., Darvish-i Mâ). His fables in verse (Tulhâ ke shir, shir, tâlûk ke shir, tâlûk ke shir etc.) followed the widespread oriental tradition set by the "Kalila va Dimna", but may be also influenced by Krolov's (1768-1844) genial adaptations. In his works a number of Russian words—mostly taken from the terminology of administration and selected to suit his satirical purpose—made their first appearance in Adhari Turkish.

The first publications of poetry by Dhâkir seem to have appeared in 1854 (in the official Tiflis newspaper Kanka) and 1856 (within an anthology published in Temir-Khan Shura—now Buiunaks, Daghistan—by Mirza Yusuf Nesersov Karabaghi).

Although there is reason to believe that Akhund-zâda had planned a complete edition of Dhâkir's works after the latter's death in 1857, no such edition was printed in the pre-Soviet era.
kdghadh (pron. kdghaz), 'paper', appears in early 16th century Hindi texts as kdgad, also in Marāṭhī, Dakhāl Urdu, and in the Dravidian languages Kannada and Telugu (kdghad'); similar variations in gunbādh: gunbad, 'dome' (Kann. gunbadā).

DHAMĀR (or DHMĀR, see Yākūt s.v.), a district (mīkhāf) and town in South Arabia, south of Ṣanʿa', on the Ṣanʿā'-Adan road, near the fortress of Hīrān. The district of Dhamār was very fertile and had rich cornfields, splendid gardens, and many ancient citadels and palaces. On account of its fertility it was called the Misr of Yaman. The town of Dhamar used to be the headquarters of the Zaydi Imams of Ṣanʿa'. A1I (the real prophet) but originally an agent of the MuḤāṣṣīnīyīn, and ascribed also to al-Shalmaghānī (Hamdānī mentions a Rūḍjma), al-Sam'āni, al-Kawna, Hirran, Baynun and Hakir.

Hofner, Beiträge zur hist. Geogr. des vorislam. Al-ʾIjhammiyya, "the people of the blame", in al-Malāʾiṣ; al-Dawṣīrī (or Asadi or Sadusī), in al-ʾIjhamīyya, says that while the 'Abābiyyīn and the Muṭaṣallītīn, whose niceties of psychological analysis led them into seeming to assert that a man could be condemned for a sin he had not yet committed, Multāhar al-Maḍūsī (K. al-ʾAbī b. al-ʾĪlaʾrāʾīk, ed. Cl. Huart, Paris 1916, v. 143) gives a different explanation of the same name. Also he ascribes the name to one group of Karrāniyyīn (145).

(D. J. BURTON- PAGE)

DHANAB [see NUDJUM].

DHĀR, an ancient town on the scar of the Vinḍyās overlooking the Narbādā valley, and since 1356 the headquarters of Dār district, Mādhyā Pradeś, India. It stood on the main routes from Dīhlī to the Dakhān and to Gudjarāt. From the 3rd/4th to the end of the 7th/13th centuries it was a capital of the Paramāras who ruled Mālāwī first as Rāshīrakāfī feudatories and then as independent monarchs. The most powerful of these, Vākapītī II (or Muḥāṣṣīn) and Bhīḍjadeva I, receive mention in many Muslim histories of India. Bhīḍjadeva's troops may have joined Anandapala in 399/1008 against Māhāmūd of Gharzmīn, while Dīgasdevī, 456/1067-492/1104, defeated Gharzmīnī forces in the Pāndjāb. Undermined by Cawluķya and Yādvā asonslaughters and attacked by Kuṭb al-Dīn Aybak in 566/1199, Iltutmīṣ in 632/1234 and Dīgal al-Dīn Khālīdī in 690/1291 and 692/1293, the Dīrām Paramāras broke up in confusion at the end of the 7th/13th century.

In 705/1305 ʿAlī al-Dīn's general ʿĀyn al-Mulḵ Multānī defeated the Paramāra Rāḍīlā Māhāladeva, and his minister Gogadeva, slaughtering both. Dār was taken and ʿĀyn al-Mulḵ appointed governor of Mālāwī. Until 804/1401 Dīrām remained the seat of the governors of Mālāwī appointed from Dīhlī. In 731/1330-31 Mūḥāṣṣīn b. Tughluk struck token coins at Dār. He himself was at Dār during the famine of 736/1335. His appointment of ʿĀzīz Khāmāmīr as governor of Dār, with instructions to curb the amārīn-i sāda, led to the massacre of over eighty of them at Dār and precipitated the fatal revolts of 745/1345 onwards. The last governor, Dīlāwār Khān [q.v.], was appointed prior to 793/1390.

From 801/1399 to 804/1401 Dīlāwār Khān entertained Sultan Māhāmūd Tughluk, a refugee from Timūr, at Dār, but on Mūḥāṣṣīn's return to Dīhlī Dīlāwār Khān declared himself independent at Dār. His son, Alp Khān, succeeded him in 805/1401, and his title Hūṣān Shāh. Accused of particide, he was attacked at Dār and carried off prisoner by Murāṣīf Khān of Gudjarāt, whose brother Nasrāt Shāh was appointed governor at Dār. His extortion provoked rebellion and he was expelled from Dār, where Hūṣān Shāh was reinstated in 812/1408. Thereafter Hūṣān Shāh made Māndū his capital, as did his successors. The importance of Dār consequently declined though during the struggle between the sons of sultan Ghīyāth al-Dīn, in 905/1499-50 Nāṣir al-Dīn made Dār his headquarters, as did his son, Shīhāb al-Dīn, when he rebelled in 916/1512.

In the Mughal period, though visited by Akbār and Dīhāṅgrī, Dār was merely one of the sixteen
Dhār — Dharrā

219

māhāls of Māṇḍū sarkar, chiefly notable, as befitted Plrān-i Dharrā, for extensive suyurghal grants. Its importance, as a strong fort on the Dihl-Dakhan communications, revived with the Mughal-Māṇḍū struggle. South Māṇḍū was first invaded in 1125/1719 and in 1125/1703 the fawdvdar of Māṇḍū took refuge from the Māṇḍūs in Dhār. From 1125/1719 Şahhān granted mokāsās to his generals in southern Māṇḍū, and from 1125/1702 Dhār was allotted to Uddājī Pāwār. The Mughal governor Girdhā Bahādur and his cousin Dayā Bahādur refused Uddājī's demands and repelled Māṇḍūrā attacks until both were killed at the Amrābāra pass below Dhār on 25 Dūmādā 1 1141/29 November 1725.

From 1141-1279 the Māṇḍūs collected dues from Dhār māhāl, though the fort, strengthened by Girdhār's son and successor Bhawānī Rām, held out and Muhammad Khān Bangāsāng defeated the attacks made on Dhār from 6-18 Ramānād 1145-1727 March 1731 by Malhār Holkār. But on 15 Ramānād 1150/6 January 1738 Niẓām al-Mulk conferred Māṇḍū on the Peshwā, who allotted the Dhār territories to Yaghwānt Rāo Pāwār. (Dhār fort was only taken on 6 Shīriwāl 1153/25 December 1740). Dhār state, which came under British protection in 1234/1819, remained under Pāwār rulers until 28 May 1948 when it was merged in Madhya Bhārat, and in 1956 in Madhya Pradeś.

Wright, The sullūns of Delhi; their coinage and mythology, Delhi 1936, 169; R. Sin, Māla in translation, Bombay 1936; History and culture of the Indian people, vi, the Delhi sultanate, Bombay 1960. See also Dilāwar Khān; Māṇḍū; Māṇḍūdār.

2. Monuments. From the architectural point of view the monuments of Dhār are important only as illustration of the earliest phase of the Māṇḍū style, one of the characteristic provincial styles of Indian Islamic architecture (see Hind, Architecture). The earliest building is a tomb enclosing a marble mābād of Kamāl al-Dīn Mālāwā (locally called Khāmāl Mālāwā), a disciple of Niẓām al-Dīn Āghātī of Dihlī; the oldest grave inscription in this enclosure is of 795/1392-3, which records that the ruling sovereign was Māhūmūd Tughlūk, whose local representative was Dilāwar Khān [q.v.]. The slightly later Dīlāwar Khān inscription is generally rendered as the dust which remains clinging to the hand after the slightest touch, and interpreters of this have explained dharrā by two images, both of which go back to Ibn 'Abbās, 1. From the most common phrase of the Qur’ān, its usual meaning of the root: powder, dust. The dharrā is the dust which remains clinging to the hand after the rest has been blown off (the sensecollected in tasfir, for example, by Khāzīn in xcix, 7-8); or the weightless dust, seen when sunlight shines through a window (id., iv, 40). The image of the “red (black) ant”, by a kind of equivalence dharrā-namāl (al-Zamānhāshari): “the weight of the head of a red ant”, (Khāzīn in xcix, 7-8); “little ant” (xcix, 7-8); “little red ant” (x, 61), etc.—The dharrā is also said to be equivalent to “the hundredth part of a grain of barley”.

In translation dharrā is generally rendered as “atom” (cf. R. Blachère: “weight of an atom”, except for iv, 40: “weight of an ant”). L. Massignon, Passion d’al-Hallādī, Paris 1922, 550, gives dharrā in the sense of atom with nātā ("point") in order to...
explain the diawhar fard ("elemental substance") of the kalâm and the falsafa. It is noticeable, however, that dharrâ was not generally used as the technical term for the philosophical atom, and is not of Democritus, Epicurus and the Muslim "atomists." Two technical expressions were used in preference: djus' [q.v.], "part" (indivisible), and djawhar fard. On the other hand, modern Arabic readily renders the atom of modern physics by dharrâ (djus' becoming "molecule").

Thus Arabic vocabulary is careful to distinguish between three terminologies: 1) physical sciences: dharrâ, atom; 2) mathematical sciences: mukhtâr, geometrical point (thus Ibn Sînâ, Risâla fi 'l-Hudâd); 3) philosophy: djus' and djawhar fard, "atom," in this way to emphasize that the last usage does not include the atom of modern physics. (L. GARDET)

DHÄRT. In Muslim philosophy this term is used in three terminologies: 1) philosophy: dhârât (from the point of view of this dhârti, is the conceptually and determinate. In this pantheistic world-view the mystic, as being constitutive of the substance which is a essence. The term dhârti, from the point of view of this ambiguity in meaning, is especially relevant to the philosophico-theological doctrine of God and His Attributes. The Mu'tazila and the philosophers deny Divine Attributes and declare God to be a simple substance or pure Essence; in this case simple substance and simple essence coalesce and are identical with one another. The Attributes are then construed either as negations or as pure relations. Although both the Mu'tazila and the philosophers agree in the denial of Divine Attributes, their reasons for doing so are very different. The Mu'tazila were moved to deny Attributes through the theological anxiety that affirmation of these would be contrary to strict monotheism. The philosophers' reasoning, on the other hand, is the result of the rational search for a simple being from which all multiplicity and composition—existential and conceptual—should be excluded, but which at the same time should "explain" the multiplicity of existing things. In this they were followers of Plotinus. The Islamic orthodoxy devised a formula according to which Attributes are "neither identical with God nor other than Him".

The Sûfî theosophy, which became widely influential during the later middle ages of Islam, found another way of reconciliation between philosophy and theo-poetry. According to this theory God, as absolute, is pure and simple Being without any Attributes; but through a series of "descents" or "determinations" He becomes progressively determinate. In this pantetheistic world-view the mystic, in his upward march towards communion with God, passes through a series of theophanies (tablîyât) from the levels of Names and Attributes to the final theophany of the Absolute.

DHÂT AL-HIMMA [see DHU 'L-HIMMA].

DHÂT AL-SAWARÎ [see SUPPLEMENT].

DHÂTî, Turkish poet, b. 875/1471 in Balikesir. The son of a modest bookmaker, as a boy he practised his father's craft but soon gave it up, moving to the capital during the reign of Bayezid I where, following his natural inclinations, he devoted his life to poetry. An easy and prolific versifier, he made a living from the gifts of the notables of the day, to whom he dedicated kaşîadas (among others, to the sultans Selim I, Suleyman I, to Djâfer Celibi and Ibn Kemâl). In his old age he practised geomancy in a shop which soon became a sort of literary club for men of letters, where Dhâtî helped and encouraged many young talents (such as Tâshîhdâlî Yâyâ

Apart from a voluminous diwan, his major work is Shām ʿe Pervane, a mathnavī of nearly 4000 couplets interspersed with ghazals, which develops one of the favourite themes of mathnavī literature (for a fairly good copy, see Süleymanîye (Lala İsmâ'il) no. 443).

With no regular education and training, Dhâti taught himself all the knowledge which was required by a diwan-poet. Much appreciated by his contemporaries and early tadhkīrī-writers, unduly neglected later, Dhâti was a poet of remarkable talent and skill, and contributed to the refinement of language and style of diwan-poetry, and thus became a link between Nejdâtî and Bâkî.

DHAŅK — DHAWK

DHAŅK, "taste", is a technical term used in philosophy, in aesthetics (especially literature), and in Sūfism.

1. In philosophy [see FALSÅFÅ] dhawk is the name for the gustatory sense-perception. Following Aristotle, it is defined as a kind of sub-species of the tactual sense, localized in the gustatory organ, the tongue. It differs from tactual sense, however, in that mere contact with skin is not sufficient for gustation to occur: besides contact, it needs a medium of transmission, viz. the salival moisture. The salival moisture, in order to transmit tastes faithfully, must be in itself tasteless, otherwise it would impose its own taste upon the object of gustation, as is the case with patients of bile. The problem is discussed whether the tasted object "mixes" with the saliva and thus its parts are directly tasted, or whether the object causes a qualitative change in the saliva, which is then transmitted to the tongue. The answer is that both are conjointly possible and it is therefore held that if it were possible for the object to be transmitted without this moisture gustation could occur all the same, for example, vision, for which a medium is absolutely necessary.

2. In aesthetics, dhawk is the name for the power of aesthetic appreciation; it is something that "moves the heart". But although it is psychologically subjective, it nevertheless requires objective standards (ijdâf) for objectivity and verification, "just as the taste of sugar is private, nevertheless its sweetness is something universally agreed upon by consensus".

3. The aesthetic definition of dhawk already stands at the threshold of the mystic use of the term. In its mystical usage this term denotes the direct quality of the mystic experience. The Christian mystics have used this term e.g. in the ḥerôsis kardëlis and γένουσι of Bishop Diodochoe, although it would occur naturally to a mystic endeavouring to distinguish direct experience from discursive knowledge. The metaphor of "sight" is also often used, but dhawk has more qualitative overtones of enjoyment and "intoxication" (sukh) besides the noetic element which it shares with the term "sight". Thus, Djalâl al-Ḏin Rûmi says "you cannot appreciate the intoxication of this wine unless you taste it". Kamâl al-Ḏin in his Iṣâlahat al-sülahya states that dhawk is the first stage of wâdâd (ecstasy), the two further stages being shûk (drinking) and dhawk (bothering). According to some, however, wâdâd is a higher stage than dhawk. These distinctions, however, are later, and concern the doctrine of Sūfism rather than its practice.

Dhaṅk is also commonly used to denote insight or intuitive appreciation, generally of any phenomenon whatsoever, and implies the previous acquisition and exercise of a skill: a doctor, for example, on the basis of his previous experience be able to identify a novel disease by dhawk; or a historian, in face of conflicting evidence on a point, may be able to decide by a kind of "historical intuition".

Bibliography: In addition to the references above, and general works on philosophy and literary aesthetics, see al-THâNâWî, Dictionnary of technical terms, s.v.; al-Dîjmâgne, K. al-TâVîfâtî, F. RAHMÅN.

DHAŅK, MUHAMMAD İBRAHÎM ŞAYKH, Urdu poet b. Dihlî 11 Ḏhu l-Ḥijjah 1209/18 December 1790 (so Azâd; in 1203 according to a contemporary Calcutta newspaper, cf. Nawâ-i Adab, 45), the only son of Sh. Muhammad Ramadân, a trusted servant of Nawâb Lutf ʿAlî Kân of Dihlî. His early schooling in Persian and Arabic was in the mosque-school of Ḥâfiz Ḥulûm Rasûl Shawk, a poet and a pupil of Shâh Naṣîr (Shểtâ, 150), who inspired the young learner with a love for reading and writing poetry. Dhaṅk later became a pupil of Shâh Naṣîr and followed his style, but after some time, when a rupture had taken place between the pupil and the teacher, he began to write successfully in the style of the well-known masters of Urdu poetry, particularly Sawdâ. He was now attending madhâfâras and acquiring fame as a young poet (cf. Spranger, 222; Kazüm, Madmûd-aş-Nâgâ, ii, 385: Dhaṅk was about 17 when this was written). He intensified his study of the sciences (medicine, music, astrology, etc.) when an opportunity came for him to complete his education, and the technical terms of these stood him in good stead later when he came to write ḥâdîs. His reputation grew rapidly, and Mir Kazüm Husayn, an old class-fellow, introduced him to Aboz Şafaż, the heir apparent of Akbar Shah II, whose poetical compositions he was in due course appointed to correct, roughly from 1816 (cf. Karîm al-Ḏin, Tadkhîrâ-i Nâmânûn, 118; but cf. also his Tabâkâbî, 459). On presenting a ḥâsâda to Akbar Şah he received the title of Ḥikâm-i Hind, by which Şelta (between 1831-3) calls him. After the prince ascended the throne, as Bahâdûr Shah II, in 1837, Dhaṅk became his laureate, and his pay, formerly the first stage of wâdâd (ecstasy), the two further stages being shûk (drinking) and dhawk (bothering). According to some, however, wâdâd is a higher stage than dhawk. These distinctions, however, are later, and concern the doctrine of Sūfism rather than its practice.

Dhaṅk was of rather small stature, with a dark pock-marked face (the result of a childhood attack), a good memory, and knew a large number of Persian and other ceremonial court odes in the style of Akbar Shah he received many other favours after reciting his Tadhkīrâ-i Naṣîhâ, and thus became a link between Nejdâtî and Bâkî.

Dhawfr was of rather small stature, with a dark pock-marked face (the result of a childhood attack), bright eyes, and a loud but pleasant voice. He had a good memory, and knew a large number of Persian verses by heart. He was a religious-minded man, of a persuasion according to Karîm al-Ḏin's conflicting evidence on a point, may be able to identify a novel disease by dhawk; or a historian, in face of conflicting evidence on a point, may be able to decide by a kind of "historical intuition".

Bibliography: In addition to the references above, and general works on philosophy and literary aesthetics, see al-THâNâWî, Dictionnary of technical terms, s.v.; al-Dîjmâgne, K. al-TâVîfâtî, F. RAHMÅN.
He was a prolific writer, as his contemporaries (Sābir, Sayyid Ahmad Khan, Anwar, Azad and others) testify, but much of his work was lost in the disturbances of 1857-8. According to Shīfīna, who used to meet him occasionally, 106, and Sābir, 223, he did not arrange his poems in the form of a diwan; according to Azad Dhwak compiled a diwan when 15 or 16 years old, though its fate is unknown. Zafar also refers to a diwan of Dhwak (Hindustānī, April 1945, 40). The earliest edition of the diwan, 186 pp., was lithographed in Dihlī in 1859; no reference to it occurs in the subsequent editions. An attempt to collect his work was made by Hāфиз Gholām Rasūl Wārān (the blind pupil of Dhwak, who had associated with him for some 20 years and who knew a large number of his poems by heart) and his co-editors Zahir and Anwar (for whom see Saksena, 156 ff.; Bailey, 74 ff.); as well as taking dictation from Wārān, Zahir and Anwar made use of various tadhkiras and of the note-books of the poet’s pupils. This diwan (259 bayts) was lithographed in Dihlī in 1299/1862-3, with an Urdu colophon and Anwar’s Persian preface (20 pp.) appended to the book; it was later lithographed several times, without the Persian preface, in Kānpūr, Dihlī, Mīrāt, etc. The largest edition was produced by Azād, in his old age (1858-9 ?) just before his mind became finally deranged; he states that soon after Dhwak’s death he and the poet’s son, Muhammad Iṣmā’īl, collected Dhwak’s poems after the labour of many months. This collection was published from Lahore in 1890 (Blumbhart, Suppl. Cat., 319), and is composed mostly of ghazals, 24 or 25 bayts, and some fragments (500 bayts in all), with interesting prefatory and marginal notes. Several pages of rare verses of the poet have been quoted from a Nāgārīṣṭīn-i Shawkān in the Mu‘āṣir. More of his unpublished verses can be collected from old tadhkiras. This and what follows would justify a new critical edition of the diwan.

In a critical examination of Azād’s edition (Ph. D. thesis, 1939) Muhammad Sādīk claims that Azād revised and improved Dhwak’s juvenile work, in some cases slightly, in others drastically; later, in 1944-7, Professor Mahmūd Shīrānī proved the interpellations throughout the diwan even more fully and conclusively; and the same is shown by Iṣmā’īl’s ed. of the diwan (edition of 1279 A.H.; now in Dr. Saksena, 156 ff.; Bailey, 74 ff.); as well as taking dictation from Wārān, Zahir and Anwar (for whom see Saksena, 156 ff.; Bailey, 74 ff.); as well as taking dictation from Wārān, Zahir and Anwar (for whom see Saksena, 156 ff.; Bailey, 74 ff.) a supplementary catalogue . . ., London 1909, 323; Muhammad Husayn Azād, Diwan-i Dhwak (the life of Dhwak as given in this and the following work is to be used cautiously); idem, 1887, 402; Sri Rām, Kāmhāna-i Diwād, Dihlī 1947, 175 ff.; Shah Muḥāmmed Sulaymān, Fadillāh-i ghazals (with Mu‘āṣir-i Dhwak wa Chālib), Budayyin 1925 (?); T. D. thesis, 1939, Appx. viii, VII, now in the Punjab University library); Rām Bābā Saksenā, History of Urdu literature, Allahābād 1940, 152-6, 16-29; Kādī Čulmān Āfīr, Biḥātār ghasal-gō, Lucknow 1941; Fīrāk Gorakhpur, Andāz, Allahābād, xxii (1937), ci (1944); Kālīm al-Dīn Ahmad, Urdā ghā’irī par 2 ek nazar, Patnā 1952, 113; Hindustānī (Urdu quarterly), Allahābād, 1944, i, iv; 1945, all issues; 1946, i, 1947; i, Sayyid Mas‘ūd Hasan Rīdāwī, Bī‘ai Hayāt kā ṭandkiyat mu‘āṣira, Lucknow 1953, 29, 59; Nāvās-i Adab (Urdu quarterly), Bombay, i/x (July-September 1958), 41; Sayyid Imām Āṭār, Kākhīs al-khadāb, Lahore 1959, i, 29 ff., 258 ff., 280 ff. (Muhammad Shafi)

**DHAWAK** [see CĂȘENĂGHIM]

**AL-DHĪBĀB**, “the wolves”, a South Arabian tribe whose lands lie between the territory of the Lower ʿAwwālī [q.v.] and the Lower Wahīdī [q.v.]. There are also considered to be elements of the Dhībāb in the country of the Lower Wahīdī itself, the villages of which are largely occupied by them. The soil is unfertile and mostly prairie-like pasture land. In the east of the district is a mountain of some size, the Dībal Hamrā, over 4000 ft. high. The chief place is the fishing village of Hawra (al-Ulyā) with an important harbour.

The Dhībāb are a very wild, warlike tribe of
robbers, and are therefore feared throughout South Arabia. They are Kabd'il (free, independent tribes) and are considered as genuine Himyars; their slogan (qarkhe, tamsen) is: and Dhihnl (Dhib) Hmyar (Himyar), "I am the wolf of Hmyar". They have no common sultan, and the various branches of the tribe are ruled by Shayykh, called Aba "father", whom they heed only in case of war. The most influential Shayhakh of the Dhihlb lives in 7rka (Friga).

DHPB, the wolf. Most of the cognate forms in other Semitic languages have the same significance. Numerous synonyms and sobriquets are found in Arabic, such as sirkan, usaya, sid, abd dja'da, etc. In local usage, dhi'b may also denote the jackal (Jayakar, Malouf), yet Hommel's assumption (203, n. 1) that this was the only meaning of the word in ancient Arabic (so also Jacob) is inconsistent with its use in the Sura of Joseph (Kur'an, XII, 13, 14, 17), where it stands for the biblical 'evil beast' (Gen. xxxviii 20, 33).

Ample mention of the dhi'b is made in ancient Arabic poems, proverbs, popular traditions and hadiths, some of which are quoted in later zoological writings. Other information given by Arab zoologists goes back to foreign sources, such as Aristotle's Historia Animalium and the ancient Physiologus literature.

Since dhi'b, in the Arabic script, is similar to dubb (= bear), the two words were easily confused and, consequently, the behaviour and properties of one animal have sometimes been attributed to the other.

The dhi'b is described as extremely malignant, quarrelsome and cunning. It is quick of hearing and possesses a powerful sense of smell. It feeds on flesh only but eats herbs when ill. It can go without food for a long time, whence the proverb: "More hungry than a wolf". Dab al-dhi'b (lit.: the wolf's disease) is a metaphorical expression for hunger. Its stomach may become so engorged that some of its contents (possibly the liver) is able to dissolve a solid bone but not a date stone. Its penis consists of bone. The female is robuster and more courageous than the male. If a hyena is killed or caught, the dhi'b takes care of her young. Some authors state that the wolf goes single and does not associate, while others describe its behaviour in aggregation; no one separates from the pack, as they do not trust one another. When one becomes weak or is wounded, it is eaten by the others. When asleep, they keep the right and left eye open alternately to keep watch on one another. The wolf is always prone to attack men in contrast to other wild animals which do so only when old and unable to hunt. It assails a person from behind, not from the front. A man who shows no fear of it remains unmolested, but is attacked when afraid. Only ravenous wolves are aggressive. When a wolf has designs on a flock of sheep, it howls so that the dog hears and runs in the direction of the sound; the wolf then goes to the other side where there is no dog and snatches the sheep away. It makes its raids preferably just before sunrise when shepherd and dog are both tired from the night watch.

Some of the information on the wolf belongs to the field of superstition, e.g.: If a man carries with him thefang, skin or eye of a wolf, he will overcome his opponents and be loved by all people. The wolf may also have played a part in Arabic onerramony. Its blood, brain, liver, bile, testicles, dung and urine were used for various medicinal purposes.

DHIHNL, Bayburdlu, Turkish folk-poet, b. towards the end of the 12th/13th century in Bayburt. Educated in Erzurum and Trabzon, he spent ten years in Istanbul and later travelled in the provinces on minor governmental duties; he was for a short time in the service of Mustafa Reshid Pasha. He spent the last four years of his life in Trabzon and died in a village outside town. He made a journey while on his way to his home town (1275/1859).

His background, somewhat different from that of the usual folk poet, led him to imitate classical poets, and he even composed a complete dwn of traditional poetry in arud. But he remained a poor and awkward imitator of dwn poets and his fame rests entirely on a few poems, written in the folk tradition, which he himself tried to ignore and did not include in his dwn. Dhihnl, as a folk poet, is strongly under the influence of classical poets and his poems are full of the figures, images, and similes of dwn poetry. In spite of this he succeeds in capturing the spirit of the genuine folk poet of the early 19th century. His famous koshma about his home town was written when he saw Bayburt in utter ruin, after its devastation by the Russians in 1828.

Bibliography: Ziyaeddin Fabri, Bayburdlu Zihni, Istanbul 1928; Ibndilemin Mahmud Kemal, Bayburdlu Zihni, in Turk Tarik Encimens Mec., i, 1929; M. Fuad Koprului, Turk Sazsiirleri Anlotljos, Istanbul 1940, iii, 450. (Faktir Iz)

DHIKR, reminding oneself. "Remind thyself of (udhkur) thy Lord when thou forgettest" (Kur'an, XVIII, 24). Thus: the act of reminding, then oral mention of the memory, especially the tireless technique of this mention. In dhikr is the above-quoted text Kur'anic basis of the dhikr in poetry. In spite of this he succeeds in capturing the spirit of the genuine folk poet of the early 19th century. His famous koshma about his home town was written when he saw Bayburt in utter ruin, after its devastation by the Russians in 1828.

DHIKR, reminding oneself. "Remind thyself of (udhkur) thy Lord when thou forgettest" (Kur'an, XVIII, 24). Thus: the act of reminding, then oral mention of the memory, especially the tireless repetition of an ejaculatory litany, finally the very technique of this mention. In tasawwuf the dhikr may be possibly the most frequent form of prayer, its muhabbal ("opposite correlative") being fikr (q.v.), (discursive) reflection, meditation. In his Fawsat, in connexion with Muhammad's "nocturnal ascension", al-Hallali declares that the road which passes through "the garden of dhikr" and that which is described as the "way of fikr" are equally valid. For the Sufis the Kur'anic basis of the dhikr is the above-quoted text (cited, among others, by al-Kalabadi) and XXXIII, 41: "O ye who believe! Remember (udhkur! Allah with much remembrance (dhikr** kafi**)". Hadiths are often quoted in support and in praise of the practice. As an ejaculatory litany tirelessly repeated the dhikr may be compared with the "prayer of Jesus"
of the oriental Christians, Sinaitic then Anthonic, and also with the *dhyā-yoga* of India and the Japanese *nembutsu*, and this quite apart from historical threads which may have played a rôle in one direction or another. One may recognize in these modes of prayer, without denying possible influences, a universal tendency, however climates and religious beliefs may differ.

**Traditions of the Brotherhoods:**—The *dhikr* may be uttered aloud (*dā'ūl*) or in a low voice (*khās*). At the beginning the formula must always have the sign of the cross, either in动荡 (star-shaped) [q.v.]: there is a double tradition: that of solitary *dhikr* (aloud or whispered), and that of collective *dhikr* (aloud). It is the first which the major texts of the great spiritual writers envisage: "The Şīfī retires by himself to a cell (zāmiya) ... After sitting in solitude he utters continuously "God (Allāh)" being present with his heart as well" (*al-Ǧhazzālī, Iḫyā',* III, 16-7). Several brotherhoods (the *Shadhiliyya* and their offshoots, Khawāṣṣ, Darkawa, etc.) stress the advantages of solitary *dhikr* and seem to make it a condition of the *dhikr al-khawan* (of the "privileged"), those well advanced along the spiritual path. Others (Ramānīyya, etc.), without excluding the entry into solitude, stress the dangers of it and recommend, at least for a long time, "sessions" (*ḥadīr*) or "circles" (*kalbā* of collective *dhikr*. The latter is without doubt as old as the solitary *dhikr*; but in its liturgico-technical form, with prescribed attitutes regulating the respiratory rhythm as well as the physical posture, it seems to have been born at a relatively late date, about the 8th/13th century, betraying Indo-Iranian influence among the Mawlawiyya ("Whirling Dervishes") of Konya, and Indian through Turko-Mongol influence (cf. the descriptions by the Mongol ex-functionary Simnānī, 13th-14th centuries). This technicality, which must have been introduced progressively, extends its influence to the experience of the solitary *dhikr* itself (cf. in the Christian Orient the connexions between the "prayer of Jesus" and the hesychastic technique).

The "sessions" generally take the form of a kind of liturgy which begins with the recitation of Qur'ānic verses and prayers composed by the founder of the in the Middle Ages, and later by the *shāhīd* or the *wird* [q.v.], often accompanied by the "spiritual oratorio" (*samāt*). *Wird*, *samāt*, and physical posture during the recitation of the *dhikr* vary with the brotherhoods (see, for the Maḥrīb, Rinn, *Marabouts et Khouan*). For the *dhikr* itself the best summary is the *Ṣaḥālib al-mu'īn* (*fī l-tādhīb al-ḥawbah al-arba'in* of Muḥammad al-Sanūsī (d. 1276/1859) printed on the margin of the same author's *Masābih al-ṭāhir*, where there is a condensed account of the essential characteristics of the *dhikr* practised by the forty preceding brotherhoods, of which the Sanūsīyya claim to have adopted the essential. The collective *dhikr* sessions described by Western writers are generally classifiable as "*dhikr* of the commonality (*al-'awdūm*)*. One of the best-observed accounts is that of the Ramānīyya by W. S. Haas. It requires correction and completion (e.g., in connection with the "condivisi" [q.v., which may be used in solitude and by "a man aware of what the result will be". (It appears that the modern *Alliwīyya* brotherhood of Mostaghmem has re-adapted this procedure).

Other formulae are proposed by Ibn 'Āta' Allāh of Alexandria, Simnānī, Bāsh Tārzī, etc. in accordance with gnostic hierarchies where spiritual progress is matched with the vision of "coloured lights" which is the sign of it: *Huwa, al-Lāh, al-Ḥaqq, al-Ḳayyūm, al-Ḳahhār*.

The duration of the experience is regulated either by the *sha'yār*, or, in solitude, by numbers, with or without the help of a rosary (*suḥbā*): 300, 3,000, 6,000, 12,000, 70,000 repetitions (cf. the 6,000 or 12,000 "prayers of Jesus" daily of the "Russian Pilgrim" and the Japanese liturgy "of the million" (*nembutsu*). The invocation may finally become unceasing, without care about the exact number. Control of the respiration seems mostly to be concomitant, but it appears more deliberate in the Hamayyīl *dhikr* (6th/12th century) and Simnānī's descriptions and also in the counsels of Zayn al-Mīla wa'l-Dīn (no doubt Khāwāfī) the commentator on Anāfīr's *Manāsī*.

The *dhikr* as an internal experience:—One of the best sources is the *Miftaḥ al-falāḥ* of Ibn
DHIKR

Ata: Allah of Alexandria, the second Grand Master of the Shadhill order. Reference may also be made, on the one hand, to Al-Kalâbâdhî's chapter on the ghîr and the matter-of-fact description of Ghazzâlî, and, on the other hand, to the numerous gnoses of later times (Zayn al-Dîn, Bâsh Târzî, Amin al-Kurdi Nakshbandî, etc.). Three main stages may be distinguished, each being subdivided; it is to be noted that these progressive stages are found again in the writings of Malay Sûfism.

(1) Dhiir of the tongue with "intention of the heart" (cfr. the matter-of-fact description of Ghazzâlî, and the passage of his "sûfî as a tongue" without nâyâ). The name wâyet is rejected, for it would be "just routine, profitless", says Bâsh Târzî. (a) At the first step, there is a voluntary recitation, with effort, in order to "place the One Mentioned in the heart" according to the exact modes of utterance and physical postures taught by the shaykh; it is firstly to this level that the foregoing descriptions apply. (b) At the second step the recitation continues effortlessly. The disciple, says Ghazzâlî (Ibydî, iii, 17), " leaves off the movement of the tongue and sees the word (or formula) as it were flowing over it". Cf. the similar testimony of those who have experienced the "prayer of Jesus" as it were flowing over it. The "effortless" step may be compared with the dhârâyâ stage of Yoga experience, "fixation" (of mental activity).

(2) Dhiir of the heart

The Sûfî reaches a point where he has effaced the trace of the word on his tongue, and finds his heart continuously applied to the Dhiir (al-Ghazzâlî, ibid. Same testimony in Account by a Russian Pilgrim). Here also there are two steps: (a) with effort (cfr. Ibn 'Ata Allâh, Miftâh, 4), i.e., with the obscure desire to "maintain the formula" which results in something like a pain felt in the physical heart; (b) effortless: this presence is expressed in a sort of hammering of the formula by the beating of the physical heart (same in Russian Pilgrim) and by the pulsation of the blood in the veins and the arteries, with no utterance, even mental, of the words, but where the words never appear. This is a move of "necessity of presence", where the "state of consciousness" dissolves into an acquired passivity. Cf. the step of "absorption" (dhyâna) of Yoga. Al-Ghazzâlî's analysis in the Ibydî halts at this stage. "It is in his (the disciple's) power to reach this limit, and to make the state lasting by repulsing temptations; but, on the other hand, it is not in his power to attract to himself the Mercy of the All-High". This important distinction is reminiscent of al-Hâllâdî's exclamation to God: "You are my ravisher, it is not the Dhiir which has ravished me!" (Dhârdân, 53). Later traditions no longer draw this distinction. Ibn 'Ata Allâh's monograph speaks of a third stage, for which the second is an effective preparation.

(3) Dhiir of the "inmost being" (sîrû)

The heart (kârî) was the seat of the "knowledge of God"; the "inmost being" (sîrû), "a substance more subtle than the spirit (ruh)" will be the place of the "vision" (muṣâdhâda) of them. It is also the place where the tâwhîd takes place, the declaration of divine unity and the unification of the self with the self, and the self with God. The writers often associate this third stage of the Dhiir with the state of iṣâm, spiritual perfection and beauty. The "arrival" of the Dhiir of the inmost being is known by this, that "if you leave off the Dhiir it does not leave you, and the whole being of the Sûfî becomes 'a tongue uttering the Dhiir'." (Miftâh, 6). The slave of God "has disappeared (ghâ'ib) both from the Dhiir and the very object of the Dhiir" (ibid.). Thus no duality must remain. But a twofold step is distinguished even here: (a) fana? 'an al-Dhiir wa 'l-madhkur ... ûd 'îlah, annihilation away from the Dhiir and its object ... towards God; (b) fana? 'an al-fand*. ... bi'lldh, annihilation away from the annihilation ... in God. It seems that this state may be compared with the entry into samâdiy al-Dhiir of Indian Yoga (or at least the "samâdiy with seed"; any equivalence with the "samâdiy without seed" should be more closely examined): "becoming one alone!" (cf. the Indian kâhiyâ) conceived as abolition in God, generally in the line of "monism of the Being" (wahdat al-wujûd). The personality of the Sûfî has, as were, "disappeared" in the abolishing of all acts. Ibn 'Ata Allâh's description of the Dhiir al-sîrû goes as far as possible in expressing this.

Accompanying phenomena and explication gnosos:—Ibn 'Ata Allâh describes the Dhiir of the tongue as sounds of voices and rhythms "within the periphery of the head". Explanation: "the son of Adam is a mixture of all substances, noble and base", and the sounds heard come from each of the "constituent elements" of these substances (Miftâh, 5); the Dhiir liberates the harmony established between the microcosm and the macrocosm (cf. the period of "cosmization" of Yoga). The Dhiir of the heart resembles "the buzzing of bees, without a loud or disturbing noise" (ibid.) and is accompanied by luminous and coloured phenomena, at this stage intermittent. Al-Ghazzâlî drew attention to this as the "apparition of lights" which "sometimes pass like a flash of lightning and sometimes stay, sometimes last and sometimes do not last, sometimes follow each other different from one another, sometimes blend into one single mood" (loc. cit.). He explains them as "gleams of truth" released by God's good will, but other authors later describe them as intrinsically and obligatorily bound up with the Dhiir experience. Later writers describe these luminous phenomena as being even more brilliant at the step of the Dhiir of the inmost being, of which they become the particular mark. This time "the fire of the Dhiir does not go out, and its lights do not flee ... You see always lights going up and others coming down; the fire around you is bright, very hot, and it flames" (Miftâh, 6). Yoga describes similar phenomena. Moreover it would be rewarding to make a comparison and a distinction between the Sûfî analyses and either the Buddhist "objective" illumination or the "uncreated light of the Thabor" of the oriental forms of Christianity. Various late authors establish other successive stages from the Dhiir of the inmost being which are also marked by variously coloured luminous phenomena. The descriptions vary with the texts and do not seem to affect the structure of the experience. This hierarchy proposed by Simnâni: grey smoke (corporeal envelope); blue (physical soul); red (heart); white light ("inmost being"); yellow spirit (ruh); black (subtle and mysterious principle, hâfisyya); green (reality hâkîhâ), the state of the perfect soul "which sums up all the other states" as Bâsh Târzî states.

These rising and falling lights are held to be "divine illumination"; no longer a gift from Mercy, Encyclopaedia of Islam, II
as al-Ghazzālī believed, but an effect linked to the experience according to the extent to which the dhikr of the tongue and its “cosmization” effects entry into the world of ḥabārūl, All-Power. The higher stages introduce into the domain of malakūt “angelic substances”; they may even lead to lāhāl, the world of the Divine Essence. "If you recite the dhikr with your inmost being, recite with yourself the Throne with all its worlds until the dhikr unites with the Divine Essence (dālīh) (Mīṭlāk, 7). One is reminded here of the entry into the "Pure Land" of the Jōdo promised to the disciples of the Japanese nembutsu.

These gnostic visions, which in Ibn ʿAṭā Allāh are relatively sober, later become involved in the effort (as in the above-quoted text of Ibn Amin al-Kurdi).

Interpretations:—Al-Hallāj, al-Kalābādī, etc., speak of the dhikr as a method of reminding one’s self of God, of helping the soul to live in God’s presence; but without for this reason understimating the discursive method of fiṣḥ. Al-Ghazzālī portrays the dhikr as the way of the Sufis, but still preserves, so it seems, the method aspect of its nature: a method of unifying the disciple’s spirit and preparing him to receive, if the Lord wills, the supreme Mercies. Ibn ʿAṭā Allāh informs us at the beginning of the Mīṭlāk that to the best of his belief no monograph has yet been devoted to the dhikr. If this is true, then the developments ex professo in the theory and practice of the dhikr, and the absolutely capital importance assigned to it, may be dated from the 6th/12th century. Ibn ʿAṭā Allāh no longer speaks of it as a preparatory or concomitant method, but as an effective technique, up to its consummation: entry into the domain of lāhāl. Later works insist even more on technique—voice, breathing, posture, etc., give themselves up to long discursions on the gnostic theme, and never cease to see in the dhikr pursued to its last steps a "guarantee" of attainment. This emphasis on technique (where non-Muslim influence is much in evidence) dates from the 8th/14th century onwards. A very important stage in this development is the Šūfism dominated by the One-ness of Being (waḥdat al-ʿudwāfīd); man, in respect of his most "spiritual" aspects, is considered to belong by nature to the divine.

Now the direct effect of experiencing the dhikr seems to be a monolimism working on the One Mentioned, “realizing” that perpetual (conscious) “re-membering” which the first Šūfīs demanded of their disciples (cf. the “prayer of Jesus” of the Sīnātic Fathers). But as techniques progressed the ever more numerous analyses are marked by the “cosmization” of the dhikr of the tongue, the influence of the dhikr of the heart on the circulatory system, and the probable influence of the dhikr of the inmost being on the para- and ortho-sympathetic systems, and it seems as though we are in the presence of a control by this monoideism on the individual’s conscious, unconscious, zones. In this case we are dealing with an equivalent of the dīṣṭa-yoga, almost certainly bringings about a twisting-back of self on self towards an ineffable grip of the first act of existence. The conceptualizations of the waḥdat al-ʿudwāfīd remain faithful to their monist view of the world by calling this movement of "enstasy" janāa ... bilāla.

This “attainment” is the fruit of a difficult technique of natural spirituality based on long asceticism. It is understandable that certain brother-hoods should have sought the equivalent (or what they thought to be the equivalent) by purely physical procedures: the sacred dances of the Mawlawiyya, the cries of the “Howlers”, not to mention stimulating and stupefying drugs. Thus one arrives finally at veritable counterfeits which have not been without effect on the opposition by the naḥda of contemporary Islam to the brother-hoods and its distrust of Šūfism.

To sum up: in the course of the history of Šūfism, two distinct lines of utilization of the dhikr. The first and oldest makes it simply a method of prayer, without excluding other methods, where technique appears only in rudimentary form. The second, which became dominant, sees in it a guarantee of efficacy in attaining the highest “states” (abūl) by virtue of a seeking after lāhāl conceived as a (substantial) identification with the divine. This latter tendency often yields to the attraction of “procedures” and gnosces which become ever more extravagant. The testimony of Ghazzālī in the Iḥyā stands at the hinge of the two lines—nearer to the first, and yet bearing witness already to the appearance of technique.

II. Western works: A. le Chatelier, Les conférences musulmanes du Hedjaz, Paris 1887; Depot and Coppolani, Les conférences religieuses musulmanes, Algiers 1897; Goldziher, Vorlesungen, index s.v. Dīkhīr; J. P. Brown, The Dervishes, or oriental spiritualism, London 1868; Hughes, Dictionary of Islam, s.v. Zikr; D. B. Macdonald, Religious attitude and life in Islam, Chicago 1909, index s.vv. Gaulouf-Demonbynes, Mahomet, Paris 1957, 517-9; for the technical meaning: Louis Rinn, Marabouts et Khouan, Algiers 1884; W. S. Haas, The zikhr of the Rahmanīya-Order in Algeria, in MW, January 1943; Louis Massignon, Passion d’al-Hallāj, Paris 1922, Index; idem, Recueil de textes inédits, Paris 1929, 143, ref. to Fleischer,

(L. Gardet)

DHIMMA, the term used to designate the sort of indefinitely renewed contract through which the Muslim community accorded hospitality and protection to members of other revealed religions, on condition of their acknowledging the domination of Islam. The beneficaries of the dhimma are called dhimmis, and are collectively referred to as ahij al-dhimmia or simply dhimma. An account of the doctrinal position of Islam vis-à-vis the religions in question, and of the polemics between the two sides, is given in the article AH1 AL-KITAB, for a detailed account of the various religious communities see MADINAS, NABAAR, SARIPON and YAHUD. Mention is made here only of the general characteristics of the Muslim attitude to non-Muslims, as expressed in their institutions and social practices.

The bases of the treatment of non-Muslims in Islam depend partly on the attitude of the Prophet, partly on conditions obtaining at their conquest. Muhammad is known to have first tried to integrate the principal Jewish groups at Medina into a rather loose organization, then opposed them violently, and finally, after the expansion of his authority across Arabia, concluded agreements of submission and protection with the Jews of other localities such as Khaybar, and with the Christians of, e.g., Najran; this last action alone could and did serve as precedent in the subsequent course of the Conquest. The essential Qur’anic text is IX, 54: “Fight those who do not believe ... until they pay the dzuya ...” which would imply that after they had come to pay there was no longer reason for fighting them. The conditions at the time of the conquest consisted essentially of the enormous numerical superiority of non-Muslims over Muslims in the conquered countries, and of their generally favourable bias towards the Muslims. Food-supply, intelligence, and security against espionage (it is as an example of this that we must understand the prohibition, on which later rigorists were to insist, of the wearing by dhimmis of Arab dress, since in fact the natives and the Arabs dressed differently). But the essential—and lasting—stipulation concerns the payment of the distinguishing tax or dzuya (q.v.), which was later to develop into a precise poll-tax, and which, expressing subjection, was to inaugurate the definitive fiscal status of the dhimmis; this was in conformity with the usual custom of all mediaeval societies where non-dominant religious communities were concerned. Precautions must have been taken to avoid clashes between different communities, which at first enjoyed such friendly relations that buildings could be divided between Christians and Muslims; but it was only in the ummar that restrictions on the right to construct new religious buildings could already from that time be maintained. The preservation by each community of its own laws and customs, as well as its own leaders—this also in conformity with the attitude of all mediaeval societies—must have resulted in the first place from the situation as it was rather than from any formal decision. The autochthonous non-Muslims, who were often un-acustomed to bear arms, were only exceptionally called upon for military services.

The dhimma is defined as against the Muslim and the idolater (with reference to Arabia, but this is scarcely more than a memory); also as against the harbi who is of the same faith but lives in territories not yet under Islam; and finally as against the musta’min, the foreigner who is granted the right of living in an Islamic territory for a short time (one year at most). Originally only Jews and Christians were involved; soon, however, it became necessary to consider the Zoroastrians, and later, especially in Central Asia, other minor faiths not mentioned in the Kur’ân. The Zoroastrians, by committing to writing the previously orally transmitted Avesta, attained the status of Ah1 al-kitab; but more generally the Muslims, without waiting for such a step, and whether or not there existed recognized communal chiefs to guarantee the unbroken performance of the agreements, in fact accorded to the subject believers of most religions an effective status comparable to that of the dhimmis properly so-called, except for a few points of inferiority of which one or two examples will be given.

However, the precise nature of the earliest regimes, which varied according to the conditions obtaining at each conquest, is difficult to determine exactly, since the relevant texts have often been altered, and sometimes fabricated from the whole cloth, then opposed them violently, and finally, after the expansion of his authority across Arabia, concluded agreements of submission and protection with the Jews of other localities such as Khaybar, and with the Christians of, e.g., Najran; this last action alone could and did serve as precedent in the subsequent course of the Conquest. The essential Qur’anic text is IX, 54: “Fight those who do not believe ... until they pay the dzuya ...” which would imply that after they had come to pay there was no longer reason for fighting them. The conditions at the time of the conquest consisted essentially of the enormous numerical superiority of non-Muslims over Muslims in the conquered countries, and of their generally favourable bias towards the Muslims. Food-supply, intelligence, and security against espionage (it is as an example of this that we must understand the prohibition, on which later rigorists were to insist, of the wearing by dhimmis of Arab dress, since in fact the natives and the Arabs dressed differently). But the essential—and lasting—stipulation concerns the payment of the distinguishing tax or dzuya (q.v.), which was later to develop into a precise poll-tax, and which, expressing sub-
But indeed, on the other hand, we must recognize that current practice fell very much short of the preeminent, which was hardly ever implemented except in the great Muslim centres and in the capitals, and was even then incomplete and sporadic; the different juridical schools are moreover not at all in agreement, and some of them reiterate rules without any practical effect. On the whole the condition of the dhimmis, although unstable in its minor practical aspects, was until about the 6th/7th century in the west, and the 7th/8th in the east, essentially satisfactory, in comparison with, say, that of the admitted smaller Jewish community in the neighbouring Byzantine empire.

The principal directions in which the strengthening of Islamic control operated were as follows. On the one hand people like the sindis, Manicheans and those under their influence, who were suspected of wishing to propagate false doctrines within Islam, were excluded from the category of dhimmis, and, of course, were those who, like the Mazdakites of Bâbak, called in question the very political domination of Islam. As far as the dhimmis in the traditional sense are concerned, their rights held good, and it could even be said that their financial situation had become closer to that of the Muslims than it was at first, since the converted possessors of kharâj lands had to continue to pay this kharâj, which the Arabs from the time of the conquest had not paid, and, though they did not pay the diyâya, had to pay the sakât on their other income. The dhimmis moreover retained the autonomy of their own internal law, the stipulations of which formed the subject of treatises compiled at that time, and although they were able, if they wished, to apply to a Muslim judge (who would then often adjudicate according to Muslim law), they continued normally to resort to their own chiefs where these existed. Nevertheless, in relations between dhimmis and Muslims, the two parties were not treated equally; thus, the Muslim could marry a dhimmî woman, but a dhimmî could not marry a Muslim woman; a dhimmî could not own a Muslim slave, although the converse was permitted; at the frontier the dhimmis were regarded as dhimmimûn, to wear distinguishing articles of dress, in particular the sumâr belt, the original intention of which was perhaps merely to prevent administrative errors but which gradually came to be regarded as a sign of humiliation, and was accompanied by complementary restrictions such as the prohibition of fine cloth, noble steeds, uncut forelocks, etc.; in fact, it would appear that these regulations, often variable in their detail, had never been respected for any length of time (with the exception of the application to dhimmis of any kind. On the contrary, it was the close association of Muslims and non-Muslims in everyday life that provided the raison d'être of the restrictions mentioned above. Similarly, although there may have been some professional specialization, such as the trade of dyeing in the hands of the Jews, in general the mixture of faiths among all trades is the striking characteristic of society in “classical” times.

Although there was obviously no “liberty of conscience”, as it would now be understood, in any Muslim society, Islam tolerated the religions of the dhimmis according to the following restrictions: it was forbidden to insult Islam, to seek to convert a Muslim, and apostasy was forbidden (all this, in principle, subject to the death penalty). The child of a mixed marriage was Muslim. As regards places of worship, the jurists are almost unanimous in interpreting restrictively the undertaking made on behalf of Muslims to uphold them, in the sense that this promise could apply only to those buildings which were in use at the time of the advent of Islamic power; hence new building was forbidden, and rigorists opposed even the reconstruction of buildings fallen into decay. The practice of earlier centuries shows that these prohibitions were rarely made absolute, and that as long as money was available the construction of new buildings was usually possible, even in Muslim centres like Fustûn and Cairo, and a fortiori in the regions where there was a non-Muslim majority during the greater part of the middle ages, such as certain districts in Upper Mesopotamia. Yazid II had forbidden figure-representations in these buildings, but this order—linked with the iconoclastic movement, regarded favourably by many monophysite Christians, which was shortly afterwards to show itself so strongly at Byzantium—was certainly not enforced in any lasting way. There were also various limitations on the outward expressions of worship, such as processions and the use of bells, though these were never general in the earlier centuries of Islam. Only in Arabia, most strictly in the Holy Cities, was permanent residence by dhimmis forbidden, following measures some of which go back to ‘Umar—although temporary exceptions made under the Umayyads and ‘Abbasids were numerous. Indeed Jews lived in the Yemen until a few years ago.

Of course, those Muslims who interpreted the early precedents on the dhimmia restrictively endeavoured to find textual authority for their attitude, as did the Christians who opposed them. Thus appeared the allegedly ancient Pact of ‘Umar on the one hand—which in its complete form is not attested before the end of the 6th/7th century—and on the other the Edict of the Prophet to the Christians, a pious fraud of Nestorian monks of the 3rd/4th century. In addition there came gradually into prominence a person, the muštâsib [q.v.], who, entrusted with the maintenance of order in the streets and markets, was to include within its province the control of the dhimmis.

The domain from which one might have expected, from a doctrinal point of view, to see dhimmis excluded is that of government; but in fact this is not the case. Originally the Arabs would, without their assistance, have been unable to carry out the duties of an administration which was primarily the administration of the non-Muslim population. Later Christian bureaucrats, Nestorians in ‘Irân and, more permanently, Copts in Egypt, were able to uphold family positions acquired in the face of the
competition of Muslims, who turned more readily towards other professions, and to whom authority would in any case have found it difficult to entrust duties whose Islamic legality was questionable; the dhimmis, whose situation depended more on the favour of prince or vizier, were more faithful to them. Nowhere had Jews and Christians played a more important part in these matters than in Egypt under the Fatimids; much the same position, however, at certain periods in Spain, and even in the east, al-Mawardi, the theoretician of Caliphal revival, admits—legitimizing past instances—that even a dhimmî vizier was possible, provided that his vizierate was 'executive' (tanfidh) and not with power to command, i.e., that in practice he should neither exercise explicit political responsibility for major political decisions nor, in particular, sit in judgment over Muslims or take the initiative in matters where Islam was concerned. Obviously, it happened on many occasions that the condition upon which a dhimmî could secure or retain a high post was that he should become a convert to Islam; but the bonds of clientship and patronage still held, and the official new Muslim could protect the dhimmî staff to whom he was used.

Moreover, since the dhimmî remained to some extent under the jurisdiction of their own leaders, it followed that the latter were officially invested by the Muslim ruler—to whom the community did not hesitate to appeal when they disagreed on a candidate. The Jews thus came officially under the government of their Exilarch, and the Christians of different denominations similarly under that of their respective Catholicosoi and Patriarchs; in this respect the position of the Zoroastrians is less clear. In Iran, the Catholicos of the Nestorians had some precedence within the entire Christian community. One single persecution of the dhimmî has been recorded in the classical centuries of Islam, that of the Fâtimid al-Hâkim [q.v.], which made a considerable impact in both East and West, because of its severity and of the destruction of the Holy Sepulchre; this was, however, the work of a visionary caliph, whose decision, difficult to explain, may not derive from ordinary processes of reasoning; he himself, at the outset of his mission, retracted his measures, and his successors until the end of the dynasty restored the previous tradition of an extremely broad toleration. Even the Ayyûbid conquest, which adversely affected the Armenian community, hardly impaired the administrative position of the Copts. The restriction of dhimmîs in special quarters in Jerusalem was an exceptional move on the part of the Fâtêmids, and was intended to ensure their safety.

One cannot, therefore, say that it was persecution which led in some cases to the diminution and in others the complete disappearance of non-Muslim communities. The factors, essentially social, involved in this process cannot be discussed here; it must, however, be emphasized that the general position of the dhimmîs was gradually transformed by the fact that they passed almost everywhere from the position of a majority to that of a minority community. Moreover, instead of consisting, as previously, of a variety of communities, the gradual disappearance of Christians (foreigners excepted) in the Maghrib, of Christians also in Central Asia a little later, and of Zoroastrians in Iran, bring it about that in some regions the category of dhimmî had practically ceased to exist, while in others it had come to comprise only the Jewish community, more tenacious but by now almost exclusively urban. These proportions were of course to be reversed after the establishment of the Ottoman empire in Europe, but this represented a new phenomenon which was to lead to no modification in the rest of the Muslim world.

It cannot be denied that from the last three or four centuries of the Middle Ages there was a general hardening against dhimmîs in Muslim countries, helped materially and morally by the change in numerical proportions. Before proceeding further, however, it must be emphasized that the opinion was contemporary with that which appeared in Christendom against the Jews and against Muslims where there were any, without our being able to say to what extent there was convergence, influence, or reaction. On the other hand it must be emphasized that the populace were more easily excited as a result of the deterioration in the economic climate, and that generally changes in the Muslim attitude had been occasioned more by political than by religious considerations. Hitherto there had been scarcely any difference in the treatment accorded to Christians and Jews (at most they were distinguished by prescribed differences in dress); but it later came about that some categories of dhimmîs were looked on as friends of foreign powers and were worse treated, and naturally some Christians were in this respect more of a target than the Jews. There is nothing in mediaeval Islam which could specifically be called anti-semitism.

Although it has sometimes been considered that the formation of the Saljûq empire aggravated the condition of the Christian community, this is only very marginally true. The Saljûqids, partly because the numerical proportions of the various communities made it less of a natural conclusion, employed Christian functionaries less than their predecessors, whence doubtless there were a few less safeguards in the life of the community; nothing, however, was directly changed in the régime of which they were the beneficiaries. In Asia Minor the Turkish conquest evidently caused much suffering and loss to Byzantine Christendom, but inter-denominational relations became singularly good once a stable political situation had been established. Contrary to what might have been expected, the Crusades had at first no noticeable effect on the condition of the dhimmîs, because the eastern Christians were not of the Latin rite and maintained on the whole an attitude of correct loyalty to their masters—except for the Armenians, who were only to be met with locally. The first suspicions seem to have mounted against the Copts at the time of the Frankish expeditions into Egypt; there may also have been some in Syria and the neighbouring lands after the penetration of Latin missionaries, whose ministries were in vain precisely because it was impossible for the local Christian communities to come into contact with them without becoming politically suspect. The climax came with the Mongol invasions which, wherever they occurred, were of temporary advantage to the Christians, as there were Christians in the Mongol ranks, and because the Mongols held the balance between the various faithful; several acts of excess by Christians against Islam followed locally; but finally Muslim reaction made the Christians pay for their behaviour, and the expansion of intolerant nomads to the detriment of cultivators was a grave blow to rural Christian communities in Armenia and Upper Mesopotamia even when these were under Mongol
control. Timur’s massacres, and the rivalries between Turkomans even more than the Copts, suffered the repercussions of the struggle against the Mongols, the perpetuation of the state of war maintained against the Franks on the Mediterranean coastline, and the growing supremacy of western merchants over their eastern rivals. The Mamluk government tried in general to uphold the earlier legal system, but it was able neither to prevent popular violence stirred up by the old hatred of the Franks nor to resist the pressure of jurists, such as Ibn Taymiyya, who insisted on an increasingly vexatious interpretation of the law regarding dhimmis. Not only were the regulations on dress periodically renewed, though still with doubtful efficacy, but the regulations on mounts were narrowed so as to allow the dhimmis nothing better than inferior donkeys, and in some places, even less. This has an Italian parallel—which forbade them to possess houses higher than those occupied by Muslims (thus indicating incidentally that they did not live in special quarters). Care was in general taken that nothing in their everyday social comportment might tend to conceal the evidence of their inferiority vis-à-vis Muslims; an attempt was made to embarrass the dhimmis’ trade by regulations, always temporary, against the sale of wine; there was a growing repugnance on the part of certain Muslims to associate with non-Muslims, and their religious buildings were destroyed on various pretexts; there was a partial exclusion of dhimmis from the administrative offices themselves. From this period date also treatises specially written against the dhimmis (no longer merely religious polemics), to say nothing of chapters inserted in works of fiqh.

In the West the Almoravids, and even more the Almohads, had adopted, earlier than the East, an intolerant policy, which is partly explained by the suspicions entertained of their Christian subjects of complicity with the Spaniards of the Reconquista (it is impossible to say how the Maghrib would have tolerated Christian communities there while Spain was expelling its Muslims, since except for foreigners there were none). What one may emphasize is that, although religious factors obviously contributed to the intolerance shown in particular by the Almohads, it is political factors which in general outweighed strictly religious intolerance in Islam. Finally, it was at the time of the expulsions from Spain and the religious wars in the West that the constitution of the Ottoman empire restored—albeit without modifying the situation of Islam in those Islamic countries—the spectacle of an Islamic dhimmis symbiosis which was none the less remarkable for having been indispensable for the maintenance of the régime, as it had been for the Arab conquerors in the 1st/7th century. The Jews found asylum there, the Armenians and Greeks, in the 18th century, backed by Christian Europe, attained to positions of the highest importance. The later deteriorations are connected with the history of nationalist movements and the change in the notion of the State, which, gradually reaching all Muslim peoples, has emptied the concept of dhimmis of its traditional content. No more can be done here than merely to mention this last phase.[see Khawmiyya, milla wa watan].

Bibliography: It is obviously impossible to enumerate here all the sources, which might include almost all Islamic legal and historical literature, with additions from the geographers, the adab authors, etc. An extensive, but incomplete, list will be found in Fattal, cited below. One might notice the importance, for the earlier period, of Baladhurī and Abū Yūsuf; later of Mawardī; then of the works on hisba, omitted by Fattal (see Gaudefroy-Demombynes, in JA., cxxviii, 1936, and ʿArifī’s edition of Shayzari, Cairo 1946); and in general the Christian chronicles, either Arabic, like the History of the Alexandria Patriarchs and the historical chronicle of Mari (ed. Gismondi, 1909), or non-Arabic, like the Syriac chronicle of Michael the Syrian (ed. Chabot); mention may also be made of the Jewish documents, mainly in Arabic, of the Geniza. Some smaller works specially directed against the dhimmis date from Ayyūbīd and Mamluk times, such as al-Nabulusī’s fragment (fragments edited by Cl. Cahen in BIFAO, lxxv, 1960; complete edition in preparation by M. Perlmann); Ghāsī 2 b. al-Wasīṭī, Radd ʿalā aḥī al-dhimmīs, ed. and trans. R. Gottheil, in JAOS, xli, 1921; the Festa on la condition des dhimmis, etc., trans. Belin, in J. A. 4e série, xviii-xix, 1851-2; the Tract against Christian officials of al-Asnawi, ed. M. Perlmann, in Goldscher Mem., ii, 1958. On this literature in general see Perlmann, in BSOAS, 1942.

In the modern literature there are two general studies worthy of notice: A. S. Tritton, The Caliphs and their non-Muslim subjects, London 1930 (Arabic trans. Hasan Habashī, Cairo n.d.), and Ant. Fattal, Le statut légal des non-musulmans en pays d’Islam, Beirut 1958. Neither however can be considered as complete, nor to have sought to portray and explain the evolution and the differentiation in the condition of the dhimmis. Deeper studies, but limited to the category of the Jews, are: S. D. Goltein, Jews and Arabs, New York 1955; the numerous but scattered passages relevant to the world of Islam in S. Baron, History of the Jews, iii-vii (up to the 12th century), New York 1957-9; E. Strauss-Ashtor, History

**DHIMMA.** The term *dhimma*, in its legal sense, bears two meanings, the first of which, that of the works on *Usul* (legal theory), is equivalent to the notion of capacity, and such is the definition of it given by the classical doctrine. The *dhimma* is the legal quality which makes the individual a proper subject of law, that is, a proper addressee of the rule which provides him with rights or charges him with obligations. In this sense the *dhimma* may be identified with the legal personality. It is for this reason that every person is endowed with a *dhimma* from the moment of birth. Equally it follows that the *dhimma* disappears with the person at death.

But the *dhimma*, an attribute of the personality, is never used exclusively, by the Muslim legal theoreticians, in relation to a person's estate. It embraces all kinds of proprietary and extra-proprietary rights. Thus the duty of the ritual prayer binds the person insofar as it is endowed with a *dhimma*. So completely is the *dhimma* identified with the legal personality that certain authors have been able to assert that it is a useless notion and even devoid of any real meaning (Taftazani, *al-Talwih*, Cairo 1914, index; Tāftāzānī, *al-Talwīh*, Cairo 1304 H., and other works on *usūl*; Ibn ʿAbīdīn, *Radd al-muhātar*, 4; Ibn Niṣāyīm, *al-Bahr al-rūḍūk*, vi, 204; Kāsānī, *Baddāl al-qamās*, v and vi; Miḥārīl ʿīd al-Bustānī, *Mardūq al-tūlūb*, Beirut 1914, index).

**DHIMMA.** The term *dhimmī*, in its legal sense, bears two meanings, the first of which, that of the works on *Usul* (legal theory), is equivalent to the notion of capacity, and such is the definition of it given by the classical doctrine. The *dhimma* is the legal quality which makes the individual a proper subject of law, that is, a proper addressee of the rule which provides him with rights or charges him with obligations. In this sense the *dhimma* may be identified with the legal personality. It is for this reason that every person is endowed with a *dhimma* from the moment of birth. Equally it follows that the *dhimma* disappears with the person at death.

But the *dhimma*, an attribute of the personality, is never used exclusively, by the Muslim legal theoreticians, in relation to a person's estate. It embraces all kinds of proprietary and extra-proprietary rights. Thus the duty of the ritual prayer binds the person insofar as it is endowed with a *dhimma*. So completely is the *dhimma* identified with the legal personality that certain authors have been able to assert that it is a useless notion and even devoid of any real meaning (Taftazani, *al-Talwih*, ii, 726).

In its second sense, that of the legal practitioners, the term goes to the root of the notion of obligation. It is the *fīdes* which binds the debtor to the creditor. The bond of the obligation requires the debtor to perform a given act (*fīlī*), and this act will be obtained at the demand of the creditor, *mušālāba*. In the case of a real right (*hāqīqī*) *ayn*, on the contrary no bond exists: there will be no case of exacting any performance from a specified person. For this reason the question of contract or *dhimma*. Some authors have so completely identified the idea of *dhimma* with that of obligation that in their view *dhimma* is properly undertaking, *ʿakd*, or guarantee, *dāmān*. Others restrict the term to contractual obligations (al-Nasafi, *Iṣlāḥāt al-ḥanāfīyya*, 65).

But in actual fact *dhimma* is never identical with obligation: it is properly the basis of an obligation. Once *fīdes* has been brought into existence the object of the right will exist in the seat of rights which is the person. It is at this stage that the second sense given to the term by the legal practitioners merges with that of the theoreticians of Islamic law. The *dhimma* is not only the bond which ties the creditor to the debtor but is, in particular, the seat of it. But here it embraces only rights of debt properly so-called. Thus it is that the obligation to give alms to those in need is held to exist in the *dhimma*. It must be particularly noted that, as distinct from Western law, in a right of debt with which the *dhimma* is charged is restricted to the right which exists in relation to a sum of money or other fungible goods. It is therefore only the obligation termed *dāyīn* that has its basis in the *dhimma*. The case will be the same if the obligation is one of future performance (iṣlāmāʿ). But if the obligation exists in respect to a specific object it will be termed *ʿayn* and this obligation will lie outside the *dhimma*. In this case indeed the obligation cannot be in *futūr* and on the other hand is not discharged, in case of non-performance, by payment of damages.

It results that the idea of obligation in Islamic law is of a quite different structure according as to whether it is or is not directed towards a specific object.

In the first case it does not create a legal bond since it cannot be in *futūr*. In the second case the creditor's purpose is to bind his debtor, and this bond is established on the basis of the *dhimma*. Obligation, then, will properly be, as it has been defined by Muslim lawyers, an incorporeal right existing in the *dhimma* of the debtor. Thus the *dhimma* becomes, in the final analysis, the equivalent of what is termed in modern law, the debtor's estate.

**DHIMMI** [see AḤ L-AL-DHIMMI]

**DHIRĀ**; originally the part of the arm from the elbow to the tip of the middle finger, then the measure of the cubit, and at the same time the name given to the instrument for measuring it. The legal cubit is four handsbreadths (baḥda = index finger, middle finger, ring finger, and little finger put together), each of six fingersbreadths (asaʿ = middle joint of the middle finger) each the width of six barley corns (qāṭrā) laid side by side. A considerable number of different cubits were in common use in Islam. Roughly speaking they can be grouped around the following four measures: the legal cubit, the “black” cubit, the king's cubit, and the cloth cubit. The point of departure for all these calculations is the cubit of the Nilometer on the island of al-Rawḍa of the year 2478/621, which, on an average, measured 54.04 cm. The average of the cubits of the countries of the Near East and the Maghreb, and of the codices, is 52.6-53.2 cm.

1) The legal cubit (al-ḥirār al-ḥarāṣiyya), which is the same as the Egyptian hand cubit (dhirāʾ al-yaḏ), also called al-ḥirār al-bīšīm, the Joseph cubit (al-ḥirār al-Yūṣufiyya), called after Kālī Abū Yūsuf, who died in 138/758, the post cubit (dhirāʾ al-bāṭīr), the “reed” cubit (al-ḥirār al-marsaḥ), and the thread cubit (dhirāʾ al-galṭ), measuring 49.8 cm. (In ʿAbdāsī’s times, a cubit measured only
232 DHIRAC — DHC, DHI, DHA

of the cubit: the bā‘ or ‘fathom’, also known as kāma, is basically 4 legal cubits = 199.5 cm., or approximately 2 metres, and thus the thousandth part of a mile (mil). Today in Egypt, the bā‘ = 3 millimetres = 3.5 inches. The bāsha, or measuring rod (Persian nāb; bāb is a reading error) is predominantly used in surveying.

The Fatimid al-Hakim bi-amrillāh (375-411/985-1021) introduced the bāsha Hākimīyya, which measured 7½ ‘black’ cubits, on the norm of 3.85 metres, established by a French expedition to Egypt.

In 1380, the bāsha was established at 3.55 metres. The aḥār or ‘rope’ (Persian tandbāb) equals 20 bā‘ = 60 Hākimī cubits = 80 legal cubits = 95.5 metres; 150 tandbāb or 3 mil equal one parasang (farsāb) = 958 metres = approx. 6 km.

**DHLKĀ** (see GUDJĀRAT).

**DĀH, DHI, DHA,** demonstrative forms based on the demonstrative element ḏā. The variety of their uses precludes these forms from being regarded as a single declined word; thus:

Dāh was the relative pronoun, invariable, of the Tāyyl; corresponding to the Hebrew ẓêt, the poetic form of the relative pronoun.

Dī forms part of the masc. relative pronoun al-lāḏīḥ; but al-liḥ in the feminine. The opposition ḏāh marks the gender. Corresponding to ḏāh are the Aramaic biblical relative, invariable, di (ḏī in syr.), the Geez masc. demonstrative ze, acc. za.

Dāh masc. sing. demonstrative (near object), diminutive ḏāyyā; ḏāh for the feminine, the opposition ḏī then marking the gender here. J. Barth understood it as ḏī, maintaining the existence of an ancient sound ẓī, from which followed his sharp controversy with A. Fischer (ZDMG, 1905, 159-61, 443-8, 633-40, 644-71; J. Barth, Sprachwissen- schaft. Untersuch., in, Leipzig 1907, 30-46). Dāh occurs most often either reinforced with hā‘: ḥiddāḥ, or combined with other demonstratives: ḏāḥa, ḏāḥa. Corresponding with ḏāh are the Geez feminine sing. demonstrative su, Hebr. zōb (= ẓōb + i), the Geez masc. rela. ẓōb.

Once in the nominal form with the sense: “he of”, then “who has”, “possessor of”, dāh follows the 1st declension, taking the dual and the external plural. But it is always followed by a noun in the dependent grammatical phrase (common noun, according to the requirements of the Arab grammarians: al-Zamakhshārī, Mutfl, § 130, 2nd ed. Broch; al-Harlīl, ed. H. Thorbecke, 158). Thus dāh mālū‘ “possessor of money”, pl. ḏāḥāt mālū‘ or (elegantly) jālū mālīn; for the feminine with the same construction: ḏāḥa mālīn, pl. ḏāḥātūt mālīn (or ʿulūt mālīn). See W. Wright, Ar. Gr., i, 205 D, in Līṣān the art.: ḏāh wa-ḥādād, xx, 344/v, 456; Mutfl, § 122, for expressions like ḏāḥa yawmā ‘a day’, ḏāḥa ʾl-yaḥmīn “on the right”.

Dāh, having this meaning of “possessor of” or “who has”, was suited to provide surnames or nicknames (lakab), e.g. Dāh ʾl-Karnayn (for Alexander), which have sometimes become the most commonly known name for some individual, e.g. the poet Dāh ʾl-Rumma. For the kings or princes of the Yeman (such as Dāh Ṭazān) it has become an autonomous word with internal plural; these are the ḏāḥād al-yaman (see Wright, ibid., 206 A and Līṣān, ibid.),
[see ADHWA?]. In addition, two Muslim names of months: Dhu 'l-hididia, Dhu 'l-ka'da [see TA'RIKH, i]. In addition, two Muslim names of months: Dhu 'l-hididia, Dhu 'l-ka'da [see TA'RIKH, i].

The main subject of this romance is the Arab [see ADHWA?]'. In addition, two Muslim names of months: Dhu 'l-hididia, Dhu 'l-ka'da [see TA'RIKH, i].

As b. Munabbih, killed in the battle. It is mentioned in the Sīra [ed. Sakkā, etc., 1375/1955], ii, 100, and in several hadiths [see for example Ibn Sa'd, ii, 2, section: fi suyuf al-Nabl]. The expression Dhu 'l-Fakar is explained by the presence on this sword of notches (ju'ra) or grooves [cf. the expression sa'yi mufakkar]. According to a tradition, the sword bore an inscription referring to blood-money which ended with the words lā yaktal Muslim bi-kāf "no Muslim shall be slain for an unbeliever". The proverbial expression lā sayy ilā Dhu 'l-Fakar has often been inscribed on finely engraved swords, from the middle ages down to our own times, throughout the Muslim world. The words wa-lā jatā ilā 'Alli are sometimes added, because, although Muhammad's sword, after belonging to 'Alli, passed into the possession of the 'Abbāsid caliphs, it became an attribute of 'Alli and an 'Allād symbol. Islamic iconography represented it with two points, probably in order to mark its magical character (the two points were used to put out the eyes of an enemy; for a representation of a sword with two points, among other magic objects, see V. Monteil, in REI, 1940-ii, 22). Dhu 'l-Fakar became a proper name which is found more particularly among Shi'is.

war against the Byzantines from the Umayyad period until the end of al-Wāḥīk’s caliphate, that is to say it covers in principle the first, second, and third centuries of the Hijra, but also reflects later events. Though this is the general character of the romance, it also has an equally important but individual character as the history of the rivalry between two Arab tribes, the B. Kilaab and the B. Sulaym, the key to a whole series of vicissitudes in the Sīra and to the course of action taken by the leading figures, and it may indeed be regarded as the epic of the B. Kilaab tribe. In the edition noted above it covers a total of 5084 pages in 8vo with 27 lines to the page, in 7 volumes of 10 sections (djuz) each, with 64 pages in each section except for sections 69 and 70 which have 92 and 158 pages respectively.

The name of the heroine appears in different forms. She is often called simply Dalhama or al-Dalhama, and this might be her original name, the feminine of Dalham, a well-known proper name and appellation in the romance. It is by the name Delhemma that the romance is most generally known. But whilst several of the characters have a historical prototype, the heroine herself seems never to have existed historically.

Contents of the romance. The starting point is the history of the Umayyad period of the rivalry between two Kaysi tribes in the Iḥjād, the B. Kilaab and the B. Sulaym, the former belonging to the Amur b. Saṣaṣa group, a section of the Hawāzīn who, with the Sulaym, are one of the two principal branches of Kays Ayyān. The head of the Kilaab was Dījandaba b. Hārīth b. Ṭāmir b. Khiḑāl b. Saṣaṣa b. Kilaab, while the head of the Sulaym was Marwān b. Ḥayrām. It was the latter, a favourite of the Umayyad caliph, who, despite the superiority which Dījandaba had won by his exploits, held the ʿimāra (command) over the Arab troops. But after Dījandaba’s death his son al-Ṣaḥābī, having saved the caliph from assassination in Damascus, was given the name of Dījandaba’s brother and sister, and also, near Malatya, an ally of the B. Kilaab and the B. Sulaym at that time, ʿAbd Allāh (ʿUbayy Allāh) b. Marwān, supported the ʿAbbasīd cause and obtained from al-Manṣūr ṭarādī, the crown and ʿAbbasīd successor. Delhemma persuaded the Kilaab, despite their initial reluctance, to support the new dynasty. The Byzantines having taken advantage of the change of dynasty to regain the initiative, war broke out again and the two tribes, Kilaab and Sulaym, took part in it at the caliph’s request, acquiescing in ʿUbayy Allāh’s leadership. They freed Amid, captured Malatya and took up positions to defend the frontiers, the Sulaym at Malatya, the Kilaab in the nearby fortress of Hisn Kawkab.

It was as head of the Kilaab and the Black tribe, the Sulaym, that the romance is most generally known. But whilst several of the characters have a historical prototype, the heroine herself seems never to have existed historically.
have him put to death, and, as the Sulaym, their amir and the caliph supported and defended 'Ukba whose treason they refused to acknowledge despite the proof provided by Delhemma, 'Abd al-Wahhāb and al-Batṭāl, in consequence the Kilāb only took part in the war to save Byzantium, since it had been rendered critical by the Byzantines' successes in capturing and even advancing beyond Malatya, or else to fight against the emperor and the caliph who were linked together in an unnatural alliance against the Kilāb, or else to go off into far distant lands beyond Byzantium to rescue 'Abd al-Wahhāb's wife and daughter. Adventures which cannot be related here led al-Batṭāl into the West, whence he brought back a Frankish king whom he converted, and a little later to the Maghrib, returning with a contingent of Berbers. Subsequently the two tribes were reconciled and secured victories over the Byzantines near the Cilician Gates, recapturing Malatya from them and imposing a truce.

The narrator then tells, after the death of Hārūn al-Rashīd, of the war between al-Amin and al-Ma'mūn. Once again the Kilāb and the Sulaym supported al-Ma'mūn, whilst the Sulaym supported him. The amirs of the Kilāb who had been summoned to Baghdād, with the exception of al-Batṭāl who had escaped, were arrested by 'Amr at the instigation of Zubayda, she in turn being inspired by 'Ukba. A fratricidal struggle then broke out between the Sulaym, reinforced by troops from 'Irāq, and the Kilāb and 'Amīr. The Kilāb overcame the Sulaym and the 'Abbaṣīd troops, reached Baghadād, attacked the palace, set free the Kilābī amirs and took al-Amin prisoner, but were persuaded by 'Abd al-Wahhāb and Delhemma to release him. However, some of the Kilāb still continued to support al-Ma'mūn.

The emperor Michael, Manuel's successor, taking advantage of the civil war between al-Amin and al-Ma'mūn, on 'Ukba's advice renewed hostilities. Al-Ma'mūn, who had been supported by al-Batṭāl, came to the throne but had Delhemma, 'Abd al-Wahhāb and the Kilābī amirs who had helped al-Amin arrested. The caliph, following the not disin- terested advice of 'Ukba, the emperor's ally, set off in the direction of al-Raḳṣa and was captured, together with the Kilābīs whom he had taken with him, and they were all carried off to Constantinople. Delhemma was released and freed by al-Batṭāl. The others regained their liberty upon the outbreak of a war against the emperor that had been launched by a king named Kashānā, grandson through his father of the king of the Bulgars (al-Burdjān) and through his mother descended from Nestor, king of the Maghlabites (sic). Kashānā captured Constantineople, and then in his turn renewed the struggle with Islam and penetrated as far as Baṣra. He was finally captured by the Kilāb and beheaded by Delhemma herself. Thanks to the Kilāb, the emperor was freed and restored to the throne, and he decided for the future to give them the tribute which, in the past, he had paid to the caliph, a step that the latter returned to favour, set out an expedition, and was defeated. Finally Aḥmad was overcome and surrendered. He was soon compelled to seek help from the Muslims against his enemy king Karfanās who, with the Saḵārīḵa and the Malāfīta (Amalīfāns) captured Constantinople. The caliph sent the Sulaym against him. Karfanās captured 'Amr, defeated the caliph al-Mu'taṣīm and reached Aẓīm. At that point 'Abd al-Wahhāb intervened. Karfanās was killed and Aḥmad regained the throne.

The narrator, who is not unaware that al-Mu'taṣīm led an expedition against Amorium in 223/838, does not fail to describe it in a fanciful way, with certain characteristics which recur in an already legendary account by Ibn al-'Arabī in his Muḥādarat al-ḥabr wa-muslimarāl al-akhyār, ii, 64. Then he had Aḥmadūn dethroned by his own son Bīmūn. The latter maltreated al-Batṭāl, who had fallen into the hands
of Armanus, and thereby provoked 'Abd al-Wahhab and 'Amr to intervene. The latter was made prisoner. Delhemma then came to the rescue, killed Binund and restored Armanus to the throne.

'Ukba's mosque at Ankara was then burned down, but his tomb, still hidden by the caliph, was then nearly crucified in Constantinople, but he managed to escape. He then seems to have been sick and was retired to a hermitage, where he was again decoyed by the caliph; he hatched a new plot against the Kilab and procured the arrest of 'Abd al-Wahhab and al-Battal, and it was only by the vizier's help that they escaped from the sentence of death by drowning in the Tigris. Nevertheless, 'Amr and the Sulaym continued to fight against the Kilab.

A new emperor named Michael twice sent expeditions against the Muslims, the second time with a Frankish king Takafur. He took Malatya but it was recaptured by the caliph and 'Abd al-Wahhab, who had the support of a son of Delhemma, then her son al-Djarrah. Nevertheless, 'Amr also of being a Christian.

We come now to the final section of the romance, section 70, which like the preceding one is almost three times longer than the others. It is given up to a description of two important events: the pursuit of 'Ukba through various countries from Spain to the Yemen, his capture and crucifixion in Constantinople in spite of the intervention of a vast army of Christian peoples led by 17 kings; the murderous ambush into which the Muslims fell on their way back, in the Defile of the Anatolians, from which the caliph Maslama had been repulsed with 400 men, al-Battal and some of his companions, as well as Delhemma, 'Abd al-Wahhab and a number of men who had been shut up in a cave and given up for lost, but were miraculously saved by a genie. Soon afterwards al-Mu'tasim died.

His successor al-Wathik decided on a reprisal expedition against Constantinople. The emperor was captured and executed. Until then, Muslim conquerors had limited themselves to making the emperors pay tribute. From that time, a Muslim governor was appointed in Constantinople in the person of a son of 'Abd al-Wahhab who had the mosque rebuilt with great splendour. The amir 'Amr had been killed in the disaster of the Defile of the Anatolians, and was succeeded at Malatya by his son al-Djarrah.

At this point the narrator describes the deaths, first of Delhemma, then her son 'Abd al-Wahhab, after their return from Mecca, in a state of piety, while al-Battal ended his life at Ankuriya (a coral city in Andalusia, and the Masamida (Almohads) all appear. The incident of the founding of Samarra by al-Mansur. The incident of the founding of Baghdad by al-Mu'tasim.

Elements in the romance. Different elements enter into the creation of Delhemma. Firstly, a bedouin element which might be described as "antarian", since it is what occurs in the Sira 'Antar, which may have served as a model, as comparisons sometimes appear between some personage and ' Antar, whose horse Abjadi is mentioned. In the preamble of a Berlin manuscript the narrator, after giving al-Shaibah's genealogy, says that the events which he is about to describe took place after the death of ' Antar b. Shaddad. To this element belong, in the first part, the romance, the princes, the battles, the exploits of al-Haruh, his son Djandaba, and later of al-Shaibah and Delhemma herself, tales of pursuits and horse-stealing, al-Shaibah's romantic encounters with first Layla, then Amama, then ginniyya. In the last analysis these bedouin tales go back to pre-Islamic antiquity. It is noteworthy that Islam only plays a subsidiary part (doxology, Muslim talismanic formulae) although the importance of the djinn is stressed from the start.

The most important element is the pseudohistorical, for the romance claims to be an accurate history of the Arabs. This element appears as the often very vague recollection of a certain number of facts and historical personages, garbed in romantic trappings and presented in an imaginary way, with constant disregard for chronology and probability. In the internal history of the Umayyad period we find traces of the history of Maslama b. 'Abd al-Malik and of the eulogy of him spoken by 'Abd al-Malik on his death-bed; Maslama's renunciation of the throne in favour of al-Walid rests on a historical basis, Maslama as the son of a non-Arab mother having been barred from the caliphate for that reason. The 'Abbasid propaganda and the story of 'Abd Muslih ibn Maslama and of Dunwaites, called the son of Dunwaites, the founding of Baghdad by al-Mansur. The incident of the Zindik in al-Mahdi's time is transformed into a meeting of 22,000 zindiks with renegade Arabs acting in the service of Byzantium. It would be fruitless to reveal the improbabilities and inventions in the story of al-Mahdi's succession, or the account of the Barakids interwoven with 'Ukba's intrigues. Similarly a Khalid, in revolt against Harun al-Rashid, is endowed with the same characteristics as the Karmati in al-Muktadir's time, for he carries off the Black Stone. In the account of al-Battal's adventures in the West there is an incredible farrago in which the Spanish Umayyad called Hisham al-Mu'tayyad and described as the imam mahdi, the Mulaghthama (Almoravids) whose king 'Abd al-Wadid (a recollection of the 'Abd al-Wadids of Themen) pays tribute to the Frankish king of Andalusia, and the Ma'samida (Almohads) all appear. Turks are mentioned in the Muslim army from the time of Harun al-Rashid. We have seen how the war between al-Amin and al-Ma'mun is described in terms of the rivalry between the Kilab and Sulaym. There is only a very brief allusion to the founding of Samarrā by al-Mu'tasim.
As regards the Arabo-Byzantine war, it is the historical element which plays the chief part. Thus, in the first part Maslama’s expedition against Constantinople in 237/852-3 is the central event, around which all the romantic episodes are grouped. Al-Baṣṭāl who in actual fact took part in it is not mentioned here because he has been relegated to the second part of the romance. This part, which is based primarily on the Arabo-Byzantine war, reflects several important events of the ʿAbbāsid period, above all the establishment of a group of fortresses west of the Euphrates, with Malatya at the centre, which is alluded to again and again in the romance as a fact well known from al-Baladhuri. Then came al-Muʿṭasim’s great expedition against Amorium, which inspired several episodes in the romance, either under Harun ar-Rashid’s caliphate or under al-Muʿtadid. This must originally have been the epic of the B. Sulaym and their famous amir.

The description of land-battles is full of clichés, but the part of the romance which has inspired prose or verse accounts seems to be more realistic. There is, for example, (sect. 18, 35) a detailed description of the use of Greek fire, hawadir al-naft, boarding with the help of grappling-irons and several names of ships.

Folklore element. As in all romances and Pusi̇k works, Delhemma contains a mass of features derived from folklore, of which we shall only specify a few: tricks to make the enemy kill each other, the description of wonderful objects (automatic birds, talismanic statues), amazons, the use of the bandaje, etc. In the story of the queen of Georgia, Bakhtūs, which occurs in the first part, one can detect features which go back, through the legend of queen Thamar, to that of Zenobia. The theme of the camel-skin cut into strips in order to obtain a larger area for the building of the mosque in Constantinople is the same as the legend of Dido. Certain names (Kaykbūs, Kiliği b. Kābus) suggest an Irano-Seldjukid influence, rather than the Iranian legend.

The composition of the romance. I have tried to show, in an article entitled Delhemma, Sayyid Baṭṭal et Omar al-No̱mān, in Byzantion, xii (1937), 183 ff., following an article by H. Grégoire in Byzantion, xi (1936), 571 ff., on the subject of the relegation of the personage of al-Baṭṭal, the hero of the second part of the romance, to the legend of ʿAmr b. Ubayd Allāh, amīr of Malatya in the ʿAbbāsid period, that the romance of Delhemma is made up of two parts which are each a version or fragment of two cycles of different periods and origins. The first and shorter part goes back to a bedouin and Syro-Umayyad cycle (other fragments of which are incidentally extant) describing the adventures of the Umayyad amīr Malāma b. ʿAbd al-Malik and of personnages of the B. Kiļāb tribe related to Malāma through his wife. Though this part does not include the historical heroes of the Umayyad period, al-Baṭṭal and his companion ʿAbd al-Wahhāb who have been relegated to the second part, al-Baṭṭal’s exploits have been put under the name of the Kiļāb amīr al-Sabīs. The second, the principal and longer part, constitutes the part of the romance which goes under the name of the Turkish Sayyid Baṭṭal, represents not only the Turkish romance but also a cycle which H. Grégoire and I have called a Melitenian cycle on account of the part played by Malatya-Melitene and its amīr ʿAmr b. Ubayd Allāh, of the B. Sulaym tribe in the ʿAbbāsid period. This must originally have been the epic of the B. Sulaym and their famous amīr.
As a result of al-Battal's popularity the Sulaym must have appropriated the personage who is described in the romance as being of Sulaym origin. In H. Grégoire’s opinion, this change in respect of al-Battal was determined by the fact that in the expedition during which he was accompanied by an amir of Malatya named Ghamr, a name easily confused with 'Amr, and his delegation has also involved a similar change in respect of 'Abd al-Wahhab. A later stage in the development of the romance was the fusion of the two cycles and the appropriation of the Melitenian cycle by the Kilab, to their advantage, for the reasons I have given in the article under reference (the submission of the amirs of Malatya to Byzantium in the 10th century, which was frowned upon by Islam; and, on the other hand, the important rôle played by the B. Kilab in the Byzantine war in the 10th centuries, and their eminence in north Syria). It is in this way that the end of the first part, in which we see the birth and childhood of Delhemma, the Sulaym granddaughter, and then of her son 'Abd al-Wahhab, is a translation of the second part where the Kilabis take their place in the Melitenian cycle, that 'Abd al-Wahhab, historically an Umayyad was of unknown origin, becomes a Kilbi and the principal character, with his mother, that al-Battal is represented as voluntarily leaving the B. Sulaym in order to join the B. Kilab, and that 'Amr b. Ubayd Allâh, the central hero of the Melitenian cycle as he is in the Turkish romance under the name 'Umar b. al-Nu'mân (cf. also the story in the 1001 Nights of the same name) becomes a personage not only less important than 'Abd al-Wahhab but also less attractive, since the narrators give all their sympathies to the B. Kilab. Moreover, it is known from Kalkashandl, Şîbâ, i, 340 and iv, 251, that in his time the romance was regarded as having been written to glorify the B. Kilab of north Syria who claimed to be adherents of 'Abd al-Wahhab.

Date of composition of the romance. It goes without saying that it is impossible to give an exact date for the composition of this romance as we have it in the published edition and in the manuscripts which differ little from it. It is probable that, if the first outlines of the Syrio-Umayyad cycle were traced as early as the Umayyad period, then, those of the Melitenian cycle shortly after the death of 'Amr in 249/863, it was at a much later date, and under the inspiration of the spirit of hostility to the Crusaders, that an epic of the Arabo-Byzantine wars followed by the Islamo-Frankish wars finally took shape. Positive references to an epic of this sort do not go back beyond the 12th century. The Egyptian historian al-Kurītī, writing at the time of vizier Shīwār and the Fatimid caliph al-Qādir (555-67/1160-72), speaks of the Akbaḍīth al-Battal and the 1001 Nights as being known in his time (al-Maqrīzī, Khitat, i, 485, ii, 182; cf. Macdonald, in J. R. A. S. 1924, 381), a detail which should be added to the article al-Battal. Sama‘wal b. Yalāyā al-Maghribī, a Jew converted to Islam in 558/1163, says that before his conversion he took pleasure in reading stories and romances and collections of legendary histories like the Dīwān 'Abd al-‘Antara, the Dīwān Delhemma wa l-Battal (see Bibl. to al-Battal). If we can accept a tradition from al-Mughūlī reported in the Ta‘ṣīm, al-aswād by Dāwūd al-Antākī (ed. Bālāk, 1279, 55), a Maghribī Shaykh was said to have heard the Strat al-Battal recited in Cairo, at the time of al-Hākim. Thus a romance dealing with al-Battal, or with both Delhemma and al-Battal, was known in the Fāṭimid period, and it is difficult to tell if it is a question of one and the same romance, or of two separate romances. A Strat al-Battal is also mentioned by al-Kalkashandl, xiv, 149, l. 9. Can we go back further? According to H. Grégoire (ZDMG, lxxviii, 1923), the basis of Delhemma's history and the tale of 'Umar al-Nu'mān (see also my article Un personnage . . .) must have been known in about 390/1000 in north Syria since it served as a source for the Byzantine epic Digenis Akritas. In this period we find other mentions of Delhemma. In the 8th/14th century Ibn Kahlīr (see Bibl. to al-Battal), repeating what Ibn ‘Asākir had said of al-Battal, adds that the Sīra put out under the name of Delhemma, al-Battal, 'Amr 'Abd al-Wahhab and hādī 'Ukba is no more than a tissue of lies, like the Sīra of 'Antara or the one (on the Prophet) by al-Bakrī [q.v.]. In the 17th century, the jurist al-Wangārīshī, in his Miṣ'yar al-mughrīb (see the analysis by Amar, in Arch. Marocaines, xi (1908), 435-7 and the lith. ed. vi, 52), says that it is not permitted to sell historical romances like the one on 'Antar or the "Dalhama". Today, the disfavour shown by the most critical circles has become even more marked: see the modern contempt for this literature, in Brockelmann, S ii, 62.

The author or authors of the romance. In the edition, no author is named, but there is a list of rawīs. A manuscript analysed by Ahlwardt begins: bālia Naǧīd b. Ḥishām al-Ḥākimī al-Ḥāṣid, as though in reference to the author. But in another, six rawīs are listed, Naǧīd being the third. The edition gives ten rawīs, of whom Naǧīd, with the ethnic al-‘Āmirī, that is to say, of the tribe of ‘Āmir who plays a large part in the romance with the related Kilab, is the last. These persons are unknown and one can scarcely draw any conclusions from the fact that the one has the ḥisba at al-Shimshāt, and the other at al-‘Aṣrā q, that is to say, lands situated on the Arabo-Byzantine frontier. The fact that a rawī is stated to have been present at the event described (sect. 18, 64), dated 190 A.H. is merely a device by the narrator.

Conclusion. Such then is this long romance of which our analysis gives only an incomplete idea, so complicated are the adventures of the characters, prolonged at will by the author by means of repetition, the confounding of similar situations, the artificial duplication of characters with identical rôles etc. Such as it is, this epic of the Arabo-Byzantine wars and of the B. Kilab succeeded in pleasing a popular Muslim public by exalting the mujāhidūn and their successes in battles and against adversaries that were often imaginary. A simple-minded audience accepted all this with enthusiasm as though it were fact. In addition to the epic character, with its accounts of combats and great feats of arms, the dramatic or melodramatic element is not lacking; the narrator is adept in holding his listeners spell-bound waiting for some climax, through agonizing changes of fortune whether happy or unhappy, and by various means rousing sympathy or antipathy. The comical element, at times of a somewhat crude sort, appears fairly frequently, or antipathy. The comical element, at times of a somewhat crude sort, appears fairly frequently, particularly in scenes portraying disguise, abduction or theft, and in the more or less childish devices employed by al-Battal and ‘Ukba, the use of various mountebank tricks of which al-Battal is past master, when for example he appears as a Christian king with his ghulām, in the guise of Christ and the
twelve apostles (cf. a similar story in Murudi al-
dhahab, viii, 175).
The personages ... the nomads). Shah-suvar
drove out Shah-budak, and gained such successes
over the Egyptians that he threw off Mehemmed's
force led by the governor of Aleppo, he escaped
capture, but was eventually surrendered to the
Egyptians, processions). Verse which plays the same
part as in the 1001 Nights is relatively infrequent,
but section 70 contains a passage of 472 lines of
receptions, processions). The language
pretends to seem learned by making a show of
in descriptions (horses, arms, clothing, combats,
from the Eretna-oghlu and began to menace Malatya.

The founder of the dynasty, Zayn al-Din Karadja
b. Dulkadir, first mentioned as penetrating Little
Armenia with 5000 horsemen in 735/1335, was
the leader of Bozok clans whose summer-pastures
were in the east range of the Anti-Taurus and who
wintered in the valley east of the Amanus range.
In the confusion following the death of the Ilkhan
Abu Sa'id, Karadja Beg seized Elbistan and procured
from the Mamlik Sultan a diploma recognizing him
as mawla (738/1337). The rest of his life was spent
in struggles with his neighbours and in revolts against
Egyptian suzerainty. Defeated at last by a strong
force led by the governor of Aleppo, he escaped
capture, but was eventually surrendered to the
Egyptians, processions). Verse which plays the same
part as in the 1001 Nights is relatively infrequent,
but section 70 contains a passage of 472 lines of
receptions, processions). The language
pretends to seem learned by making a show of
in descriptions (horses, arms, clothing, combats,
from the Eretna-oghlu and began to menace Malatya.

The twelve-year reign of Mehemmed's II
son, against Musa (Neshrl, ed. Taeschner, i,
326 f.). He took part in the Egyptian punitive
expedition against the Karaman-oghlu in 822/1419,
and after its withdrawal defeated him and sent him
captive, but was eventually surrendered to the

protection (see Ibn Kemâl, VII, defter [facsimile], ed. Ş. Turan, 429-33). The Egyptians retaliated, took him prisoner to Cairo and executed him (877/1472), and re-installed Şâhiş-budak. (Şâhiş-suvâr alone of the Dhu 'l-Kadr rulers is said to have struck coins, cf. 'Arifî [see Bibli., 430, 765].

Another brother, 'Ali al-Dawla (whose daughter was married to Prince Bayezîd and had borne him the future sultan Selim I), sought Mehemmed's protection (Ibn Kemâl, 433-47) and in 884/1479 drove out Şâhiş-budak. During the Ottoman-Mamlûk war of 890-6/1485-90, 'Ali al-Dawla began to incline towards Egypt, so that the Ottomans made an unsuccessful attempt to depose him in favour of Şâhiş-budak, who had changed sides and was now sandjak-bey of Vize (Şâhişgazhâzade, ed. ‘Ali, 234-8; Sa’d al-Dîn, ii, 63-5). During the next twenty years ‘Ali al-Dawla remained at peace with the Ottomans, but came into conflict with Şâhiş Isma’il, who in 913/1507 sacked Elbistan (destroying the monuments of the dynasty) and Mar’ash. When Selim I marched against Şâhiş Isma’il the aged ‘Ali al-Dawla refused to assist the Ottoman army, so that on his return Selim sent against him Khâdîm Sinan Pasha and ‘Ali, the son of Şâhiş-suvâr, an Ottoman sandjak-bey. ‘Ali al-Dawla was defeated and killed (Râbî‘ II 921/June 1515) and his head sent to Cairo (Sa’d al-Dîn, ii, 293-7; Ferdîndân, Munsha’dt, i, 407-413).

‘Ali Beg, appointed in his stead, distinguished himself in Selim’s Egyptian campaign; but by playing the major part in suppressing the Djalall and re-installed Shah-budak. During the next twenty years ‘Ali al-Dawla remained at peace with the Ottomans, but came into conflict with Shah Isma’il, who in 913/1507 sacked Elbistan (destroying the monuments of the dynasty) and Mar’ash. When Selim I marched against Shah Isma’il the aged ‘Ali al-Dawla refused to assist the Ottoman army, so that on his return Selim sent against him Khâdîm Sinan Pasha and ‘Ali, the son of Shah Isma’il, an Ottoman sandjak-bey. ‘Ali al-Dawla was defeated and killed (Rabî‘ II 921/June 1515) and his head sent to Cairo (Sa’d al-Dîn, ii, 293-7; Ferdîndân, Munsha’dt, i, 407-413).

Under Ottoman suzerainty the Dhu ‘l-Kadr-

DHO KAR — DHU 'L-KALASA

DHO KAR, name of a watering-place near Kufa, in the direction of Wasit (Yakut, iv, 10), where one of the most famous Arab ayyâm [s.v.] took place. In contrast with most other clashes between Arabian tribes, this one had a historical importance because the Bakr b. Wâlî tribe (a coalition of all its clans except the Banû Hanifa) put other Arabs to flight (Taghib, Ityâd, etc.) among whom, significantly, were regular Persian troops. Even if the battle was no more than a skirmish (though sources speak of several thousand combatants) it showed the Arabs that the Persians were not as invincible as had been supposed. Caetani points out that it was not mere coincidence that several years later, the same Bakr b. Wâlî tribe, led by al-Mu'tanând b. Harîgha, took the initiative in making the first incursions into 'Irak; it was henceforth well aware of the Persian weakness when faced with an Arab coalition. The date of the battle is uncertain (variously put at the year of Muhammad's birth[1], or when he began preaching, i.e., ten years before the kîdâra, or immediately after the flight to Medina, or some months after Badr, i.e., 2-3/623-623) but the account left of it allows us to place it within a very restricted period. Details vary, and are partly legendary; some of them however can be accepted as authentic, and indicate that the battle occurred soon after certain well-known historical facts. These details attribute the cause of the conflict to the imprisonment of the last Lakhmid leader, al-Nu'mân b. al-Mundhir, by Khusraw Parwiz (Abarwiz in Arab sources) From them it is possible to reconstruct the train of events: the Sâsând made an error of judgment in replacing the Lakhmid monarchy by a system of direct government. The Bakr b. Wâlî were either incited by al-Nu'mân's imprisonment followed shortly by his death, or else, suddenly freed from their fear of this guardian of the frontiers, they devoted themselves to plundering, and the Sâsând resolved to punish them. His troops, however, were defeated and pursued as far as the Sawâd, and through a combination of circumstances the expected reprisal did not ensue. The end of al-Nu'mân's reign has been put at 602 A.D. (605 by Caetani), and the government of the Taghibid Ityâs b. Ka'bisa, who followed the Lakhmid so peacefully as to remain sovereign until 611. The date of the battle can therefore be restricted to the years between 604 and 611 A.D. (Caussin de Perceval, Essai, ii, 185, puts it at 611; Noeldeke, Geschicchte, 347, n. 1, between 604-610; Goldziher, Muh. Stud., i, 103, at 611; Caetani, Annali, Intr. § 230 & Note 1; year 12, §§ 135 and 136; I. Goldzihcer, Muh. Studien, i, 103 ff; Diad, Badjawi and Abû Faqîl Idrîshîm, 'Ayyâm 'al-'Arab, Cairo 1361/1942, 6-39. (L. VECIA VAGLIERI)

DHO 'L-KARNAYN [see ISKANDAR].

DHU 'L-KHALASA (or KULASA). Dhu 'l-Khalaşa refers to the sacred stone (and the holy place where it was to be found) which was worshipped by the tribes of Daws, Khabš'am, Badjîla, the Azd of the Sarât mountains and the Arabs of Tabâla. "It was a white quartziferous rock, bearing the sculpture of a white man's imprisonment followed shortly by his death, or else, suddenly freed from their fear of this guardian of the frontiers, they devoted themselves to plundering, and the Sâsând resolved to punish them. His troops, however, were defeated and pursued as far as the Sawâd, and through a combination of circumstances the expected reprisal did not ensue. The end of al-Nu'mân's reign has been put at 602 A.D. (605 by Caetani), and the government of the Taghibid Ityâs b. Ka'bisa, who followed the Lakhmid so peacefully as to remain sovereign until 611. The date of the battle can therefore be restricted to the years between 604 and 611 A.D. (Caussin de Perceval, Essai, ii, 185, puts it at 611; Noeldeke, Geschicchte, 347, n. 1, between 604-610; Goldziher, Muh. Stud., i, 103, at 611; Caetani, Annali, Intr. § 230, at 610).

A famous hadîth bears witness to the great importance which the Arabs attached to this military success; the Prophet is recorded as having said "It is the first time that the Arabs have got the upper hand of the Persians, and it is through me that God has helped them (mursûr)". Poets and story-tellers of the ayyâm have perpetuated the fame of this battle; many poems are recorded by al-Tabarî and in both the Aghâni and the 'Idâd, the traditions of which have been collected together principally by Abû 'Abd Allah al-Badîl [n. 2] and in the works of other authors. Even in the material of popular romances, such as (according to Goldziher, xvi, 6-43) the romance of 'Antar, and (according to Mittwoch, EI, s.v. Dhu Kâr) the romance entitled K. Harî Banû Shaybân ma'a Kîsîrâ andgâbirân.

The youm of Dhu Kâr is also known by the names of other places situated near the watering-place, such as al-Hinw (i.e., the hinw, "the curve"), of Dhu Kâr or of Kurâkir, al-Dhibâbât, al-'Udâr or Encyclopaedia of Islam, II
about the idol according to which the prophet said: "The hour will not come until the women of Daws worship the idol about which the prophet said: "The hour will not come until the women of Daws worship the idol."

Dhu 'l-Kifl, a personage twice mentioned in the Koran (XXVI, 85 and XXXVIII, 11, probably second Meccan period), about whom neither Kur'anic contexts nor Muslim exegesis provides any certain information. John Walker (Who is Dhu 'l-Kifl?, in MW, xvi [1926], 399-401) would like the name to be understood in the sense of "the man with the double recompense" or rather "the man who received recompense twice over", that is to say Job (Ayyûb [q.v.]; cf. Job xlii, 10). Without being certain, this explanation does not lack probability; in any case, no better suggestion has been put forward. Muslim exegesis either adopts a similar opinion in making Dhu 'l-Kifl the second name of Ḥizkîyâ [q.v.] = Ezekiel, or else identifies him with an imaginary Bishr (Bashîr), son of Ayyûb (as early as Tabârî, Annales, i, 364). "Etymological" speculations about the meaning of kifl or the derivatives of the root KFL (double, caution, subsistence) have helped to swell the legends that have been woven round the rather insignificant figure in the Korân; thus, for example, Dhu 'l-Kifl assumes the role of Obâdiah, Ahab's pious major domo who, according to the Bible (I Kings, xviii, 4) kept and fed a great number of prophets.

The figure of Dhu 'l-Kifl reappears elsewhere in certain edifying accounts in which another person of the same name is presented as typical of the sinner who, having overcome some particularly strong temptation, gains his eternal reward. As with many other historical or legendary personages, various local traditions attribute to Dhu 'l-Kifl burial places far removed from each other.

Dhu 'l-Nun used the word ḥubb for love to God, which means, he says, to love what God loves and to hate what God hates. But the love of God must not exclude love to man, for love to mankind is the Will of God.

Dhu 'l-Nun was a practical mystic, who describes in detail the journey of the soul on its upward way to the goal, and gives the Suffi conception of the unitive life in God.

Dhu 'l-Nun was the first to teach the true nature of gnosis (maʿrîj), which he describes as "knowledge of the attributes of the Unity, and this belongs to the saints, those who contemplate the Face of God within their hearts, so that God reveals Himself to them in a way in which He is not revealed to any others in the world". "The gnostics are not themselves, but in so far as they exist at all they exist in God". The gnostic needs no state, he needs only his Lord in all states. Gnosis he associates with ecstasy (waḍâdî), the bewilderment of discovery. Dhu 'l-Nun used the word ḥubb for love to God, which means, he says, to love what God loves and to hate what God hates. But the love of God must not exclude love to man, for love to mankind is the foundation of righteousness. He is one of the first to use the imagery of the wine of love and the cup poured out for the lover to drink.

He was called "the head of the Sûfis", a great teacher who had many disciples during his lifetime and afterwards. A few books on magic and alchemy, attributed to him, have survived, but his mystical teaching is found only in what has been transmitted by other writers, including his great contemporary, al-Muḥâsibî. There are many of his prayers recorded and also some poems of fine quality. He was the first to explain the Sûfi doctrines and to give systematic teaching about the mystic states (akhwâl) and the stations of the mystic way (makâmât). He taught the duty of repentance, self-discipline, renunciation and otherworldliness. Self, he considered, was the chief obstacle to spiritual progress and he welcomed affliction as a means of self-discipline. Sincerity in the search for righteousness he calls "the sword of God on earth, which cuts everything it touches". Solitude helps towards this end, "for he who is alone sees nothing but God, and if he sees nothing but God, nothing moves him but the Will of God'.

Dhu 'l-Nun was the first to teach the true nature of gnosism (muʿrâj), which he describes as "knowledge of the attributes of the Unity, and this belongs to the saints, those who contemplate the Face of God within their hearts, so that God reveals Himself to them in a way in which He is not revealed to any others in the world". "The gnostics are not themselves, but in so far as they exist at all they exist in God". The gnostic needs no state, he needs only his Lord in all states. Gnosis he associates with ecstasy (waḍâdî), the bewilderment of discovery. Dhu 'l-Nun used the word ḥubb for love to God, which means, he says, to love what God loves and to hate what God hates. But the love of God must not exclude love to man, for love to mankind is the foundation of righteousness. He is one of the first to use the imagery of the wine of love and the cup poured out for the lover to drink.
ruled, with Tulaytula (Toledo) as their capital, from Wadi '1-Hidjara (Guadalajara) and Talablra (Talara) in the N. to Murcia in the S.

The original territory of the Banu Dhí 'I-Nún lay E. of Toledo in the kūra (administrative district) of Shantabariyya (represented by modern Santaver near the confluence of the Guadiela and the Tagus) where as early as the amirate of Muḥammad I (236-73/852-86) we find established Sulaymān b. Dhí 'I-Nún, a descendant in the fourth generation of a certain al-Samḥ, who is said to have been present at the conquest of al-Andalus. In this region of the Middle Frontier (al-thaghr al-awsat) or, as is also given, of the Northern Frontier (al-thaghr al-djawf), the family played an active part, frequently in opposition to the reigning dynasty, until the end of the Caliphate of Cordova.

In the troubles of the Fiina (literally 'sedition') after 399/1009 the Dhí 'I-Nunids rallied at first to Sulaymān al-Musta'āl (died 409/1019), but soon 'Abd al-Raḥmān al-Muẓābī b. Dhí 'I-Nún and his son Isḥāq, who is said to have received from Sulaymān the double vizirate and the title Nāṣr al-Dawla (Ibn Hayyān, quoted Ibn Bassām, iv/1, 110), struck out a line of their own. According to Ibn Hayyān, Ismā'īl was the first of the 'Party Kings' to break with the central authority and was inimitated by this in the others, but when and how he actually did so are not known. It is usually said that he began to rule in Toledo after the death of Ibn Ya'qūb in 477/1085. But this is evidently too late. The date of the death of Ibn Ya'qūb is given by Ibn Bagkuwāl (ed. Codera, 628) as 419/1028-9. We also have an inscription of Ismā'īl in Toledo dated 432/1042 with the titles Dhí 'I-Rāsātayn (cf. above) and al-Zafīr, 'the Triumphant', which must be placed after his accession (E. Lévi-Provencal, Inscriptions arabes d'Espagne, 66). As king in Toledo Ismā'īl was beset by difficulties on all sides, including war with the Christians (Ibn Sa'īd, ii, 15-16), but he made good his position and survived till 435/1043, when he was succeeded by his son Yaḥyā, called al-Ma'mūn.

Early in his reign al-Ma'mūn was attacked by Sulaymān b. Hūd of Sarakūsta (Saragossa), and subsequently both he and Ibn Hūd at different times abandoned the allegiance of the Andalus, to operate practically unopposed in Muslim territory. The death of his rival in 438/1046 put an end to these anxieties, at least temporarily, and al-Ma'mūn was free in the next decades to occupy himself elsewhere. He intervened profitably in the E. of al-Andalus, wresting Valencia from the hands of a descendant of al-Ma'sūr b. Abī 'Amīr in 457/1065 (see art. Balansiva). In 464/1072 he received Alfonso VI, who had been defeated by his brother Sancho of Castile at the battle of Volpejares (Golpejera), and retained him as guest in Toledo for 9 months. The main object of al-Ma'mūn's ambition was Cordova, the former seat of the Caliphate, held by the Djahwarids till 461/1070. To secure help against Ibn Hūd, he had been obliged to support the claims to the Caliphate of the pseudo-Hīḏām, maintained by the 'Abbāsid of Seville, which his father al-Zāfīr had always denied. But even though thus compromised, he was able to gain possession of Cordova, which had passed to the 'Abbāsidīs, in 467/1074-75, shortly before his own death in the same year.

Al-Ma'mūn was succeeded at Toledo by his grandson Yaḥyā al-Kādir, whose iniquity was speedily shown by the assassination of the wāṣir Ibn al-Hadīdī, hitherto a principal supporter of the Dhí 'I-Nunid regime. Al-Kādir lost Cordova and Valencia and, faced by dissension at home and by the hostility of the other 'Party Kings', he took the disastrous decision of applying for help to Alfonso VI. He was brought back to Toledo, which he had been obliged to leave, by Christian arms and later installed by Alfonso in Valencia, in return for the cession of Toledo, but was assassinated in 485/1092. With al-Kādir ended the rule of the Dhí 'I-Nunids. Toledo itself had passed into the hands of the Christians in 478/1085.

Less well-endowed than the 'Abbāsidīs, the family produced perhaps only one man of literary distinction, Arḵām b. Dhí 'I-Nún, brother of Ismā'īl al-Zāfīr (Ibn Sa'īd, ibid., 14), and at first their court appears to have been deficient in poetical talent (Ibn Bassām, ibid., 111, 114). This state of affairs must have radically altered under al-Ma'mūn, since we know the names of many literary men and scholars who flourished under Dhí 'I-Nunid protection, among them the hādi Sa'īd, author of the well-known Ṭabābāṭ al-Ūmām, valuable for the history of science, and the famous astronomer al-Zarkālā (Azarchiel), who may have been employed as engineer by al-Ma'mūn in some of his constructions at Toledo. The luxury of al-Ma'mūn's court became proverbial in the expression the 'cumbustion-feast of Ibn Dhí 'I-Nun (al-Thāfir al-Dhunnānī), given in honour of his grandson (an eye-witness description of his grandson's (an eye-witness description of his grandson's hand in the Spanish Muluk al-Tawḍīf, Hispanic Numismatic Series, no. 3, American Numismatic Society, New York 1954, 122-34; Daniel of Morley, Liber de naturis inferiorum et superiorum, ed. K. Sudhof, t. xii, 1931, 33-49; D. M. Dunlop, The Dhunnānīs of Toledo, in J.R.A.S., 1942, 77-96; ibid., Notes on the Dhunnānīs of Toledo in the 11th century, J.R.A.S., 1943, 170-5, and Al-Andalus y Los Reyes de Taifas, Madrid 1926, 52-5, 335-5, 231-3 (chiefly numismatics); G. C. Miles, Coins of the Spanish Muluk al-Tawḍīf, Hispanic Numismatic Series, no. 3, American Numismatic Society, New York 1954, 122-34; Daniel of Morley, Liber de naturis inferiorum et superiorum, ed. K. Sudhof, Archiv für die Geschichte der Naturwissenschaften und der Technik, vii, 1918, 33 (12th century Latin reference to architectural works of the Dhí 'I-Nunid period).

DHÚ NUWĀS, YUSŪF AŠ'ĀR, pre-Islamic king of the Yemen. According to a tradition probably deriving from Wahb b. Munabbīh (Tījānī, ii, 2 ff.) and repeated by the Arab chroniclers (Ibn Kutayba, Ma'ārif, 277; al-Dinawarī, Aḥhār, 65; al-Tabāri, 540 ff.; Ibn Khaldūn, 'Ibar, i, 90; al-Maṣūdī, Muʿjam, i, 129 etc.), he was a descendant of Zurrātī, author of Inšālīdat Dhū Nuwās, who in Arab traditions is generally known as Zurāt's b. Tibbān Aš'ād, and who took the name Yūsuf after his conversion to Judaism (Ibn al-ʿAṭhir, vi, 252, calls him Yūsuf Shurābbīl), was placed on the throne by the Himyarites after he had
assassinated Labay'a b. Yanuf to escape from his attentions. On the subject of his reign, which is said to have lasted 38 years, tradition tells in particular of the persecutions to which the Christians of Nadjaran [see Ashâb al-Asbâha] and the invasion of the Yemen by the Negus at the request of the emperor of Constantinople. Dhu Nuwas was conquered by Aryan, (who had Abrahah under his command, and threw himself into the sea. In the Martyrium St. Arethae he is called Dhououas (nom.) and Dhououas (accus.) (Noldeke, Geschichte, 274, 3) (Theophanes calls him Dimianus, which Noldeke says is incorrect, the name of an Abyssinian king). Thus the epithet Dho Nuwas does not seem to be an invention of Arab traditions which explain it by his curly hair (al-Hamdani, Kitb, viii, 137); but a certain Dhu Ghamman and Nuwas, lord of a fief, is mentioned in CTH, 68, li (cf. M. Hartmann, Islamische Orient, ii, 292 ff.). However, The Book of the Himyarites (A. Moberg, ibid. 451, stanza 5) "is authentic, Yusuf Dhu Nuwas must be his predecessor's son. The two inscriptions Ry 446 = Ry 510, (Musdon lxv, lxvi), discovered in 1952 by G. and J. Ryckmans confirm the historical existence of Yusuf Dhu Nuwas; they describe the operations conducted against the Christians and Abyssinians in Zufar and Nadjaran. Sumayya Asha (Ist. 7608 bis li. 1-2) whom the Abyssinians chose as king of Saba' after the defeat of Dhu Nuwas (G. Ryckmans, lix; J. Ryckmans, Musdon, lxvi, 337-8; The Book of the Himyarites, 544 and cxxvii-ix) see also Smith, Events, 459) was grandfather of Sharahl Yakbul Dhu Yazan; this tribe must be the same as king Yusuf's (J. Ryckmans, Musdon, lxvi, 337). At the beginning of his reign, Yusuf Ash'ar invited the king of Hira, al-Mundhir, just when the latter was leading a campaign against Byzantium in the Syrian desert, to follow his example and exterminate all Christians who would not deny Christ. Then Yusuf Ash'ar began a savage onslaught on the Christians of Nadjran, first of all at Zufar where he destroyed and burnt the church (Ry 508 li. 2-3; Ry 507 l. 1; cf. The Book of the Himyarites, 7b). Then turning to the neighbouring Christian tribe of al-Ash'ar, he ordered his commander Sharahl Yakbul Ya'azan to march against Mukha (Ry 508, 3-4). In the operations in the two regions casualties in the battles amount to 14,000 killed, with 11,000 prisoners. At Nadjaran, where the siege was said to have lasted some months, the king asked the Nadjarans for guarantees to prevent any invasion by the South. Meanwhile a certain Daws Dhu Thu'luban fled and informed the emperor Justinian I. Simeon Beth Arsham arranged that the news of the coming of the new king and his persecutions (cf. Philby, Musdon, lixii, 271 ff.). The Book of the Himyarites, 18-22 and the Negus occupied the Yemen (see Bury, Later Roman Empire, ii, 324; Smith, Events, 451) at the head of 120,000 men (70,000 according to al-Tabari, i, 548) who came down from Bâb al-Mandab (J. Ryckmans, lxvi, 334-5; Budge i, 262; Smith, 458). According to Christian evidence, Dhu Nuwas Ash'ar was killed (A. Moberg, Ch. XLII; Philby, Background, 120). We can see from what ensued that a split occurred among king Yusuf's allies (cf. Smith, 549; Ibn Khaldun, 'Ibar, i, 92). Sumayya Ash'a, viceroy to the Negus in 525, was among Yusuf's supporters in 524. Inscriptions and The Book of the Himyarites are in agreement about the Jewish king's
successor, whom Ella Asbaha gave to the Himyarites (see Smith, 459, B.H. 54b); it is a question of king Sumaya's Ashwa (in Procopius, Wars, i, xx, 3-6; he is called Esimiphaeus) of just. 760 hajj, 1. 1, a Christian convert of the royal family. J. Ryckmans and A. F. L. Beeston think that RES 253 = CIH 621, the date of which, 640 A.D., must indicate his death, but that of Dhu Nuwās Yūsuf (Persécution, 8-9). This inscription must relate to Abraha's revolt against king Sumaya's Ashwa in about 330 A.D. (see also Procopius, Wars, supra). According to this theory, it was composed in about 100 B.C., and not in 115. It is by this system of dating, which conforms better with the evidence of inscriptions and traditions, that the inscriptions quoted in this article have been dated.

**Bibliography:** J. B. Bury, Later Roman Empire, ii; A. Moberg, The Book of the Himyarites, Lund 1942; Sidney Smith, Events in Arabia in the 6th Century, in BSOAS, vi, 3, 1954, 425-68; Ibn Kathiya, 334). According to a story originating from two sources in Basra, an unknown Aghdni b. Abl Burda of the shameless plagiarism of his own poems (see Aghānī, xvi, 121 and 123-5; also Kutayba, 339). The controversies with Dīārīr (q.v.) were a result of the open preference which Dhu 'l-Rumma showed for the poetry of al-Parazdaḳ; his diatribes with the Tamīmi Ḥīṣām seem to have given rise to some of the choicest anecdotes in Basra (see Aghānī, vii, 55, and ibid., xvi, 117). We have only a few facts of doubtful authenticity on his love affairs with Mayya and a certain Kharka3; they were later developed into a sort of novel. His thoughts on religion also remain obscure, there being but a few references to the Kurān in his poems, e.g., Divān no. 7 verse 30, no. 22 verses 35 & 79 (cf. anecdotes in Aghānī, xvi, 128). His death, at a relatively young age, has been put at about 117/735 (for other estimations see Schaade in EtH, s.v., and references). According to a story originating from two sources in Basra, an unknown person reported his burial at Huzwā, on the borders of Dahmā.

As was normal for the times, Dhu 'l-Rumma's works were diffused orally by rāwīs, one of whom is known by name (see Aghānī, xvi, 112, l. 27). Many stories attributed to him circulated among the nomads of eastern Arabia (ibid., xvi, 112), and, although often of doubtful authenticity, they have helped preserve his poetry for later generations. In time, oral accounts were written down in the form of a Divān, and by the end of the 3rd/9th century two collections existed, one by Thalab and the other, a more complete edition, by al-Sukkari (e.g., Fihrist, 158, l. 20). In Macartney's work, the collection attributed to Dhu 'l-Rumma is extensive, comprising 87 complete poems to which the author has added 140 fragmentary works. Most of the poems are exceptionally long. Sometimes they are improvised for a particular occasion, e.g., nos. 31, 33 (in praise of Muhāджir), 57 (traditional ُbaṣīda in honour of Bilāl), 81 (an allusion to events of which nothing is known historically). More often than not they are lyrical odes written in a style common to Bedouin poets of his time, beginning with a description of deserted camps, followed by some reflections on the poet's lover, and ending with a description of his camel and its wanderings across the desert. His beloved Mayya is mentioned in nearly all of them (nos. 4, 7, 10, 11, 17, 22, 28 etc.). The study of his works poses several well-known problems. Some pieces are fragmentary (e.g., the end of no. 60, ُbaṣīda, is missing), others are of dubious origin because of the inconsistent sequence of themes treated in them. Some seem to have no more than a lexicographical inspiration, and were no doubt composed to meet the demands of certain learned men of Basra and Kūfā. If we are to believe Ḥammād 'the Transmitter', many poems full of pathos were written in Kūfā by persons using Dhu 'l-Rumma's name (see Aghānī, xvi, 122, l. 156 ff.). Moreover, it may well be asked whether certain elegant poems were, as was often the case, in fact, included in the collection simply because they contained references to Mayya. From the 3rd/9th century onwards, the historical character of Dhu 'l-Rumma began to change and he took his place among those famous Arab lovers who were victims of unrequited passion; in this case, the hero pines away for Mayya, who is married to a rich sayyid, and his songs addressed to Kharka3 are designed only to arouse his Lady's
jealousy (ref. Aqhdhî, xvi, 113, 114, 119 ff., 125, quoting Ibn al-Nattâh; cf. Ibn Kutayba 334-6, where the story, from an unknown source, is in a very conventional romantic manner).

Although this epic of love has been much elaborated (cf. mention of title in Fihrist, 306, l. 22), it has nevertheless retained traces of its Bedouin origin, as is shown by comparison with a story in al-Hamadhâni's [q.v.] Mâkâmât [q.v.] (Beirut 1924, 43), which the author adapted from an old story of central Arabian origin.

Dhu 'l-Rumma's prestige stood particularly high with the Basra grammarians (see Aqhdhî, xvi, 115 ff.), although this assumption must be qualified, with some reservations (see Ibn Sallâm, 125, & Ibn Kutayba, 333). It was the profuse richness of the poet's descriptions of the camel, onager and oryx and the desert which aroused admiration; the great beauty of his elegies was also acknowledged, hence the large number of his verses which were set to music (Aqhdhî, xvi, 129 ff.), of which we may mention a Kitâb al-ghâb Dhu 'l-Rumma composed by Ishâq al-Mawsill (title in Fihrist, 142, l. 19). But it was nevertheless the lexicographers whom Dhu 'l-Rumma interested most, and, to give but one example, numerous verses of his are quoted in the dictionary Lisân al-‘Arab. This is due to the great number of rare expressions used by the poet. On the other hand, he is quoted only 6 and 20 times respectively in the Bayân of al-Dîhîs and the ‘Idh of Ibn ʿAbd Rabbih. Set in the perspective of his age and society, Dhu 'l-Rumma is one of the great figures in the tradition of eastern Arabian poetry. His excessive use of rare terms was a common tendency in poets (e.g., Ru'ba, [q.v.]) who were in close contact with the philologists and grammarians of ʿIrâk; the frequent appearance of the radjâz tendency in poets (e.g., [q.v.]) who were in close contact with the philologists and grammarians of ʿIrâk; the frequent appearance of the radjâz metre in his Diwân underlines his close relationship with certain of his contemporaries. He terminates a line of poets who, even in their own age, were considered 'behind the times'.

DHU 'L-RUMMA — DHU 'L-SHARÂ

Ramûs: Dhu 'l-shârâ fêhâm daws. The tradition arose from among the Arabs between Duserani, "the worshippers of Dusares", a naming for the Nabataeans, and the tribe of Dawes (R. Dussaud and P. Macler, Mission dans les régions désertiques de la Syrie moyenne, 67, n. 3).

Dhu 'l-Sharâ is attested in Thamudic and Saifatic. Its only trace in Thamudic is on an inscription from the region of Tabûk, in the Aramaic form dhâr (Jauuss-Savignac 648), according to the reading of A. van den Brauden, Les inscriptions thamoudennes, Louvain 1950, 451. Saifatic has the name of this god in the form dhâr (CIS, v 57, etc.) and in the Aramaic form dhâr (CIS, v 57, etc.) and dhâr (CIS, v, 395). The name Dhu 'l-Sharâ means "The One from Sharâ", the local god of the Sharâ range, the southernmost tip of the chain of mountains to the south-east of the Dead Sea (A. Muls, The Northern Hedjâ, New York 1926, 252-5; R. Dussaud, La pénétration des Arabes en Syrie, 30; W. Caskel, Die alten sem. Gottheiten, 109). The name of this god was A'âra, as is shown by several Nabataean inscriptions (D. Sourdel, Les cultes du Hauran à l'époque romaine, 59; R. Dussaud, Pénétration, 40 and n. 4; J. Starcky, Palmýrâniens, Nabatâniens et Arabes du Nord, 222). The confusion of Dusares with the god Ares is due to Suidas who "takes ōkôpâqâp, a defective form of Dusares, for the god Ares" (M.-J. Lagrange, Études sur les religions sémitiques, 1, 210, n. 1).

From the fifth century B.C. the god A'âra was identified with Dionysoos, according to Herodotus: "Dionysoos, with Urania, is the only god whose existence they [the Arabs] recognize ... They call Dionysoos Orotalt, Urania Alitat" (Hist. iii, 8). A'âra can be recognized in the part Oro, whatever Oro may be, as second part of the name Ao (C. Clermont-Ganneau, Recueil d'archéologie orientale, V, Paris 1903, 109-15; R. Dussaud, Pénétration, 45). Alitat, clearly, is the goddess Alât. Hesychius (s.v.) identifies Dusares with Dionysoos: Δοουςιος του Διονυσου Ναβαταίος A'âra Dhu 'l-Sharâ being none other than Dionysoos the god of vegetation, "it may be concluded that during the occupation of Djebel esh-Sharâ by the Edomite Arabs the vine prospered in Dusares and that before the arrival of the Greeks the god of vegetation Orotal (A'âra) had soon been identified with Dionysoos" (R. Dussaud, op. cit., 56). J. Perrot's excavations in the Negev and the recent experiments of the botanist M. Evenari, who has restored a Nabataean agricultural settlement dating from early in the Christian era, on the site of the former city of Subeta, prove that the fertility of the land in that desert area was ensured by the construction of terraces, dams and channels, irrigated by periodic rainfall and flooding. This explains why Dionysoos-Dusares came to be represented on reliefs decorated with vine-branches, particularly on the lintels of Kaanawât and Suwayda (R. Dussaud, Pénétration, 57-61; see M. Dunand, Le musée de
Soudia, Paris 1934, nos 1, 2 and 3; D. Sourdel, *Les cultes du Hawran*, 64, expresses certain doubts on these identifications). Similarly, the statue of a bearded god at Gharria-Shubayr, holding a horn of plenty filled with bunches of grapes, seems indeed to represent Dusares (R. Dussaud, op. cit. 60). As we see, D. Sourdel, *op. cit.*, 64, who does not share this opinion.

An eagle with outspread wings was probably the symbol of Dusares. It figures above the entrance to numerous Nabataean tombs at Hegra (see particularly Jaussen and Savigac, *Mission*, i, pl. xxxvvi and fig. 160; ii, Atlas, pl. xlii, xlv and xlv). Jaussen and Savigac see in it the symbol of Dusares, who might have been assimilated in Zeus the sun god (*Mission*, i, 490-491). An eagle figures also on one of the lintels of Suwayda (M. Duand, *op. cit.*, 2); attributing it to Dusares in this relief is "not subject to doubt" (R. Dussaud, *op. cit.*, 60). R. Dussaud sees Dusares on an altar relief from a Nabataean temple to that god in Si' (formerly Sela in the Hawrân; see R. Dussaud, *Topographie historique de la Syrie antique et médiévale*, Paris 1917, 388-390), dating from early in the Christian era (D. Schlumberger, *La Palmyrène du Nord-Ouest*, Paris 1951, 97 n. 3). But the altar is dedicated to Zeus Kyrios (R. Dussaud, *Pètrification*, 57). This assimilation, as does also the assimilation of Dusares to Hellos in the Roman era, nevertheless raises problems which are far from resolved (D. Sourdel, *op. cit.*, 63-5), and it should be noted that, while Strabo may associate Dionysos with Zeus Ouroanos, he never identifies them with each other in any way (Strabo, xvi, 1, 11).

DHÛ YAZAN [see SAYF].

DHUBAB, the fly. Some authors state that word is used also for other insects, such as bees, hornets, butterflies or moths (jarâdâ, etc). According to Arab lexicographers, it is either a singular or else a collective noun, in which case dhubbâb is used for the singular. Cognate synonyms are found in other Semitic languages, e.g., Hebrew יזון, Aramaic יזון. The fly is of ten mentioned and described in ancient Arabic poems and proverbs. A kadîth has it that there are flies in hell to torture the condemned. Numerous kinds are mentioned by Arab zoologists, some of them bearing specific names and some being distinguished by their colour (black, blue, red, tawny [salaw]). Another distinction is in the size of the different varieties: Some are said to be produced by spontaneous generation, in putrescent substances or in the body of certain animals (lion, dog, camel, horse, cattle, etc.), to
which they adhere exclusively; others are born by sexual procreation. The flies that molest man are also capable of expressing a fine sentiment and an appreciation of nature. The simplicity and directness of the early Abbasid age. The plain was once famous for its gazelle hunting. The term dabdbta (pl. dabdbt) is applied by some of the Bedouins to any flat, firm-surfaced area and is related to the classical dabdaba, referring to the drumming sound of hooves on hard earth. Maps: Series by the U.S. Geological Survey and Arabian American Oil Company under joint sponsorship of the Ministry of Finance and National Economy (Kingdom of Saudi Arabia) and the Department of State (U.S.A.). **Djab**

poetic nickname of Abū ʿAli Muḥammad b. ʿAli b. Rażīn al-Khwāzī, ʿAbbāsīd poet, born 148/765 and died 245/860. His birthplace is uncertain; the cities of Kūfah and Karkisīya are given as his places of birth. According to the accounts in the Kitāb al-Aʿīd, he spent his youth in Kūfah from which he was forced to flee because of some mischievous activity. Dībīl's apprenticeship as a poet was under the tutelage of Muslim b. al-Walīd [q.v.]. However, he soon made a reputation for himself as is indicated from his relationship with Khalaf al-Ḥāmar (d. 180/796) and Marwān b. Abī Ḥāfa (d. 181/797). The most probable date for Dībīl's entry into the circle of Ḥārūn al-Rašīd (d. 193/809) lies between 795-809. Being pro-Shiʿite and famous for his poem praising ʿAli al-Riḍā [q.v.] he generally attacks the ʿAbbāsīd caliphs from Ḥārūn to al-Mutanabbi (d. 247/861). However, Dībīl's loyalty appears to be motivated also by monetary considerations so that we find him praising them on occasion. If Dībīl is famous for his satire—at times of the vilest content—he is also capable of expressing a fine sentiment and an appreciation of nature. The simplicity and directness of his expression share and give additional evidence of this tendency which has become characteristic of the early ʿAbbāsīd age.

Ibn Rashīk places him in the Ṭabaqāt of Abū Nuwās [q.v.] and al-Ḥubayrī rates him above Muslim b. al-Walīd. Dībīl's rivalry with Abī Tammān [q.v.], whom he excluded from his Kitāb al-ʿarbāb (Brockelmann, S I, 179).

**DHUBAB — DI'BIL**

which they adhere exclusively; others are born by sexual procreation. The flies that molest man are also capable of expressing a fine sentiment and an appreciation of nature. (J. Mandaville)
is based not only on literary grounds but also on political-religious foundations, since Abu Tammam was lukewarm to the Shi'a and was pro-North-Arab. Dibil's Book of the Poets, whose date of final composition is post 231/846, and whose fragments are based in the 12th century, is important in Arabic literary history since it forms a link between the Tabakat al-Dimma (d. 230/845) and the Kitab al-Shir of Ibn Kutayba (d. 276/889), Dibil's pupil. Moreover, since Dibil was chiefly interested in the minor poets of the Islamic period—including those of the category of Hârûn al-Rasîd, 'Abd Allâh b. al-Zayyât (d. 235/847), and Ahmad b. Abû Dâud (d. 240/854)—his work can be regarded as a defence of the "modern poets" which preceded and anticipated that of the Kitab al-Shir by Ibn Kutayba.

**DID,** word for "contrary" is one of the four classes of opposites, ûtvîlîmakûn, mutâkabâlât, as discussed by Aristotle in his Categories x (and also in his Metaphysics v, io). There are four classes of opposites: 1) relative terms; 2) contraries; 3) privation and possession; 4) affirmation and negation. The fact that there are contraries implies that there must be a substratum in which they inhere, for it is impossible, even for God, to change, e.g., the White into the Black, although a white thing may become black. There are things which have necessarily one of two contraries, e.g., illness and health, for every animal is either sick or healthy (Galen, however, distinguishes three conditions of the body, corpus salubre, corpus insalubre and corpus neuter) and there are contraries which allow an intermediate term, for not all bodies are necessarily black or white. The question whether there is an intermediate term between virtue and vice was much debated by the Stoics who originally denied this, for whether a man is a hundred stadia from his aim or only one stadium, he is equally not there. In Islam the question whether there is a medium term between faith and unbelief was much discussed and those theologians who asserted that belief is based only on tasdiq (assent), for faith as a 0eoCTe(3e£a<; auyxaTaOeaic; see for example, Clemens Alexandriaus, Strom, ii, 2.8) held that faith can be neither increased nor diminished. Didd is used also as a translation of the Greek prefix ãvti. So ãvtîlîtos is translated by didd al-samm or simply by al-didd.

**DIJLA,** the Arabic name (used always without the article al-) of the easterly of the "Two Rivers" of ’Irâk, the Tigris. The name is a modernized and Arabized form of the Diglat of the Cuneiform, and occurs as Dihekel in the Book of Genesis. The river (Dicle Nehri in modern Turkish) rises in the southern slopes of the main Taurus, south and south-east of Lake Golekî. Its upper course, with its many constituent tributaries, drains a wide area of foothills and plain, which formed the northern half of the ’Abbasid province of Dijzâra in which stood the important towns of Amîd (modern Deyr Bakr), Mayyâfîrisîn, and many others. Among the early tributaries the Arab geographers (Ibn Sarîbîyûn, Mu’addâs, Yakûtî) name the Nahir al-Kübî (alternatively Nahir al-Dîbî‘b), the Wâdî ’Sâbî, Wâdî Sâdîmadan and Wâdî al-Sarba. Identifications of these are not certain with the modern tributaries which are notably (in their Turkish forms) the Zulkarnayn Su, the Ambagh Suyu, the Batman Suyu and the Garzan Suyu. At the point where the river bends from eastward to southward, at the modern Til or Till (medieval Tall Fâfân) the Bohtan Çayi enters from the east, and at least doubles the discharge of the Dijlîa: this, the Wâdî al-Zarm of the Arab geographers, drains the high mountains south of Lake Vân including the areas of Diblis (modern Bitlis), and Siîrîd (modern Sûrît). Above this junction there are therefore two major streams, the Tigris boundary. The town of Hasaniyya (probably the modern Zakho) contained a famous bridge. No main tributary except the Abu Maryâ (modern Wâdí al-Murr, joining the Dijlîa at Eskî Mosul, the former Balad), and many small left-bank flood-channels, comes in south of the Kübûr till the Greater Zâb is reached, 30 miles below the great city of Mosul (al-Mawşul), itself a Sâsânîd city which grew to greatness under the Umayyads.

The Greater Zâb (al-Zâb al-A’çâm) which rises partly in the Hakari mountains and partly in those which form the Perso-Irâk frontier, contribute a highly important volume to the Dijlîa. The same is true of the Lesser Zâb, which joins the river some 60 miles to the south, having drained a wide sector of the Perso-Irâk frontier region. The junction of the Greater Zâb and the Kübûr in the middle ages marked by the town of Hadîtha, that of the Lesser Zâb by Sinn; neither of these survives. There are no immediate tributaries, but it is possible that a stream or streams, rising in Dijbal Sinîdar, may in some periods have found an outlet for their flood water into the Dijlîa near Ka’a Sharî’a.

Below the point where the river cuts through Dijbal Hamrîn (at al-Fathâ) it appears that, at or above Takrit, the Wâdî Thrardîr (which may in some flood seasons have drawn water from the western Kübûr drainage-area, which belongs more naturally to the Uprhersates) poured its waters into the Tigris passing by al-Hadr: Yakûtî speaks even of a formerly navigable Uprhersates-Tigris channel in this area. Lands in the Dijlîa drainage area above Takrit have at all periods been rain-irrigated, and have therefore risked drought but not floods; skin-bucket water-lift devices (the modern karad) assured crops along the river-banks. The great mediaeval (and in part much more ancient) canal-system of ’Irâk began below Takrit. The Nahir al-’Ishkâb, doubtless a partially-controlled spring-flood channel, took off from the right bank and after the expenditure of its waters in irrigation
poured the remainder into the river below Sâmarra. South of the latter the Didjla took off also from the right bank, and (it is said) was sometimes aug-
river channel; the modern head of the Gharra' canals, its canals, returned to the river at varying points south of Ükbarâ. The course of the main river between a point south of Sâmarra and one not far north of Baghdâd (that is, for some 70 miles) lay in 'Abbâbî- times some five to twelve miles west of its modern channel, with the towns of Kâdîsiyya, al-'Alîh, Ükbarâ and Rahdîlîyya on its banks. Many flood-
seasing his river, which by the turn of the 8th/15th centuries, until it was substantially destroyed by the Mongols in the middle of the latter. The 'alignment and degree of water control, and the discharge of the canals, varied from century to century; most were seasonal flood-channels without head-works, and the solution if any found for disposal of the devastating annual floods does not satisfactorily appear. Nevertheless, irrigation from the Didjla—and rain cultivation in the north—undoubtedly supported a population perhaps three times more numerous than that of today, in a host of cities and villages now forgotten. During the centuries following the ruin caused by Hulûgî (656/ 1258) conditions fell to a low point of disorganization, misery and stagnation, during which the régime of the river deteriorated and all control was lost. No serious study of its problems was made thereafter until the 14th/20th century.

The efforts of the modern 'Irâk Governments have been concentrated on such irrigation works as will stabilize the course of the river, prevent the extremely serious annual flooding of the country side—and almost of Baghdad itself—and regulate and conserve the water for summer irrigation upon which, in central and southern 'Irâk, all cultivation other than precarious spring crops must depend. Many control works have been built, notably in 1357/1938 the Kût Barrage which regulates the supply into the Hayy (Gharra') river; many more, and major flood-disposal arrangements—for instance, on the Greater Zâb, and by utilizing the Wâdî Tharthâr—are in hand or planned. But the immense difference between the high water and the low water discharge of the river, varying between some 6000 to 300 cubic metres a second at Baghdâd, due to seasonal melting of snow in the north and to winter and spring rains, and the inadequacy of the river bed to take the flood water, combine to render the Didjla peculiarly difficult to control or utilize. The important extension of irrigation by mechanical pump from the modern heads, has been a striking feature of the period since 1346/1927.

The river contains large quantities of indifferent or low-quality fish. In modern as in ancient and mediaeval times, all the traditional types of river-craft—skin-borne rafts floating downstream from Mosul or the Zâbs, bitumen-covered coracles, sailing-craft and paddled
skiffs of every size have been and are in use. They have been supplemented regularly between Basra and Baghdad (and rarely and precariously between Basra and -al-Amara, Amara and Basra).

251

1. The Dido proper (Tsez Tsunta), numbering 18,000. Ethnically close to the Andi, they are well-known for their craftsmanship: goldsmiths' work among them, except for the Beleta, than among the Andi; and their integration within the Avar nation is less advanced. Russian linguistic influence is barely noticeable.

2. The economy of the Dido remains traditional; they subsist by fodder-production (maize, potatoes), by sheep-raising over changing pasture-lands, and by terraced horticulture. They are well-known for their craftsmanship: goldsmiths' work among the Dido and the Beleta, and leatherwork among the Khunzal.

Bibliography:

(D. QUELQUEJAY)

DIENNE, a town in the Sudan Republic, 360 km. SW of Timbuctoo and 200 km. ENE of Segou. Geographical position: lat. 13° 55' N.—long. 4° 33' W. (Gr.). Altitude: 278 m.

The etymology of this name (often wrongly spelt Djenné) is unknown but the most likely is Dianna = the little Dia (Dia is an ancient Sudanese town, 70 km. to the NW.). Djenné was mentioned for the first time in 1447 by the Genoese Malfante, under the name Geni.

The town is situated in the flood-area of the Niger and the Bani, 5 km. from the left bank of the latter river, to which it is connected by a navigable channel. It is built on a hill of sandy clay not subject to flooding, though surrounded by water particularly during the flood season, which normally lasts from August to February; and it is then that movement in the district is easiest, owing to the network of navigable channels between the Bani and the Niger, the most important and most freely used being the Kouakourou channel. In the dry season the town is linked up with surrounding districts by tracks which can be used by motor vehicles.

In area, Djenné extends for 900 m. from east to west, and 600 m. from north to south. Until the end of the 19th century it was surrounded by a brick wall; this was destroyed by the French who also cleared and laid out a large square in the town.

The population which has remained the same since 1900 is about 6,300; of these, 3,000 are Diennénké, 1,600 Fulani and 1,600 Bozo. Several languages are spoken, Songhai, Boro and Fula among others.

The date on which the town was founded is not known. The Ta'rīkh al-Suddn, trans. Hourdas, 23, mentions a first settlement at Zoboro, the foundation of the town in about 1507/67 and the conversion to Islam in about 500/1106. It seems more likely that the actual date of founding was later: M. Delafosse puts it at about 648/1250 and attributes it to Soninke merchants, the Nono; according to him, the inhabitants' conversion to Islam is followed in about 700/1300. Legend has it that a Bozo virgin, Tapama, was immersed alive in the wells at the instigation of magicians, in order to ensure the future prosperity of the town.

When chief Konbore was converted he pulled down his palace and, on the foundations, built the great mosque which remained standing until about 1830 when it was destroyed by Shaykhu Ahmadu.

Bibliography:
1. The geographical position of the Dido peoples has remained the same since 1900 is about 6,300; of these, 3,000 are Diennénké, 1,600 Fulani and 1,600 Bozo. Several languages are spoken, Songhai, Boro and Fula among others.

The date on which the town was founded is not known. The Ta'rīkh al-Suddn, trans. Hourdas, 23, mentions a first settlement at Zoboro, the foundation of the town in about 1507/67 and the conversion to Islam in about 500/1106. It seems more likely that the actual date of founding was later: M. Delafosse puts it at about 648/1250 and attributes it to Soninke merchants, the Nono; according to him, the inhabitants' conversion to Islam is followed in about 700/1300. Legend has it that a Bozo virgin, Tapama, was immersed alive in the wells at the instigation of magicians, in order to ensure the future prosperity of the town.

When chief Konbore was converted he pulled down his palace and, on the foundations, built the great mosque which remained standing until about 1830 when it was destroyed by Shaykhu Ahmadu.

Bibliography:
Konboro’s descendants remained in power until the Songhai conquest. In spite of the well-known passage in Ta’rikh al-Suddان (26) stating that from the time the town was founded the inhabitants of Dienné were never conquered by any king until the day when Sonni Ali imposed his authority over them, there is a strong possibility that, after 735/1335, the city belonged to Mali. It must have regained its liberty fairly soon, before being captured by Sonni Ali (872/1467).

The Songhai domination was very favourable to Dienné and it seems that it was from this time onwards in particular that it became a commercial centre of the greatest importance to the Sudan. In direct communication with Timbuctoo by river, it was also situated at the edge of the overland routes leading to the gold mines of Bitou (Bonduku region, Ivory Coast), Lobi and Bouré. It was the great entrepot for salt from Teghaza on its way via Timbuctoo to the countries in the south.

The first account to speak of the town is the Descriptam . . . . by Valentin Fernandes (1506): “Gyni is a large town built of rock and limestones, surrounded by a wall. To it come the merchants visiting the gold mines. These dealers belong to one particular race, the Ungaros (Wangara), who are red or brownish . . . . When these Ungaros come to Gyni, each merchant brings with him 100 or 200 or more negro slaves to carry salt on their heads from Gyni to the gold mines, and to bring back gold. Merchants who trade with the gold mines deal in considerable sums. Some of them undertake a deal which may amount to 60,000 mithkâl; even those who are content merely to take salt to Gyni make 10,000 mithkâl . . . . The Ungaros only come to Gyni once a year”.

Leo Africanus (1525) repeats the theme of the town’s prosperity, describing it under the name Ghinea (ii, 465-485).

This prosperity was maintained throughout the 16th century, and even to the beginning of the Moroccan domination. In fact Dienné followed the fate of her sister town, Timbuctoo, which from 1000/1591 was occupied by the Moroccans of Dj handled. The bâids of Timbuctoo had no difficulty in compelling Dienné to recognize their overlordship. In Dienné the Moroccan authority was represented by a pasha, a bâkim assisted by an amin or treasurer and a mukhtar or military commander. It was at this time (1828) that René Caillé visited the town.

In the middle of the 17th century the Ta’rikh al-Suddan once again described (22 ff.) a town at the height of prosperity: “This town is large, flourishing and prosperous; it is rich, and enjoys Heaven’s blessing and favour . . . . Dienné is one of the great markets of the Muslim world. It is the meeting-place for merchants with salt from the mines of Timbuctoo and other bringing gold from the Bitu mines. Almighty God has drawn to this blessed town a certain number of scholars and men of piety, strangers in this country who have come here to live”.

The town’s two-fold reputation for commerce and religion continued even after the decline of Timbuctoo in the 17th and 18th centuries; protected by its marshes, Dienné was able to hold its own in spite of the attacks of the Bambara [4.5] for a time even in hiding in making themselves masters of the Diennéri but were unable to take the capital. After 1818, Šhaykhu Ahmadou founded the Fulani empire of Massina and took Dienné after a well-conducted siege. He drove out part of the population and built a new mosque (on the site now occupied by the school) in place of the old one which he allowed to fall into ruin. He left the administration of the city to the people of Dienné, but he was represented by an Ambru mangal, military commander. It was at this time (1828) that René Caillé visited the town. The Fulani rule lasted until 1862-1862 when al-Hâdi ’Umar conquered Dienné. In 1893, Colonel Archinard took possession in the name of France. By bringing peace to the Sudan, French rule paradoxically enough led to the decline of Dienné, for what had previously been the source of its strength, its isolated position surrounded by flood-waters, in the 20th century became a source of weakness. The town’s commercial functions were taken over by Mopii which is situated at the confluence of the Bandi and the Niger, and is connected by a dyke with dry land. Dienné is no more than a second-rate local market and centre of the administrative sub-division.

The town has kept its beautiful old houses, built in the style which was peculiar to itself, now widespread and known as the “Sudanese style”; the old mosque, built before the 19th century, has been rebuilt in the old style on the same foundations.

Bibliography:

(R. MAUNY)

DâRGAL (see Dârgal).

DIGLAL, the title of the hereditary ruler of the Banî Âmir tribal group in the Agordat district of western Eritrea and in the eastern Sudan; he is also senior member of the aristocratic Natabt class or caste, who, for historical reasons no longer possible to elucidate, form the superior stratum in every Banî Âmir section. The title is believed of Fundji origin, and may recall days when the tribe was, in the 10th/16th century, intermittently tribute-paying to the Nilotic but Muslim Fundji dynasty of Senar. The insignia of the Diglal’s position include notably a red velvet three-cornered hat of unique design. The Diglal, whose relations with Ethiopian, Italian and British rulers of Eritrea have varied in the manner usual with feudal or tribal potentates, has at his best exercised good control over the lawless, scattered and wholly nomadic Banî Âmir, themselves numerous (some 60,000 in Eritrea in 1936-44, and 30,000 in the Sudan), varied in origin (containing an original Hamitic base with large admixtures of Sudani, Ethiopian and Nilotic stocks), and speaking the Beja or Tigre languages according to subtribe or section. Indeed, the Diglal’s traditional position, unchallenged for four centuries, has been a main unifying force in a group otherwise highly heterogeneous.

He lives normally in a main settlement of the Dagga (Dega, Dâga), a term which, by origin the “camp” of himself and his immediate circle, now signifies that section of the Banî Âmir (numerically the largest) which contains the Diglal’s family,
retainers and slaves, and the descendents and numerous accretions of these.

Bibliography: A. Pollera, *Le Popolosini indigene dell'Eritrea*, Bologna 1935; ed. V. Minorsky (1937), 60, mentions the peninsula Dhishistān Dar Sār (?), inhabited by fishermen and birdhunters, which W. Barthold takes to be the modern Cape Hassan Kull (to the north of the mouth of the Atrek). This is hardly possible, if *Istakhri's* data (219) are correct: he states that there are 50 parasangs between the mouth of the river Dirjūn and this peninsula, and this would get on to the region of the Bay of Keli Suwu (to whom the Ghaznawids, Krasnovodsk, and the Tashirs finally sold it). V. Minorsky, *Ḥudud*, 386, connects the name of Dihistān with the name of the ancient *Dakār* (concerning these, compare W. Tomaschek in Pauly-Wissowa, *Realencyclopdie*, iv, 12 [1901], col. 1456 ff.). Today, the ruins of Ribāt Dihistān (as can be gathered from an inscription in a mosque of the beginning of the 13th century) are known as Masbaḥ-ad-i Mihrāb. 

**DIGURATA** [see ossettes].

Dihistān, name of two towns, and their respective districts in north-eastern Iran:

1) A town north-east of Harāt, the capital of the southern part of the Bāḏḡās (q.v.) region, and the second largest town in that region ("half the size of Bāḵšāndān") and, according to Ṭabūt (i, 461), the capital of the whole of Bāḏḡās around the year 596/1200. The town was situated upon a hill in a fertile area, and near a silver mine; it was built of brick. In 98/716-7, Dihistān is mentioned as the seat of a Persian ḏihkān (Ṭabarī, ii, 1320; ca. 426/1035), it came into the possession of a Turkish ḏihkān (these titles persisted amongst the Turks (see the agency of the GHORIDS, to whom the Ghaznawids had left it). In 552/1158, it was the residence of the Oghuz prince Iḫṭilār-īn Ṭabūt-īn-Ṭaybak, who, as the only ruler of this district, became subject to Khorāzmshāh II Arslan (Baybaki, *Ta'rikh-i Bayhalz*). The Ḫūrāzmshāh Sulṭān Sháh was robbed of his succession by his brother Tekeqh, and fled with his mother Teken (Islamicized: Turkan) to Dihistān, in 569/1174. Following this, Tekeqh, occupied the town of Dihistān, and had Teken executed; Sulṭān Šah succeeded in escaping further to the Ghurids (Ibn al-Athīr, xi, 247/4th/ioth century, the area was a border region limited by that of the monarchy and the Zoroastrian clergy, the local rulers as well as the landowners were converted to Islam and largely retained their lands (von Kremer, *in view of the derivation from Dārāz—contradicts Yakūt and the other Islamic sources*); Samʿānī, K. al-ansāb, 1922 (GMS xx), fol. 23v v (gives the correct vocalization); Nikbī (in Nāshākī, ed. Ch. Schefer), 144; Gg. Hoffmann, *Syr. Ahien pers. Mātryr* (1856), 277-81; W. Barthold, *K istorii orosheniya Turkestana* (History of irrigation in Turkestan) (1914), 31-7; Le Strange, 337-82; Spuler, *Istan*, 430, 455, 464*; Ḫudud al-ʿĀlam, index. (B. Spuler)

**DIHKAN**, arabized form of ḏihkān, the head of a village and a member of the lesser feudal nobility of Sasanian Persia. The power of the ḏihkān derived from their hereditary title to the local administration. They were immensely important class, although the actual area of land they cultivated as the hereditary possession of their family was often small. They were the representatives of the government vis-à-vis the peasants and their principal function was to collect taxes; and, in the opinion of Christensen, it was due to their knowledge of the country and people that sufficient revenue was provided for the upkeep of a luxurious court and the cost of expensive wars (Christensen, *Histoire de l'irrigation en Turkestan*, 122-3). Masʿūdī divides the ḏihkāms into five classes, distinguished from one another by their dress (Murūdī, ii, 241). Persian legend imputes their origin to Vēghard, brother of the legendary king Ḥūghang (Christensen, *Le premier homme et le premier roi dans l'histoire légendaire des iraniens*, i, 144, 150, 151, 153, 155, 159). After the Arab conquest the ḏihkāms continued to be responsible for local administration and the collection of tribute from the protected communities; many of them were converted to Islam and largely retained their lands (von Kremer, *Culturgeschichte*, ii, 160). In Transoxania, where immediately before the Arab invasion the ḏihkāms had enjoyed perhaps greater influence than in Persia in that their power was not limited by that of the monarchical and the Zoroastrian clergy, the local rulers as well as the landowners were designated by the term ḏihkān (Barthold, *Turkestan*, 180-1; and see Nāshākī, *Ta'rikh-i Buhkārd*, ed. Muddaris Ripavi, 7, 72). The power of the Tāhīrs and Sāmānids was largely founded on their community of interest with the ḏihkāms; but by the end of the Sāmānīd period the ḏihkāms had become discontented and were in part responsible for few nomad tribes between Khārīm and the Ūst Yurt, as by then, Islamization—even of the Mongols of Transoxania—was complete. The *Ḥudud al-ʿĀlam*, ed. V. Minorsky (1937), 60, mentions the peninsula Dhishistān Dar Sār (?), inhabited by fishermen and birdhunters, which W. Barthold takes to be the modern Cape Hassan Kull (to the north of the mouth of the Atrek). This is hardly possible, if *Istakhri's* data (219) are correct: he states that there are 50 parasangs between the mouth of the river Dirjūn and this peninsula, and this would get on to the region of the Bay of Keli Suwu
for the eventual overthrow of the Samanid dynasty by Bughrā Khān Ḥafrūn b. Mūsā, the Ṣāk Khan (Bartold, 457, 307). With the spread of the šahād system in the 5th/11th century and the depression of the landowning classes the position and influence of the diḥkān diminished. With this the term diḥkān became debased and by the 5th/11th century it was also used to denote a peasant, in which sense it is used by Nāṣīr-i Khusraw (Dīwān, Tehran 1304-7 A.H. solar, 357) and Kōhā b. Iskandar (Kabās nāma, G.M.S., 297). On the other hand under the Sūluks the diḥkān appear to have continued to exist in the eastern part of the empire as village heads or landowners. The term would appear to have this sense in a document issued by the dīwān of Sandjār (‘Atabat al-kataba, ed. Ibkāl, Tehran 1950, 53, 55) and in a diploma for the muʾāmār of Khūrāzim belonging to the latter half of the 6th century A.H. (Bahāʾ al-Dīn Muḥammad Muʿayyad Baḡdādī, al-Tuṣar al-Shāfī‘i ‘alā al-Tuṣar, ed. was born in 1114/1703 at Dīhli, four years before Shah Walī Allāh, which form part of the extraordinary military campaigns of Sāvyd Ṭāhir Bārsdāli [q.v.] and Ṣāḥib Ṣāghīr, the grandson of Wall Allāh, revolted round his concept of mašĀhīk, i.e., the establishment of a kind of welfare state based on the “relationship of man’s development with the creative forces of the Universe”. The time and the environment were both unsuited for the success of such a revolutionary movement. The inevitable result was that the movement, although launched with a great deal of fervour, soon lost impetus when faced with realities. On the other hand, the Waḥhābi movement launched by his contemporary, Muḥammad b. Ṣāḥib al-Waḥhābi, [q.v.] succeeded, as it sternly refused to accept the idea of compromise, which constitutes the kernel of Shah Wall Allāh’s thought; he even attempted to reconcile such antithetic theories as the waḥdat al wujūd [see IBN AL-ʿARABI] and waḥdat al-šahāda [see ṢĀḤĪḤ BĀḤRĪ]

His mission failed because both he and his successors failed correctly to assess the impact of contemporary forces and the increasing conflict of the East and West consequent on the growth of European influence in India, especially those parts of the country where Muslims dominated.

His chief works are: (a) Arabic, (i) al-ṣuyūṭī al-baḥrī, his magnum opus, a unique work on the secrets of religion (asrār al-dīn), also dealing with various other subjects such as metaphysics, politics, finance and political economy. It was in this book (ed. Bareilly 1285/1868; Cairo 1322-3/1904-5), now prescribed as a course of study at al-Azhar and in the Sudan, that he propounded his revolutionary theory of “fākh huwā liyām” (down with all systems!). The book has also been translated into Urdu (Lahore 1953, Karachi n.d.); (ii) al-Musawwī, a commentary on the Muṣafat of Mālik b. Anas; (iii) al-Fāth al-kabīr . . . . . the fifth and the last chapter of his Persian work al-Fawās al-kabīr jī wāsī al-tasrīr, but on the supreme independent title (Lucknow 1289/1872); it is a pithy but highly useful dissertation on the principles of the science of Kur’ānic exegesis; (iv) and (v) al-Budār al-bāzīgha and al-Kayr al-baḥrī, both on the same subject, also a unique work on jurisdictional differences between the various sects of Islam and the evolution of Islamic jurisprudence; (b) Persian, (vii) Tafḥīḥat-i ʿIlāhīyya, partly in Arabic, contains inter alia addresses to the various

AL-DILAWI, SHAH WALI ALI, the popular name of Khūt al-Dīn Ṭāhir Bārsdāli, a revolutionist Indian thinker, theologian, pioneer Persian translator of the Kur’ān, and traditionalist, the first child of the 60-year-old Shah Ṭāhir Ṣāḥib al-Raḥīm al-Umarī of Dīhli, by his second wife, was born in 1114/1703 at Dīhli, four years before Shah Walī Allāh, which form part of the extraordinary military campaigns of Sāvyd Ṭāhir Bārsdāli [q.v.] and Ṣāḥib Ṣāghīr, the grandson of Wall Allāh, revolted round his concept of mašĀhīk, i.e., the establishment of a kind of welfare state based on the “relationship of man’s development with the creative forces of the Universe”. extensive are the remains of the Cawhan Radjput town, dating probably from the 10th century A.D., which existed immediately prior to the Muslim conquest. On a small hill in the south-west of this region a citadel, Lâlkot, was built circa 1052 A.D. by Anang Pâl, and around the town an outer wall was thrown, as a defence against the Muslim invaders, by Prithwi Râj in about 576/1180 (Cunningham, residence of the Dihli sultans until Mu'izz al-Dîn Kaykubâd built his palace at Kilökhâf, then on the banks of the Djamna (Briggs, Ferishta, i, 274), in about 688/1289; this was occupied, completed, and its suburbs extended, by Djalâl al-Dîn Firuz Khaldji in and after 689/1290. It has now fallen completely into desuetude. Even in Djalâl al-Dîn’s case the older city seems to have had a higher prestige value, and he moved his court there as soon as it was politically practicable so to do. The sultan ‘Allâ al-Dîn Khaldji effected many improvements and repairs, including the west gate (Randjit darwâza) of Lâlkot (Amir Khusraw, trans. in Elliott and Dowson, iii, 561); he commenced also the extension of the citadel of Lâlkot, see Beglar, loc. cit., and Fig. 1. As a protection against the invading Mongols he first established a camp on the plain of Siri to the north, later encompassed it by entrenchments, and finally walled it, in about 703/1303. The location of Siri has been questioned (e.g., by C. J. Campbell, Notes on the history and topography of the ancient cities of Delhi, in JASB, xxxv, 1866, 206-14); but the descriptions of Ibn Baṭṭûṭa, iii, 146, 155, and Timûr, Malfūsāt-i Timûrî, trans. in Elliott and Dowson, iii, 447, and the ruins and lines of defences on the ground, enabled Campbell’s views to be correlated with the historical narrative.

ASI, i, 183). Subsequent to the conquest a mosque, known as Masjid Kuwwat al-Islâm, was built in 588/1192 by Kutb al-Dîn Aybâk, who later commenced the building of the adjoining minâr not only as a ma’dhâna but also as a commemoration of his victory; for these, their extensions by Shams al-Dîn Iltâmish and ‘Allâ al-Dîn Khaldji, and other buildings in this so-called “Qutb site” see Monuments, below. The systematic refortification and extension of these old Hindu walls was effected by the earliest governors and monarchs to form the first Muslim city of Dihli, known by the name of its former occupant as Kil‘â Rây Pithorâ. An indication of the extent of these walls and of their periods is given in the sketch-map, Fig. 1; for a discussion of the archaeological evidence see J. D. Beglar, ASI, iv, 1874, 6 ff.

Kil‘â Rây Pithorâ remained the only regular city of Dihli, and its inhabitants retained their Hindu religion; but it did not attain the political importance of other cities at the time. The present approach to the old town is by a modern road, built by the British, which follows the line of the ancient walls. The old city is now inhabited by a mixed crowd of Hindus and Muslims, and the central streets are lined with shops and mosques. A new city, Dîhlî (Dheli), was founded by Khâlid, the governor of Delhi, in the 12th century, and later became the capital of the sultans. The old town is now known as Dîhlî and is the seat of the governor of the city. The entrance to the old town is through a massive gate, built in the time of Alâ al-Dîn Khaldji, which is now covered with rows of shops. The old town is surrounded by a wall, with gates at the north, south, east, and west. The walls were raised in the time of Khâlid, and repaired and strengthened by Alâ al-Dîn Khaldji.

convincingly refuted by Cunningham in *ASI*, i, 207 ff. All that now remains within the walls is the comparatively modern village of Shāhpur.

Hardly a "city of Delhi", but an important site in its history, is the group of buildings, the earliest of which date from Khaldūn times, surrounding the shrine of the Chishti saint Nizam al-Dīn Awliya, which make up what Pigott has described as the "squalid but entertaining complex" now known officially as "Nizamuddin" (for plan, and description of these buildings, see *Monuments*, below).

Some of the most ambitious building projects in the time of the Dihli sultanate were conceived during the rule of the following Tughluk dynasty. Firstly, Ghiyāth al-Dīn Tughluq selected a site some 8 km. to the east of Kīlā Rāy Pitthorā, immediately after his defeat of the converted Hindū Nāṣir al-Dīn in 720/1320, for the building of his capital Tughluk-ābād. The trace of the outer enceinte is approximately a half-hexagon, within which are a more strongly defended palace area, and an even stronger citadel; there are the ruins of a mosque in the city area, and the layout of the streets and houses of the streets and houses of the city, which shows it to have been well populated, can be seen from the aerial photograph in *Ancient India*, i, Plate IX. On the south of the city was formerly an artificial lake, in which stands the tomb of Ghiyāth al-Dīn, connected to the citadel by a fortified passage supported on arches, itself fortified. Connected with Tughluk-ābād by a causeway on the south-east, which formed a band to retain the waters of the lake, is the subsi-

![Fig. 2. Tughluk-ābād](image-url)
DIHLI

diary fort of 'Adilābād built by his son Muḥammad b. Tughlūk c. 725/1325, but abandoned by him, together with Tughlūkābād, in 729/1329 on his transfer of the capital to Dawlatābād [q.v.]. For these sites see Fig. 2, and the excellent article of Hilary Waddington, 'Adilābād: a part of the “fourth” Delhi, in Ancient India, i, 60-76, with photographs and survey plans. A small fort, known as the “Barber’s” or “Washerman’s” fort, to the east, machicolations, containing a palace complex, the remains of a fine mosque, and an extraordinary pyramidal structure built as a plinth for a column of Ashoka brought from near Ambalā; the isolated Kādam Sharīf and the nearby ʿIdgāh show the western extent of the city to have been no further than the later Shahdājahānābād. The extent of Fīrūz Shāh’s building activity around Dihīl would indicate that the suburbs in his time were still well populated,

Fig. 3. Shahdājahānābād

possibly a madrasa or a shrine in origin, was fortified and presumably used as a residence for Ghiyāth al-Dīn while Tughlūkābād was in building.

About contemporary with the building of ʿAdilābād was Muḥammad b. Tughlūk’s more grandiose project, the walling-in of the suburbs which had grown up between Kīl‘a Rāy Fīthorā and Sīrī (see Map) to form yet another city, called Dīlahānānābād. The extent of Firūz Shāh’s building activity around Dihīl would indicate that the suburbs in his time were still well populated,

as evidenced by the two large mosques in Dīlahānānābād, another in Nizamuddīn, and smaller ones in the northern suburbs and in Wazrābād. A further occupied site was around the old reservoir built by ʿΑlāʾ al-Dīn, the Hawd-i ʿAṣāsī, later known as Hawd-i Khāṣṣ, where he established a large madrasa and built his own tomb.

The Timurid sack caused the eclipse of Dihīl as a capital city for some time, and although the Sayyid governor Khīḍr Khān established his court at Khīḍrābād, and Mubārak Shāh his at Mubārakābād, both on the Dāndā, and the latter sultan built also his own tomb in the fortified village Mubārakpur (also Mubārikpur, Mubāzik [sic] Shāh Kōfī), the Sayyids and their successors the Lōdis built no further cities at Dihīl. The Lōdis, indeed, moved their seat of government to Agra, and Dihīl became little more than a vast necropolis, the plains between Sīrī and Firūzābād being covered with tombs and mausolea of this period; especially Khayrāpur, 2 km. west of Nizamuddīn, a region 1 km. west of Mubārikpur ("Tīr Burdh").
During the Mughal invasions in the early 10th/16th century, Dihli was renamed Shahdijahan and started the building of a new city, Dinpangh, on the mound of the old Indrapar in 940/1533, but was dispossessed by the usurper Shir Shoh Kottla, and the southern gate, opposite the citadel, was the most of the stone which was preserved for the building of Shahdijahbabad. His son and successor Isalm Shoh, popularly called Salm Shoh, built the Diwana the fortress Salimgarh as a bulwark against the return of Humayun. Humayun’s return five years later added nothing to the Dihli buildings, and the two Mughal rulers preferred to reside at Agra and Lahore; some buildings at Dihli date, however, from their time, especially the complex of monuments around Humayun’s tomb (see S. A. A. Naqvi, Humayun’s tomb and adjacent buildings, Dihli 1947). Shahdijahan also reigned at Agra for 11 years, but the inconveniences there caused him to remove to Dihli (‘Aml-i Sait, fol. 375-6; Manucci, Storia do Mogor, i, 183) and found there on 12 Dhu l-Hijja 1048/14 April 1639 (so the contemporary historians and inscription in the Kh Sabgh; 9 Muharram 1049/12 May 1539 according to the Ma’dhir al-Umar), iii, 452, and Sayyid Ahmad Khn) a new fort, the citadel of his new city (Fig. 3) Shahdijahanabad, known as the “Red Fort”, Lali kil’f, which was completed after 9 years. The waling of the city proceeded at the same time, and it was enriched with many more buildings in the reign of Shahdijahan and his successors (notably the Dami masjid, commenced two years after the completion of the fort), who made no further expansions of any of the successive cities. Shahdijahanabad continued to be the capital of the Mughal rulers—except for Awrangzbl, who spent much time in the Deccan and died at Awranggabad [q.v.]—although other sites around continued to be used; e.g., the Humayun’s tomb complex, Nizamuddin, and the arqas of Roshan Ghazi Dihli in Dihangh, and of Kutb al-Din Khil’s Mirawli were all used as burial places for the later Mughal rulers, and at Mirawli is a small summer palace used by the latest Mughals.

With the fall of the Mughal dynasty in 1858, the destruction of many buildings by the British during and after the mutiny, and the transfer of the capital to Calcutta, Dihli became a town of less importance, and as it was there that the first characteristic Indian Islamic styles developed, the influence of which was to spread far and wide from Dihli itself, the account of the monuments given here is confined to a simple description of the major works, arranged chronologically, and an account of the architectural features of the monumental complexes of buildings of different periods.

Fig. 4. Masjid Kuwwat ul-Islam

Plinth of Hindu temple  
Kutb al-Din Aybak  
‘Ali al-Din

For a treatment of the styles, with plates and detailed drawings, see MIND, Architecture. The earliest phase of Muslim building in Dihli is represented, as in the earliest stages in other sites (see ADBNKR, BHRK, DIBNPR, DAWLATB, DHAR, DAWNPUR, GAW, GUDJR, MANSO, TRIBN) by the re-utilization of pillaged Hindu temple material. This applied to the first mosque constructed in Dihli, Kutb al-Din Aybaks’s Masjid Kuwwat ul-Islam, earliest inscription 587/1192-2, in Kils’s Ray Pitohra on a temple plinth 37.8 m. by 45.4 m. is constructed the central court, 65.2 m. by 45.4 m., with colonnades of three bays on the east and there on the north and south; the western Iwan is four bays in depth, originally with five domes covering voids in front of the mirhab recesses, its roof raised at the north end to accommodate a saninna gallery. The Iwan is separated from the mosque courtyard by a great arched screen, added 595/1199, whose arches
do not conform with the spacing of the columns and mihrābāt behind. The columns of the arcades were taken from some twenty-seven Hindu and Dījān temples, arranged in such a way as to give one another the necessary height, ranged to support a roof made from ceiling slabs of similar temples, the sculptured figures mutilated and roughly covered with plaster, sometimes turned face inwards. The screen arches are corbelled, ogee at the top, some 2.5 metres thick, the central arch 13.7 m. high with a span of 6.7 m. The whole surface of this maqṣūra is covered with carving, Hindu floral motifs and the various lines of naskh. In the court-yard stands a pillar of rustless malleable iron from a temple of Vishnu of the Gupta period (4th century A.D.), doubtless placed there by the builders not only as a curious relic but also as a symbol of their triumph over the idolaters. At the south-east corner of the mosque Kubṭ al-Dīn commenced, after the completion of his mosque, the minaret known as the Kubṭ minār, described below.

The reign of Kubṭ al-Dīn’s successor, Shams al-Dīn Iltutmīsh, saw an increase in building, not only at Dīlī. To the Dīlī mosque he attempted to give greater scale and dignity by extensions of the colonnades and the great maqṣūra screen—symmetrically disposed as regards the new mihrābāt, columnar bays, and the arches of the maqṣūra, thus indicating a design of homogeneous conception; the new sahn included the minār, to which he added also, and its entrances were arranged co-axially with those of the old mosque. The colonnade is composed of relatively plain columns, and the screen decoration, including Kūfic character and tughrā devices, is more obviously the work of a craftsman familiar with his material than is the earlier example. The arches, still corbelled, differ in contour from those of the earlier screen by the absence of the ogee counter-curve at the apex. Immediately west of his northern extension of the mosque is the Tomb of Iltutmīsh (c. 632/1235 ? No dating inscriptions), a square chamber, originally bearing a circular dome, supported on corbelled squinches, the whole interior surface intricately banded with arabeques, diaper-work, and naskh and Kūfic inscriptions (entirely Kufic); the exterior is of dressed stone with the arched openings on north, east and south in red sandstone; red sandstone is also used for the interior, with marble on the mīrab wall and the cenotaph; the true grave is in a subterranean tahkhdna.

The Kubṭ minār was extended by Iltutmīsh by the addition of three further storeys, to a total height of 69.7 m. (Cunningham, ASI, i, 193, completed c. 626/1229). The angle of slope is about 4°25' degrees from the vertical, and the four storeys are separated by balconies supported by stalactite corbelling. Each storey is fluted—developing probably the technical advance in construction but also a strengthening of Islamic building tradition, as opposed to that of the impressed Hindu craftsmen.

4Alā’ al-Dīn Khuldī’s extensions to the citadel of Lālkot, and the building of Sīrī, have been mentioned above. He started a grandiose plan of extension to the Kuwwat al-Īslām mosque to the north and east; a few columns remain, and the foundations of the north gateway, to show the extent of this, and of the great arched maqṣūra screen which was intended to be twice as long as the two previous screens combined, and of twice the scale; in the northern court-yard stands the incomplete first storey of a gigantic minār, its diameter at base twice that of the Kubṭ minār. The most notable feature of these extensions is the southern minār of Alā’i darwāza, of exceptional architectural merit: a square building of 10.5 m. internal dimension, with walls 3.4 m. thick, is surmounted by a flat dome, with lofty (10.7 m. from ground level to apex) arches on east, south and west, and a smaller trefoil arch on the north leading to the new eastern extension of the court-yard. The three large arches, and the squinches which support the dome, are of pointed horse-shoe shape, vousoired, with on the intrados a fringe of conventionalized spear-heads. A similar style is seen in the Dīmāsāt Khāna mosque at the dargāh of Nīṣām al-Dīn, the first example in India of a mosque built with specially quarried materials, not improvised from Hindu material. (For a discussion of this mosque see M. Zafar Hasan, A guide to Nīṣāmū-d-Dīn (= Memoir ASI, xi, 1922). Apart from the early building (madrassā?) at Ḥawī ‘Alā’i (= Ḥawī-i Khāṣṣ), the only other structure of ‘Alā’ al-Dīn at Dīlī is his tomb and madrasa to the south-west of the Masjid Kuwwat al-Īslām, now much ruined; the series of small cells on the west wall show for the first time in India domes supported by a corbelled pendentive. The location of this building and all others in the “Qutb site” is shown on Fig. 4; for an extensive description of all the monuments and archaeological work see J. A. Page, Historical Memoir on the Qutb, Delhi (= Memoir ASI, xxii), 1925; idem, Guide to...

The achievements of Ghiyath al-Din, the founder of the Tughluq dynasty, are confined to the building of the city of Tughluqabad (see above, History), and his own two tomb buildings; for the first of these see MULN; the second, commenced after leaving the Pandjâb and coming to Delhi as sovereign, forms an outwork on the south side of Tughluqabâd (see Fig. 2 above), an irregular pentagon with barracks at each angle, with the tomb-building placed diagonally at the widest part of the enclosed court-yard. This mausoleum is of red sandstone faced with white marble, its walls with a strong batter (25° from the vertical), with a recessed archway in the north, east and south sides (the west side closed for the mihrâb) with the "spear-head" fringe introduced under the Khalâjis and a slight ogive curve at the apex. Here the old Hindu trabeate system is joined with the newer arccuate by a lintel being imposed across the base of the arch.

Muhammad b. Tughluq's foundation of Adilabad and Djahanpanah has been mentioned above; in the walling of the second of these is a sluice or regulator of seven spans, the Sât pulâh, with subsidiary arches and end towers, its two storeys of seven arches holding the mechanism for regulating the level of a lake contained within the walls. Another building of his time, near the village of Begampur, is the Bidiyây Mandâl, which has been supposed to be the remains of his Kâsâr hazâr sitûn, with the first example of intersecting vaulting in India; close to this is a superb but nameless tomb, and the Bârah Khâmâ (see below).

Muhammad b. Tughluq's act in transporting the entire elite population of Delhi to Daulâtâbâd (q.v.) resulted in the dispersal of the northern craftsmen, and the introduction of a rubble-and-plaster phase under the enthusiastic patronage of his successor Fîruz Shâh (752-90/1351-88). A list of the numerous building projects sponsored by this monarch is given by Shams-i Sîrâdî 'Alî, Ta'rîkh-i Fîruz Shâhî, and by Firshah, and in his own Fu'tashâ-i Fîruz Shâhî he describes the monuments of his predecessors which he had rebuilt or renovated. These numerous building and restoration projects demanded a strict economy; plans for every undertaking were submitted to the Khâlid-i sadra, and the more expensive building materials, red sandstone and marble, were no longer used. Of Fîruz Shâh's cities, Fîruzabad has been mentioned above; see also DAIWNPUR, FATHABAD, NIŞâR FîRûZâ, and for the fortification of the kûltâ and the introduction of machicolation see BURDI, iii. The Dâjmî masjid within the kûltâ stands on a high plinth and the main gate is on the north; the sâhn was surrounded by deep triple aisles, and around the central octagonal haued was inscribed the record of the public works of Fîruz. Only the shell of the building remains, much of the stone having been built into the walls of Shâhjahanâbâd by British engineers. The other building standing within the kûltâ is a three-storied rectangular structure on which is mounted a pillar of Ashoka (3rd century B.C.) brought from the Mêhrâb district. For these and other ruins in the citadel see J. A. Page, A memoir on Kolâ Firoz Shâh, Delhi (= Memoir Asi, iii) Delhi 1937. The mosque style of the period is better shown by half a dozen mosques of approximately the decade 766-76/1364-75; all are rubble-and-plaster, presumably originally whitewashed, with pillars and Hindu-style brackets and eaves in local grey granite, with prominent gateways, many-domed roofs, and tapering ornamental pillars flanking the gateways. The simplest is the mosque in the dargah of Shâh 3'Amî at Wazirâbâd (= Timânpûr), a simple west liwan of five bays, with three domes, within which is the earliest example in Delhi of a sanâna gallery in the rear corner of the liwan; the large (court-yard 68.0 by 75.3 metres) Begâmîpûr mosque in the north of Dijhânpanâh has the sâhn surrounded on all sides by a domed arcade, and the west liwan has a tall arched pylon in the centre of its façade which completely masks the large central dome; the Sandjar mosque (also called Kâlî maqâm-i masjid) at Nizamuddin has the central court-yard divided into four smaller courts each 13.1 by 10.2 metres by a cruciform arcade one bay in depth, as well as the domed arcading on all sides (Asi, Annual Report, xxvii, Plate I); the Khîrîtî mosque, at Khirki village in the south of Dijhânpanâh close to the Sât Pulâh, has a similar arrangement, but the crossing arcades are of three ranks of arches, as are the side liwâns; hence only the four courts, each 9.8 metres square, are open in the total area of about 52 m. square; the Kalân (this also sometimes miscalled 'Kâlî' masjid, within the walls of the later Shâhjahanâbâd, is smaller with a single open court and surrounding domed arcades. This, the Khirki mosque, and the Dâjmî masjid in the kûltâ, are all built on a high plinth over a lakshâna storey, and the mosques themselves are approach by high flights of steps. The Kalân masjid was no doubt the main mosque of the new Firuzabad suburbs, but the size of the Begampur and Khirki mosques implies that the older cities still maintained a considerable population. The northern suburbs were further provided for by the Cawbujârî mosque on the Ridge, now so altered through various uses that its original plan is hardly discernible; near the mosque is the remains of Fîruz Shâh's hunting lodge, Kughk-i Shikâr or Djahan-numâ, to which he repaired for consolation after the death of his son, Fath Kâhî, in 776/1374. This is a fortified enclosure (see burdâ, iii, and Asi Annual Report, xxii, 4 and Plates III c and d) in which is a domed arcade surrounding the grave, over which is a stone print of the Prophet's foot set in a small tank of water. Fîruz's own tomb is coupled with the madrasa he built on the site of 'Alâ-al-Dîn's structure at the Hawd-i Khâs; the madrasa buildings on the east and south of the haued, double-storeyed on the lake front and single behind, are colonnades, several bays deep, of arches or lintel-and-bracket construction, connecting square domed halls at intervals, extending about 76 m. on one shore and 120 m. on the other; at the south-east corner is the 13.7 m. square tomb, with plastered walls slightly battering, the two outer (south and east) with a slight projection in which is an arched opening in which the entrance is framed by a lintel-and-bracket; there is a single dome on an octagonal drum, supported by interior squinches, and the west wall, in which is a door to the adjacent hall, has a small mîhrâb. The building stands on a short plinth extended southwest to form a small terrace, which is surrounded by a stone railing of mortice and tenon construction resembling woodwork. Another tomb, of great architectural significance, is that of Fâriz's Prime Minister Kânî-i Djahan Tilangânî, d. 770/1368-9, within the kât at Nizamuddin; this is the first octagonal tomb at Delhi (although the tomb-
chamber at Sultan Ghari is octagonal also), and is surrounded by a verandah, each side of which has three arched openings surmounted by a wide chadda or eaves-stone; there is a central dome, and eight smaller dome-like cupolas, one over each face. The prototype of this tomb has been sought in the Dome of the Rock in Jerusalem; it formed the model for many royal tombs of the subsequent “Sayyid”, Lodí and Suri dynasties. One of the latest buildings of the Tughluks is the tomb of the shaykh Kabir al-Din Awliyá’ (probably of the time of Nasir al-Din Mahmúd, after 796/1394); although an indifferent is early 11th/12th century; and others); outside the east wall of the court is the square polychromatic tomb of Atga Khan, foster-father of Akbar, d. 989/1582, of a style similar to that of Humáyún (see below). Some 60 m. south-east of this tomb is the Čawnsaṭ Khambe, a grey marble pavilion of excellent proportions forming the family burial place of Atga Khan’s son, Mirzá ‘Aziz Kókaltash, d. 1033/1624. The adjoining kót and Tilangání tomb have already been described. For a full account of all these buildings see M. Zafar Hasan, A guide to

Fig. 5. Nizamuddín

and half-scale copy of the tomb of Ghiyáth al-Dín Tughlúk, it is of interest in indicating a revival of sympathy for the earlier polychromatic style, a reaction against the Firuzian austerity.

On Firúz Sháh’s tunnels at Díhlí, see H. Hosten, in JASB, n.s. vii (1911), 99-108; viii (1912), 279-81; ix (1913), lxxxiii-xci.

Since the major structures at the shrine of Nizám al-Dín are of this time the complex is described here (Fig. 5). The entrance gate bears the date 780/1378-9, within which is a large ba’dal [q.v.] flanked by two tombs and a two-storeyed mosque, all of Firuzian appearance; the ba’dal is named Čashma-i dil kushá (= 703/1303-4 by abjad). A further gate leads to the shrine enclosure; the shaykh’s tomb dates from the time of Akbar, replacing an earlier one built by Firúz Tughlúk, but has been much restored since, the dome being an addition of Akbar Sháh II in 1823; the Diamá’t Khamá masjid is early 11th/12th century; and others); outside the east wall of the court is the square polychromatic tomb of Atga Khan, foster-father of Akbar, d. 989/1582, of a style similar to that of Humáyún (see below). Some 60 m. south-east of this tomb is the Čawnsaṭ Khambe, a grey marble pavilion of excellent proportions forming the family burial place of Atga Khan’s son, Mirzá ‘Aziz Kókaltash, d. 1033/1624. The adjoining kót and Tilangání tomb have already been described. For a full account of all these buildings see M. Zafar Hasan, A guide to

Nizám-u-d-Dín ( = Memoir ASI, X), Calcutta 1922. Another dargáh largely dating from Firúzian times is that of Nasir al-Dín Čirágh-i Díhlí, d. 757/1356 (see čýt váya); the east gate is of 775/1373, but the tomb has been much modernized; the walls enclosing the shrine and village were built by Muhammad Sháh in 1142/1729; beside stands one of the alleged tombs of Bahól Lodi.

The “Sayyid” and Lodí dynasties produced no great building projects; their monuments consist entirely of tombs, except for one significant mosque, and the principal ones are concentrated in three sites: Khayrpur, Mubarakpur, and south of Muđahidpur on the road to Hawd-i Kháshs. The tombs are of two distinct types, square and octagonal, in both cases with a large central dome, frequently also with open chattris above the parapets. The earliest octagonal example is that of Mubarak Sháh, d. 838/1434, in Kótá Mubarakpur, an improvement on the style of the Tilangání tomb although the dome is not high enough and the octagonal chattris over each face are too crowded. The tomb of Muhammad Sháh, ten years later, removes these defects by raising the drum of the dome and the chattris, and
adding a guldasta at each angle of the verandah parapet. The tomb of Sikandar Lodī, c. 924/1518, at the north end of Khayyāpur, is of similar proportions but without the chatris, and the dome has an inner and outer shell; the mausoleum stands in a fortified enclosure, on the west wall of which is an arrangement of arches resembling an iqḍāḥ, presumably an outdoor mihrāb. The tomb of Mubārak has a detached mosque, but that of Muhammad has none. All tombs have sloping buttresses at the angles.

The square tombs probably all date from the last quarter of the 9th/15th century, but they lack inscriptions and are known only by very uninformative local names. The finest is the Barā Khānā gumbad, “Big Khān’s dome”, the largest (height 25 m.) of the three known as Tin burdā, west of Mubārakpur, apparently of three storeys from the exterior, but actually a single hall; this and the adjoining “Little Khān’s dome” have octagonal chatris in the angles of the square below the drum, as had the Dādī Khānā (“Grandmother’s”) and Potī Khānā (“Granddaughter’s”) gumbads of the Mudiāhjidpur group. At Khayyāpur are the best preserved, the Bařā Gumbad (“Big dome”), date 899/1494, which has no graves within and is locally said to be a gateway to the attached mosque, court-yard and madālis-khānā (?). The mosque has massive tapering and sloping pillars at each rear angle, each with a band of fluting, alternately rounded and angled, reminiscent of the lowest storey of the Khūṭ minār; the east façade has wide central arches whose spandrels are filled with the best cut-plaster decoration in Dihlī. Near is the Shīkh gumbad, very similar to the Bařā gumbad, but with courses of dark blue encaustic tile work.

Apart from the mosque mentioned above, the Lodīs produced one major example of this class, the isolated Moṭhī kā masjid south of Mubārakpur, built by the wazīr of Sikandar Lodī c. 911/1505; the west wall shows similar tapering pillar-turrets, but at the angles of the projecting mihrāb, and the external angles are provided with two-storeyed open towers; the side walls have trabeate balconies; the façade of the west liwān has the contours of the arches emphasized by the recession of planes of the intradoses, and the central arch is emphasized further by a pylon-like structure of the same height as the remainder; the liwān side domes are supported on stalactite pendentives; white marble, red sandstone, and coloured encaustic tiles are used in the decorative scheme, as well as fine cut-plaster; it is aesthetically one of the liveliest buildings in the whole of Islamic art in India. Other buildings of the Lodīs are few: a structure (madrasa ?), incorporating a small mosque, known as the Dāhār maḥāl, on the east of the Hawāi-’i reliq at Mirwālī, a small bārdarī of 952/1546, and a mahālī near Nizamuddin, and the residence (Barāh Khānā), with enclosed court-yard and three-storeyed tower, at Begampur.

In the unsettled days of the early Mughal conquest the Lodī mode seems to have continued: the Dījamālī mosque, of 943/1536, in the south of Khīlā Rāy Pithorā, has fine ashlar masonry, five liwān arches with recession of planes in the intradoses, and the central archway sunk in a larger arch, with a spearhead fringe, in a central propylon rising above the general level of the façade, with a single central dome; to the north is the insignificant-looking oblong building over the tomb of Fadl Allāh [g.v.], tabghalīs Dīamālī, with the best colour decoration in Dihlī on its ceiling. A continuation of the octagonal tomb style is in that of ‘Īsā Khān Niyāzī, of 954/1547-8 and hence in the reign of Islam Shāh Sūrī; the construction is similar to the preceding examples, including the closed west wall and mihrāb, but more on encaustic tile remains; a separate mosque stands on the west of the octagonal court-yard, of grey quartzite and red sandstone, the central bay of the three set in a projecting portico, with a central dome and chatris over the side bays. The tomb-building has sloping buttresses at each angle, and is the last building in Dihlī so treated. (For these buildings see S. A. Nāqīvi, Humayūn’s tomb and adjacent buildings, Dihlī 1947, 21-4).

The first two Mughal emperors, Bābur and Humāyūn, built in Dihlī in their first period no sand nothing to Dihlī’s monuments, except perhaps the commencement of the Purānā Khīlā; this, however, was mostly the work of the usurper Shīr Shāh Sūrī, as a citadel for his new city. Of the city only two gateways remain, the northern (Lāl, Kābulī or Khūnī darwāza), opposite Fīruz Shāh Kūtī, and the southern, with a short stretch of walling, near Purānā Khīlā (see ASI, Annual Report, xxii, 6 and Plate II). Of the citadel the walls remain, and two major structures within, the Shīr Māndāl, a two-storeyed octagon of red sandstone of unknown original purpose but used by Humāyūn as a library and from which he fell to his death; and the mosque, with no distinctive name, which has the Dījamālī mosque as its immediate prototype: but each of the five façade bays has a smaller recessed archway, and every other feature of the earlier mosque is improved and refined in this later example. The external construction is in courseed ashlar, and the liwān façade in red sandstone, some of it finely carved, embellished with white marble and polychromatic encaustic tile work; inside the dome is supported by a second stage of squinches, and in the side bays stalactite pendentives support the roof; the rear wall has tapering turrets on each side of the mihrāb projection, and an open octagonal turret at each angle.

The first major building of the Mughals in Dihlī is the tomb of the emperor Humāyūn, of a style already prefigured in the small tomb of Atga Khān at Nizamuddin; the foundations of it were laid in 1566-7 (so Sanghīn Beg, Siyāsī al-Mandali, MS in Dihlī Fort Museum; 1565 according to Sayyid Ahmad Khān, followed by most later writers) by his widow, employing the Persian architect Mirzā Ghīyāth, although the enclosure wall had been started some five years before. In a large square garden enclosure (540 m. side; this is the first tārbedgān garden in India still preserving its original plan) stands the mausoleum building, 47.5 m. square on a plinth 95 m. square, 6.7 m. high; each face is also in its third period, angular fronton containing an immense arch, flanked by smaller wings each containing a smaller arch; these wings are octagonal in plan and project in front of the main arches. The central chamber is surmounted by a bulbous double dome on a high collar, around which are chatris over the corner wings and portals. The
entire building is in red sandstone, with a liberal use of white and coloured marble. Neighbouring structures are the small Nārī kā gumbad, "Barber's dome"; the Nīlā Gumbad, "Blue dome", earlier than Humāyūn's tomb and therefore not the tomb of Fahīm Kān, d. 1035/1626, as often stated; the "Af sarwālā" tomb and mosque; the 'Arab Sarā'ī; and the tomb of Isā Kān already described (see Fig. 6 for plan of this complex; full description of these buildings in S. A. A. Naqvi, Humāyūn's Tomb and adjacent buildings, Dihlī 1947). Not far to the south is the tomb of Abd al-Rahīm Kān-ī-Khān, d. 1036/1626-7, a similar structure but smaller and without the octagonal corner compartments—hence a more obvious forerunner of the wards to the river. The diwān-i ʿamm is of red sandstone, with slender double columns on the open sides; this and the palace buildings on the east have encausted arches, stand on low plinths, and most have open chajrīs at each corner of the roof. Through the palaces runs an ornamental canal, the Nahr-i Bihīsh, which flows south from the Shāh Burdāi, water being brought from a point thirty kās on the Djamnā (through the Western Djamnā canal; for the history of this, which dates from the time of Firūz Shāh Tūghlūk, see J. J. Hatten, History and description of government canals in the Punjab, Lahore n.d., 1-3); this has a plain marble channel, which in the Rang mahāll flows into a large tank in which is set a marble lotus, having previously passed, in the royal

Fig. 6. Humāyūn's tomb

Tāдж Mahall than Humāyūn's tomb; the white marble of this building was later stripped off by ʿAsaf al-Dawla, wazīr of Awadh. Other early Mughal buildings are the Lāl čawk or Khayr al-ma'nāzīl (the latter name a chronogram, 969 = 1561-2), a mosque built by Māhmān Anaga, foster-mother of Akbar, with double-storeyed chambers on east, south and north forming a madrasa (ASI, Annual Report, xxii, 6 and Plate I a and b; inscr., Memoir ASI, xlvii, 10); and the mosque of Shāykh ʿAbd al-Nabī, ṣadr al-sudār of Akbar, between Firūz Shāh Kōtla and the Purānā Kīlā, built 983/1575-6 (see M. Zafar Hasan, Mosque of Shāykh ʿAbdu-n-Nabī (= Memoir ASI, ix), Calcutta 1921).

The main phase of Mughal building in Dihlī was the construction of Shāhjahanābād and the Red Fort, Lāl Kīlā, founded 1048/1638. The main features of Mughal palaces and other buildings will be described in MUGHALS; a brief account only is given here. Within the palace enclosure, about 950 by 505 m., are a central court, containing the Diwān-i ʿamm; flanking this, two open spaces containing gardens; and, on the eastern wall, the range of palaces facing inwards to the gardens and outside private apartments, under a screen bearing a representation of the "Scales of Justice", Mizān-i-ʿadī. Off these apartments is the external octagonal balcony, the Muḥammān Burdāi, from which the emperor gave the darshan [q.v.]. The Rang mahāll and the Diwān-i khāss are the most lavishly ornamented of these palaces, built and paved in white marble, the piers of the arches inlaid with floral designs in pietra dura; the latter building contained the fabulous Peacock Throne (Takht-i ṭūs), taken to Persia by Nādir Shāh in 1152/1739 and there broken up (G. N. Curzon, Persia and the Persian question, i, 321-2). The disposition of these and the other buildings is shown in the plan, Fig. 7.

The fort originally contained no mosque; the Motī masjīd was added by Awrangzīb in 1073/1662-3, entirely of white marble, with a curved "Bengali" cornice over the central bay. For the fort and its buildings, see G. Sanderson, A guide to the buildings and gardens, Delhi Fort, Delhi 1937.

The Diwān-i masjīd of Shāhjahanābād (named Masjīd-i Diwān-nūmā), built 1057/1648-50, stands on an open plain to the west of the Lāl Kīlā, its high basement storey, with blind
dihlī — dihlī sultanate

Arches on all sides, built on an outcrop of the local Aravalli ridge. The gates on north, east and south have an external opening in the form of a half-dome with a smaller door in the base of each. The east gate, used as the royal entrance, is the largest. The gates on north, east and south, and the western sanctuary is a detached compartment 79 m. by 27.5 m. with the court-yard (99 m. square), with a wide central arch flanked by five smaller bays of enframed arches on each side, and a three-storeyed minaret at each front angle; above are three bulbous domes of white marble surrounding the court is open to the outside, gate, used as the royal entrance, is the largest. The have an external opening in the form of a half-dome

DIHLÍ SULTANATE, the principal Muslim kingdom in northern India from its establishment by Iltimāsh (608/1211-1236) until its submergence in the Mughal empire under Akbar (963-1014/1556-1605). The establishment of the Dihlī sultanate was made possible by the Indian campaigns of the Ghurid al-Muzzaffar Dīn Muhammad b. Sam, father of Asaf Dīn, in a hornwork outside the Ağmār gate of Shahrāh-ñābād (1122/ 1710), and where the Arabic school is still maintained; the Kudhhāsh gate of the Kashmiri Gate, c. 1163/1750, and the elegant diminutive mosque (Sohnabīl masjid) of Dīwān-ī Khán, of fawn-coloured sandstone, of the same time; and the finely-proportioned fawn sandstone tomb of Saifdār Dīng, d. 1166/1753, standing in the last great Mughal garden. One British building is worth mention, St. James's church, built by Col. James Skinner in Palladian style in 1824. The vast building projects of New Delhi (Naqī Dihlī) show occasional reminiscences of the glory of Mughal building, but have no further Islamic significance.

Adjmer and Mu'izz al-Din had to enter India himself in 592/1195-6 to take Bayana, the stronghold of the Indo-Aryans. In 593/1196, the latter defeated an attempt by the Mhers, in alliance with the Calukyas, to take Adjmer and in the following year defeated the Calukyas near Mt. Abu without however attempting permanently to occupy their territory. Turning his attention to the upper Ganges, Aybak occupied Bada'un in 594/1197-8 and Kanawdi in 595/1198-9. In 597/1200, Gwalior was taken and the Bundelkhand area was penetrated in 599/1202-3 with the capture of Kálandjar (Kálandjär).

When, in 602/1206, Mu'izz al-Din was assassinated at Damyak on the Indus (on the identity of the assassins see Habibullah, *The foundation of Muslim rule in India*, 79), the Ghüríd position in India was that of a precarious military occupation. Holding only the chief towns of the Pandjab, Sind and the Ghurids, the Ghurids, the Ghorids, the Mongols had slipped out of Dihll's feeble grasp. Indeed, by accepting Prthvîrâja's son and the Râjputs in Bundelkhand (Kâlandjär had been retaken by the Candelas) and around Gwalior which had been retaken by the Parhrâs. Moreover the Gâhadâvâlas were still active in the districts around Farrukhabâd and Baddà'nun. The Râjputs clans had but melted into the countryside hoping to re-emerge and take control when the Turk Ish invasions had passed on. Indeed, by accepting Prthvîrâja's son and the Râjputs in Bundelkhand (Kâlandjär had been retaken by the Candelas) and around Gwalior which had been retaken by the Parhrâs. Moreover the Gâhadâvâlas were still active in the districts around Farrukhabâd and Baddà'nun. The Râjputs clans had but melted into the countryside hoping to re-emerge and take control when the Turk Ish invasions had passed on. Indeed, by accepting Prthvîrâja's son and the Râjputs in Bundelkhand (Kâlandjär had been retaken by the Candelas) and around Gwalior which had been retaken by the Parhrâs. Moreover the Gâhadâvâlas were still active in the districts around Farrukhabâd and Baddà'nun.

The consolidation of the Ghûrid position in Hindustân was still a secondary consideration even after Mu'izz al-Din's death is evident from the subsequent career of Kutb al-Din Aybak. Said by his panegyrist and son-in-law, Shams al-Dîn Iltutmish, an Ilbarl Turk, may be regarded as the founder of an independent sultanate of Dihll. (The correct form of the name is Iltutmish, as shown by Hikmet Bayurır in *Bilelten*, xiv, 1950, 567-88). His reign saw three main political developments—the severance of political ties between the Turks and the Afgâns in Hindustân and Central Asia, the achievement of primacy in Muslim India by the ruler of Dihll, and the firm grasping of the main strategic centres of the north Indian plains by the forces of Dihll. Such was the successful conflict between Arâm Shâh and Iltutmish to occupy Lahore, Tâdj al-Dîn Yildiz had not abandoned his claim to the Ghûrid conquests in India and numerous Hindû chiefs were threatening the Turkish hold over Bada'un, Kanawdi and Banaras. Râjdîstân also had slipped out of Dihll's feeble grasp.

Placing Yildiz by acceptance of the statû and dârâbîkh of sovereignty and not stirring when the latter's troops drove Kabâca from Lahore, Iltutmish tightened his hold over Sarosût and Kushrâm east of the Satlándj and when, in 612/1215, Yildiz was forced out of Ghaznl into the Pandiab by the forces of the Khârazm-Shâh, Iltutmish was able to defeat and capture him at Târa'n (Târho). He still did not hasten, however, to occupy Lahore.

Cîngiz Kân's attack upon the Khârazm-Shâh hastened the political isolation of the Turks in India. Iltutmish refused to be drawn into the struggle between the Mongols and Dihll al-Din Khârazm-Shâh [q.v.], watching the latter erode Kabâca's position in the Pandiab and Sind. Taking advantage of Kabâca's difficulties, Iltutmish occupied Lahore and in 625/ 1228 drove Kabâca from Multân and Uc to a death by drowning in the Indus. Although Iltutmish occupied Sidâkof (and Lahore when he could), by drawing back his effective frontier east of the Beâs, he managed to avoid a head-on clash with the Mongols before his death.

In the east, where Muhammad Bakhtiyâr Kâhdîjî had overcome the Sena kingdom in Bengal in 600-2/1203-6, Iltutmish repelled Ghiyâth al-Dîn Iwâz Kâhdîjî's raids in the east and his attempts in the west in the following year the latter was slain by Iltutmish's eldest son Nâsr al-Dîn Mahmûd. Toward the end of 627/1230, Iltutmish invaded Lakhnawtî and slew the Kâhdîjî chief Balka.

Against the Râjputs, Iltutmish was successful in capturing, at least temporarily, Ranthambhor in 624/1226, Mandor in 625/1227, Gwâliyûr in 629/1231, and in plundering Bhilsâ and Ujdîâjan (Ujjain) in 630/1234-5. Nevertheless his lieutenants were worsted in encounters with the Câwânns of Bundî and the Cândelas of Narwar and even in the Dâ'sh Hindû chiefs needed constant overawing.

The appearance of an independent Muslim power in north India was however signalized by Iltutmish receiving, in 626/1229, a robe of honour and the title of Nâsr â Mir al-Mu'mînîn from the 'Abbâsid caliph, al-Mustansîr.

That the Dihll sultanate had 'settled in' in northern India by the end of Iltutmish's reign is suggested by its capacity to survive faction, Mongol pressure and sapping by Hindû chiefs during the years immediately following. Within ten years of Iltutmish's death, the mu'ta's and officials had accepted and deposed four of his children or grand-children, Rukn al-Dîn Firûz (631/1234-6), Râdiyyû (634-7/1236-40), Mu'izz al-Dîn Bahrâm, (637/1240-2) and 'Ala' al-Dîn Mayûd (639/1242-4).
Stability was not achieved until the reign of Nasir al-Din Mahmud (644-64/1246-66) during whose time effective authority was exercised by Ghiyath al-Din Balban as na`ib. Most sources picture Nasir al-Din as a pious recluse, but from the evidence of Fisamis Futuh al-Salatin, it is possible that this is an exaggeration. (See also K. A. Nizami, Balban, the regicide, in bibli.).

The ceaseless struggle required of the Turks and Afghans in Hindustan to maintain Dihli as the principal, let alone the paramount, power at this time, is emphasized by the career of Balban both as na`ib and as sultan. His activities, though not always demanded, in 645/1247, Balban plundered the areas between Kalingar and Karra; in 646/1248, he led an unsuccessful raid against Ramthambhor and in 649/1251 he marched against Cachardeva, the Diadjiapella ruler of Gujjarai and Narwar. In 652/1254 he campaigned against the Karehriyas whose activities always threatened the hold of Dihli over Badi`un and Sambhal, north of the Ganges. Depredations by the Yaduvanshi Kaldjils of the northern Alwur area, the 'Mewati', were endemic in the last days of Nasir al-Din Mahmud's reign, with raids against Hansl in 655/1256 and even as far as the environs of Dihli itself.

Early in Balban's own reign (664-86/1266-87), he cleared the forests near Dihli of marauders and pacified the Bodjoin, Patyaiil and Kampil districts, stationing garrisons of Afghans there. One historian of the next century, Diyal` al-Din Barani, depicts Balban as consciously pursuing, in his own reign, a purely defensive policy and as concerned mainly to hold the western marches against the Mongols. That this is probably an ex post facto rationalization, provoked by the contrast with the succeeding period, is suggested by the fierceness of Balban's reaction to trouble in Lakhnawt in the 620's when he put forth a great military effort to suppress Tughril; who had assumed independence under the title of Sultan Mughilt al-Din. Dihli was not always so mindful of events in Bengal. Although Balban strengthened the frontier strongholds of Dipalpur, Sama`na and Bhatinda and posted his favourite son Muhammad to Multan and Lahore, the Mongols were too preoccupied with the quarrels between the Caghatays and the Il-khans and their rivalry in Afghanistan and India. Nevertheless, threats to the Dihli sultanate in Balban's time.

As Muhammad was killed in a skirmish with the Mongols in 684/1286, and Balban's second son Bughra Khahn preferred his title of of Lakhnawt, Balban was succeeded by his grandson, Mu`izz al-Din Kaybubad who, young and frivolous, proved incapable of withstanding the intrigues of ambitious ministers and the faction struggles between groups of Turks and Kaldjils. Eventually, succumbing to paralysis, he was displaced by his infant son, Kayumart, a puppet in the hands first of the Turks and then of the Kaldjils. The Kaldjl leader, Djialal al-Din, accepted the status of na`ib to Kayumart; after about three months, finding that, in order to protect himself against the jealousies of other nobles, he needed the title to as well as the reality of power, Djialal al-Din assumed the sultanate himself (689/1290).

By Muslim historians of a later generation, the end of Balban's dynasty was regarded as signaling the end of the Turkish sultanate of Dihli. In the sense of the race of the sultan this is so, but not in the sense that the ruling elite had hitherto been exclusively Turkish. Djialal al-Din Kaldjl had been Balban's mu`aht of Sama`na before becoming ard-i mamdilkh under Mu`izz al-Din; and Balban's ard-i mamdilkh, 'Imad al-Mulk Rawat, was a converted Hindu. The outcome of the diversification of the Muslim ruling groups through immigration, inter-marriage and concubinage with the subject population was to become more evident under the Kaldjils, but Barani's rhetoric, for example, cannot conceal the fact that the process had already gone a considerable way under Balban.

Djialal al-Din Kaldjl's assassination by his nephew, 'Ala' al-Din, has enabled Barani, against the evidence of events and the testimony of Amir Khurasis's Mi`rath al-Futuh, to fasten upon him the character of an ageing, indulgent and gullible valetudinarian. Actually, he suppressed a revolt by Balban's former officers in Shabban 689/August-September 1290, besieged Ramthambhor (though unsuccessfully) in 690/1291 and defeated a Mongol foray in 691/1291-2. He also pillaged Mandor and Uddinayn (Ujjain) at the end of 691/1292.

But it is clear in the Kaldjl's reign (695-715/1296-1315) that, for a brief period, the Dihli sultanate attained an imperial status in the sub-continent. 'Ala' al-Din was probably born about 666/1267-8. A participant in the Kaldjl coup against Balban, the Kaldjl's family and the other military officers, he was appointed mu`dja of Karra in 690/1291 from whence he raised Bhilsa and then, in 695/1295, unbeknown to Djialal al-Din Kaldjl, the Yadava kingdom of Devagiri (Dwegir). Loaded with booty, he was met on the Ganges near Manikpur by Djialal al-Din who appears to have been so based to share the spoils that he was careless of his own safety. Fear of the influence of powerful enemies at court feeding his ambition, 'Ala' al-Din had his uncle slain.

Supported by his brother Alma` Beg, 'Ala' al-Din bought over many mulaks and amirs by money and promotion. Within a few months of his accession, he had captured the surviving sons of Djialal al-Din Kaldjl and their supporters and blinded, imprisoned or executed them.

The reign was noteworthy in that serious attacks upon Hindustan by the Caghatays Mongols of Transoxiana were repulsed, the influence of Dihli over Rgdjasthan was greatly extended and profitable raids, which made possible the introduction of a Muslim ruling class in other contemporary or near-contemporary evidence. It is not clear from the evidence why 'Ala' al-Din should have succeeded in winning the co-operation of the military and official classes for reforms which adversely affected them.

The rivalry between Daw` Khahn, great-great grandson of Caghatay and ruler of Transoxiana, and the Great Khans in the east in alliance with the Il-Khans in the west, led to an effort by Daw` to expand in the direction of Afghanistan and Hindustan. The first Mongol invasion of 'Ala' al-Din's reign, into the Pandjs in 697/1297-8, was worsted at Djialandhar and the second, into Siwishkan in 698/1299 was equally abortive. A third, later the same year, under Kutlug Kh Kh`ada, son of Daw`, reached Kil near Dihli before it too was defeated. The invasion of Tarht in 702/1303 invested Dihli and appears to have
been thwarted of success only by Ala’ al-Din Khaldil’s entrenchments at Siri. (On the location of Siri, see A. S. I., i, Simla 1871, 207-12.) Other insurrections were defeated at Umraba in 705/1305, and near the Rawal in 706/1306 by Malik Kāfir and Malik Tughluk. But although Dihill was almost uniformly successful against the Čaghatai Mongols, the cessation of major attacks during the latter half of ‘Ala’ al-Din’s reign was probably caused more by an intensification of antagonism between the Il-Khāns and Dāwa’s successors than by discomfiture in Hindūstān; Malik Kāfr, for instance, is known to have kept busy combating minor forays as muḥāfaẓ of Dīlāpur.

‘Ala’ al-Din had not waited upon security from the Mongols before expanding the sultanate in India itself. In 698/1299, Gūḏarrison was invaded and Khambāyat plundered. (See K. S. Lal, History of the Khalīfs, 83, on the date of this expedition.) In 700/1301, Ranthambhor, in 702/1303 Cittor, in 703/1305 Māndū were captured, to be followed in 708/1308 by the capture of Siwāna and in 711/1311–2 of Dīlāhor. These victories in Rājāstān were essential to the success of ‘Ala’ al-Din’s expeditions south of the Narbādā. The Yādava kingdom of Devagirī was laid under tribute in 706/1307, the Kākātya kingdom of Telengāna in 709/1309-10. In 710/1311, with the help of the Hīosāla Ballālādeva of Dwārasamudrā, Malik Kāfr invaded the Pāṇḍya kingdom in the far south, returning laden with spoils to Dīlāh in 711/1311.

The successes of ‘Ala’ al-Din Khaldil’s reign may be attributable partly to the personal drive of a sultan requiring, as his uncle’s murderer, to go on living dangerously, partly to the financial appeal of his earliest Deccan raid and the conquest of Gūḏarrison to the soldiery, and partly to the services of Indian-born Muslims and converted Hindū slaves. Moreover, he treated defeated Hindū rulers in a conciliatory way, receiving them at court and marrying into their families. (He himself married a daughter of Rāmadeva of Devagirī and his son Khādir Ḳān married “Dīwāl Rānî” (correctly Devadevi), daughter of Rāy Ḹaran of Gūḏarrison.) It is significant that he was content to reduce the Hindū kingdoms of south India to a tributary status. His administrative measures will be mentioned under a general reference to the political institutions of the sultans of Dīlāh, which have left few traces.

‘Ala’ al-Din Khādir did not however succeed in perpetuating the sultanate in his family. On his death, his adīb Malik Kāfr raised ‘Ala’ al-Din’s six-year-old son Ḍūrā Kān to the throne as Shihāb al-Din Umār al-Khalīf, blinding Ḍūrā Khān and Shāhīd Khān before himself being murdered by the palace pāyakhs. ‘Ala’ al-Din’s third son Kūṭb al-Din Muḥārak Shāh Khādir then ascended the throne. During his reign (716-20/1316-20), a revolt in Gūḏarrison was suppressed, Devagirī was garrisoned and Telingāna and the far south raided again. However, Kūṭb al-Din was murdered by a Hindū convert, his favourite Khusrav Khān Barwār (on his name and origin see: Hodivala, Studies in Indo-Muslim history, i, 369-71, who assumed the title of Sultan Nāṣīr al-Din Khusrav Shāh.

Tradition formed under the Tughlucks depicts his rule of four months as that of an avowed Hindū infidel; it is evident however that Kūṭb al-Din was unpopular among important elements of the military classes (there had been plots against his life in 718/ 1318 when coins were struck in favour of one Shams al-Din Mahmūd Shāh (see R. B. Whitehead, Some rare coins of the Pathan sultans of Delhi, in J.A.S.B., 1910, Numismatic Supplement iv, 566-7; Shamsuddin Mahmūd of Dīlāh, in J.A.S.B., 1912, Numismatic Supplement xxxv, 123-4; H. N. H. Wright, The sultans of Dīlāh; their coinage and metrology, Dīlāh 1936, 109-10; K. S. Lal, ed. cit. 330-2, 337-8). Historians favouring the Tughlucks state that many Muslims either accepted office under him or refused to join Malik Tughluk’s revolt, or fought energetically on the Barwār’s behalf. It is stated that Hindū Khokhar chiefs also supported the Tughlucks, however, Ghusrav Shāh, encouraged by his son Malik Fakhīr al-Din Dīlāhor, marched on Dīlāh, defeating the forces of Nāṣīr al-Din Khusrav Shāh twice, capturing and executing him.

According to Ibn Baṭṭūṭa, (Rihla, ed. Defremery and Sanguinetti, iii, 201), Ghusrav al-Din Tughluk was a Karawna Turk. (On this see Wolseley Haig, Five questions in the history of the Tughluk dynasty of Dīlāh, in JRAS, July 1922, 319-21. He appears to have risen to the appointment of Īd-dīn under Muṣīz al-Din Kavkubāb and first to have obtained the post of muḥāfaẓ under Dīlāhor al-Din Khādir. His reign (720-5/1320-5) saw a further campaign against Telingāna, the repulse of a Mongol raid, a raid into Dījāṅnagar and an expedition to Lakhnawtī to reassert Dīlāhor’s suzerainty. Ghusrav al-Din Tughluk met his death under a collapsing hunting pavilion at Afgānūr. The complicity of Muhammad b. Tughluk in his father’s death has been exhaustively argued (see Syed Moinul Haq, Was Muhammad bin Tughlak a parricide?, in Muslim University Journal, Aligarh, v/2, October 1938, 17-48). In the light of Dīyā’s al-Din Baranī’s apparently genuine mystification at the event, the absence of condemnation of Muhammad b. Tughluk (whom he condemns fiercely on other counts) and the unnecessarily elaborate and haphazard method of killing alleged, Muhammad b. Tughluk is, in this article also, adjudged innocent of his father’s death.

The reign of Muhammad b. Tughluk (725-52/ 1325-51) appears to have been a watershed in the history of the Dihlī sultanate. At the outset, Dihlī’s authority was, according to Dīyā al-Din Baranī, recognized in twenty-three provinces, and the picture drawn by Ibn Baṭṭūṭa in the 730s is one of Dihlī’s Muslim and non-Muslim population set by 752/1351 the power of Dihlī south of the Narbādā was clearly forfeit and revolt endemic elsewhere. Baranī’s interpretation of Muhammad b. Tughluk’s troubles is too redolent of his general philosophy of history (see P. Hardy, Historians of medieval India, 36-9, 124-5) to be acceptable as it stands (it hardly explains the military support the sultan enjoyed until his natural death, for instance).

Perhaps the decision which did most, in the long term, to undermine the sultan of Dihlī’s authority was Muhammad b. Tughluk’s attempt to make Deogir (Dawlatābād [q.v.]) a second capital and to settle numbers of Muslims belonging to the ruling ālite in the Deccan. During the two previous reigns, the temptation among Muslims of the Deccan armies to plot against the Dihlī sultan had been shown to exist. By changing the Khādir policy of suzerainty by right to a tributary status, Muhammad b. Tughluk unilaterally ensured that such temptations would be successful. The relationship of other projects of the sultan—an expedition said to have been aimed at the conquest of Khurāsān, but probably at the seizure of Peshāvar or Ghāznī (Baranī’s geographical statements are
vague and uncorroborated, while Ḩamāṣi speaks of a Peshawar expedition about the same date), a permanent loss of hegemony, were in 754/1353-4, Multan (754/1353-4) and in 760/1359, Nāgar (746/1345), Gīljānī (748/1347). The latter led to the proclamation, in 748/1347, of an independent sultanate under ‘Alā’ al-Dīn Bahān Shāh [see Bahānmands]. Muhammad b. Tughluk died near Thaffīnā while in pursuit of one Ṭaghī, a Turkish rebel, who had taken refuge with the Sammas of Sind. It is noteworthy that tradition in ṣīfī or ṣīfī-influenced writing is generally hostile to Muhammad b. Tughluk. (He is known to have welcomed a pupil of Ibn Taimiyya to his court [see K. A. Nizami, Some aspects of Ḥanafī life in medieval India, in Stud. Isl., viii, 1957, 60].)

Muhammad’s successor, his cousin Firkār b. Ṭaghājār, selected by the army in Sind, was apparently personna grata to the ṣīfīs of the time; the extant accounts of the reign are mainly panegyrical and in the manākīb idiom; they depict him as pious and benevolent, shunning war and devoting himself to building. Nevertheless, before old age came upon him, he seems to have been no more pacific than Dīlī sultans usually were. He led expeditions to Lakhnawtī in 754/1353-4 and in 760/1359, followed by a foray into Dāhdūn in 761/1360 and Nāgarzāf in 762/1361. Other campaigns followed to Thaffīnā in 765-6/1366-7, Etāwā in 770/1370 and Khatārī in 782/1380. Fīrūz Shāh Tughlūk did however refrain, despite an invitation, about 767/1366, from disaffected leaders in the Bahānī sultanate, from attempting to recover Dīlī’s former possessions south of the Narbādā. The impression of prosperity and contentment among all sections of the population given in Ḥārī’s Taʾrīkh-i Muḥammadī, Fīrūz Shāh was probably heightened by the contrast with the period after Timūr’s incursion into Hindūstān, when the work was written.

Perhaps Fīrūz’s longevity (he died in 790/1388) had removed all restraint from the frustrated ambitions of his descendants, for after his death his sons and grandsons fell to struggling for the throne without regard for the consequences for the sultanate. By 790/1393-4, there were two would-be sultans, Māḥmūd, son of Muhammad the third son of Fīrūz Shāh Tughlūk, with headquarters in old Dīlī, and Nusrāt Khān, son of Fakhr Khān the eldest son of Fīrūz, with headquarters in Fīrūzābād, the new capital built by Fīrūz Shāh Tughlūk to the north-east of old Dīlī. It was not surprising that the muḥāfīdhs of the provinces seized their opportunity to become independent or to raise their terms for supporting one or other of the contestants.

Upon the scene of political disintegration burst Timūr’s invading army. Crossing the Indus in Muharram 801/September 1398, capturing Bhatnagār but by-passing Dālpūr and Sāmānā, Timūr defeated the forces of Sūltān Māḥmūd before Dīlī and occupied and sacked Dīlī itself. The consequent political anarchy is reflected in the purely local scale of the events recorded in the histories of the period. The possessor of Dīlī itself became merely one of many military chiefs, both Muslim and Hindū, struggling to widen the area in north India from which they drew revenue, or to increase their military following. Some of Dīlī’s former officers succeeded in assuming complete independence of Dīlī. In 808/1406 Hūshān Shāh put the seal on his father Dīlāwār Khān’s independent rule in Mālwā with a proclamation of an independent sultanate; in 810/1407 Zafar Khān did the same in Guḍjārāt. In the east, the area of Awadh and Tirhut became the centre of the independent power of Dāwanpur under the eunuch Mulk Sarwar (Dāwanpur appears to have become formally independent of Dīlī in 803/1400). Khīndegh in the valley of the Tāptī, Kālpī and Māboba in eastern Rādūstān also became independent in the period immediately after Timūr’s invasion.

Dīlī itself, a capital city without an empire, came in 817/1414 into the possession of the ‘Ṣayyīd’ Khīđr Khān, governor of Multān, Māḥmūd, the last of the Tughlūks, having died the previous year. He lay claim to a title no higher than ‘Rayāt-i A’lā and, according to the Taʾrīkh-i Muḥammadī, (B.M. Or. 137, folios 311b-312a) acknowledged the suzerainty of Shāh Rūkh, Timūr’s son. Khīđr Khān and his ‘Ṣayyīd’ successors, Mubārāk Shāh (824-37/1421-34) and Muhammad b. Farīd (837-49/1434-45) were obliged to play the part of provincial rulers, struggling with the Rāys of Khatārī, Etāwā, Candwar, Bāyānā, Gwālīsār for the acknowledgment of suzerainty by the payment of tribute. The possession of Dīlī and its historic claims was worth so little at this time that in 855/1451 the last of the ‘Ṣayyīds, ‘Alī’ al-Dīn ‘Alā’ī Shāh, peacefully relinquished Dīlī to the Lōdī Afgān, Bahālū, contenting himself until his death in 883/1478 with possession of the district of Bādānīn, a possession which, illustrative of the particularist outlook of the time, Bahālū was equally prepared peacefully to allow.

There are now extant no records strictly contemporary with the Lōdī period of the sultanate; moreover some authors in Mughal times tend to romanticize the Lōdīs in the influence of the Afgān sentiment. It is incontrovertible that considerable Afgān immigration into India occurred (it is said with the deliberate encouragement of the Bahālū) and that during Bahālū’s reign (855-94/1451-89), the Lōbāns, the Sūrs, the Sarwāns, the Niyažīs and the Karrāns came into prominence as settlers in India.

Bahlūl Lōdī was the grandson of Malik Bahrām who had migrated to Multān during the reign of Fīrūz Shāh Tughlūk. Bahālū succeeded his uncle Malik Sūltān Shāh as governor of Sīrhīn and acquired Lahore becoming Khaṇ-i Khaṇān under Muhammad b. Farīd. He was invited to take over at Dīlī by Hāmid Khān, the waṣīr of ‘Alī’ al-Dīn ‘Alā’ī Shāh. Bahālū succeeded in widening the area of Dīlī’s influence. He pacified the Dōbāb, reduced Etāwā, Candwar and Rēwarī and, in 856/1452, defeated an attempt by sultan Māḥmūd Shārkhī of Dāwanpur to seize Dīlī itself. Another attempt by sultan Ḥusayn Shīh in 850/1457 was also defeated. Desultory warfare between Dīlī and Dāwanpur continued until, in 884/1479 Bahālū succeeded in occupying Dāwanpur itself and seizing his son Bārbak Shāh on the throne. Much of Bahālū’s success is attributed to his dexterous handling of his Afgān amis; he is reputed to have avoided any extreme assertion of the authority of the sultanate and to have limited his demands upon his ḡāṣfīrārīs to military service.
Bahlul’s third son, Nizām Khān (Sikandar Lodi), was preferred as successor by the Afghan chiefs. Sikandar completed the incorporation of Dīnwarp into the Dīlhī kingdom, deposing Bārbak Shāh, and campaigned in Bihār where the fugitive Husayn Shāh had taken refuge. In order to control the Ėtawā, Koyl, Gwālīyār and Dholpur areas more effectively, he founded Āgra in 910/1504, but the latter years of his reign (894-923/1489-1517) saw incessant military activity in this region.

His successor, Ībrahim (923-32/1517-26), was soon faced by a Lowānī, Pārmūlī, and Mūgālī rebellion under the nominal leadership of Dīlūn Khān, a younger brother, in Dīnwarp and Bihār where the tradition of independence of Dīlhī at that time was still strong. Although Ībrahim enjoyed some successes, Dāwlī Khān, governor of the Pāндīlī Āmm, appealed to the Mughal Bābūr to intervene in Dīhūndīn, as also did Īlām Khān, Ībrahim’s uncle who claimed Dīlhī for himself. Bābūr, proving more adept at using them than they used at using him, marched on Dīlhī to defeat and kill Ibrāhīm Lodi at Pāndī at Rādīd 932/April 1526. But this victory merely established Dīlhī as one of the serious contenders for empire in Hindūstān. The Afghāns melted into the countryside or withdrew into Bihār out of Bābūr’s immediate reach, waiting on events and by no means reconciled to Mughal supremacy.

The Dīlhī sultanate of Dīlhī was temporarily restored by Šīhr Khān and his son Īsā Shāh. Farīd Khān’s (Šīhr Shāh’s) grandfather had migrated to Hindūstān during the reign of Bahlūl Lodi; his father Miḥiyn Ḥasan Khān receiving under Sikandar Lōdī the pārganās of Sahṣūrān, Ḥāḏīlpūr and Ḥarkpur Tāndā near Bankās in Ėḍūr for the maintenance of 500 horsemen. Šīhr Shāh, who was born about 1472 (see F. Saran, The date and place of Šīhr Shāh’s birth, in Journal of the Bihar and Orissa Research Society, xx, 1934, 108-22, and Ishwari Prasad, Life and times of Humayun, Calcutta 1955, 96 fn.) was given the management of his father’s pārganās about 917/1511. Losing them to his half-brother Sulaymān, in 933/1527 he took service with Bābūr only to leave him the following year to place himself under Bāhār Khān Lōhānī who had set himself up as sultan of Mūgālānī Khudrānī in southern Bihār. In 936/1529, after Muḥammad Khudrānī’s death, Šīhr Khān ruled in co-operation with Duḍū, the mother of the boy successor Diālī Khān. Šīhr Khān temporarily lost his position in Bihār to the Lōdī claimant Māḥmūd b. Sikandar Lōdī. His rivals were however discomfited by the Mughal Humayūn at the battle of Dāwra 937/1531, with the help of Šīhr Khān’s neutrality. His spiritual defence of Ėndūr rallied the Afghāns of Bihār around him and he consolidated his position in Bihār by defeating an invasion by the forces of the Bāṅgālī ruler Māḥmūd Shāh at Sūrālgīrār in 940/1534. Counter-attacking, by Dhu ‘l-Ka’dā 944/April 1538, the sultānate of Bāṅgāl was at his feet with the occupation of the capital Gāwūr.

Alarmed at the rise of Šīhr Khān, Humayūn moved eastward from Āgra in Safar 944/July 1537 only to lose six months besieging Ėndūr. Losing an opportunity to secure Šīhr Khān’s submission as a tributary, Humayūn marched on to Bāṅgāl only to meet defeat at Ėtwānī in Safar 946/June 1539. He was again defeated near Kānawdī in Mūharrām 947/May 1540 and forced to flee to Lahore and then via Mūlānī to Sind from whence he eventually made his way to Kāżwīn.

Šīhr Shāh secured his position in the west by occupying the Pāндīlī, founding a stronghold, Rohtār, near Bāṁlāt; Mūlānī was also occupied in 950/1543. Šīhr Shāh took up Dīlhī’s perennial struggle with the Rāḍīpūṭs with the capture of Ḳāyṣā in 950/1543 and campaigns against Mārwār in 950-1/1544. He was killed while besieging Kālīndīr in Rabī’ 1 952/May 1545.

His successor, Īṣlām Shāh Sūr (952-60/1545-53), the younger son of Šīhr Shāh, though far from adroit in handling the Afghān chiefs, managed to hold Šīhr Shāh’s dominions together until his death. He is criticized by later Afghān historians for attempting to curb the powers of the Ėḍūrgārīs.

On his death the throne was seized by Muḥārīz Khān, a nephew of Šīhr Shāh who took the title of Muḥammad Ādīl Shāh. This was the signal for the collapse of any unifying authority in the area of the Dīlhī sultanate. Tāḏī Khān Karranī in Gwālīyār, Ībrahim Khān Sūr, Adīm Khān Sūr in Lahore and Muḥammad Khān Sūr in Bāṅgāl threw off their allegiance. Upon this scene of political confusion Humayūn re-entered in 962/1555, occupying Lahore in Rabī’ II 962/February 1555, defeating the Afghāns at Sirhind in Shā’bān 962/June 1555 and entering Dīlhī the following month. It was not however until after Humayūn’s death (Rabī’ I 963/January 1556) that the Mughal victory at Pāndīpāt over Ḳemūlī, the Hūndī general of Muḥammad Ādīl Shāh, guaranteed that the Mughals would not be expelled from India against their will.

Under Ḳabār, the Dīlhī sultanate merged imperceptibly into the Mughal empire, distinguished from that empire less by the character of its institutions (for Ḳabār built more upon Ḳhāḷḍī and Tūḡlūk foundations than his panegyrists acknowledge) than by the narrower extent of its authority, its failure to guard the north-west marches and its failure to hold Rāḍījāstān for any appreciable period.

Despite the rhetoric of Muslim historians of the period and the undoubted achievements of the Ḳhāḷḍīs and the early Tūḡlūkūs, the Dīlhī sultanate made no violent break with the later Rāḍīpūṭ political tradition that rulers in Hindūstān sought paramountcy rather than sovereignty, that is, acknowledgment of their superior rights in the spheres of military service and revenue enjoyment rather than a general control over the people at large. This is hardly surprising when it is remembered that at no time did the Turks and the Afghāns succeed in reducing the Hindū chiefs to disarmed impotence. The panegyrics of Muslim historians require correction by the inscriptional evidence cited, for example, in H. C. Ray, The dynastic history of Northern India, i, Calcutta 1931, 544-7, and ii, Calcutta 1936, 729-35, 908, 1096-93, 1132-4, 1190-5 (see also Cambridge History of India, iii, Turks and Afghans, Chapter xx), which shows clearly that the Rāḍīpūṭ clans remained politically active away from the principal centres of Turkish military occupation; the emergence of the Hindū chiefs into prominence in the 9th/15th century is explicable only on the basis that they had been there all the time, concealed from view by the earlier Muslim historians. It is important to recall that except for a short period under the Ḳhāḷḍīs and Tūḡlūkūs, Rāḍījāstān was generally independent of Dīlhī. Moreover the Ḳhūrīd conquest of Hindūstān was undertaken by a military dīla of Turks, Ḳhāḷḍīs and Afghāns, accustomed at home to a predatory relationship with the economically productive sections of the population but leaving them a large measure of autonomy in law and custom. Although
there was a large and continuing (though imperfectly documented) migration of Muslims to India during the sultanate period. It was largely a movement of professional classes and did not involve economic and social displacement of the mass of the Hindustan population. The bulk of the Muslim ‘working’ population consisted of converts made in the group or the products of intermarriage and concubinage. Neither their own political traditions nor their political necessities would suggest more than the minimum interference, political and administrative, between the Muslim and the Hindu or a unit of Indian social life, the village community. (It is probable that the Muslim 
\[dj\]aglardar contingents living in the villages near the larger towns had some social and cultural impact upon the local population).

The relations of the Dihli sultanate with the Hindustan population were dominated usually by considerations of policy rather than of religion. Hindu chiefs were accepted as tributaries and Hindu cultivators as tax-payers. Hindu clerical assistance in levying the land revenue and Hindu bankers’ services in providing sultans with ready cash were indispensable. The description of the place of the 
\[R\]agîpguts at Muhammad b. Tughluk’s court by Ibn Battûta, following upon Khal'dî marriages with Ragîpgut families, suggests that Akbar’s policy of conciliating the Ragîpguts was not without precedent in the sultanate period. It cannot be regarded as established, without question, that the sultans of Dihli normally levied 
\[d\]ijîya as a discriminatory tax on non-Muslims as such. It is suggested that many statements in Indo-Muslim historians to that effect may be discounted as attempts to depict, for the comfort and edification of the pious, an ideal Muslim ruler. Moreover, where the terms 
\[Kh\]ardî and 
\[d\]ijîya are found together, it is suggested that they are being used as conventional legal terms, with emotive intent, for what was in fact the tribute or land revenue customarily paid to a paramount ruler. In support of this latter hypothesis, it may be noted that in his 
\[F\]atâwa-yi 
\[D\]iâhândîrî, 
\[D\]iyâ’ al-\[D\]în Barâni speaks of Hindu Râys taking 
\[Kh\]ardî and 
\[d\]ijîya from Hindu 
\[m\]ugârs and 
\[k\]âftîrs (India Office Library MS. 1149, f. 119a). However, for a contrary (and indeed more plausible) view of this controversial question, see, e.g., Ishwari Prasad, 
\[H\]istory of mediaeval India, 475–6: A. L. Srivastava, The sultanate of Delhi, Agra 1950, 443–5; and The advanced history of India, index, s.v. 
\[d\]ijîya, 1951.

The Muslim ruling 
\[d\]îte was ethnically heterogeneous. Turks from the steppe, Afghan and Khal’dîs were dominant until Balban’s time, but Hindu converts soon made their appearance in important offices (see P. Saran, Politics and personalities in the reign of Nasir-uddin Mahmud, the Slave, in Studies in medieval Indian history, Delhi 1952) and later, under the Khal’dîs and Tughluqs, sometimes played a dominant rôle (e.g., Malik Kâftîr, Khusraw Kâhan Barwârî and Khan-i Dihâh Mâkbul, wazir of Firuz Shah Tughluq). Muhammad b. Tughluq was reported to have encouraged Muslims to come to India to take service under a Muslim sultan. The Indian-born Muslims of Hind stock did not enjoy the same prestige as did descendants of the original conquerors or Muslim immigrants. Although Kûtîb al-\[D\]în Aybâk, Iltutmish and Balban, their principal commanders and mukhtârs, and the Khal’dîs favourite Malik Kâftîr and Khusraw Kâhan, began as slaves in the royal household, the position of slaves in administration and war under Dihli followed the 
\[G\]haz-nawid and Sâmânid precedents. Slavery was not the only or indeed the principal road to power; slaves formed merely one source of recruitment to the ruling 
\[d\]îte.

The headquarters administration of the Dihli sultanate followed familiar Sâmânid and Ghaznavid lines. The wâkîl-i 
\[d\]ar and the amir-i 
\[h\]âdîgî were to be found managing the sultan’s household and regulating access to him; the wâstî, the ‘ârîq-i 
\[m\]amâlîk, the bardî-i 
\[m\]amâlîk and the 
\[h\]âdîl al-
\[m\]amâlîk appear to have exercised broadly the same functions as under the Sâmânids and Ghaznavids.

The administrative, the military and the salary 
\[i\]tâdâl (cf. A. K. S. Lambton, Landlord and Peasant in Persia, London 1953, 61–64), are clearly discernible under the Dihli sultanate. The provincial governor, in the period from Balban to Firuz Shâh Tughluq, 
\[d\]ulî or 
\[m\]ukhâ’ was an official, transferable at will, commanding the local military forces and paid personally by the grant of a revenue assignment or by a percentage of the provincial revenues. He was supposed to remit the revenue, surplus to local expenditure, to headquarters, where a record was kept of the numbers of the provincial contingents and the anticipated revenue. This system broke down after the Tughluqs when the distinction between the administrative and the military 
\[i\]tâd became blurred, governors became semi-independent tributaries with their own private armies, and the process of revenue audit also became spasmodic. The military assignment, or grant of the revenue from villages for the recruitment and upkeep of a body of cavalry, is reported to have existed under Balban; ‘Alâ’ al-\[D\]în Khal’dî is said to have resumed many such assignments and to have paid his soldiers in cash. An Arabic source (Masâlik al-\[a\]bâdî fî mamâlîk al-\[a\]msâ’r of Shâh al-\[D\]în al-\[U\]marî, trans. Otto Spies etc., Muslim University Journal, Aligarh, March, 1943, 28–9) written in Egypt during the reign of Muhammad b. Tughluq states that the troops of the Dihli sultan were paid in cash from the 
\[d\]îwar. The encomiast ‘Affi clearly indicates that during the time of Firuz Shâh Tughluq the military assignment was common, though there are passages which suggest that the assignee was not always allowed the personal management of his assignment. In the ‘Sâyîd’ and Lâdî periods payments of troops by the grant of 
\[d\]jâftr or assignments, which the 
\[d\]jaglardar managed himself and over which the sultan’s 
\[d\]îwar exercised minimal supervision, was usual. It is clear that there was throughout the sultanate period a tension between the sultan, like ‘Alâ’ al-\[D\]în Khal’dî, with a preference for an extension of the 
\[k\]hâlsîa land, or area under direct revenue administration from which the troops could be paid in cash, and the Muslim military class with a preference for assignments which they managed themselves. Neither the sultan nor the military class ever wholly succeeded in obtaining their wishes throughout the whole area of the sultanate. Probably ‘Alâ’ al-\[D\]în Khal’dî succeeded more in managing the assigned areas than in abolishing all such grants of revenue. The accounts of Shîr Shâh give a vivid picture of the opportunities open to the provincial ruler in the Afghan period to become the 
\[d\]efacto ruler of the area of the 
\[d\]jâftr and aspire to a provincial sultanate or even to the throne of Dihli itself. Shîr Shâh did not himself, as sultan, abdolish 
\[d\]jaglardar but set a limit to their influence by maintaining a large army recruited by himself and financed by a more extensive 
\[k\]hâlsîa area.

Evidence on the sub-organization of a province
DIHLI SULTANATE 273

(tāqī or wilāyat)—which in any event denoted that area around the principal town which the wall or murāk could control rather than a clearly defined administrative area—la šahī. There are references to ǧāhidārī in the time of Muhammad b. Tughluk and favūdīs rather later; these probably represented military commands subordinate to the wāli or murāk rather than regular heads of a definite administrative subdivision. Shir Shāh is said however to have appointed a ǧāhidār and an amīn to each pargana to control the police and the revenue aspects of its work respectively. Below the pargana was the village community with which the Muslim official dealt through its muhaddam or headman and patwāri or village accountant. In the 9th/15th century ǧāhid is sometimes used to denote a province—a sign perhaps of the smaller political scale of that period.

In the collection of the land revenue, the Dihli sultanate, its revenue officers and assignees, did not depart seriously from the principles and practices of the pre-Muslim period—of demanding a proportion of the gross produce of the soil assessed either by sharing the harvest (hukm-i māsābād), by estimating its probable yield (hukm-i muṣābaḍa) or by measurement of the area under cultivation and assessment according to a standard rate of demand per unit area according to the crop sown (hukm-i mīšāhād). For the best account of the known changes and permutations in the sultanate period, see W. H. Moreland, The agrarian system of Moslem India, Cambridge 1929; see also Darība, 6(a).

DIHLI SULTANATE — DIHYA

DIHLI SULTANATE, ART. With the exception of the coinage [see SIKKA], and a very few ceramic fragments (a few described in J. Ph. Vogel, Catalogue of the Delhi museum of archaeology, Calcutta 1908; for the pottery fragments of the 'Adulâbad excavations see H. Waddington, in Ancient India, i, 60-70), the only body of material for the study of the art of the Dihli sultanate is monumental. Most of the monuments are in Dihli itself and are described s.v. Dihli. The remainder are mostly described under the appropriate topographical headings, and are listed here in more or less chronological order.

The first major undertaking outside Dihli was at Adivar (q.v.), where the Kaftân Dîn Aybak built the mosque, known as Afsî-dîn ka dâjhîmî ("Hut of two-and-a-half days"), at about the same time as the Masqîêt Kûwat al-islam at Dihli, to which itetsmîsh added a mabûsra screen as he had done to the Dihli example. Other buildings attributed to Ietsmîsh include a large masonry tank, the Qadî al-Isfahân and an 'îdâkah and madrasa at Badî-udîn (q.v.); for the last, one of the largest mosques in India, see J. F. Blakiston, The Jame Masqîêt al-Badaun and other buildings in the United Provinces (= Memoir ASI, xix), Calcutta 1926, and Cunningham, ASI, xi, 1880. In Nagawr (q.v.) is a fine gateway, the Atarkîn kâ darwâza, c. 627/1230, and at Bayanâ, about 80 km. south-west of Agra, is a mosque made out of temple spoil with corbelled arches similar to those of the Dihli mosque; known as the Ukhâ mandir, it was later reconverted to temple use. Of the time of Balban is a minâr at Koyîl (see ALGaKH), demolished in 1868, described in 'AlGarh Gazetteer', v, 218.

Noteworthy buildings of the Khâldî dynasty include the bridge over the Gambîrî river at Citawr built by 'Alî-ud-dîn in c. 703/1303, and the Ukhâ masqîêt of 'Alî-ud-dîn Mubârak (716-20/1316-20) at Bayanâ, with colonnades of temple pillars but typical Khâldî arches with their "spare-head" fringe.

Ghiyâsh al-Dîn Tughluk's buildings after his accession were confined to Dihli; for his previous buildings see MüSTAN. His son, Muhammad b. Tughluk, carried the Dihli craftsmen south to Dowlatâbâd (q.v.), whence the Dihli style spread to the Deccan (see BAHMANIS, monuments). Furûz Shâh Tughluk was responsible for the early buildings of the towns of Dwânpur, Fatehâbâd, Hîyâr and Lalitpur (q.q.v.), and the last Tughluk, Maḥmûd Shâh, for the Dîmâshqî masqîêt at Irîc (q.v.), the arches of which anticipate the recession of planes characteristic of the Lôdîs (there is not general agreement about the date of this building; the interpretation of Blakiston, op. cit., seems the most plausible).

The Lôdî dynasty's buildings outside Dihli are mainly at Agra, Kâlpî, Lalitpur, and Hânsi, (q.q.v.), to which must be added the fine tomb of Muhammad Ghâwth at Gwâlîyâr (q.v.), of c. 972/1564, which is Lôdî in spirit if not in date. The Cawrâsch Gumbad at Kûlpî is said to be the mausoleum of one of the Lôdî sultans, who is not further identified (cf. Blakiston, op. cit.).

For the buildings of the Suri dynasty see especially RûSTâS, RûSTâSâRî, SAHSâRâM, and the bibliography to BÎHAR.

DIHYA (or DARYA) b. KHALİFA AL-KALBI, Companion of the Prophet and a somewhat mysterious character. He is traditionally represented as a rich merchant of such outstanding beauty that the Angel Gabriel took his features; and, when he arrived at Medina, all the women (mu'Âsir, see LÂ, root, 97) came out to see him (Kur'ân, LXXI, 15, may be an allusion to this occurrence). There is no reason to accept the suggestion put forward by Lammens (EP, s.v.) of some commercial connexion with Muhammad; we only know that a sudden death put
a stop to a projected marriage between a niece of Dihya and the Prophet, that the latter died just as he was about to marry a sister of the Kalbi and that Dihya, to whom Safiyya [q.v.] had been allotted after the capture of Khaybar, had to renounce her, to receive instead a cousin of the young captive.

After being present, if not at Udhâ, at least at the Khandâk, Dihya commanded a small detachment at the battle of the Yarmûk, but it was his "diplomatic" activities in particular which have been pointed out. As a Kalbi he was bound to have an influence on Arab wars among the Syrian times, and his business allowed him to move freely everywhere without arousing suspicion; for this reason, he was probably used as a secret agent.

Tradition however simply reports that, in 6 or 7, he was given the task of conveying to Heraclius a message from the Prophet inviting him to be converted to Islam, and that on his return the caravan was plundered by the Pdhdâm, against whom Muhammad was compelled to send Zayb b. Hârijta. Several orientalists have noted legendary characteristics in the account of these events and have called into question the authenticity of the letter addressed to Heraclius; M. Hamidullah has recently applied himself to the task of refuting their arguments and even of finding evidence concerning the fate of the original document which may still be in existence (see Arabic, 1955/5, 97-110).

After the conquest of Syria, it is surprising that Dihya should disappear from the scene; one source makes him withdraw to Egypt, but most biographers state that he settled in Damascus (al-Mizzâ = Mezze), where he died in the caliphate of Muâwiya, in about 50/5670.

(H. Lammens-[CH. Pellat])

DIK, the cock. The word is perhaps of non-Semitic origin. No cognate synonyms seem to exist in the other Semitic languages except in modern South Arabian (Leslau, Lexique soughri, 1938, 126).

The cock is mentioned quite often in ancient Arabic poems and proverbs and in the hadîth. In zoological writings it is described as the most sensual and conceited of birds. It is of feeble intelligence, as it cannot find its way to the hen-house in the other Semitic languages, except in modern Semitic origin. No cognate synonyms seem to exist for it. Its medicinal properties, however, are mentioned by Ibn al-Baytâr and Dâwûd al-ANTAKI in the chapters of hadîth. Mainly its flesh and a gravy soup prepared therefrom, its bile, brain, comb and blood were put to medicinal use.

Diâhis, who mentions quite often a dispute between sâhîb al-dik and sâhîb al-kalb, seems to quote from an anonymous work belonging to that kind of literature which has been treated by Steinhauser, Mitteilungen der Deutschen Orientgesellschaft (DÄO), Wien, phil.-hist. Kl., 155, Abb. 4, 1908.

(L. KÖPP)

DIK AL-DJINN AL-HI MÎṢ, surname of the Syrian Arabic poet ʿAbd al-Sâlâm b. Râghbân b.
DILAWAR KHAN, founder of the kingdom of Malwa [q.v.], whose real name was Hasan (Firigha, Nawalkishore ed., ii, 234); or Husayn (Firishta, iv, 169). Dilawar Khan did not, however, live long to enjoy the fruits of freedom, and died suddenly in 808/1405; his sudden death gave rise to a suspicion, shared by some of the high-ranking army commanders, that he had been poisoned by his ambitious son, and Murza Affar Shah I, ruler of the neighbouring kingdom of Gudjarat, long had the same impression and ultimately made the desire to avenge his old friend and sworn brother-in-arms the reason for his attack on Malwa.

DILAWAR PASHA (71051/1622), Ottoman Grand Vizier, was of Croat origin. He rose in the Palace service to the rank of Caghnigl Bashl,
becoming thereafter Beglerbeg of Cyprus and then, in Dhu 'l-Hididja 1022/January 1614, Beglerbeg of Bagdad. As Beglerbeg of Diyarbekir—an appointment new—of the Ottoman-Safavid war (1024-7/1615-8), was shared in the Erivan campaign of 1025/1616 against the Safawids of Persia. His subsequent career until 1030/1621 is somewhat obscure. The Ottoman chronicles (cf. Pecewl, ii, 356; Hâdîdî Khaâlâfa, i, 392; Na'mâ, ii, 166) state that a certain Muşafa Paşa, killed in action during the last hostilities of the Ottoman-Safavid war (1024-7/1615-8), was buried in Bagdad. Dilawar Pasha was present at the death of Othman II (d. 1027/1618). A Venetian "relazione" of July 1620 mentions the removal of Dilawar Paşa from the Beglerbeglik of Diyarbekir (cf. Hadidii Khalifa, i, viii, 267). Dilawar Pasha fought—once more as Beglerbeg of Diyarbekir (cf. Hâdîdî Khaâlâfa, i, 406; Na'mâ, ii, 194)—in the Choczm (Hştin) campaign of 1030/1621 against the Poles. It was on 1 Dhu 'l-Ka'da 1030/17 September 1621, in the course of this war, that Sultan Othman II (1027-31/1618-22) raised Dilawar Paşa to the Grand Vizierate. His tenure of the office was destined to be brief. He lost his life on 8 Radjab 1031/19 May 1622 during the revolt of the Janissaries which led to the deposition and death of Othman II. Dilawar Pasha built a large mausoleum for himself between the Kânî Rüha (Urfa) and Halrik, and another khan-ı- wie completed until the time of Sultan Murad IV (1032-49/1623-40)—at Sûlî Gazi (Seyyid Gâzi).

DILSIZ, in Turkish tongueless, the name given to the deaf mutes employed in the inside service (enderin) of the Ottoman palace, and for a while also at the Sublime Porte. They were also called by the Persian term bâbâdî, with the same meaning. They were established in the palace from the time of Mehemmed II to the end of the Sultanate. Information about their numbers varies. According to 'Atâ', three to five of them were attached to each chamber (Koçguzhî); Rycuats speaks of 'about forty'. A document of the time of Meşufa II (d. 1115/1703), cited by Uzunçarşılı, dealing with the distribution of cloth to the palace staff, mentions one mute in the harem, two mutes and one dwarf (âidîdî) in the Privy Chamber (Kâhzî oda), a chief mute, chief dwarf, six mutes and two dwarfs in the Treasury Chamber (Khasine Koçguzhî), a chief mute, chief dwarf, and ten mutes in the Campaign Chamber (Seferi Koçguzhî). The mutes received pay and pensions, and had special uniforms and ceremonial dress. Their chiefs were called bashdilsiz—chief mute. Though deaf mutes from birth, they are said to have been men of intelligence, and to have had an elaborate sign language in which they communicated among themselves and received orders from their superiors. According to Bon, many of them could write 'and that very sensibly and well'. Their duties were to act as guards and attendants, and as messengers and emissaries, in highly confidential matters, including executions.

There are descriptions and pictures of the deaf mutes in a number of western accounts of the Ottoman court (B. Lews).
the shadow. At the end of November the first heavy showers wash the dust from the leaves; it is autumn. In this semi-desert type of climate vegetation suffers from a constant shortage of water, and maintenance of animal life is only possible with the help of the nomads who constantly move from one oasis to the next. The oasis of Dimashq enters into history with the mention made in Genesis, X, 22, XIV, 15; even today Muslims venerate the Masjid Ibrahim at Berzé, to the north of Damascus, which according to tradition was the birthplace of Abraham. It seems that it was at this time that the Aramaeans introduced its grid-like plan with straight streets and rectangular intersections, similar to that which existed in the second millennium in Babylon and Assyria. The city owed the development of its canal system to the Aramaeans; we know from the Old Testament history of Na'amân the Leper (II Kings, V) that the Abâna was already flowing alongside the Barâdât before the 10th century B.C., while the Nahâr Tawrâ with its Aramaean name, which had been dug along the slopes of the Kâsiyûn, irrigated the region to the north and north-east of the city and played an important part in the agricultural economy of the oasis. The town was conquered by David (II Kings, vii, 5-6) but in the century of Solomon, the king of Dimashq fought successfully the Assyrian kings to the north and the kings of Israel to the south. In 732 B.C. the Assyrian troops of Tiglathpilezer III put an end to the kingdom of Dimashq; they took the town and despoiled the temple and palace, part of whose furniture was rediscovered in 1930 in Upper Mesopotamia. For this period of the city's history, as for the successive occupations by the Assyrians in the 8th century, the Babylonians in the 7th century, the Achaemenids in the 6th century, the Greeks in the 4th century, and the Romans in the 1st century B.C., see K. Wulzinger and C. Watzinger, Damascus, i, Die Antike Stadt, and the articles of J. Benzingier in Pauly-Wissowa, iv, 2042-48, Jalalbert in the Dictionnaire d'archéologie chrétienne et de liturgie de Cabrol and Lederer, art. Damas, iv, 1920, col. 119-46. R. Janin in the Dictionnaire d'histoire et de géographie ecclésiastiques of R. Aulbert and E. van Donkerenbergh, xiv, 1957, col. 42-71.

The conquest of Alexander the Great in 333 B.C. is an important date, for Dimashq had the Achaemenid city of Tawrâ with its Aramaean name, which had been dug along the slopes of the Kâsiyûn, irrigated the region to the north and north-east of the city and played an important part in the agricultural economy of the oasis.
Rome brought internal peace and administrative order, which in their turn brought amazing prosperity to the town. The upward trend of its economy led to the construction of an aqueduct, al-Kawdnut, to provide drinking water which functions up to the present time. New blocks of houses in the southern part of the rectangle settled the problem of finding homes for the newcomers. Two great colonnaded streets were new features of the urban picture. One of these important thoroughfares, 25 metres wide, could be entered by seven gates: to the east, the Eastern Gate (Bāb Sharkī), to the south the Kaysān Gate and the Little Gate (Bāb al-Saghīr), to the west the al-Diābiya Gate, and to the north the Gate of the Gardens (Bāb al-Parādīs), the Dīnīk Gate and the Thomas Gate (Bāb Tūmā). Important remains of these walls and gates are still visible today. The growth in the population necessitated the construction of an aqueduct, al-Kawdnut, to provide drinking water which functions up to the present time. New blocks of houses in the southern part of the rectangle settled the problem of finding homes for the newcomers. Two great colonnaded streets were new features of the urban picture. One of these important thoroughfares, 25 metres wide and with arcades on either side, joined Bāb Sharkī to Bāb al-Diābiya, crossing the city from east to west and corresponding with the decumanus of Roman cities. This road, the present Sūk Midḥat Pāgha, is still referred to by foreigners as the 'Street called Straight' from the allusion to it in Acts, IX, n. 25. In the middle we can still see to-day one of the three arches which used to stand there, and in a little semi-circular tell on its south side, crossed obliquely by a small alleyway, is the site of the ancient theatre. The second colonnaded street was the ancient road joining the temple and the agora, which was now turned into a forum. The temple, which was dedicated to Jupiter of the Damascenes, the successor to Hadad, god of storms, was partially rebuilt and altered on several occasions, especially in the second and third centuries A.D. Part of the peribolus (enclosure), two of whose corner towers serve as bases for minarets, is to be found in the outer wall of the Great Mosque. The eastern propylaea are to be seen in the present day Diayrūn to the east of the Great Mosque, while the western propylaea, which are ornamented with a wide pediment, are visible at Bāb al-Barid to the west of the sanctuary. Finally it is also known that the Circus, which perhaps replaced the Stadium, was situated on the site of the present Boulevard de Baghādād, north of a cemetery outside the Gate of the Gardens, where Roman sarcophagi have been found.

Medieval Arab nomenclature has preserved in other ways the memory of certain Roman districts such as al-Dinām, corresponding with the ancient demōsion, al-Fūrānak which recalls the furnaces or pottery kilns, and again al-Furskār, which seems to show that at this end of the Street called Straight there once stood the fœscaron where the juscā was made and sold. Many of the ancient remains must have disappeared beneath the earth whose level has risen by more than four metres in some places since the Roman period, but the plan of the city as it was laid out at the beginning of the 3rd century A.D. was hardly altered up to the arrival of the Muslims. The Roman city, in fact, formed the skeleton of the mediaeval town. The Romans therefore imposed a new urban plan and set about combining the original Aramaean town with the Hellenistic one to form a new city. The state occupied mainly with projects of general interest such as the city walls and additional canals to provide extra water.

Rectangular walls measuring 1500 by 750 metres were built on the right bank of the Barada, to protect the inhabitants against pillaging nomads. Strengthened by a castrum in the north-east corner, the entry took on the appearance of a vast quadrangle which could be entered by seven gates: to the east, the Eastern Gate (Bāb Sharkī), to the south the Kaysān Gate and the Little Gate (Bāb al-Saghīr), to the west the al-Diābiya Gate, and to the north the Gate of the Gardens (Bāb al-Parādīs), the Dīnīk Gate and the Thomas Gate (Bāb Tūmā). Important remains of these walls and gates are still visible today. The growth in the population necessitated the construction of an aqueduct, al-Kawdnut, to provide drinking water which functions up to the present time. New blocks of houses in the southern part of the rectangle settled the problem of finding homes for the newcomers. Two great colonnaded streets were new features of the urban picture. One of these important thoroughfares, 25 metres wide and with arcades on either side, joined Bāb Sharkī to Bāb al-Diābiya, crossing the city from east to west and corresponding with the decumanus of Roman cities. This road, the present Sūk Midḥat Pāgha, is still referred to by foreigners as the 'Street called Straight' from the allusion to it in Acts, IX, n. 25. Finally it is also known that the Circus, which perhaps replaced the Stadium, was situated on the site of the present Boulevard de Baghādād, north of a cemetery outside the Gate of the Gardens, where Roman sarcophagi have been found.

Medieval Arab nomenclature has preserved in other ways the memory of certain Roman districts such as al-Dinām, corresponding with the ancient demōsion, al-Fūrānak which recalls the furnaces or pottery kilns, and again al-Furskār, which seems to show that at this end of the Street called Straight there once stood the fœscaron where the juscā was made and sold. Many of the ancient remains must have disappeared beneath the earth whose level has risen by more than four metres in some places since the Roman period, but the plan of the city as it was laid out at the beginning of the 3rd century A.D. was hardly altered up to the arrival of the Muslims. The Roman city, in fact, formed the skeleton of the mediaeval town. The Romans therefore imposed a new urban plan and set about combining the original Aramaean town with the Hellenistic one to form a new city. The state occupied mainly with projects of general interest such as the city walls and additional canals to provide extra water.
by proposing to substitute the name of Yazíd b. Sufyān for that of Abu ʿUbayda. In any case, Lammens has shown the unlikelihood of a division of the town, a legend which seems to have come into being only at the time of the Crusades.

The Muslims guaranteed the Christians possession of their land, houses and churches, but forced them to pay a heavy tribute and poll tax.

In the spring of 15/636, an army commanded by Theodoros, brother of Heraclius, made its way towards Dimashq. Khalid b. al-Walid evacuated the place and reformed his troops at al-Dābiyya before entrenching himself near the Yarmūk to the east of Tiberias. It was there that on 12 Radjab 15/20 August 636 the Byzantine army was put to flight by Khalid who, after this success, returned to Medina. This time the conquest of Syria and Dimashq was to be the work of Abu ʿUbayda b. al-Dāhrāb. The town capitulated for the second time in Dhuʾl-Kāʿaḍā 15/December 636, and was finally integrated into the dominion of Islam.

The fall of Dimashq was an event of incalculable importance. The conquest put an end to almost a thousand years of western supremacy; from that time on the city came again into the Semitic orbit and turned anew towards the desert and the east. Semitic by language and culture, Monophysite and hostile to the Greek-speaking Orthodox Church, the people of Dimashq received the conquerors with unreserved pleasure, for they felt nearer to them by race, language and religion than to the Byzantines, and, regarding Islam as no more than another dissident Christian sect, they hoped to find themselves more free under them. At Dimashq more than elsewhere circumstances seemed as if they ought to have favoured Arab assimilation to Greek culture but in fact Hellenization had not touched more than a minute fraction of the population who for the most part spoke Aramaic. While the administration continued to maintain Byzantine standards, religious controversies arose and contributed towards the formation of Muslim theology. Assimilation took place in the opposite direction so that the positive result of the conquest was the introduction of Islam, which within half a century succeeded in imposing itself. Arabic to replace Greek as the official tongue.

The change of régime was reflected in the urban plan only by the erection of two buildings closely connected with each other: the palace of the Caliph and the mosque, which did not alter the general aspect of the city. Muʿawya was content to remodel the residence of the Byzantine governors to the south-east of the ancient peribolus on the site of the present-day gold- and silversmith's bazaar; it was called al-Khādrā, 'the Green (Palace)'. This name must in fact have been given to a group of administrative buildings as was also the case in Constantinople and later at Baghdaḍ. At the side of the palace, which under the ʿAbbasids appears to have been transformed into a prison, was situated the Dār al-Khayl or Hostel of the Ambassadors. The Caliph Yazīd I improved the water supply by reconstructing a Nabataean canal on the slopes of the Djabal Kāsīyān above Nahr Tawrā which was given the name of Dār al-Khās. The palace of al-Malik al-Hādīdjādi, the son of the Caliph ʿAbd al-Malik b. Marwān, built a palace outside the walls to the west of Bāb al-Dābiyya whose memory is preserved in the name of the district of Kaṣr al-Hādīdjādi.

It is to Caliph al-Walid I that we owe the first and one of the most impressive masterpieces of Muslim architecture, the Great Mosque of the Umayyads. The Church of St. John of Jerusalem continued to exist under the Sufyanids and Muʿawīya did not insist on including it in the masjidī. The Gallic bishop, Arculf, passing through Dimashq about 50/670, noted two separate sanctuaries for each of the communities (P. Geyer, Itinera Hierosolymita, Saeculi ivrviii).

Conversions grew in number and the primitive mosque, which was no more than a musāllā situated against the eastern part of the south wall of the peribolus, became too small. ʿAbd al-Malik laid claim to the church and met with its purchase but the negotiations failed. "By the time that Caliph al-Walid decided to proceed with the enlargement of the mosque, the problem had become difficult to solve. There was no free place left in the city, the temenos had been invaded by houses and there remained only the agora where the Sunday markets were held. In spite of previous agreements, he confiscated the Church of St. John the Baptist from
the Christians, giving them in exchange, however, several other places of worship which had fallen into disuse'. A legend which tells of the division of the Church of St. John between Christians and Muslims springs from an error in translation. The text of Ibn al-Mu'allā which Ibn 'Asākir and Ibn Ḍubayr have helped to spread, speaks of a division of the kanisa where the Christian sanctuary adjoined the masjid of the Muslims. We must take the word kanisa in a broad sense as meaning place of prayer, that is to say the open-air haram of the ancient sanctuary (J. Sauvaget, in Syria, xxvi, 353) which can also be called masjid. Fascinated by the plan of the mosque in which they hoped to discover an ancient Byzantine basilica, certain authors, of whom Dussaud is one, have stated that the Christian hall of prayer was divided between the two communities. Lammens admits, however, that the construction of the cupola must be attributed to al-Walid. All those who have studied it on the spot, such as Thiersch, Strygowski, Sauvaget and Creswell, agree with only some slight differences of opinion in regarding the Great Mosque as a Muslim achievement. In 86/705, al-Walid had everything within the peribolos of the ancient temple demolished (al-Farażdāk, Dimān, 107-109), both the Church of St. John and the little chapel which stood over the three cubits square crypt, in which there was a casket containing the head of St. John the Baptist (Yahyā b. Zakariyya?). Only the surrounding walls made of large stones and the square corner towers were allowed to remain. In this framework, approximately 120 by 80 metres in size, the architects placed to the north a court-yard surrounded by a vast covered portico with double arcades. "Along the whole length of the south wall of the peribolos, extended in the same direction as that in which the faithful formed their ranks for prayer, an immense hall made a place of assembly for the Muslim community". In the middle was an aisle surmounted by a vast cupola. In the east the "mihārāb of the Companions" served as a reminder of the primitive masjid. In the west a new door, Bāb al-Ziyāda, was opened in the wall to replace the central portica which had been blocked up. "Finally, in the centre of the north wall a high square minaret showed from afar the latest transformation which had come to the old sanctuary of Damascus". The walls of the building were hidden in some places under marble inlays, in others under mosaics of glass-paste. The Great Mosque was built in six years and "by the vastness of its proportions, the majesty of its arrangement, the splendour of its decorations and the richness of its materials" it has succeeded in impressing the human imagination down the centuries. A Muslim work in its conception and purpose, it was to be "the symbol of the political supremacy and moral prestige of Islam".

Two new Muslim cemeteries were made in addition to that of Bāb al-Farādis: the first was situated at Bāb Tūmâ but the one in which most of the Companions of the Prophet were to lie was to the south of the city outside Bāb al-Saghīr. The ʿAbbāsid period.—ʿAbd Allāh b. ʿAli, uncle of the new Caliph Abu ʿl-ʿAbbās al-SAfraḥ, having put an end to the Umayyad dynasty, took Dimashq in Ramaḍān 132/April 750 and became its first ʿAbbāsid governor. Umayyad buildings were sacked, the defences dismantled, tombs profaned. A sombre era began for the city which dwindled to the level of a provincial town, while the Caliphate installed its capital in ʿIrāq. A latent state of insurrection reigned in the Syrian capital. Under al-Mahdī (156-68/775-85), a conflict between Yamāni and ʿAbbāsid governors, who resented the introduction of a certain amount of fire and destruction in the town. The Fatimid domination only aggravated the situation for the city, where the Maghrabī soldiers in the pay of Cairo exasperated the population. It was a century of political anarchy and decadence. The riots sometimes turned into catastrophe, for the majority of the houses were built of unfired brick
with framework and trusses of poplar trees, and any fire could have grave consequences; such was the case in 461/1069 when one which broke out owing to a brawl between Damascenes and Berber soldiers caused serious damage to the Great Mosque and the city.

The Turkish domination.—A Turkoman chief, Atsîz b. Uvâk [q.v.], who had been in the pay of the Fâtimids, abandoned their cause and occupied Dimâshq on his own account in 468/1076, thus putting an end to Egyptian rule. Threatened by his former masters, Atsîz hastened to strengthen the city and endeavoured to form an alliance with Malik Shâh [q.v.] whom he asked to help him. In reply, the Saljûkian sultan gave the town in appanage to his brother, Tutush [q.v.]. He arrived in Dimâshq in 471/1079, re-established order and got rid of Atsîz by having him assassinated. The era of violence continued. In 476/1083, Muslim b. Kuraysh besieged the city; the Fâtimid aid which he expected failed to arrive and Tutush succeeded in setting the city free. He died fighting his nephew, Bârkyârûk [q.v.], in 488/1095. His sons divided his domain. Ridwân installed himself at Halâb and Duûkâk at Dimâshq. The latter put the direction of his affairs into the hands of his atabeg, the Turk Zâhîr al-Dîn Tughtakin, who from that time on seems to have been the real ruler of Dimâshq. His political position was a delicate one for he had against him the Fatimids, the Saljûkians of Baghâdâd and, after 490/1097, the Franks as well.

On the death of Duûkâk (Râmâdân 497/June 1104), Tughtakin exercised his power in the name of the young Tutush II who died soon afterwards. From then on, the atabeg was the only master of Dimâshq and his dynasty, the Bûrids [q.v.], remained there until the arrival of Nûr al-Dîn in 549/1154. During the quarter of a century of Tughtakin's reign, there was a remarkable improvement in the state of the city, both morally and economically. On his death in Safâr 552/February 1158, he was succeeded by his son, Tâdj al-Mulûk Burl. The Bâtiniyya [q.v.], who had already made themselves felt in Dimâshq by killing the Amir Mawdûd in 507/1113, re-established order and got rid of this vizier killed. This was the signal for a terrible massacre, the population, out of control, exterminating some hundreds of Bâtiniyya. The survivors did not long delay their revenge; Tâdj al-Mulûk Burl was the victim of an attempt on his life in 525/1131 and died as a result of his wounds a year later in Raqîb 536/November 1141. The two succeeding princes were also assassinated, the one, Ismâ'îl, by his mother in 539/1145, the other, Shîhâb al-Dîn Mahmûd, by his enemies in 553/1159.

In 534/1140 the military leaders brought to power the young Abû Sa'îd Abâk Mûdîrî al-Dîn, who left the direction of his affairs to his atabeg, Mû'în al-Dîn Unûr. On the atabeg's death ten years later Abâk took over the power himself but was obliged to accept the guardianship of Nûr al-Dîn who finally chased him out of Dimâshq.

The situation of the Bûrids was not easy. Invested with their power by the Caliph, they defended an advance position on the road to Fâtîmid Egypt, while the replenishment of their grain supplies was dependent on two regions, the Hawrân and the Bîjkâ, which were threatened by the Latin kingdom of Jerusalem. It was necessary at certain times to negotiate with the Franks, while at the same time they had to account for this conduct to Baghâdâd.

A new threat hung over Dimâshq from the beginning of 524/1130, that of the Zangîds, who at that time became masters of Halâb. In order to cope with them, the Bûrids on more than one occasion obtained the help of the Franks, but as the latter threat the Zangîds attacked Dimâshq in 543/1146, new agreements with them became no longer possible. The city was obliged to seek other alliances in order to safeguard its recently re-established economy.

Before Tughtakin succeeded in restoring order, Dimâshq had known three centuries of anarchy. Delivered up to the arbitrary power of ephemeral governors and their agents, the population lived under a reign of terror and misery. Hence the quest for security which haunted them determined the lay-out of its streets. They had to live among people whom they knew and who knew each other and be near to those who lived a similar kind of life. It was from this starting-point that they were able to make a new beginning in their corporate life.

The plan of the city, which had changed very little since Roman times, from the beginning of the 4th/5th century on became broken up into numerous water-tight compartments. Each district (bâra) barricaded itself behind its walls and gates and was obliged to form itself into a miniature city provided with all the essential urban constituents such as a mosque, baths, water supply (âdiî), public bakery, and little market (sawayka) with its cook-shop keepers; each had its own chief (shaykh) and group of militia (ahâddh [q.v.]).

This breaking up of the ancient town was accompanied by a complete segregation since each community had its own sector of the city, the Muslims in the west near the citadel and the Great Mosque, the Christians in the north-east and the Jews in the south-east. The whole appearance of the city changed, houses no longer opening directly on to the streets. From this time on, there sprang up along the ancient roads of the city streets (darb) each of which served as the main thoroughfare of its own district and was closed at both ends by heavy gates. It branched out into little lanes (jâzîh) and blind alleys.

Nevertheless there still existed in the city some elements of the old town. Thus, for instance, the fortified outer walls which protected the town, the Great Mosque of the Umayyads, its religious and political centre which were threatened by the Latin kingdom of Jerusalem, became masters of Halâb. In order to cope with them, the Franks as well.

When tranquillity returned under Tughtakin, new districts were built, al-'Ujayba to the north, Shâhâr to the south, and Kusir al-Hâdâdî to the south-west. At the gates of the city, Tanneries produced raw
materials for the leather workers, two paper-mills functioned from the beginning of the 9th century, and many water-mills ground various fatty substances.

Of the period preceding the Būrids, the only monument which still exists is the cupola of the Treasure-house (Bayt al-Mal) built in the Great Mosque in 616/1218 by a governor of the Caliph al-Mahdī.

During the reign of DuŠāk, the city's oldest hospital was built to the west of the Great Mosque, and there also in 491/1098 the first madrasa, the Ṣādiriyu, was constructed for the Ḥanafis.

The first ḥānakāb of Dimashk, the Tawṣūsyya, once contained the tombs of Dušāk and his mother, Șafwat al-Mulk, but the last traces of it disappeared in 1398. Intellectual activity and Sunnī propaganda developed in the city under the Būrids. The Shafiʿīs had their first madrasa, the Amlīyya, by 514/1120, whereas the first Ḥanbalī one, the Sharaflīyya, was not built until 536/1142. On the eve of Nur al-Dīn's capture of Dimashk seven madrasas were to be found there but was still none for the madhhab of the Imām Mālik.

Dimashk under Nur al-Dīn.—A new era began for the city with the arrival of Nur al-Dīn in 549/1154. In establishing his residence at Dimashk, this prince, already master of Ḥalāb, set a seal on the unity of Syria from the foothills of Cilicia to the mountains of Ǧallīlī. For the first time since the Umayyads, Dimashk was to become once again the capital of a vast Muslim state, unified and independent. Nur al-Dīn's politics impressed his character on the city which assumed the rôle of rampart of Muslim orthodoxy as opposed to the Fāṭimid heretics and the infidel Franks. A rerudescence of fanaticism showed itself at this time; its one and only aim was the triumph of Sunni Islam and all efforts were concentrated on the diṭḥād [g.v.]. Great centre of the Sunnis, its fame was heightened by a large number of new religious buildings, mosques and madrasas. Dimashk retrieved at this time both its military importance and its religious prestige.

Works of military defence were carefully planned and carried out. The surrounding city walls were strengthened, and new towers built, of which one can still be seen to the west of Bāb al-Saghlī. Some gates such as Bāb Șārqi and Bāb al-Dājjabiyya were merely reinforced, others provided with barbican gates such as Bāb Sharkī and Bāb al-Dajbiyya were provided with barbicans (Bāb al-Saghlī and Bāb al-Salām). A sector of the north part of the city wall was carried forward as far as the right bank of the Ǧarādī, and a new gate, Bāb al-Faraj, was opened to the east of the citadel, while Bāb Kaysān to the south was blocked up.

Nur al-Dīn carried out works at the citadel itself, strengthening Bāb al-Hadīl and building a large mosque. Finally, in keeping with the military life of the city, two great plots of ground were reserved for the training of cavalry and for parades, the Maydān al-Aḥqāf to the west of the city and the Maydān al-Ǧahṣa to the south.

Religious and intellectual life was very highly developed. The two families playing leading rôles, the Shafiʿīs Banū ʿAṣākir and the Ḥanbalīs Banū Ḥudāma who came originally from the now district of al-Ṣalāḥiyya, outside the walls on the slopes of the Kāṣyūn, in 556/1161. Places of prayer multiplied; Nur al-Dīn himself had a certain number of mosques restored or constructed. An especially energetic effort was made to spread Sunnī doctrine and traditions and Nur al-Dīn founded the first school for the teaching of traditions, the Dār al-Ḥadīl.

There remain only ruins of this little madrasa whose first teacher was the Shafiʿī historian, Ibn ʿAṣākir. Other new madrasas were built, for the most part Shafiʿī or Ḥanafī. It was at this time that the first Mālikī madrasa, al-Ṣalāḥiyya, was begun, to be finished by Șalāh al-Dīn. It was to the initiative of Nur al-Dīn that we owe the construction of the great madrasa, al-ʿĀdīliyya, now the home of the Arab Academy. Begun about 567/1171, it was only finished in 619/1222.

Another new institution owed to Nur al-Dīn was the Dār al-Ṣadīq, which later on became the Dār al-Saʿāda. A high court of justice occupied the building to the south of the citadel; there, in the interests of equity, the prince grouped representatives of the four madhhab around the Shafiʿīs hadī ʾl-kudūdī.

New forms showing an ʿIrāqī influence appeared in Damascus architecture, notably the dome with honeycomb construction outside, to be found on the funerary madrasa of Nur al-Dīn which was built in 567/1171, and in the cupola over the entrance to the Mārisīdīn whose portal is ornamented with stalactites. This hospital, one of the most important monuments in the history of Muslim architecture, was founded by Nur al-Dīn to serve also as a school of medicine. An accurate inventory of the 12th century monuments of Dimashk is to be found in the topographical introduction drawn up by Ibn ʿAṣākir for his Taʾrīḥ madinat Dimashk. By the end of Nur al-Dīn's reign the number of places of worship had risen to 242 intra muros and 178 extra muros.

The Ayyūbīd period.—In 569/1174 on the death of Nur al-Dīn his son, al-ʾMālik al-Ṣalāḥ Ismāʿīl, whose atabeg was the Amir Shams al-Dawla Ibn al-Mukaddam, inherited his father's throne. In Dimashk, where a powerful pro-Ayyūbīd party had been in existence since the time when Ayyūb, father of Șalāḥ al-Dīn [g.v.], had been governor, plots were hatched among the amirs. The young prince was taken to Ḥalāb while Ibn al-Mukaddam remained master of the city. To ensure its stability, the amir negotiated a truce with the Franks, an agreement which upset one section of public opinion. The agents of Șalāḥ al-Dīn presented him as the champion of Islam and the population of Dimashk to their side. The former Kūrīdish vassal of Nur al-Dīn took over the waging of the Holy War and entered Dimashk in 571/1176. During the years which followed fighting hardly ever ceased; it was the time of the Third Crusade and the Muslims were dominated by a desire to throw the Franks back to the sea. At last, in 583/1187, the victory of Ǧaṭṭīn [g.v.] allowed Islam to return to Jerusalem. Some months after having made peace with the crusaders, Șalāḥ al-Dīn, founder of the Ayyūbīd dynasty [g.v.], died on 27 Ṣafar 589/4 March 1193 at Dimashk. Buried first at the citadel, his body was to receive its final sepulture in the al-ʿAẓīziyya madrasa to the north of the Great Mosque. After the sovereign's death fierce fighting broke out between his two sons and his brother, al-ʾAdīl [g.v.], who in 582/1186 had received Dimashk in fief from his father, tried to retain his property, but in 592/1196 he was chased out by his uncle, al-ʾĀdīl, who recognized the suzerainty of his nephew, al-ʾAẓīz, successor of Șalāḥ al-Dīn in Cairo. Al-ʾAẓīz died three years later and after lengthy disputes, al-ʾĀdīl was recognized as head of the Ayyūbīd family in 597/1200. Under the rule of this spiritual heir of Șalāḥ al-Dīn there began a period of good organization and political
relaxation. Cairo from that time on became the capital of the empire but Dimashk remained an important political, military and economic centre.

Al-‘Adl died near Dimashk in 615/1218 and was buried in the al-‘Adiliyya madrasa. Al-Malik al-Mu’azzam ʿIsā, who had been his father’s lieutenant in Syria since 597/1200, and who had received the province in fief in 604/1207, endeavoured to remain independent in Dimashk, but the twists and turns of political life brought him at the beginning of 623/1226 to mention in the ḥadda the Khārizm-shāh, disputed the succession and thus became nominal suzerain of the city. When al-Mu’azzam ʿIsā died in 624/1227 his son, al-Malik al-Nāṣir Zāwad, succeeded him under the tutelage of his atabeg, ʿIrāz al-Dīn Aybak. Very soon afterwards, the Amir al-Ḥaṣrāf arrived from Diyar Ḍuar, eliminated his nephew, Ẓāwad, and installed himself in Dimashk in 625/1228.

On the death of al-Kamil, who had succeeded al-ʿAdl in Cairo in 635/1236, there had begun a period of decline. Fratricidal disputes started again. In order to hold on to Dimashk, al-Malik al-Salih ʿIsaʿī allied himself with the Franks against his nephew, al-Ṣalih Ayyūb, master of Egypt. With the help of the Khārizm-shāh, Ayyūb was victorious over him in 643/1245 and once again Dimashk came under the authority of Cairo. Ayyūb died in 646/1248, his son, Turanshāh, disappeared presumably assassinated a few months later, and in 648/1250, the prince of Ḥalab, al-Malik al-Nāṣir Dawūd, succeeded him under the command of the Amir al-Ẓāfīn Ayyūb, seized Dimashk of which he was the last Ayyūbīd ruler. The Mongol threat was, indeed, now becoming more imminent; Baghdād fell in 656/1258 and less than two years later the Syrian capital was taken in its turn.

The arrival of Nūr al-Dīn had undoubtedly brought about a renaissance in Dimashk, but the circumstances of the reign of Ẓāfīn al-Dīn had put a stop to the evolution of the city. Progress began again under the Ayyūbīds when Dimashk became the seat of a princely court. The growth in population and new resources which such a promotion implied had repercussions on its economic life, all the more appreciable since the citadel was burnt down and dismantled by the Mongols, two of these 7th/13th century towers still remain almost intact.

The general prosperity allowed the Ayyūbīds to practise an exceptionally generous patronage of writers and scholars. Dimashk at this time was not only a great centre of Muslim cultural life but also an important stronghold. The Sunni politics of the dynasty showed themselves in the encouragement of the Islamic faith and of orthodoxy. Civil architecture flourished at this time also. Princes and princesses, high dignitaries and senior officers rivalled each other in making religious foundations and Dimashk was soon to become the city of madrasas; the number of these—twenty are mentioned by Ibn Dūbār in 1164–70—was to quadruple in a single century. (On the Ayyūbīd madrasas, see Hefzbed in Aris Islāmiska, x-xii, 1-71.) From then on, the madrasa with its lecture-rooms and its lodgings for masters and students, began, like the mosques, to be combined more and more often with the tomb of its founder (see, for example, the al-ʿAdiliyya and the al-Mu’azzamyya). Linked with the funerary madrasa, there appeared also at this time the turba of a type peculiar to Dimashk. The mausoleum consisted of a square chamber whose walls were decorated with painted stucco, above which four semi-circular niches and four flat niches symmetrically placed formed an octagonal zone surmounted by a drum composed of sixteen niches of equal size upon which rested a sixteen-sided cupola. This was the typical way of erecting a cupola over a square building. The first example whose date we know is the mausoleum of Zayn al-Dīn, built in 567/1172. Among the monuments of this kind which can still be seen to-day are the following of the 6th/12th century: the Turbat al-Ḥaḍrī, the al-Nāṣimiyya madrasa, the al-ʿAzīziyya madrasa and the al-Mu’azzamyya. Linked with the funerary madrasa, there appeared also at this time the turba of a type peculiar to Dimashk. The mausoleum consisted of a square chamber whose walls...
of Egypt's troops. The Christians of the city suffered reprisals for their attitude with regard to the Mongols, and the Church of St. Mary was destroyed at this time. From then on Cairo, where since 656/1258 the shadow Caliphate had been maintained, supplanted Dimashq which became a political dependency of Egypt.

It was still to be the most important city of the Syrian province, the mamlika or nizâbât of Dimashq. (For its administrative organization, see Gaudrefoy-Demombynes, La Syrie à l'époque des Mamelouks, Paris 1923, 135-201). The first great Mamlûk sultan, Malik al-Malik al-Manṣûr Baybars b. Kalâwûn, who had revolted against the Sultan. Master of Syria, torn apart by the rivalries of the amirs, fell as far as Dimashq and it was in his camp near the Rubâba on the Euphrates. Ladjûn, now freed, was imprisoned, and proclaimed himself sultan. The possibility of rivalry between the governor of Dimashq and the Sultan was diminished by the presence of the governor of the citadel. There were, in fact, two governors, the nādir or the person of Tankiz, a governor of true quality who resided to the south of the citadel at the Dâib. The succession of Barkuk in 734/1338 brought a new line of Circassian Sultans to power who are also called Burdûj.

Although warned of the progress of Tîmûr, Barkûk did not have time to reinforce the defences of his territory for he died in 801/1399. In Dimashq, Sayf al-Dîn Ta'âbir who had governed the city since 792/1389, revolted against Farâdî the new Sultan, and marched on Egypt. He was defeated in his turn but in Shâbâb 792/July-August 1390 we find him once again governor of Dimashq.

From 791/1389 Dimashq fell for some weeks into the power of Yîlbûgha al-Nâşirî, a governor of Halab who had revolted against the Sultan. Master of Syria, he penetrated the walls of Dimashq, overthrew an army sent by Barkûk and made his way towards Egypt. He was defeated in his turn but in Shâbâb 792/July-August 1390 we find him once again governor of Dimashq.
of fires which caused serious damage. The Great Mosque itself was not spared nor the Dār al-Saʿāda. In 805/1401, Tīmūr left Dimashk, taking with him to Samarkand what remained of qualified artisans and workmen. This mass deportation was one of the greatest catastrophes in the history of the town. After the Mongols' departure, the Amīr Taghrībrīdī al-Zāhīrī became the governor of a devastated city, despoiled and depopulated. The exhausted country had to face a thousand difficulties. Two long reigns gave Dimashk the opportunity of rising from its ruins: that of Sultan Bārbāry (827/1422-38) and, more importantly, that of Kāhīb b. Shabīb whose tenure lasted from 872/1274 until 904/1295 brought a long period of tranquillity. Moreover between 16 Shābān 871 and 10 Ramāḍān 882/883 November and 16 December 1472 this Sultan paid a visit to Dimashk where the post of governor was held by the Amīr Kiqīmās, whose capacity remains legendary. The civil strife had swallowed up large sums of money and the amirs did not hesitate about increasing the number of taxes and charges. The Sultans themselves would often use violent means of procuring a sum of money with which the taxes could not provide them, nor did they scruple about reducing their governors to destitution by confiscating their fortunes. Under the last Mamlük corruption even won over the kādīs who, in return for a reward, were willing to justify certain measures against the law. After Kāhīb b. Shabīb, there began once again a régime of violence and extortions which ended only with the reign of Kānsūh al-Ghawrī (905-22/1500-16). This last Mamlük Sultan had to defend himself against the Ottomans who had invaded Syria. He died in battle in Ramāḍān 922/mid-October 1516, and the troops of Selīm I made their entry into Dimashk.

Paradoxically enough, a large number of buildings were constructed in the city during this tragic period. The Mamlikūs, who lived uncertain of what the next day would bring, tried at least to secure themselves a sepulchre, so that mausoleums and funerary mosques multiplied although they built few madrasas.

There were no innovations in the art of this period, for any lack of precedent frightened these parvenus. At the beginning of Mamlik times they built according to the model of al-Zāhīrīlsī, now the National Library, where Baybars's tomb is situated, was originally the house of al-Aqţī, where Ayyūb, father of Šalāh al-Dīn, had lived, and the modifications made in 676/1277 were limited to the addition of a cupola and an alveoled shafts, loaded with balconies and corbelling whose silhouettes were to change the whole skyline of the city. The first example was the mausoleum of the Dāmīnī Hīshāmī, built in 830/1427. Polychromatic façades grew in popularity and even inlays were added. The al-Sabīniyya mosque, finished in 868/ 1464, and the funerary madrasa of Sīhay called the Dāmīnī al-Kharrātīn, built in the very early years of the 9th/16th century, are two striking examples of the decadence of architecture under the last Mamlikūs.

It is interesting to notice that most of these Mamlikū monuments were built extra muros. There was no longer room within the city walls and the city "burst out" because, paradoxically, "there was an immense development of economic activity during this sad period". "All the trades whose development down the course of the centuries had been assisted by the presence of a princely court, had now to satisfy the demand for comfort and the ostentatious tastes" of military upstarts who thought only of getting what enjoyment they could out of life and of impressing the popular imagination with their display. Dimashk, while remaining the great market for the grain of the Hawrān, became also a great industrial town, specializing in luxury articles and army equipment. This activity was reflected by a new extension of the sāks which was accompanied by "a sharp differentiation between the various trading areas according to their type of customer". A new district, Thābit al-βal`a, developed to the north-west of the town below the citadel. In the 8th/14th century came aced, whose open space remained the centre of military life, groups of craftsmen installed themselves whose clients were essentially the army and who left the shops inside the city walls to other groups of artisans. Wholesale trade in fruit and vegetables also went outside the town; a new Dār al-Bītīlh was set up at al-Ukayba where the amirs and the members of their ġūnd lived.

Towards the middle of the 9th/15th century there appeared the first symptoms of an economic crisis. The state, whose coffers were empty, lived on its wits, but commerce still remained active as is demonstrated by the accounts of such travellers as Ludovico de Varthema (Itinerario, vi-vii) who visited Dimashk in 907/1502. The city profited from the very strong trading activity between western Europe and the Muslim East, but the hostility of the people of Dimashk and that of its governors prevented European merchants from founding any lasting establishments likely to acquire importance. Merchants arrived bringing a above all cloth from Flanders, stocked themselves up with silk brocades, inlaid copper-work and enamelled glassware, and then departed. The effects of the discovery of the Cape of Good Hope did not immediately make themselves felt; it was excessive taxation rather which was beginning to slow down trade on the eve of the coming of the Ottomans.

The Ottoman Period (922-1246/1516-1831). — On 25 Rādjab 922/24 August 1516 the Ottoman troops, thanks to their well-trained infantry and the superior firing power of their artillery, put the Mamlikū cavalry to flight at Mardj Dābīk near Halab. This victory gave the conquest of Syria all the more swift since the majority of the ad-dib`s rallied to the Ottoman cause. There was practically no resistance at Dimashk where the Mamlikū garrison retreated and the Sultan made his entrance into the town on 1 Ramāḍān 922/28 September 1516. The Mamlik detachments protecting Egypt were beaten three months later near Ghazzā. The commander of the Syrian contingents,
Djanbird al-Ghazall, joined forces with Sellm and was allowed to return to the post of governor of Dimashk to which he had been nominated by Sulayman, the last Mamluk Sultan. The arrival of the Ottomans seemed no more to the Damascene population than a local incident and not as a remarkable event which was to open a new era. To them it was merely a change of masters; the Mamlūks of Cairo were succeeded by another group of privileged foreigners, the Janissaries who had come from Turkey. Fairly quickly, however, there was a reaction on the part of the amirs and Djanbird surrounded himself with all the anti-Ottoman elements. On the death of Sellm I in 927/1521 the governor of Dimashk refused to recognize the authority of Sulaymān, proclaimed himself independent and seized the citadel. The rebel quickly became master of Tripoli, Hims and Ḥamā, and marched against Ḥalab which he besieged without success, then returning to Dimashk. Sulaymān sent troops which crossed Syria and in battle at Kāburn, to the north of Dimashk, on 17 Safar 927/27 January 1521, the rebellious governor was killed. The violence and pillaging of the Turkish soldiery then sowed panic in Dimashk and its surroundings. A third of the city was destroyed by the Janissaries.

Under the rule of Sulaymān, the political régime changed and the administration showed some signs of organization. In 932/1525-6 the Ottomans made their first survey of the lands, populations, and revenues of Dimashk (see DAFR 1 KHĀKANI and B. Lewis, The Ottoman Archives as a source for the history of the Arab lands, in JRAS, 1951, 153-4, where the registers for Dimashk are listed). Dimashk was no more than a modest ṣaḥālik in the immense empire over which the shadow of the Ottoman Sultanate extended. Most certainly the city no longer had the outstanding position in the game of political intrigue which it had enjoyed in the century of the Circassians. Pashas, accompanied by a Ḥanafī ḥādi and a director of finance but with no authority over the garrison, succeeded each other at a headlong rate; between 923/1517 and 1103/1679 Dimashk was to have 133 governors. A list of them and an account of these years is to be found in H. Laoust, Les gouverneurs de Damas sous les Mamelouks et les premiers Ottomans, Damascus 1952.

Early in the 12th century the 17th century there was a change of feeling in the empire; the Sultans lost their authority and remained in the Seraglio, and the Ottoman frontiers receded, but they still remained wide enough to shelter Dimashk from internal troubles at that time. The offices of State were farmed out during this period; the holders and especially the governors, wanting to recover the cost of their position as quickly as possible, put pressure on the people; corruption became the rule and lack of discipline habitual. Nevertheless Dimashk was not without a certain prosperity thanks to the two factors of trade and the pilgrimage to Mecca.

As early as 942/1535, France concluded with the Porte a Treaty of Capitulations which opened Turkish ports to its traders and enabled them to do business throughout the eastern Mediterranean. European merchants, three-fifths of whom at the end of the 18th century were French, imported manufactured goods and exported raw materials and spices. Despite the very high custom duties, the bad behaviour of officials and even, to some extent, the insecurity, external trade remained very lucrative and political events never succeeded in stopping the broad movements of commerce. At Dimashk, as in other parts of Syria, the native Christians served as intermediaries between the Europeans and both the Turkish administration and the population which spoke an Arabic that in the course of four centuries had taken in many Turkish loan-words. The intensity of the commercial traffic justified the construction of numerous ḥāms which served as hotels, as well as exchanges and warehouses, for the foreign traders. In the oldest ḥāms, such as the Khan al-Hārīrī, built in 927/1525 by Darwīsh Pasha and still in existence to-day, we find the usual Syrian arrangements: a courtyard, generally square, surrounded by an arcade gallery on to which open the shops and stables, while the floor above is reserved for lodgings. Certainly the Venetian fundus which came into being in Damascus after 1535 would have had the same arrangements. Early in the 19th century this plan was modified; the central space became smaller and was covered with cupolas, the merchandise thus being protected in bad weather. This was a new type of building and specifically Damascene. Still to be seen to-day is the Khan Sulaymān Pasha, built in 1144/1732, whose central court is covered by two great cupolas, and most important of all, the Khan As'Sad Pasha, constructed in 1165/1752, which is still alive and active. This masterpiece of architecture is a vast whole, square in plan, covered by eight small cupolas dominated by a larger one in the middle which is supported by four marble columns.

Trade with Europe was carried on via the ports of the ultrasound of Dimashk, the most important of which was Ṣaydā.

The Ottoman Sultan, having become protector of the Holy Cities, showed a special interest in the pilgrimage to Mecca. This became one of Dimashk's main sources of income. Being the last stop of the darb al-hadīji, it was a good place to meet the pilgrims coming down from the Holy Cities, showed a special interest in the pilgrimage to Mecca. This became one of Dimashk's main sources of income. Being the last stop of the darb al-hadīji in settled country, the city was the annual meeting-place of tens of thousands of pilgrims from the north of the empire. This periodical influx brought about intense commercial activity. The pilgrims seized the opportunity of their stay in order to prepare for crossing the desert. They saw to acquiring mounts, storehouses and bought provisions to last three months. At the given moment, the Pasha of Dimashk, who bore the coveted title of amīr al-hadīji, took the head of the official caravan accompanying the maqamat and made his way to the Holy Cities under the protection of the army. On the way back, Dimashk was the first important urban centre and the pilgrims sold there what they had bought in Arabia, whether coffee or black slaves from Africa.

Once past the Bāb Allāh which marked the extreme southern limits of the town, the caravans passed for three kilometres through the district of the Maydān, where cereal warehouses and Mamlūk mausoleums alternated without a break between them. This traffic to the south helped to develop a new district near the ramparts outside Bāb Djabāya; later, in the 19th century, with the passing of the caravans. These found equipment and supplies in the ṣābs where, side by side with the saddlers and blacksmiths, the curio dealers installed themselves as well. This district owed its name of al-Sināniyya to the large mosque which the Grand Vizier, Sinān Pasha, built in 994/1586 and 999/1591; its minaret covered with green glazed tiles could be seen from a very long way off. Some years earlier, in 981/1574, the governor, Darwīsh
Pasha, had had a large mosque, whose remarkable faience tiles are worth admiring, built in the north of this quarter. This mode of decoration arrived with the Ottomans when the art of Constantinople was suddenly implanted in Dimashk. A new architectural type also appeared in the urban landscape, that of the Turkish mosque, schematically made up of a square hall crowned by a hemispherical cupola on pendentives, with a covered portico in front and one or more minarets with circular shafts crowned by candle-snuffer tops at the corners. The first example of this type in Dimashk was the large mosque built on the site of the Kāsra al-'Abbās and Sulaymānīyya of Kānīn, in 962/1555 according to the plans of the architect, Sinān. This mosque, indeed, formed part of a great ensemble which is still called to-day the Takkīyya Sulaymānīyya. The covered portico of the hall of prayer opens from the walls, over a vast court-yard; on the east and west side there are rows of cells with a columned portico in front of them; on the north stands a group of buildings which used to shelter the scholars. This sanctuary, which since 1957 has housed the collections of the Army Museum, Active centres of religious life were to spring up both around the 'Umariyya Madrasa at al-Ṣālihibiya, and around the mausoleum of Muhīy al-Dīn 'Abū al-Fath Muhammad ibn 'Isā ibn 'Amri, where in 950/1552 the Sultan Sulayman had built an imārāt constructed to make free distributions of food to the poor visiting the tomb of the illustrious šāfi, or again at the Takkīyya Maṭliwīyya built in 993/1585 for the Dancing Dervishes to the west of the mosque of Tankiz. The fact that all these great religious monuments of the Ottoman period were built extra muros shows that the Great Mosque of the Umayyads was no longer a unique centre of assembly for the Muslim community and definitely confirms the spread of the city beyond the old town.

With the progress of artillery the ancient fortifications of Dimashk became outdated, but on the other hand the peace which reigned over the empire diminished the value of the surrounding walls which at this time began to be invaded by dwelling-houses, while the moats which had become a general night-soil dump were filled with refuse. Within the ramparts the streets were paved, cleaned and lit at the expense of those living along them. At the last Mamluks. The picture of this population showed itself in the construction of public fountains (sabil), the madrasas and zāwiyas, in contrast, were deserted by many in favour of the coffee-houses which multiplied and added to the number of meeting-places for the people. The only monument worth notice intra muros apart from the khān is the palace which the governor As-Sā'id Pasha al-'Azm had built to the south-east of the Great Mosque in 1162/1749. The whole body of buildings is a great ensemble which is still called to-day the Tankiziyā. This, which was erected outside the walls to the west of the mosque of the Mamluks, was transformed into a military headquarters which only ceased to exist in 1917, while in this same sector of the city the best patronized shops were grouped together in the Sūk al-Baladīyya and MADjLis) and proposed an independent and centralized government. Europe, and above all Palmerston, was opposed to the ambitions of Muhammad 'Ali; they profited therefore by the discontent provoked by the introduction of conscription to rouse the population against Ibrahim Pasha who was forced to evacuate Dimashk. His attempt at reform was not followed up and the Damascenes fell back under Ottoman domination. A violent outburst of fanaticism was to break the apparent calm of life there. Bloodthirsty quarrels having arisen between the Druzes and the Maronites of the south of Lebanon, public opinion was stirred on the religious side, Ibrahim Pasha founded a college for the Dancing Dervishes serious measures, in the course of which the Amir 'Abd al-Kādīr, exiled from Algeria, was able by his intervention to save some hundreds of human lives. This explosion was severely punished by the Sultan and, at the end of August 1860, provoked the landing of troops sent by Napoleon III.

From the beginning of this period European influence made itself felt in the cultural and economic spheres. Foreign schools of various religious denominations were able to develop, thanks to subventions from their governments. The Lazarist Fathers had had a very active college since 1775, and a Protestant Mission had been functioning since 1853. New establishments were opened after 1860 such as the British Syrian Mission and the College of Jesuits (1872). Education of girls was carried on by the Sisters of Charity. Midhat Pasha made an attempt at reform by proposing an independent and centralized government. LIST OF MONUMENTS SHOWN ON THE PLAN OF DIMASHK

1. Roman arch
2. Agora
3. Castrum
4. Chapel of Ananias
5. Citadel
6. Bab al-Baqid
7. Bab al-Dajjalya
8. Bab Djiyraun
9. Bab Djinn
10. Bab al-Farâdis
11. Bab al-Faradji
12. Bab Kaysan
13. Bab al-Saggir
14. Bab al-Salam
15. Bab SHarâ
16. Bab Tümâ
17. Dâr al-Bittâgh
18. Dâr al-Hâdîth of Nûr al-Din
19. Dâr al-Khayy
20. Djami' Darwishiyya
21. Djami' Highâm
22. Djami' Sibâ'iyya
23. Djami' Sinâniyya
24. Djami' of Tankiz
25. Djami' of Yibughâ
26. Church of St. Mary
27. Great Umayyad mosque
28. 'Imârât of Sellim
29. al-Khadrâ'
30. Khan As'ad Pasha
31. Khan al-Hasir
32. Khan Sulaumân Pasha
33. Khânakâh al-Ţawûsiyya
34. Kaşr al-Âzim
35. Kaşr al-Âlibâk
36. Kaşr al-Hadîdâjî
37. Madrasa al-Âlibiyya
38. Madrasa al-Âmidâniyya
39. Mâdrasa al-Âzizîyya
40. Madrasa al-Kaâdîyya
41. Madrasa al-Nâmiyya
42. Madrasa al-Sâbûniyya
43. Madrasa al-Sâdirîyya

Damascus, was not to appear until 1897. Little by little, however, the Syrian capital was to become one of the centres of Arab nationalism. As in the other towns of Syria, secret revolutionary cells showed themselves very active in the last quarter of the 19th century and periodically exhorted the population to rebel. It was even said that Midhat Pasha, author of the liberal constitution of 1876, protected the movement after he had become governor of Dimashq in 1878. The great reformer had a population of about 150,000 to administer and control. From the very beginning, he showed himself very active in matters concerned with public hygiene and improvement of the traffic system, which since carriages had come on the scene had grown very inadequate in the old town. The governor replaced a number of alleyways in the suks with broader streets. The old town began to empty; there were no longer any houses where European consuls, missionaries, merchants and so on, settled themselves, while the new part of the city was put up at this time on vacant lots to become the kernel of the present-day university. The Christian quarter of Bāb Tūma saw the rise of fine houses where European consuls, missionaries, merchants and so on, settled themselves, while the old town became easier and to the two outer world became easier and to the two

The narrow gauge Hidiaz railway was in-

pilgrimage easier. From this time on, the Sultan was to be on friendly terms with Kaiser Wilhelm II, who had hoped to win the people of Dimashq over to the Turkish cause but was soon forced to give up this idea. It was in Dimashq, in the circle of the family al-Bakrī, that the Amir Faysāl, son of Husayn, the Sharif of Mecca, was won over to the idea of Arab revolt in April 1915; he met with members of the secret societies al-Fatād and al-‘Aḥd, at that time. At the end of May, Faysāl returned from Constanti-
aple and shared in the elaboration of a plan of action against the Turks with the co-operation of the British. They arrived ultimately at the famous “Protocol of Damascus” asking Britain to recognize Arab independence and the abolition of capitulations. In January 1916, Faysāl was in Damascus again and was still there on 6 May when Dji- 
mal Pasha had twenty-one partisans of the Arab cause hanged. This event, the “Day of the Martyrs”, is still commemorated every year. On 10 June, the revolt broke out in the Hījāţ, where the Sharif Husayn proclaimed himself “King of the Arabs”. It was not until 30 September 1917 that Turkish troops evacuated Dimashq. On 1 October Allied forces, including units of the Amīr Faysāl, entered the city. In May 1919 elections took place to appoint a National Syrian Congress and in June this congress decided to reject the conclusions at which the Peace Conference of Paris had arrived concerning the mandates. On 10 December a National Syrian government in Dimashq was formed. On 7 April 1920 the National Congress proclaimed Syria independent and elected Faysāl as king. The Treaty of San-Rremo in April 1920 gave the mandate over Syria to put the agreement which had been con-

The Contemporary Period.—The period of the mandate was marked by expressions of hostility to the mandatory power, which sometimes took the form of strikes, sometimes of more violent outbreaks.

The most serious revolt which broke out in 1925 in the Diābal Durūz, under the leadership of the

spirit of liberalism which had led Kurd ʿAli to bring to the city his review, al-Muškabas, which he had founded in Cairo three years earlier as a daily paper, was deceptive. After 1900 the Ottoman authorities banned it and the only resource for the Arab nationalists was to band themselves together again in secret societies.

The declaration of war in 1914 was to have grave consequences for Dimashq. At the end of that year, Dji- 
mal Pasha was appointed Governor-General of Syria, Lebanon and Palestine, and Commander-in-Chief of the 4th Ottoman army with head-

quarters in Dimashq. This town rapidly became the great General Headquarters of the combined German and Turkish forces and their operational base against the Syrian rebels. Dji- 
mal Pasha soon showed himself a mediocre general but a very energetic administrator. He had hoped to win the people of Dimashq over to the Turkish cause but was soon forced to give up this idea. It was in Dimashq, in the circle of the family al-Bakrī, that the Amir Faysāl, son of Husayn, the Sharif of Mecca, was won over to the idea of Arab revolt in April 1915; he met with members of the secret societies al-Fatād and al-ʿAḥd, at that time. At the end of May, Faysāl returned from Constantinople and shared in the elaboration of a plan of action against the Turks with the co-operation of the British. They arrived ultimately at the famous “Protocol of Damascus” asking Britain to recognize Arab independence and the abolition of capitulations. In January 1916, Faysāl was in Damascus again and was still there on 6 May when Djemal Pasha had twenty-one partisans of the Arab cause hanged. This event, the “Day of the Martyrs”, is still commemorated every year. On 10 June, the revolt broke out in the Hijāţ, where the Sharif Husayn proclaimed himself “King of the Arabs”. It was not until 30 September 1917 that Turkish troops evacuated Dimashq. On 1 October Allied forces, including units of the Amir Faysāl, entered the city. In May 1919 elections took place to appoint a National Syrian Congress and in June this congress decided to reject the conclusions at which the Peace Conference of Paris had arrived concerning the mandates. On 10 December a National Syrian government in Dimashq was formed. On 7 April 1920 the National Congress proclaimed Syria independent and elected Faysāl as king. The Treaty of San-Remo in April 1920 gave the mandate over Syria to put the agreement which had been concluded into force. On 24 July fighting broke out at Maysalūn and on 25 July the French entered Dimashq. King Faysāl was forced to leave the country and power passed into the hands of the High Commissioner. The mandate had begun.

The Contemporary Period.—The period of the mandate was marked by expressions of hostility to the mandatory power, which sometimes took the form of strikes, sometimes of more violent outbreaks.

The most serious revolt which broke out in 1925 in the Diābal Durūz, under the leadership of the

Encyclopaedia of Islam, II
Amir Sultan al-Atrash, succeeded in taking Dimashk. At the end of August the rebels, newly arrived in the suburbs of the city, were repulsed. The population did not openly support them until they came back a second time, when on 15 October 1925 serious rioting occurred in the city which caused General Sarrail to bomb it on 18 October. In April 1926 a new bombardment put an end to a rising in the Ghita and the city, but tranquillity was not restored until the following autumn.

From 1926 onwards the town began to develop in towns, the word very quickly. Undeveloped quarters between al-Saljiyya and the old city were rapidly built up and from then on, the suburbs of al-Djir, al-‘Arrau and al-Shuhada\'\' provided homes for a growing number of Europeans and Syrians without any segregation of ethnic groups. The Christians of Bab Tuma left the city walls in greater and greater numbers to set up the new district of Kasra\'. To avoid chaotic development, the French town-planner, Danger, in 1929 created a harmonious and balanced plan for the future town, and its working out was put into the hands of the architect, Michel Écochard, in collaboration with the Syrian services. New roads, often tree-lined, were made and the ancient Nayarab became the residential quarter of Abu Rumm\'a which continued to extend towards the west. New suburbs were developed to the north of the old city between the Boulevard de Baghdad and the Dieal Kaysyûn, and to the north-east towards the road to Halab. In view of the growth of the population and in the interests of public health the drinking water was brought from the beginning of 1932 by special pipelines from the powerful spring of ‘Ayn Filja in the valley of the Barada.

Dimashk suffered very much less in the Second World War than in the first. In June 1941 British and Free French troops entered Syria. On 16 September 1941 General Catroux proclaimed its independence, but there was no constitutional life in Dimashk until August 1943. It was then that Shukri al-Kuwaiti became President of the Republic. On 12 April 1945 the admission of Syria to the United Nations Organization put an end to that mandate, but a new tension was to be felt in Franco-Syrian relations. They reached a culminating point on 29 May 1945, when the town was bombarded by the French army. The British intervened in force to restore order and some months later foreign troops finally evacuated Syria.

From 1949 until 1954 Dimashk was shaken by a series of military coups d'etat. In 1955 Mr. Shukri al-Kuwaitti became President of the Republic again and from 1956 on discussions were broached with a view to a Syro-Egyptian union. On the proclamation of the United Arab Republic in 1958 Dimashk became the capital of the northern region; but after the coup d'etat of the 28th September 1961 it again became the capital of the Syrian Arab Republic.

Ruled by a municipal council, the city in 1955 had a population of 408,800 of whom 90% were Sunni Arabs. Important groups of Kurds, Druzes and peasants of the Ghuta. These not only find many foreign products in its saks but also goods specially manufactured to fit the needs of the country-dweller. There exists also a class of artisans which specializes in luxury goods such as wood inlays, mother of pearl mosaics, silk brocades and engraved or inlaid copper work. Wood turners and glass blowers are also very active.

The protectionist measures of 1926 brought a remarkable upward trend to industry and thus it was that a first cloth factory (1929), a cement works at Dummar (1930) and a cannery (1932) were founded one after the other. Modern spinning mills were installed in 1937, and by 1939 there were already 80 factories representing 1,500 trades. A large glassworks was put up to the south of the city at Kadam in 1945, while to the east many tanneries and dye works ply their centuries-old activities. Since 1954 an important international exhibition and fair has been held at the end of each summer on the banks of the Barada. This has helped to establish Dimashk as a great commercial and industrial centre of the Arab Near East.

AL-DIMASHK — AL-DIMETOKA

DIMASHK — DIMETOKA

Bahá'í writings and other works. He was šaykh and imām at al-Rabwa, described by Ibn Battûta as a pleasant locality near Damascus, now the suburb of al-Sholiyya, and at Ša'īd in 727/1327. Al-Dimashki's best-known work, Nahḥbat al-dahr ji 'ajdā' al-barr wa 'l-bahr is a compilation dealing with geography in the widest sense, and somewhat closely resembling the 'Ajḍā' al-makhliāt of al-Ḳawzmī. Though the author's standpoint is conspicuously uncritical, his book contains a good deal of information not to be found elsewhere. Less well known but also of considerable interest is another work of al-Dimashki, al-Mahdām al-lajšayya wa 'l-tardjamāt al-sūfiyya (see E. G. Browne, Handlist of the Muhammadan MSS preserved in the library of cl. Universidade of Cambridge, 217-218, no. 1012), fifty maḥāmās forming an encyclopaedia of physical, mathematical and theological information, placed in the mouth of one Abu 'l-Ḳāsim al-Tawwāb (i.e., the Penitent), on the authority of Abu 'abd Allāh al-Awāwī (i.e., the Repentant). Al-Dimashki has also left a defence of Islam, Dīwān risālāt al-dживrat Kubrus, in which traces of Sūfī mysticism appear (see E. Fritsch, Islam u. Christentum im Mittelalter, Breslau, 1930, 33-50). Another work of his has been printed:

al-Risāla (variant: al-Siyāsa) fi 'ilm al-firāsá (Cairo 1300 A.H.); but Maḥāsin al-ḥijdāra (Cairo 1318 A.H.) attributed to Shams al-Dīn by Brockelmann (correctly K. al-żirāra ilā maḥāsin al-ḥijdāra, tr. H. Ritter, in Isi., vii, 1917, 1-91) was written by Abu'l-Fadl Di'afar b. 'Alī al-Dimashkī.

DIMETOKA, also called Dimotika, a town in the former Ottoman Rumelia. Dimotika lies in western Thrace, in a side valley of the Maritsa, and at times played a significant role in Ottoman history. The territory has belonged to Greece since the treaty of Neuilly (27 November 1919), again bears its pre-Ottoman name of Didymoteichon, and lies within the administrative district (Nomos) of Egnatia. It has a population of about 10,000, and is the seat of a bishop of the Greek church as well as of an eparch (provincial governor). It is situated near the junction of the Saloniki—Alexandroupolis—Dimotika line with the Orient line.

Dimotika, which was called Didymoteichon (Διδυμότειχος) by the Byzantines, fell first into Ottoman hands in Mūarram 765/November 1361, according to the Florentine chronicler Matteo Villani (cf. F. Babinger, Beiträge zur Frühgeschichte der Türkenherrschaft in Rumelien (14.-15. Jhd.) = Südosteuropäische Arbeiten, xxxiv, Munich 1944, 46). Dimotika had been defended by a castle encircled by a double wall, built for protection on a conical hill, and provided with strong fortifications under the ruler Matthew Cantacuzenus; it was probably the commander Ḥādīd ibn Ḥabū,right b. Dhû al-Qādî who brought it into Ottoman possession. Murād I, before the conquest of Adrianople early in 762/1361 (cf. F. Babinger, in MOG, ii (1926), 311 ff.), set up his court there. The Burgundian traveller and diplomat Bertrand de la Broquiere (see his Voyage d’outre-mer, ed. Ch. Scheler, Paris 1892, 172 ff., 150) has vividly depicted its appearance in 1443; from this it may be seen that Dimotika, as the first residence of the new Ottoman officials—their removal to Adrianople has not followed until about 765/1365—was built and beautified with especial care, although the layout of the fortifications of that time goes back for the most part to Byzantine times. The rich and broad hunting grounds of the surrounding country made Dimotika a favourite resort of early Ottoman rulers, such as the prince and claimant to the Sultanate Mūsâ Čelebi, and Bāyazīd II, who was born there in Dhū 'l-Ka‘da 852/January 1449 to the 15 year-old future Sultan Mehemmed II. The planning of the royal palace and its additions owed its origin to this circumstance. The first design was brought to completion under Murād I (cf. Ḥādīd ibn Ḥabū,right b. Dhû al-Qādî, Rumeli und Bosna, trans. J. von Hammer, Vienna 1812, 65). Bāyazīd II, weary of worldly cares, proposed to spend the rest of his life there, to avoid persecution by his son Selim I, but died in route—probably poisoned—on 10 Rabī‘I 1381/ 26 May 1352, not far from Hafsa (on the place of death cf. Hammer-Purgstall, GOR, ii, 365 ff., 625). The Swedish king Charles XII (1697-1718) fared rather better when, before reaching Stralsund, he stayed in Dimotika from February 1713 to October 1714, and managed to evade pursuit by an adventurous ride.

 DIMETOKA — AL-DIMYATI

roβoβio is given by the Ottoman globe-trotter Ewliya Celebi [q.v.] in the eighth volume of his Siyâsâtname (73 ff.; cf. the abridgement in H. J. Kissling, Beiträge zur Kenntnis Thraciens im 17. Jahrhundert = Abb. K. M., xxxii/3 (1956), 81 ff.). At that time the sole Muslim in the fortress of the city was its commandant (dísâr), for the inner castle (derûn hisâr) consisted of a hundred tumble-down houses occupied by "unbelievers". Dimêyôtâ was the seat of a judge and the administrative centre of a district (nîğiyya). The upper fortress measured, according to R. Bardisi, 2500 paces in circumference, and the outer double walls of stone were defended by "a hundred" towers. There was no moat, no space for one being available. The citadel (iç kal'e) of the upper fort is arranged on two vertical levels; one part is commonly called the "Maiden's tower" (Kiž kal'esi). From Ewliya Celebi's detailed description of the defensive arrangements of Dimêtoya it is specially noticeable that the royal palace, which was at that time no longer much used, lay in the upper fortress, and could be reached through doors accessible only to the sultan. The lower city (varoλ) was divided in Ewliya Celebi's time into twelve wards (mahalle) and consisted of 600 multi-storied tiled houses. In Dimetoka at that time there were twelve places of worship, the most important of these being that with which sultan Bâyazîd I graced the city. Near the mosque of oratory (medîdî) many of whose travelling members mention by name; they owe their origin for the most part to the well-to-do Ottoman dignitaries established there. Sultan Bâyazîd I had a Kurân school erected in Dimetoka, which next to that of Uruđ Pasha is the most important of the four in existence. Of the baths, the so-called "Whisper Bath" (fisilti fiyamûmi), with its "Ear of Dionysus" is also mentioned by Hâdîdjî Khalîfî (op. cit., 66). According to the Sânîname of Edirne, 1309/1891-2, 208, it was still standing and widely famous. There was no basâtîsinâ, although the market (bâzar) was dominated by some 200 potters' stalls, whose wares, especially the red Dimetoka glasses, beakers, dishes and jugs enjoyed a great reputation. The chief produce of Dimetoka and its environs is grapes and jubes.

There were numerous graves of holy men, who found their last resting place in or near Dimetoka; Ewliya Celebi gives a list of them by name, from which it appears that they belonged entirely to the Bektâşi order; from the evidence of Ottoman toponomy the hinterland of Dimetoka towards the west must have been to a very great extent a centre of the dervishes, particularly those of the Bektâşi (cf. H. J. Kissling, op. cit., 83, n. 310). In more modern times Dimetoka, out of the way from the bustle of the world, had practically no part to play under the Ottomans, and gradually declined.

Bibliography: In addition to references in the text, cf. Sânîname-ı Edirne, 18th ed. 1309, 203-9; 28th ed. 1319, 996 ff.; Sâmi Bey Fraserî, Kâmîs al-a'ldm, iii, Constantinople 1308/1891, 2216 ff.; Ami Boué, Recueil d'itineraires dans la Turquie d'Europe, iv, 257-61; the European travellers have hardly touched Dimetoka and its surroundings and have left no descriptions.

DIMYAT (Damietta), a town of Lower Egypt situated on the eastern arm of the Nile, near its mouth. Dimyât, which was an important town before the Muslim conquest, was captured by a force under al-Mikdâd b. al-Aswad, sent by 'Amr b. al-ʿĀṣ. As a Muslim town, it suffered repeated naval raids, at first from the Byzantines and subsequently from the Crusaders. After an attack in Digital Bibliography, in Makrîzl, ed. Wiet, iv/2, 37-80; and 'All Mubârâk, al-Khîsîr ed-djdâldî, xi, 36-57 (largely a reproduction of Makrîzl). For a full bibliography, see Maspero-Wiet, Matämia, 92-3. (P. M. Holz)

AL-DIMYATI, 'abd al-Mu'mîn b. Khâlaf Sharaf al-Dîn al-Tûnî al-Dîmîyatî al-Shâfi'i, traditionalist born in 613/1217 on the island of Tûnâ between Tinnîs and Damietta; at the end of his career he was professor at the Manûrîyya and at the Zâhîriyya in Cairo, where he died in 705/1306. Apart from the works listed by Brockelmann, to be supplemented by the recent study of A. Dietrich, 'Abdalmu'mîn b. Xalâf ad-Dîmîyatînin bir mukhâtûrînt listesi, in Şarkiyat Mecmuası, iii (1959), 125-55) he has left a dictionary of authorities, often cited and used by subsequent historians and biographers, called Mu'jam Shuâyîkh; it only survives at the present time in a single incomplete manuscript (Tûnîs, Ahmadiyya, 911-2, about 1185 entries out of the 1250 contained in the complete work) which was preserved at the author's dictation. In this document are contained the Hadîth, and also other texts collected by al-Dimyâtî in the course of his numerous voyages in Egypt, the two holy cities, in Syria, Diáira and in 'Irâk between 656/1258 and 656/1258; these, together with the numerous reading-certificates which accompany them, will be the subject of a monograph by G. Vajda. Apart from his own works, al-Dimyâtî is one of the most
important figures of the last third of the 7th/13th century in the field of the handing down of traditions. These few remarks cast some light on and perhaps suggest the nature of the commentaries of which the text has been made into Ottoman Turkish in 1257/1841 and 1885-1886 and again in 1901.

After a second pilgrimage to the Holy Cities he journeyed to the Yemen, where he was initiated by his master, Shaykh Ahmad b. Aqili, into the Naṣkhīyah tradition of the Fraternity. On his return to Egypt he established a branch of the Naṣkhīyah in the Delta, specializing in the science of hadith, k)bîth and Shâfî fiqh under the Muṣâwa and the Shâbarmusli, and was able to hear such contemporary masters as al-Âdîẖ, al-Shawbari, al-Kalûbûd and al-Maymûnî. At the conclusion of his studies he went on pilgrimage to Mecca where he studied hadîth under al-Kurâni. On his return to Dimyât he published his Îhât, on which he had apparently been at work while in the Hijâz, and in which he collected the variant readings of Ibn Muhâysin of Mecca, al-Âzdir of Basra, al-Hasan of Basra, and al-Âmash of Kufa, as well as the more commonly studied Ten Readers, prefacing the whole with an excellent study on the science of hadîth. He also made another volume of digests of the famous al-Sira al-Halabîyya, and compiled treatises, al-Dhâhârâr al-mukhîmmîn, on the signs which precede the coming of the Last Day. After a second pilgrimage to the Holy Cities he journeyed to the Yemen, where he was initiated by Shaykh Ahmad b. Aqili into the Naṣkhîyah tradition of the Fraternity. On his return to Egypt he established himself as a marabout in the sea-side village of ʿEzbet al-Burdj. During a third pilgrimage he died at Medina in Muharram 1117/April-May 1705, and was buried in the Baqî'. Besides the Îhât, which has not the sources quoted may be added al-Durûr al-Kâmûnîa, ii, iv, 1, 1852, and Ibn Rauf, Mun- takhab al-Mukhârîr, in the edition of ʿAṣâwîl, 120-2, no. 104; for Dimyât as a transmitter of traditions, see also Ahlwardt, Verzeichniss . . . Berlin, no. 9648 (ix, 193 f.); G. Vajda, Les certificats de lecture . . . Ahmed Ates, in RIMA, iv, 1, 1958, 14.

AL-DIMYATI, AL-BANNA'. AHMAD B. MUHAM- MAD B. ÂBÂD B. MUHAM B. ʿÂBD AL-QÂNÎ LA DMYATI, known as AL-BANNA', though he had some local reputation in Lower Egypt as a pillar of the Naṣakhîyeya order of dervishes, owes his fame to his ʿIbâdî jadila al-baṣâr on the Kur'anic variants of the Fourteen Readers. He was born at Dimyât where he had the usual education of a Muslim youth under local teachers, till he was able to journey to Cairo, where he studied širâdî, hadîth and Shâfî fiqh under the Muṣâwa and the Shâbarmusli, and was able to hear such contemporary masters as al-Âdîẖ, al-Shawbari, al-Kalûbûd and al-Maymûnî. At the conclusion of his studies he went on pilgrimage to Mecca where he studied hadîth under al-Kurâni. On his return to Dimyât he published his Îhât, on which he had apparently been at work while in the Hijâz, and in which he collected the variant readings of Ibn Muhâysin of Mecca, al-Âzdir of Basra, al-Hasan of Basra, and al-Âmash of Kufa, as well as the more commonly studied Ten Readers, prefacing the whole with an excellent study on the science of hadîth. He also made another volume of digests of the famous al-Sira al-Halabîyya, and compiled treatises, al-Dhâhârâr al-mukhîmmîn, on the signs which precede the coming of the Last Day. After a second pilgrimage to the Holy Cities he journeyed to the Yemen, where he was initiated by Shaykh Ahmad b. Aqili into the Naṣkhîyah tradition of the Fraternity. On his return to Egypt he established himself as a marabout in the sea-side village of ʿEzbet al-Burdj. During a third pilgrimage he died at Medina in Muharram 1117/April-May 1705, and was buried in the Baqî'.

There is no doubt about this translation. But the etymological sense of din “debt which falls due on a given date” is to be understood. Henceforth is the corpus of obligatory prescriptions given by God, which one must submit to. This etymology has been exploited by Nöldeke and Volland, who agree with Gaufredroy-Demombynes (Mahomet, 504) in not finding it convincing. In any case, the notion of “religion” in question is by no means identical in Mazdaism and Islam. On the contrary, the two first etymologies, Hebrew and Arabic, seem to interact, and the meanings are nothing like so diverse as has sometimes been stated. Thus the semantic dialectic of Arabic causes daysm “debt which falls due on a given date” to pass to din “custom” (cf. El'), s.v., art. by Macdonald). “Custom, usage”, in its turn, leads to the idea of “direction” (given by God), hadâ; and to judge (the sense of the Hebrew root) is to guide each one in a suitable direction, hence to give direction. In Gaufredroy-Demombynes’ view the “Day of Judgment” (yaasîm al-din) is the day when God gives a direction to each human being”. Elsewhere the Arabic philologists freely derive din from dâna lâ ... “submit to”. Din henceforth is the corpus of obligatory prescriptions given by God, to which one must submit. This din signifies obligation, direction, submission, retribution. Thus the obsequies performed in the 13th/19th century by the Hebrew-Aramaic sense or the ancient Arabic root, there will remain the ideas of debt to be discharged (hence obligation) and of direction imposed or to be followed with a submissive heart. From the standpoint of him who imposes obligation or direction, din must be translated “religion”—the most general and frequent sense.

There is no doubt about this translation. But the concept indicated by din does not exactly coincide with the ordinary concept of “religion”, precisely because of the semantic connexions of the words. Relîgo evolves primarily that which binds man to God; and din the obligations which God imposes on His “reasoning creatures” (akbîd al-ʿuqul, as Djhurjânt says). Now the first of these obligations is to submit to God and surrender one’s self to Him. Since the etymological sense of islâm is “surrender of self (to God)”, the famous Kur’anic verse shows its full meaning: “This day I have perfected your religion (din) for you and completed my favour unto you, and have chosen for you as religion al-Islâm” (V 3; cf. II 126, III 19).

These few remarks cast some light on and perhaps illuminate the field of the handing down of traditions. It is usual to emphasize three distinct senses of din: (1) judgment, retribution; (2) custom, usage; (3) religion. The first refers to the Hebrew-Aramaic root, the second to the Arabic root dâna, dâna (debt, owing), the third to the Pehlevi dvn (revelation, religion). This third etymology has been exploited by Nöldeke and Volland. We would agree with Gaufredroy-Demombynes (Mahomet, 504) in not finding it convincing. In any case, the notion of “religion” in question is by no means identical in Mazdaism and Islam. On the contrary, the two first etymologies, Hebrew and Arabic, seem to interact, and the meanings are nothing like so diverse as has sometimes been stated. Thus the semantic dialectic of Arabic causes daysm “debt which falls due on a given date” to pass to din “custom” (cf. El'), s.v., art. by Macdonald). “Custom, usage”, in its turn, leads to the idea of “direction” (given by God), hadâ; and to judge (the sense of the Hebrew root) is to guide each one in a suitable direction, hence to give direction. In Gaufredroy-Demombynes’ view the “Day of Judgment” (yaasîm al-din) is the day when God gives a direction to each human being”. Elsewhere the Arabic philologists freely derive din from dâna lâ ... “submit to”. Din henceforth is the corpus of obligatory prescriptions given by God, to which one must submit. This din signifies obligation, direction, submission, retribution. Thus the obsequies performed in the 13th/19th century by the Hebrew-Aramaic sense or the ancient Arabic root, there will remain the ideas of debt to be discharged (hence obligation) and of direction imposed or to be followed with a submissive heart. From the standpoint of him who imposes obligation or direction, din must be translated “religion”—the most general and frequent sense.
oversimplify the difficulties encountered in translating the *din* of Kur'anic verses into Western languages. (1) The sense of judgment (and retribution) is quite frequent in the use of the term *din* during the Meccan period: four times taken absolutely and 12 times in the expression *yaum al-din*. (2) The sense of religion is suitable in the other cases. It is true that R. Blachère several times, and appropriately, translates it by “act of worship” (*culte*) (e.g. II, 198; XLI, 11 and 20, etc.). Notice XLI, 11: “Discharge the debt of worship” (*acquites-vous du Culte*), which evokes the primitive Arabic sense of debt, owning. But if we recall that *din* is defined by the obligations and prescriptions laid down by God, it must be admitted that the *culte* is the essential part of *din*. (Moreover Muslim authors often associate ‘*ibāda*, the act of worship proper, and *din*). Finally sundry Kur'anic expression must be indicated which are found again in subsequent elaborations: *al-din al-kayyim* “the immutable religion”: “He it is Who hath sent this Messenger with the guidance on the author’s thought, M. Laoust stresses that Who hath commanded you that ye worship none save Him. This is the immutable religion” (XII, 40); *al-din al-kabīb*, “the religion of Truth”: “He it is Who hath sent this Messenger with the guidance (*huda*) and the religion of Truth” (XLVIII, 28); *al-din ṣawīa*, “religion practised as a *ḥanīf* (*q.v.*)” (XCVIII, 5); *al-din al-khālis*, “the pure religion” (XXXIX, 3). The three texts cited above (V, 5; IX, 36; and XLVIII, 28) emphasize the relationships of meaning between *din* on the one hand and, on the other, *ṣīla* (surrender of self to God), *ḥukm* (judgment), and *huda* (right direction). Other references could be given.

II. Content of the notion of *din*

There are numerous Kur'anic verses which associate the worship of God, or the prayer due to God, and the religion (or *culte*), e.g., XXXIX 14, etc. A well-known hadīth (Buḫdārī, li, 37) unites under “the teaching of religion” (a) the contents of the faith (*imān*), (b) the practice of *ṣīla*, (c) *ḥukm* or interiorization of the faith (“to adore God as though one saw him”). It later became common to define *din* by these three elements.

We now come to a few elaborations of doctrine. The Ḥanāfi-Māturīdī text *Fiḥṭ Abūr Akbar* II defines religion as an appellation including faith, *ṣīla* and all the commandments of the Qur'ān (and its early traditions). The Māturīdī Bākūlī devote a short chapter to the meaning of *din*. He distinguishes several possible meanings: (1) judgment in the sense of retribution (in the expression *yaum al-din*); (2) judgment in the sense of decision (*ḥukm*); (3) doctrine (*madhhab*) and religious community (*milla*), implying faith, obedience, and the practice of a given belief; in this last sense there may be more than one creed (cf. below); (4) *din al-kabīb*, which is *ṣīla* (and Islam): allowing one's self to be led by God and abandoning one's self to Him. In his Ta'rifdt, Dījrānī defines *din* as a divine institution (wādād) which creatures endowed with reason receive from the Apostle. Similar definitions are repeated in the treatises of the Ashʿarī school. Thus in Bāqṣrī’s elementary manual *din* is “the corpus of prescriptions (ḥukmāh) which God has promulgated through the voice of His Apostle”.

Therefore, the Muslims willingly make faith an element in religion; the Aḥṣarī stresses the prescriptions to be observed. As for the Ḥanbal school, their accent is on the “authentic tradition” taken in the widest sense. The Kur’ān and the Sunna—therein lies religion (‘*Akhīda I* of Ibn Ḥanbal); Ibn Taymiyya repeats that it is “the whole of religion”. Hence the assertion that *din* is *tablīq* (Ṭabarīāl-ḥanābīlā, i, 37), endowing *tablīq* with a positive value of faithfulness to the Prophet (contrarily to other schools who see it primarily as pure acceptance, passive and non-reasoning). L. Masségnon writes that, for Ibn Ḥanbal (Passion d'Al-Hallādī, 669), *din* may be understood as “devoting our religious observances to God”, as distinct from *ḥukm* (external practices) and *ṣari‘a* (observance of legal precepts): the whole constitutes faith (*imān*). Thus understood *din* is nourished by the Tradition and supererogatory acts of piety. Besides the Ḥanballās associate *din* with the act of worship (*‘ibāda*) “the whole of religion, and with right guidance (*huda*)”. Now the first act of worship is prayer (*ṣalāt*). Ibn Taymiyya quotes several Traditions where prayer is stated to be “the basis of religion”; “those (then) who cause it to be observed and themselves observe it preserve their religion” (cf. Siyāṣa, tr. Laoust, 19). He is pleased to reproduce the dictum of the “Ancients”, which makes *imān* the complement of *din*: “Religion and faith consist in the act of prayer, and in doing what the Sunna” (Maʿṣūrījī, tr. Laoust, 76). Commenting on the author’s thought, M. Laoust stresses that “religion” is “above all a law” (ibid., 79 n.). Finally, the contemporary writer Rashīd Rida, whose links with Ibn Taymiyya are well known, presents religion as “the act of worship, the care to avoid bad and blameworthy deeds, to respect right and justice in social relationships, and to purify the soul and prepare it for the future life; in a word [it consists of] all the laws whose aim is to bring man near to God” (Kāfīda, 192; tr. Laoust, 156). This concept, though losing nothing of its specifically Muslim character, reminds one of the more usual meaning of *religion*.

III. *Dīn wa-milla*; *dīn al-kabīb*

In order to set forth clearly the elements of the problem the *din* is often distinguished from terms of related meanings or made more specific by a determinative which limits its connotation. Ibn Ḥanbal employed *milla* in the sense of *din* (cf. Masségnon, loc. cit., n. 4), and, as we have seen, Bākūlī noted that *din* could be synonymous with *milla* or, in a more restricted sense, with *madhhab*. Dījrānī (Ta’rifdt, 111) distinguishes a shade of meaning: *dīn* and *milla* agree in respect of their essence, both are the law of God and of the Apostle. Both go back to the idea of Law, divine positive legal prescriptions (*ṣari‘a*). Here we come across the usual Aḥṣarī position again. *Dīn*, says Dījrānī, is the Law as something obeyed; *milla* (a word of Aramaic origin: word, revelation) is the Law gathering men in a community; *madhhab* is the Law to which one strives to return. *Dīn* relates to God, *milla* to the Apostle (*rasāḥ*), *madhhab* to the founder of a school, the *madhhab* who strives to know and interpret the Law. It is to be noted that in the Kur’ān *milla* is used now to designate the “religion of Abraham”, which is already essentially Islam, now to designate the communities of “possessors of the Scripture”.

But Islam alone is *dīn al-kabīb*, the “religion of Truth”. Each time that this expression appears in the Kur’ān it is to affirm that the “religious of Truth” has the authority “over the religion”, that is over all the domain of religion, and so over any other religion (e.g., XLVIII, 27; IX, 33; and parallel text LXI, 9). Opposite to *dīn al-kabīb* is *dīn al-mubaddal* “corrupted religion”, “like that of the polytheists or the Zoroastrians” says Ibn Taymiyya (Maʿṣūrījī, tr. Laoust, 87). Tradition, especially that of the Ḥanballās (e.g., Barbūhāfī, tr. Laoust, La
profession de foi d'Ibn Bafta, 4, n. i), distinguishes hakfr, what comes from God, i.e., the Kur'an; sunna, the common practices and beliefs of the Companions. Thus we have on the one hand din al-hakfr, revealed religion, and on the other al-din al-
'satik “the ancient religion” understood as Islam as practised by the Companions (from whom Barbahârât excludes *Ali). This latter expression is connected with the Hanbalite conception of tabûlîd.

*Din al-hakfr* is to be compared with and distinguished from the other Kur'anic expression din al-
yasâyîm “the immutable religion”: it is Islam referred to the faith of Abraham (VI, 162, here synonymous with din hunafâ) or considered as bound to laws testifying to the order of the universe (IX, 36) and recapitulated in the worship of God alone (XII, 40). Note finally that one of the characteristics of the *din al-hakfr* is to be a “religion of the golden mean”, “far from extremes”. Several Muslim apologists, arguing from *Kûrân* II, 137 where the determinative is applied to the Community (*umma*) and on the other hand from the phrase “no constraint in religion” (II, 256, cf. XXII, 78), like to present Islam as a religion of the “golden mean”. This is a theme which readily re-occurs when a writer wishes to urge a balanced solution on the opponents of his school (maäghâh): thus Ibn ʿAsâkir, in his defence of ʿAbhūrīsm, or Ibn Taymiyya, in his solution of this or that legal problem (e.g., Siyāsâ, tr. Laoust, 31). In the opposite direction a severe warning is addressed to the “People of the Book” (Jews or Christians) who “are extravagant” or “exaggerate” in their religion (*Kûrân* II, 171; V, 77; cf. VII, 31); those who do not practise din al-hâkhî must be combated.

IV. *Din wa-dûnychâ, din wa-dawsâla*  
*De* din, distinct from milaâ et maâqîshâ, is opposed to dawnsâa. The nearest translation would be the relations of the spiritual and the temporal. *Din*: the domain of divine prescriptions concerning acts of worship and everything involved in spiritual life; dawnsâa: “domain of material life”, as M. Laoust translates (dawnsâa appears besides as the opposite correlative to akhâira: “this world” and “hereafter”). *Din* and dawnsâa are undoubted opposites. The Sûfis distinguish three elements: (1) the acts of adhâma, l-dawnsâa. But the most traditional tendency is to subordinate dawnsâa to din, to make “this base world” in some way included in the “domain of religion”. The Hanbal school is insistent on this. It “is an act of religion (diyâna)”, says Ibn Bâta, “to give good advice to the imâms and all the other members of the Community, whether in the domain of religion (din) or that of material life (dawnsâa)” (tr. Laoust, 129-30). Ibn Taymiyya quotes Hasan al-ʿÂsîrî with approval: “Religion is good advice, religion is good advice, religion is good advice”. Religion and state are closely bound to each other: “exercise of a public office is one of the most important duties of religion; we would add that public office is essential to the very existence of religion”. Again: “Thus it is a duty to consider the exercise of power as one of the forms of religion, as one of the acts by which man draws near to God” (Siyâsâ, tr. Laoust, 172-4). “Social order and peace” are indispensable to the exercise of religion. Commenting on Ibn Taymiyya’s political doctrine, M. Laoust writes: “Religion (din) is intimately bound up with the temporal (dawnsâa)”, (Doctrines sociales et politiques d’Ibn Taymiyya, 280).

The contemporary Salafîyya school puts the elements of the problem somewhat differently. By a modernized apologetic, Muhammad ʿAbdûr-Rahîm intends above all to show the conformity of reason (ṣâhîh) and din. Raschîd Ridâ, having set forth what in social life is an integral part of the religious domain (cf. quotation above), enumerates everything which depends on it in a wide sense: respect for life, honour, other people’s property, an attitude based on sound counsel, shunning of sin, iniquity, violence, deceit, abuse of confidence, unjust wastage of other people’s property; in other words the domain of morality. Thus it is a question of an equivalence between “the rights of God and of men”, according to the classic distinction of Muslim jurists. But Raschîd Ridâ adds that there is a third order of facts, which no longer depends on the domain of din: everything to do with “administrative, juridical, political, and financial organization” (*Kûrân* 92/154). Two concepts may be brought up here: (1) the principle of distinction established by Ibn Taymiyya between the prescriptions of the *Kûrân* as distinct from the beliefs (ṣâhîh) and laws concerning the acts of worship (*ibûdât*), which are unouchable, ethics (akhâira) (in certain cases) and social relationships (*mu‘âmalât* more generally) are capable of adaptation to time and place; (2) the prescriptions of the *Kûrân* taken as a whole (domain of din) do not by any means entail in detail for the actual organization of social life; this organization must be, and it is sufficient that it be, subservient to those prescriptions. Thus we see the sketch, according to a traditional line of reflection, of a possible principle of distinction between the “spiritual” and the “temporal” derived not so much from the object of the prescriptions as from their source (“revealed” or not).

The Muslim BREhren vie with one another in repeating that Islam is at one and the same time din and dawsâla (government, domain of politics). The principle of distinction is by no means abolished. Din and dawsâla are not identical. But Islam, which is the link between the two, includes both. According to this view there is a distinction between din, domain of religion, and Islam, which is religion, true enough, but temporal Community also. The Muslim “Alaïcists” (thus to some extent Ibn Taymiyya) tend to identify din with Islam, and to see in the latter a “religion” in the Western sense of the word.

V. *Uṣûl al-dîn*  
Apart from this latter case, where modern Western influence is obvious, din and Islam are distinct. Sometimes Islam, as the practice of the Kûrânic faith, is one of the elements of din (hadîth quoted above, Bûlhârî, ii, 37); and sometimes din is one of the elements of Islam understood as an organized politico-religious Community (e.g. Islam is din and dawsâla). In current language din is employed absolutely in the sense of din al-hakfr and then becomes the religious expression and spiritual radiation of Islam itself. Such is the connotation of the frequent proper names where din is a determinative (e.g., Muḥîî —, Fâkhîr —, Nûr —, Śalîh —, Taqî al-Dîn, etc.).

But if we translate din by “religion” or “spiritual domain” we must not forget that the Muslim concept denotes above all the Laws which God has promulgated to guide man to his final end, the submission to these laws (thus to God), and the practice of them (acts of worship). The expression *uṣûl al-dîn* “sources (or bases) of religion” is to be taken in this sense.

The advanced course in the great mosques is
often shared by three faculties (cf. an old official syllabus of al-Azhar, REI 1931, 241-75: "faculty of Arabic language"), k. al-qaṣṣaḍ [centred on šīb], and k. usūl al-dīn [theology and apologetics]. As a matter of fact, the writers on šīl al-dālīl often used the term usūl al-dīn (or al-dīyāna) to denote an introduction to or a résumé of dogmatics, and so we have the titles of well-known works: Al-ibnāna 'an usūl al-dīyāna (Ash'arī); Maḍālim usūl al-dīn (Fakhr al-Dīn Razī), etc. The Usūl al-dīn of 'Abd al-Karim al-Baghdādī deals with the methods (asbūb) towards knowledge and their degree of certitude. The expression "theology" and apologetics]. As a matter of fact, the heresy is related to earlier [q.v.], his w/awa of the advent of the Prophet. Among its formative oppression, intimidation and pride. To these was added the dislike of animal slaughter and prohibition from the Kurʾān: liberality, "forbearance from bad actions and repulsion of anger with mildness", abstenance, avoidance of "violent material pursuits", piety, devotion, prudence, gentleness, kindness; while the tenth was the şūfīstic "purification of soul by yearning for God". Ritualistically, it was a kind of solar monotheism with an exaggerated preoccupation with light, sun and fire, showing primarily Zoroastrian, and secondarily Hindū and şūfī influences.

The crux of the orthodox Muslim criticism of Akbar's age was focussed on its indirect suggestion of exotting the emperor to a status of prophethood, even of divinity in such manifestations as the mutual greetings of his disciples Allāhu Akbar and Dīn Allāhu. Dīn-i Ilāhī hinting flatteringly at Akbar's name; though these were also familiar formulae of şūfī dhikr. Actually Akbar discouraged enrolment to his sect on the plea: "Why should I claim to guide men before I myself am guided?" The number of its adherents did not exceed nineteen. Akbar seems to have regarded it as a spiritual club confined to those of the élite of his court whose devotion to himself, by his own encouragement, had assumed the form of an esoteric and heterodox personality cult. The Dīn-i Ilāhī did not claim to have a revealed text, and did not develop a priest-craft. The apologetics of Akbar in diplomatic correspondence with 'Abd-Allāh Kān Üzbek [q.v.], stressed that the basis of his religious faith was essentially rationalistic, affirmed Akbar's attestation of faith as a Muslim, and denied any claim on his part to prophethood or divinity. On the other hand Abu I-Fadl quotes Akbar as confessing, at least figuratively, to cessation from Islam.

Though eclectically influenced by other religions, the Dīn-i Ilāhī derives its essential tenets from various streams of orthodox and heterodox şūfism. Its preoccupation with light was an exaggeration of the Suhrawardīyya emphasis on nār; Akbar's personality cult was inspired by Ibn al-Arābī [q.v.] and Dīlī's doctrines of the 'Perfect man'; the use of the Emperor's name in salutation was giving a heterodox significance to familiar şūfī formulae of dhikr; and the ritual of the initiation of a disciple was based on the Čiṣh'īya example.

Some features of the ritual of sun and fire, especially at one stage Akbar's recitation of one thousand Sanskrit names for the sun, suggest Hindu influence; but it is remarkable that very little was borrowed from either orthodox Hindūism or the Bhakti movement. The sect had only one Hindū member, Rāja Birbal, while Akbar's trusted administrators like Bhagwān Dās and Mān Singh were opposed to it.

The trend of recent scholarship is to treat the Dīn-i Ilāhī as a heresy within Islam, rather than a form of apostasy. In Akbar's own age Muslim orthodoxy treated it with some apprehension, and although it died out with him, it set in motion a strong orthodox reaction represented in Nakshbandiya şūfism by Shaykh Ahmad Sirhindi and in theological studies based on hadīth by Shaykh 'Abd al-Hakīm Dīlī (q.v.).

DINĀDĪPUR: a district in East Pakistan; population (1951) 1,354,432. In 1947 the district was partitioned, and its southern part was given to India. The name has been wrongly derived from Dinwādī or Danūdī, identified with king Danūdī Mardana Deva, whose coins are dated in Sākā 1339-40 = A.D. 1417-18. This king's name is also to be found in the town and district of Dināgūṭh, whose original estate was at Bhateriya in this district and who played an important role in the early 9th/15th century Muslim history of Bengal. Dīnādīpur is a non-Aryan term, which with the Sanskrit ending pur makes the full name of the town and district. Such non-Aryan terms are common in the place names of Bengal. The district is famous for the fortified remains of the old city of Devkot, the ancient Koīvārgāh, about 18 miles south-south-west of Dinādīpur, now marking the boundary between India and Pakistan, just on the Indian side of the railway station Hilly. It was at this place that Muḥammad Bāghtīyār Khaljī, the first Muslim conqueror of Bengal, returned from his ill-fated Tibetan expedition and died in 602/1206. There is also to be found the famous dargah of Shaykh al-Masīḥīyyāl Mawlānā 'Aṭā Wāḥibī, who died in the middle of the 8th/14th century. Another important saint, Shāh Ismā'īl Ghūzī, who died a martyr's death in the third quarter of the 9th/15th century in fighting against the non-Muslim rulers of this area, has a memorial dargah at Ghoroğhāf, 18 miles east of Hilly. The third important place is Mahisantogī, spelt in Persian works as Mahisān, which was a centre of Muslim education during the early Muslim rule.

DINĀR (pl. danāmīn), the name of the gold unit of currency in early Islam. The word derives from Greek διωνόμον (Latin, denarius), originally signifying a silver coin but in post-Constantinian times commonly synonymous with solīdus, denarius aureus or νομίσμα χρυσωσ. The Arabs were familiar with the word and with the Roman and Byzantine gold coin before Islam (kūrān, ed. Flügel, iii, 68; and cf. J. Stepková in Numismatische Schriften, iii, 1956, 65). The earliest type of Arab dinār, undated but attributable to approximately the year 72/692-3, and struck almost certainly at Damasus, imitates the solīdus of Heraclius and his two sons but with specifically Christian symbolism deleted and an Arabic religious legend added. A new type, more distinctly Arab, that of the "standing sword-girt Caliph", appears at the Umayyad capital with an issue dated 74/693-4 and is repeated in 76 and 77; but in the latter year ʿAbd al-Malik's coinage reform drastically affects the style of the dinār which henceforth, with very rare exceptions, is purely epigraphic. In North Africa and Spain the early dinār (kūhī) has an independent history: before approximately the year 85/704 the unit and its fractions imitates the Carthaginian solīdus of Heraclius but bears Muslim legends in abbreviated Latin translation; thereafter until the year 97/713-4 the portraits are deleted and dates are sometimes given in indiction years; Hidjra dates appear in 95, bilingual legends in 97/715-6, and just after the turn of the century both Ifrīkiyya (Kayrawān) and al-Andalus (Cordoba) issue dinārs of purely Arab type, differing only in minor detail from the reform dinār of the East. The minting of gold in al-Andalus ceases in 106/724-5 (except for an anomalous unpublished issue of 127/744-5 and is not resumed until 317/929 under ʿAbd al-Rahmān III. The weight standard of the early transitional dinār appears to have been the same as that of the Byzantine solīdus, i.e., approximately 4.55 grams. With ʿAbd al-Malik's reform, however, the weight was reduced to 4.25 grams. The accuracy of this latter figure is attested not only by the weights of well-preserved dinārs but also by the evidence of Egyptian glass dinār and dinār fraction weights dating from the end of the first to the end of the second century A.H. The reduced standard of the post-reform dinār resulted from a decision to redefine the mīṭkāl (i.e., dinār) in convenient terms of 20 Syro-Arabian kīrāṭs of 0.2125 grams in place of such cumbersome terms as 21 7/12 kīrāṭs, or "22 kīrāṭs less a fraction", etc., which had been employed by the Arabs in pre-Islamic times to express the weight of the mīṭkāl. The latter was doubtless based on the Attic drachm, theoretically containing 4.372 grams, but was soon circulated in Arabia, falling somewhat below that weight. While in general the weight standard of the dinār was maintained in most parts of the Islamic world down to the 4th century of the Hidjra, thereafter extreme irregularity occurs both in weight and purity. In any case the dinār usually passed by weight rather than tale, except where payments were made in sealed purses (sura) of coins of guaranteed weight and fineness. The half dinār (mīšf, semiunis) and the third dinār (thūlah, semissis) were struck in North Africa and Spain in the transitional period and in the early years of the 2nd/8th century, while glass weights for these fractions (2.12 and 1.41 grams) continued to be issued until the third quarter of that century. The quarter dinār (rub) was introduced by the Aghlabids in North Africa in the 3rd century and subsequently was issued in large quantities by the Fatimids both in North Africa, and in Sicily where in due course it became the well-known tari d'oro; as well as in Spain under ʿAbd al-Rahmān III and his successors and some of the Mulāḥ al-Tawāḥī. With respect to fineness the standard of the early dinār was exceptionally high. The post-reform Umayyad dinār ranges between 96% and 98% fine.
and this same standard prevails by and large during the 'Abbasid period. Exceptions are the years of civil war between al-Amin and al-Ma'mūn, the period between the end of Tāhtān and the beginning of Ikhshidid rule in Egypt, the Fatimid period in Baghdad. Less debased but still below the early standard is the gold of the Caliph al-Nāṣir and his successors who resumed the striking of dinārs and multiples in their own names in Baghdad during the last years of the Caliphate. In Egypt under the Fātimids the standard exceeds 98% and even approximates 100% under al-Āmid; under Saladin it falls below 90%, but rises again to 98% under his successors, particularly under al-Kāmil. "There existed neither in the West nor in the East dinārs of a standard excelling the standard al-Āmidī al-Kāmilī" (Ibn Bahrā, writing between 615 and 635 A.H.). Reliable statistics for the fineness of the dinār in the period of its decline in the East are lacking (Ghaznavids, Salūdūs, Khwarizmshāhs, etc.), but it is evident from the appearance of preserved specimens and from limited technical data available that in eastern Khurāsān in the 5th and 6th centuries A.H. the alloy is low-grade electrum containing a large percentage of silver. Electrum fractions also appear among the Mulākā al-Tawǎṣṣīf in Spain. Silver and copper "dinārs" of eastern Iran and Transoxiana are known in Mongol and post-Mongol times (see v. Schrötter, op. cit. in bibliography).

For the division of the dinār into various theoretical fractions, see Dānāk, Kīrāt, Ḥabba, s.v. Sīkka.

In outward appearance the dinār of the Caliphates and of most independent dynasties differs very little. The prototype carries the ghāvida and part of Kūrān CXII in the field or area, and the "prophetic mission" (Kūrān IX, 33) and a formula stating the date of striking in words in the circular margins. The 'Abbasīs alter the legends and arrangement slightly. Down to the year 170/813-4 the dinār is anonymous; thereafter the name of the official charged with the administration of the coinage begins to appear; some of the issues of al-Āmid and al-Ma'mūn bear their names, and from the time of al-Mu'taṣim the Caliph's name appears regularly. Until the year 155/871-2 there is no indication of the mint, but beginning with that year at Miṣr (Fustāt) and subsequently at Muḥarrmān (Samarrā), Marw, Ṣurra-man-ra'a (Samarrā) and many other cities, the name of the mint regularly appears in the date formula. Gradually other legends are added, such as the name of the heir-apparent, supplementary religious legends and eventually the names of independent dynasts and princes. The Fātimids, while not entirely abandoning the style of the prototype, introduce Shī`īte legends and a type in which the inscriptions are arranged in concentric circles.

The word dinār differs from the coinage in the 6th century A.H. in the West, in the 7th/1st century in the East and in India, and in the 8th/14th century in Egypt. As a money of account the word was widely used both during and after its circulation as an actual coin.

The influence of the dinār on the economy of western Europe, its rôle in mediaeval international commerce along with the Byzantine solidus or nomisma have been discussed at length, notably by Pirenne, Monneret de Villard, Block, Lombard, Lopez, Bolin, Grierson (synthesis and bibliography conveniently assembled by F.-J. Himly in Rev. Suisse d'Histoire, v. 1955, 31); and it was inevitable that it should on occasion be imitated as other popular media of exchange have at various times been imitated (e.g., the florin, the ducat, etc.). Most important was the Crusader bezant (basanlits saracenatis, sarrazinis, etc., etc., the Arabic dinār șārīf), chiefly imitating Fātimid coins of al-Mustaṣim and al-Āmid. In the western Mediterranean the dinār gave rise to the muncus, a European term used not only to describe the Arab dinār and as an accounting term, but also, with qualifying proper names, to designate various Christian imitations of the 5th/11th century in Spain (cf. P. Grierson in Rev. belge de phil. et d'histoire, xxxii, 1954, 109, and J. Duplessy in Rev. Numismatique, 1956, 101). The original maraiboine (maravedi, etc.) of Alphonso VIII of Castile was an imitation of the Murābit dinār with Christian legends in Arabic character.

Sauvaire (see bibliography) lists numerous adjectives and nouns which occur in written sources qualifying or describing various types of dinārs. To these may be added: Ābdhik (Zagūd), tārī (fortiarii, ?), JAO5 1954, 163; tāṣālī (Fatimid), hasanī (Fatimid), al-ḥakhīrātī (for special occasions, Herzfeld, Geschichte ... Samarra, 195), ṣadād ("counted", ḥāfīma nāvāmāt, papryi), sawā ("correct weight", papryi), ṣarā ("fresh", "uncirculated", papryi), sawāmī (Buwayhid, Ars Islamica 1951, 23), muddākī ("full weight", papryi), mudawwara (Fatimid, with concentric legends ?), musawwara (Fatimid, with legends in parallel lines ?), masbakha or musakha ("settled", i.e., European, BSOAS, 1953, 17, JESHO 1958, 48), muskhirī ("eastern", papryi), musafari (شاه-ی Arman, JAO5 1954, 163), masūlī ("correctly counted out", papryi), musīkī (Zuray'id, Num. Zeitschrift 47, 1914, 172), munākhāt ("clipped", papryi), nisārī (Fatimid), yaswū (Mawuhbid, Ibn Khallīkān).

The word dinār as a denomination applied to coins of various metals including nickel, copper, etc., bearing no relationship to the classical Arab unit, has survived in modern times: e.g., Kādār (Nāṣir al-Dīn Shāh and successors, and the Pahlavi dynasty), ʻtrāk (1 dinār, paper money = 1000 fils), Yugoslavia (1 dinār = 100 para).

dinar — dinawar

In the middle ages was one of the most important towns in Djbil (Media); it is now in ruins. The exact location is 34° 35' Lat. N. and 47° 26' E. Long. (Greenwich). The ruins are situated near the rock of Bisitun; the Gamas-Ab is a tributary of th. Kara Sû which, in its lower reaches, is known as the Karkha. When Ibn Khurradadhbih (ed. de Goeje), vi, 243 ff., and also in Noldeke, ZDMG., xxvi, 559 ff. and his Gesch. der Perser und Araber zur Zeit der Sassaniden (1879), 103, and J. Marquart, Erdnsahr, Berlin 1901, 18-19.

In the Umayyad and Abbasid periods Dinawar was very prosperous. In the 4th/10th century it was, according to Ibn Hawâlî, only one-third less in size than Hamdânân. Mu̇kaddasî praised its well-built bazaars and its rich orchards. The confusion that broke out in the last years of al-Muktâdir's reign (d. 320/932) temporarily ruined the town. When the rebellious general Mardâwîdî of Gilân seized the whole province of Djbil after defeating the troops sent against him by the Caliph, Dinawar also fell into his hands (319/931), and several thousands (the figures vary from 7,000 to 25,000) of the inhabitants perished soon afterwards. Hasânâwî (Hasâniyâ), a Turkish prince living in this region, founded a small independent kingdom of which the capital was Dinawar; he was able to retain possession of it for nearly 50 years (until his death in 369/979). Hamd Allah Mustawîfî (Nûshâ, 106) described Dinawar as a small town, with a temperate climate and abundant water, producing crops of corn and also fruit. Half a century after Mustawîfî's time, Dinawar was completely destroyed by Timûr and has never been rebuilt.

Theodore Strauss, who visited the ruins of Dinawar in 1905, stated that: “The site of Dinawar is indicated only by mounds of earth which have been ransacked several times in the search for coins; numerous finds are still being made especially by peasants tilling the fields” (See his Eine Reise im Westlichen Persien, 1911, 65). Strauss also stated that traces can still be seen in the adjacent Tang-i Dinawar of an ancient road hewn out of the rock which probably connected Dinawar with Bagdad.

AL-DINAWAR, Abū Ḥanīfa Ahmad b. Dawūd, Arab scholar of the 3rd/9th century. The name of his grandfather, Wanand, indicates that he was of Persian extraction. In spite of the great attention he gave to his work by later authors very little has been handed down about his life except a short notice by Ibn al-Nadim (Fihrist, 78), copied by Yākūt with additional notices about his year of death, which according to various sources fell in 282 or 283/894-5 or before 290/902-3; an appreciation of his work quoted from the K. Tabrīs al-Dīnawarı by Abū Hayyān al-Tawḥīdī and an anecdote about his meeting in Dinawar with the philologist al-Mubarrad (Irshād al-dīna); an extract in ʿAbd al-Kādīr al-Baghḍādī, ʿAlīzād al-adab, 1, 23-27. That he lived in Dinawar is corroborated by what is said by the astronomer ʿAbd al-Rahmān al-Sūfī, who in the year 335/946-7 saw the house in Dinawar that served him as an observatory (Ṣuwar al-kāwīkīb, Ḥaydarābād 1373/1954, 8). His philological studies he prosecuted in Trāk, where he is said to have learned both from Baṣrān and Kūfān teachers, especially from the two grammarians al-Sikkīt and his son Ibn al-Sikkīt (see also Suyūṭī, Buğyay al-ʿawāli, Cairo 1326, 132).

Dīnawar belonged to the epoch of Arabic literature which was dominated by the spirit of al-Dīnawarī (q.v.) to whom he may be compared (as did Abū Hayyān al-Tawḥīdī) in consideration of his interests in the "philosophical" studies of the Hellenistic learning (ḥikmat al-falsafa) and the Arabic humanities alike. Unlike Dīnawarī, however, he had a clear disposition for a systematical approach, which was from the very beginning applied by the masters of the philological schools of Trāk to materials treated by them. It may be that this disposition was connected also with his mathematical genius attested by works of his on the field of exact sciences, in which was cultivated the greater part of Iranian origin like himself. From the beginning, Arabic philology, the study of pre-Islamic literature and culture, had been associated with Kūrānic studies; a commentary on the Kūrān to whom he may be compared (as did Abu Hayyan al-Tawhidi) was plagiarized by Ibn Rushd al-Djadhiz (ed. by V. Guirgass, Leiden 1888; Preface, variantes et index par I. J. Krakovskij, Leiden 1912). That this work, in spite of its literary and scholarly qualities, never met with great approval and popularity in the Arab speaking world may be due to accidental circumstances rather than to a deliberate disregard. Its title was known to bibliographers from Ibn al-Nadim on, but the author is never called a historian. History is seen from an Iranian point of view; thus the Prophet is mentioned so to speak in a marginal note of the history of Anūšfarwān; Islam and the Arabs appear on the scene when invading Persia; the Umayyads are treated with only as far as the religious and political movements involving the eastern part of Islam are concerned, etc. This tendency towards promoting Iranian views may be due, not to anti-Arab feelings, but to the sources on which he drew. His chief aim was certainly to write a book of literary and entertaining qualities. For this reason he omitted the isnāds of the akhbār, took the liberty of choosing, among different traditions about one and the same event, the one that suited him and insisted on points of dramatic value; he omitted the fitna of Ibn al-Ash, narratives of Ibn al-Ash, etc., narratives which belong to the finest products of Arab historiography.

Bibliography: in the article. (B. LEWIN)

AL-DINAWAR, Abū Saʿīd (Saʿīn) Naṣr b. Yaʿqūb, is a writer chiefly remembered as author of al-Kādīrī fi l-Tābībān (composed in 397/1008 and dedicated to al-Kādīr Bīlāh 381/1291-92), which is oldest authentic Arabic treatise on onerocriticism and an excellent synthesis of everything that was known on the subject at the time. Its sources were Arabic: Ibn Sīrīn (q.v.) to whom innumerable interpretations are attributed; Greek: Artemidorus of Ephesus, whose Oneirocritica translated into Arabic by Ḥusayn b. Iṣḥāq (died 260/873); cf. Fihrist, 255, MS A 4726 in the Istanbul University Library; later generations it was the standard work in the field and was to a great extent quoted by lexicologists from Ibn Sīdā [q.v.]. Of the two sections into which it was divided the first contained a series of monographs some of which go far beyond the field of "botany" proper, treating with themes that have a more or less indirect connexion with the world of plants; see B. Silberberg, Das Pflanzenbuch des Dīnawarī in ZA xxiv, 1910: 253-95, xxv, 1911: 39-88. Two volumes of the original work have come down to us, the 5th containing the last part of the monograph section and the letters alīf to sāyi of the alphabetical section (ed. by B. Lewin, Uppsala Universitets Årsskrift 1953: 10), and the 3d (M. S. Salisbury, Yale Univ. Libr.; an edition of this together with the monograph part of the 5th vol. is under preparation to appear in Bibliotheca Islamica).

The only work of Dīnawar's that has come down to us in its full extent is his historical work al-Akbār al-taawul (ed. by V. Guirgass, Leiden 1888; Preface, variantes et index par I. J. Krakovskij, Leiden 1912). That this work, in spite of its literary and scholarly qualities, never met with great approval and popularity in the Arab speaking world may be due to accidental circumstances rather than to a deliberate disregard. Its title was known to bibliographers from Ibn al-Nadim on, but the author is never called a historian. History is seen from an Iranian point of view; thus the Prophet is mentioned so to speak in a marginal note of the history of Anūšfarwān; Islam and the Arabs appear on the scene when invading Persia; the Umayyads are treated with only as far as the religious and political movements involving the eastern part of Islam are concerned, etc. This tendency towards promoting Iranian views may be due, not to anti-Arab feelings, but to the sources on which he drew. His chief aim was certainly to write a book of literary and entertaining qualities. For this reason he omitted the isnāds of the akhbār, took the liberty of choosing, among different traditions about one and the same event, the one that suited him and insisted on points of dramatic value; he omitted the fitna of Ibn al-Ash, etc., narratives which belong to the finest products of Arab historiography.

interpretations imputed to the Jews and has numerous quotations from the Bible.

**Bibliography:** al-Kādirī fi ḫāibr is still unpublished; 29 MSS. are known. It was translated into Persian (AS 1718) and following Hādīṣī Ḫalifā (ii, 312, no. 3068), translated into Turkish verse by Ṣhibḥ al-Dīn Abū ʿAbdAllah b. Umar (died 854/1450). On this work and Arabic oneirocritical literature, cf. T. Fahd, *Les Rêves en Islam*, in *Sources Orientales*, ii, Paris 1960, 125-58.

**Dindān, the lakah of Abū Dījār fār Aḥmad b. Husayn, a Shīʿite traditionalist of the 3rd/9th century. His father was a reliable authority who related traditions of the Imāms ʿAllī al-Riḍā, Muḥammad al-Diāwād, and ʿAllī al-Hādī; originally from Ḳīf, he lived for a while in Ahvāz, where Dindān was born. Dindān also related traditions on the authority of his father's masters, but was regarded as a ḡālī, extremist, and his reliability as a relator was impugned. He wrote several books, among them Kītāb al-thiqātā jī ʾl-dāwaʾ; none of them appears to have survived. He died and was buried in Kumm.**

These data are found in twelve Shīʿite biographical and bibliographical sources (e. g., Tusys List of Skyṭṭah Books, ed. Sprenger and ʿAbd al-Haq, Calcutta 1853, 26; Ibn Shahrshūb, *Maʿālim al-ʿulamaʾ*, ed. Eghbāl, Tehran 1934, 10; Astarrābādī, *Mnhāk al-makāl*, Tehran 1307, 34). The reference to Dindān's extremist views is amplified in a group of Sunni sources, dealing with the genesis of Ismāʿīlimism. (Fihrist 188; Baghdadī, *Farāh*, 266, tr. A. S. Halkin, *Moslem schisms and sects*, Tel-Aviv 1935, 108; Makrizī, tr. Quatremère, in *J. A.*, 1836, 152, etc.). In these Dindān appears as one of the founders of the sect, in association with ʿAbd Allāh b. Maymūn [q.v.]. He is said to have played an active part in both the formulation and propagation of Ismāʿīlī doctrines, and in addition to have provided large sums to finance the daʿwa. According to the Fihrist, he was secretary to ʿAḥmad b. ʿAbd al-ʿAzīz b. Abī Dulaf (d. 280/893). His name and pedigree are variously distorted in these sources, but remain recognizable. His grandfather's name is given, with various corruptions, as Čahār Lākhtān, *four parts*—obviously a nickname. Abū ʿl-Maʿālī (Bayyān al-adāyān, ed. Eghbāl, 36, tr. Massé in *RHR*, 1926, 57) makes Čahār Lākhtān an associate of Dindān and ʿAbd Allāh b. Maymūn in founding the Bāṭinī sect, and attributes to him the role of financier.

The much better informed Shīʿite sources make it clear that Dindān lived in the 3rd century. While therefore he may have been a secretary of Ibn Abī Dulaf, he cannot have been associated with ʿAbd Allāh b. Maymūn, who lived and died during the 2nd/8th century. He may well, however, have played some part in the early history of Ismāʿīlimism, though it is noteworthy that neither his name nor any of his works appear to have been preserved by the Ismāʿīlis.

**Dioscorides [see Diwūsūrīdī].**

**Diplomacy** [see Eṣṭ, Muʿāhada, Safīr].

**Diplomatic**

1) Diplomatic has reached the status of a special science in the West, and the results of such research are accessible in good manuals (like Harry Bresslau's *Handbuch der Urkundenlehre für Deutschland und Italien*, 2nd ed., 1931). Much less work has been done on Arabic documents; the material is very scattered, and not yet sufficiently collated to permit detailed research. Yet Arabic documents have aroused the interest for them a considerable time: a number of them have been published, and the editing of Arabic papyri of the first centuries of Islam in particular has added materially to our knowledge. It is thus not mere chance that so much of the groundwork for the establishment of a science of Arabic diplomatic should have been done by a papyrologist (Grohmann), and it is to be hoped that the publishing of further papyri will advance work in that direction. It is indeed of very special advantage to possess original documents of so early a date, particularly as there are not so many Arabic documents of the later centuries. Some collections have become known only recently, and it is to be hoped that here too, more material will be discovered. Numbers of important Arabic documents have already come to light in the Geniza collections and among the manuscripts in the St. Catherine's Monastery on Mount Sinai. Documents of the Mamlūk period are preserved in archives in Italy and Spain.

Arabic manuals for secretaries also form part of the material on which a science of Arabic diplomatic can be based, and these are preserved in great number. In part, they consist of theoretical explanations and advice to scribes, in part of practical examples in the text; these, however, are usually no more than model forms without either names or dates. It is obviously difficult to decide to what extent these texts are authentic, that is to say to what extent they are based on original documents. Such manuals gradually grew and became more complete, until in the time of the Mamlūks they reach encyclopaedic extent in Kālahšandī's *Ṣḥḥ al-ʿashā ʾl ʾismaʿāl al-ʾinshaʿ*. This great work is an essential source book for the study of documents, and therefore its author may be regarded as the most important precursor of scientific Arabic diplomatic. Here too, of course, it is hard to tell to what extent Kālahšandū had himself seen the originals of the numerous texts he gives. It is known that he did have access to the archives, and that many more texts survived than do today. We are not so certain about the older texts: Kālahšandū probably based his work largely on literary sources (some of which he names), but we can hardly expect a critical treatment of these.

The following is an attempt at a survey, based on Bresslau's classification, in order to get nearer to a complete picture.

2) Composition of Documents. The same division which is observed in occidental documents is also to be found in Arabic ones; namely the introductory protocol, the text, and the closing protocol.

A. The introductory protocol is known as īṭrāz and īṭtāz. Īṭrāz is the name of the protocol in the Arabic papyri: to begin with the formulae were bilingual, Greek-Arabic, and later Arabic-Greek; later on, purely Arabic. There is considerable variety in the wording, and extensive material has been published by Grohmann. The purpose seems to
have been to endow the document with a certain authenticity, but as far as the validity of Arabic documents is concerned without impact. From the imperial 4th/10th century it was omitted altogether, and the term *jird* is now used only in the sense of the inscription of names on clothes. Kalkashandi knows it only in this sense, and uses the term *ishtāb* for the introduction of documents, for example *ishtāb al-kutub* and *ishtāb al-mukalla*. He calls the individual parts of this *ishtāb jawālī*; they are *basmāla*, *gharshī* (a direction or address), *salāla* (objective, as for instance *salāla waladuhu* or *salāla al-Muslim al-Nāṣirī* etc. There is also evidence of the use of *tafiya* for sender, developing from the ancient *ja'alanī 'llahu fidda* ah through numerous intermediate forms, as early as *Abbasid* times. The formulae of benediction for the addressee, which were called *du'ud* and were taken very seriously, were even more varied. Developing from inconspicuous beginnings in Umayyad times, there was a whole system of gradation under the *Abbasids*. Scribes appear to have compiled lists of these *adīya* fairly early on, which became more detailed when distinctions in rank became more and more minute in the times of the Fātimids and Mamlūks, when every *laḥab* had its own precise *du'ud*.

The different personal names (*asmaʾ, ḥūnd, lāḥab, nuʿūd*) also underwent considerable development, and details concerning them are naturally of great importance in the interpretation of documents. Kalkashandi devoted his third *mabāla* to them, and the material which he collected is very extensive. Here too, the development is towards ever increasing complexity. Under the Umayyads, *ism* and *kunya* were sufficient, but *laḥab* and *naʿ* became current under the *Abbasids*. There was a veritable inflation of terms in Mamlūk times, when there were also a whole range of new additives and development of the language of appointment. From the *laḥab* and *naʿ* there were numerous intermediate forms, *lakab* became current, and *naʿ* was given a precise meaning. Consequently, the exchange of letters concerning matters of state was called *mukātabāt* by the *Abbasids*, and the chancellery the *diwān al-mukātabāt*. This was also usual in Egypt, under the Fātimids, Ayyūbids, and Mamlūks. There were also *rasāʾil* and *diwān al-∗rasāʾil*. *Murāsasāt* and *tarāsul* were also known, though these appear to have been less common. *Inshā* became the general term for letters, and *diwān al-∗inshāʾ* was already known in *Abbasid* times, then, especially under the Fātimids and Mamlūks, it became the general term for chancellery (cf. 6 below).

C. Letters of Appointment. *Wilāyāt* = offices are dealt with in detail under that heading by Kalkashandi in his 5th *mabāla*. Generally, however, compound words of the type *wilāyāt al-* have been more common, such as *wilāyāt al-∗ahd*, *wilāyāt al-∗bāb*, *wilāyāt al-*Kāhirā and others. There is, for instance, a term like *nasrāt allāhu sidgīl bi-wilāyāt al-∗Kāhirā*. *Tawliya* was the right to appoint, but this, in Mamlūk times, rested with the governors of Syria only, not with those of Egypt. The following terms for the different grades of appointment were, at least in Mamlūk times, more common than these general terms: *bayʿa*, *jahd*, *taklid*, *tafuḍ*, *masrūm*, *tawhīd*, *mangahr*. Each of these has its own history.

(a) *bayʿa* [q.v.] = the homage paid to a Caliph. Under the Fātimids, this reached particular importance, and reports of it were written in the harsh and sent to the provinces, where the governor accepted the oath of allegiance from the subjects.

(b) *jahd* = contract in general, but here the contract between a sultan and his successor, or a sultan, in particular; and later also the contract between a sultan and his successor, or the sultan and rulers of smaller lands. Kalkashandi classifies all these as appointments. He believes that the first two are traceable back to the Prophet, but he describes the latter as developments which took place only under the Ayyūbids after the death of Nūr al-Dīn.

(c) In the actual letters of appointment of officials, there was also one supreme grade, called *jahd*,
which concerned only the highest officials. It has not been usual since the time of the Fatimids.

(d) ta'khli'd was a much used term for high officials such as kadi, although under the Mamluks it was restricted to very special high officials such as the confidential secretary = kadih al-sirr.

(e) tafsqid applied to supreme kadi, appears to have been used in Mamluk times only. It may have been introduced by Shihab al-Din b. Fa'iz Allah (?).

(f) marasim used for military personnel, also appears to appear in Mamluk times only. By this, Shihab al-Din b. Fa'iz Allah means minor documents which are not connected with appointments of these, the more important with basmala, and the less important, such as passes, without), but Kalkashandli distinguishes between major and minor marasim: muhabbarata for the appointment of the commander of a fortress, and military persons of medium rank, muqashbarata for the lower ranks.

The latter are said to be rare (presumably because they were normally given a manghur).

(g) tawsiti: to begin with this seems to have been the ruler's signature, which was appended in the chancellery (whilst altama was a kind of motto written in the ruler's own hand, like a signature, at the bottom of documents). The tawsiti add'l-bi'as may well have developed from this. Later on tawsiti was also used for letters of appointment: to begin with, quite generally (thus Ibn Fa'iz Allah, perhaps even Ayyubid), but later only for the lesser officials, and in Kalkashandli for the fourth and lowest group of the muta'ammin min = turban weavers.

(h) manghur. In the first centuries, this was a pass for peasants in Egypt, apparently designed to curb increasing movement away from the land. In 'Abbassid times, it was the name given to grants of fiefs; under the Fatimids it denoted certain letters of appointment; rather general appointments under the Ayyubids; but under the Mamluks, it became restricted to feudal grants, in different grades according to size and writing. The wording was short and precise, there were no instructions (washiyat), neither was there the sultan's signature, but a kind of tughra can occasionally be found at the head.

D. Contracts. The general terms 'ash, 'as, and mithqal appear as early as the Kur'an, and seem to have been usual at all times. 'Ash [q.v.] seems to have been used particularly for political agreements; 'as [q.v.] for civil contracts, often more clearly defined by an additional genitive, such as 'ash al-nihak, 'ash al-izhamma, 'ash al-suq. Mithqal seems to have been less common. Kalkashandli does not mention it, but Ibn Fa'iz Allah's Ta'rif mentions muwadda and muwaddaba. Kalkashandli uses the terms hudna and mahidanna for an armistice, giving examples from 'Abbassid and Mamluk times. He pays particular attention to the form which the oath takes, and states that such contracts have not been current at more recent times. He knew the terms muwadda, muslama, mukadda, and muradaha as having the same meaning, but these were probably all less usual. Neither did the terms tawshka and mufasakha, for revocation by one or both parties, appear frequently. See further shurut.

E. Documents of a predominantly business nature. These include not only grants of fiefs (see C [q.v.] above) and annual tax settlements, but also the musamahadi and the tarkhansiyat. The former concerned tax-relief, probably only in Mamluk times, and were divided into large ('isam), issued in the name of the sultan, and small (jiqgar) in the name of the governor. Dues thus cancelled were called mukas, jihat musabaka, munkarat, and baswah (ref. balance of tax due). Some were valid for merchants and all their goods, others only for certain sums. The tarkhansiyat were concessions granting aged officials exemption from taxes, and possibly also a fixed salary (ma'alam). In the case of the military, they were called marasim, and in others ta'kwf.

F. Documents of a predominantly legal nature. Such were amin [q.v.], safe-conducts either for whole tracts of land (especially for individuals), or for foreigners in Islamic territory, though later also for Muslims "whose attack is feared, and especially those who have renounced their allegiance", so that, if possible, they might yet be recalled to obedience. The drawing up of such documents gradually came to form the bulk of the work of a diwan. Kalkashandli endeavours to trace both varieties back to the time of the Prophet and gives examples from Umayyad, 'Abbassid, Fatimid, and Mamluk times. Some documents refer to an application of the musa'ammin (e.g., innaka dhakarta raghabatuka), others do not.

Yarilgh = Ferman, extensively used by the Turks, and introduced as far as Mamluk Egypt by consular traffic, but only in its limited meaning of a pass for foreign ambassadors.

Ishlal was the given name to documents reaffirming decisions of former rulers; sometimes, however, they were simply called tawshiki. The Fatimid proclamation of the year 415/1024 (ed. Grohmann, RSO, 32, 641) can be added to the three texts cited by Kalkashandli.

Dafn, the burying of sins, is said to have been known in pre-Islamic Arabia, but appears to have fallen into disuse (perhaps replaced by the amin?) [see mu'mina, dafin al-].

Ta'khild hukmiyya were occasionally written for the kadh; they were appointments either in the form of diplomas or mere musabakat.

Ishfat al-'adda were certificates of good character of witnesses. They are known both in the papryi, and later right into Mamluk times. The altama, date, and habsala at the end were written by the kadh himself, and witnessed by the scribes.

al-tawqifat. The right of decision in petitions in open court, is said to have been the custom even in Sasanid times. In Islam under the Umayyads, and under Harun al-Rashid, the right of tawqif was said to have been transferred to Yahyaa al-Barmak. Egyptian governors exercised this right, too, but it seems to have been forgotten after the Tulinids, and not revived until the Fatimid fostered and developed it. The decision was made immediately, and was noted briefly on the back by the 'owner of the fine pen', then, after instruction (tawqif), by the head of the diwan, it was fully executed by the 'owner of the broad pen'. The right of decision remained with the head of the diwan al-tawqif, even under the Mamluks. The Sultan himself also presided in court, and Kalkashandli reports six different ways of submitting a petition. This tawqif was so popular that the people applied the term tawshiki to the profession of the scribe, and called the scribes themselves muswakbi'in.

'Abd al-nikha. Marriage contracts; legal documents in which the economic details were of special importance (baswah al-urs, mukhbat sadak), though the attestation of equality, the undertaking to pay the remainder of the marriage portion, and the rejection of all claims in case of divorce, etc., were likewise important.
DIPLOMATIC

Fatwâ. Whereas certain qualities were demanded of the mufti, there does not appear to have been any set form for the fatwâ. A customary form did, however, emerge, as can be seen from the many collections, and a certain brevity appears to have been typical.

Wahbiyya, deed of wahbi, also traced back to the Prophet. Lawyers have laid down regulations for the content and form of endowments, and the deciding words wahbiyya, babatu, sabattu, as well as the exhortation that it must be neither sold, nor given away, nor bequeathed, appears in every such deed. Some texts are extant in the original, in literature, and carved in stone. The numerous endowments affected the economic situation adversely, and the state found a solution for this in large scale confiscations, as also—in more modern times—in supervision by Ministries of Awkâl.

Waqiyya, last will and testament, legacy. The content is laid down by law in detail, the form appears to be free, but two witnesses are prescribed.

Wasâyâ diniyya were large and ornate documents for reading from pulpits, in order to inculcate the rules of Islam. They were of particular importance at the time of the Sunnî restoration after the fall of the Fâtimids, but appear also in the Mağribîn.

Yamîn. Oaths played an important part in the ceremonies of homage (bâyâ), and the aymân al-bay'a, introduced by al-Ḥâджîdâdî, were famed for being particularly strong. The Fâtimids systematically extended these oaths, particularly in view of the fact that their subjects were of a different faith. Later, too, the oaths had their significance when they sealed contracts, or were made on attaining office or entering certain professions.

ʿUmra. These were documents for pilgrims to Mecca, who there made the ʿumra; these appear to have been rather rare.

Idjâdati were frequently issued on behalf of scholars and writers, e.g., for futâyâ, tadris, riwâya, often in the form of large sized jârkhât al-ḵâmi.

Mulâṭṭatî were sent by the Fâtimids to the governor of a province when he took up his office, and also when honours were bestowed (fâkhât al-ḵâmî). Mulâtâja was also the term applied to letters accompanying appointments for present holders of office. The orders were laid down for the higher officials, ambassadors, and commanders of fortresses. These were chiefly concerned with income and expenditure.

Tâbrîs recommending books or poems occur occasionally.

4. Transmission and multiplication of documents. Naturally, the Arabs recognized a difference between draft, original, and copy (muscâha, qat, muskha). A capable copyist (mâshikh) might advance to being a munâqîb (qotl 118). Ibn al-Sayrâfî 142 mentions copying as an important occupation, and also mentions a fair-copyist (mubâyîd). Copies are also marked with muskhâ or muskhâlat, and, like originals, could be attested by yâḥâ. The copies were kept, and it may well be that some collected works of the inkhâb literature were compiled from collections of drafts or copies. There are innumerable examples of the transmission of documents, in historical works. M. Hamidullah has collected no fewer than 269 texts attributed to the period before 652 (Documents sur la diplomatie musulmane à l'époque du Prophète et des khâlífes orthodoxes. Suivi de: Corpus des traités et lettres diplomatiques de l'Islam, Paris 1935. Also in Arabic: al-Walâbî al-sijâsîyya fi l-ʿâdh al-nabawî

ua l-ʾkâlidâ al-râqîdâ). This has of course no bearing on the unsettled question of their authenticity.

5. Archives. The preservation of originals and copies in archives was already customary in the Ancient Orient and in Greek Egypt. It may therefore be assumed that the Arabs likewise knew of the practice at an early date, and indeed we find a short précis on the back of some papyri, intended to facilitate storing and reference. But there is no evidence of the existence of a central archive, as there was in Greek times. Barthold in 1920 treated the question of the preservation of documents in the states of the Islamic orient (Arkhîven, Kursk 1, Petrograd 1920; cf. Islamica, iv, 145). Perhaps one might be permitted to regard the documents drawn up between Hârûn al-Rašîd and his sons Amîn and Maḥmûd in 186/802, and sent to Mecca to be hung up in the Kaʿba, as being kept in a kind of archive in that holy place.

There was a proper archive in Fâtimid times, and Ibn al-Sayrâfî (5/118, 142) calls the archivist fâkhân (qotl), and stresses his importance. He praises the Baghdâdî archive al-ḫâlîsâna al-tâmâ as a model. It was the archivist's task to file the originals of incoming documents, and the copies of the outgoing ones according to months, in folders with headings (iḏâbâr yahîb ʿulâykh fībdâla). A certain decline in this practice seems to have set in in Mamlûk times, and there were periods when the dawâdâr of the confidential secretary sufficed as an archivist.

6. Chancelleries. A. Whether the Prophet himself had a chancellery in which his famous writings to the rulers of the world were written is not certain, although we do have a whole list of scribes of the Prophet, among them the first caliphs.

According to one report, ʿUmar is said to have set up the first chancellery and called it dawîn (qotl), a word which might go back to the Persian dâwân, or even the Assyrian dep, and in fact, a certain parallel with Persian administration can be discerned. Yet it would appear to have been a dawîn for matters of finance and the army, rather than an actual chancellery of state.

B. In Umayyad times, the official language—which had hitherto been Persian in the east and Greek in the west—became Arabic. This takhâlî al-dawîn ʾâd l-ʿarâbî was carried through by al-Ḥâджîdâdî in the east, and by ʿAbd al-Malik in the west. It was indeed a disaster when all the dawâns were burnt in the battle near Dayr al-Dâjmâdîm (qotl) in 83/701. Otherwise we know little about Umayyad chancelleries. A special office for the sealing of documents (dawîn al-khâlîm) is said to have been introduced because of an attempted forgery under Muḥâwiyya. Some innovations are said to have been made by Walid b. ʿAbd al-Malik, when papyri appears to have become better and the writing more beautiful; though here, as on other occasions, ʿUmar b. ʿAbd al-ʿAzîz is said to have reverted to the customs of his forebears. The custom of the caliph's hearing and deciding complaints in open session (al-tâbâb ʾâlî l-ḥâsâs) is said to have come into being under the Umayyads. The scribes then had to record the caliph's decisions in writing.

The most famous of the Umayyad scribes was ʿAbd al-Hamîd b. Yahyâ (qotl), who was active from the time of Sulaymân to the end of the dynasty. He has appeared to have enriched the scribal art in respect of both form and content, and he was probably influenced by the Persians. Not all the writings attributed to him have, however, been authenticated.

C. ʿAbbâsid Chancellery. The ʿAbbâsîds do
not appear to have taken over much of the Umayyad administration. They developed a completely new way, and the state chancellery became known as dhawān al-rasā'il or dhawān al-inshā'. We have only scanty reports (and those particularly from Ibn ʿAbdūs al-Dīshāshīyārī and Maʿrīzī) of its organization and the way it functioned. Some innovations are attributed to the Barnamids. Thus, for example, Khālid b. Barmāk is said to have introduced parchment books (dāšiṭ min al-dīwān) instead of writing scrolls (puḥā muṭarradā), Yabhāy b. Khālid is said to have enlarged the basmāla by the tāsiṣya, and Ḥārūn al-Raḍī is said to have bestowed the right of the tawḥīd al-šaʿr-ashāq on him. The tawḥīd al-šaʿr-ashāq of Dīsṭār b. Yabhāy were copied, collected, and studied as models of erudition. Al-Maḥdī is said to have decreed that scribes should be free every Thursday, and it became a working day again only under al-Muṭṭasim. The following were famous scribes and waṣāʾir of the ʿAbbadīs: Ibn Muḥāḳ (died 338/949), Ibn al-ʿĀmīd (died 360/970), and Ḥābīb al-Sābī (died 384/994), and many innovations are traced back to them. One used to quote: Futḥāl al-rasāʾil bi-ʿAbd al-Ḥamīd wa-ḥṣīṣmat bi-Ḥān al-ʿĀmīd. We hear little of the working of the state chancellery in later ʿAbbāsid times, but it will still have served as an example to the chancelleries in Egypt and other countries.

D. Chancelleries in Egypt. Papyri are the main source for the earliest days, and Grohmann has attempted to describe the administration of the provinces from these in From the world of Arabic papyri, 114 ff. Of course, Egypt had no state chancellery at that time, although it did have one for the provinces which dealt with the exchange of letters with the capital. A seal of the conqueror of Egypt, ʿAmr b. al-ʿĀṣ (died ca. 436/653), has survived as an examination. Cliques and intrigues in the dhawān are described by Ibn al-Sayraṭī, in the chancellery of state in the time of the Ayyūbids, but there are a few details in the Rasāʾil of Kāf al-Fāḍil, and in Ibn Māmūṭī, al-Nābulusī, and Ibn Shīḥ. Al-Kāfī al-Fāḍil describes his admission to the dhawān al-inshā' by a stringent examination. Cliques and intrigues in the dhawān are also mentioned. Ibn Shīḥ describes conditions in the province of Syria, and pays special attention to the form of the documents. There is a detailed description of the Tarqgama of the sender; ḍuḏā, Ṽuḏāt, and 'uṣūn are treated in detail, and so is collaboration with other dhawāns.

Our most extensive sources date from Mamlūk times, namely from Shīhāb al-Dīn b. Ṭaṣkıī (d. 749/1349), in his Taʿrīf bi l-mustalakah al-gharīf, and others. His work can thus be regarded as a precursor of an Arabic diplomatic. Amongst the heads of the Dhawān al-inshā', the families of Banū ʿAbd al-Ẓāhir and Banū Fadl al-Malīk became famous and continued to improve their position. The title kāṭib al-sīrīr emerged under ʿAlāʾun, and under Nāṣir Muḥammad b. ʿAlāʾun, the head acquired the right of the tawḥīd al-šaʿr-ashāq, and precedence over the wazir. The number of employees rose with the increasing importance of the office. The higher employees bore the title of kāṭib al-dārādīr, and the others kāṭib al-darādīr. Although their numbers increased, their status in the public eye diminished. The head also succeeded in bringing official mail and the whole of the news service gradually under his control. The spheres of work were the same as under the Fātimids, but they were enlarged and differentiated. Foreign correspondence in particular had grown very much, through contact with almost the whole of the world which was then known. Foreign languages and
interpreters were of importance. The exchange of letters with governors became increasingly complicated as the number of grades, titles and addresses increased. It was, however, at this stage that the number of these became enormous, demanding further written work, and one now distinguishes 5 different grades of officials (cf. C 3 above). The *taωbi'tt al'αlā l-bi'siās* continued, as did a whole group of occasional documents such as contracts, passes, oaths, amnesties etc.

E. Compared with Egypt our knowledge of chancelleries in the other Arab countries, such as the Maghrib and al-Andalus, is somewhat more meagre. In these, the term *sahr* was commonly applied to all documents. Ibn al-Khaṭīb (died 767/1364) became famous with his *Rayhānat al-khuttāb*, which is frequently quoted by Kalkashandi. Cf. below, ii.

7. Probative force of documents. Islamic law accepts only proof brought by witnesses, and rejects written testimony in principle. Nevertheless, in the actual practice of law, documents have achieved great importance. Incidentally, contracts seem to have appeared in writing in Arabia even in pre-Islamic times. The seal (*khdtam*), which is of very long standing in the Orient, was an important means of authentication in Arabic documents. This seal was not replaced, as it was in the West, by the use of a signature, for the document was not valid unless a seal appeared on it, even if it was signed. The Prophet is said to have had a silver seal with the picture of a bull, which is of great importance for the interpretation of documents. A special branch is the emergence of rhymed prose

8. Development of Documents. Petitions and preliminaries also occur amongst Arabic documents. Petitions (*bi'siās*) naturally preceded decisions (*taωbi'tt*), and were the instigation of their formulation. The actual text of the *taωbi'tt* was generally short and to the point, so that mention of the petition was hardly possible. The *fatiMah*, too, was preceded by an investigation, and the state of affairs was described more or less explicitly in a set formula which omitted names. Contracts were often preceded by lengthy negotiations, but there is no mention of these preliminaries in the actual text of the contract.

9. Procedure and authentication, stages of authentication. Of the nine stages of authentication known in Arabic documents, only a few can so far be traced in Arabic ones. Ibn al-Šayrāli (108 f.) mentions revision and correction as *mukabala* and *is.wā*. During the consultation with the ruler, the head of the *diwān* merely indicated the main points of the reply, whilst the reply itself was drawn up by the relevant secretary. Then he compared the reply with the excerpt, corrected omissions and errors if need be (there is also mention of a special corrector = *mu.tașsīf*), and only then did he submit the completed reply to the ruler to be signed. The latter then added his signature (‘alāma), but the address (‘umusān) had to be written by the head of the *diwān* himself, in order to give visible proof that he was aware of the contents and accepted responsibility for it. In order to be put into effect, the document required the *ta.yīn* for the charge of carrying out the decision, which was authorized by the reverse of the *is.wā*; this charge had to be assigned in writing by the head of the *diwān*. According to the rank of the secretary who was ordered to carry this out, it had different phrasing and placing, e.g., *yuκtab bi-dhλλbuka* or *li-yuκtab bi-dhλλbuka* (cf. Kalkashandi, vi, 210). Great attention was obviously paid to the elegance of the fair copy, and the Fātimids had a special fair-copyist (*mu.bayyyid*) who was responsible for all types of documents (cf. Ibn al-Šayrafī, 133 f.). Nothing is said concerning the reading of this fair copy to the ruler, or about its handing over to the addressee.

10. Intercessors and witnesses. The religious intercession (*ṣawāfa*) of the Prophet is well known in Islam. There are also intercessions of a secular nature, such as on the occasion of the handing in of a petition to the ruler, or on standing surety for a debtor. Kalkashandi, ix, 124 gives early and late textual examples, and, in xiii, 328, an *a.mūn* in which the intercessor is referred to as follows: *inna M.b. al-Muṣayyib bi'l-sahr fī 'inda al'mūn wu-dhikara rāqibatūkum fī 'l-khidma*.

11. Model documents for use by scribes. In the West, set forms were always used, from the days of ancient Rome to the end of the Middle Ages. As early as the first century, there are some Arabic papyri which prove that letters and documents were written in a certain set form, and one may therefore assume the presence of models, although none is extant. Later Arabic formularies, the so-called *ins.wā* works, are an independent genre of literature. Of these, three types can be distinguished: 1) collections of models similar to the formularies of the West, 2) treatises on stylistics and rules concerning the drawing up of the documents, similar to the Western *arles* or *summaria dissectionis*, 3) a mixture of both, that is to say, formularies with theoretical commentary, or theological treatises with examples from practice, similar to the ones found in the West from the 12th century onwards. The most important of the many (over 50) Arabic *ins.wā* works are probably the following: al-Šūlī (d. 335/946), *Adab al-khuttāb* (type 2); Abū Ilshāk al-Šabī (d. 384/994), *Rasīd* (type 2); Ibn al-Šayrafī (d. 542/1147), *Kādūn diwān rasīd* (type 2); al-Kāfī al-Šafī (d. 596/1199), *Rasīd* (type 1); Shihāb al-Dīn b. Faḍl Allah (d. 749/1349), *al-Tawfīr bi-l-mu'tašalā al-šarīf* (type 3); al-Kalkashandi (d. 821/1418), *Ṣuḥb al-a'zāq fi šīnd.āt al-λns.wā* (type 3). As examples of preliminary documents, one might perhaps mention those known as *iš.tāb*, which confirmed decisions of earlier rulers. These naturally refer to the older documents, but there is no evidence of a complete list as in the West.

12. Copies. There are many examples of official facsimiles or copies in the West, but I know of no Arabic ones. But there were grounds for them, too, such as the loss of an original, or the accession of a new ruler. There are Arabic examples of illegal imitations or forgeries. As early as Sulī (143), there is mention of forgery from *mīl al'all* to *mīs'all al'all*, which is given as the reason for introducing the *diwān al-khdtam* of the Umayyads. Kalkashandi (xii, 104) writes on Tamlīn al-Dārī's first investiture with land, and Shihāb al-Dīn b. Faḍl Allah (Masālīk, i, 173) claims to have seen the original. This can hardly have been anything other than a forgery. Hamidullah seems to accept the documents attributed to the Prophet as genuine, but some internal evidence would argue against the authenticity of some of them. Concerning forged papyri cf. Grohmann, *Chrestomathie* 35.

13. The language of the documents. Whilst much thorough work has been done on the development of Latin in the Middle Ages, only the main outline of the development of modern literary Arabic from Classical and Middle Arabic is known (cf. *Ārabiyya*). This development is of great importance for the interpretation or documents. A special branch is the emergence of rhymed prose
14. Dating. Just as in the West, dating (taṣārik) brought about several problems. Even the normal ḥaḏira dating offered many possibilities, such as dating according to nights and days, feast-days, parts of the month etc.; but Kalkashandi (vi, 234 ff.) treats no less than 19 older eras and one younger era, that of Yezdegird. Most of them were of little importance. Only the Christian and the Coptic occurred frequently. A special problem was the adjustment between the lunar and the solar year (sana hilāliyya and khurādīyya) for the purposes of taxes. As far back as ʿAbbāsid times, special documents, ḥaḏa wa-ḥaḏa al-sana, were written when the need arose. [see taṣārik].

15. Writing materials. Extensive work has been done on writing materials by papyrologists, the most recent being by Grohmann, (Christomatia 63 ff.). Apart from the usual materials (papyrus up to the 11th century, parchment, paper), there were the rarer materials, such as cloth (especially for marriage contracts), wood, stone, wax, bones and potsherds. Size (ḥāṭ, in Šūlī mudār) also differed greatly, and so did the kinds and the prices. Kalkashandi gives several recipes for the ink (ḥibr, midād). [See AGMENT, Kāḥid, Kirtās, Rīk, Warāk].

16. Script in documents. Although much groundwork has been done by Mortiz, Tisserand, Chetkio, and others there is as yet no full scholarly history of Arabic script (cf. AGMENT). Grohmann investigated the script of the papyri (Christomatia 88-103). As far as later documents are concerned, observation of the peculiarities of different types of script, the use of diacritic marks and differential signs, must suffice in order to decide the age of undated pieces approximately. Certain formulae, numbers, notes on records etc. often appear in a shortened cursive hand which one might almost call shorthand. Grohmann (Christomatia 83) discusses the writing materials, and Kalkashandi (ii, 430) lists no less than 17 terms, the precise meaning of which can hardly be determined in the absence of drawings. Codes and hidden allusions may always have played a part, as in Šūlī (186) (targāma), and Kalkashandi (ix, 239, tašmiyya, later bal al-rumūs). They even occur in a papyrus (Grohmann, Christomatia 103 f.).

17. Sealing. Šūlī (139) and Kalkashandi (iii, 273) were already interested in seals (ḥāṭām). In Europe too the shape and use of Arabic seals has roused a certain amount of interest since Hammer. According to Grohmann (Christomatia 129 f.), one should distinguish between the use of a seal to replace the signature as a means of authentication, the attaching of a seal by way of recognition and ratification, and sealing on the part of witnesses. [See AGMENT].

ii. — Maghrib

In the Maghrib the external characteristics of documents (format, colour of paper, kinds of script, etc.) as well as the choice of protocols and formulae appear always to have been simpler than in the East.

To be mentioned, however, is the introduction by the Moroccan Almohad dynasty (al-Muwaḥḥidūn) of a sign manual of authentication called al-šālāmā. This consisted of the precatory formula wa-l-hamdu li-llāhi wakallāhu wa-llāhī al-ʿamīn, elegant in large, thick letters, with a ligature of the ḥāʾ and the dāl in the final word, and followed by a “terminal sigla” (see below). This mark of authentication was written afterwards at the top of the document, in a broad space left free for this purpose by the scribe, below the basmala and the taṣliyya, of which it was a complement.

Of a “unitarian” nature, this formula was possibly used by the mahdi Ibn Tūmart himself in some of his epistles. His successor ʿAbd al-Muʾmin certainly used it in his famous Risālat al-Fuṣūl (see E. Lévi-Provençal, Documents inédits d’histoire almohade, Arabic text, 13). But it is Ya ḡūb al-Mansūr (580-95/1184-90) whom the Kīrṣās (ed. Fās 1305, 154) considers to have been the first to use this formula as an al-šālāmā and to write it with his own hand. Indeed, it was not until under this ruler that the formula appeared, as a dynastic device, on the Almohad dinars (see Lavoix, Cat. mon. mus.. Espagne et Afrique, 303-308) replacing the earlier formula al-ḥamdu li-llāhī rabbī l-ʾalāmin.

The Almohad Ḥafṣid rulers of Ifrikiya expanded the formula by adding wa-l-ḥakūmah, l-ʾilāhī. Later, the Naṣrids of Granada chose wa-la ʾalāhī illa ʾilāh “and there is no conqueror but God”, very likely in memory of the name of their eponymous ancestor Naṣr (“divine aid which grants victory”). Moreover their first ruler chose the laḥbāb: al-Ghālib bi’llāh.

These two dynastic devices, Ḥafṣid and Naṣrid, appeared as well on their coins and some monuments. Left at first to the ruler himself, the responsibility for inscribing the al-šālāmā was later entrusted to a very
DIPLOMATIC

high confidential official, a kind of head chancellor or keeper of the seal called šāhīb al-ṣālama. It was most often a scholar of great distinction; thus it was that Ibn al-Abbār [q.v.] and Ibn Khalūdūn [q.v.] filled this office at Tunis. According to the importance of the document to be authenticated, it could have an al-ṣālama kubrā or an al-ṣālama suğrā, whose inscription was entrusted to two chancellors of different rank.

In Morocco the use of the Almohad hamdala as al-ṣālama continued to the end of the Saʿdīan dynasty. But it is believed that it became a kind of tracery of arabesques, difficult to decipher, and possibly in imitation of the Turkish tağrā [q.v.]. This very artistic al-ṣālama of the Saʿdīans, for them a sort of coat of arms, is found on their guns, some of their coins, and in the ornament of their palaces. In the last years of the Saʿdīan dynasty as well as the manual al-ṣālama, use was made of a stamp in ink engraved on an oval seal.

The succeeding Moroccan dynasty, that of the ʿAlawīs, abandoned entirely the Almohad al-ṣālama, both manual and stamped. The sole mark of authentication became the ink stamp of a round seal (fība’s), large or small according to the importance of the document, placed below the blank space between the hamdala and the taṣliya.

Yet another particularity of Maghribi diplomatic must be noted. To mark the end of the text in a document, a terminal sigla was placed immediately after the date, consisting of an initial ḥadi with a tail curving towards the right, which it is tempting to read, not without reason, as an abbreviation of the verb intahād (“it is concluded”). In any case it cannot be an abbreviation of the postscript (taʿṣifī) šahh hadīkha or šahīh dīkhā (this is authentic) which appears at the end of diplomas conferring privileges and favours, often written by the ruler in his own hand.

We might add that some Moroccan documents, of the Waṭṭāṣids and Saʿdīans, are dated in “Greek numerals” which also appear on some of their coins, and that the Saʿdīan sultan Ahmad al-Mansūr made “Greek numerals” which also appear on some of their coins, and for the official language and thus provided for its introduction into the chancellery. A similar development took place under the Sāliḥids (see B. Spuler, i, 6; Cusa, I Diplomi greci ed arabi di Sicilia, Palermo 1868; ʿAbd Allâh Gannûn, Rasûlī Saʿdīyâ—Cartas de historia de los Saadies, Tetuan 1373/1954; M. Nehâl, Les systèmes chiffrés, collection of 128 official documents of the Moroccan ʿAlawīid dynasty, in facsimile, Paris 1915. The collection of Sources Inédites de l’histoire du Maroc contains in transcription, as well as plates, numerous Moroccan diplomatic documents.

(P. S. COLIN)

iii. — PERSIA.

The origins of Persian diplomatic are to be found in the period of the foundation of Turkish states in Persian territory. While in the chancelleries of the ʿAbd Allâh and Mawīyâ Sulaymān b. Muḥammad, acquired a solid power of attorney, bayʿa sharīʿa-nâma (deed of sale), waṣīya-nâma (testament), waʿfīb-nâma (act for the establishment of a pious foundation). These documents (ṣādir-lī-sharīʿya) belong primarily to the sphere of competence of the authorities for religious law. In contrast to these, documents containing orders were the exclusive prerogative of the organs of state, executed by the ruler or his
deputies and recorded in the chancellery. In principle an "official document" (farmān) can be found for every expression of the ruler’s will. In practice they may be divided according to contents into the following groups: deeds of appointment, of investiture (iḫṭāʾ, in the Mongol and post-Mongol period: soyyārḫā; musallāmī, tax-exemption; tiyyāl, officeholder’s tit; wasfīa, grants to religious from foundations or state funds; the awarding of a robe of honour, ḥatīrā, etc.), treaties, passports, judicial decisions of the ruler, and orders of a general nature to governors and officials. In the Safavid period the terminology appears to have been still largely undeveloped. In addition to farmān, the most general term, manšūr (manaššīr) refers to documents of the greatest diversity, while others are tablīd, taftūd, tashlīm, miḥāl (amḫīla), and manaššīr-i tablīd or taftūd (see Rieu, Cal. Pers. Ms in the Brit. Mus., London 1879, i, 389; Ethé, Cal. Pers. Ms in the Ind. Off. Library, i, 2131; Muntaghić al-Dīn Badīʿ Alībeg al-Dwuyalī, Sālabat al-kātaba, passim). The expression niqānīn appears in the Timūrid period (see Roemer, Staatsbriefen der Timuridenzeit, Wiesbaden 1952, passim) and is used until the 17th century (see Chardin, Voyages du Chevalier Chardin en Perse, ed. Langlès, Paris 1817, ii, 97). Synonymous with niqānīn is maḥūb, occasionally used in the Timūrid period (Niğām al-Dīn Shāhī, Zaftar-nāma, ed. F. Tauer, ii, 264, index). Decrees were further called ḥukm (Ḥafiẓ-i Abrū/Tauer, Cinque opuscules, 83, index), taḵkī (originally only the signature of the ruler and later his seal as well, see below) or miḥālī (Shāhī/Tauer, ii, 299). The Mongol designation yrīlīq, alone or in the combination ḥukm-ī yrīlīq, remained in use until the end of the 15th century (Shāhī/Tauer, ii, 274). A distinction according to diverse introductory formulae (see below), though not according to contents, appears in the 16th/17th-16th centuries: parvānda and ḥukm with solemn formulae are treated with simpler documents designated by rakām (see H. Busse, Untersuchungen zum islamischen Kanzleiewesen an Hand turkmenischer und safawidischer Urkunden (Abhandlungen des Deutschen Archäologisehen Instituts Kairo, Islamische Reihe, i, 1952), in which acts of submission and authority are not explicitly called miḥāli (miḥālī-i diwān al-ṣadāra: Padapazyan no. 17, 970/1562). In the Kāḏjār period the designations depend upon the issuing authority: only the decrees of the Shah are called farmān; acts of governors of royal origin are called rakām (arkām); those of other governors ḥukm (see Greenfield, Die Verfassung des persischen Staates, Berlin 1904, 135). In less official language, however, almost all of the expressions listed above occur (see S. Beck, Persische Konversationsgrammatik, Heidelberg 1914, ii, 211 ff.).

Distinct from deeds and orders in the strict sense are the letters concerned with domestic and foreign affairs (maḥūb, kāḥbaṭ or risāla). Like the former they are provided with an official attestation and have a fixed external and internal form, but lack a legal content, as for example in the letters confirming friendly relations (ihatūsayyīd). There is a type of letter or document addressed to the provincial governors of the ḫūṣūl (dīyāyīd), condolence (thaʿṣiqat-nāmā), etc. Into the 9th/15th century foreign correspondence, based on a Mongol pattern, preserved in part the form of a decree, from which, however, it tended to depart under the Ṣafawīs in the 11th/17th century. Owing to their legal contents “border-books” (nimūr-nāmā, examples in Evoğlu Haydar, İnşāh, see Rieu, i, 390) approach the form of decrees. The same may be said of letters-patent for envoys. Letters from the royal hand (dastḵᵛāšt-i ḫumāyīn or muḥbrāt), the highest in rank, assume a middle position between documents and other writings, their contents ranging from the personal execution of an act by the ruler to confidential communications.

The internal structure of documents and writings has in the course of nine hundred years of Persian chancellery history scarcely changed—that is, until modern times. The documents begin with an invocation to God (mawṣūla) frequently combined with a devotional ejaculation (compare the phrase in maḥbūl l’iḫṭāʾ). These formulae, together with the formula of promulgation, the arenga and the narratio, constitute the protocol, which is followed by the most important part of the document, the dispositio. In the arenga the execution of the document in general terms, mostly of a religious character, is established, partly by the abundant use of Kurānic citations, and reused as a spiritual analogy. Here, in contrast to other parts of the document which are bound by more rigid formulae, the writer is free to display his literary talent. Evidence of this art is to be found, however, in pronounced form more frequently in ṣināḥ works than in original documents. The narratio on the other hand contains the essential transaction, for the most part a report of the proposition (ʿardā-dāḏa) of the petitioner, while in documents of confirmation the proposed act, or, depending upon the affair in question, several acts are included completely or in their most important parts (insertio). In the narratio appear for the first time the name and title of the addressee, who is always referred to in the third person, and afterwards only by maḥšūr, maḥsūrī, maḥšūrī ʾlāyhi and maḵmūl ʾlāyhi. The full titles can, in artistic combinations with ṣanāʿ wa ṣanāʿat, be extended for several lines. The formulae of promulgation (such as farsandān wa usurā ... bi-dāndān ki) are placed before the arenga or narratio, but can be omitted. The arenga closes frequently with the phrase ammā baʿdāʾ.

The nucleus of the document is the dispostio, or decision of the ruler: in appointments and investitures the office and the date of the nomination or object of the investiture are given in more detail (circumscriptio), while in other acts the decision or command is set forth. The dispositio is expressed in either active (that is, the ruler refers to himself in the first person plural: muḵkār barjamān wa arsāni ḏaḏṣīm) or passive form, (muḵkār rafīʿīda ʾšūd ki). Vestiges of an original first person singular were preserved in isolated phrases into the 17th-18th centuries: ʾšūd bībām, ḏuḏḏ-i baṣūrgudram (accompanied by blessings). The transition from the narratio to the dispositio is accomplished by means of set formulae: frequently bīnāʾlān ʾalāyhi, bīnāʾ bar in, ḥāḏāḏa, or mi-bāyād ki. To the dispositio in cases of appointments and investitures, prescriptions (adhortatio) for the addressee or officials and persons concerned might be added, usually introduced by sabīl wa ṣarīḥ. In contrast to the formulae of promulgation, where the highest dignitaries are named first, they appear here at the end. To the accoutants (al-bukāʿīyān) are often directed to register the document (dār dafīr rasmāl ṣamāl namāyend). Finally a prohibition might follow, forbidding the annual request for a renewal, with the directive “may this apply in all similar cases”. Except for the insocratia all of these parts which precede and succeed the dispositio may be omitted, in which case the document consists only of the dispositio. Most frequently, however, the order
is narratio—dispositio—conclusion (date etc.). In this case the entire text is included between ... to his coronation (8 March 1736; the nominal ruler was the Safawid cAbbas III, 1732-6) contained the phrase farmdn-i 

names of the months appear with their customary n.s. xiv, 222) or ed. Jahn, The day of fi. tahrir

dispositio. In the sitio).

In the ioth/i6th centuries, to the right below the text and later disappearing altogether. Similarly, until the end of the 9th/10th century the place of issue was named after the date: ba-madām, ba-madina or ba-dār al-saltana. With some exceptions this later disappears. In Turcoman documents, beneath the date and place name, is an apprēciatio: rabbi šītām bi'l-khāyrib wālī�bālī (see Busse, Untersuchungen, no. 2). In the 10th/16th century this phrase was moved to the right-hand margin and shortened to ḥūtima bi'l-khāyir or ḥūtimā, later disappearing altogether. Similarly, until the end of the 9th/10th and beginning of the 10th/16th centuries, to the right below the text and perpendicular to it, was a reference to the secretary and other officials who might have participated in the preparation of the text: parawndn-yi aqrāf-fa ʿlīd, ba-risalā (name), ba-awnlī (name). From the beginning of the 11th/17th century this remark can be found in altered form on the reverse side of the document (see below).

The external form of the documents has been more subject to change than the internal form. The periods of modification are roughly the following: Pre-Mongol—Mongol—Timurid and Turcoman—Safawid to the beginning of the 14th/20th century. The tughrā—[q.v.]—was employed by the Baldānūs and the rulers of Khāzīm (in ʿAtabat al-kalaba a wawir-ī tughrā mentioned, no. 16; for Khāzīm see al-Nasawi, Strat al-sūtān Djalāl al-Dīn Māngıbārdā, ed. Hāfīz Ahmad Ḣamdī, Cairo 1953, 324). While here they consisted evidently only of the name and titles of the ruler, in the Mongol period was added, in addition to bābdār (after 1219, see Spuler, Mongolen, 197 and 271), after the name the phrase ṣūrā manšū ("an order from us"). In Timūr's documents the phrase reads in Turkish translation: Timur gūrkān sōṣūmū (see Fekete, Arbeiten der germanischen Orien- 
talistik auf dem Gebiet der türkischen und persischen Paläographie und die Frage der Formel sōṣūmū, in AO Hung. vii (1957), i, 14). In this form the tughrā was preserved on particular documents throughout the Turcoman period into the 11th/17th century, and it was employed by the khāns of Būgārā as well as by the Golden Horde in southern Russia (see Fekete, op. cit., 14). In Aḵ Ḵoynūlu documents the tughrā is combined with the ʿaḏmar ḥaša which appears on their coinage (see Hinz, Irans Aufstieg zum Nationalstaat im fünfzehnten Jahrhundert, Berlin and Leipzig 1936, 106 and the illustration opposite 104). An innovation for the world of Islam was the Uyghur practice introduced by the Mongols of indenting the first lines of the text, as well as emphasizing (owing indirectly to Far Eastern influence) the term and the word yardīg by beginning a new line (see Busse, Die Entwicklung der Staatsurkunde in Zentralasiien und Persien von den Mongolen bis zu den Safawiden, in Akten des XXIV. Internationalen Orientalisten-
kongresses München, Wiesbaden (1959), 372-4). With insignificant changes this usage can be observed as late as the 13th/18th century in documents with a tughrā, from which it was also extended to other documents. During the rule of the Saʿfawī Ismāʿīl I (1501-24) the tughrā disappeared from certain documents, though the first two lines of the text continued to be indented. The seal, earlier at the bottom of the document, came generally to be placed at the top (where it is still, in the form of a crest). There was a new development under the second Saʿfawī ʿAbbās I (1524-76), in that the tughrā, written by the head of the chancellery (munšī al-mamlīk), was written in red ink in two forms as an introductory phrase (while the indenting of the first two lines was dropped): farmān-i humāyūn ʿṣūd and farmān-i humāyūn šarāf-i nāṣirī yiḏl. At the beginning of the 11th/ 
17th century was added the phrase (written in black ink by the sāḥīb-i-nawīs, equivalent to the μαχίσης 
Niwas or wasir-i lāp): ḥuṅm-i ḡiāhān-muʾādī ḍūd. In documents of the divān begi the same formula appears in red ink (see Tadhkirat al-Mulūk, ed. and tr. V. Minorsky, London 1943, fol. 21b, 24b, 40a). A further differentiation had already begun to develop (the first example in Papazyan no. 3, 866/ 1462), in that the tughrā in documents emanating from members of the royal family had instead of sōṣūmū the term sōṣūm ("my order"), to be found up to the end of the 10th/16th century (see Puturidze no. 17, 1992). There appeared further in the 10th/ 16th century in the documents of governors the formula amr-i ʿṣūd ḍūd (also in combination with the tughrā containing sōṣūm: Puturidze no. 76, 1051/1643), and in the 11th/17th century mukarrar as kt. Under Ismāʿīl II (1576-77) the phrase amr-i diwān-i aqrāf-fa ʿlīd was used in certain decrees (Papazyan no. 19, 984/1577). Documents of the authorities in the central government bore in the post-Safawid period. The formula farmān-i 
humāyūn ʿṣūd continued to appear in the acts of the Afšarīs, though combined with baʿdawān Allāh ʿawdāl (later aʿūdhu biʾllāh ʿawdāl), while the strokes of the letters were curved into an artistic shape similar to a row of treble clefs. In Kāḏarīr documents is the phrase ḥuṅm-i diwān-i aqrāf-fa ʿlīd (with al-mulāk iliʾlāh ʿawdāl), while in the acts of Muḥṣafar al-Dīn Shāh (1856-1907) farmān-i humāyūn ʿṣūd reappear (see Beck, Am-mamlīk ii, 349-3 and note) and in red or gold ink was preserved. The phrase ḥuṅmī- 
ḏiwaṅ-muʾādī ḍūd (without additions) appears even in the late Afšarī and in some Zand documents, retaining the same simple form of the Safawīd period. The acts of Nādīr Shāh prior to his coronation (8 March 1736; the nominal ruler was the Saʿfawī ʿAbbās III, 1732-6) contained the phrase farmān-i
Al'Ali Mardán Khán, also unofficially Shah, employed the introductory phrase ḥukm-i wāllā ḍud (without additions) in the 9th/i5th century though with an interlinear introductory phrase ḥukm-i wḏld shud, which with this phrase were executed completely in black. The use of coloured inks was dropped also in the documents emanating from provincial authorities. In writing, a large margin was left at the top and on the right, in which only words to be stressed were written. The lines rise, especially in the early period, slightly to the left; occasionally, in order to prevent later insertions, the last word of the line was extended to reach the left-hand edge of the paper. Until the end of the 9th/15th century the beginning of the disputation (muhammad) or signet rings, were occasionally used in the place of which there were tendencies under Ismâ‘īl I, the long overdue designation muhr. Shâh Ismâ‘îl included in his edicts the phrase huwa Allâh al-‘ādîl (Papazyan no. 19, 984/1577), though it was an exception; in principle the seal was enough. Not until the Kâdîr period did the seal require a countersign (tughra) by the Shah (see Greenfield, op. cit., 197; Beck, op. cit., facsimile: sakha below the first line). The ruler’s seal was originally at the bottom of the document. The Mongol square seal was also used on paste-joints, in order to preclude the possibility of later insertions, though in the 9th/15th century the seal appeared only at the bottom (see Kurat, op. cit., 29). At the beginning of the Safavid period, in acts of the ruler and those of the central government, the seal was put in the place of the tughra at the top of the document. In the decrees of governors with the tughra: ḥukm-i ‘āli ḍud, the seal remained at the end, while those governors who were princes placed their seals to the right of the tughra (similar to the paper of the Ottoman viziers). Correspondence (makhâbbâ‘) was sealed by the seal of the Carmelites in Persia and the Papal mission of the XVIIth and XVIIIth centuries, 2 vols., London 1939, plate opposite 95 in vol. i). In the Mongol chancellery seals for the various affairs of state were stamped in different colours, such as blue, red (or gold), green, and black (see Spuler, Mongolen, 293). For the square seal still to some extent used by the Timūrids, gold ink was employed; later all seals were stamped in black. In addition to square seals (Ghâzân Khán had introduced different kinds of seals for the different branches of government; see Rashâd al-Dîn, ed. Jahn, 292) the Timūrids also had round seals, often stamped at the top of the document (see J. Deny, Un soyurgal du Timouride Shah Rûkah en écriture ouïgûre, in JA 245 (1957), 253-56). The use of different seals for different kinds of documents, of which there were tendencies under Ismâ‘îl I, reached full development in the later 9th/15th century: "great" seals (mehr-i sharaf-i nafâḏâgh and mühr-i humâyûn) were used in documents with the introductory formulae farmān-i humâyûn sharaf-i nafâḏâgh yâfî and farmān-i humâyûn ḍuḏ, while "small" seals (mehr-i anqaleh-i āfāb āfāb), or signet rings, were used for documents with ḥukm-i dihâqān mu‘ādh ḍuḏ. The inscription in the large seals partly contained the names of the twelve imāms, that in the
small seals contained only the ruler's name, frequently combined with the title banda-yi shah-i wilayat (servant of the king of holiness, that is, 'Ali). Chardin gives evidence also of a square seal (Plate XXXI, and shir wa khurshid) and small (oval) seals are still to be found in the Kâdîr period (plates in Rabino di Borgomale, Coins, medals and seals of the Shahs of Iran, 1500-1547, place of publication not given, 1945, plate 3). The seals of the ruler were later for the most part rectangular with an upper extension in the shape of a roof. The lion and sun (shir wa khârgâh) appears in the seal as early as 1159/1746 (Chubua, no. 47). Large (rectangular with extension) and small (oval) seals are still to be found in the Kâdîr period (plates in Rabino, op. cit., 4). The governors' seals were in the Safawid period mostly rectangular or oval (some isolated examples are round) with inscriptions containing the name of the office-holder and a religious device. These were also employed during the Safawid period a special round "diwân-seal" (muhr-i musawwada-yi diwân-i a'ld). Originally in the custody of the keeper of the seal (muhr-i dâr), the seals passed in the early Safawid period into the safe-keeping of harem officials (see Roemer, Der Niedergang Iran's nach dem Tode Isma'il des Safawidenkönigs, Würzburg 1939, 44), in whose protection they remained in the later Safawid period. The actual sealing was executed by officials with the title dawât-dâr (see DAWÂR), while the keepers of the seal placed only a small stamp on the reverse side (see Tadhkirit al-Mulîh, ed. Minorsky, fol. 414 ff.).

Before delivery to the addressees the documents were sent through different departments of the financial administration (dawât khâna-yi humâyûn a'ld), where high officials supplied flourishes and seals, and other officials confirmed the entry of the documents in various registers (dawât, dâ'âsîr) by means of seals and annotations (muhr wa khatt) (other than for example in the Ottoman administration, where these remarks were placed on the draft, that is, as mere bookkeeping comments; see Fekte, Die Siyaqat-Schrift in der türkischen Finanzverwaltung, Budapest 1955, 67, 68 note 2). While flourishes evidence also a square seal (Plate in XXI, and decrees for example, between the last lines (see Grohmnn in RSO, xxxi (1957), 641-54), in Persia they appear early on the reverse side from and written in a direction perpendicular to that of the text. This procedure was already to be found in Ilkhan documents (see Cleaves in HJAS, xiv (1951), 493-526). In this respect Ghâzân Khân also introduced obligatory prescriptions (see Rashid al-Din, ed. Iahn, 291-6). A series of seals and impressions are also to be found on Timurid (see Deny, op. cit.), Turcoman and early Safawid documents (see Busse, Untersuchungen, 77 ff.). A definitive system was introduced at the beginning of the 11th/17th century and remained substantially in effect until the end of the Kâdîr period. The flourishes consist of a religious device (for example, lauakhâlu 'alâ'âhik), while the registration comments contain a reference to the nature of the business, the fiscal year, the registration comments (dawât-i daftar-i daftar-i gaan-i a'ld shud ("it has been entered in the outgoing register of the high diwan"), or simply sahâ ("correct"). In the later Safawid period flourishes and seals were applied to all documents by the grand vizier (t'immâd al-dawla), by the sadr and officials who belonged to the arkhân-i dawlat, such as the kure'il bashk andULLar abâst, on documents which fell within their jurisdiction, while registration comments and seals were applied by the musawwâf al-mamâlih (or—hâssâa), laqshar-niûs, shah-dâ'âshik, darâ-âh-khâna-yi a'ld, darâ-âh-khâna-yi dawât-khâna-yi a'ld, and others. The documents were brought first to the musawwâf, then circulated in the various departments, returning finally to the musawwâf. The registration comments of the imperial officials (sârkhân-i mamâlih) differed from those of the officials for the royal domain (sârkhân-i hâssâa-yi sharfa) in composition: for example ba-nâfar rasîd (imperial), nasrâ'î (green ink, royal domain). In contrast to those documents which were registered in the dawât-khâna (arkân-i dawât), are those which were not registered (arkân-i bayâdî) because they did not concern the financial administration or because they were to be kept secret (see Tadhkirit al-Mulîh, fol. 42b; and Busse, Untersuchungen, 79).

The documentary commission was given orally by the ruler or a high official directly, or in writing by way of the "relator", to the chancellery. The actual process was then, even in the Mongol period, entered on the document (see Hinz, Die Resâld-yi Falakiyyd des 'Abdolldh ibn Mohammad ibn Kiyd al-Mazandarani, Wiesbaden 1952, fol. 444 ff.). In Turcoman documents into the 10th/16th century the annotation was placed on the lower right-hand front (see above), but from the beginning of the 11th/17th century it is to be found on the reverse side: in an oral commission from the ruler ba'tl-muhâjdâ al-'alîya al-âlîya, otherwise huwa bâsâb al-amr al-a'ld. In the latter case beneath this formula the relator was named: as kârâr-i niwâsî . . . when the relator was the grand vizier; otherwise ba-ridâl. The phrase bâsâb al-amr al-a'ld was omitted when the grand vizier or another official had given the commission (see Busse, Untersuchungen, 69 ff.). In post-Safawid documents such annotations appear to have been omitted. After all of the formalities had been seen to the documents were rolled together with the writing inside and pressed flat. Letters to foreign rulers were often sent in richly ornamented covers of brocade, protected against unauthorized view by a special seal.

In the early period documents and correspondence were prepared in the imperial chancellery (dâr al-inshâ', diwân al-rasâ'i) under the authority of the muntîh al-mamâlih. From the 11th/17th century on, documents with the introductory formula (tughra) bukm-i gâshân-mulâs shud (in black ink) were executed in the chancellery of the wâsh'a-niûs, who was also responsible for letters addressed to foreign princes. There was also a subdivision in the jurisdiction for the empire and for the royal domain: documents relating to imperial affairs (with the introductory formulae farmân-i humâyûn sharfa-i nasîfâd yâft and farmân-i humâyûn shud) were prepared by the muntîh al-mamâlih, those for the royal domain by the wâsh'a-niûs. In addition to these two authorities separate departments of the dawât-khâna were also authorized to execute documents, in the Safawid period for example, the laqshar-niûs, and the secretaries of the abâst, tubâ'î bashk, tufangtî bashk, and others. These documents contained no introductory formulae (tughra). The provincial authorities had their own chancellories. Solemn documents were independent pieces of writing; on less important occasions, though the other formalities were preserved (seal, tughra), the resolution was placed in the upper margin of the petition (t'arâm-dâkh). Supplementary
Remarks and additions by subordinate officials were until the 9th/10th century written between the lines, later in the right hand margin (with the phrase mukarrar and kiss and seal). In solemne edicts the ruler could make additions in his own hand (khatḵīya baḵšiḵt-i muḏbārā). In addition to the Persian section there were, as was mentioned before, in the chancellery departments for foreign languages as early as the Ghaznavids. Especially comprehensive in this respect, corresponding to the many nationalities involved, was the Ilghānūd chancellery (see H. Busse, Die persische Geheimkanzlei im Mittelalter, in West-östliche Abhandlungen, Wiesbaden 1954, 345). The Timūrids corresponded with the Ottomans partly in Arabic and partly in Eastern Turkish (Rieu, i, 389; Kurat, op. cit., 195 ff.), the Šafawīd in Ottoman Turkish (see Fekete, Iran Šahārīnī iki türke məktəb, in TM, v (1935), 269-74). During the Ḷāḏārī period French became the principal foreign language of the chancellery, a position which it has preserved.

Original deeds and deeds of confirmation may be distinguished according to the occasion of their issue. Confirmations were necessary upon the death of the incumbents of hereditary offices and fiefs, and general upon a change of government. The prohibition at the conclusion of many documents "a renewal (lagiḏīd) shall not be requested annulment (muḍur tawāṣer) was very likely of a precautionary nature. In practice an annual renewal does not seem to have been customary. For practical reasons possessors of documents might have issued verified copies of these which carried the same degree of authority as the originals. Edicts which concerned larger groups of people or the population of an entire community were frequently posted in the form of inscriptions in public buildings and places (see Barthold/Hinz, Die persische Inschrift an der Mauer der Manucehr-Moschee zu Amīn, in ZDMG, ci (1951), 241-69; and Hinz, Steuerinschriften aus dem mittalterlichen Vorderen Orient, in Belleth., xii (1949), 745-69).

The oldest original documents preserved belong to the Ilghān period (largely Mongol letters to European princes). Some Persian documents of the 8th/14th and 9th/15th centuries are related to Persia (and bordering territories), and in European archives and museums. Only Šafawīd and later documents have been found in greater quantity. Especially rich in this respect are Georgian (M. Čušua, Persidskije firmānt i uštā Muzeya Grusti, i, Tbilisi 1949; and V. S. Puturidze, Gurisu-persidskie istoricheskie dokumenti, Tbilisi 1955) and Armenian sources (A. D. Papazyan, Persidskie dokumenti matenadarana, 2 vols., Erivan 1956-60). A small collection of Šafawīd documents (of which two are Turcoman) is located in the British Museum (Rieu, Suppl. 252-60, the greater part having been published by Busse, Untersuchungen). Isolated documents and letters are to be found in the Vatican (A Chronicle of the Carmelites in Persia, Appendix B) and in Italian archives (see F. Gabrieli, Relazioni tra lo scia’ Abbās i Granduchi di Toscana Ferdinando I e Cosimo II, in Rend. Lincei, 1949), in Poland (H. S. Szpszal, Wyobrazenia swietych mużalmanskich, Wilna 1934, 26-48), in Sweden (see K. V. Zettersten, Türkische, tatarische and persische Urkunden im Schwedischen Reichsarchiv, Uppsala 1945), in Austria (Vienna), and in Germany (Dresden, see Fekete, Iran Šahārīnīn . . .). In Persia there are large and small collections in private archives in Teheran (Huṣayn Šahābī, Muḥammad Farḥād Muṭʿamīd, Khan Malik and Tabriz (Muḥammad and Ḫursayn Āḏā Nāḥḵūdwaṇ), other collections in the Archaeological Museum in Teheran, in the Chihil-Sūṭn pavilion in Isfahān, in the Armenian church in New Šuflā, and in the Sanctuary Library (kiṭāb-khāna-yi āstānā) in Maḡāhād. In Germany there is a small collection of documents, assembled in 1938-9 by Wilhelm Eilers (Würzburg) in Persia (original documents and copies of inscriptions), in the possession of Hans R. Roemer (Mainz). In two articles the latter has brought together the material known up to 1957: Vorschläge für die Sammlung von Urkunden der islamischen Geschichte Persiens, in ZDMG, civ (1954), 392-70; and Über Urkunden zur Geschichte Aegyptens und Persiens in islamischer Zeit, in ZDMG, civ (1957), 519-38.

the pattern brought by Asiatic Turks who in turn followed diplomatic models that were developed by the states of Central Asia, thus presenting a blend of Uyghur and Chinese traditions. On the other hand its organization was largely based on European practice, especially that established by the Byzantine Empire. The Tatar documents (those of the Golden Horde and of the Crimean Tatars) mainly followed Central Asian models and showed influence of Uyghur and indirectly of Chinese diplomatic usage. This fact is evidenced by Persian documents dating from the 16th to 17th century which use the titles of the type of the sūmūsūsū (see L. Fekete, "Arte de la grusinisch-Amerikanisch auf dem Gebiete der türkischen und persischen Palaeographie und die Frage der Formel "sūmūsūsū", in AOHung., vii, 1, 1937). The documents of Ottoman Turkey from the 15th century represent a set of more or less consistent patterns (see F. Kraelitz-Greifenhorst, in STAK Wien 1921 and TOEM, xxviii, P. Wittek, in WZKM, 1937). The documents, their general names being ērūbāk or ṣētwāk, were issued by the chancellor's office of the Sublime Porte; solemn public documents proclaimed by sultans or announced by viziers were issued by the office of the so-called beylik or beylik belami, a special department of the central office of the Porte, formally known as ḍawān-i khamūdān belami. The secretary, the scribe and the official in charge of the whole department (byelik) attached those of their signatures to the documents, before they were sent to the reis efendi for his stamp (the resit). More important deeds were checked by the nishdndj or to be had to bear his tughra, in the office of takwil documents such as letters of appointments, proclamations and letters-patent were renewed or ratified. The documents called tekhkeree were issued by the office of the ḍawān-i khamūdān belami, and those of the fisc were made out by the clerks of the defterdar. Officials of lower rank in the capital as well as in the provinces had their own secretariats and were endowed with the authority to issue their own documents (see J. Hammer, Staatsverfassung und Staatsverwaltung des osman. Reichs, Wien, 1815; I. H. Uzunçarşılı, Osmanlı devleti teskildi, 1945, and also Beylik above).

The body of a Turkish document shows a great similarity to a European document. It is quite probable that its form and shape were imitated from the Byzantine model. The Turkish document can be divided into two parts; the first (the opening and concluding formula) bears the character of protocol while the middle part contains the essential text. There are particular formularies which are also found in any Turkish document: ērūkān: (1) āvātsī, being an invocation composed of the formula containing the name of governor (the Bey's name). This would range from the simplest huwa to the longest titles (numerous examples are quoted by Fr. Kraelitz, Osmanische Urkunden in türkischer Sprache, in STAK Wien 1921). A little space that follows the initial formula sometimes to the right hand side (in the documents issued by the Sultan only) is succeeded by (2) tughra, the device or the sign of the Sultan, named also nisān-i humāyūn, tevkī, or 'ālamī, and of different design for each sultan. This device contains the name of the Sultan and all his titles and other distinctions with the formula muṣafir daʾūmā. All this is encased in an ornamental design, always with the same motifs and shape. The tughra was drawn and painted with particular care by a clerk specially assigned to this work, the tughra-keş. It was made in colours. The origin of tughra is not certain (see I. H. Uzuńçarşılı, in Belleten v, 1941; P. Wittek, in Byzantion xvii, 1946 and xx, 1956; F. Kraelitz-Greifenhorst, in MOG i; F. Babinger, Sarre-Festschrift 1925; P. Miyatev, Tugrite na osmanskite sultani ot XV-XVII w. in Godischiq na povod ttorne narodna biblioteka i muzei 1537—1739, Sofia 1940; E. Kühnel, Die osmanische Tugra, Wiesbaden 1955; and TUGRA). The documents issued by higher officials bore instead of the tughra another sign, the penče. It was usually placed not at the beginning but on the left hand or right hand margin or at the foot of the scroll. It was made in colours. It was called incorrectly tughra (see F. Kraelitz-Greifenhorst, Studien zur osmanischen Urkundenlehre, i; Die Handfeste (Pensê) der osmanischen Wesire, in MOG, ii). (3) The ṣennâm, that is, the title of the person in whose name the document was made, was, especially in sultanic documents, of considerable length and worded in solemn form beginning with the traditional benki... (see Orgn Zariit, Tugralarda el muṣafir daʾūmā duası ve Sahnı umursı, Türk Tarih, arkeol. ve etnogr. dergisı, Istanbul 1949). (4) The inscription or the title of the person to whom the document was addressed (elkib), especially in documents of great importance, was also very long, and was introduced with the formula sen ki or hâli. Beside the name and titles of the addressee it contained (as regards Christian rulers) certain long-established formularies, e.g., "the paragon of the highest princes of Jesus", "the second of the illustrious dignitaries of the people of Messiah", etc. The addressee's name was followed by (5) dušī, e.g., by a brief clause expressing the good wishes of the sender, an equivalent to a certain extent of a salutation in European documents. If the person addressed was a Muslim the clause contained also a blessing, an invocation to Allah for protection over his person, etc. If the letter was addressed to a Christian, this formula would contain
an allusively worded hope for his future conversion to Islam, e.g., *Muqimiat 'awdkh bila-bi'ây, see J. Östrup, Orientalische Heilighkeitsformeln, Copenhagen 1927, 55-6* (German tr., Orbis Theol. Orient., Leipzig 1929). The *dûlî* concludes the introductory part of the protocol. The transition to the contents proper of the document is achieved through a special expression, e.g., “when this writing comes to your hand, let be known that”, then follows (b) *nâkî-i *iblîk or *taqîr, that is the main body of the letter or document which tells of the reasons for writing it, of favours bestowed or letters which have preceded it, sometimes introduced by means of the areng, i.e., excuses and apologies that would occasionally contain a quotation from the Kûrân, or a proverb, etc. In documents dispatched to foreign rulers no distinction is made between the narrative part and the succeeding one, which is (7) a dispositio with the opening words *bism Kom or *emr. This bears the main decision or resolution, either being strengthened by the use of the word te'kid and the formula, such as for instance *gâyôle *bilestî together with *la.net, a threat of punishment in case of disobedience to orders (in relation to superior authorities). Then follows (8) an attesting formula, corresponding to the European: *corboratoras as bîs takûkh bilûb, *i'timad *kîlastî. The dating or (9) *taqîr is marked by means of an Arabic formula, e.g., *tâhir**â** fi. Then comes (10) *gûrra, the last one, *sulûd, the middle of the month, *munasafl, to indicate particular months abbreviations are used. This rule is followed in documents written in the *siyqâkat* script. From the abbreviated forms the names of the quarters of the year are made (the first is *mûshir, the second *revedî, the third *reveden and the fourth *lebâlah) see J. H. Mordtmann, in *Isr, ix; F. Krae litz-Greifenhorst, in *Isr, viii; J. Mayr, *Armenische Handschriften, in *Hand worried.* H. Sabanovi, *Irâzi evâl ii, evasisi evâhî ve datamima turkîs spomênikâ, in *Prilozi za Orientalnu *filologiju, i, 1950. (10) The place of promulgation or announcement comes after the date and here the usual formula is *be-mêkâm-i . . . Then the name of the town is given (sometimes accompanied with an appropriate epithet), which frequently is descriptively defined. If the writing was made out on a journey or in camp, the phrase *be *yûrî is used. Last comes (11) the seal *mûshir, *kahlem, serving to attest the document. It is impressed in China ink on the moistened paper. The seal is of various sizes and shapes, round, oval, square, polygonal etc. It contains the name of the writer, religious formulae and ornamental elements (see 1. H. Uzuncarshî, in *Belleten*, iv, 1940; also *mûshir). On the front page of the writing or on its back there are attached various attesting formulae for ensuring its validity, e.g., *sh (= *sakht) inserted by the officials of the chancellorry to attest to the authenticity and correctness of the document. There frequently occur abbreviated forms of certain terms, e.g., *m in the meaning of *mer-kâm (= mentioned), *la instead of *Allîh, etc.

As a matter of course documents of the Turkish chancery were written in the vernacular (in Turkish), but there are also other documents in Greek, Old Slavonic (Cyrillic characters), Hungarian, with the genuine *tughra or *pînê attached to them. Sometimes a translation in Italian, Polish etc. accompanied the Turkish text, or its transcription in Latin, Greek or Armenian characters. The documents of the Kazan Khâns and those of the Golden Horde that were dispatched to the sultans in the 15th century were written in the Uygur language and bore the specific characteristics of Central Asian diplomatic documents.

Turkish diplomatic practice led to the development of a specific formula for writing more formal and solemn documents. The left hand side of each line was rounded upward and resembled a sabre with a curved point. For the sake of more intricate ornamen- tation the last letter in each line was inscribed in oval shape (usually *nân, *rî or *îlî). The script used was the *dîwânî, also known as *te'nêî* in its various forms (see under *mattî). Not infrequently the in- vocation would be written in *tâhîlu* while the rest of the text would be written in the *dîwânî characters. Documents signed by inferior officials were written in *neskhi and *dâwânî (see Mahmut Yazar, Eski yazlar okuma anahtars, Istanbul, 1942). Fiscal documents were written in the *siyqâkat* characters which are very difficult to read (see L. Fekete, *Die Siyqâkat-Schrift in der türkischen Finanzverwaltung, i-li, Budapest 1955; N. Popov, Paleografski osobnosti na cislitelnite imena v pismoto *siyqâkat*, Sofia, 1955).

Official papers are usually written with a rather broad margin (kendr) on the right hand side. It is covered with notes and remarks (der kendr), suggesting the main points to be worked into the body of the answer.

The usual ink used for writing was black China ink; in some words the black letters were covered with gold dust (altln rig or rîh).

Waxpaper, frequently imported from Italy, with watermarks was used (see F. Babinger, in *OM*, xi, 1931). The sheets were of elongated rectangular shape about 50 cm. long and 20 cm. wide; the letters of sultans, solemn acts of alliance were at times several metres long.

Generally the document was folded in pleats breadthwise so that when unfolded itould unfold the introductory text and the forms of courtesy etc. would be the first to be read. Longer documents were rolled up like scrolls. Each document was kept in a satin bag, *kise, tied up and having a slip of paper sticking out that contained the address or *bula.b.

Copies (sürel) were made and sewn together into files (mangulâd). They would contain the bare text only, with no remarks, notes, *tughra, or stamp. The legal formula which was usually placed on the right side close to the first lines of the text stated (usually in Arabic) the conformity of the copy with the original and was called *imdâd or *te'nêîâî *îdâdî (see F. Krae litz-Greifenhorst, *Legalisierungsmethoden in Abschriften osmanischer kaiserlicher Erlasse und Handschriften, in *MOG*, ii, 1926). In order to indicate that this was a copy only and not an original, additional phrases were used as *yasâlîhâ, gendirilidîh, irad ulunâ. Also registers of documents were kept with entries which contained transcripts or summaries, the so-called *defer or *siyâfil.

The development of the style and phraseology of the Turkish diplomatic document continued till about the 17th century, when the forms crystallized and acquired their uniform character. In the 19th century the lettering looked exactly like print.
style and wording of Turkish documents had their effect upon the somewhat different tradition and usage of the Crimean Tatars, as they also left their mark upon Persian diplomatic practice. A certain number of letters sent out by the Chancellor's office of the Persian pādēghās in the 17th and 18th centuries were written in Turkish (see L. Fekete, in Türkçâyet Mecmuası, v, 1936).

The copies of the documents and incoming correspondence were kept in special offices from which Turkish archives later developed (see Băsvekall Aşşvi and F. Bajraktareviç, Glavni arhiv u Sarajevu; i s p i s t i t i u n e ga u Pribosu za orijentalnu filologiju i istoriju Jugosl. naroda, vi-vii, Sarajev 1958).

Numerous Turkish documents are extant in the countries once forming part of the Turkish Empire—

in Egypt (see J. Deny, Sommaire des Archives turques du Caire, Cairo 1930, Tûnisia (see (R. Mantrac, in Les Cahiers de Tunisie, 1957, 34 ff.); Budapest 1926, with an introduction by A. Zajâczkowski and Jan Reychman: Historia diplomatiei turco-osmanskiej. An English version of this book, under the title: A manual of Turkish Diplomats, revised and considerably enlarged, is in the press.

In 1938 a Rumanian scholar M. Guboglu published a new book: Paleografia, și diplomaică turco-osmană, Bucharest 1959, which, beside the facsimiles contains 203 Turkish documents from Rumanian archives.

In the book the author gives new and useful information on the subject of Turkish diplomatica turco-osmanica, diplomatica turco-osmanica, and
diplomats.

DIPLOMATIC — DlR

completely defeated and the Mihtar Aman al-Mulk of Citral acquired great influence in Dir. Muhammad Sharif Khan had to take refuge in Swat [q.v.] with whom he maintained concord, but he was constantly at war. He made several unsuccessful attempts to regain from Amān al-Mulk his territory, which in 1890 was conquered by the adventurer, Umra Khan, chief of Dīandol. Five years later in 1313/1895, Muhammad Shārif Khan succeeded with the moral and material backing of the British forces, in regaining Dir and even capturing Shir Aftāl, proceeder to the throne of Citral.

In 1897 the title of Nawāb was conferred on Muhammad Sharif Khan who had, the same year, annexed a part of the upper Swat territory, the old enemy of his House. This title was, in all probability, conferred on him in recognition of his services to the British in dissuading the Dir tribes from participating in the jihād which Mūllā Sa‘d Allah Khān of Bunēr, nicknamed Sartor (crazy) Fakir, had launched against the alien government. A close ally of the British Government, in receipt of an annual allowance amounting to 26,000 rupees, Muhammad Sharif Khan died in 1904 and was succeeded by his son Awrangzīb Khān (Bādghāsh Khān). He soon fell out with his younger brother, Mīyān Gul Dīn, who in alliance with the disaffected sections of the population of Dir, marched against his elder brother and captured, in Dīnumādī 1323/June 1905, two of the Dīr fortresses. Peace was, however, restored through the efforts of the British Chief Commissioner of the North-West Frontier Province. It proved short-lived and fighting broke out between the two brothers again in 1911-12. This period of internecine war came to a close with the death of Mīyān Gul in Dīandol in 1924.

In 1917, while World War I was still in progress, Bādghāsh Khān helped ‘Abd al-Matīn Khān, a son of Umra Khān, to regain the principality of Dīandol but soon afterwards occupied it himself. This act was characterized as usurpation and betraya of the worst kind. The Sultan of Turkey, in an appeal issued in Muharram 1336/October 1917 to the warlike tribes of Yaghanistan, exhorted the Nawāb of Dir to give up creating discord among the tribesmen but his principality had been almost constantly at war. He was succeeded by his eldest son, Muhammad Shah Djahān Khān, the deposed ruler. In 1930 when the entire north-west frontier of India was ablaze he placed his resources at the disposal of the British Government for quelling the Red Shirt disturbances in Peshawar and the surrounding area. The same year existing boundaries between Dir and Swat were confirmed, and Malakand Agency.

DIR [see somali].

DIRĀR B. AL-KHATTĀR B. MIRDĀS AL-FIHRI, a poet of Mecca. Chief of the clan of Muḥābī b. Fihr in the Fīdjar [q.v.], he fought against the Muslims at Uḥud and at the battle of the Trench, and wrote invectives against the Prophet. He was however converted after the capture of Mecca, but it is not known if he perished in the battle of Yamānā (12/633) or whether he survived and went to settle in Syria.

DIRE DAWA, important road, rail, and air communication centre and chief commercial town in British Ethiopia, 33 m. North-West of Harar [q.v.] and thus within the cultural orbit of this major Muslim city in the Ethiopian Empire. The name is most probably derived from the Somali dir-dabo 'limit of the Dir' (the Dir being the confederation of Somali tribes which inhabit the vast arid region between Dire Dawa and Djibouti), but it is possible that the Amharicized form is meant to reflect a popular etymology from the Amharic dire dawa 'hill of uncultivated land'. Dire Dawa owes its comparatively recent origin and importance to the Addis Ababa-Djibouti railway which climbs from the desolate Dankali plain to this first great centre of sedentary population at the edge of the escarpment at an altitude of just below 4000 feet. The total population (estimated between 30,000 and 50,000) includes Ethiopians proper as well as Gallas, Somalis, Labores, Chechis, and Oromo of the Abyssinian and Arabian tribes. The ill-starred Emperor, Lidj lyasu, built a mosque at Dire Dawa during the First World War, while during the Second the town became the headquarters of the British Reserves Administration after the reconquest of Ethiopia in 1941. The Islamic culture of the Muslim population of Dire Dawa and its hinterland varies considerably and includes remnants of pagan practices. The Shāfiʿī is the most generally accepted madhhab in this area.

(DIR LULLENDORF)

DIRGHĀM ('Lion'), Fāṭīmīd amir and waṭrī; his full name Abu l-ʿAbdāl al-Dīrghām b. Amīr b. Sawwār, he received the agnomens of Fāris al-Muslimīn, Shams al-Khiliāfā, and, when he was
vizier of the last Fāṭimid al-Aṭid, the title of al-Malik al-Mansūr, the victorious king, according to a protocol issued by Rūdwan [q.v.]. He was Arab in origin and was perhaps descended from the former kings of Htra, to judge from the dynastic names of al-Lakhmî and al-Mundhîrî that he bore.

The first mention of him is made in 548/1153. He was among the detachment charged with relieving the garrison of ʿAskalān led by the future vizier al-ʿAbbās together with Usāma b. Munkîd b. Qatādah [q.v.]. It was during the advance of this company that the murder of the vizier al-Ṣalâr [q.v.] was planned, and it was carried out by Naṣr, the son of al-ʿAbbâs; the latter, advised of this, returned to Cairo with his company and seized the vizierate (Muharram 548/April 1153). Al-ʿAbbâs was overthrown by Tallārī b. Ruzzîk in 549/1154. The latter, whose trust Dirghām seems to have received (Abu ʿl-Mahasin, v, 338, 10), the most important office after the vizierate. But Dirghām, in spite of his good relations with Ruzzîk whom he had just formed. He rose in the hierarchy and became nāʾīb al-bāb, that is to say lieutenant of the sāhib al-bāb or grand chamberlain. He distinguished himself as commander of the army sent by Tallārī against the Franks, which gained a victory at Tell al-ʿAḍīl in Palestine on the 15 ʿṢafar 553/19 March 1158. The following year, together with Ruzzîk, son of the vizier, he triumphed over the rebel Bahrām in Upper Egypt near Athīb (Derenbourg, Osmara du Yémén, i, 1-3, ii, 127). During the vizierate of Ruzzîk, Tallārī's successor, Dirghām, was sent with an army to stop the expedition of the king Amalric I who, in September 1162, invaded Egypt in order to claim the tribute already promised by Tallārī. Dirghām (Dargent de Guillaume de Tyr, in RHC, Occ. l/2, 890-1), was defeated and fell back on Bilbays and put to flight at the end of April 1164. His three brothers were likewise killed soon after him. But Dirghām, after trying in vain to muster some supporters and accompanied by no more than 500 cavaliers, presented himself at the palace of the Caliph, who refused to admit him and advised him to have a care to his own life. The desertions continued until he retained only thirty cavaliers. He took the title of Fāris al-Muslinna which Dirghām had formerly borne. According to al-Makrizî, during his vizierate Dirghām was dominated by his brothers Humām and Hus ām. Fortune did not smile on Dirghām for very long, and difficulties soon arose. Aware of Shāwar's preparations for revenge, he attempted to start negotiations with Nur al-Dīn by promising him his allegiance and an advantageous alliance against the Franks. Nur al-Dīn gave an evasive reply. And perhaps it was at the instigation of Nur al-Dīn that Dirghām's messenger was seized by the Franks of Karak on his return from Damascus. thwarted in this and disturbed by the attitude of the amirs of the corps of the Barṣiyā, who had given him powerful support in winning the vizierate but some of whom envied him and were negotiating with Shāwar, Dirghām trapped them in an ambush and massacred seventy of them, not counting their followers. Historians do not fail to point out that these executions removed men of ability and weakened Egypt dangerously.

Amarīl however had not given up his scheme to conquer Egypt, and at the end of 1163 or at the beginning of 1164 his advance-guard invaded Egyptian territory. Dirghām, after failing to bring over Nur al-Dīn to his cause, decided to negotiate with Amalric and offered him, on condition that he withdrew from Egypt and treated the demands of hostages, and the payment of an annual tribute to be levied until a date fixed by the king. But Shāwar had finally gained the support of Nur al-Dīn, who in Djihamād I 559/April 1164 sent into Egypt with Shāwar an army commanded by Shirkhū which included Salādīn his nephew. It crossed unhindered the territory controlled by the Franks who withdrew from Egypt. Thus, by the end of 1164, the power of Egypt was reduced to the Amalric's smaller part. Dirghām, that had been deserted by most of his troops; the corps of Rayḥānī who had sustained some losses promised their aid to Shāwar. Dirghām, after trying in vain to muster some supporters and accompanied by no more than 500 cavaliers, presented himself at the palace of the Caliph, who refused to admit him and advised him to have a care to his own life. The desertions continued until he retained only thirty cavaliers. He took to flight followed by the curses of the people while Shāwar's troops entered Cairo. Overtaken between Cairo and Fustāt, Dirghām was dragged from his horse and killed near the mausoleum of al-Sayyida Nasīma in Ramadan 559/July-August 1164, or, according to certain traditions, at the end of Djihamād II/24 May 1164 or in Radjab/May-June 1164. His three brothers were likewise killed soon afterwards. His corpse remained without burial for two or three days and his head was carried on a pikestaff. He was buried near Birkat al-Fil and a cupola was raised over his tomb. His vizierate had lasted only nine months.

ʿUmāra al-Yamanī and al-Makrizī praised Dirghām whom they consider among the greatest amirs and bravest cavaliers. He combined with his physical
qualities (skill at polo, archery, wielding the spear, and feats of prowess at tilting in the ring) a gift for penmanship, for poetry (he composed some fine
manuscripts), and for poetic criticism. Umāra has spoken highly of his generosity, but has also noted that he was quick to turn against his friends, and it must not be forgotten that he betrayed successively Ruzzik and Šhwar.

**DIRHAM**

1. The name of a weight, derived from Greek ὀργή, traditionally the dirham kēyār or ḍahr waʿid, from 50 to 60 average-sized, unshelled ḍahr or ḍabba, and was theoretically divided into 6 ḍanāb, the latter being calculated variously between 8 and 10 ḍahr. So numerous and contradictory are the values of the dirham and its relationship to other Arab metrological units in different parts of the Islamic world and at different times that they cannot be summarized here, and the reader is referred to such works as Sauvaire’s *Islamische Masse u. Gewichte* (Handbuch der Orientalistik, Ergänzungsbänd 1, Heft 1, Leiden 1955, 2 ff.), where also 19th and 20th century legal definitions in different countries are to be found. Although most Muslim states have officially adopted the metric system, the dirham and other traditional weights continue irregularly in use in various trades. In present-day Egypt, the dirham is defined as weighing 3.12 grams; two actual goldsmith's brass dirham weights of the year 1953 are found to weigh 3.1322 and 3.1335 grams respectively.

2. The silver unit of the Arab monetary system from the rise of Islam down to the Mongol period. The earliest Arab dirhams (baghl) were imitations of the late Sasanian drachm of Yazdigird III, Hormuz I V and (chiefly) Khusraw II. The Sasanian iconography was retained, but a Kufic religious inscription was added to the margin; on a few issues the name of the Caliph (Muḥāwia and ʿAbd al-Malik) and on most issues the name of the provincial governor and the abbreviated mint name and date according to the Hijra, Yazdigird or post-Yazdigird era (all in Fāheli characters), were engraved. About the year 72/691-2 (American Numismatic Society *Museum Notes* vii, 1957, 191) and for a few years thereafter variations of the conventional type, including the use of more Kūfic legends and innovations in iconography more suitable to Islam, were experimented with. In the year 79/698-9 ʿAbd al-Malik’s monetary reform drastically altered the style of the dirham, which thenceforth, with few exceptions, was, like the dinār, purely epigraphic. The post-reform dirham was at first anonymous, but in the course of the 2nd and 3rd centuries A.H. the names of governors, heirs-apparent, Caliphs, etc. were added. The name of the mint and the date, in words, was always present. In Umayyad times the chief dirham mints were located in former Sasanian administrative centres, but silver was struck also in Damascus, North Africa and Spain. Wāṣīt, founded in 847/703-4, appears to have been the most prolific of Umayyad dirham mints, and it is possible that the administration of the silver coinage was centred in this city and that the dirham dies were engraved there. Little change in the style and general appearance of the dirham occurred, but variations of the type were found in the various dynasties down to the end of the 4th/10th century, except that the legends on the Fātimid dirham were usually arranged in concentric circles. There followed a period of silver famine in the East when the output of silver coinage was relatively insignificant (cf. R. P. Blake in *Harvard Journal of Asiatic Studies*, 1937, 291, where the study of this phenomenon is broached but not investigated) and in the Ghurid dynasties to the end of the 11th century, dirhams and multiples thereof, differing in design from the *classical* type, were again issued in immense quantities. For the late Fātimid dirham waʿāb, the Ayyūbid dirham Nāṣirī and Kāmilī, and Mamluk dirhams, see P. Balog in BIE, xxxiii, 1950-1, and H. H. Schröter, s.v. dirham. In the West, however, dirhams declines in weight and, with the increasing dependence of the Umayyad dynasty of Spain, is restored in somewhat altered form under the Marābitūs, and undergoes a complete change in style and weight with the Muwāḥhidīn, when the square dirham (marābbī), also imitated by the Christians in France (the *milares*), is introduced (corpus and bibliography in H. W. Hazard, *The numismatic history of late medieval North Africa*, N.Y. 1952).

With regard to the weight of the classical Arab dirham, statistics (unpublished) show that the highest frequency group of the Sasanian drachm of Khusraw II falls between 4.11 and 4.15 grams. The Arab-Sasanian dirham was definitely lighter, approximately 3.98 grams. After the reform of 79 A.H., an entirely new standard is adopted with the result that thenceforth until the middle of the 3rd/9th century, when weights begin to be very erratic, the peak weight of the dirham consistently lies between approximately 3.98 grams. After the reform of 79 A.H., the traditional theoretical figure based on the classical Arab formula which pronounced the weight of the dirham to be 7/10 that of the dinār (dinar), loss of weight, is 2.97 grams, which conforms exactly with the classical Arab formula which pronounced the weight of the dinar to be 7/10 that of the dirham. Hence the loss of weight, is 2.97 grams, which conforms exactly with the classical Arab formula which pronounced the weight of the dinar to be 7/10 that of the dirham. Hence the
that there were in Egypt dirhams of 13 kharrubās, weighing still less.

The rate of exchange between dinār and dirham fluctuated widely at different times and in different parts of the phenomenon. For instance, the rate of exchange was 1 dinār for 10 (or 12) dirhams to the dinār in the time of Muḥammad, but subsequently there is plentiful evidence to show that the dirham at times sank as low as 15, 20, 30 and even 50 (see the numerous textual citations by Sauvage, Lane-Poole in NC 1884, Grohmann in Einführung, etc.). P. Grierson (op. cit. under Dīrām) has attempted to explain the economic bases of the mint and market gold-silver ratios, with particular reference to Byzantine-Arab relationships.

Both typologically and economically the dirham exerted a strong influence on Byzantium and the West. The Byzantine miliareon, introduced in the second quarter of the 8th century after a generation during which virtually no silver coinage was issued in Constantinople, was clearly inspired by the dinār, and many Dīrāmias of the 8th and 9th centuries were actually struck on Arab silver plates. The desire to believe also that the style of the Carolingian denier or denar may have been influenced by the dirham. The great importance of Arab silver in commerce between the lands of the Eastern Caliphate on the one hand and Russia, eastern Europe, Scandinavia and the Baltic regions on the other, is abundantly documented by the immense numbers of dirhams and fragments of dirhams found in these areas in hoards dating from four clearly defined periods between 780 and 1100 A.D. (comprehensive summary and full bibliography in U. S. L. Welin in Kulturstorisk Leksikon for nordisk middelalder, i, Copenhagen 1956, s.v. Arabisk mynt). Dirhams also have been found in lesser numbers in England and France (cf. J. Duplessy in Rev. Numismatique 1956, 101).

Beginning in the 5th/11th century, dirhams of base silver (billion) and copper were struck by various dynasties (late Buwayhid, Karakhanid, Khāwarīm, etc.). The large, thick copper dirhams of the Artūkids (in the coin catalogues "Urtukids"), Zangids and Ayyūbids, with figured types resembling those of Hellenistic, Roman provincial, Byzantine and other coinages, and occasionally exhibiting original Islamic iconography, constitute a unique series of coins, of which the reasons for their introduction are unaccountably unexplained and deserving of further study (best illustrations in the British Museum and Istanbul catalogues and in S. Lane Poole, Coins of the Urtuk Turkmuns, London 1875; cf. also J. Karabacek, in Num. Zeitshchr., 1869, 265).

Dirhem (with valuable bibliography); J. Walker, A Catalogue of the Arab-Sassanian Coins (A Cat. of the Muhammadan Coins in the British Museum, i, London 1941); U. S. L. Welin, in Kulturstorisk Leksikon for nordisk middelalder, iii (Copenhagen, 1959), s.v. Dirhem; G. C. Miles, Byzantine miliarens and Arab dirhem: some notes on their relationship in American Numismatist Society Museum Notes ix (1960), 186-187; idem, The Iconography of Umayyad Coinage in Ars Orientalis iii (1959), recent bibliography; idem, "Trésor de dirhems du IXe siècle", in Mémoires de la Mission Archéologique en Iran, xxxvii, 1960, 67-145 (detailed study of a large hoard of dirhams found at Susa). (G. C. Miles)
is reported to have been in the region of al-Katīf, but its exact location is not known. Some genealogists state that the Marada, the kinsfolk of Māni, belong to Banū Ḥanīfa, while others advocate a descent from Banū Ḥizam. It appears to be the prevailing view among members of Āl Saʿūd.

After Māni various branches of his descendants took turns in ruling al-Dirʿīyya. Ghasība seems to have been the original centre and strong point; no record has been found of when it was supplanted by al-Turayf, which topographically enjoys an even greater degree of impregnability. In 1133/1721 Saʿūd ibn al-ʿĀimmah al-Hammar became the lord of al-Ḥasā, plundered houses in al-Zuhayra, Malwī, and al-Surayba, all settlements still existing along the left bank.

In 1139/1726-7 Muḥammad b. Saʿūd al-Mukrīn, a direct descendant of Māni, became the independent ruler of al-Dirʿīyya, including Ghasība. At that time the primacy among the towns of central Naǧd was held by al-ʿUyayna, farther up the valley, under the domination of Āl Muṣammār of Tamīm. ʿAbd Allāh b. Muḥammad, the most powerful representative of this house, died the same year Muḥammad b. Saʿūd came to power in al-Dirʿīyya. Muḥammad b. Saʿūd won a good reputation as a secular lord. In 1157/1744 Shaykh Muḥammad b. ʿAbd al-Wahhāb chose al-Dirʿīyya as his new home when requested to leave al-ʿUyayna, his native town, by ʿUṯmān b. ʿAbd Allāh b. Muḥammad b. Saʿūd. The Shaykh and Muḥammad b. Saʿūd made a compact to work together in establishing the true version of Islam throughout the land of the Arabs.

The spiritual force of Ibn ʿAbd al-Wahhāb and the military skill of Muḥammad b. Saʿūd and his son ʿAbd al-ʿAzīz and grandson Saʿūd brought virtually the whole of the Arabian Peninsula under the authority of al-Dirʿīyya by the early 13th/19th century. Ibn Bishr records his own eye-witness description of the capital in the time of Saʿūd. Much of the land now given over to palms was then occupied by buildings. Particularly vivid are Ibn Bishr's vignettes of the market in the valley bottom, the sunrise religious assembly in the same spot attended by Saʿūd and his resplendent corps of mamlāḳs, Saʿūd's bearing of petitions and dispensing of largesse to his subjects and guests, and the diligent Islamic instruction given by the sons of the Shaykh. Saʿūd was said to own 1,400 Arab horses, of which 600 were taken on campaigns by Bedouins or his mamlāḳs. He had 60 cannon, half of which were of large size. For Naǧd, al-Dirʿīyya had become a very cosmopolitan and expensive centre: visitors from Oman, the Yemen, Syria, and Egypt thronged its bazaar; shops rented for as high as 45 riyals a month, and houses sold for 7,000 riyals. So much building went on that there was a great scarcity of wood.

The first and only European to see al-Dirʿīyya while it flourished was J. L. Reinard, an Arabic-speaking Dutchman (or Englishman?) sent there in 1799 by Samuel Manesty, the East India Company's Resident in al-ʾBaṣra, to negotiate with the Imām ʿAbd al-ʿAzīz. Reinard, who spent a week in the oasis, remarks on the simplicity of the ruler's establishment and the sullen hospitality of the inhabitants.

When Ibrāhīm Pāḥa of Egypt advanced into Naǧd with the intention of breaking the power of Āl Saʿūd, ʿAbd Allāh b. Saʿūd, who had succeeded to the rule in 1229/1814, fortified himself in al-Dirʿīyya instead of using the superior mobility of his forces to harass the enemy's over-extended lines of communication. Ibrāhīm, establishing himself athwart the wadi at al-Ilib, began a siege which lasted about six months. The attack consisted of a ponderous advance step by step down the wadi, accompanied by a piecemeal reduction of the defenders' numerous towers and barricades of the defenders scattered about the heights on either flank. Ibrāhīm moved his headquarters from al-Ilib down the wadi to Kārī Ḵūsāy (now known in memory of his army as Ḵūrāy al-Rūm), a tributary descending from the north. Sweeping around the oasis, the invader's horse fell on the town of ʿIrīḵa farther down the wadi. Progress was hampered by the presence of the Musḥārya depot, but ʿAbd Allāh b. Saʿūd failed to exploit this opportunity. Once a new supply of ammunition had been built up, Ibrāhīm resumed pressure on the main front and fought his way into the palm grove of Musḥārya south of the tributary al-Bulayda, thus gaining access to the promontory of al-ʿUyayna, from the heights to the west. A resolute offensive smashed at all points brought about the surrender of the capital in Dhū al-ʿĪdā 323/September 1818. After staying in al-Dirʿīyya a short time, Ibrāhīm returned to Egypt. On his orders the place was systemically torn down in 1234/1819. According to Captain Sadleir, a British officer who saw it almost immediately afterwards, "the walls of the fortification have been completely razed by the Pacha, and the date plantations and gardens destroyed. I did not see one man during my search through these ruins. The gardens of Dīrah produced apricots, figs, grapes, pomegranates; and the dates were of a very fine description; citrons were also mentioned, and many other fruit trees, but I could only discern the mutilated remains of those I have mentioned. Some few tamarisk trees are still to be seen."

An attempt was soon made to restore al-Dirʿīyya as the capital. As many members of Āl Saʿūd had been killed during the siege or carried off to Cairo, Muḥammad b. Muḥāri b. Muṣammār of the old princely house of Muṣammār of al-ʿUyayna, a nephew on the distaff side of the great Saʿūd, established himself in al-Dirʿīyya before the end of 1234/Oct. 1819 with the aim of rebuilding the oasis and making himself the head of the reform movement in Naǧd. A few months later, in 1235/1820, Muṣammār ap-peared in al-Dirʿīyya, and Ibn Muṣammār swore allegiance to him as scion of Āl Saʿūd. Having once tasted power, Ibn Muṣammār dreamed of regaining it and rebelling against Muḥārī b. Saʿūd. Another member of Āl Saʿūd, Turki b. ʿAbd Allāh, a cousin of the great Saʿūd, now returned to the scene after having escaped Ibrāhīm Pāḥa's dragnet. Turki sided with his relative Musḥārī b. Saʿūd, but the Egyptian forces got hold of Musḥārī and he died in captivity in 1236/1821. In revenge Turki put Ibn Muṣammār to death. After taking al-Dirʿīyya, Turki also occupied al-Riyād, but the Egyptian troops quickly drove him out. In 1236/1821 Ḥusayn Bey, the new Egyptian commander, ordered all the people who had settled in al-Dirʿīyya with Ibn Muṣammār to go to Tharmada, the new Egyptian headquarters. After their departure al-Dirʿīyya was destroyed for the second time, trees being cut down and the orchard set to whatever was inflammable. In Tharmada about 250 men from al-Dirʿīyya were paraded on orders from Ḥusayn Bey and slaughtered in cold blood. The obliteration of al-Dirʿīyya was complete. When Turki in 1240/1824 gained strength enough to challenge the Egyptian forces, he attacked them in al-Riyād, which he chose
as the new capital for his realm in preference to the twice desolated home of his forefathers.

In 1281/1865 Colonel Pelly, the British Resident in the Persian Gulf, passed through al-Dir'iyya on the way to al-Riyadh; the place seemed to him "utterly deserted". The modern oasis, now encroaching on the territory of its forerunner even in the hallowed precincts of al-Ṭurayf, was described by Philby after his visit in 1356/1917.

**DIRLIK,** a Turkish word meaning living or livelihood. In the Ottoman Empire it was used to denote an income provided by the state, directly or indirectly, for the support of persons in its service. The term is used principally of the military fiefs (see TIMAR), but also applies to pay (see ULUFA), service. The term is used principally of the military fiefs, but also applies to pay (see ULUFA), service. The term is used principally of the military fiefs, but also applies to pay (see ULUFA), service. The term is used principally of the military fiefs (see TIMAR). From 916/1509 the Mughals, returned to Diu. He invited Nuno da Cunha to come north, and having failed to tempt him ashore, visited his galilee. On his way back to the shore he was killed in a scuffle with the Portuguese, 3 Ramadan 943/13 February 1537.

The Portuguese thereupon seized the palace, treasury and arsenals in Diu, and in 943/1537 proclaimed Muhammad Zaman Mīrāz sultan, in return for his confirmation of their position in Diu. He was defeated outside Diu, however, and in 945/1538 Khāḍja Ṣafar laid siege to the island. The siege was intensified after the arrival of Khādīm Sulaymān Paḡa [q.v.], governor of Egypt, with a powerful fleet, but after three months, distrust between Ottomans and Gudjarātis and reports of Nuno da Cunha's approach led to the break-up of the siege and a final concession of peace, 6 Shāhwal 945/25 February 1539.

On 20 Rabī' II 953/20 April 1546 Khāḍja Ṣafar opened a second siege of Diu which lasted seven months and cost the lives of the Khāḍja and his son before the viceroy João de Castro routed the Muslim forces and lifted the siege on 19 Dhu 'l-Ka'da 953/11 November 1546.

For many years the Portuguese from Diu fort controlled all seaborne traffic from Gudjarāt through a system of cartasises or passes. Though in 1079/1668 and 1086/1676 Diu was overrun and sacked by Arabs the Portuguese were able to use Mughal decline to extend their control over the whole island and its mainland suburb. They retained them until December 1661.

**DIVAN** [see DIWAN].

**DIVINATION** [see KIHANA, also DJAFR, FA'L, IKHTILADJ, RAML, TA, TA'HIR].

**DIVORCE** [see TALĀS].

**DIW** (originally *dew*, Avestan *daeva*, Sanskrit *deva*), in Zoroastrianism, the name of the spirits of evil and darkness, creators of Ahriman, the personification of sins; their number is legion; among them are to be distinguished a group of seven principal demons, including Ahriman, opposed to the seven Amhas-pand (Av. *amšašpanda*), the "Immortal Holy Ones"). "The collective name of the daeva designates . . . exclusively the inimical gods in the first place, then generally other supernatural beings, who, being by nature evil, are opposed to the good and true faith . . . . These daeva, these dev have become increasingly assimilated to the ogres and other demoniac beings whose origins are to be found in ancestral beliefs" (A. Christensen). In the Iranian epic Kayūmarth, the first of the civilizing kings of Iran, and then his son and his grandson, fought the Black Diw and his hordes; Tahmurāth, his great-grandson, deprived them of power, and they taught writing (Firdawsi, *Shāh-nāma*, 4. tr. J. Moli, i, 39-32); Djamšīd, son of Tahmurāth (ibid., 35), controlled the diw (as Solomon did the djinn in the Muslim legend [see SULAYMĀN B. DĀWŪD]); these, on his orders, constructed palaces and other buildings, then took him to heaven on a day later called nawrūz; under the following dynasty, that of the
Kayanids in the course of the war against the king of Mazandaran—a country frequented by the diws (ibid., 421 ff.)—the hero Rustam, champion of the king Kayanid, killed the Arzang whose several times opposed monstrous form (Livre diws (ibid., 421 ff.), the hero Rustam, champion of the king Kayanid, killed the Arzang whose several times opposed monstrous form (Livre diws (ibid., 421 ff.).

It is impossible to mention here all the diws who appear in Persian literary or popular sources: most frequently the term diw is juxtaposed to the Arabic epithets 'iršār, shayṭān, ūlagh; for example, the diws with Cows' Feet (diw-ī-gāy-pāy: Saʿd al-Dīn Warawīni, Marsūbān-namā, ed. Muḥammad Kazwini, 79 ff.; M. Nizāmūd-dīn, Introduction to the Jawdshīyār, 16). The diw remains, e.g., in H. Māsī, Comtes en persan populaire, nos. 27 and 29; or it may be associated with both di˚s and part (e.g., Rāʿa Ḥakīm and A. A. Kohzd, Légendes et coutumes afghanes, 17 and note). According to the Shīʿas, men, diws, and di˚s will receive reward or punishment at the day of resurrection (Tābrīz al-sawmm, ed. Iqbal, 210). Ḥamd Allāh Mūstawfī Kazwīnī mentions a Diw River (district of Djiruft, Kirman), so called because of its rapid current (Nishāt al-kabūl, tr. Le Strange, 217, 139).

**DIWĀN,** a collection of poetry or prose [see *Arabiyā, Persian literature; Turkish literature; Urdu literature* and *shīʿa*], a register, or an office. Sources differ about linguistic roots. Some ascribe to it a Persian origin from dev, 'mad' or 'divel', to describe secre¬
taries. Others consider it Arabic from *daewāna,* to collect or to register, thus meaning a collection of records or sheets. (See Kalkashandi, *Sābūk, i, 90; L. d., xvii, 23–4; Sāhī, *Adab al-Kabūl,* 187; Māwardī, *al-Kāmil al-sulhīniyya,* 175; *Diāshiyār, Wusara* (16–17), cf. *Badālūr, Futūh,* *449*). However, in administration, the term first meant register for troops (cf. Sāhī, *op. cit.,* 190; Kindī, *Wulāīt,* 86; *Badālūr, Futūh,* 454) when it was first used for office. It seems that the idea is foreign, but the term itself was in use earlier.

---

**The Caliphate**

Umar instituted the first diwān (usually called *al-Dīwān*) in Islam (*Diāshiyār, op. cit.,* 16). The sources ascribe this action to the need to organize the pay, register the fighting forces, and set the treasury in order. (Cf. *Diāshiyār,* 16–17; *Badālūr, Futūh,* 449–51; Makrizī, *Khitāt,* i, 148; *Yākūbī, *Taʾrîkh,* ii, 130; Abū Yūsuf, *Kharaḍā, 25,* Sūlī, *Adab,* 190–1; Abū Sālim, *al-Tādhb,* 154–5). Though some reports put this in 15 A.H., more reliable authorities prefer 20 A.H. (See Tābarī, iv, 162; *Yākūbī, i, 170; Makrizī, *Khitāt,* i, 148–9; *Badālūr, Futūh,* 450; Abū Yūsuf, 24).

This first diwān was the *diwān al-dīgn.* The register covered the people of Medina, the forces that participated in the conquests and those who emigrated to join garrisons in the provinces, together with their families. Some *mawdīli* were included in the register, but this practice was not continued. With the names, pay and rations were indicated (Abū ʿ Ubayd, *al-ʿAmādi,* nos. 562, 569, 568; Tābarī, iv, 163). A description of these genealogists carried out the registration, by tribes, and pay depended on past services to Islam and relationship to the prophet. Registration by tribes continued till the end of the Umayyad period. (Abū Yūsuf, 24, 26–7; Tābarī, iv, 162–3; *Yākūbī, Taʾrīkh,* ii, 132; Abū ʿ Ubayd, *Al-ʿAmādi* nos. 560, 520, 577; *Badālūr, Futūh* 450 ff.; 457–9. Makrizī, *Khitāt,* i, 149–50). Similar diwāns (of *dīgn*) were set up in provincial capitals like Baurā, Kūfa and Futūṣ (cf. *Diāshiyār,* 21, 23; *Thaʿlabī, Latīf,* 59). Besides, Byzantine and Sādānī diwāns of Kharaḍā continued to function in the provinces as before (*Diāshiyār,* 38; cf. 3).

The Umayyad Period. — The *diwān al-kharaḍā* of Damascus became the central *dīgn* and was now called 'al-dīgn' to indicate its importance. It looked after the assessment and levying of land taxes. Under Muʿāwiyah it was the central *dīgn* (usually called *dīgn al-khātām* or 'office of the seal', where a copy of each letter or document was kept and where the original was checked, sealed and dispatched. It was set up as a check to prevent forgery (*Diāshiyār,* 25; *Thaʿlabī, Latīf,* 16; Nabiya Abbōt, *Kurrah qābīry,* 14; See also Grohmann, *CPR,* iii, Bd. I/1, 17 ff.). The Caliph would read all correspondence and make his comments, and then the secretary (*kātib*) would draw up the letters or documents required (*Diāshiyār,* 24, 34; Kalkashandi, i, 92). Muʿāwiyah established the *diwan al-khaitam* or 'office of the seal', where a copy of each letter or document was made and kept while the original was checked, sealed and dispatched. It was set up as a check to prevent forgery (*Diāshiyār,* 25; *Thaʿlabī, Latīf,* 16; Nabiya Abbōt, *Kurrah qābīry,* 14; See also Grohmann, *CPR,* iii, Bd. I/1, 17 ff.). The Caliph would read all correspondence and make his comments, and then the secretary (*kātib*) would draw up the letters or documents required (*Diāshiyār,* 24, 34; Kalkashandi, i, 92). Muʿāwiyah established the *diwan al-khaitam* or 'office of the seal', where a copy of each letter or document was made and kept while the original was checked, sealed and dispatched. It was set up as a check to prevent forgery (*Diāshiyār,* 25; *Thaʿlabī, Latīf,* 16; Nabiya Abbōt, *Kurrah qābīry,* 14; See also Grohmann, *CPR,* iii, Bd. I/1, 17 ff.). The Caliph would read all correspondence and make his comments, and then the secretary (*kātib*) would draw up the letters or documents required (*Diāshiyār,* 24, 34; Kalkashandi, i, 92).

Muʿāwiyah also established the *diwan al-kharid* (post office), which was later reorganized by *Abd al-Malik* (d. 86705) (see further BARID). The *diwan al-dīgn* carried out, at intervals, censuses of the Arabs by tribes to keep its registers up to date. The *diwan of Egypt* made three censuses during the 1st/7th century, the third by ʿAbd al-Sharīf in 95 A.H. (Kindī, *Wulāīt,* 86; Makrizī, *Khitāt,* i, 151).

The *diwan al-naṣīḥāt* (expenditure), which is very probably a continuation of a Byzantine office, kept account of all expenditure (cf. *Diāshiyār,* 3).
It seems to be closely linked to the treasury (Bayt al-Mal [q.v.], Djahshiyari, 49). The diwan al-sadaqa was founded to assess the zakat and 'ughr [q.v.]. A diwan al-mustaghfalt was established, apparently to administer government lands in cities, and buildings, especially sīsī' rented to the people. The diwan al-irdās was responsible for making banners, flags, official costumes and some furniture. The name of its secretary was inscribed on the cloth (cf. Dhahshiyari, 60; Sābib, Rashīdī, i, 141).

Each province had a diwan of khardājī to which all revenue came (li-judūdī 'l-amwāl), a diwan of diwān and a diwan of rasā'īl (Dhahshiyari, 21, 23, 24, 27, 36, 44-5, 60, 61, 63-4). The chief secretary of a diwan received three hundred dirhams a month under Ḥaddādī (Dhahshiyari, 61).

'Abd al-Malik initiated the policy of Arabization in the diwāns, ḥiraṣ and currency. Hitherto, the diwāns of khardājī used local languages: Persian in Irak and Persia, Greek in Syria, and Coptic and Greek in Egypt, and followed previous practices of book-keeping and recording. Even local seals and dates were frequently used. Arabic forms and formulas were introduced and previous calendars adjusted to the Muslim lunar year. (See PERF Nos 556, 559, 566, 586, 587, 572, 589, 601; CPR III Bd. I, Teil I 97, Teil II c-ii). Arabic was occasionally used (the first available papyrus dates from 22 A.H. PERFS no. 558) before the diwan became the official language. However, local languages were occasionally used far into the 2nd/8th century (cf. Grohmenn, Étude de papyrologie, i, 77-9; P. Lond IV, 417; Nabiā Abbott, op. cit., 13-14). The arabization of the diwāns was effected in the Empire by stages. In 78/697 Ḥādīḏḏārī arabized the diwāns of ʿIrāk (Dhahshiyari, 39; Baladhuri, Futḥ, 300-1; Sāhib, Abad, 192); then in 81/799 ʿAbd al-Malik arabized the diwāns of Syria (Baladhuri, Futḥ, 193; Dhahshiyari, 40; Sāhib, Abad, 192-3). The diwāns of Egypt followed in 82/798 (Kindli, Wudūʿ, 80; Ibn ʿAbd al-Hakam, Futḥ, 122; Makhrīṭī, Ṣūrī, i, 150). Finally, the diwāns of Khurāṣān were arabized under Ḥīqām in 124/742 (Dhahshiyari, 63-4). Phīlmīs, who were the bulk of secretaries in these diwāns were no longer used, but some continued to be employed. The mawdūlī were always employed (cf. Dhahshiyari, 61, 67, 38-40, 51; Tritton, The Caliphīs and their non-Muslim subjects, Ch. ii; Kindli, Wudūʿ, 80; Baladhuri, Futḥ, 193; von Kremer, The Orient, 196-7).

The ʿAbbasīd period. — The ʿAbbasīds extended and elaborated the Umayyad system of diwāns, and provided a central bureaucratic direction through the office of ṭawāṣir (q.v.).

Under ʿAbd al-Maʿmūn a diwan for confiscated Marwānī lands was established (Dhahshiyari, 90). It probably developed into the diwan al-diyāʿī, which looked after confiscated palaces and lands to the west of the Caliph (Ibn Tayfur; Taʿrīf Baghdādī, vi).

During the reign of ʿAbd al-Malik, in 162/779, we hear of diwāns of zīrāmīn (control), one for each of the existing diwāns. In 169/784 a central diwan, zīrāmīn al-akṣīmān, was established to control all zīrāmīn. These diwāns checked the accounts of the diwāns, supervised their work and acted as intermediaries between single diwāns and the ṭawāṣir or other diwāns (Dhahshiyari, 146, 166, 168; Tabārī, x, 11; Baladhuri, Futḥ, 464). The diwan al-maṣrūqīn was created to look into complaints of the people against government agents. Judges sat in this diwan (Fakhrī, 131).

The diwan al-khardājī seems to have been established by the Caliph (Dhahshiyari, 195; Ibn ʿArabī, MaṣĪṭī al-wulām, 42, 50). Letters of the diwan al-khardājī were checked in the diwan al-badīʿ, and delays here led Rashīd to recommend his wazīr to send the letters directly (Dhahshiyari, 178).

Under Mutawakkil we hear of a diwan al-mawāḥil wa l-ṭawāṣir, which may be another version of the diwan al-khardājī. It was concerned with slaves and clients of the Palace whose number was very large (Yaʿkūbī, Buldūm, 252). The diwan al-khardājī, also called diwan al-sīrī (confidential affairs) (Dhahshiyari, 177), was of special importance because of the close relation its head kept with the Caliph (cf. Tabārī, x, 51-2).

In the provinces there were local diwāns of khardājī, diwāns and rasāʿīl which were smaller copies of the central diwāns (cf. Dhahshiyari, 141, 142, 177, 220-1).

A distinguished khitīb was sometimes appointed over more than one diwan (ibid., 266; cf. 179). Until the time of Maṣūm the salaries of khitīb ranged between 300 dirhams and ten dirhams a month (Dhahshiyari, 23, 126, 131-2. Dhābīţī states that the highest in pay after Maṣūm was that of khitīb al-khardājī (cf. Three essays, ed. Finkel, 49). (See further khitīb).

Diwāns reached full development during the 3rd/9th-10th centuries. The diwan al-khardājī usually kept copies of records of local diwāns. But by the middle of the 3rd/9th century each province had a special diwan of khardājī in the capital. Muṭtaḍī combined these diwāns in the capital and organized them into one diwan called diwan al-dār (or diwan al-dār al-kharīb). Under his successor Muqtaḍī, it was reorganized in three diwāns: diwan al-maqṣūrī for Eastern provinces, diwan al-maqṣūrī for Western provinces and diwan al-sāṣīd for ʿIrāk. ʿAlī b. ʿĪsā considered the diwan al-sāṣīd the most important diwan (Miskaway, Ṭadājīrbī al-wulām, i, 150). However, under Muṣṭaḍīr a central office (diwan al-dār still remained. The three diwāns remained under the ṭawāṣir, or one secretary next to him, but they were still considered sections of the diwan al-dār (Ṣāhib, Wusārā, 123-4, 131-2, 262; Yaḥṣūʿ, Iṣrāḥīd, i, 177; Ṣāhib, 42; Miskawayh, i, 152-3; Bowen, ʿAṣr b. Ṣāḥib, 31-2). It seems that the dār or palace refers to the dār al-usṣārah or ministerial residence (cf. Sāhib, Wusārā, 131). The secretary of the diwan al-dār was authorized to communicate directly with the ʿummul (Ṣāhib, Wusārā, 177). After the Buyyāhid occupation (334/945) we hear only of diwan al-sāṣīd because of the dismemberment of the caliphate (cf. Sāhib, Taʿrīfā, 467-8).
The diwāns of Khārdādī kept a record of the areas of lands, the rates of taxation in money or in kind, and the measures used. (Māwardi, op. cit., 182-3; Khašārizmī, Mādīth, 37). They received the revenue of Khārdādī, dījāt and zakāt (al-Hasan b. ʿAbd Allāh, ʿAḥār al-ṣulāl (Bulāk 1295/72). Māwārdī’s reference to diwān al-ʿawārī could only mean a section of this diwān. Māwārdī, 182).

When the diwān al-dār was formed, the relevant diwān was combined in one (Ṣāḥīb, Wuzarrā, 97; 84; idem, Taʾrīḫ, 468). The zīdmūn was “guardian of the rights of Bayt al-Māl and the people” (Māwārdī, 189). It kept another copy of the documents concerning lands in the diwān al-ḥarādī and checked assessments, orders for payments and receipts (Māwārdī, 190-1). An ikṭāʾ was granted by Muʿtaḍīd, and passed by the Wazīr and the secretary of the diwān al-dār, was not passed by the secretary of diwān al-zāmīm until he checked the ikṭāʾ in his records (Ṣāḥīb, Wuzarrā, 683).

The diwān al-naṣṭāḥī dealt with all diwāns. It examined accounts of their expenses and drew its reports (al-Ḥasan b. ʿAbd Allāh, op. cit., 71). By the end of the 3rd/9th century it dealt mainly with the needs of Dar al-Khišāla (Mes (Arabic), 152; cf. Ṣāḥīb, Wuzarrā, 11 ff.). It kept records of recurring and current debts (Ṣāḥīb, Wuzarrā, 16), and had sub-sections dealing with various heads of expenditure (cf. Mes (Arabic) 1, 125-6). There was a zīmām of naṣṭāḥī, and in 355/967 its secretary held the zīmām of treasury stores (khāṣāzīn) as well (Ṣāḥīb, ʿAbd Allāh al-Rādī wa l-ʿUmmāṭī, 61; Mīskawayh, i, 152).

The diwān of Bayt al-Māl, also called al-diwān al-sāmī, kept classified records of the sources of money and goods, coming to the Treasury, and maintained stores (khāṣāzīn) for the different categories of revenue, and a small diwān for each, such as diwān al-khišāna (for cloth and money), diwān al-ahlād (for cereals), and diwān khāṣānát al-sīlah (for arms) (al-Ḥasan b. ʿAbd Allāh, op. cit., 72; cf. Ṣāḥīb, Wuzarrā, 16). This diwān checked all items of income, and all expenditure had to be passed by it. The secretary took charge on day three of orders and payment was required by the wazīr (Mes (Arabic), 1, 126-7). Usually, the diwān drew up monthly and yearly balance sheets. (In 315/927 ʿAll b. Ḥāfīz requested weekly sheets. Mīskawayh, i, 651-2; Ṣāḥīb, Wuzarrā, 303, 306).

The diwān al-dhīnakhaḍa branched off from the Bayt al-Māl. (q.v.). See further Dāftar, Dāḥabaḍa). The diwān al-diyyāʾ administered domains of the treasury (Hamadān, Taḫmīla, 18; Mīskawayh, i, 21; cf. Ṣāḥīb, Rādī, i, 139). Yet we hear at times of more than one diwān for diyyāʾ. In 325 A.H. there was a diwān al-dīnyaʾ al-khišāna wa l-mustāḥdaṭa (i.e., Caliphal and newly acquired domains) and diwān al-dīnyaʾ al-Furdisyā (i.e., Domains on the Euphrates) (Ṣāḥīb, Wuzarrā, 123-4; Mīskawayh, i, 152).

In 304/916 Ibn al-Furat established a diwān al-mārdīf (lit. aids; brījes, etc., which were paid by governors, obviously from riches accumulated by dubious means). The mārdīf accounted then to 100,000 dinars per year from Syria and 200,000 dinars from Egypt. ʿAll b. Ḥāfīz forbade the mārdīf because they corrupted administration (Mīskawayh, i, 44, 108, 241-2; Ṣāḥīb, Wuzarrā, 31-2, 81).

While every diwān dealing with finance had a zīmām, all diwān al-zāmīm were occasionally put in one hand. In 295/907 the wazīr c. the one-day Caliph Ibn al-Muṭṭaḍ put all the wazīrs (diwāns proper) under ʿAll b. Ḥāfīz and the diwāns of zīmām under Ibn ʿAbdūn (Mīskawayh, i, 60). In 319/931 the zīmāms were put under one secretary and the wazīrs under another, mentioned. The diwān of al-ṣalāḥī was repeated in 325/936-7 and in 327/938-9 (Ṣāḥīb, ʿAbd Allāh al-Rādī wa l-Muṭṭaḍī, 87, 147).

The diwān al-diyyāʾ kept a register of the forces classified according to their ranks, and their pay or ṭhāʾāʾ. It consisted of two sections, one dealing with pay (ṭhāʾāʾ [q.v.]) and expenses, and the other with recruiting and classification (lāṣīfāʾ) (ʿAllāb, Three Essays, 48). The wazīr called the major diwān al-māḥarīb, and majdīṣī al-Muḍāḥāba, Mes (Arabic), 1, 165. See also Māwārdī, 179-80). This diwān had a zīmām, called diwān zīmām al-diyyāʾ, and, as already mentioned, it supervised its accounts and expenditure (Mīskawayh, i, 152).

The diwān al-ṣaḍāṭīl was directly under the wazīr or under a secretary. Letters and documents were drafted by the first secretary on the instructions of the wazīr (or Caliph) and when approved by him the final copy was made. Sometimes, a special calligrapher (muḥarrīr) made the last copy. At intervals of three years, letters and documents were sent to the great store (al-khišāna al-usmāʾ) to be finally classified and indexed (Kalkashandī, i, 96; Ibn al-Ṣaʿraffī, Ḫāsim diwān al-ṣaḍāṭīl, 94, 100-3, 108 ff., 116, 118, 144-5; ʿAllāb, Three Essays, 49; Ṣībī, ʿAbd Allāh Wuzarrā, 21, 123; ʿAbd Allāh al-Rādī wa l-Muṭṭaḍī, 109 where diwān al-khāḥāṣī is used). The diwān al-ṣaḍāṭīl, probably a section of the diwān al-ṣaḍāṭīl in origin, opened letters and documents, and had sub-sections, put indications of their contents on the back, presented them to the wazīr and kept a record of them. (Mes (Arabic), 1, 130-1; Ibn al-Ṣaʿraffī, op. cit., 108; Tawḥīdī, al-ʿImārī wa l-ʿuṣūrī, i, 98). In 295/907 one secretary looked after the diwān of ḥārāt and ʿṣādāṭīl (Mīskawayh, i, 152; Ṣāḥīb, Rādī, 111).

Mention is made of a diwān al-karam which looked after the affairs of the female section of the palace (Mīskawayh, i, 152).

There was a diwān to administer confiscated property, called diwān al-muṣīdārīn (Ṣāḥīb, Wuzarrā, 306, 311). Two copies of confiscations were made, one for the diwān, and the other for the wazīr (Mīskawayh, i, 155). A diwān was created to administer confiscated estates, diwān al-dīnyaʾ al-muḥābba (Ṣāḥīb, Wuzarrā, 21, 30; cf. Mīskawayh, i, 84; cf. Hamadānī, Taḫmīla, 83 where a diwān al-muḥābba is mentioned, as administering the property of Muʿīnis.

It is clear that sections of a diwān were sometimes called diwāns, while some diwāns were short-lived and were set up for temporary needs. Besides, more than one diwān were sometimes put under one secretary (cf. Ṣāḥīb, Wuzarrā, 27, 123-4).

In the reign of Muʿtaḍīd, the two days rest was resumed, Tuesday for relaxation and Friday for prayers (Ṣāḥīb, Wuzarrā, 233).

Salaries of the heads of diwāns varied. At the beginning of the 4th/10th century, the secretary of the diwān al-sawādī received 500 dinars per month and the secretary of the diwān al-ṣaṭā ṭīl 10 dinars. In 314, ʿAll b. Ḥāfīz reduced salaries by one third, so the secretary of the diwān al-sawādī got 333½ dinars,
The secretaries of the diwan al-fadd and diwan al-khatam 200 dinars each. The secretaries of the diwan al-dār 500 dinars, and the secretary of the diwan of simām, together with his kuttub, 2700 dinars (Ṣāḥib, Wuzūrā, 31; 84, 177, 178, 314; cf. ibid. 20-1; Miskawayh, i, 68). Measures of economy led ʿAli b. ʿIsā to reduce the year to 8-10 months of pay, and this became a common practice (Ṣāḥib, Wuzūrā, 314; Miskawayh, i, 152.

In the Buwayhid period (334-447/945-1053), we still find the official of the saʿādah with a secretary and an assistant secretary (khalīfah), and of a diwan al-dīyaʾ (or al-dīyaʾ al-khāṣṣa) (Ṣāḥib, Taʾrīkh, year 390 A.H., 401-2, year 392 A.H., 467-8; Miskawayh, ii, 120-1; Ābū Shudāʾ, Ḍhāti Taʾdārīg al-umām, 147). The central diwan for finance was now called al-Dīwān; it was under the wasīr or a secretary next to him in importance (cf. Miskawayh, ii, year 338 A.H., 242, 263, 266; Ābū Shudāʾ, 143). In 389/999, this diwan went under a masūḥ, and its secretary was the head of this diwan was the khaṣṣīn or nāṣir, and at times, the mint (dār al-dār) was put in his charge (Abū Shudāʾ, 250-1). Al-Tawhīdī, however, mentions a special diwan for the mint called diwan al-nāḍr wa l-iṣyār wa dār al-dār (lmīa, i, 98).

The diwan al-ġund was divided into two dinwāns, one for the Daylamites and the other for the Turks (the two main elements of the army) and called diwan al-dījāyshayn (Ṣāḥib, Taʾrīkh, 467-8). There was however one head or paymaster, called al-ʿarīf (Abū Shudāʾ, 258).

The Fāṭimid s.— Fāṭimids diwāns are basically related to the ʿAbbāsiids. The diwan al-rasādī is here diwan al-iṣḥāq; its head is šāhī diwan al-iṣḥāq or kāhī dast-al-iṣḥāq. The detailed account inshād* of this diwan given by Ibn al-Ṣayrāfī shows that it was also called the ʿAbbāsi diwan with a secretary (See Ibn al-Ṣayrāfī, Kāmīn diwan al-rasālid, ed. A. Bahjat, Cairo 1905; Makrīzī, Kitāb, ii, 244, 306; iii, 140; Kālkhāshdī, iii, 490; i, 103; x, 310; Ibn al-Kalānīsī, Ḍhāyi taʾrīk Dimāshq, 80; Ṣhayyāl, al-Waḥābi al-Fāṭimiyya, 365).

The diwan al-ġund was called diwan al-dījāysh, or diwan al-dījāysh wa l-raʾūdīb (office of troops and salaries). It consisted of two sections: the diwan al-dījāysh, under a wasīr, dealing with the recruitment, equipment and inspection of the troops, and the diwan al-raʾūdīb dealing with pay. However, other references show that the two diwāns were often separate, the first under šāhī diwan al-dījāysh and the latter concerned with salaries of the military and civilians (See Makrīzī, Kī Bahjat, 242; Kālkhāshdī, iii, 492-3, 495; cf. Ibn al-Ṣayrāfī, Ihkāāh, 25, 47; Makrīzī, Ihkāāh, year 542; Ṣhayyāl, Waḥābi, 304). Such soldiers who attached great importance to the fleet, had a diwan al-ṣamāʿīr to look after the construction of ships and their forces (Kālkhāshdī, i, 496).

Accounts of the diwāns of finance are involved. The diwan al-maǧālīs seems to have been the central bureau. It had different sections, one of which dealt with fiefs (ibīd-al). It was probably similar to the ʿAbbāsid ʿal-Dīwān. It made the estimate of the budget (istīmām) when required, after getting estimates from all diwāns (Makrīzī, Kī Bahjat, ii, 236 ff.; i, 150-2; cf. ii, 245; Ṣhayyāl, Waḥābi, 325). The diwan al-nasār had general control over the diwāns of finance (amṣāl) and over their officials. It seems to correspond to the central diwan of kharāḍī, of the ʿAbbāsids (cf. Ṣhayyāl, Waḥābi, 304, i, Ibn al-Ṣayrāfī, Iḥkāāh; ii, 247; Kālkhāshdī, iii, 493). The diwan al-taḥsīb was linked to diwan al-nasār, but its function was to check the accounts of other diwāns of finance. It is parallel to the ʿAbbāsid central simām (Makrīzī, ii, 242; Kālkhāshdī, iii, 493, i, 407; Ibn Muyassar, Ḍhāhi, 43).

The diwan al-khāṣṣ looked after the financial affairs of the palace (Makrīzī, Ḍhī tāʾsī, 200). The office of waṣīr was the diwan al-ḥābīs (Kālkhāshdī, iii, 494-5). The diwan al-maṣrūṭī al-bāḥriyya was instituted to administer escheated and heirless property (Ibn Muyassar, 56; Kālkhāshdī, iii, 496). The Makrīzī says the “central office of the palace” was headed or wasīr. There was a diwan al-taḥsīb, with two secretaries, to deal with them (Makrīzī, Ḍhī tāʾsī, 307; Kālkhāshdī, 491).

Salaries of secretaries varied. The secretary for inshād* got 150 dinars monthly, that of nasār 70, of ʿabād al-mīl 100, of taḥsīb 50, and of the secretaries of dijāysh, tawālī ṣalāḥīs and ʿabād 40 dinars each. Lesser secretaries got 5-10 dinars (Kālkhāshdī, iii, 526; Makrīzī, Kī Bahjat, ii, 243). Non-Muslims were widely employed in the diwāns, and this led to occasional reactions against them (cf. Ibn al-Kalānīsī, 59; Ibn al-Ibhr, Taʾrīkh, 370; Ibn al-Ṣayrāfī, al-Iḍhārā, 34, 35, 48, 53. Cf. Tritton, op. cit., ch. ii).

The 11th-13th centuries.— Since the Buwayhid period, the diwan al-rasālī had been called diwan al-iṣḥāq, and its secretary kāhī al-iṣḥāq (Abū Shudāʾ, 153-4; Ibn al-Djawiš, Munṣāsam, ix, 55; x, 125; Ibn al-Ṣuqūf, Waḥābi, 16; Ibn al-Sāʾī, Diʿāmī, ii, 222). The central bureau was al-Dīwān (cf. Ibn al-Djawiš, ix, 91, 27, 28, 29, 83). It was headed by the wasīr, and at times by a secretary called šāhī al-dīwān (Ibn al-Djawiš, ix, 56, 165, 125). Later it was called al-dīwān al-ʿadīs (cf. al-Fuwātī, 47, 63, 88; Ibn al-Sāʾī, Diʿāmī, iii, 285).

Finances were primarily the concern of diwan al-simām, which in effect carried the work of diwan al-kharāḍī; fief farmers and governors sent revenue to it (Ibn al-Sāʾī, ix, 16). It had two sections: the main diwan headed by a kāhī (kāhī al-simām) (cf. Ibn al-Djawiš, ix, 150, 223, x, 27, 124) later called ʿadīr, and the other section headed by a muḥriṣ who supervised the work of the diwan and the revenue (Ibn al-Sāʾī, ix, 96-9, 128; Ibn al-Ṣuqūf, 16, 62, 63). Each province (or district) had such a diwan headed by a nāṣir or a muḥriṣ (Ibn al-Djawiš, 63, 104).

Al-maḥkām al-maʿmūr replaced, in time, al-maḥkām (treasury) used for Bayṭ al-Māl, and its head šāhī al-maḥkām was replaced by nāṣir or ʿadīr. This diwan supervised the mint also (cf. Ibn al-Djawiš, x, 24-5, 52, 125; ix, 125, 155, 216). His standing was very high (cf. Ibn al-Djawiš, ix, 205). In 949/1059 the ʿadīr of this diwan was given authority over all diwāns (Ibn al-Sāʾī, ix, 250). It had many sections each headed by a nāṣir (for example kūhān al-galālī, Ibn al-Fuwātī, 7, 37; cf. Ibn al-Djawiš, ix, 83; x, 52; Ibn al-Sāʾī, ix, 103, 127. He describes the ceremony of appointment, 141). Here, again, there was a muḥriṣ to supervise
the work of the mahkûm. Obviously, ishrdf replaces
the old zîmdm (Ibn al-Fuwati, 103; Ibn al-Sâ`î, ix, 20, 229).

The diwân al-dimârî (i.e., poll-tax) looked after assessing and levying the poll-tax. (See DIWÂN, DÂYÂ.) A new bureau, diwân al-tarîkât al-haṣâriyya, appeared to administer heirless property (Ibn al-Sâ`î, 107; Ibn al-Djawzi, x, 68). The diwân al-`ašâr, headed by a nāṣîr, looked after buildings, such as shops, owned by the state (Ibn al-Fuwati, 63; cf. Ibn al-Djawzi, x, 243). Building and repairs, however, were the concern of another bureau called diwân al-abnîya (but b. b. Sahl). It had engineers and architects among its staff (Ibn al-Sâ`î, ix, 93, 184). In 635/1237-8 it participated in repairing the walls of Baghâd (Ibn al-Fuwati, i, 111). The diwân al-bisâha was usually under the Kâfî al-kâdî, or under a deputy (Ibn al-Salî, ix, 16; Ibn al-Fuwati, 64).

Non-Muslims worked with Muslims in financial offices to the end of the Caliphate. Occasionally restrictions against them were enforced, but only temporarily. In 533/1140, Jews and Christians were expelled from the diwân and al-Maḥkûm only to be returned after one month (Ibn al-Djawzi, x, 78). The repetition of such orders (like that of al-Nâṣîr li-Dîn Allâh in 601 A.H.) shows that they were not enforced and non-Muslims continued to be employed (Ibn al-Sâ`î, ix, 162).

ii. Egypt.

Three periods may be distinguished in the development of the Egyptian diwân, though, since continuity in administrative institutions tends to be stronger than changes of governments, there are in reality no clear deavages: (1) the time when Egypt was a province of the great Muslim Empire (18/649-
358/969); (2) the Fātimid caliphate (358/969-567/ 1171); (3) the Ayyubid and Mamlûk period (567/ 1171-923/1517).

The sources for the first section are scattered remarks in the earlier and later historians and manuals for kuttâb as well as the growing number of Arabic papryri. For the second and third periods the manuals and encyclopaedic works for kuttâb provide ample materials which increase by the end of the mediaeval period; and the historians supplement the actual facts rather than the more theoretical explanations of the former. Among the latter al-Mâkûzî (d. 845/1442) al-Khâtâfî is of outstanding importance, as he gives a nearly continuous history of the Egyptian administration from the Muslim conquest until his own time (ed. Bûlâk, i, 82 ff., 397 ff., ii, 215 ff.), besides many important additions in the scattered “Vitaes” and the descriptions of buildings etc.

(1) The Muslims carried on the administrative practice in Egypt that the Byzantines had established with the help of the local population, even allowing them the use of the Coptic language.

Since the term diwân was not in use in Egypt during the Byzantines, we may deduce that it was brought by the new masters. Severus b. al-Mukaffa (living about 1000 A.D.; see IBN AL-MUQAFFA, ABU`L-BÂSHR) reports that the second Abbott Allâh b. Sahî (854-95/66, [4]) “established the diwân at Mi`râb (al-Fustat) to which all the taxes of Egypt were paid” (History of the Patriarchs of Alexandria, ed. C. S. F. Seybold; ed. B. T. Evett (Pair. Orient. vi), 5, quoted by N. Abbott, The Kurra papyri, 13, and D. C. Dennett, Conversion and poll tax, 74). Unfortunately the Muslim sources do not offer any confirmation either for the establishment of a central revenue office, or the use of the word diwân for it at such an early time. Al-Mâkûzî relates (Khâtâfî, i, 94, 2-10) that the governor Maslama b. Mu`âṣîr al-Anâsîr (47/667-682; al-Kindî, ed. Rh. Guest 38-40; Makrîzî, Khâtîfî, i, 301, 18-27) appointed an official to go round among the immigrant Arabs each morning to inquire about changes in their family status, or the arrival of guests, and to report it to the diwân. The governor would then advise the ahl al-diwan (the officials of the diwân) to pay the increased pensions. This narration indicates the existence of an organized office called diwân, as well as its concern with registration and the payment of pensions to the immigrant Arabs. The same use of the term diwân also appears in a note by al-Kindî (ed. Guest 71; Makrîzî, Khâtîfî, i, 94, 10-3): the first diwân was established in Egypt by `Abî b. `Asî, the second by `Abî al-Azîz b. Marwân, the third by Kurra b. Sharîk [q.v.], the fourth by Bîshr b. Safwân. After the establishment of the fourth diwân nothing worth mentioning happened except the admission of the Kays into the diwân during the caliphate of `Abîd b. Marwân (105/724-725/743). Al-Kindî (ed. Guest 76) refers to that event in the year 109/727: 3000 families of the Kays were transferred to Egypt to pay the new tax, together with their diwans. These notes show that the term diwân was used from an early time to denote (a) the pension lists of the Muslim-Arab tribes, (b) that these lists accompanied the tribe wherever it moved, (c) that consequently the term diwân (pension list) of the Kays was transferred to Egypt and there added to the other already existing diwans.

During the second half of the 11th/17th century the use of the term diwân to denote central government offices must have become more general. We read (al-Kindî, 58-9; al-Makrîzî, al-Khâtâfî, i, 98, 11-15) that the change-over from Coptic to Arabic in the Egyptian diwans took place in 872/705 (cf. ed. Wiet, ii, 58). This can only mean that in the above-mentioned year the term diwân was already the name of the central government office at al-Fustat. The first independent director of finances (fâmil al-kharadî) was Usâmâ b. Zayd al-Tânîkî who was appointed in 667/127 by the caliph Sulaymân b. `Abîd b. Malik on the death of the governor Kurra b. Sharîk. That Usâmâ worked with the help of a diwan is shown by the report of al-Makrîzî (Khâtîfî, i, 77, 37-8, 3) that `Umar b. `Abî al-Azîz (997/177-1015/720) abolished the poll-tax for Muslims and notified the diwan (al-kharadî) about it. In
105/725 the governor al-Hurr b. Yusuf sent officials of the diwan against Coptic peasants in order to enforce the payment of higher taxes. Two years later the well-known 'amil al-kharadji Ibn Habhab (C. H. Becker, Beiträge, ii, 107-10) set up lists of taxpayers which were carefully put together and provided with detailed information for the diwan al-kharadji (al-Makrizi, Khiṭāt, i, 74, 24 & 99, 10).Ashḥāb al-ahra (officers of the government granary) are already mentioned in a papyrus dated Shawwal 90/August-September 709; it seems likely that they were officials of the diwan al-ahra listed later by al-Nābulusī (C. H. Becker, Patrologia Orientalis, Schott-Reinhardt, 70, 37 & 49; see below). — The diwan al-barid (diwan of the post) is alleged by diwan al-rawdtīb, the central pay office for all receivers of salaries from the wazir down to the muḥn. It can be called the predecessor of the diwan al-majlis which was the predecessor of the diwan al-inṣāq wa l-mukdātāt. The following list of diwāns culled from the above-mentioned sources can not claim to be complete one. It should be kept in mind that the different offices styled diwan do not rank on the same level, as diwan denotes sometimes even provincial branches of central offices. (i) Diwan al-inṣāq, its predecessor was the chancellery of state (daftar al-majlis) in which the whole of the administration was concentrated. A number of clerks sat there in their own rooms with or without assistants (muʿātim). The chief of this diwan was responsible for the grant of fiefs (inšāʿ; C. H. Becker, Islamstudien, i, 226; W. Björkman, Index; C. H. Becker, Evolution de l'État, in Annales ESC, 1953). The chief of the diwan al-majlis dealt with such topics as alms, gifts, clothing and administration of the private purse of the sultan. Our sources do not state whether that diwan existed already before the Fatimid or when it was split up into different independent diwāns took place. But it seems probable that the diwan al-majlis was the predecessor of the diwan al-amwil, and that the diwan al-inṣāq existed side by side with it. These offices were subdivided into three departments: (a) Sāḥib al-dawla, head of which was the diwan al-majlis, with high-rank officials, and his deputy existed in the main places of the provinces (head). — The diwan al-amwil, with his deputy existed in the main places of the provinces (head). — The diwan al-sāḥib al-dawla, head of which was the diwan al-majlis, with high-rank officials, and his deputy existed in the main places of the provinces (head). — The diwan al-sāḥib al-dawla, head of which was the diwan al-majlis, with high-rank officials, and his deputy existed in the main places of the provinces (head). — The diwan al-sāḥib al-dawla, head of which was the diwan al-majlis, with high-rank officials, and his deputy existed in the main places of the provinces (head). — The diwan al-sāḥib al-dawla, head of which was the diwan al-majlis, with high-rank officials, and his deputy existed in the main places of the provinces (head).
to the cavalry trooper (cf. A. Mez, Renaissance 74-6); (c) diwān al-`ītad (diwān of fiels and pensions) for civilians, as the military personnel belonged to the diwān al-kārkhāndī (al-Kākhashandi, iii, 492-3; al-Makrizī, Khīṭāt i, 401-2). (iii) Diwān al-amūāl (diwān of finance, the treasury) was divided into fourteen departments, also called diwān, which are enumerated by al-Kākhashandi (iii, 493-6) and much more briefly by al-Makrizī (Khīṭāt i, 400-1). Ibn Mammātūt offers a list of seventeen employees of the class of civil servants (ṣamā‘ al-muṣtakhād mīn hamal al-`ītum) which apparently belonged to the staff of the diwān al-amūāl; but it is not always clear to which of the 14 departments these 17 groups correspond (ed. A. S. Aṭiyya 297-306). (a) Nasār al-dawwārīn, or diwān al-nasār (control-office of the diwān). The head of it is ex officio the chief of the diwān al-amūāl, i.e., the chancellor of the exchequer. Ibn Mammātūt distinguishes between the nasār of the diwān (the controller, auditor) who checked and countersigned the accounts and the muṣawālū (superintendent) who was responsible for all business (C. H. Becker, Islamstudien i, 170, 173; (b) diwān al-tahkīk (diwān of official enquiry (cf. Dozy s.v.) was founded by al-Aḍāl b. Bādir al-Dāmiyālī [q.v.] in 501/1107-8. When a Jew and a Christian were employed as its heads; later on it was not filled for most of the time (Ibn al-Ṣayrāfī/Maṣṣūs 82 note 1); (c) diwān al-maqālīs (see above xxx) only administered royal gifts, alms etc.; (d) diwān khāṣṣ‘ al-kiswā, diwān of the houses of clothing; about the numerous storehouses see the long lists in al-Kākhashandi, iii, 475 ff. and al-Makrizī, Khīṭāt i, 408 ff.; (e) Diwān al-tahdīd (diwān of the embroidered garment-factories and storehouses). The diwān maintained several branches at places where the factories were situated, e.g., Alexandria, Damietta, Tannūs (Ibn Mammātūt 330-1; A. Grohmann, Stud. z. hist. Geogr. u. Verw., 44); (f) diwān al-ahbāds (diwān of endowments). Since its foundation by the caliph al-Mu`izz in 363/974 the diwān dealt with the administration of pious foundations (mawāfī [q.v.]); its officials were Muslims only and the chief of it is called sahib diwān al-ahbāds (the controller, superintendent). The certificate was often signed by fifteen clerks of the class of civil servants. It is not clear what the relation had been between this diwān and the office of the same name in the diwān of the holy war, or the navy. Its seat was in the dockyards at Cairo, and it served as administrative centre for the military personnel of the caliph (Ibn LANAN 329-). (g) Ibn Ayūbīd period. The political and religious break which the end of the Fātīmid caliphate meant for Egypt was counterbalanced by the administrative continuity clearly demonstrated by the leading personality: the last sāhib diwān al-`ītad al-Kādī al-Fāḍī Muhīy al-Dīn [q.v.,], was kept on by Salādīn in the same office and later on created wāzīr. Hence al-Kādī al-Fāḍī and his numerous successors often formed a link between the periods. As already mentioned Ibn Mammātūt’s Kauwānīn al-dawwārīn can serve as a contemporary source for the first half of the Ayūbīd period; for the second half two other contemporary authors have come down: Ibn Shīth al-Kurashi and ‘Uthmān al-Nābulūsī. Like Ibn Mammātūt, Ibn Shīth al-Kurashi was a pupil of al-Kādī al-Fāḍī whose high esteem he gained by his skill in poetry and prose. He went to Damascus where he became the head of the diwān al-`ītad and the friend of Mu`azzam b. al-`Aḍīl (d. 624/1227). Mal`ūm al-kiṭāb, a guide to the correct form of letter-writing for clerks of the diwān al-`ītad, offers but one chapter dealing with our theme (pp. 23-32). The diwān al-`ītad is in the eyes of Ibn Shīth the most important government office, hence its head (sāhib al-dīwān) should be of a moral standard that corresponds to his exalted rank and the high esteem he enjoys among his colleagues. His next subordinate to whom he forwards the answering of letters and deeds was called muṣawālū kiṭāb al-`ītad, (superintendent of the secretariat of the chancellery). Other offices enumerated by Ibn Shīth: diwān al-`ītad, diwān al-`ītad al-ma‘ūsī, whose chief (kāhid al-`ītum) holds a lower rank than the sāhib diwān al-`ītad, and needs an account-book (dajarīd) with the names and fiels of all the military personnel to be in a position to pay out their salaries, even if no head of the diwān al-`ītad should have been appointed. The diwān al-`ītad apparently was an independent office, whose head was of lower rank than that of the diwān al-`ītad and both worked together with and under the control of the military personnel (al-wāṣīr). It is not clear what the relation had been between this diwān and the office of the same name in the diwān al-`ītad. It seems possible that this diwān al-`ītad had been a kind of predecessor to the diwān al-khās (the diwān of the private fund of the caliph; al-Kākhashandi, iii, 495 and 457); (h) diwān al-Sa`īd (diwān of Upper Egypt); (i) diwān Asīl al-arīd (diwān of Lower Egypt); (j) diwān al-`ītum al-thughūr (diwān of the frontier districts). The marches of Alexandria, Damietta, Tannūs and ‘Aydhab formed an administrative unity for the purpose of levying import-taxes from the merchants at the ports (al-khums and maṭīfūr [see maws]; Ibn Mammātūt 325-7); (k) diwān al-`ulmār wa l-mawwūrīt al-`ītum (diwān of the poll tax and estate duty of dhimmīs; F. Lokkegaard, Islamic Taxation 51 & 140-1; C. H. Becker, Islamstudien i, 172; Ibn Mammātūt 306, 317-8 and 454; C. H. Becker, Le régime des impots, iii, 24; (l) diwān al-khārājīn wa l-`ilālī (diwān of the lawful and illegal taxes). F. Lokkegaard, 185-6; C. H. Becker, Islamstudien i, 177-9). Ibn Mammātūt enumerates several offices connected with this diwān: al-`ītum (the tax collector), al-`ītum (the notary) who countersigned the invoices, al-māzik (the surveyor), etc.; (m) diwān al-harār or al-`ītum al-thughūr (diwān of the houses or the stables); (n) diwān al-`⅋hār or al-`amārī (diwān of the holy war, or the navy). Its seat was in the dockyards at Cairo, and it served as administrative centre for the military personnel of the caliph (Ibn LANAN 329-).
DIWĀN

therefore, asks for the knowledge of foreign languages among the officials of that diwān such as Turkish, Persian, Greek and 'Frankish' al-farangiyya (Latin); šaḥdāl-aštāfā'; i, 165-7; Björkman, Staatskanzlei, 44 and note 21; (b) appointments (wilāyāt), including the oath of allegiance (hayyāf), and the document of investiture for the sultan's successor ('aḥd) as well as the governors of the provinces (kullād) and other officials (lašfīd, tašfī); al-Kaškhāndi, i, 253; Björkman, Staatskanzlei 48, 52; (c) the royal decisions upon complaints of the common folk (tašfīdāt ʾalā l-ḥāja, see above, al-Kaškhāndi, vi, 202 ff.). Björkman, Staatskanzlei 52-3. (ii) Diwān al-diaysh, or diwān al-diaysh al-mansūra administered the grant of fiefs of army personnel (al-Kaškhāndi, i, 102), hence sometimes called diwān al-ḥaṣā; al-Kaškhāndi, iii, 457; Björkman, Staatskanzlei 51, note 2). Its chief, nāṣir al-diaysh (controller of the army-diwān), often a Kādi, was assisted by the inspector of the diwān al-diaysh (ṣāḥib diwān al-diaysh) and numerous other officials (wazīr, kādī, nāẓir, shuḥûd, kuttāb, etc.) whose head was called nāẓir bayt al-mdl which according to Makrizi no longer existed at his time (Khitat. Egypt and Syria, 97: "controller dawdddr [qq.v., ddr., etc. Ibn Khaldun considers the diwān al-mufrad (diwān established the function of the special bureau) for the control of stipends, clothing of the army-diwān), Sultan diwāns: asfydb al-suyuf) the military class (arbdb) of Alexandria (see above) and of the royal Mamluks etc., and all that at the expense of officials: nāṣir al-māl (controller of the exchequer), ṣāḥib al-dawārin (superintendent of the diwāns), nāṣir al-khāṣṣ (controller of the private funds of the sultan; W. Popper, Egypt and Syria, 97; controller of private funds) and kādī al-ṣawārī (secretary of state) of the royal Mamluks etc., and to the sultan, or presented foreign ambassadors to it as typical sign of "senility" of an epoch and a time" (Ibn Khaldun, ii, 15 & 20; tr. Rosenthal, ii, 51, note 2). Its chief, the kātib al-sirr, was concerned with (a) correspondence (muḥāfās) with foreign powers as well as with the provincial authorities. Al-Kaškhāndi,
224, 36-7), nazar al-mawdrith al-tashriyya (control-office of heirless property; Popper; Syria and Egypt*, 99, 17), nazar al-muradiyya bi'l-tashriyya (control-office of heirless property; Popper; Syria and Egypt*). The historians provide ample examples for the working of that complicated machinery, the disastrous effect of its inefficiency aggrandized by the incessant changes of the leading personnel as well as of the rulers and the cruel arbitrary system of punishments (muṣādara) that accompanied every change.

(H. L. GOTTSCALK)

iii. Muslim West.

A. So far as Muslim Spain is concerned, we do not know how much of the civil and military administration of the Visigoths, which unquestionably was influenced by the Byzantine system, was found and adopted by the first conquerors at the beginning of the 2nd/8th century. In the 14th/19th century, in the Umayyad period, three basic divisions of public administration have been in operation, corresponding with the three essential needs of a State, each directed by a special minister (wizar or sāhib).

These were:

1. The Chancellery and Secretariat, diwan al-rasā'īl (= al-tariq) wa'l-khdāba, which dealt with official correspondence, both incoming and outgoing, and also with the drafting of various diplomas and commissions (sāḥibat, sāhib).

2. The Ministry of Finance, diwan al-khdāriyya wa'l-khdāriyya, diwan al-ashghal, diwan al-al-fayd (for the payment of salaries; Popper; Syria and Egypt*), etc. The historians provide examples of the work of that complicated machinery, the disastrous effect of its inefficiency aggrandized by the incessant changes of the leading personnel as well as of the rulers and the cruel arbitrary system of punishments (muṣādara) that accompanied every change.

3. The Ministry of the Army, diwan al-diyāq, diwan al-djand, diwan al-rasā'īl, diwan al-thughār, which had three different functions; keeping up to date the financial records of the regular army; keeping accounts and giving the army their pay (arżād); and active service gratuities (ṣayyidūd); distributing gifts of estates to senior officers (bāzād). But it had no share in the command of troops or direction of campaigns.

After the Umayyads, a similar tripartite organization, though naturally on a much reduced scale, was found at the "satrap's" court (mulūk al-fawād), and later at the Nasrids'.

With regard to North Africa before the Almohad period (6th/12th century), we know practically nothing about the diwāns. In 554/1159 the Almohad 'Abd al-Muʾīn, after imposing his authority over North Africa from Wādat Nūl to Barka, had a survey made of his empire, with the aim of compiling a register for the assessment of land taxes (hārādগ), payable in kind and money; from this we can deduce that a special fiscal diwan was either set up or developed.

Another Almohad, Yaḥyā b. Al-Manṣūr (580-95/1184-94) introduced the practice of 'ulāma, the formula of authorization written in large letters at the head of despatches and commissions, the text of which was: wa'l-khdārū li-lāhī wa'dah. At first this was inscribed by the sovereign himself; later the insertion of 'ulāma was entrusted to the High Chancellor. The practice was maintained by the Ḥafṣids and Marinids, and was observed until the end of the Sa'dids. The Nasrids alone did not adopt it.

In other respects the Almohad diwāns correspond with those of the Umayyads in Spain. But the High Chancellery tended to become the diwan al-tawād. This organization was maintained in Ḥafṣid, and in Morocco by the Marinids. However, several diwāns were often put together and held simultaneously by a single statesman belonging to one or other of the great ministerial families.

From the 10th/16th century there is very little information about the operation, or indeed the existence, of diwāns in North Africa. In Morocco we only know of the diwan al-diyāq which included all regular troops, at first Arab and later negro ('Abīd or Ḥarāfīm). As these troops (more particularly the 'Abīd) had often made and deposed Ḥalīwī sultans, their diwan sometimes appeared to be a kind of royal Council.
After the disastrous Tetuan war (1860), sultan Muhammad III b. cAbd al-Rahman tried to establish a modernized diwan al-diwyā, but his attempt proved abortive.

B. From the Almohad period (6th/12th century), in those ports open to trade with Christian Europe (from the Maḥdīyya in Ifrīkiyya to Ceuta, and also in Almeria), the existence has been established of special offices which were subordinate to the diwan al-aṣchāl, and whose function was to collect tithes (aʿghar) and other incidental taxes (maṣālīm) which were imposed on European importers. This sort of office in general called simply al-diwān; but more detailed titles are also encountered: diwan al-bawāy and in particular dār al-īṣāra, which exercised supervision over the levy of customs-dues. The local official in charge was called mushrī.

To facilitate the operation of customs, and in addition to ensure the safety of Christian merchants and their merchandise, one or more entrepôts (one for each nation) were situated very close to the diwan; these were ʿandūb or kaysāriyya, the eastern equivalents of which were ḥāmid and (dār al)-yashūdā. As an exception, offices of this sort also operated in capital cities situated inland, as for example at Tlemcen and Fez. In the latter town, the "office for the tax" levied on cloth imported from Europe which Leo Africanus (beginning of 10th/16th century) recorded as being in the kaysāriyya there must correspond with the small commercial quarter, still known today as Ed-Diwānī, immediately north of the present kaysāriyya.

The word diwan, taken in this narrow sense (which must have been the one best known to European merchants), is evidently the origin of the Italian dogana and the Spanish aduana, and also of the French douane, but the loss of the -a- and the addition of the final -a in the two first borrowings cause difficulty. In Granada (end of 9th/15th century), P. de Alcala still gave, as the Arabic translation of the Spanish aduana, the word diwān. However that may be, the present-day term in Morocco is diwān, perhaps influenced by the Spanish form. In the other Maghribi languages as in eastern languages, that is to say in the Arabic-speaking countries which were annexed to the former Ottoman empire, the words for "Customs" are borrowed from the Turkish giṃrūkh which goes back to the Latin commercium through demotic Greek.

C. From the middle of the 10th/16th century diwāns made their appearance in the Turkish principalities of Algiers, Tunis and Tripoli. At that time the word denoted a clique of senior officers who were appointed to assist and, more particularly, to supervise the leading Turkish official of the locality. It was no doubt on the precedent of these cliques that, at the beginning of the 11th/17th century, the Moors living in the kasaba of Rabat set up their Diwān or Council (contemporary European texts refer to them as diwan, douan, duana), the members of which exercised supervision over the Government.

In its present use in dialect, the word diwan is sometimes applied to the "councils" which the Saints, and also diwnān, are reputed to hold from time to time. It is partly for this reason that the word is sometimes used in the sense of "plot, cabal".

Bibliography: See the articles ALGERIA, LIBYA, TUNISIA; de Castries, Les trois républiques du Bou-Rregag, in Sources indiées de l'histoire du Maroc (Holland, 1st series, V, i-xvii), in which the author is mistaken with regard to "douane".

In the East, special systems of writing were used in government offices, notably the diwānī for chancery and diplomatic usage, and the siyāb or siyāba, including a system of numerical abbreviations, for fiscal and financial records. In the Muslim West the accountants in the financial offices made use of a system of 27 figures called rusūm (or ṣurūf) al-simām "abbreviations or characters of the great book", the Byzantine origin of which is established. See also khatt.

iv. Irān

The term diwanī was variously used to mean the central government in general, in which sense it was also more specifically known as the diwanī-ī aštā, the office or place in which government business was transacted and the "civil" administration as opposed to the "military" administration, though the dividing line between them is sometimes difficult to establish. By the mid-19th century the term diwanī in the sense of the central government had been largely replaced by dawla or dāʿara-ī dawla. Secondly the term diwanī was used to mean a government department in general, in which sense it was eventually replaced by wizāra, dāʿara, and idāra. These diwāns varied according to the exigencies of the time. The adjective diwanī is similarly used. Thus, muḥimmāt-ī diwānī meant the affairs of the central administration; takālīf-ī diwānī were taxes or dues (of a non-canonical character) which were levied on goods entering the country; takālīf-ī land diwānī meant state land in contradistinction to crown land or private estates.

Barthold's statement that "throughout the whole system of the eastern Muslim political organization there runs like a red thread the division of all organs of administration into two main categories, the dargāh (palace) and diwanī (chancery)" (Turkestan, 227) is, perhaps, an over-simplification; there was, almost inevitably, because of the intensely personal nature of power, a tendency for the dividing line between the competence of the various officials to be a shifting one. The general tendency in the early phases of Ilkhanī, Safawid, and Kāḏār rule, for obvious reasons, was for the central administration to be relatively simple and for the differentiation between the various organs of government to increase with the passage of time. This is noticeable especially in the Safawid and Kāḏār periods.

The diwanī-ī aštā covered the whole field of administration; but it was concerned primarily with three aspects; the issue of diplomas and decrees; financial administration; and the administration of justice (apart from cases of personal status which came under the ṣurūf courts). The first two fell
DIWÂN 333

within the purview of the wazir; the last, so far as it was delegated, was delegated, not to the wazir, who lacked the power to execute decisions, but rather to his officials as well as conducting state business in the diwan-i a'ādā also held from time to time a diwan-i mārādīm. Under the Timurids and Ṣafawids the chief judicial official was the diwanīn,begī, who was usually a member of the military classes. The tradition of personal administration, including the administration of justice, by the ruler continued into KāḏĀr times (Malcolm, History, London 1939, ii, 308), and the royal residence in which state business of all kinds was transacted by the ruler (and by the governors in the provinces) in general, and the audience hall in particular, was known as the diwanīkhāna.

The central administration had little influence in the field of policy or over the appointment of governors, which was in the hands of the sultan or the šāh. Large areas of the empire were also alienated from its control in the form of ṣāḥqa or tīyāl. There was, nevertheless, a remarkable continuity of administrative tradition in Persia, especially in the field of finance, which was that aspect of the central government which was most highly organized. This tradition stretches back from the mid-19th century (after which administrative changes were induced by the example of western European countries began to take place) to Ṣafawid and Timūrid times, and it can, in spite of certain innovations made by the Ilkānids, be traced back still further to the period of the Great Ṣaljuḵs. That this continuity should have been preserved was, perhaps, largely due to the fact that the members of the bureaucracy were drawn almost exclusively from the settled population and served the successive dynasties. Thus, the administrative personnel of the early Ṣafawid empire was largely composed of officials who had served the preceding Turkoman dynasties; similarly the bureaucratic officials of the Ilkānids had served the dynasties ruling in Persia before the Mongol conquest. Equally striking is the extent to which high office under the early KāḏĀrs was held by the population and served the successive dynasties. hadźadźi of the divān (‘Atabat al-kataba, 61). There are also cases recorded of Seldjuk women having divāns (cf. ‘Atabat al-kataba, 61; Қūndandarəm, Dašt-i a-wusur, 490). With the Mongol invasion of Persia there was to some extent a break with tradition; much of the earlier administrative structure nevertheless remained, or was revived after the adoption of Islam by the Ilkhāns; and the officials of the bureaucracy and the religious institution with their various divāns were again found alongside the officials of the “military” government. The foremost minister of state continued to be known as the wazir, or, sometimes, in his position as the representative of the ruler as the nāšib (Spuler, Mongolen, 282). There was, however, a tendency to remove financial affairs from the direct supervision of the wazir and to entrust these to an official known as the sāhib divān, who tended at times to overshadow the wazir. It seems not unlikely that the Ilkhāns intended in this way to lessen the likelihood of the divān, were religious institution with their various divāns being used, or was revived after the adoption of Islam by the earlier administrative structure nevertheless remained to some extent a break with tradition; much of the division for the chief official of the administration which broadly coincided with the dichotomy between Turk and Tadjik (i.e., Persian) was clearly marked.

Under Husayn Baykara the diwan-i a’ld (under the divān-i a’ld) was under the wazir, the supreme organ of government was divided into the diwan-i buzurg-i amārāt (under the divān-i a’ld, which deal with military affairs, and the diwan-i māl (under a wazir), which was concerned with “civil” affairs (Roemers, Staatsschreiben der Timuriden, 347). The highest official of the administration, similarly designated. There appears to have been something in the nature of a state council, to which certain members of the diwan-i a’ld belonged; this council seems to have been outside the traditional pattern of the central administration. Alessandri states that Tāhmāsp held a daily council attended by twelve sultans (i.e., provincial governors and therefore members of the military classes) and those of his sons who were at court (A narrative of Italian travels in Persia, Halkdyrt, 220-1). The functions of this council appear to have been purely advisory. The Tadhkirat al-Muluk states that the khūllar-ḍāšt, sāhib-ḍāšt, tujangēšt-ḍāšt, wazir-i a’ṣam, divān-begi, and wāṣṭ-i a’ṣam “had from early times belonged to the council of amirs of the umārā-yi djiṅši and at the end of the reign of Shāh Sulṭān Ḥusayn the nāšir, mustawfi-i al-māmālik, and the amir-ṣāḥib-ḍāšt were also, on some occasions, included in the council. If the council met on the subject of sending an army commander (sipahṣālr) to some outlying part of the empire, the presence of the sipahṣālr at the djiṅši was a necessary condition” (ff. 7b-8a). Minorisky considers the institution to be of Mongol or Tumurid origin. Chardin maintains that there was no council of state similar to the European institution; Sanson, on the other hand, states that all decisions were taken in the King’s Council (Tadhkirat al-Muluk, 113-4). Under the Kāḏār the djiṅši does not appear to have been a regular part of the central government administration, but to have been a tribal council dealing with affairs concerning the Kāḏār tribe, which presumably normally sat under the ilḵānī. Malcolm mentions a case of treason by a “high noble” of the Kāḏār tribe being tried about 1608 by a djiṅši (History, li. 327n.). The highest official of the diwan-i a’ld under Ismā’il and Tāhmāsp was the wazir, who was the alter ego of the shāh as the wazir, in his heyday, had been of the sultan; his competence extended virtually over the whole field of the administration. The use of the term wazir for the chief official of the diwan-i a’ld appears to have died out in the middle of the 16th century and to have been replaced by the term wazir-i a’ṣam, who held the title of ‘Ismā’il-al-dawla. After 920/1514 his office tends to be referred to as the nāṣarāt-i diwan-i a’ld, nāṣarāt-i diwan, or diwan-i wisiara (R. M. Savory, The principal offices of the Safavid state, in BSOAS, xxii/1, 1960, 91-105 and xxv/1, 1961, 65-84). In due course an elaborate system of administrative procedure was evolved. As head of the diwan-i a’ld the wazir confirmed official appointments; documents concerning these matters and the pay of officials went through an office called the dafarkhāna-i kumāyān-i a’ld under a special wazir. Documents concerning the pay of the “standing army” (bārēšt, ghuḏām, tujangēšt, and members of the toppbhāna) went through the relative department (sarkhā), which was under a wazir and mustawfi and staffed by secretaries belonging to the diwan (Tadhkirat al-Muluk, f. 58 ff.). Letters of appointment and salary grants for “civil” and military officials as well as being sealed by the
wazir-i a'zam were also sealed by the lashkar-niwis of the diwan-i a'zam, who was also wazir of the depart-ment (sarkdr) of the diwan-i acld, who was also wazir of the... of his control over the diwan-i khdssa are not entirely clear. The budget of the buyutdt was apparently submitted to the wazir-i a'zam (Taghkirat al-Muluk, f. 16a). Under the mustawfi al-mamdlik there were various officials in charge of different tax offices (daftar-i mawfyufdt) of the state (Tadhkirat al-Muluk, ff. 7iaff.). This last was, in the relevant matters according to whether they were situated in mandlik or khdssa areas. These included a sarkdr-i mawfyufdt (Taghkirat al-Muluk, f. 71a) and a daftar-i mawfyufdt (f. 75a). A special department, the sarkdr-i jayd dthdr, at Mashhad administered the wakfs of the shrine of the Imam Ridan (‘Alam-drd, 258b, 654). General supervision of wakfs was carried out by the diwan-i saddr-dthdr under the sardr-i a'zam (H. Busse, Unter-suchungen zum islamischen Kanzleiwesen, Cairo 1959, 204). Some of the provincial sardrs also had wakfs or sarkdr-i jayd dthdr (Iskandar Munshi, ‘Alam-drd, 765). As the royal court its procedure from the time of Fath ‘All onwards was elaborate. The administration of the royal household, which comprised a number of offices which were collectively known as the buyutdt, was, however, more clearly separated from the diwan-i a'zam than had previously been the case. So far as the diwan-i a'zam in the central government was concerned, its organization was less elaborate than in Safavid times; and there was no longer a distinction between the mandlik and khdssa departments. Aka Muhammad Khan apparently attended to the details of the administration largely in person; the rule of Fath ‘All was also personal, but during his reign the administration was expanded. The chief official of the diwan-i a'zam was the sardr-i a'zam; his power varied with the relative energy, indolence, and competence of the shah. Under Aka Muhammad Khan the sardr-i a'zam, Haidjji Ibrdrhm, is said to have presided over all the departments of state (Malcolm, ii, 308-9). The two most important departments were under the mustawfi al-mamdlik and the laghrar-niwis respectively; the latter was concerned with the pay and levy of the military forces, which was closely bound up with the tax administration. Under Fath ‘All the office of mushkip al-mamdlik again became important. The internal administration of these various departments appears to have been of a relatively rudimentary nature under the early Kadjars. Morier, writing in 1809, states that the offices of the ministers and secretaries of state were situated in the shah's palace where they assembled every day to be ready whenever the shah might summon them (A journey through Persia, London 1812, 216); but in fact the ministers often had to set up their departments wherever they happened to be. Aka Muhammad Khan and Fath ‘All both spent much of their time on military expeditions and in camp (as also did their successors); and they were normally accompanied on these occasions by their ministers. In such circumstances government departments had to function without any elaborate administrative apparatus. Malcolm states that “the accounts of the receipts and disbursements throughout the ecclesiastical, civil, revenue and military branches of the government, are kept with much regularity and precision” (History, ii, 370). In fact, these records were largely treated as the personal property of the officials who made them; and so far as they concerned the revenue assessment, by the middle of the century they often bore little relation to conditions as they were. The diwan of the mustawfi al-mamdlik was organized on a geographical basis; the tax assessment and records of a given area were placed in charge of a mustawfi, who was known as the mustawfi of that district. Separate departments dealt with crown lands (khdlisa) and waqfs and other special aspects such as arrears (babdy). The provincial administration was delegated to the governor, who often attended to the details of this in person. In the case of a powerful provincial governor, especially if he were a Kadjar prince,
the provincial court tended to be a replica (on a smaller scale) of the diwan-i 'ald. The most important provincial official was the wazir, who was normally appointed by the diwan-i 'ald. His main responsibility was to ensure that the governor remitted the provincial tax quota to the central government.

v. India

The term *diwan*, meaning a government department, appears to have been first introduced into India during the rule of the Ghaznavids with the seat of their administration at Lahore. Artyark, the Commander of India appointed by Sultan Mahmud, had all the wealth which he had accumulated during his vicereignty in India confiscated on his dismissal and recall to Ghazna. A great part of this fortune must have come from land-revenue for whose collection and disbursement there must have existed a separate department. Narshakhi (cf. *Tarikh-i Bukhara*, ed. Schefer, 24) mentions the existence of no less than ten *diwan* under the Ghaznavids, including the *diwan-i wizira* or revenue department (cf. also Abu 'l-Fadl Bayhaqi, *Tarikh-i Bayhaqi*, ed. Said Nafozi, Teheran 1319/1940, 53, 180, 792). Bayhaqi was himself on the staff of the *diwan-i risala* (*diwan-i inquld*?) during the rule of Mas'ud b. Mahmud. Moreland's contention [see Bibi] that the word *diwan* was first used by Indian historians to denote a department or a ministry in the 7th/13th and 8th/14th centuries is, therefore, erroneous. The term was in use much earlier.

During the Sultanate period its use was mainly confined to the minister for revenue, who was ordinarily the wazir himself, and his department, the revenue ministry. A new department, on its creation, was also known as the *diwan*, such as the *diwan-i risala* or the *diwan-i masailim*. During the same period the word was also used for the military department, which too was under the control of the wazir, although under the Ghaznavids, this department was known separately as the *diwan-i ard*.

This system of government seems to have been fully developed during the Sultanate period as we find quite a number of departments in existence. These included: (i) *diwan-i risala*, which dealt mainly with the expenditure only. Firuz Shâh Tughluk had also set up a separate *diwan*, under a *muqaddar*, for the royal *kâyhanas* (factories), whose accounts were, however, audited by the *diwan-i wizira*. There occurred a slight change in the designation of the *wazir* during the Mughal period, who came to be known as the *diwan-i kull* and his colleagues in the same department as mere *diwan*, with such other appellations as denoted their functions and duties such as the *diwan-i tan* or the *diwan-i khalîla*.

Another significant change under the Mughals was that the office of the revenue department of revenue and finance came exclusively to be known as the *diwan*. During the reign of Akbar the word *wazir* in this sense was seldom used, having been replaced by the term *diwan*, which had come to denote a person rather than an institution or a government department. However, in the reign of his son, *Diwângir*, the old practice was revived and the term *wazir* again came into vogue. It was during the reign of Shâhjahân that the *wazir* came to be known as the *diwan-i kull* and his other colleagues in the department as *diwan*, with the addition of such epithets as showed their designations. For some time the two words *wazir* and *diwan* remained almost synonymous, and even in private business, a person who managed a high officer's or a wealthy person's financial affairs came to be known as a *diwan*. Dayânât Khân was the *diwan* of Mumtâz Mahal in the first year of Shâhjahân's reign (*Ma’dârî al-umârâ?*, Eng. tr. by A. H. Beveridge, i. 484). Even to this day male members of some families, both Hindu and Muslim, proudly carry the hereditary honorific of *Diwan*, once borne by some illustrious ancestor.

The revenue ministry, under the *diwan*, was consequently known as *diwân*, a term which was destined to survive in the *diwân* (civil) and *faujiyâr* (criminal) courts of the British days, which still form a part of the legal structure of Pakistan.

During the Mughal period the *diwan* performed multifarious duties. He was not only responsible for the disposal of revenue papers, but also drafted urgent royal letters and *farmâns*. He also granted interviews to the agents of the princes, provincial governors and high nobles. The mounting of the guard, under the command of the *wazir*, was performed in the imperial palace at night was also a part of his duty. He had to submit revenue collection and expenditure returns to the emperor who was in this way kept informed of the finances of the State. As an administrative functionary, he allocated duties to all high dignitaries on first appointment, received regular reports from them, and also had powers to grant leave. He was also in charge of all official records which were deposited in his office (for a detailed list of these records, see Jadunath Sarkar, *Mughal administration*, Calcutta 1952, 29-32).

His colleagues, the *diwan-i khalîla* and the *diwan-i tan*, had separate duties to perform. The former, *inter alia*, examined the accounts prepared by the revenue department, checked up the *farmâns* (record of total standard assessment) of the *Mâdîsa* (Crown lands), prepared the estimates of expenditure (*badar-i darâdr*) on the troops and the emperor's personal staff and retinue. The *diwan-i tan* was responsible, *inter alia*, for the submission of all matters to the emperor, which dealt with the *fadârs* or cash disbursements including the drafting of *farmâns*, memoranda, *paradâns* etc. for the grant of *madad* to scholars, the 'ulamâ, *khalîla* etc.

The office of the provincial *diwan* was next in
importance to that of the sipahs-dldr only. The provincial diwdn having been appointed directly by the emperor on the recommendation of the central diwdn, was no longer given a subordinate to the governor. He obtained his orders from the central diwan and was only responsible to him; the idea was to keep the fiscus independent of gubernatorial control and thus minimize dangers of misappropriation, defalcation and embezzlement of public money as well as of the insurrection of the sipahs-dldr. The Mirzâ-i Ahmadî (Baroda 1926, i, 165-70) quotes fardâm from Akbar giving in a comprehensive form the duties of a provincial diwan, who according to this fardâm, should be a “trustworthy and experienced person who has already served some high noble in the same capacity”. His duties entailed heavy responsibilities as he was supposed to scrutinize the accounts of the revenue collectors (tamis) and report corrupt ones for dismissal. He sometimes also acted as the provincial auditor.

As time passed, the powers of the diwan increased greatly. Not only could he make grants up to 99,000 dams but could also sign the deeds for the grant of jādîgs and a’imma lands, which technically were defective and void without the Imperial seal or the signature of the central diwan. In spite of this the diwan did not enjoy a rank equal to that of the sipahs-dldr as head of the revenue department, enjoyed a higher status, prestige and honour in the public eye than the ‘chancellor of the exchequer’.

The provincial diwan was assisted in his duties by a pîqshâr or personal assistant, who was appointed by an imperial sanad under the seal of the central diwan, a dârâgha or office superintendent, a muqâfî and a taqâshîr-i dalâlr-khâna (record-keeper), all holding a mansabd. Among the lower staff the muqâfî (process-server) occupied an influential position in the public eye and was generally held in great respect.

In 11th-12th/17th-18th centuries the term diwan came to be used only for the revenue administration in contrast to the nizamat or fawdîgârî, terms which denoted the general administration, concerned primarily with the maintenance of law and order. Even to this day civil courts in the Indo-Pakistan sub-continent are known as diwan courts, as distinguished from the criminal or fawdîgârî courts.

In this sense the word owes its origin to the appointment of the East India Company as the diwan of the Province of Bengal. The management of the Company found it desirable to establish their own court of justice which they named the Diwâni A’dâlât, i.e., court of the diwan.

In some of the former princely States in India, now merged with the Indian Union, the chief minister was known as the Diwan. The word also formed part of two of the titles Diwan Sahib and Diwan Bahadur, conferred by the British Indian Government; their use was, however, restricted to South Indian celebrities.

The use of the word in expressions like the Diwan-i A’dâm (Hall of Public Audience) and the Diwan-i kâhîs (Hall of Special Audience) in the Mughal forts at Lahore, Agra, Dilli, and elsewhere, is a faint echo of its original meaning. In the houses and mansions of the great or well-to-do people, in days gone by, there was a separate apartment known as the Diwan-khâna, equivalent to the modern drawing-room, but reserved exclusively for the use of the male members of the family or their guests and visitors.

(A. S. Bazmee Ansari)
anecdote, the withdrawal of the Sultan is confirmed by the Kānūn of Mehemed II, which states clearly that the Sultan sits behind a screen (dawādḵ bāzḵi) and that the Grand Vizier or beylerbey, he sat above the defterdārs; if that of sandjak-beyi, below the defterdārs, and the nishandjī, at which the Sultan was present behind a grille (kānūnndmē 15, 23). In former times, it had been the practice of the Sultan to dine with the viziers, but Mehemed had abolished this (ibid. 27).

In the course of the 10th/16th century the membership of the dīwān was somewhat extended. A document of 942/1536, quoted by Feridūn (Munše'īlāt al-Selāfīn, i, 595) authorizes the Beylerbey of Rumeli to attend the dīwān but excludes the Beylerbey of Anatolia. Later, in recognition of the growing importance of naval affairs, the Kapūdarān, who then was the ordinary custom so to do, in two of the four Divan days, viz., upon Sunday, and upon Tuesday) to attend the Sultan an account briefly unto His Majesty of all such businesses as he hath dispatched" (ed. Greaves 1747, 616). Besides the regular dīvān meetings, certain special dīwāns were held. These were 1) the wūšlı̇ dīwān or gālebe dīwān, held quarterly for the distribution of pay and supplies to the Janissaries and other 'slaves of the gate' (see Kāpū), and also for the reception of foreign ambassadors; 2) the ayaḵ dīwān—a extraordinary or emergency meeting presided over by the Sultan or army-commander. It was so-called because all present remained standing. (On these two, see I. H. Uzunçarşı, Osmanlı devleti təşkiləndən kapakulu oceklər, i, Ankara 1943, index, and idem, Osmanlı devletinin saray təşkilədə, Ankara 1945, 225-9).

C o n s t i t u t i o n and procedure. The Kānūn of Mehemed II, which purports to set forth the practice of the Sultan's father and grandfather, lays down the constitution of the dīwān-i humāyun in some detail. The dīwān met every day; those attending were, in order of precedence, the Grand Vizier, the other viziers, the kādī'askers, the defterdārs, and the nishandjī. If the nishandjī had the rank of vizier or beylerbey, he sat above the defterdārs; if that of sandjak-beyi, below the defterdārs. When they came, they were received with obeisance by the Chief Pursuivant (Ca'wāḵ-bāzḵ) and by the Intendant of the Doorkeepers (Kāpīḏīlar Kāhyasl). Four times a week a meeting was held in the audience chamber (ark odasl), attended by the viziers, kādī'askers, and defterdārs, at which the Sultan was present behind a grille (kānūnndmē 15, 23). In former times, it had been the practice of the Sultan to dine with the viziers, but Mehemed had abolished this (ibid. 27).

During the 10th/16th century, the dīwān met regularly four times a week, on Saturday, Sunday, Monday and Tuesday. Its proceedings began at daybreak, and dealt with the whole range of government business. The morning was normally devoted to public sessions, and especially the hearing of petitions and complaints, which were adjudicated by the relevant member of the dīwān, or by the Grand Vizier himself. About noon, the mass of petitioners and their assistants, clerks, and messengers.

addition was the office of the Amedd [q.v.], who headed the personal staff of the palace. Their subordinate were called kâdd [q.v.]. Decline of the Diwan-i humayün. The growing importance of the Grand Vizierate as against the palace led to the practice of the ikindi diwanî, a meeting held in the Grand Vizier’s residence after the afternoon prayer (ikindi), to deal with unfinished business left over from the diwan-i humayûn. This body came to meet five times a week, and gradually took over a large part of the real work of the diwan-i humayûn. The transfer of the effective control and conduct of affairs from the palace to the Grand Vizierate was formalized in 1054/1644, when Sultan Mehmed IV presented the Grand Vizier Derwish Mehmed Pasha with a building that served both as residence and as office (see bâb-i âli and pasha kâpusu). To this new institution most of the administrative departments formerly under the diwan-i humayûn were, in time, transferred. By the 18th century the diwan-i humayûn had dwindled into insignificance. A new form of diwan appeared under the reforming sultans Selim III and Mahmûd II, who established special councils to plan and apply the reforming edicts (see tanzîmat). These in time evolved into a system of cabinet government. Bibliography: an early statement, from an Ottoman official source, on the constitution, in yâzîde-i hümâyûn (total population, 508,000 according to the ‘preliminary figures’ of the 1957 census with the dependent kâdd [q.v.]). It is the headquarters of a liwa? (total population, 508,000 according to the ‘preliminary figures’ of the 1957 census with the dependent liwa? of Samawa, 132° N.), midway between Hilla and Samawa. With a population of some 12,000, most of all Shi‘i Arabs, it is the headquarters of a liwa? or under the ‘Irâk government (notably in 1336/39, 1919/20) has frequently embarrassed the government by faction and disobedience calling for punitive expeditions; the influence of the Naqdi ‘ulamâ? is strong. The town, built mainly on the left bank and with only small date-gardens, is now extending to the right and has been greatly modernized in recent years with improved streets, bazaars and public buildings. A new steel bridge has replaced the ancient and a landing-ground serve the town and district. It is an important military station. Diwaniyya under its present name dates only from about 1271/1564, when it was formed as a settlement of the Khâzâ‘î bûyüs for the accommodation of the office and reception room (diwan) of their tax-gatherers. The Turkish government adopted it soon afterwards as headquarters of a bâdâ, and merchants, officials, and a military and police garrison augmented the existing matting dwellings and mud-huts, and inaugurated the modern town. In site, however, and as an important middle-Euphrates tribal, administrative and intermittently military station, it seems to have continuity from the Hiska of earlier (post-medieval) centuries. It and its district were disorganized and largely deserted by the tribesmen and cultivators when the Euphrates increasingly abandoned its eastern (Hilla) channel from 1298/1880 onwards in favour of the Hindiyiya channel; but conditions were restored by the erection of the Hindiyiya barrage in 1330/1912.

DIWIRIGI or DİFRİĞ(199,739),(374,757), now a small town in modern Turkey, situated on the confines of Armenia and Cappadocia on one of the routes leading from Syria and Upper Mesopotamia to the Anatolian plateau. Through it runs a torrent which flows into the Çaltı Irmak, a tributary of the Kara Su (northern Euphrates). This chief town of a haddā in the province of Sivas, situated among market gardens and orchards which make it a pleasant resort—archaeological remains testify to its former prosperity in the Middle Ages—is now no more than a very scattered village, part of which is deserted (in about 1930 it had less than 4000 inhabitants). It stands at the bottom of a fertile valley, the old quarters of the town clustered together on the right bank, along with the ruins of the citadel.

The ancient Byzantine Tephrikē, which must not be confused, as is sometimes done, with the Nikopolis of Pompom Arba of the early centuries knew by the name of al-Abrik or al-Àbrūk, "capital of the Paulicians" (G. Le Strange, Al-Àbrīk, Tephrike, in JRAS, 1896, 733-47, and Pauly-Wissowa, s. v. Tephrike), known to have been long occupied by Manichaean sectarians who were persecuted by the emperors of Constantinople and aided by the caliphs of Baghdad. But the most important period in its history followed the annexation of the country to Islam, shortly after the battle of Manazgird in 464/1071 and the partial conquest of Armenia and Asia Minor by the Saljūqids under Alp Arslān. The upper Kara Su region, with Erzindjan and the mummified bodies of "martyrs of the time of 'Umar b. al-Khattāb", which the shaykh 'Ali al-Harawi, whose account has been reproduced by Yākūt, has the opportunity to visit at al-Ubrūk, doubtless the present locality of Ubruk which appears on maps between Konya and Ak Saray.

DIYA, a specified amount of money or goods due in cases of homicide or other injuries to physical health unjustly committed upon the person of another. It is attacked upon several occasions, by the Mongols among others, still continued to depend upon minor local dynasties, is consequently somewhat obscure. For a time reunited with the Ottoman possessions by Bāyezid I in 801/1397, it was recaptured by the Mamlūks who have left many epigraphic traces of their occupation and, along with the other Taurus frontier-zones which for a time protected their empire from the Divriği territory they created the third of the great Armenian districts forming the mountain marches of the province of Aleppo, connected with Malatya and Cairo by a post road. Finally, in the reign of Selim I in 922/1516, Divriği was to become Ottoman for several centuries.

The dismantled castle which dominates the town was probably founded in ancient times, but the present fabric apparently dates entirely from the Middle Ages (inscriptions of 634/1236-7, 640/1242-3 and 650/1252). The mosque of amir Shāhānshāh, also known as the Djāmī-i, built in 526/1130-1, is still well-known, but the most remarkable building in the town, and indeed one of the most curious Turkish monuments in the whole of Anatolia is, beyond question, the architectural group comprising the great mosque and the adjoining hospital, built in 626/1228 for Ahmad Shāh, grandson of the previous sovereign, and his wife Tūrān Malik by the skill of a native craftsman of Aḥāḍī. The rich decoration of the three doorways is no less effective than that of the vaults which have been used to cover these buildings. One must search far in the East to find parallels to these features. Various mausolea of the same period, aedicules built on an octagonal base, crowned with a pyramid of stone and containing a domed burial chamber, are also noteworthy, in particular the tomb of Shāhānshāh, known by the name of Sitte Malik Türbesi, and a shrine of amir Kamar al-Dīn, both of which were built in 592/1192-6. On the other hand, it is profitable to seek to identify in present-day Divriği the site of the strange place of pilgrimage, generated both by Muslims and by Christians and housing in a grotto the mummified bodies of "martyrs of the time of 'Umar b. al-Khattāb", which the source Al-Harawi, whose account has been reproduced by Yākūt, has the opportunity to visit at al-Ubrūk, doubtless the present locality of Ubruk which appears on maps between Konya and Ak Saray.

The historical origin of the institution lies in pre-Islamic customary practice, where it was closely bound up with the social organization of Arabia. This rested upon a tribal basis, with the absence of any political authority, even within the individual tribe, and a system of private justice tempered to some extent by the practice of voluntary submission to arbitration. In matters of homicide particularly the principle of the exercise of personal vengeance (thāʾr [q.v.]) reigned supreme, apart from the possibility of voluntary renunciation of the right against the payment of diya. The amount of this was, in principle, fixed—at least in the area in which Islam was born—at one hundred head of camels, although
there are certain traditions which speak of ten camels only. A strong solidarity, as much active as passive, united the members of the tribe in the application of the system: the tribe as a whole was obliged to share in the payment of the diya, just as vengeance itself could be exercised upon members of the tribe other than the culprit himself. In the opposite case, and where the nearest blood-relative of the victim was himself unable to exact vengeance, any other qualified fellow-tribesman could take his place.

Islam did not interfere with the basic system; various Kur'anic texts even expressly confirmed it. They indicated, however, certain modifications, among which the most important was the rule which made compensation obligatory in the case of accidental homicide.

On the other hand the integration of the ancient custom in the Kur’anic revelation perforce had the effect of fixing this custom in a definite form in the law and thus constituting, in principle, a barrier to any further development.

It was, however, soon to find itself out of tune with the new Islamic society such as was to develop rapidly into a community unified in principle and, in particular, organized as a State.

Working under the influence of such opposing demands the jurists constructed a theory of the diya land of the law of private justice (see kisâgâh) in which divergent trends are readily apparent. This theory is, in general, the same in both the Sunni and the Shi’î doctrine, apart from certain differences on secondary points, some of which will be noted below.

The operation of the institution is confined to the field of homicide and a certain number of injuries to the body which will be defined below and which are restricted by enumeration to such effect that outside their bounds the developed common law of civil liability and the precise calculation of damage asserts its sway. Diyas are sometimes optional and sometimes obligatory.

They are optional in the case of offences committed deliberately (’amd). In the case of homicide the condition of intention is interpreted restrictively: not only is it necessary that the murder should have been committed with a weapon intrinsically likely to kill. In the absence of this last condition there is quasi-deliberate (shibh ’amd) homicide where the diya is no longer optional. The Maliki madhhab does not recognize this separate category: whatever the means employed might be, as soon as the intention to kill is established the diya remains optional.

There are, however, a certain number of cases where an ’amd offence does not entail a right of vengeance and for which the diya is no longer optional, such as infanticide, murder which is not the direct and immediate result of the assault, etc. (see kisâgâh).

The diyas are obligatory in all cases other than those of deliberate offences which entail a right of vengeance.

Controversy exists among the different schools on the question as to whether the choice of the optional diya in place of kisâs depends solely upon the wishes of the victim or his heirs, or whether the agreement of the offender is necessary for the choice to be effective.

In the absence of a contrary agreement between the parties there is a fixed tariff for the amount of the diya. In principle it consists of camels of different ages and sex. The diya in cases of homicide is one hundred camels, split into five categories equal in number: twenty four-year-old, twenty three-year-old, twenty two-year-old and twenty one-year old female camels and twenty one-year-old male camels. Subject, however, in the matter of this division, to divergent juristic opinions, if the homicide is deliberate or quasi-deliberate, the value of the diya is increased (diya muhâllala) comprising now only female camels of the first four categories described. The diya for accidental homicide is also due in full in all cases of total loss of an organ or of a physiological or intellectual function. In cases of partial loss the amount of the diya is in proportion to the part lost: a half of the total diya for the loss of an arm, a leg, an eye or an eyelid; a quarter for the loss of eyelashes; a tenth for the loss of a finger or toe; a twentieth for a tooth, etc.

The remaining physical injuries for which a diya or arâh is prescribed and for which, again, the amount is determined by reference to the diya of homicide are the following: the gîdâ’â, a wound penetrating the brain: 1/3rd of the diya; the munâabîla, a fracture with displacement of a bone: 3/20ths; the kâshîma, a fracture of a bone: 1/10th; the mûdîha, a wound laying bare the bone: 1/10th. All other injuries lie outside the system of the diya and are dealt with on the basis of what is called hukumat ’adl, i.e., an assessment: the actual harm suffered. This remains, however, under the influence of the diya system inasmuch as compensation is determined by a comparison with an injury for which a fixed diya is established and it cannot, in any case, exceed the amount of the diya.

The previously cited amounts of diya or arâh are due in full only where the victim is a Muslim, of the male sex and of freeborn status. The diya of a woman is half that of a man. According to the Malikis, however, who are here followed by al-Shâfi‘i, this reduction to half is only applicable where the diya exceeds a third of the full diya; but if, for example, the offence is one for which it would have been due at the rate of a quarter of the full diya, this same amount will be due to the woman.

The diya of the dhimmî or the mus’ta‘min (a non-Muslim foreigner temporarily admitted to Muslim territory—in the case of the foreigner who is not musta‘min nothing is due) is at the rate of one third or one half in the opinion of the majority, though the Hanafis admit an equal rate. In every case the diya is due only where the offence is committed in Muslim territory. As for the slave, he is outside the system when he is the victim (see below for his position when he is the offender). Since he is assimilated to property, if he is killed or is the victim of some injury to his physical well-being, his master will be entitled to an amount of compensation equivalent to the loss he himself suffers from this fact. Such compensation may even exceed the amount of the relevant diya, except, according to a minority opinion, in the case of murder, where the compensation may not exceed this amount.

Although, according to the original principle, the diya consists of camels, it was very soon recognized that it could equally well be paid in gold coinage (1000 dinars) or silver coinage (10,000 or 12,000 dirhams according to different versions which, without doubt, depend upon the variations in gold and silver currency rates). According to certain opinions the diya may consist of cattle (200), sheep (1000) or clothing (200 garments). Opinions differ, however, on the point as to whether the choice of
DIYA

the mode of payment depends upon the agreement of the parties or belongs to the guilty party or to the judge; or whether the diya in camels is the fundamental obligation and it is only in circumstances where the provision of payment in this form is impossible that recourse may be had to the other forms.

As to the matter of deferred payment of the full diya, the majority opinion (Shafi', MalikI and Hanbali) draws a distinction according as to whether the offence was committed; while in other cases it may be paid over a period of three years in instalments of one third. According to the Hanafs the diya may, in all cases, be paid within the three year period.

Where the diya is equal to one third of the full diya, payment may be exacted, in all cases and according to all opinions, in the course of the first year. Where the diya exceeds one third of the full diya the same controversy exists as in the matter of the full diya; the second third may also be exacted within the first year in the case of a deliberate offence according to the majority opinion, while according to the Hanafs it may be paid in the course of the second year.

The legal nature of the diya is complex and is marked by diverse and contradictory characteristics which are the result of its origin and subsequent development. It appears at one and the same time as a manifestation of the law of private vengeance, as a measure to safeguard the public order and as a means of compensation for loss suffered.

The creditor of the diya is the victim; in the case of homicide it will be the victim's heirs according to the order of succession; it is not precisely the circumstances of the victim of the loss which will be the determining factor.

The debtor of the diya was, at the outset, the tribal group—referred to, in these circumstances, as the 'dhiil (q.v.)—to which the culprit belonged; and this is the explanation for the comparatively high amount of the diya. The principle of this collective responsibility was firmly maintained in theory; but in fact it was progressively impaired, eventually disappearing altogether; it is avoided in the case of deliberate offences, as we have seen. The responsibility of the 'dhiil, having previously been the primary one, became subordinate to that of the culprit himself; it was now regarded as no more than the act of a beneficiary towards a debtor without means; and then, in recognition of the fact that the tribal organization had disappeared in developed Islamic society, the place of the 'dhiil was taken by the State itself, whose responsibility, in turn, eventually disappeared. In cases where there is a number of culprits the diya is divided among them per capita.

If the perpetrator of the offence is a slave, again a distinction is drawn according as to whether the offence is deliberate or accidental. In the former case there is ground for hizād just as in the case of a freeman, unless, according to one opinion, the victim or his heirs should choose to surrender the slave. In the view of the majority, however, the choice of the successful prosecutor lies solely between hizād and outright pardon.

A secondary practice connected with that of diya and hizād is that of baskama (q.v.). When the corpse of a murdered person is found in a locality—tribe, village or district—and the identity of the culprit is not discovered, fifty persons from the local population are asked to take an oath that they have no knowledge of the identity of the perpetrator of the offence. In default of such oaths, the obligation to pay the diya will fall upon the local population. This practice also, as was observed by an author of the 6th/12th century, eventually disappeared.

The survival of the diya.

The system of the diya survives in the present contemporary period in two principal forms according to circumstances.

Among the Bedouin tribes, with their innate hostility towards a State organization, the system of private vengeance tempered by the practice of the diya still survives upon a basis of customs which are analogous to ancient Arabian customs in several particulars—though they differ from tribe to tribe—and which often contradict the precepts of the Kur'ān and the rules of Islamic law. The efforts of the governments concerned have not been able to achieve more than the imposition upon these groups of certain regulations of a procedural character and of limited scope.

Thus, among the Arab tribes of Egypt, Jordan and Syria there is a fairly general custom which renders the diya obligatory in all cases save those of deliberate homicide. The composition of the diya varies from tribe to tribe—40 male camels only, 40 male camels and a virgin girl, a sum of money (in Egypt, for example, £E 400, or 300 or 150 etc.).

The diya of a woman is usually greater than that of a man; among certain tribes it even reaches four times or eight times the amount of a man's diya. As regards proof of the offence, the system of ordeal, by fire and water particularly, is often practised. Among certain tribes a procedure of baskama is in evidence.

The survival of the system in communities more fully developed and politically organized is essentially attributable to the religious character which it had acquired. A typical example in this regard is provided by the Ottoman Empire. The principle of compensation, despite the modernization of the law towards the middle of the 19th century, and notwithstanding the fact that the principle of the rule of compensation (properly so-called) for loss suffered had been enunciated and the system of public law had been duly organized, the right of the interested parties to demand the application of hizād and, finally, the diya, was retained, notably under the terms of the penal code of 1863. The amount of the diya was officially fixed at £T 224.

All this has now, in actual fact, disappeared from positive legislative enactments; but traces, hard to erase, of the former state of things still persist. In certain countries such as Syria the courts, in spite of the spirit and the letter of legislation, such as a civil code and a penal code wholly modern in inspiration and in force since 1949, still continue to pronounce liability for diyas, the amount of which, in cases of homicide, is always fixed as a lump sum of money, and is greater or less according as to whether it is a case of deliberate or accidental homicide.

DIYA — DIYAR BAKR

DIYAR BAKR, properly "abode of (the tribe of) Irak". Its name, of unknown origin and meaning, is as ancient, appearing in antiquity as ZIYAR or DIYAR or DILAS; its upper waters are known as the Sirwan or (originally and more correctly) Shirewan, as known to Yakut, and this name is in common use for most of its length. It forms a left-bank tributary of the Dijla (Tigris), navigable only by small craft, and with a discharge formidable in the flood season (March-May), slight in the later summer and autumn.

The river rises in western Persia, where the many hill-streams (often dry in the summer and autumn) which unite to form its principal tributaries drain (1) the area north of Kirmanshah, (2) the area both ways of the Persian frontier follows substantially the old alignment by way of Ba’kuba, Shahrabán, Kizil Rubát, Khánikln, and Kasr-i Shírin. The first three of these sources have made their contributions before the middle of the river flows first through Mesopotamia. Having stayed for some time in the middle and lower course, where it flows first through undulating, then through flat country, diminishing its speed of flow, and lending itself to important towards the north. It was at the time of the conquests of Khánikln, Mandáli, Kháli, and Ba’kuba —are due entirely to the presence of these canals, and to water-lift irrigation by the Middle East. The intensive cultivation and famous ruins of the Diyálá Íwad—not itself named from the Dijla river (the Djabal Hamrin a series of major canals and to water-lift irrigation by the Tigris at or near the present mouth, 10 miles below Baghdad. Techni-

cally, the relation between the Diyálá (with its capacity for sudden and formidable flooding) and the Nahrawán canal-system, remains obscure; nomenclature varies in the Arab geographers, who do not distinguish between canals and mere flood-channels, and at times even identify the Dijla with the Nahrawán or Támría. The mediaeval cities dependent on the Dijla and its connected canals included Nahrawán, Bándísrí, Ba’kúbá, Daskara and Djalálí. The area astride its lower course was closely admi-

cistered and sustained hundreds of villages and a dense population; traces of Sásáníán and older sites indicate that this had always been a favoured region. The main road from Bágdád to, and through, the province of al-Dijláb—the Khurásán highway—ran through it, and largely followed the course of the river; this is still the case; the motor-road running from Bágdád to and across the Persian frontier follows substantially the old alignment by way of Ba’kúbá, Shahrabán, Kizil Rubát, Khánikln, and Kasr-i Shírin. The metre-gauge railway to Khánikln, constructed in and after 1337/1918, follows a similar line; railway bridges exist at Ba’kúbá and at Karághán, where the Kírkük-Irbil line branches off.

Bibliography: For the Arab geographers, see bibliography under Díyá; equally for the relevant works of Streck, Le Strange, Wilcockes, and Longrigg.

DIYÁR BAKR, properly "abode of (the tribe of) Bakr", the designation of the northern province of the Djazira. It covers the region on the right bank of the region where it changes from its west-east course to flow in a south-easterly direction. It is, therefore, the upper basin of the Tigris, from the region of Sírt and Tell Fáñán to the north-west of Ámid and Bișan al-Hammi (Cermúk) to the west of Ámid. Yakút points out that Diyár Bakr does not extend beyond the plain.

Diyár Bakr is so called because it became, during the 1st/7th century, the habitat of an important portion of the Rabí’í tribe of Bakr b. Wa’il [q.v.]. The latter had already moved forward, following the tribal wars of the pre-Islamic period, into Mesopotamia. Having stayed for some time in the region of al-Kufa, the Bakr tribes spread out towards the north. It was at the time of the conquests under the caliphate of Uthmán, while Mu’áwiyá was governor of Syria and the Djazira, that some Mdárí and Rabí’í tribes were settled in the occupied lands of this region on the orders of the government. Mu’áwiyá installed these Mdáris in what came to be called the Diyár Mu’dar and the Rabí’í in what came to be called the Diyár Rabí’í. Al-Baládíchur, who gives us this information, does not mention the Bakr tribes expressly, who were included in the Rabí’í group, but it is probable that it was in the same manner and at the same time.
that they established themselves in the Diyar Bakr. This appellation does not however mean that this territory was inhabited by Bakris alone; on the other hand, there were Bakris elsewhere.

The Diyar Bakr and the Diyar Rabl, since the two groups of which it was composed, are sometimes spoken of jointly under the single name of Diyar Rabî (Yûkît, ii, 637).

The principal towns of the Diyar Bakr are Āmid, the capital, Mayyafarîkî, Ḥisn Kayfâ, and Arzan, which strictly speaking is part of Armenia. The territory of the Diyar Bakr has, from the administrative point of view, generally followed the destiny of the Djazîra. It has, however, sometimes formed, in juxtaposition with neighbouring Armenia, a distinct and quasi-independent government. Esâ b. al-Shaykh al-Shaybânî, from 256/870 to 269/883, and his descendants ruled over the Diyar Bakr until the reconquest of Āmid by the caliph Muḥtaḍâd in 286/899. The same situation occurred in Ḥamdânî times when Diyar Bakr and Armenia were in the hands of the Amir of Aleppo, Sayf al-Dawla, at the same time as northern Syria, over which the decline of the latter in 356/967 Diyar Bakr returned to the Ḥamdânî Abû Taghlib of al-Mawṣî. With the rest of the Djazîra, it fell under the domination of the Buwayḥid Āḍud al-Dawla in 357/978, but after the death of the latter in 372/983 it passed into the hands of a Kurdish chief, Bâdîth (the Kurds were also inhabitants of this part of the Djazîra), then to those of his nephew Abû Ḥâlid b. Marwân, who disputed the Diyar Bakr lands with scions of the Ḥamdânî family, but remained in control, and was the founder of the Marwânî dynasty.

From Diyar Bakr comes the name of the Bakrî frontier posts (al-thughr al-bakhrîyya) enumerated in M. Canard, Histoire de la dynastie des Ḥamdânîs, i, 254-61, and cf. 846 ff., which are situated in the north and north-west of the province.

i. The formation of the Saljûq empire faced the Marwânîs with a new problem. From the beginning they rejoiced in their increasing power, causing the khâlsâ to be read in the name of the Sultans as well as of the Caliphs. The Saljûqs were in no hurry to suppress a principality which was functioning as a buffer state between themselves and Byzantium. The Marwânîs, however, were unable to prevent some Turcoman infiltrations, some of which were accompanied by plunder. The dislocation of the empire of the likhans proceeded. In the face of this invasion, Artukids and Ayyûbîds had no differences, and both Mayyafarîkî and Mardîn succumbed after severe sieges (657/1259 and 659/1261), but the Mongols allowed two small dynasties, an Artukid one at Mardîn and an Ayyûbîd one at Ḥisn Kayfâ, to remain, under their suzerainty; these recovered some degree of autonomy as the dislocation of the empire of the likhans proceeded. The region, however, became the prey of nomadic pastoral tribes, especially Kurds in the north and Turcomans in the south, whose attacks against the rural Christian communities of Tûr ʿAbdîn contributed to the Islamization of this region which had hitherto not proceeded very far. On the eve and the morrow of Timûr's devastations (especially at Mardîn), Diyar Bakr was the stake in the struggles with which the two great confederations of the Ak-Koyunlu and the Kara-Koyunlu occupied themselves; the former, masters of Āmid, made themselves masters of the whole of Diyar Bakr having taken Mardîn from the Kara-Koyunlu, and then Ḥisn Kayfâ from the Ayyûbîds. Diyar Bakr was, however, occupied for a time by the troops of ʿShâh Ismâʿîl, founder of the Safawî dynasty in Persia (913/1507), and fell, for three centuries, into Ottoman hands in 922/1516.

It must be borne in mind that, in the terminology of the Saljûqids of Rûm, Diyar Bakr referred to the western confines of the province, which were all that they possessed in those areas in that of the Mongols it often refers to all the Djazîra, including the Diyar Muḍar and the Diyar Rabî.

ii. Diyar Bakr, in its Turkish form Diyarbakr, is the name by which the Turks called the capital of the province, Āmid, which they also called Kara ("black") Āmid, on account of the black colour of its ramparts and its houses, built of basalt (or millstone); this is noted by the Arab geographers, and is perhaps alluded to in a verse of al-Muṭanabbi (ed. Bârkhûlî, i, 182; cf. Vasiliev, Byzance et les Arabes, ii/2, 316). A proverb relates that all there is black, dogs, walls, and hearts.

Only the Āmid of Arab times is described here. This was built on the left bank of the Tigris on a plateau which runs down abruptly to the river, which runs beside the enceinte on three sides, the fourth being protected by a moat and an outer wall. Āmid was taken without a fight in 960/1550 at the time of the first appearance of the Ottoman Turks under ʿOzâyîd b. Zâhîn. It was besieged by al-Muṭâḍâd who put paid to the attempt at independence of the small Shaybânî dynasty (see above), and the walls of the town were dismantled; at the time of al-Muṣṭadîr, however, in 297/910, they were restored. An inscription commemorating this restoration is still legible on the Mardîn gate. Āmid fell into the hands of the Buway-
bids in about 368/978. It was also the target of several attacks by the Byzantines, such as in 347 and 348/958 and 959 by the Domesticos John emperor, in 972, 973 and 974 A.D. In the course of the success of the Byzantines, and Ibn Hawkal seems to have foreseen that it would fall into Greek hands.

Amid was renowned for its woolen and fine linen products, said to be “Greek” and “in the Sicilian style” (al-Mukaddasi, 145).

On Amida in Roman times, see Chapot, La frontière de l’Euphrat, 523 ff.

Of the Ottoman rulers, the sources of the history and general geography of the periods covered, for which see AK-KOYUNLU, ARTUKIDS, AYYÜBSDS, the only references specifically to Diyar Bakr are Ibn al-Khatib, Khusraw, Iskender and Behrân, Nasûh, Murtezû, Melek Ahmed, Dâltaban ‘Ali and Ismâ’îl Pashas built one mosque each in the city, while Hasan Pasha had an inn (khan) built. Another khan is ascribed to Melek Ahmed Pasha. Bathes were built by Melek, Iskender and Behrân Pashas and a dâr al-hurma by Kâpûlu-žâde ‘Abdulhalîc Pasha. Sarl (yellow or fair) ‘Abd al-Rahmân Pasha founded a library. In 1815 Suleymân Pasha repaired the walls.

Amid, known now as Diyarbakr, also became an important cultural centre in Ottoman times. In the 19th/20th century it bred the poet İbrahim Gulpınar, who also founded a tariqa (religious order), and the historian Khâzî Huseyn. It was during that century that the famous historian Müsûd al-Dîn Lârî was mufti of Amid. Many poets are known as Âmîdî in the 19th/20th century, including Labîb, Hamîl, Wâlî and Ahmed Murâhidî, as also the physician Ahmed Râdi, the mathematician Ismâ’îl and the theologian Küçûk Ahmed-žâde Abû Bakr. Later local notables included the poets Refî, Râgib and Tâlib in the 19th century, as also the historian, belles-lettres and poet Sa’d Pasha, while in modern times there are the latter’s sons Suleymân Nasîf and Behrân ‘Ali Bey, ‘Ali Emîl Efendi, the founder of the Millet library, and the political thinker Ziya (Diyâ) Gökalp. The ‘Abd al-Dîjaal-žâde family which gave many distinguished Pashas to the service of the Ottoman Empire is also of Diyarbakr origin. Descendants of tribal chiefs in the Kara-Koyunlu and Ak-Koyunlu States, of 19th/20th century governors and of regional notables can still be found in the city.

In the second half of the 19th century the Diyarbakr region, like other Ottoman provinces, was the
scene of opposition and sometimes of revolts of local amirs, tribal chiefs and other notables who did not wish to accept the reforms carried out in the Ottoman Empire. This led to armed uprisings and ouster of the authorities, as a result of which local chiefs, such as Bedir Khan Pasha, were forced to submit, or were punished, sometimes by exile. Leaders of nomadic or settled tribes, however, succeeded in maintaining their influence, even although their official titles had been abolished, only instead of gathering round amirs or tribal chiefs, these notables gave allegiance to the shaykhs of the dervish orders (tariqa). Led by shaykh Sa‘id, the latter rebelled in 1924 against the reforms which the new Republican government of Turkey sought to carry out. The revolt started in Khani and spread before long to most of the Diyarbakr region. The rebels were, however, beaten back before the walls of Diyarbakr, after which the Government, which had proclaimed a partial mobilization, rapidly quelled the rebellion. In 1928 an Inspectorate-General was formed in the region of Diyarbakr and of A’kkâhl with the object of promoting reforms. While it was in existence a small rebellion was quelled at Şâsun.

The city of Diyarbakr is always named Āmid in all writings up to the end of the 19th/20th century. It then began to acquire its present name, which was the name of the province of which it had become the centre, the name of Āmid being gradually forgotten. Under the Republic the form Diyarbakr was officially adopted, in place of the earlier Diyarbekir.

Bibliography: Among Ottoman geographers and travellers, Kâtîb Celebi (Diyahannûmû) gives some information, Ewliyâ Celebi very much more (Ṣiyâhatnâmê, iv, 24 ff.). There are useful data on the social and cultural conditions in the region of Diyarbakr in the Mênâkî of İbrahim Gûlşênî. Interesting information on local customs is given in the chapter on Diyarbakr written by Bâkî Faydî (in the author’s private library). At the end of the 19th century Diyâbekirî Sa‘îd Paşa gives the mediaeval Islamic history of the city in his Mîrî‘î al-‘îbâr: he does not, however, add very much to the data of Ibn al-Āthîr and Munegdîmîm-Bâshî. Detailed information on local scholars and writers is given in ‘Alli Emrî Efendî, Tâhtâ-Îlî, which was published in 1924. The second volume of this work has not, however, been printed. There is further information in the same writer’s Diyâbekirî Vîlîyêtî, Istanbul 1918, in his Mîrî‘î al-fa‘ûlîyyd and in the magazine Āmid which he published. For more recent Turkish work on the history of the city and province see Basrî Konyar, Diyâbekirî tarihi, kitâbeleri, yildaş, Ankara 1936; İbrahim Tokay, Diyâbekir, Istanbul 1937; Osman Eff, Diyarbakır, Diyarbakır 1937; Kâzîm Baykal and Suleyman Savci, Diyâbekir şehrî, Diyarbakır n.d.; Kâzîm Baykal and Suleyman Savci, Diyâbekir şehrî, Diyarbakır n.d., and Diyarbakır şehrî, Diyarbakır 1942. Much useful information will also be found in the Sülênîmê of Diyarbakr.

Data on the city and region can also be found in European travellers from the 16th century onwards. Scholars have also described the region and the archaeology, geography and history of the city. For local monuments and inscriptions see van Berchem and Strzygowski, Amida (Heidelberg 1910) (reviewed by Khâlîl Edhem in TOEM 1st year, no. 6, 1329, 365-77). Further information on inscriptions is given by J. Sauvaget and Basrî Konyar. See also the extensive bibliography in A. Gabriel, Voyages archéologiques dans la Turquie orientale (Paris 1940). (Mîkrimih H. Yımançlı)

Monuments. One of the most remarkable characteristics of the present-day town of Diyarbakr is without doubt the archaeological wealth of this city of black stone, with its old quarters still surrounded by walls which give the site its characteristic shape, which, throughout the middle ages, gave a strategic value to this locality which is otherwise lacking in natural protection. The well preserved enceinte naturally attracted the attention of 19th century European travellers, as well as admiration from all visitors to the stronghold since the Arab conquest (for example, the account of Nâsîr-i Khursaw). But not until the serious archaeological investigation made on the spot by A. Gabriel, re-opening the joint study to which M. van Berchem and J. Strzygowski had formerly bent themselves on the basis solely of photographic material, was it possible to recognize in it one of the most eloquent witnesses of military art in the mediaeval Near East. The site shows a rampart of regular trace, somewhat modified by certain configurations in the terrain (the original town was in fact situated on the edge of a plateau bounded by escarpments on the side of the Tigris), displaying on a perimeter of more than 5 km. a curtain flanked by towers and contreforts, before which were a fausse-braie and a ditch, now filled in, interrupted by several monumental gates and by breaches of recent date. The layout of the curtain (8 to 12 m. high, 3 to 5 m. broad, built of masonry rubble between two matching facings), with its chemin de ronde protected by a crenelated parapet and its arched gallery running at certain places under the chemin de ronde,—the disposition of the square, polygonal or circular flanking towers, of varying dimensions, with powerful basalt piers equipped with lower casemates and with upper rooms or platforms arranged for defence,—the roman elements still in place between the circular salients of the gates now called the Kharput, Ura and Mardin gates, all combine with epigraphic evidence to show the antiquity of an enceinte which indeed underwent successive alterations after the Arab conquest but "which remains the most important and the most complete example of Byzantine fortification of the 4th century" (A. Gabriel). No less significant, however, is the nature of the works which were carried out in the 13th century under the Mu‘tadid period, indicated particularly by the restoration of the principal gates (dismantled by al-Mu‘tadid, then rebuilt by al-Muqtadir, as inscriptions of 297/709 testify)—on the other, under the Marwânids, Sa’dîjids and Artûkîds who undertook at different times partial repairs to the curtain and towers on the western front (indicated both by inscriptions and by underpinning of coursework), or more important works of reconstruction attested by those enormous circular bastions of the Artûkîd period, Ulu Badan and Yedi Kardash, which are over 25 m. in diameter and encompass previous works within their complex systems of casemates and galleries—and, finally, under the Ottomans, who were content to keep the enceinte of the town in repair but directed their main efforts to the citadel, of which the south-east corner, extended it, and substituted their own works for the ruins of the former palace of the Artûkîds.

In the interior of the enceinte the great mosque, Ulu Dîjamî, is noteworthy, whose abundant inscriptions, scattered in the greatest disorder on a heterogeneous composition in which re-utilized older material dominates, have provoked a clash of opinions concerning its origin and history. In fact
the most probable conclusions, with regard to both
the actual state of the building and the vicissitudes
(fire in particular) which, according to textual in-
formation, it must have undergone, tend to show it
the structural qualities of these various works

following the death of al-Kamil, granted it to the Khwarizmians, recent fugitives from Asia Minor (635/1238). The later defeat of these latter and the fall of the Ayyubid dynasty in Egypt caused the region to pass into the hands of the Aleppo Ayyubid al-Nasir Yusuf, from whose time dates the administrative description of 'Izz al-Din b. Shaddad; but in 658/1260 it was conquered by the Mongols, who were already in control of Asia Minor and Mesopotamia.

Henceforward the function of the Dyir Murd changed. Reconquered by the Mamluks, who repelled the Ayyubids in Egypt and Syria. They established a frontier with the Mongols of Persia, and later with the Turcoman dynasties who succeeded them at the end of the 8th/14th century. Successive invasions ruined the land, especially in the south, and Harran declined irretrievably, although Edessa was the capital of the province. As in the neighbouring regions of the north, east and west, the Turcoman element, here especially of the tribe of the Djabal Sindjar; and that on both banks of the Tigris between Tell Fafan and Takrit, was more important than in the Umayyad period as in the 5th/nth century. The eclipse of the Abbasid caliphate, as much in the Umayyad period as in the 5th/nth and 6th/i2th centuries.

Bibliography: The sources of the history and geography of this period are to be found especially, for almost all the Djazira, in 'Izz al-Din b. Shaddad, A'tid, iii, analysed by Cl. Cahen in REJ, 1934. (Cl. Cahen)

DIYAR RABI'A, a name formed in the same way as Diyar Bakr [q.v.], is the most eastern and the largest province of the Djazira. It includes three regions: that of the Khabur and its tributary the Hirmas (Diaghchagh) and their sources, i.e., the slopes of the Tur 'Abdin; that which is contained between the Hamadan, the Tigris, the former Beih 'Arabayyeh with the Dijalal Sinjar, and that on both sides of the banks of the Tigris between Tell Fafan and Takrit, which marks the boundary with 'Irak. The lower reaches of the two Zabs are also included in this last region. The principal towns are the capital Mosul (al-Mawsil) on the left bank of the Tigris, Balad, Djazirat Ibn 'Umar, al-Sinn, and in the west Bark'ud, Sinjar, Nasibin, Mardin, and Ra'a al-'Ayin. The strategy of the Dyir Rabi'a is not so menaceous as that of al-Mawsil. It was marked by numerous Khalidji revolts, which also affected other regions of the Djazira, as much in the Umayyad period as in the 'Abbasiad. In the first period they were further complicated by the rivalries between the Caliphal governors of the Djazira and Syria. An account of the troubles which afflicted the Dyir Rabi'a in the Abbasid period is given in Sulaiman Saigh, Histoire de la dynastie des Hamdaniades, i, 97 ff., and passim, Vaglieri, Le vicende del Harizismo in epoca abbaside, in RSO, xxiv, (1949), 31 ff.; M. Canard, Hist. de la dynastie des Hamdaniades, i, 291 ff.

The Dyir Rabi'a is the region from which sprang the Taghlibi family of the Hamdaniades, who took part in these Khalidji revolts and founded thereafter the quasi-independent amirate of al-Mawsil, which during the reign of Nasir al-Dawla consisted principally of the Dyir Rabi'a. After the conquest of the Hamdani amirate of al-Mawsil by the Buwayhids, the attempt on the part of the last Hamdani, Ibrahim and later with the Turcoman dynasties who succeeded them at the end of the 8th/14th century. Successive invasions ruined the land, especially in the south, and Harran declined irretrievably, although Edessa was the capital of the province. As in the neighbouring regions of the north, east and west, the Turcoman element, here especially of the tribe of the Djabal Sindjar; and that on both banks of the Tigris between Tell Fafan and Takrit, which marks the boundary with 'Irak. The lower reaches of the two Zabs are also included in this last region. The principal towns are the capital Mosul (al-Mawsil) on the left bank of the Tigris, Balad, Djazirat Ibn 'Umar, al-Sinn, and in the west Bark'ud, Sinjar, Nasibin, Mardin, and Ra'a al-'Ayin. The strategy of the Dyir Rabi'a is not so menaceous as that of al-Mawsil. It was marked by numerous Khalidji revolts, which also affected other regions of the Djazira, as much in the Umayyad period as in the 'Abbasiad. In the first period they were further complicated by the rivalries between the Caliphal governors of the Djazira and Syria. An account of the troubles which afflicted the Dyir Rabi'a in the Abbasid period is given in Sulaiman Saigh, Histoire de la dynastie des Hamdaniades, ii.—In the middle of the 5th/11th century the Dyir Rabi'a sustained the repercussions of the Turkish advance. From 433-5/1041-3 it was ravaged by the first band of Turcomans, who were finally massacred. When in 447/1055 the Saljuk sultan Tughril Beg was enthroned at Bagdad by the 'Abbasid caliph, the 'Uqaylidis, fearing for their Shi'a faith and for their pastures, resisted his summons, and it was in their territories that the coalition of Arab adversaries of the sultan was organized, grouped under the former Buwayhid general al-Basasiri [q.v.], who was now adhering to the Fatimid caliph of Cairo (449-51/1053-9). The 'Uqaylid Kuraysh however decided in due time to rally to Tughril Beg, who for his part in this frontier region preferred to content himself with his vassal status. The 'Uqaylid principality thus remained until 479/1086, the son of Kuraysh, Muslim, recently suspected of intrigues with Egypt, having met his death in a battle in Syria, and Malikshah, the third Saljuk sultan, having thereupon annexed his dominions without a struggle. After the death of the last Saljuk emperor, to reconstitute this amirate for their advantage at the time of the Buwayhid Bahi'a al-Dawla (579-403/1089-1012) was opposed on the one hand by the Marwānid of Diyar Bakr [q.v.], and on the other by the 'Uqaylid amir Muhammed b. al-Musayyab, who had originally helped the two princes and had received three places in the Diyar Rabi'a in return. The latter became ruler of al-Mawsil, and was nominally subject to the Buwayhid of Bagdad. He was the founder of the 'Uqaylid dynasty of al-Mawsil, to which the Saljūks put an end. (CL. CAHEN)
was not integrated into the new Turkey. The odd disposition of frontiers divides it between Syria.

Some further articles are DJAZIRA, DJAZIRAT IBN QUMAR, AL-MAWŞİ, NASBIN, SINDJAR, and ZANDGIS.

**Bibliography:** The sources are those of the general history of the period; the only special work is *Histoire des Atabeks de Mossoul* of Ibn al-Ashir (ed. and Fr. trans. in *Revue des Hist. des Croisades, Hist. Arabes*, ii/2), which, however, is particularly devoted to the exploits of Nūr al-Dīn, who reigned at Aleppo and not al-Mawsī. The *ATabēk* of *Izz al-Dīn b. Muhammed al-Dīyar Rabil* (see Cl. Cahen, in *REI*, 1934), but does not give the developments promised about al-Mawsī.

(OUTLINES)

AL-DIYĀRBAKṘ, ḤUSAYN B. MUḤAMMAD B. AL-ḤASAN, 10th/11th century author of a once popular history of Muhammad, entitled *Ṭabakāt al-ḥamāsī fi abwāb nafs nafs* and preserved in numerous MSS and printed twice (Cairo 1285, 1302).

The work is furnished in addition to a brief sketch of subsequent Muslim history. The brief enumeration of Ottoman rulers at the end stops in some MSS with Sūleymān Kānnūjī but usually ends with Murād III (982/1574).

The author is also credited with a detailed description of the sanctuary in Mecca. There is much confusion concerning his identity. According to Ḥājjī Khalīfa (ed. Flugel), iii, 277, the *Ṭabakāt* was finished in 940/1534, and its author lived in Mecca, and died in the 950s/1550s. His date of death is now given as 990/1582 on the basis of an identification with Judge Kāram al-Dīn Ḥusayn al-Mālikī of Mecca, who was appointed judge of Medina in 982/1574-5 (al-‘Ayarḍūf, *al-Nūr al-sā‘īr*, 380-3; Ibn al-‘Imād, *Shahārīdī*, vii, 419 f.), but proof for this identification is not available. The unpublished works of al-Nawrāwī may decide the question. However, the identification is unlikely if only in view of Istanbul ms. of the *Ṭabakāt*, such as Topkapısaray, Ahmed III 3044, which was written at the latest around 960/1553 and which states that the work was completed in 935/1529-30 (and which represents an earlier recension breaking off, originally, with the caliphate of Ẓulfic al-Mustaṣir in Egypt); or Damud Ibrahim 898, dated Wednesday, 28 Safar 941(Tuesday) 8 September 1534 (dated stating that the work was completed on Sunday, 8 Shabān 940/23 February 1534 (see Ḥājjī Khalīfa, loc cit.).

**Bibliography:** Brockelmann, ii, 500, s ii, 514, III, 1293; *Qāmūs al-mudīlli*, iii, 118 f. A further ms. of the *Risāla fi dhār al-Ka‘ba* in Istanbul, Bagdatîl Vehbi 1142, 100-16a.

(F. ROSENTHAL)

**DIYUSKURİDİS,** is the most correct transcription of the Greek ΔΙΟΥΣΚΟΡΙΔΩΣ; other forms, such as Điysuskūridiš, allow a certain Syriac influence to be admitted. In Islam the name always refers to Pedanius Dioscorides (1st century) wrote a resume in Syriac entitled *Ṭabakāt al-ḥamāsī fi abwāb nafs nafs* and preserved in Mecca. Later the polygraph Abu ‘l-Faraj—Bar Hebraeus (7th/13th century) wrote a résumé in Syriac entitled *Kathāba ḏe Dhiqorhâdus*. In the whole, the work of Dioscorides was known above all in the fragmentary form preserved by Ibn al-Wāfīd, Māṣawayh and others. Latin versions which for the most part were made in Toledo allowed mediaeval Europe to become acquainted, through the medium of two translations, with only part of his work; and the complete text of Dioscorides only became known in the West at the Renaissance. But fragments of the Arabic Dioscorides were also translated in the East, as is proved by the Armenian pharmacology of Amir Dawlat (2nd half of the 15th century).

Any study of the materia medica of Dioscorides is incomplete if his iconography is omitted. Dioscorides himself used botanical drawings by Cratavas (1st century).
century B.C.), whose sketches are preserved in Greek and Arabic manuscripts. In their illustrations these manuscripts contain an additional element which may help to determine their origins. As for the iconography, in addition to the ancient source already mentioned, it sometimes reveals Byzantine traces, and at other times Iranian influence; by the nature of things the different Muslims' schools of painting are reflected, as for example the Baghdad school or the later Persian schools. Particularly interesting as a Muslim botanist and one of the most original was Ibn al-Surl (d. 639/1241), who when botanizing in Syria took with him an artist who made drawings of plants for him at different stages of growth; it is astonishing that Ibn al-Baytār does not quote this author who was his contemporary. In the iconography of the Arabic Dioscorides we have a proof that Diyskuridēs became the point of fusion of all the earlier traditions, enriched by the Muslims' observations of nature.

**DIZFOL**

The capital of the district (ṣubḥān) of the same name in the 51th wādī (Khūzistān) of Persia, is situated in 32° 23' N. Lat. and 48° 24' E. Long. (Greenwich), on the left bank of the Aḥ-ʾi Dīz or Dīz-fūl-rūd. This river, which rises in the Ab-i Diz or Dizful-rud. This river, which rises in the Neapolitan Apennines, flows into the Kārūn (g.v.) at Band-i Khr (Askar Mukram, g.v.). The town, which stands 200 metres above sea level, is built on a conglomerate formation; many of the inhabitants have made cellars (sardābā) under their houses in this formation, into which they retire during the heat of the day in summer. Dīzful (Persian *Dīz-fūl* = 'castle bridge') takes its name from the fortress which was built to protect the well-known bridge over the river there. The piers of this bridge, like those of the even more famous bridge at Shūhtar (g.v.), are undoubtedly Sasanid; their construction may have been supervised by Roman engineers in the time of Shāpūr I (see D. L. Graadt van Roggen, *Notice sur les Anciens Travaux Hydrauliques en Susiane*, in J. de Morgan’s Mémoires de la Délégation en Perse, Paris 1905, vol. v, 87). The arches and superstructure are of later origin and have frequently been repaired. According to Mustawfī (740/1339-40), this bridge had 42 arches, while ʿAll of Yazd (828/1424-5) stated that it had 28 large and 27 small arches, making 55 in all (these authors doubtless regarded as arches the supplementary vents over the piers which were made in order to ease the pressure on the structure when the river was greatly in flood).

The name Dīzful did not come into use until the 6th/12th century; previously it had been known as Khurāsānī or Khurāsānīk (this name is now borne by the small town on the Trans-Iranian railway 11 km. to the north of Dīzful). The older Arab geographers gave the town various names, such as Kāsr al-Rūnāgh, ʿAnārār al-Rūm (‘the Roman Bridge’), ʿAnārār al-Rūd (‘the River Bridge’) and ʿAnārār al-Zāb (Zāb repeatedly occurs as a river name; it is one of the Semitic roots ʿālām ‘to flow’).

Procopius, in his *Batarepa* (Book I, v, 28 and 29) has given an interesting account of a ‘castle of oblivion’ (γοῦ τός Αμάρτης φροῦριον) somewhere in Persia where persons of high degree were incarcerated; no one, under pain of death, was allowed to speak of it. Neither Procopius nor the Arab and Persian writers who also mentioned this castle gave its precise location, but, according to Armenian sources, it was at Andamishn, which H. HübSchmann, in his *Armenische Grammatik* (Leipzig 1897, 19), has identified with Andamishn, that is, Dīzful. Dīzful, like Shūhtar, was for long overshadowed by the neighbouring city of Gundšt- Šāpur. Later, when Gundšt-Šāpur fell into ruin, Dīzful became more prosperous, but it and the surrounding district suffered when the wonderful hydraulic system of the Sāsānids fell into disrepair. Although Dīzful escaped destruction by the Mongols, it afterwards submitted to the rule of the Il-Khāns. In 1393 it offered no resistance to Timūr. It is said that, shortly after its surrender to Timūr, Khshād ʿAll, the grandson of Shvēkš Nafti (q.v.) of Ardabīl, visited Dīzful and converted its inhabitants to Shiʿism by temporarily stopping the flow of the Aḥ-ʾi Dīz by a display of his supernatural powers. Nādir Shāh (q.v.) visited Dīzful on several occasions; in order to protect it against the Lurs, he built a fortress called Dīzšt-Šāh some miles to the north-east.

Muhammad ʿAll Mīrzā, one of the sons of Fatḥ ʿAll Shāh (q.v.), had the famous bridge repaired in the early years of the 19th century, but exceptionally heavy floods in 1832 swept away the parts that had been carefully restored. It was at this time that the cultivation of indigo was introduced on a large scale in the neighbourhood. Much indigo was produced until the importation of foreign dyes made the industry uneconomic. Dīzful was also noted for its reed pens, which were for long considered the best in the east and were exported far and wide. The raw material for this industry was supplied by the inexhaustible reed-beds in the so-called Bāštā, the marshes of the lower reaches of the Tigris and Euphrates.

Owing to very severe outbreaks of plague and cholera at Shūhtar in 1831 and the following year, Dīzful for a short while supplanted it as the capital of Khūzistān. About the middle of the 19th century, Loftus estimated the population of Dīzful at between 15,000 and 18,000, all of whom were Muslim except some 30 Mandaean families. Wols, in 1883, gave the total as 20,000, while Herzfeld in 1907 estimated it at only 15,000, including Persians, Kurds, Lurs and Arabs. At the present time (1962), the population is approximately 50,000. Many of the inhabitants, like those at Shūhtar, are Sayyids or descendants of the Prophet. In the town are some 35 mosques and a large number of tombs of saints; in the suburb of Rūbān is the shrine of Sultan Ḥusayn which closely resembles that of the Prophet Daniel at Susa (Shāhī).
Quite recently the bridge over the Ab-i Diz has been extensively repaired; in the process, a number of the old arches have been replaced by three modern spans. Dizful and the surrounding area will undoubtedly benefit greatly when the big dam across the Ab-i Diz which is now (1959) under construction in a gorge 12 miles to the north-east of the town has been completed, as it will not only provide sufficient water to irrigate a large area, but it will also supply electricity on a large scale to northern and central Khuzistan.

**DIA'ALIYYUN:** (1) A group of tribes in the Republic of the Sudan. The principal tribes of this group, mainly sedentary in their way of life, inhabit the banks of the main Nile from the Dongola [q.v.] region southwards to the Fifth (Sabaluka) Cataract. Other tribes and clans in Kurdufan (Kordofan) and elsewhere attach themselves to this group. The link among the tribes of the Dja'aliyyun is traditionally expressed in genealogical form: their eponymous founder (rather than ancestor) is said to have been a certain Ibrāhīm known as Dja'īl (i.e., "he made it", because he made himself a following from those whom he relieved in a famine). More realistically, the common element of the Dja'aliyyun group may be seen in a Nubian strain in their ancestry. The Danākila, or northern tribes of the group still speak a Nubian tongue. They are separated from the southern Dja'aliyyun by the Şaḩkiyya. Although no memory of Nubian speech survives in the southern sector of the group, the name of Berber [q.v.] may well indicate an ancient linguistic enclave or frontier (cf. the Barībrā [q.v.] further north). Migration from the Nile valley, a recurrent historical phenomenon, probably accounts for the numerous claims to Dja'all descent made in other parts of the Sudan, e.g., by the Hamājud of the Sinnar region, and by a group of tribes lying west of the Nile whose names are derivatives of the root DI-M-<br>

Dja'alla in Sudanese usage. The claims of the dynasties of Dār Fūr and Waddāy to 'Abbāsīd descent should be understood in this sense.

(2) The name of Dja'aliyyun in a more restricted sense is commonly and currently applied to a specific tribe, the most southerly member of the riverain group, which has its territory (dār) between the Atbara-Nile confluence and the Sabaluka Cataract. It is probably the "kingdom of Al Ga'il" mentioned by the Jewish traveller, David Reubeni, who passed through its territory in 1523. During the Fundj period, the Dja'aliyyun were dependent upon their southern neighbours, the 'Abbālāh, whose hereditary chief, the Wād 'Adjiḥ, was paramount over the Arab tribes under the sultan of Sinnār. From the late 10th/16th century until the Turco-Egyptian conquest, the tribe was ruled by chiefs (muḥāk, sing. makh) of the Sa'dāb clan. Their capital was at Ṣanḍī (Ṣendi) on the right bank of the Nile. At the time of Bruce's visit (1772) the effective ruler was an 'Abbālābīyya princess, the widow of the late makh. Under the last makh, Nimr Muhammad, the Dja'ail tribal kingdom was far more important than that of the 'Abbālāh, whose power was much decayed. At the time of Burchardt's visit (1814) Şanḍī was the principal trading-centre of the eastern geographical Sudan, as it was the meeting-place of routes from the interior of Egypt and the Red Sea. During the Turco-Egyptian invasion, Mākū Nīmī submitted to the ser'askebr Ismā'īl Kāmil Paşa (23 DJumādā II 1236/28 March 1821). When Ismā'īl returned from Sinnār in the following year, he was entertained at Şanḍī by Nimr. A quarrel over the slave-trust, a matter then causing great tension in the newly annexed territories, led to Ismā'īl's assassination, which in turn touched off a revolt of the Dja'aliyyun and the tribes to their south. The rising was bloodily suppressed by the ǧerdir Mehmed Khişrev Bey, the ser'askebr in Kurdufan. Şanḍī was devastated, and the sister-town of al-Matamma, on the left bank of the Nile, became the principal urban centre of the tribe. In general, however, the Dja'aliyyun, sharpwitted folk with great trading ability, profited under Turco-Egyptian rule. Dja'aliyyun of the dispersion were numerous in Kurdufan and Dār Fūr, especially in the Arab-negroid southern fringe, where conditions were particularly favourable to petty traders (dja'allāb). The involvement of the dja'allāb in slave-trading led to severe measures being taken against them by the governor-general C. G. Gordon Paşa in 1879. It is therefore not surprising that many of the Mahdi's supporters were Dja'aliyyun of the dispersion. The Dja'aliyyun and other riverain tribes were prominent in the early years of the Mahdist state, but the Khalīfā 'Abd Allāh [q.v.] transferred political power increasingly to the Bakğḳa [q.v.]. When Kitchener began his great advance towards Omdurman, the Dja'all chief of al-Matamma, 'Abd Allāh Sa'd, refused to obey the Khalīfā's order to evacuate the town (which was to form the base for the Mahdist forces), and sent for help to the south. This could not be given; al-Matamma was retaken by Mahdist troops, and 'Abd Allāh Sa'd was killed (30 Muḥarrām 1315/7 July 1897). Under the settled rule of the Condominium, the Dja'aliyyun gained from the increasing opportunities for trade and education, and are ubiquitous throughout the territories of the present Republic of the Sudan.

(L. LOCKHART)

**DJABÄ** [see benêk].

**DJABA** (variants: Ibn Rusta: N. dhiba; Ya’qûbî: N. du nayd a, Kasbîya; al-Idrîsî: Dhiba; ibid, MS. Cairo: Hâba; again, ‘Abâ, Dhiba, ‘Ana, etc. occurring in the same list as kings separately in Ibn Khurradadhbih and al-Idrîsî are perhaps a dittoGRAPHY of Dîbâh) represents the name of the former hill-state of Chamba (old name Šâmpâ). The ancient capital of the state was Brahmapura (or Vayrâfapafana). Hîuen Tsang describes the kingdom as 667 miles in circuit, and it must have included the whole of the hilly country between the Alaknanda and Karnâlî rivers (Law, Historical geography). Later, the city of Chamba became the capital of the state. During the early decades of the 9th century A.D. it was merged into Himâchal Pradesh to be centrally administered by the Union Government of India.

Djâba is generally used by the Arab writers as the title of the rulers of Chamba, who were probably Sûryavamshi Râdjâpûtas. According to Ibn Rusta, the king enjoyed an honourable position (among the kings of India) and belonged to the Salti (race). The term Salti according, which undoubtedly applies to the ruling dynasty of Chamba, seems to have been wrongly used for the country in Hudâd al-Šâlam (for the salâkî hound, see KALB). There is a difference of opinion among scholars with regard to the date of the foundation of the Chamba dynasty. The earliest Arabic source to mention Djabû is Ibn Khurradadhbih, and the first draft of his work was prepared in 231/846, although the original report of the source was drawn up much earlier. It is therefore very likely that the city of Chamba existed during the early decades of the 9th century A.D.

Ibn Rusta and Marwazi state that the rulers of Chamba, on account of their pride (gharâb) took wives only from among themselves but the Balâkyr kings (the Râshîfrûkas, married their ladies. Then, they were always at war with al-Djura (the Gûrdjara-Prathâras) who also possessed the Râshîfrûkas and al-Tâhâ (Takka-daša east of Sialkô). It may be deduced from the above information that the Râshîfrûkas and the rulers of Chamba may have been allies, not only because they had a common enemy in the Gûrdjara-Prathâras, but also because they were related to each other, in the internecine wars for political supremacy in India at this period. The Red Sandalwood, which according to Ibn Rusta was exported from Chamba, is the product of Pterocarpus santalinus, native of South India, Ceylon and the Philippine Islands; climatic conditions could not have favoured its growth in Chamba. Al-Bîrûnî says that the red sandalwood is *wûrît hažâ‘n* (= Skt. rahtâ-candana) and was exported from DJAWA.

The kingdom of Dîbâb al-Hindi, the Island of Dîbâ (Ibn Khurradadhbih), the Indian Dîbâ (Hudâd al-Šâlam) and Dîbâ Island (Kazwinî, ‘Ajdâbî) are all the same place as Zîbâdî of other Arab writers and represent Java [q.v.].

**DJABAL** Mountain, see under the name of the Mountain.

**DJABAL-ARAKAT** [see YAPÔîT].

**DJABAL-AL-HARITH** [see AGHRIDAH and BUDUL].

**DJABAL-TâRÎK, GIBRALTAR,** the promontory of calcareous rock, a British possession, south-west of the Spanish province of Cádiz, almost at the southern extremity of Spain (length 4.6 km., breadth reaching 1.2 km.; area, 4.9 sq. km.; highest point 425 m.); the town extends the length of the western slope, which is fairly gradual, and numbers 28,000 inhabitants (British, Spanish, Jews and Morocans) including the garrison; it is as it were the key to the Mediterranean, and is fortified and studded with batteries on a gigantic scale. In the bay to the west, called the Bay of Gibraltar or of Algeciras, there was in antiquity the European column of Hercules, also called Calpe or Abyla Mons, facing the African column called Columna Abyla or Amenâ (the modern Sopers), Gibralmar, from the north-east, the whole strait between Europe and Africa, the Atlantic Ocean and the Mediterranean Sea; in antiquity this strait was called Γκαρδάπεδος Πολις, Fretum Gaditanum (from Gadis, Cadiz) or Herculeum; the Arabs call it (Khalidi) al-Zubûh, “(canal of) the alley” [see BAK AL-MAQÂHIR]. Gibraltar received also the name of Diqbal al-Fâk or Djâbal Târîk from the name of Târîk b. Ziyad, who landed there in 92/711. During the entire Arab period the port, the town and the citadel (“The Moorish Castle”) on the north-west of the rock played a continual part as a sure base for vessels, while Algeciras, facing it across the bay, developed still further and became the pros perous principal town of the entire southern extremity of Andalusia. The Almohad caliph ʿAbd al-Muʾmin, on his return from the Ifrikiya campaign (954-5; 1159-60) sent from Constantine orders to his son and successor Yûsuf, then governor of Seville, to construct a new town at Gibraltar which, with regard to the attacks aimed at Cordova, Granada and Seville, would serve as a base and as an assembly point for the large scale campaign he intended to undertake against the Christian kingdoms of the Peninsula. Yûsuf, from Seville, and his brother...
In the 4th/10th century, with the renewal of the power of the Byzantines, the town was occupied by them on two occasions (Nicephorus Phocas in 537; 685, and John Tzimiskes in 964); it once again became part of the dāwand of Hīmṣ. In 473/1080, ḫālīf Abū Muhammad ʿĀbd Allāh b. Maḥṣūr, known by the name of Ibn Sulayha, drove the Byzantines out, and the town fell into the hands of the Muslims who kept an important Jacobite bishopric there. After the third attempt of the Franks, the ḫālīf surrendered the town to the ʿabd al-Malik b. Marwān b. uṭūba of Damascus (726/1326); a short time later the Damascene garrison was driven out and replaced by the Banū ʿAmmār of Tripoli.

In 502/1108-9 Djabala was captured by the Crusaders, its commerce was given to the Genoese and it became the seat of a Roman bishopric.

In 584/July 1188 Șālāb al-Dīn was called in by the inhabitants and captured the town, which became part of the empire of al-Ẓahir. Between 1192 and 1285 Djabala was the object of rivalry between the Templars and the Hospitallers. In 1285 Sultan Kālāwūn took possession of it and joined it to the nīyābā of Hamāh; throughout the Mamlūk occupation the town’s prosperity benefited from the important pilgrimage to the tomb of the Sūfī Ǧibrīl b. ʿAḍām [q.v.] (d. 1617/778).

In 1516 it remained for four centuries under Ottoman rule. Nowadays Djabala, surrounded by gardens, is no more than a small town where it is still possible to admire numerous traces of the past. (J. F. SEYBOLD- [A. HUICI MIRANDA])

DJI B AL TĀRIK — DJABALA

Ugmn, from Granada, hastened to collect the necessary material and workmen for the foundation of a new and beautiful city with a cathedral mosque, palace for the Caliph and his children, and vast dwellings for the high officials of the empire, and for the troops, all, including gardens and orchards, supplied by water derived from mountain springs. The architect in charge of the works was al-Hadīdī; in the “Moorish Castle” remains of the fortifications erected at that time by the Almohads have been preserved up to the present day. ʿĀbd al-Muʿāmin arrived in Gibraltar in Dhu ʿl-Kaḍā 555 (November 1160); he received the homage of the whole of al-Andalus with great pomp and, having organized a reception in which the poets took part, inspected and accelerated the work on the new city which he named Madinat al-fāṭh “city of victory”, he returned to Morocco in Muḥarram 556 (January 1161, after a stay of two months. In 709/1309 Gibraltar was taken by Alonso Pérez de Guzmán, the Bueno, on behalf of Ferdinand IV of Castile, but in 733/1333 it fell into the hands of the Marinids of Morocco, from whom the Naṣrī Yūsūf III Abu ʿl-Haḍidīḍ of Granada took it, but only in 831/1420, until the time when, on 24 Dhu ʿl-Kaḍā 866/20 August 1462, the town was finally conquered by the duke Guzmán de Mediná Sidónia on behalf of Henry IV of Castile. From 1462 to 1502 it became, together with all the mountainous region of the Campo de Gibraltar, on the north-west (in substance the entire Sierras de los Gazules), a hereditary fief of the Guzmán of Medina Sidónia, after which it reverted to the crown. In 947/1540 Gibraltar was pillaged by the Algerian corsair Khayr al-Dīn, but in 953/1552 it was powerfully fortified by Charles Quint; in 1561/1610 the admiral Don Juan de Mendoza embarked at Gibraltar the Moors who had been driven out in order to return them to Africa. In the war of the Spanish succession Gibraltar fell in 1704 into British hands, and subsequently had to sustain several difficult sieges, particularly in 1779-83 under General Elliott, against Spain and France.

(D. F. SEYBOLD- [A. HUICI MIRANDA])
relying, as suggested by a remark of the poet Labid, too much on one another, were utterly defeated. The prince Laššī fell, while Hāǧībīb, one of his brothers, was taken prisoner and afterwards ransomed for a huge sum. This defeat shattered the last remnants of Kinda's power in Central Arabia; one of the tribe's leaders also fell in battle. The statements regarding the date of this battle are, as usual, contradictory and uncertain. According to some it took place 17 or 19 years before the birth of the Prophet, while others say it was fought in the year of his birth. Causin de Perceval places it a few years later, and this must be the correct date, if the king of al-Hīra who sent reinforcements was, as is said, al-Nu'mān b. al-Mundhir; his reign did not begin until about 580 A.D.

In 1347/1929 another memorable battle took place at Djabala between branches of 'Uṭayba. Following the crushing defeat of the rebellious Ḥādaṣūn at al-Sabāla by King 'Abd al-'Azīz al Saʿūd, the Barkā branch of 'Uṭayba fled, under Sūltān b. Bīgād al Humayad, the paramount Shaykh of 'Uṭayba and one of three leaders of the rebels. He and his men were eventually caught and beaten again at Djabala by 'Umar Ibn Rubyān in command of loyal elements of al-Rawḳa of 'Uṭayba. Sūltān himself managed to escape once more, but he was later taken prisoner. Like Tamīm on Yawm Djabala, the fugitive members of 'Uṭayba may have been attempting to reach one of the wadis of Djabala, either the michaḥ of 'Athīyya in the southeastern wādi or the 'idd of Muwajjih in the northeastern wādi, the reputed site of the pre-Islamic battle.

[D. SOURDEL]

The fortress owes its modern name to the Kushayri Djabar b. Šābīk who captured it in the time of the Saljūḳids, but was forced to give it up to Sulaymān Shāh. The latter handed it over to the last Ṣukyūlid of Halab, Sālim b. Mālik, who had been expelled from his former possessions (479/1086-7), and Kašīf Djabar remained in the hands of Sālim's descendants for almost a century, apart from a brief occupation by the Franks (497/1002). Zankī, the powerful atabeg of al-Mawṣil, was assassinated there in 527/1131 while besieging it, and in 564/1168-9 the Ṣukyūlid Shīḥāb al-Dīn Mūṣā al-Mardūk surrendered it, in exchange for other districts, to Nūr al-Dīn who put up various buildings there; of these a minaret still survives. The importance of the Jewish colony at the time was noted by Benjāmin of Tudela. Subsequently Djabar passed into the hands of the Ayyūbids, and then the Mamluks. Under the latter dynasty it was at first abandoned but the fortress, which had fallen into ruin in the time of Abu 'l-Fida', was restored at the end of al-Nāṣir Muhammad's reign by governor Tankiz in 736/1335-6. Traces of the fortress still attract attention, standing above a steep chalky cliff and dominating the wide Euphrates valley, but no serious archaeological investigations have ever been conducted there. According to ʿAshīkhpaštázade (chapter 2) and other Ottoman historians, Sulaymān Shāh, the ancestor of the Ottoman Sultans, was drowned nearby; he was buried by the castle of Djabar and commemorated by a tomb known as Mēzar-i Türk or Türk Mezari. The tomb was reconstructed by order of 'Abd al-Hamīd II and retained as Turkish property by article ix of the Treaty of Ankara of 1921. This story is perhaps due to a confusion between Sulaymān Shāh, the putative grandfather of ʿOṯmān I, and the Saljūḳid prince Sulaymān b. Kūṭumūsh [q.v.]. The tomb itself is in all probability not connected with either of them.

[D. SOURDEL]
DJABART, the name of the Muslims of Ethiopia. Originally the name of a region (Djabara or Djabarti) in the territories of Zayla' and Ifat (cf. al-Makrizi, al-Ilmdm, Cairo 1895, 6 fl.), later applied to all the Muslim principalities of southern Ethiopia and, ultimately, to all Muslims living in Ethiopia. The term Djabart is sometimes also used by the Christian population of Ethiopia with reference to the Muslims of the Arabian peninsula and thus becomes identical with the term Muslim in general. In modern usage Djabart is almost always employed, in a narrow sense, to describe the Muslim nuclei in the Christian plateau provinces of Eritrea, Tigre, Amhara, Shoa, etc. The common form Diabarti is scarcely a nisba but rather shows the ending by which Tigriina and Harari dissolve final consonant clusters. According to Abyssinian tradition the word is derived from Ethiopic agbirt (pl. of gaba) "servants (of God)"—cf. the similar development in the case of ciibd. In Amharic a Muslim is called islam or могадаре ("trader").

The Djabarti live in families and small groups scattered throughout the Christian Abyssinian highlands. Ethnically and linguistically they are indistinguishable from their Christian neighbours. Their knowledge of Arabic is generally limited to the minimum necessary for an understanding of the Kur'an. Some of them claim descent from the first Muslims other than Djabarti in the narrow application of the term, they maintain a number of mosques and Kur'an schools. In maghribi they belonged to the Malikiyya and Shafi madhhab an schools. In the 15th century Djabarti concentrated on the 12th/18th century, for the fact which discouraged Djabarti from pursuing his narrative taking first place and the narrative only second. This fact acquires a considerably added significance if we consider the extremely large proportion of material, hardly surpassed in either quality or quantity, that he collected solely for biographies, and attempt to interpret it in terms of the period of Ottoman rule in Egypt (918-1226/1512-1821 approximately) is conspicuous for the dearth of its historical sources written by contemporary inhabitants of the country. A very limited revival of historiography in Egypt, which took place towards the close of the 17th/18th century, did not change substantially this state of affairs. According to al-Djabarti's own testimony, the history of the period was completely ignored and despised by his contemporaries. He himself would not have dealt with it had he not been ousted from public life. His knowledge of Muslim and Egyptian history up to 1100/1688 (the year with which his chronicle opens) seems to have been very limited; yet in spite of these handicaps, and in spite of the fact that he had only a local knowledge of a province belonging to a much wider empire, he succeeded in writing one of the most important chronicles of the Arab countries during the Muslim period.

Al-Djabarti's main historical work is his chronicle, entitled Â¿îdîb al-thdni 'ashar fi 'l-tardjim wa 'l-akhbdr, which covers the years 1100/1688 to 1236/1821. He gives us two versions about its compilation: from the first version, which is somewhat unclear, it would appear that he started to take notes for his book regularly from 1100/1688. According to the second account, the Damascene historian al-Muradl, author of the biographical dictionary of famous people of the 12th/18th century (Silik al-durar fi 'l-yan al-barn al-thdni 'ashar) was the "main cause" of the compilation of the chronicle in its existing form. Al-Muradl asked and obtained the co-operation of Muhammad al-Murtagd the author of Tádd al-arâs, who lived in Egypt, in the compilation of that work. Al-Murtagd was helped in this task by his pupil al-Djabarti. When al-Murtagd died in Sha'ban 1205/April 1791 al-Muradl asked al-Djabarti to take his dead master's place. Al-Muradl died, however, in Safar 1206/November of the same year, a fact which discouraged al-Djabarti from pursuing his collection of material. Somewhat later, however, an "internal urge" (hâlidh min nasîf) prompted the author to resume his work and add the chronicle of events "in the present order".

From the above it is made clear that as long as al-Djabarti worked for al-Murtagd and al-Muradl he collected material solely for biographies, and that only quite a long time after 1206/1791, when he decided to continue his work independently, did he start collecting historical data. This explains the extremely large proportion of biographies in his book; it explains also why al-Djabarti concentrated on the 12th/18th century, for al-Murâdî's biographical dictionary is devoted to persons of the same century. In any case, it is no mere accident that al-Djabarti's chronicle is called al-Tardjim wa 'l-akhbdr, biographies taking first place and the narrative only second. This fact acquires a considerably added significance if we...
recall that out of all the chronicles of Ottoman Egypt al-Djabarti's was the only one to include biographies in historical work. In the Mamlik sultanate whose written records developed an extensive biographical literature, unparalleled perhaps in any other Muslim country or region. This kind of historical writing died out completely in Egypt under the Ottomans until it was revived by al-Djabarti alone, as a result of Syrian influence. Whether he was also influenced by the Mamlik biographical works is a matter which, in the state of our knowledge at present, cannot be ascertained.

Al-Djabarti wrote the first three volumes of his chronicle in their final form during the year 1220 and the beginning of 1221/1805-6; the fourth and last volume was compiled, seemingly, during the period which it covers, i.e., the years 1221-36/1806-21. There is no doubt that he intended to continue the chronicle after the fourth volume, as may be inferred from his remark at the end of that volume. Whether he did continue it or not cannot be established with certainty.

Because of al-Djabarti's vehement attacks on Muhammad Ali and his regime, the publication of the 'Aḍḍālīb was long forbidden in Egypt. A. von Kremer gives revealing evidence of the Egyptian government's attempt to suppress the book (Aegypten, ii, 326). Only towards the end of the 1870s was the ban on the book lifted. The first time any part of it was published without government interference was in 1878, when the press of the Alexandria newspaper Misr printed the section dealing with the French occupation; it was edited by Adīb Isḥāk, who called it Taʾrikh al-Faransawiyya fī Misr. In 1297/1879-80, soon after the Khedive Tawfik's accession to the throne, the whole chronicle was published for the first time at the Bālāk printing press — this is the standard edition. In 1302/1885-6, the chronicle was published again in al-Maḥāsa al-Azhariyya in the margins of Ibn al-ʿAṯīr's K. al-Kāmil. In 1322/1904-5, it was published as an independent book in al-Maḥāsa al-Aṣḥābiyya, Cairo.

A French translation of the 'Aḍḍālīb, called Merveilles biographiques et historiques, ou Chronique du Cheikh Abd-El-Rahman El-Djabarti, was published in Cairo at the Imprimerie Nationale during the years 1886-90; it developed an extremely ripe and bad translation and is very dangerous to use.

The chronicle is of immense importance for the whole period which it covers. As for the early part of that period, it is difficult to establish, in the present state of our knowledge, to what extent al-Djabarti relied on earlier sources which he has not cited; also, he might have erred about certain facts, some of which are important. Yet the general picture which he depicts of that early part reflects the history of the Egypt of that time in the clearest and truest way. For the later part of that period, and especially for the French occupation and the early reign of Muhammad Ali, he is undoubtedly the best extant source (for an enumeration and evaluation of the subjects with which the chronicle deals see D. Ayalon, The historian al-Jabarti and his background, in BSOS, xxii/4, 1960, 235-9).

A second chronicle written by al-Djabarti, called Muḥkir al-tadkīb bi-dhakhāb dawlat al-Farans, covers the few years of the French occupation of Egypt. Its compilation was finished at the end of Shāb 1218/1216/1801 of December 1801 or beginning of January 1802. In it al-Djabarti attempted to curry favour with the Ottomans by extolling them on the one hand and by denigrating the French on the other. It was published recently (in 1958) by Muḥammad ʿAṭīya under the title Yaḥyāyyiyya al-Djabarti (two small volumes, nos 59 and 60 in the series Ṭabārān al-lāh, Dar al-Maʿārif, Cairo). It was twice translated into Turkish, by the historian ʿĀṣim, and by the physician Bahdjat Mūṣā (q.v.). The latter's version, under the name Taʾrikh-i Misr, was published in Istanbul in 1282 A.H.

Al-Djabarti also made an abridgment of Dāwūd al-ʾAntaklī's medical treatise Tadbirat al-Albāb, according to Lane he also refined the language of the Thousand Nights and One Night, and "added many facetiae of his own and of other literati". This copy seems to have been lost.

Although al-Djabarti's knowledge of Muslim history was very limited, and although he did not have any personal contact with any important Muslim historian, he was very well situated to acquire first-hand information on events which took place in Egypt and especially in Cairo. His family, and particularly his father, Ḥasan, had strong and numerous connexion both among the ruling class (Mamlik sultanate and Ottomans) and among the religious notables. His father had the greatest share in moulding his character and shaping his outlook. He seems to have inherited from him the combination of Muslim piety and learning with the practical knowledge and understanding of a man of the world. Other persons who greatly influenced al-Djabarti were the above-mentioned Murtaḍā al-Zabīdī, Ḥasan al-ʿAṭīr [q.v.] and Ismāʿīl al-Khāshab.

**Djabarot** (see A‘lama).

**Al-Djabbar** [see Nudum].

**Djabbul**, a town in Central Babylonia, on the east bank of the Tigris, a few hours’ journey above Kūt al-A‘Amara, and five parasanges (about twenty miles) south-east of Nu’māniya (the modern Tell Nu’mān). It is described as a flourishing place by the older Arab geographers; but, by Yakut’s time (beginning of the 7th/13th century) it had considerably declined. In course of time—we have no details of its decay—it fell utterly into ruins. This town must date from a very remote period; for the name of the Gamūlū, one of the most important Aramaic nomadic tribes, frequently mentioned in the first thousand years B.C., must have survived in Diabbul; they have left traces of their influence in modern topography in several other places. The ruins of Diabbul, which were known by the name Diambul, Diambal, or Dzibul as late as the first half of the 19th century according to the travellers Rich, Chesney and Jones, have now utterly disappeared owing to earthquakes. On the site where Chesney in 1833 had seen the ruins of a large town, no trace of them was to be seen in 1848 when Jones passed it; the Tigris had in the interval entirely engulfed the remains of the town.

(R. M. STRECK)

**Al-Djabbar**, the ancient Gabbula, a place east-south-east of Ḥalab, watered by the Nahr al-Dhabab. The salt-mines there lent Diabbar a certain economic importance in the middle ages as well as still, to which it probably also owed its position as an administrative centre in the political division of the Mamlūk kingdom.

(R. HARTMANN)

**Djābir b. Aflah, Abū Muḥammad**, the astronomer Geber of the middle ages; he was often confused with the alchemist Geber, whose full name was Abū `Abd Allāh Diābir b. Ḥayyān al-Ṣaffī. He belonged to Seville; in the period in which he flourished cannot certainly be determined, but from the fact that his son was personally acquainted with Maimo-

nides (d. 1204), it may be concluded that he died towards the middle of the 12th century. He wrote an astronomical work which still survives under two different titles; in the Escorial Ms. it is called *Kitāb al-Hay'a* (the Book of Astronomy), in the Berlin copy it is entitled *Iṣāh al-Muṣaffī* (correction of the Almages). In it he sharply criticizes certain views held by Ptolemy; particularly rightly when he asserts that the lower planets, Mercury and Venus, have no visible parallaxes, although he himself gives the sun a parallax of about 3'. He also says that these planets are nearer the earth than the sun. The book is otherwise noteworthy for prefiguring the astronomical part with a special chapter on trigonometry (see also *Abū l-Wafa*).

In his spherical trigonometry, he takes the “rule of the four magnitudes” as the foundation for the derivation of his formulae, and gives for the first time the fifth main formula for the right-angled triangle (cos A = cos a. sin B). In plane trigonometry he solves his problems with the aid of the whole chord instead of using the trigonometrical functions sine and cosine. The work was translated into Latin by Gerhard of Cremona and this translation was published by Petrus Apianus in Nuremberg in 1534.

(H. SUTER)

**Diābir b. Ḥayyān** b. ʿAbd Allāh al-Kūṭī al-Saffī, one of the principal representatives of earlier Arabic alchemy. The genealogy quoted above is taken from the Fihrist, where on p. 324 the oldest biography of Diābir is preserved. His kunya given there is not Abū Mūsā, as usual, but Abū ʿAbd Allāh, although Ibn al-Nadīm himself states that al-Rāzī (c. 325/935) used to quote: “Our master Abū Mūsā Diābir b. Ḥayyān says...”. The biography shows not only complete uncertainty regarding facts, but also legendary elements; on the other hand, the tradition that his father was “a certain Azdī called Ḥayyān, a druggist of Kūfah...” is not without some worth for prefacing the astronomical part with a special chapter on trigonometry (see also *Abū l-Wafa*).

In his spherical trigonometry, he takes the “rule of the four magnitudes” as the foundation for the derivation of his formulae, and gives for the first time the fifth main formula for the right-angled triangle (cos A = cos a. sin B). In plane trigonometry he solves his problems with the aid of the whole chord instead of using the trigonometrical functions sine and cosine. The work was translated into Latin by Gerhard of Cremona and this translation was published by Petrus Apianus in Nuremberg in 1534.

(H. SUTER)

**Diābir b. Ḥayyān** b. ʿAbd Allāh al-Kūṭī al-Saffī, one of the principal representatives of earlier Arabic alchemy. The genealogy quoted above is taken from the Fihrist, where on p. 324 the oldest biography of Diābir is preserved. His kunya given there is not Abū Mūsā, as usual, but Abū ʿAbd Allāh, although Ibn al-Nadīm himself states that al-Rāzī (c. 325/935) used to quote: “Our master Abū Mūsā Diābir b. Ḥayyān says...”. The biography shows not only complete uncertainty regarding facts, but also legendary elements; on the other hand, the tradition that his father was “a certain Azdī called Ḥayyān, a druggist of Kūfah...” is not without some worth for prefacing the astronomical part with a special chapter on trigonometry (see also *Abū l-Wafa*).

In his spherical trigonometry, he takes the “rule of the four magnitudes” as the foundation for the derivation of his formulae, and gives for the first time the fifth main formula for the right-angled triangle (cos A = cos a. sin B). In plane trigonometry he solves his problems with the aid of the whole chord instead of using the trigonometrical functions sine and cosine. The work was translated into Latin by Gerhard of Cremona and this translation was published by Petrus Apianus in Nuremberg in 1534.

(H. SUTER)
But the time of the writings is not that suggested by the names of the persons occurring therein. The earliest evidence of their existence is found partly in the works of the alchemist Ibn Wahshiyya (c. 350/962) and of the forger Ibn Wahshiyya (c. 350/962), and partly in the Fihrist of Ibn al-Nadim [q.v.].

The corpus was divided into several collections of which the most important are: the CXII books, incoherent essays on the practice of alchemy with many references to ancient alchemy (Zosimus, Democritus, Hermes, Agathodemon, etc.); the LXX books, a systematic exposition of the alchemical teachings of Djabir; the CXLI books, the Kutub al-mawdizin ("Books of the balances"), an exposition of the theoretical and more philosophical foundations of alchemy and of all occult sciences; the D books, consisting of isolated treatises investigating more fully certain problems of the Kutub al-mawdizin. These four collections also mark successive stages in the development of the Djabirian doctrine and in the compilation of the corpus. To this have been added other smaller collections dealing with alchemy in its relation to the commentaries on the works of Aristotle and Plato, then treatises on philosophy, astronomy and astrology, mathematics and music, medicine and magic, and finally religious works.

This vast body of literature, which comprises all the sciences of the ancients which passed to Islam, cannot be the work of a single author nor can it date back to the second half of the 2nd/9th century. All the facts combine to show that the corpus was compiled at the end of the 3rd/9th century and beginning of the 4th/10th century.

The writings of Djabir in the first place present us with a problem in religious history. Just as the ancient alchemists who have been preserved are oriented towards Greek gnosio, so Djabir introduces into his system of sciences Muslim gnosio. This gnosio is not the primitive gnosio which developed in Shí'í circles of the 1st/7th and 2nd/8th centuries as described to us by Muslim writers on heresy; it is rather the gnostic syncretism which was in vogue among the Shí'í extremists (ghūdūl) at the end of the 3rd/9th century, which, combining with revolutionary political tendencies, threatened the very existence of Islam. Djabir proclaimed the imminent advent of a new imām who has succeeded one another from the 3rd/9th century, which, by the way, come from the same source.

From the point of view of his religious terminology, Djabir is closely connected with Karmatianism (the Karmatians who came to the front after 260/873) are even quoted in Djabir). The imām is called nātīk in contrast to sāmīl; the degrees of initiation are called ṣābīk tālī, ṭāhīk, etc.; the doctrine of the adversaries (addād) of the imām is also developed. The history of the world is divided according to the successive revelations into seven stages, of which the revelation of the Djabirian imām is the last. Similarly the Muslim imāms who have succeeded one another from the 3rd/9th century, which, by the way, come from the same source.

The scientific terminology used by Djabir is without exception that introduced by Hunayn b. Ishāk, which shows once more that the corpus could not have been composed before the end of the 3rd/9th century.

The fundamental principle in the science of Djabir is that of mīzān (balance). This term combines the most diverse speculations and shows very well Djabir's scientific syncretism. Mīzān means: (a) specific gravity (references to Archimedes); (b) the στάχυς of the ancient alchemists, meaning the measure in a mixture of substances; (c) a speculation on the letters of the Arabic alphabet, which are connected with the four elementary qualities (hot, cold, wet, dry). This notion is not applied to all things comprised in the sub-lunar world, but also to metaphysical beings, like intelligence, the soul of the world, matter, space, and time. It was from neo-Pythagoreanism on the one hand and the Shí'í speculations of the ḍīfār [q.v.] on the other that Djabir borrowed this system; (d) mīzān is also the metaphysical principle per excellence, a
symbol of the scientific monism of Djabir. In this sense it is opposed to the dualist principle of the religious teaching.

The writings of Djabir seem to be closely connected with the pagan scholarship of the Harranían milieu. Djabir expressly refers to the Şáhiya when reproducing their discussions of certain metaphysical problems. The direct sources of his scientific system are the writings of Ps.-Apollonius of Tyana (Bašiň [q.v.]), Kitāb sirr al-khălība and others, apocryphal works which, according to a note by Muhammad b. Zakariyya al-Râzî, were composed in the time of the Ma'mûn and are found to be the best source for a knowledge of "Harranian" literature.

Djabir says that his knowledge was handed down to him by his master Dja-far al-Sâdîk. It is to this "mine of wisdom" that all his knowledge goes back, he himself being only a compiler. In the religious hierarchy he ranks immediately after the īmām. He further quotes as his master a certain Harbi the Himyarî, a monk (ruhîb) and a man named Ufîn al-Himâr. Among the contemporaries of Dja-far are mentioned the Barmakids Khâlid, Yahya and Dja-far, to whom Djabir dedicated several of his treatises, and the members of the Šhi'i family of Yağıt. All these statements belong to the realm of legend and are in contradiction to the internal evidence of the writings. Besides, a pupil of Dja-far named Djabir b. Hayyân is nowhere mentioned in Šhi'i literature and seems to be a pure invention. It is easily understood why the author of these works attributed them to a pupil of Dja-far, who was often regarded in Šhi'i literature as the representative of Greek learning and particularly of occult sciences. Moreover, Dja-far was the father of the seventh imām Ismâ'il, whose advent is announced in these writings.

The Flārist of Ibn al-ナdām says that there were in his time Šhi'i who doubted the authenticity of these writings. The philosopher and scientist Abû Sulaymān al-Mantiḳī (d. ca. 370/980-1) has left in his Ta'īkât a note according to which he was personally acquainted with the author of the writings attributed to Djabir. He calls him al-Hasan b. al-Nâkad al-Mawṣûli. We have no reason to doubt the authenticity of this statement even if it is certain that the writings of Djabir are not the work of a single author and even if the corpus underwent a fairly long evolution before attaining its present form. The terminus ante quem would be about 330/942.

The writings of Djabir considerably influenced the development of later Arab alchemy. All later writers quote them, and there were numerous commentaries. Several books of the corpus were translated into Latin. The famous writings attributed to Geber rex Arabum, however, represent only a late recension by a Latin author of the 13th century A.D.

**Bibliography:**
-sophorum (ta'wilî) of the Kurânân refers to the weighing at the day of judgment. This speculation is also found in Muslim gnostics and it is through it that Djabir connects his scientific system with this religious teaching.

*Al-Ṭabarî* has been published and translated by A. Segel, *Das Buch der Gifte des Gîbîr ibn Hayyân*, 1958 (cf. M. Plessner, in *İsra*, li, 1960, 356 ff.). A complete German trans. of the LXX Books by M. Plessner is still unpublished.—Books later than Kraus's magna opus are: E. J. Holmyard, *Alchemy, 1957* (Pelican books); Ps.-Magritl, *Das Ziel der Weisen* (P. Kraus, *Bibliography*). *研究报告*, *Philosophorum, Placita philosophorum*, in the corpus see 'A. Badawi's introduction to his ed. of the full text, *Aristoteles De anima, etc.*, in *Islamica*, xvi, 1954. For recent articles see Pearson, nos. 5121-47. (P. Kraus-[M. Plessner])

DJABIR B. ZAYD — AL-DJABR WA 'L-MUKABALA

AL-DJABIYA, the principal residence of the amirs of Għassan, and for that reason known as "Djābiya of kings," situated in Diwān (q.v.), about 80 km. south of Damascus, not far from the site of the modern Nawa. It extended over several hills, hence perhaps the poetic form of plural Djawabi, with an allusion to the etymological sense of "reservoir," the symbol of generosity (cf. Aghānī, xviii, 72). It was the perfect type of ancient bedouin birḥājdīna, a huge encampment where nomads settled down, a jumble of tents and buildings; there is even a record of a Christian monastery there. At the present time the site is marked by a vigorous spring and pastures still visited by the bedouins of the Syrian desert. Even after it had disappeared, its memory was perpetuated by the name of the south-west gate in the Damascus wall, Bāb al-Djābiya.

The Arab conquest still further increased its importance. From an early date a large camp was established there, the principal one in the whole of Syria, and for a long time also the headquarters of the gīnda of Damascus. The name al-Djābiya is associated with the battle of the Yarmūk; it was there that a skirmish with the Byzantines took place and that the booty was collected together after the victory. This situation explains why, in 17638, the caliph ūmar went there to decide upon conditions in the new conquests, accompanied by the principal ʿakhba of the Ḥijāz with the exception of ʿAll. A meeting of the generals and principal officers was then held there and has remained famous, with the name yaum al-Djābiya, while ʿUmar's speech, frequently quoted in birḥājdīna, was edited with English translation by F. Rosen, Diwān, v, 3-4; Bakīr, Muqāiam, ed. Wüstenfeld, 227; Ibn al-Fākhi, 105; Ibn Khurrazadibīh, 77; Masʿūdī, Murādī, v, 198; al-Tanbiḥ, 308; Tabārī, YaqĪbī, indices; Baladhūrī, Futūh, index; Ibn Saʿd, iv, 124; v, 28, 29; Hassān b. Thābit, Dinwān, ed. Hirschfeld, v, 7; xiii, i, 22, 3; ʿAghānī, Tables. Lance AMMEN-J. SOURDEL-THOMINE)

DJABIR B. ZAYD — AL-DJABR WA 'L-MUKABALA

AL-DJABR WA 'L-MUKABALA, originally two methods of transforming equations, later the name given to the theory of equations (algebra). The oldest Arabic work on algebra, composed ca. 850 A.D. by Muḥb. b. Mūsā al-Khwārizmī (q.v.), consistently uses these methods for reducing certain problems to canonical forms; al-Khwārizmī's work was edited with English translation by F. Rosen, London 1831. A revision of Rosen's text is badly needed, cf. S. Gandz, The Misraḥat ha Middot, in Quellen u. Stud. z. Gesch. d. Math., Abt. A: Quellen, 2, 1935, 61 ff.; the translation is arbitrary and often wrong, not the least because Rosen tries to force the variable terminology into a preconceived rigid pattern. This edition has been the source of countless errors and mistakes in the older literature. It was J. Ruska who gave the first critical analysis of the Arabic original. For its history, see J. Ruska, Zur ältesten arabischen Algebra und Rechenkunst, in SB Heidelberg AWiss, phil-hist. Kl., 1917; in particular his explanation of al-Djābr wa 'l-M. (5-14) has not been refuted by any later authority. In the first problem, 25 Arab. text, 1 capital (māl) is equal ('uldā'a) to 40 "something" (dāqiyya) without (ilā) 4 capitals. al-Khwārizmī's instruction reads: "Fill it (the 40 "something" without 4 capi-
Dr. A0-DI3ABR WA 'L MUKABALA

(tals) up (udjburhu) with (bi) four capitals, and add them to the (i) capital*. Thus al-gjabr means eliminating quantities prefixed by ijl (later called heads of the operation of ijl-multiplication), by adding these quantities, in accordance with the usual meaning "restoring", especially "filling up the lacking sum of money" (examples in Dozy, Suppl. s.v.). In the fifth problem, 28 Arab. text, 50 dar&him and 1 m&l are equal to 29 dar&him and to "something": "Balance confronting (kabhil) with (bi) it (the 29 dar&him), and this means that you cast off twenty

Irrational quantities here are admitted as solutions.

... but only those which could be reduced to quadratic equations.  

Liber algebrae et almucabola, (1145 A.D.) composed a second translation of the first part, titled De jebra et almucabala, ed. G. Libri, Historie der sciencia mathematicae, i, Paris 1838, 253-297. In 1520 A.D. Leonard of Pisa, in the Liber abaci, ed. B. Boncompagni, vol. i, Rome 1857, 406, uses the expression compositum algbræ et elmulchabala. According to Suter, in E1', s.v. AL-DI3ABR WA 'L-MUKABALA, Canacci of Florence (14th cent.) was the first Western writer who used the term algebra, which he erroneously believed to derive from the name of Geber (11&br), the alchemist?) leaving aside almucabala; Gosselin (1577) is said to have been the last known who used almucabala. From the terms shay* and m&l derived ars rei et census, Ital. arte (or regola) della cosa, Germ. Regel Cass.

The Islamic world, Abi Kamil Shudja* (q.v.) (between 850 and 956 A.D.), who exercised a considerable influence also on the development of Western mathematics, employed the word shay* in the theory, which he turned into a powerful instrument for geometrical research, building upon the foundations laid by al-Kh&rizmi. He solved systems of equations involving up to five unknown quantities, represented by different kinds of coins. He discussed problems of a higher degree, but only those which could be reduced to quadratic equations. Irrational quantities here are admitted as solutions.
His work contains first steps leading to a theory of algebraical identities. He also dealt with problems of indeterminate analysis (integral solutions), which indicate close connection with analogous problems studied in India.

The algebraists learnt new methods from the translations of Greek mathematical works. The theory of irrational quantities was carefully discussed by Abū'Abd Allāh al-Hasan al-Muḥ. b. Ḥamīlī (?), known as Ibn al-Baghdādī, in his Risāla fi 'l-muqābala wa 'l-mutabīna, ed. in al-Rāsīl al-mutafjarra fi 'l-nayā'a, Dāhra al-Maṣā'īrī, Ḥaydārābād, 1366/1947. He is cited by al-Bīrūnī in his Risāla fi istiḥkārādī al-a'lātūr wa 'l-da'ā'tūrā, in the collection just cited, 224.

W. HARTNER

Djābr ibn al-Kasm was a high official of the Fatimid Caliphs al-Mu‘izz and al-Āzīz. On one occasion he was al-Āzīz’s viceroy over Egypt; in 373/984 he replaced Ibn Kīlls as vizier for a few weeks, without great success.

Djābr ibn al-Kasm, or Djābr, Hebrew Gabriel[C, was “Man of God”, is mentioned for the first time in the Old Testament, Dan. viii, 15 ff.; ix, 21 as flying to Daniel in the shape of a Man, sent by God in order to explain the vision of Daniel about the future. In post-biblical Judaism Gabriel plays an outstanding role among the archangels representing nations and individuals and natural phenomena. He belongs to the archangels and is governor of Paradise and of the seraphs and the cherubs (Enoch, xx, 7). He is one of “the angels of the face”, standing at the
left side of the Lord, and he dominates all forces (ibid., xi, 1-9, cf. Rev. v, 6). Michael has preference as the angel of Israel, but Gabriel is often the Messenger of God to man (2 Chron. xxxii, 21) the Targum has Michael and Gabriel, and "the man clothed with linen" (Ezek, ix, 3; x, 2) is in Yoma lixxvi identified with Gabriel. The same is even the case with the man who met Joseph in the field, Gen. xxxvii, 15, 23; according to Targum Jonathan. All angels are said to have wings (tabard), made of fire, water or air, they do not eat nor drink nor marry, and they do not die (see Weber, 166 ff.; Moore, 405; cf. Matth., xxiii, 30; Luke xx, 35 f.). Their names, also that of Gabriel, are used in the magic papyri (see Blau, 134).

These views were on the whole taken over into Islam, and here Djibril became conspicuous as the bearer of the revelations to the Prophet. In the Kur'an Djibril is only named thrice, viz. ii, 97, 98 (here also Mika'il); LXXVI, 4; and ii, 97 it is expressly said "he brought it (the Kur'an) down to thy heart". On the other hand the correspondence between God and man is also said to take place by the spirit (al-rūh) descending and ascending between heaven and earth and bringing messages on whom God will (XVI, 2, cf. LXXIV, 4; XVII, 4). The rôle of the spirit was not understandable to the people: "They ask you about the spirit, say: the spirit is (in XXVI, 95) the trustworthiness of my commandment of my Lord, but you have only got little understanding" (XXVI, 85). In some passages the spirit seems to have the character of a spiritual force, since God fortiies the faithful "by spirit from him" (LXXXIII, 22), and Jesus was fortiied by God through the Holy Spirit (II, 87, 253; V, 110). But other passages say explicitly that God sent the spirit to the Prophet with the revelation (XL, 15; LXXIV, 52); the Kur'an is brought down by "the trustworthy spirit" (XXVI, 193). Thus the spirit and Djibril are identified, just as we find in the New Test. that the seven angels standing before God (Rev., viii, 2, 6) also are named the seven spirits (πνεῦματα, Rev., i, 4; iii, 1; iv, 5; v, 6), and Jesus is named a spirit from God: sūra IV, 171.

In the taafsir (Tabari, Zamakhshari, Baydawi) there is a story about Djibril being the messenger who brings the revelation to Muhammad, and the two visions of "the Mighty in power, the Vigorous one" (Sūra LIII, 1 ff.) are interpreted in the way that it was Djibril whom the prophet saw, first "in the loftiest horizon", and later "by the sidra-tree at the furthest end". In the commentaries on sūra II, 97 the question of Djibril's activity is made the salient point that both of the strife with the Jews. These asked Muhammad (another tradition 'Umar) who was the angel that brought him revelations, and when he said it was Djibril, and that he was the helper (wafl) of every prophet (cf. Ibn Sa'd i, 1, 116, 9), the Jews said that then they could not acknowledge him, because Michael was their wafl and Gabriel their enemy (who betrayed their secrets). The Prophet answered said that both of them were God's servants and so they could not be enemies, and then Sūra II, 97 f. was revealed. 'Abd Allâh b. Sallâm was said to have given up his Jewish faith for Islam because Muhammad, after having demonstrated a knowledge that only a prophet could have, said that he had it from Djibril (Buḫkârî 60 (ambiyâ), bâb 1; 65 (taafsir al-Kur'ān), bâb 6).

In the Sîra Djibril is the constant counsellor and helper of the Prophet. When he had brought Muhammad the first revelation (sūra XVII, 5-10) on mount Hûrâ' Wârâqa b. Nawfil assured Khadhîja that he was the same "great nâmâr" who formerly came to Moses, and Khadhîja understood from the discretion of the angel towards her that he was no ghaşyân (Tabari i, 1150-3; Ibn Hishâm, ed. Wüstenfeld, 153 f.). Thus Djibril became the guarantee of the coherence of Islam and the two older religions. The opening and purifying of the belly and the breast of Muhammad was executed by Djibril and Mika'il (Tab. i, 1157; v. Wensinck, 160). Djibril came to the Prophet on the mountains of Makkâ, produced a spring and taught him wudu* and trahîd (Tab. i, 1157; Ibn Hishâm, 158), and he guided the Prophet on his ascension (Tab. i, 1157-9; Ibn Hishâm, 263 ff.; v. Wensinck, 25). When Muhammad once was passive Djibril threatened him with God's punishment if he did not follow His commandments (Tab. i, 1171), and when the Prophet's acknowledgement of the three goddesses al-Lât, al-'Uzza and Manât was made public, Djibril reproached him for reciting a message that he had not received from the angel (Tab. i, 1192 f.). He warned the Prophet against the plot of the Meccans before the hidâra (Tab. i, 1231 ff.; Ibn Hishâm, 325 ff.), at Badr he appeared with thousands of angels (Ibn Hishâm, 449 f.; Ibn Sa'd ii, 1, 9, 18), and he ordered Muhammad to attack Banû Kaynûkâ and later Banû Kurayza (Tab. i, 1300, 1486, cf. sūra VII, 59; LXXII, 5 ff.; Ibn Hishâm, 684); according to the commentaries he was the Messenger of God to every prophet. From Adam to Christ the angel carrying a divine revelation, the others see an ordinary man (al-Tâ'îyya al- khwârî v. 279-84).

In his Kīsâs al-ambiyyâ (Leiden 1922) al-Kisâî carries out the idea that Djibril was the messenger of God to every prophet. From Adam to Christ Djibril is acting as the helper and guide of all leading persons in the Bible as well as of the Kur'ânic prophet Sâlih. Most tales are referred to the converted Jews Ka'b al-AhÎbâr and Wâbâ b. al-Munabbîh. A similar account is to be found in Thâliab: Kīsâs al-ambiyyâ (al-'Arâ'îs), Cairo, 1325.

Also "pseudo prophets" pretended to be inspired by Djibril (v. Tabari iii, 1394), and this is a popular motif in jocular tales, e. g. Mas'ûdî, Murâjudî, vii, Paris 1873, 52 ff.

(D. Pedersen)

DJABRAN KHALIL DJABRAN, Lebanese writer, artist and poet, born on 6 January (al-Samir, iii/2, 52, Young 7, 142) or 6 December (Nuʿayma, 13) 1883, at Bsharri. The details which have been related about his childhood are often romanticized or imaginary (Nuʿayma, 14-96; Young, 7, 161 and passim). Biographers are agreed upon 1895 as the date of his departure to the U.S.A. with his mother Kāmila Rāhma (d. 28 June 1903), his two sisters Maryāna and Sulṭāna (d. 4 April 1902) and his maternal half-brother Burtis (d. 12 March 1903). The family settled in Chinatown, a poor district in Boston (Nuʿayma, 29-30) where Djābrān attended the elementary school (al-Samir, ibid.). On 3 August 1898 he returned to Beirut (Karam, thesis, 33). His knowledge of Arabic at that time was rudimentary. The three years he spent at the College de la Sagesse (Beirut) partly filled the gap. In 1902 he left the Lebanon, travelled to Paris, paid a brief visit to New York and was in Boston in January 1903, a year of misfortunes which only Maryāna escaped (al-Samir, ibid.; Nuʿayma i, 50 and 60; Young 7, 185). In 1904 he held an exhibition of his drawings, but without success (Young, ibid.; Khayrállah, 17-18), and corresponded with the Arabic journal al-Muḥādīr which was then edited in New York by A. al-Ǧhurayyib. His quasi-philanthropic relation with Mary Haskell dates from this period.

As regards his stay in Paris (14 July 1908-22 October 1910), it has been finally disproved that he attended the École des Beaux-Arts regularly or that he was a pupil of Rodin (Huwayyik, 208-9). After the Arab Political Conference in Paris, he returned to Boston and formed a society, al-Ḥalaṭa al-Dhahābīyya (unpublished sources; Masʿūd, 240); then settled in New York (autumn 1912), sharing with N. ʿArīḍa the work of editing al-Funūn (1913), an Arabic periodical which was replaced by al-Sāʿīb (1913). He then set out to make a way for himself in American letters, starting in the periodical al-Maṣḥūra (al-Machriq, English version ii, 37-43), then published three times in Arabic before reaching its final, definitive form (al-Maḥrīq, xxxvi; Young, 53-58, 185).

Nicetsche, Blake, the Bible, Rodin, Western romanticism, together with recollections of Eastern mysticism are the influences most profoundly affecting his works, both literary and artistic. We should moreover note the intimate connexion between his poetic prose and his symbolic drawings, the poet being nourished by the artist, whilst the latter derives from the poet the dynamism of his imagery.

The translations of his English works by Antonius Baṣghir are unfailingly prolix or laconic. For this reason conservatives do not recognize him as the author of any masterpiece in Arabic. Nor is he regarded as an important figure either by historians of Anglo-American literature or by art historians. But it remains none the less true that he is a principal representative of the new Arabic literature, the reflection of a nation in torment, and a source of inspiration for contemporary Arabic poetry.

is a romanticism reflecting a mal de siècle similar to that in Europe in the 19th century. There is the same range of themes: revolt in social, religious and literary forms, lyrical outpourings, nature, love, death, mingled with recollections and his native land, an anxiety about the hereafter where metaphysical melancholy ends in mystical serenity and the diversity of the cosmos gives way to universal unity (Iṣan al-Dīlah al-Īmām). In fact, neither his stories ʿArīḍīs al-murūḏā (1906), al-Arwaḥ al-mutammārīda (1908) nor his novel al-Ǧumāniha al-mulukhiyya (1911) entirely meet the formal requirements of the novel. They are merely a setting for a revolt or for a purely lyrical manifestation. Uprooted by emigration, and fostered by Western civilization, he escaped the traditionalists' strict discipline and was repelled by their dazzling linguistic feats and archaic artifices. Accordingly he took his inspiration from the Arabic version of the Bible. In his writings all difficulties of form dissolved into a kind of internal music, overflowing with quasi-mythological images and visions. The vocabulary he uses is severely limited, and the commonest words seem to be new and enriched with a multiplicity of potentialities. This new and somewhat free poetical prose did not fail however to provoke much criticism from traditional quarters.

His works in English are an extension of his Arabic writings. In them can be found the moral fable, the aphorisms, the biblical style, the purely oriental imagery. The character of Jesus, the subject of his first works, received its fullest realization in Jesus, Son of Man; The Earth Gods is the perfect expression of the mystical outlook, and The Prophet, his masterpiece, is the focal point in which elements scattered throughout his earlier writings are concentrated and centralized. In it, thought is detached from logic and transformed into feeling and atmosphere. And the symbol of al-AGMENTA is the manifestation of the superman on his way towards the divine, to find full realization in the person of Jesus. We must reject the unfounded assertion that this work was drafted three times in Arabic before reaching its final, English version (al-Maḥrīq, xxxvii; Young, 53-58, 185).

...
Djabrân Khâllî Djabrân — Djadhîma b. Āmîr

Gibrân, Thesis, Sorbonne, 1958; idem, in Cenacle Libanais, March 1956; J. Lecerc, in Stud. Isl. i and ii, 1953-54; H. Mas’ûd, Djabrân hâvy* *wa-mu’âyy*, Sa’d Paolo 1952; M. Nu’ayma, Djabrân Khâllî Djabrân, better than the last. This man from Lebanon, New York 1954. (A. G. Kâram)

Djabrî Dajallâ (see sa’d allâh Djabrî).

Djabrîds (see supplement).

Djabriyya, or Mudîbîra, the name given by opponents to those whom they alleged to hold the doctrine of diabr, "compulsion", viz. that man does not really act but only God. It was also used by later historians to designate a group of sects. The Mu’tazila applied it, usually in the form Mudîbîra, to Traditions, Ash’arite theologians and others who denied their doctrine of kadr or "free will" (al-khayyat, later heresiographers to describe a group of sects.

Shark al-Fikh al-Akbar or kadr and others who denied their doctrine of the Mu’tazila applied it, usually in the form diabr, "acquisition", was a commonplace of the Ash’arite theologians, to Traditionists, Ash’arites, till, according to Urban (London 1948), 96 f., 67, 69, 135 f.; Ibn Kutayba, K. ta’wil mukhtalat al-hadîth, 96; Ibn al-Murtadâ, Djabrân al-mu’âyy (ed. Arnold), 45, 71 — of Fâkhr al-Dîn al-Râzî; al-Malati, 144; Ash’arite theologians, al-Malati, 430; al-Malati, 144; Brockelmann, S. S. I, 215 f.). The Mârîrîd author of Shahr al-Fikh al-Akbar (Haydarâbad 1321 A.H.) says (p. 12) that the Ash’arîyya hold the doctrine of diabr, though elsewhere he seems to use Mûdibîra of the Djajhiyya (i.e., etc.). The Ash’arîyya considered their doctrine of kadr, "acquisition", was a mean between diabr and kadr, and identified diabr with the doctrine of the Djajhiyya. Al-Shahrastani classifies the latter as "pure diabrîyya", and al-Nâdirîj and Djarr as "moderate Djajhiyya". (K. al-milal, London, 59 f.). With the increasing complexity of later discussions of human actions the conceptions of diabr and even of kadr were largely neglected.

Djad’b d. Dirham (see ibn dirham).

Djad’a (‘Amîr), a South Arabian tribe. In early Islamic times Djad’a had lands in the southernmost part of the Yemen highlands, the Sarw Himyar and Dja’dâ were very prominent, and the Sarw Himyar represent their southernmost point, doubtless mingled here with local South Arabian peoples.

Hamdân gives copious topographical details of the Djad’a territory in the upper Abyan basin, enumerating their wâdis, districts, castles, villages and wells; some of these names are still in use. The districts (kuwwar) are attributed to the clans of Djad’a, of whom he mentions al-Uq’ûd, A’hâd, Mu‘âjdîr, al-Ubrûd and al-Sâkâsîka. The language of the Sarw Himyar and Djad’a is described as incorrect and inferior to that of the regions nearer the coast of Labûdî, Abyan and Da’thîna: their Arabic has South Arabian elements (lakhîrin) in it and they drawl and elide their words (yajurrûn fir kalâmîmik wa-yakbîsûn). They use the South Arabian definite article an- and drop the prosthetic af, saying sima’ for isma’.

The present-day territory of the ‘Amîr tribe, a sub-section of the Sarw Himyar, is broadly that of the classical Djad’a, comprising the plateau 100 miles N. of Abyan with its centre at al-Dâ’ilî (Dhaîla), capital of the Amirate of ‘Amîr [q.v.]. There are also Dja’dî tribesmen in the western Darâmatw at the Wâdî ‘Amrd region 100 miles N.-W. of Mukallâ and 70 miles E. of Shabwâ, who practise agriculture by irrigation. The name of their ancient centre there, Hisn Ka’dhî, indicates northern connexions, and these Dja’dî trace their origin to the Banû Hîlîl and a migration from further north.

Dja’d’a b. Kâb (see ‘Amîr b. sa’â’â’).
Register zu den genealogischen Tabellen, 175 ff., attributes the following facts to the Djadhima b. 'Adi b. Du'il b. Bahir b. 'Abd Manât, etc. (Table N), without apparent justification. There was an ancient grudge between the tribe of the Djadhima and that of the Kûraysh, although there was kindred between them: before Islam, the Kûnâna had attacked a caravan coming from the Yemen and had killed an uncle and a brother of Khâlid b. al-Walid, and the father of 'Abd al-Rahmân b. 'Awf; the latter had taken his revenge by slaying the chief of the aggressors, Khâlid b. Hishâm; the situation had been, however, eased when the Djadhima, while denying their complicity, had paid the blood-wit.

It seems probable that the Djadhima had already accepted Islam before the conquest of Mecca by the Prophet; nevertheless the latter after the victory sent among them an expedition of 350 men commanded by Khâlid b. al-Walid, to assure himself of their neutrality if not their support (8/629). The troops comprised, besides some Muhâjirun and Anṣâr, contingents of the Banû Sulaym b. Manşûr and of the Banû Mûldîlî b. Murra, who themselves entertained some grudge towards the Kûnâna, and moreover towards the Djadhima on account of the defeat which had been inflicted on them on the yawm of al-Burza. Although sent for a pacific purpose, Khâlid took advantage of the occasion to revenge himself, which he did in a way which aroused lively indignation at Mecca. The Prophet, to calm the agitation, rebuked Khâlid publicly. Khâlid excused himself to 'Abd al-Rahmân, who had reproached him for having killed Muslims, saying that he was unaware of their status as Believers. Khâlid thought it better to absent himself for some time, and on his return took again part in the occasion to revenge himself. The dispute with the Djadhima was adjusted by 'Ali, who paid the blood-wit for the 30 killed, and conscientiously compensated for the value of the booty.

(L. Veccia Vaglieri)

DIJADID (Arabic 'new', 'modern'; Turkish pronunciation dêjjîdî), followers of the usûl-i dêjjîdî (the 'new methods', among the Muslims of Russia). The movement arose in about 1850 among the Kazan qâsî Tatars, who provided it with its first leaders; from there it spread to other Turkish peoples in Russia. The Djdïdïs were against 'religious and cultural retrogression'; they pressed, above all, for modern teaching methods in the schools, for the cultural unification of all Turkish peoples living under Russian domination, but also for their participation in the cultural and social development of the Russia of that time. Consequently, it seemed necessary to the Djdïdïs that the south-west part of the Russian Turcs, especially the Crimean Tatar Isâmîl Gaspîralli (Russ. Gasprinskîy; 1853-1914), who published, from 1885, his journal Terjûmân 'The Interpreter', in such a way that it remained virtually free from police prosecution, in spite of the influence of pan-Islamic and pan-Turkish ideas were quite evident. Gaspîralli himself put forward the idea of the creation of a language which would be understandable to all the Turks in Russia, the basis of which was, in fact, Ottoman (cf. Gustav Burbie, Die Sprache Isâmîl Bey Gaspîrallys, diss. Hamburg 1950).

The Kadîms set up their own traditional ideas in opposition to the Djdïdïs. Since this party, composed mainly of Manadhîm and modernists, provided its support for the status quo—a support which was in no way a danger to Russia—and represented a cultural self-sufficiency which was in no way aligned to that of 'modernist' Turkey, it repeatedly received the support of the Russian state.

After the revolution of 1905 the efforts of the Djdïdïs were able to expand more freely, and now reached more strongly into Central Asia. From this direction came efforts, in the years 1917-22, to establish independent Islamic states on the territory of the former Târsît Empire (for details see the articles on the Turkish peoples of the USSR). Although the Djdïdïs had, since 1905, worked closely with the representatives of the Russian leftist parties, from whom they hoped for some recognition of their efforts, the Soviet Government turned sharply, from the very beginning, against the Djdïdïs and the corresponding movement in Central Asia, the Basmaëîs [q.v.], whom they regarded as 'foreign Imperialist agents'. Nevertheless, the Djdïdïs remained faithful to their ideas as long as any distinctive intellectual movements survived among the Russian Turks, until about 1930. The ideologies of the older Russo-Turkish emigres remain, even today, influenced by the ideas of the Djdïdïs, whereas the younger generation have come further and further from any thoughts of returning to their homeland.

(B. Spuler)

AL-DIJADIDA, Arabic and the present-day official name of the ancient Mazagon (former Arabic name: al-Buraydja "the little fortress"), a maritime town situated on the Atlantic Ocean c km. south-west of the present Moroccan town of Rabî; its population was 40,318 in 1954, of whom 1704 were French, 120 foreigners, and 3,328 Jews.

Some authors have considered that Mazagon arose on the site of Ptolomy's Ρουσπαλία την Πλην, Pliny's Portus Rutibus. The texts do not, indeed, say that there had ever been a town there, but merely an anchorage frequented by ships, and this
seems to have been the case throughout the middle ages. The name of Mazagan seems to have appeared for the first time in al-Bakri (5th/12th century). This geographer, enumerating the Atlantic Coast ports of Morocco, mentions one Mərəd (de Slane's reading) which must certainly be restored as Mazighan, the form attested by al-Idrīsī (6th/12th century). The same place-name recurs in a ms. collection of edifying anecdotes concerning the great saint of Azammūr, Mawlay Aḥdūṣu'yab, who also lived in the 6th/12th century; here Mazighan appears as a fishermen's hamlet situated between the town of Azammūr and the ribāṭ of Tit [g.1.]; the propinquity of these two relatively important centres impeded its development. The anchorage is marked on a whole series of planispheres and portolani of the 14th and 15th centuries (publ. Ch. de la Roncière, La découverte de l'Afrique au Moyen Âge, 1925), which give the forms Mezagān (1339 and 1373), Measγhan (1367), and Mazagam, forms intermediate between Mızāğhan and the Mażągāo of the Portuguese. These latter had, since the end of the 9th/i5th century, come to load corn from the Dukkāla in the port of Mazagan for the provisioning of their capital. In 1502 a squadron commanded by a Portuguese gentleman, Jorge de Mello, caught by a storm in the straits of Gibraltar, is said to have been driven as far as Mazagan and to have landed there. The Portuguese accommodated themselves in an abandoned tower for protection against possible attack by the inhabitants. Shortly thereafter Jorge de Mello returned to Portugal and obtained royal permission to found a fortress at Mazagan. Although the account of these facts is only recorded by 18th century authors, it must be based on the actual events, for letters-patent of the king Dom Manuel, dated 21 May 1505, grant to Jorge de Mello the captaincy of the castle which he was authorized to build at his own expense at Mazagan. However, he did not avail himself of this privilege, because when, on 27 August 1513, the Portuguese army who were on their way to the conquest of Azammūr under the command of the Duke of Braganza disembarked at Mazagan there was no town and no fortress except for the old ruined tower (al-Buraydja). The difficulties of access to the port of Azammūr induced the Portuguese to establish a more accessible base at Mazagan.

During the summer of 1514 there was built, under the direction of the architects Diego and Francisco de Arruda, a square castle flanked with four angle towers. One of these bastions was formed out of the old tower al-Buraydja, whose name, for the present inhabitants, continues to refer to the Portuguese town. Most of the original castle still stands; most worthy of notice is a magnificent room the vaulting of which is supported by twenty-five columns and pillars, probably a huge granary built to receive the quit-rent, paid in grain, of the tribes subject to Portuguese protection rather than an armoury; this was later (1541) used as a reservoir. Since more than ten years previously the predication of Portuguese strongholds on the coast, in the face of the religious and xenophobe movement roused by the accession and the conquests of the Sađī sultans, was so bad that the king of Portugal thought of abandoning many of his fortresses. The capture of that of Santa Cruz in Cape Ghir [see AGADIR-IGHIR] by the Sharīf (12 March 1541) was a warning. John III resigned himself to evacuating Safi and Azammūr and concentrating in Mazagan, a more favourable and more easily defendable position, for all that he wished to leave some Portuguese forces in the south of Morocco.

It was at this time that the walls of Mazagan received their present layout.

In preserving Mazagan the Portuguese wished to retain a base on the coast to guarantee the protection of the Indies route. They hoped also that the fortress might serve them as a springboard for the conquest of Morocco when conditions became favourable, but this was never to be realized. In fact, for over two hundred years while it remained in Portuguese possession Mazagan only furnished them with a pretext for obtaining papal bulls of Crusade, which furnished appropriate revenue to the treasury. But the tribes kept the town so tightly blockaded that the inhabitants were unable to venture outside the walls without military protection. The Muslims of the neighbourhood had founded, a mile or so from the town, two large villages, Faħṣ al-Zammūriyyin and Faħṣ Awlād Dhuwayyib, the ruins of which still remain, where they ensconced themselves in order to maintain the blockade.

Badly provisioned by sea, often victims to famine and epidemics, the garrison and the population managed to live in fair security within the protection of their powerful walls, against which the tribesmen could do nothing, although on several occasions the stronghold sustained vigorous attack. In April 1562 Muhammad, son of the Sađī sultan 'Abd Allāh al-Ghālib bi 'Ilāh, laid siege to Mazagan, but the besiegers became discouraged after two attacks and were repulsed. During the disorders which accompanied the decline of the Sađī dynasty the governors of Mazagan seem to have succeeded in opening the blockade and in re-establishing relations with the tribes. The muḥāfīz Sīdī Muhammad al-'Ayyāshī, to remedy this offence, made an attack on the Portuguese in 1639 and inflicted some losses on them. Mawlāy Ismā'īl, occupied with the siege of Ceuta, never seriously attempted to make himself master of Mazagan. The honour of reconquering it fell to his grandson Sīdī Muhammad b. 'Abd Allāh. The sultan came in person to besiege it at the end of January 1769. The fortress resisted victoriously for five weeks, but the order to evacuate came from Lisbon, and the governor capitulated on honourable terms, and troops and civilians returned to Portugal with their arms and baggage. In abandoning the fortress, on 10 March 1769, the Portuguese left mines there, the explosion of which caused great damage; the sultan took possession of a devastated town, which he partly repopulated, but which remained in such a sorry state that it was called al-Mahdumā, "the ruin", until the time when, under the reign of Sīdī Muhammad b. Highām, in 1240/1824-5, it was restored by Sīdī Muhammad b. al-Tawīyib, kāfīd of the Dukkāla and of the Tāmasna, who gave it the name of al-Djadida.

**DJADIS** [See TaSm]

**DJADU** (Djadou) in Arabic, or Braou in Teda, designates at once the principal palm-grove and the bulk of a massif bounded by the 12° and 20° N. parallels and the 12° and 13° E. meridians. This massif is a short branch of the plateau of primary sandstones which, from Tassili of the Ajjers to the massif of Afāfli, joins the Ahaggar to the Tibesti. Changes of level are not marked: one passes from 5—800 m. on the plateau to 450 m. at the foot of its western declivity; the impression of relief is given less by the height than by the appearance of the sandstones, looking almost like ruins, cut up, in bands running from south to north, by the beds of the “enneris”.

These intermittent streams flow towards a zone at the southern point of the massif where they expand; fed in part by the vast “impluvium” formed by the sandstones, their subterranean course is intermittent streams flow towards a zone at the southern point of the massif where they expand; in part by the vast “impluvium” formed by the sandstones, their subterranean course is marked by the line of wells. The fall of the plateau to the west is marked in its northern part by the “guéeltas” (Er Roui), and in the south-west by a string of oases.

The richness in underground reservoirs allows life to flourish in this region where the desert characteristics of the climate, violent temperature contrasts and extreme dryness, are very noticeable; there is a cold season from December to February (night temperature -5° or -4° C. [5 to 7 degrees of frost F.], day temperature 25° to 30° C. [77°-86° F.]), when violent sandstorms from the north-east obscure the horizon; from March the temperature rapidly to day maxima of 45° to 48° C. (113°-118° F.) with night temperatures of 16° to 20° C. (61°-68° F.). The rains fall at this time, very irregularly, the total annual rainfall varying between 2 and 50 mm., sometimes in a single shower. The intense evaporation explains the rhythm of the variations in the water-level in the wells and numerous springs at the southern end of the massif: from March to November the springs weaken and the ponds and some of the wells dry up; then, at the beginning of December, the level again rises, the ponds expand to an area of about one thousand in the oases. Palms need no irrigation, and tomatoes, spices, millet, and tobacco grow in the gardens. There are numerous salt-mines.

In the north and north-east of the massif the region of the “guéeltas” and that of the wells are the hàdd pasture-lands.

Djadou is also favoured by its proximity to a crossing of caravan routes: the old commerce route from Murzuk to Chad, joined at this point by the route which runs to Ghat and Ghadames in Ezzan, bifurcates, like the line of wells towards the south, on the one hand towards Fashi, running to Air or the Nigerien steppes, on the other towards Kawar and Chad; there were the traditional routes of the Sudan-Mediterranean traffic studied by Nachtilag, doubled across the Tenere by the local traffic carried by the aaslay [q.v.].

The wealth in water and the natural communication have been a twofold source of profit; but they have also been the cause of troubles, as the state of the oases testifies: the mud villages ranged one above another on the flanks of the mounds of derelict palm plantations, and would return in August at harvest time, when the population of the oases would rise to some thousand persons.

The French administration attempted to revive these deserted oases, and from 1943 an aaslay again worked the Djado road, while the palm orchards were in part restored. The Djado oasis produced for it alone some 60 tons of dates from 7000 trees; this production, with that of the other oases in the massif, Drigana and Djaba, and that of Kawar, represented 1/5 of the production of the former French West Africa, Mauretania producing the remaining 4/5.

**Djado** (Djadou), the old capital of the eastern region of the Djabal Nafusa in Tripolitania, nowadays a large village in the Fassato district situated on three hills of unequal height. The population of about 2,000—towards the end of the 19th century there were about 500 houses—mostly consists of Berbers of the Ibádi tribe of Nafusa. The ruins of the old town are nothing but a pile of broken stones and caves with a mosque in the centre. Near the mosque was formerly the business quarter and the market (sâk), near which one can still see today the site of the Jewish quarter, synagogue, and cemetery.

According to J. Despois, to whom we owe this description, the former large settlement of “Old Djado” has been replaced by five modern villages, Djado (Djadou), El Gsir (al-Gsir), Oucheba (Uzhebati), Loudjelin (Yuudjlin), and Temougouet (Temoujet). This information is not quite accurate. It appears, in fact, that at least two of these villages, Yuudjlin and Temoujet, have nothing to do with the old town of Drajd, and that they already existed alongside this town long ago. According to J. Despois, the present Djado would be about four centuries younger than the old town, which was exactly when it was abandoned. The last mention of Drajd found in the Ibadi chronicles is connected with a celebrated Ibadi skayhk who lived in the 6th/7th century (al-Shamākkhi, Kitāb al-Siyar, 541).

Little is known of the first days of Djadou. Nevertheless it appears that this town was founded long
before the Muslim conquest of North Africa and that it owed its creation and prosperity to the fact that it was situated on the ancient highway joining the city of Tripoli (and probably Sabratha and Leptis Magna) with the Fezzān and the central Sudan (on this highway, see A. Berthelot, *L’Afrique saharienne et soudanaise. Ce qu’en ont connu les anciens*, Paris 1927, 274-6). It seems to us, in fact, that it is with the name Djadū that the tribal name Gadaiae mentioned by Corippus (549 A.D.) must be connected. It must, however, be said that the first certain mentions of this town date from much later, the end of the 2nd/8th and the beginning of the 3rd/9th centuries. At this time we hear already of a caravan of traders composed of men from Djadū in an anecdote concerning the ṣayyāḥ Abū ‘Uṯmān al-Mazāṭā and related by the Ibadī biographer al-Dardjī (q.v.). For some time, in the second half of the 3rd/9th and about the beginning of the 4th/10th century, Djadū, according to the Ibadī historians, was the political and administrative centre of the entire Djabal Nafūs. It was the residence of Abū Mansūr Ilyās, the governor of the country appointed by the Rustamid imām of Tāhār, and later of Abū Yahiyya Zakariyyā al-Iraqī, who ruled the Djabal Nafūs as an independent imām. Djadū was at this time also a considerable commercial city. Ibn Hawkal (363/973) says that it possessed a mosque and a minbar. According to Abū ‘Ubayd al-Bakrī (461/1068), who got his information about the Djabal Nafūs from the geographical work of Muhammad b. Yūsuf al-Warrāḵ (d. 363/973), Djadū was a large city with bazaars and a considerable Jewish population. According to this geographer the caravans going from Tripoli to the town of Zawila in the Fezzān (today Zuulla N.E. of Murzuk), a sizeable centre for the export of slaves to Iffīkiyya and the neighbouring lands in the Middle Ages, used to pass through Djadū. A march of 40 days separated Zawila from the Sudanese country of Kānem, with which the Djabal Nafūs, and in particular the town of Djadū, had close, but as yet very little studied, relations.

In this connexion it is relevant that al-Djanawānī (a.d. 927/1522) on behalf of the imām of Tāhār in the first half of the 3rd/9th century, knew, besides Berber and Arabic, the language of Kānem (lughā kānāmiyya). Another fact attests the existence of close relations between Djadū and the Sudan: the name of the birthplace of al-Djanawānī, Djināwūn (situated below Djadū), which is known from the middle of the 2nd/8th century onwards, is the Arabicized form of a name still used today, which is the masculine plural of the Berber word aqnae “dumb > negro, black man” (cf. G. S. Collin, in *GLECS*, vii, 94-5). It is therefore probable that the village of Djināwūn (Ignawn) “the Negroes” owes its name to an ethnic group of Sudanese origin, probably natives of Kānem, who had established themselves there some time previously to the 2nd/8th century (T. Lewicki, *Études ibadites nord-africaines*, i, Warsaw 1955, 94-6). So one may speak of Djadū as having been from that period at least a stage on the ancient track Tripoli-Zawila-Kānem.

The inhabitants of other places in the Djabal Nafūs used this town as market at Djadū, which was above all an economic centre for the whole of the eastern region of the country. It even had, about the 4th/10th century, a special magistrate in charge of the market of the town. In spite of its mixed population, Djadū was also an Ibadī religious centre of great importance. According to al-Shamākhlī it was a meeting-place for the Ibadī scholars of the country. From a very distant period, the second half of the 2nd/8th century at least, Djadū was also a political centre, the chief town of the eastern region of the Djabal Nafūs, which is called in the old Ibadī chronicles “the region of Djadū”, “Djadū and its villages”, or “Djadū and its neighbourhood”. This region comprised the present districts of Fassātā, al-Rūqābān, and al-Zintān. We know the names of some fifteen villages and strongholds (*būdār*) which existed in this neighbourhood in the early Middle Ages, as well as the names of several Ibadī Berber tribes who lived there side by side with the Nafūsī proper. Of these tribes the Banū Zamīr and the Banū Tādārīr deservet special mention. We do not know whether the region of Djadū enjoyed autonomy under the Rustamīds and their governors in the Djabal Nafūs. But after the downfall of the imām of Tāhār, from the second half of the 4th/10th century onwards, at the time of the greatest economic prosperity of Djadū, there were ḫākimīn (local Ibadī chiefs) of this town (or perhaps of the whole region), known as al-Djanawānī side by side with other ḫākimīn of the Djabal Nafūs. The first ḫākim of the people of Djadū whose name we know was Abū Muhammad al-Darīfī, a contemporary of the ḫākim of Nafūs Abū Zakariyyā al-Tīndīmirī. He lived in the famous Dār Banī ‘Abd Allāh which was situated on the siḥ of Djadū. This house, which afterwards became the meeting-place of the ṣayyāḥs of the town, was considered later to be one of the holy places of the Djabal Nafūs. After the death of Abū Muhammad the office of ḫākim of Djadū passed to his son Abū Yahiyya Yūsuf, who lived about 390/1000. Along with the ḫākimīn of Djadū there were also in the region of this town from the 4th/10th to the 5th/11th centuries ḫākimīn special to the Banū Zamīr.

**DJADWAL** — **DJAF**

**DJADWAL**, pl. **diaddwil**, primarily "brook, water-course", means further "table, plan". Graefe suggested that in this meaning it might derive from *schédua*; but perhaps one should rather think of *di-l* "to twist!", cf. S. Fraenkel, *Die aramäischen Fremdwörter im Arabischen*, 224, and the similar development of the meaning of adā, as stated by E. Honigmann, *Die sieben Klimata*, 1929, 117 ff. In this second sense the word becomes a special term in sorcery, synonymous with ḥāllim; here it means quadrangular or other geometrical figures, into which names and signs possessing magical powers are inserted. These are usually certain mysterious characters, Arabic letters and numerals, magic words, the Names of God, the angels and demons, as well as of the planets, the days of the week, and the elements, and lastly pieces from the Kurān, such as the *Fālīka* [q.v.], the *Surā Yāsin*, the "throne-verse", the *fawdtify*, etc. The application of these figures is manifold: frequently the paper on which they have been drawn is burnt in order to curse someone with its smoke; or the writing may be washed off in water and drunk (cf. Num., v, 23 ff.); along with the da’wa (conjunction) and often also the *basam* (oath) the diadwal forms the contents of an amulet (iris. [q.v.]). The very popular *dawrat al-shams*, for example, is prepared as follows: it is quadrangular, divided into 49 sections by six lines drawn lengthwise and six drawn across its breadth, and contains Solomon's seal and other peculiar figures: seven consonants, Names of God, names of spirits, the names of the seven kings of the *diins*, the names of the days of the week, and the names of the planets. The underlying notion is that secret relationships exist between these various components, and the *diadwal* is therefore made to obtain certain certain results from the correlations of the elements composing it. The highly developed system of mystic letters, which is based on the numerical values of the Arabic letters, is very frequently used for the *diadwal*. A special class is formed by the squares called *waft* [q.v.] in the fields of which certain figures are so arranged that the addition of horizontal, vertical and diagonal lines gives in every case the same total (e.g., 15 or 34). The celebrated name buḍā is nothing but an artificial talisman word formed from the elements of the simple threefold magic square, i.e., from the letters in the four corners in the alphabetical order of the abjad,

</tbody>
</table>

The name buḍā evidently passed at an early date into South Arabic, became used there as a feminine proper name and as a feminine epithet, "fat!", and was confused with the root *bud* (LA, III, s.v. *bud*). It has no other meaning in Arabic. In magical books there are even a few cases of the word being personified (e.g., Ya budā, in Ḥāfīdī Ṣa’dūn, *Al-fāth al-ḥafīdī*, 21; in Ḥāfīdī Ṣa’dūn, p. 271, in *Al-fāth al-ḥafīdī*). This has become a Ḥajjīn whose services can be secured by writing his name either in letters or in numbers (*Ja*, sér. 4, xii, 521 ff.; Spire, *Vocabulary of colloquial Egyptian*, 35; Doutté, *Magie et religion*, 296, along with *Kayyûm* as though a name of Allāh; Klunzinger, *Upper Egypt*, 387). The uses of this word are most varied, to invoke both good and bad fortune: thus, in Doutté, *op. cit.*, against menorrhagia (234), against stomach pains (229), to render oneself invisible (273), against temporary impotence (295); Lane's *Egyptian megahib* also used it with his ink mirror, and so in several treatises on magic. It is also engraved upon jewels and metal plates or rings which are permanently carried as talismans, and it is inscribed at the beginning of books (like habakādā) as a safeguard, e.g., in *Fāth al-djāl*, Tunis 1290. By far its commonest use is to ensure the arrival of letters and packages. Besides the references above, see also Reinaud, *Monuments musulmans*, ii, 243 ff., 251 ff., 256 ff. for the meanings of *diadwal* cf. the notes s.v. in Dozy's *Supplement and Redhouse's Turkish and English lexicon*. The K. al-budā of Dājībār b. Ḥayyān mentioned in the *Fihrīs* is in fact a *kitāb aldād华尔*, cf. P. Kraus, *Törb ibn Ḥayyān*, i, 1943, p. 26, no. 47, and J. W. Fück, in *Ambis*, iv (1951), 128, no. 36.

(E. Graefe-D. B. Macdonald-M. Plissner)

**DJAF**. A large and famous Kūrdis tribe of southern (Yrāk) Kurdistan, and of the Sananadāj (Senna) district of Ardalan province of Western Persia.

The tribe, cattle-owning and seasonally nomadic, was centred in the Djāwarnd wrought at the area of the latter province in the early 11th/17th century, and is first mentioned in connexion with the operations and Turko-Persian treaty of Sultan Murād IV. About 1112/1700, following bad relations with the Ardalān authorities, the main body of the tribe (estimated at 10,000 tents or families) moved into Turkish territory, leaving substantial sections in their own original homes. The Djāf who settled in the Turkish and border districts occupied, in summer, the highlands around Pāndjūn in spring and autumn, the plain of Shahriūr, with headquarters at Ḥalabjā: and in winter, lands dependent upon Kifr, on the right bank of the Sirwān (Diyālā).

Other Djāf elements at various periods became incorporated with the Ġūrān, others with the Sinnābāyān, others the Bāḏgalān Dājībā, others the Shahrafāyānī, others the Bāḏgalān Dājībā (all more or less outside the reputed frontier, which was not fixed until 1265/1847), and separated from their original tribe.

The main body of the Djāf, although grouped in many distinct sections, sometimes of formidable size and self-consciousness, showed far general cohesion under capable leaders. For a century and a half (1112-1267/1700-1850) they interminently (but
never much more than nominally) formed part of the dependencies of the Bābān [q.v.] empire. Their nomadic habit and indiscipline involved them in endless quarrels with neighbours and settled folk, and their fashion of living was such that, except in the unusual periods of peace in the Turkish districts, all their energies were devoted to incessant fighting. In the years following their incorporation into the Turkish administrative system, about 1276/1859, and in spite of increasing contacts of their leaders with Turkish officialdom and forces, they remained effectively ungoverned until the first World War, dominated the area in which they camped and grazed (as well as the town of Halabjadi, which was a Djasf creation), and paid infrequent dues to the Treasury in the form of lump sums, as reviewed by them in the early years of the 18th century. Their more unmanageable reason of their formidable numbers, and the rivalries between claimants for power among their own Beg-zada, who frequently courted, or were champions by, both Governments in turn. Even after their nominal incorporation in the Turkish administrative system, about 1276/1859, and in spite of increasing contacts of their leaders with Turkish officialdom and forces, they remained effectively ungoverned until the first World War, dominated the area in which they camped and grazed (as well as the town of Halabjadi, which was a Djasf creation), and paid infrequent dues to the Treasury in the form of lump sums, as reviewed by them in the early years of the 18th century.

(S. H. Longrico)

Mirs Djasfar or Mir Muhammad Djasfar Khan (Siyar al-mutakhhirin, vol. ii in both the text and rubrics, and not Djasfar Ali Khan), son of Sayyid Ahmad al-Nadjarf, of obscure origin, rose to be the Nawwab of Bengal during the days of the East India Company. A penniless adventurer, like his patron Mirza Muhammad Ali entitled Allwirdi Khan Mahbub Djang (see the article al-werdg khan), he married a step-sister, Shah Khanim, of Allwirdi, and served his master and brother-in-law as a commandant, before the latter ascended the masnad of Bengal in 1553/1740 after defeating and killing Sarraz Khan, son and successor of Shudja Khan, to the masnad of Bengal, c. 1740.

His brother-in-law, the Bakhshi or paymaster (bakhshi) of the army, to which post he had been appointed by Siradi al-Dawla, who had by his various indiscretions alienated not only the Turkish officialdom and forces, they remained effectively ungoverned until the first World War, dominated the area in which they camped and grazed (as well as the town of Halabjadi, which was a Djasf creation), and paid infrequent dues to the Treasury in the form of lump sums, as reviewed by them in the early years of the 18th century. Their more unmanageable reason of their formidable numbers, and the rivalries between claimants for power among their own Beg-zada, who frequently courted, or were champions by, both Governments in turn. Even after their nominal incorporation in the Turkish administrative system, about 1276/1859, and in spite of increasing contacts of their leaders with Turkish officialdom and forces, they remained effectively ungoverned until the first World War, dominated the area in which they camped and grazed (as well as the town of Halabjadi, which was a Djasf creation), and paid infrequent dues to the Treasury in the form of lump sums, as reviewed by them in the early years of the 18th century.

Mirs Djasfar or Mir Muhammad Djasfar Khan (Siyar al-mutakhhirin, vol. ii in both the text and rubrics, and not Djasfar Ali Khan), son of Sayyid Ahmad al-Nadjarf, of obscure origin, rose to be the Nawwab of Bengal during the days of the East India Company. A penniless adventurer, like his patron Mirza Muhammad Ali entitled Allwirdi Khan Mahbub Djang (see the article al-werdg khan), he married a step-sister, Shah Khanim, of Allwirdi, and served his master and brother-in-law as a commandant, before the latter ascended the masnad of Bengal in 1553/1740 after defeating and killing Sarraz Khan, son and successor of Shudja Khan, to the masnad of Bengal, c. 1740. After the death of Siradi al-Dawla's incompetence and unpopularity, his ultimate defeat and flight into Awadh again brought Mir Djasfar to the masnad, which he occupied till his death in 1178/1765. Taking account of the standards of the time, the prevailing atmosphere of political chicanery and doubtful entitlement to high offices of State, of the way his contemporary Allwirdi Khan had obtained the nizamat of Bengal, of Siradji al-Dawla's incompetence and unpopularity, it is rather difficult to justify the charge of national treachery commonly levelled against Mir Djasfar, much less to dub him "Lord Clive's jackass". His last years were not very happy or comfortable as it is rather difficult to justify the charge of national treachery commonly levelled against Mir Djasfar, much less to dub him "Lord Clive's jackass". His last years were not very happy or comfortable as his doubtful attitude during the attempted Dutch invasion of Bengal in 1713/1759 and partly because of his having been in arrears with his payments to the Company. The declaration of war against the Company by Mir Kasim in 1177/1763 and his ultimate defeat and flight into Awadh again brought Mir Djasfar to the masnad, which he occupied till his death in 1178/1765. DJAFA'AR b. ABI TĀLĪB, cousin of the Prophet and brother of 'Ali, whose elder he was by ten years. When his father was reduced to poverty, his uncle al-'Abbās took Dja'far into his house to solace him, while Muhammad took care of 'Ali. Soon being converted to Islam (Dja'far occupies the second list of the first Muslims), he was among those who emigrated to Abyssinia (his name heads the second list given by Ibn Ḥišām, 209); his wife Asmāʾ b. Umayyā followed him. When the Kuraysh sent Abū Rabiʿa Ibn al-Mughira al-Makhzūmī and 'Amr b. al-ʿĀṣ to the Negus to demand the detention of the emigrés, Dja'far, by reciting Kurānic verses on the Virgin (from Sūra XIX) before the sovereign, and at a subsequent audience verses on Jesus (from Sūra IV), obtained his protection for himself and his companions; it is even said that he converted him to Islam. During this period of exile the Prophet expressly commended Dja'far to the Negus; at the time of the famous Pact of Fraternity between Muhādžirūn and Anṣār, he allotted Muḥāsaid b. Dja'bal to him as adoptive brother, and, unless the tradition is in error, he considered him as present at the battle of Badr, since his name figures among the Badrites.

On his return from Abyssinia, Dja'far met the Prophet on the day of the capture of Khaybar (7/628). Muḥammad, embracing him with the greatest fervour, cried "I know not what gives me the greater pleasure, my conquest or the return of Dja'far!"

The name of Dja'far is found in the sources in connexion with an episode concerning 'Āmmāra, daughter of Ḥamzah the uncle of the Prophet. The girl had stayed at Mecca; to withdraw her from the pagans while respecting the pact of Ḥudaybiya, 'Ali proposed to take her as wife to Medina. Zayd b. Ḥārīḥa protested that he was her waṣī in his capacity as Ḥamzah's brother and heir, and that Dja'far was also on account of his kinship with her (he was Ḥamzah's nephew and brother-in-law of 'Āmmāra's mother). Muhammad agreed that Dja'far should be the girl's guardian, but restrained him from marrying her because of his double bond of relationship. Dja'far welcomed the decision of the Prophet, skipping (kaddāla) around Muḥammad in the way in which the Abyssinians did around the Negus. It was on this occasion that the Prophet is reputed to have said: "This art like me in thy features and thine manners (aqshabā khalīti wa khlusīlī)".

In the year 8/629, when the Prophet decided to send an expedition beyond the Byzantine frontier, he appointed Zayd b. Ḥārīḥa as commander-in-chief, and, in case the latter should be killed, Dja'far, and then, as Dja'far's eventual replacement, 'Abd Allāh b. Rāwāḥa. All three fell in the battle of Mu'ta (Dumādā i 8/629) and were buried in the same tomb which had no distinctive markings. A tomb is in existence at Muṭa on which Dja'far's epitaph in Kūfic characters is partly preserved, which shows the antiquity of the tradition concerning him. Dja'far fought at Mu'ta (he died bravely at this time, about forty years old); he is said to have hamstrung his horse before the battle so that he should have no means of flight, and that he was the first in Islam so to do; having had his hands cut off one after the other, he carried the standard against his chest with his stumps; more than sixty wounds were counted on his body. The Prophet, through his supernatural powers of perception, witnessed the battle from his minbar. The following day he went to Dja'far's house and revealed to his widow, by his tears, the sorrow which had fallen upon her.

Dja'far was the one of Muḥammad's kinsmen who most closely resembled him. He was summoned Abu 'l-Maṣākin (or Abu 'l-Maṣākin) for his charity towards the poor. After his death he was called Dja'far dhū 'l-djanahayn or Dja'far a-Tayyār because of his tw emigrations, to Abyssinia and to Medina, which seems strange since, on account of his exile, he could not have had the opportunity of following Muḥammad on his hijārā.

Of the sons Dja'far had by his wife al-ʿĀmmās, 'Awn and Muḥammad fell at Karbala beside al-Ḥusayn; only 'Abd Allāh gave him any descendants.

Ibn Aḥī 'l-Ḥadīd tells us of the arguments of those who considered the merits of Dja'far to be superior to those of 'Ali: he had embraced Islam after puberty; he had died a martyr's death, whereas 'Abd Allāh had lived to an old age. Ibn Aḥī 'l-Ḥadīd concludes that Dja'far was superior to both of his sons. It is generally agreed that Dja'far was the more meritorious of the two sons of Muḥammad; it was he who had embraced Islam after puberty; he had died a martyr's death, whereas there was dispute as to whether 'Ali's had been a shahīd, etc. Abū Ḥāyān al-Tawhīdī has also treated of this subject in the 57th part of his K. al-Baṣīrī.

DJAFA'AR b. 'ALI b. ḤAMDĀN AL-ANDALUSI, a descendant of a Yemeni family which settled in Spain at an unknown date, eventually moving to the district of Mṣila, in the Maghrib, at the end of the 3rd/9th century at the latest. Like his father 'Ali, he was at first a loyal supporter of the Fāṭimid cause, as Governor of Mṣila; then, probably inspired by jealousy of the Zirids [q.v.] who were increasingly favoured by the Fāṭimid caliphs, he changed sides in 360/971 and swore obedience to the Umayyad
caliph of Spain. After a few years in favour, he incurred the displeasure of the all-powerful hādīb al-Mansūr b. Abī 'Amir [q.v.] who had him assassinated in 372/982.

**DJAFAAR B. AL-FADL** [see Ibn al-Furāt].

**DJAFAAR B. HABB.** Abu l-Fadl Dja'far b. Harb al-Mansūr b. Hamadhānī (d. 326/840), a Zaydi of the Baghdad branch, was first a disciple of Abu 'l-Huwhayl al-Allāf at Baṣra, and then of al-Murdār at Baghdad, whose asceticism he tried to imitate; this is what inspired him to give to the poor the large fortune which he inherited from his father.

In agreement with the Mu'tazila, he defended the doctrine that God knows through Himself from all eternity, that His knowledge is His very being, and that the object of His knowledge can exist from all eternity. He said that we have, in the divine wisdom, the guarantee that God does not commit injustice and does not lie; indeed that we cannot reasonably conceive the idea of a God who in fact commits an injustice. The infidel who is converted by his own effort, he said, has greater merit than one who is converted by divine grace. Again in agreement with the Mu'tazila, he admitted that the Word of God—the Kur'an—is created; it is therefore an accident and its place is the Prophet. He considered the soul to be essentially different from the body and united to it accidentally. He said that we act according to the last decision we have taken, provided it is not halted by another decision or by an obstacle.

Dja'far was a Zaydi: he said that the imāmate falls on the most worthy and not on the person who deserves it by right; and 'All b. Abī Talib is the most deserving in the community after the Prophet.

**DJAFAAR B. MANSÛR AL-YAMĀN** [see supplement].

**DJAFAAR B. MUBASHSHIR AL-Kāsabī (also al-Kasabī), a prominent Mu'tazillī theologian and ascetic of the school of Baghdad, d. 234/848-9.** He was a disciple of Abū Mūsā al-Murdār, and to some slight degree also influenced by al-Naqẓām [q.v.] of Baṣra. Little is known of his life except some anecdotes about his abnegation of the world, and the information that he introduced the Mu'tazili doctrine to 'Ain [q.v.] and held disputations with Bīghr b. Ghiyāth al-Mawsī [q.v.]. He is the author of numerous works on ḥikb and kalām (al-Khayyāt 81; *Fihrist* 37) and he had numerous disciples who, together with the disciples of his like-minded contemporary Dja'far b. Harb [q.v.], were called Dja'fariyya, a branch of the Mu'tazila of Baghdad, by later heresiographers. Nothing of his literary output seems to have survived, except one long quotation on various opinions concerning the Kurʾān, from which it appears that he had anticipated al-Ash'ārī's style of literary exposition (Maḥālī al-ʾĪslāmiyyīn, 389-98). His principle in *fiḥr* was according to al-Khayyāt (80), to follow the *zhāhir* meaning of Kurʾānīn, *sunna* and *iqdām*, and to avoid ra'yī and biyyāh, and among his writings are mentioned works directed against the askhāb al-ra'yīn wa-'l-biyyāh, and against the askhāb al-hadīthīn. His opinions in theology remain within the framework of the various doctrines held by the Mu'tazila; some of them seem directly to reflect his unworlly attitude, such as the denial of predestination as not as the "world of faith" but as the "world of unrighteousness" (*dār fiṣḥ*, in the technical meaning of the word; *Maḥālī al-ʾĪslāmiyyīn* 464); this seems to have been the basis for Ibn al-Rwendi's [q.v.] charge, repeated by later heresiographers but rejected as false by al-Khayyāt (81), that Dja'far regarded some Muslim sinners (jussāb) as worse than the Jews, Christians, Zindiks and Dahriyya. As regards the caliphate, Dja'far held, in common with Dja'far b. Harb and al-Iṣkāfī [q.v.], that 'All was the most meritorious of men after the Prophet, but that the appointment of his less meritorious predecessors before him was valid; he and the other Mu'tazila of Baghdad are therefore regarded as a branch of the Zaydīyya (al-Ḥāfiz 27).

Dja'far's brother, Ḥubayḥ b. Mubāshshīr (d. 258/872), was a faṣākī and a fakīh who is claimed both by Sunni and by Shi'a biographers (al-Khattīb al-Baghdādī, no. 436; Ibn Ḥāḍir al-Aṣkalānī, *Takhdhib* al-Tahhābī, ii, no. 363; al-Māmākani, *Tambkīh al-Mākhlūf*, Najāf 1349 ff., no. 2237); it is reported that Dja'far refused to talk to him because he was a Ḥaṣwī (al-Māṣfī, *Murtūj*, iv, 443).

**DJAFAAR BEG** (?-926/1520)—the "Zafir aga, eunuco" listed in the index to Marino Sanuto, *Diarii*, xxi, col. 825—was Sandjak Beg of Gallipoli, i.e., Kağan of the High Admirals of the Ottoman forces. He was appointed to this office, not (as Kāmās al-ʾālīm and Siğilli-i ʿOthmānī assert) in 927/1521, but in 923/1516. His tenure of the office coincided with the Ottoman conquest of Syria and Egypt (922-3/1515-6) and with the extensive naval preparations that Sultan Selim I (918-26/1512-20) urged forward during the last of his reign. Dja'far Beg was noted for his harsh character (cf. Hamner-
DJA'FAR AL-SADIK

Purgstall, Gör, iii, 7). His misdeeds brought about his execution at the beginning of the reign of Sultan Sulayman Rāhūn (926-7/1520-60).

V. J. PARRY

DJA'FAR CELEBI (864/1459-921/1515), Ottoman statesman and man of letters, was born at Amasya (for the date see E. Blochet, Cat. des ss. turcs, ii, 1-2), where his father Tādji Beg was adviser to Prince (later Sultan) Bayezid I (in 864/1459-60). After the battle of Caldiran he was given Shah Fethməsi; back in Istanbul, however, he was accused of having encouraged the discontent of the Janissaries and was dismissed at the insistence of the Janissaries (Djumada II 917/1515). He made no sharp break with the non-Shi'i majority—even a Shi'i follower of his could appear in Sunni idāms (and his heir, 'Abd Allāh, was accused by later Shi'iS of Sunni tendencies); but he seems to have been a serious Shi'i leader nonetheless. He taught also a wide circle who consulted him along with other masters; 'Abū Ḥanīfah, Mālik b. Anas, and Wāṣīl b. 'Aṭā', among other prominent figures, were known to have been influenced by him. It is in his time, at the earliest, that distinctive Shi'i positions in fiqh begin to appear; but it is uncertain how far the subsequent Twelver or Isma'ili (or Zaydi) systems may be ascribed to his teaching, though he is given a leading role in the two former.

At the time of Zayd's revolt (122/739), Dja'far served as symbol for those Shi'iS who refused to rise; and during the revolts after the death of al-Walid (126/744), when most Shi'iS were expecting that at last the 'Aid family would come to power, he remained neutral. His support and possibly his candidacy may have been solicited by the Kūfā Shi'iS at the time of 'Abbāsid victory, but he seems to have declined to recognize any other Shi'i candidacy than his own, while, if he did think of himself, he held to the principle of bu'a, that the true imām need not attempt to seize power unless the time be ripe, and can be content to teach. At the time of the Shi'i revolt of Muhammad al-Nafs al-Zākiyya in the Hijāz (145/762), he was again neutral, leading the Husaynids in their passivity in that largely Ḥasanid affair, and was left in peace by al-Mansūr.

Dja'far attracted a circle of active thinkers, most of whom, such as his son, Musā, notably Hishām b. al-Hākām and Su'lūk b. Khalīfah, were inclined to an anthropomorphist system in contrast to that of the early Mu'tazilites with whom they disputed. Dja'far himself is assigned (with uncertain authenticity) a position on the problem of ba'ad which claims to be between determinism and free-will.

Dja'far died in 148/765 (poisoned, according to the unlikely Twelver tradition, on the orders of al-Mansūr) and was buried in the Bakī' cemetery in

80/699-700 or 83/702-3 in Medina, his mother, Umm Farwa, being a great-granddaughter of 'Abū Bakr. He inherited al-Bākīr's following in 119/737 (or 114/733); hence during the crucial years of the transition from Umayyad to 'Abbasid power he was at the head of those Shi'iS who accepted a non-militant Fātīmī imāmate. He lived quietly in Madina as an authority in hadith and probably in fiqh; he is cited with respect in Sunnī idāms.

He made no sharp break with the non-Shi'i majorit-

y—even a Shi'i follower of his could appear in Sunnī idāms (and his heir, 'Abd Allāh, was accused by later Shi'iS of Sunni tendencies); but he seems to have been a serious Shi'i leader nonetheless. He appears to have permitted his own zā'īn, his personal following, to regard him, like his father, as sole authoritative exponent of the šarī'a, divinely favoured in his 'ilm, religious knowledge (and in principle as the only man legitimately entitled to rule). But he taught also a wide circle who consulted him along with other masters; 'Abū Ḥanīfah, Mālik b. Anas, and Wāṣīl b. 'Aṭā', among other prominent figures, were known to have been influenced by him. Dja'far himself is assigned (with uncertain authenticity) a position on the problem of ba'ad which claims to be between determinism and free-will.
Medina, where his tomb was visited, especially by Shi'is, till it was destroyed by the Wahhabis. He left a cohesive following with an active intellectual life, well on the way to becoming a sect. But some of the differing tendencies which he had usually managed to reconcile now seem to have caused historic splits in it, occasioned by a disputed succession to his imamate. He had designated Isma'il, his eldest son; but Abd Allah died without sons a few weeks later. The majority thereupon accepted Musa, whose mother was Hamida, a slave (and whom some, including prominent philosophers, had hailed as imam from the start); these developed into the Twelve Shī'a, for whom Dja'far was the sixth imam.

Most of Dja'far's following, however, accepted Abd Allah, Isma'il's uterine brother and the eldest surviving son, on the ground that Dja'far had generalized that an imam's successor must be his eldest son; but Abd Allah died without sons only a few weeks later. The majority thereupon accepted Musa, whose mother was Hamida, a slave (and whom some, including prominent philosophers, had hailed as imam from the start); these developed into the Twelve Shī'a, for whom Dja'far was the sixth imam. A few asserted that Dja'far was not really dead, but absent, and would return as Mahdi (these were called the Nawusiyya). Some of Dja'far's following looked to Musa's young brother Muhammad, who later became the Imam of the Shumaytiyya, for whom Dja'far was the sixth imam.

Among most Shi'is, Dja'far has been regarded as one of the greatest of the imams and as the teacher of fiqh par excellence. The Twelvers, when referring to themselves as a madhab, have called it the Dja'ariyya. To Dja'far have been ascribed numerous utterances defining Shi'i doctrine, as well as prayers and homilies; he has been ascribed, by both Sunnis and Shi'is, numerous books, probably none of them authentic, dealing especially with divination, with magic, and with alchemy, of which the most famous is the mysterious Dja'far [q.v.], foretelling the future. He is regarded as the chief teacher of the alchemist Djabir b. Hayyan (who did in fact revere him as a religious teacher). He is also regarded as a master Sufi. Especially among the Shī'a, so many sayings on all sides of all controverted questions have been ascribed to him that such reports are almost useless for determining his actual opinions in a given case.

(D. G. S. Hodgson)

Dja'far Sharīf b. 'Alī Sharīf b. Kurayshī al-Naqārī, whose dates of birth and death are unknown, wrote his Kānān-i Islām at the instigation of Dr. Herklots some time before 1832. He is said to have been "a man of low origin and of no account in his own country", born at Uppūlūrū (Ellore) in Kistna District, Madras, and was employed as a munāzah in the service of the Madras government. He was an orthodox Sunnī, yet tolerant towards the Shi'as, who had considerable influence in southern India in his time, learned yet objective in his approach to his faith, knowledgeable in magic and sorcery yet writing of it in a depreciatory and apologetic tone, and a skilful physician of the Yūnānī school. In the course of his duties he met with Gerhard Andreas Herklots (b. 1790 in the Dutch colony of Chinsura in Bengal of Dutch parents, d. Wāddājībād 1834), who had studied medicine in England and had been appointed Surgeon on the Madras establishment in 1818. Herklots, struck by the lack of any information on the Indian Muslims comparable with the Manners and customs of the Hindoos of the Abbé Dubois, had started a collection of material when he met Dja'far accidentally, whom he encouraged to produce the work himself acting "merely as a reviser", occasionally suggesting "subjects which had escaped his memory".

The original was written in Dakhkhīn Urdu, which Herklots had intended to publish also, but his death prevented this and the original has now been lost. To the translation Herklots added notes and addenda incorporating additional material from Mrs. Meer Hassan Ali's Observations on the Mussulmans of India, 1832, and Garcin de Tassy's Mémoires sur les particularités de l'islam musulmane dans l'Inde, Paris 1832, that the work might embrace "an account of all the peculiarities of the Mussulmans ... in every part of India". His Qanun-e-Islam was published (London, late 1832) with a subvention from the East India Company.

Dja'far's account traces the religious and social life of the south Indian Muslims from the seventh month of pregnancy to the rites after death, with full descriptions of all domestic rites and ceremonies and festivals of the year, including necromancy, exorcism, and other matters of magic and sorcery; Herklots's appendix adds information on relationships, weights and measures, dress, jewellery, games, etc., and a glossary. The work was rearranged and partially rewritten by W. Cooke for the new Oxford edition of 1921, enhancing its value as an authoritative account of Indian popular Islam with particular reference to the Deccan. See also E. G. B. Johnson, Dja'far Sharīf, London 1827, and A. F. C. Biard, Dja'far Sharīf, London 1827.

Dja'far Sharīf b. 'Alī Sharīf b. Kurayshī al-Naqārī. The particular veneration which, among the Shi'as, the members of the Prophet's family enjoy, is at the base of the belief that the descendants of Fātima have inherited certain privileges inherent in Prophethood; prediction of the future and of the destinies of nations and dynasties is one of these privileges. The Shi'i conception of prophecy, closely connected with that of the ancient gnosis (cf. Tor Andrae, Die Person Muhammeds in Lehre und Glauben seiner Gemeinde, Stockholm 1918, c. vij) made the prophetic afflatus pass from Adam to Muhammad and from Muhammad to the 'Alids (cf. H. H. Schaeder, in ZDMG, lxxv, 1925, 214 ff.). The Banū Hāshim, to whom 'Abbās Abī Ţālīb belonged, had long since claimed superiority over the Banū Umayya, as having the Prophet's appanage. Immediately after his conversion, seeing the armies of Muhammad filing off ready for the conquest of Mecca, the Umayyad Abī Ṣufyān said to 'Abbās, the Prophet's uncle, who was standing beside him, "Your nephew's authority has become very great!"; and al-'Abbas replied, "Yes, wretched one, that is Prophethood!" (Tabarī, iii, 1635).
A Batim tradition tells that the Prophet, when on the point of death, said to 'Ali b. Abi Talib, "O 'Ali, when I am dead, wash me, embalm me, clothe me and sit me up; then, I shall tell thee what shall happen until the day of resurrection". When he was dead, 'Ali washed him, embalmed him, clothed him and sat him up; and then Muhammad told him what would happen until the day of resurrection (Ps. al-Djafri [read al-Djaffi]; cf. F. Wustenfeld, Register, 7, l. 123). K. al-Hajj wa l-urkilla, ed. 'A. Tamir and I.-A. Khalifa, Beirut 1960, 135; on the K. al-djafir, attached to the Ps. [see Ibn Abi al-Hadj, S. I, 75]. Here clearly defined is the terminus a quo of the djafir, which in origin was identified with the hidjab, and the maladim.

In the desperate struggle for the Caliphat carried on by the descendants of 'Ali, early divided and weakened amongst themselves and suffering from the severe persecution of which they had been victims—notably in 237/851 under al-Mutawakkil—an esoteric literature of apocalyptic character arose, created in order to bolster the hopes of the adepts, who were near to despair, and to sustain in the minds of the ruling Caliphs that quasi-religious respect which they felt they should owe to the descendants of the daughter of the Prophet. This literature appears in different forms, all grouped under the generic name of djafir, to which is often added the term gdima or the adjective gdim. It is of a fatidical and sibyline character, and in its later form is summarized in a table in which the djafir represents fate (kadar) and the gdima a destiny (kadar). "It is", says Hâdîdî Khalîfa (ii, 603 ff.), "the summary knowledge (of that which is written) on the table of fate and destiny, which contains all that has been and all that which will be, totally and partially". The djafir contains the Universal Intellect and the gdima a the Universal Soul. Thus, the djafir tends to be a vision of the world on a supernatural and cosmic scale. Deviating from its original form of esoteric knowledge of an apocalyptic nature, reserved to the imâms who were the heirs and successors of 'Ali, it became assimilated to a dívivatory technique accessible to the wise whatever their origin, particularly to the mystics (see 1m Al-Qâdiri, Apokalîpsis, pp. 386 ff.; Sarav Ab, III, 359, etc.). Among the various authors who contributed to the development of this technique, four main names must be cited: Muhîî al-Dîn Abu l'-Abbâs al-Bûnî (d. 622/1225), in Shams al-ma'ârîf, a work which exists in three recensions, the smallest, the mean, and the great; the last-named was edited in Cairo in 1322-4 (1903-6) in 4 vols. It should be noted that the small work called DJAFR al-imîm 'Ali b. Abî Talib or al-Durr al-munassas ... attributed to Ibn 'Arabi (cf. ms Leipzig 833, 17; cf. Paris 2665, Aleppo-Sbath 57 and 390), is nothing but paragraphs 33 and 34 of the Shams al-ma'ârîf (cf. Hartmann, Eine arab. Apokalypse ... , 109 ff.). Muhîî al-Dîn b. 'Arabi (d. 638/1240), MiJîdah al-djafir al-gdîmî (ms. Istanbul-Hamidiye, Ism. Ef, 280; Paris 2669, 14, etc.). Ibn Talbâ al-'Adâwî al-Râdni (d. 652/1254), with the same title or under the title al-Durr al-munassas fi l-sirr al-Â'sâm (ms. Paris 16834); Istanbul, Armutlu Huseyin P. 347; Sarav Ab, III, 3507, etc.). 'Abd al-Rahmân al-Bistâmî (d. 858/1454), with the same titles (ms. AS 2813/3; Vat. V. 1254; cf. Nicholson, in J. R. A. S., 1899, 907).

In all these writings, and in many others, there is great confusion as to the procedures to be followed. Other heterogeneous elements, belonging to other forms of obscure thought, have been added; one finds the occult properties of the letters of the alphabet (hurûf) and of divine names (al-asma' al-'usma', gematria and isopsephy (isîbâb al-djumma', the indication of the numerical value of a name which one wishes to keep secret, the transposition of letters in a single word, for the purpose of forming another word, the combination of letters composing a divine name with those of the name of the object desired (al-hâs wa l-basht), the substitution of one letter in a word by another according to the abâsht system (a table of concordance in which the first letter of the Hebrew alphabet corresponds to the last, the second to the penultimate, etc.), the formation of a word by putting together the first letters of the words of a phrase, in other words all the procedures made use of by the cabbala (cf. J. G. Fervier, Histoire de l'écriture, Paris 1948, Appx. III, 588-91).

These speculations on the numerical value of the letters have played a considerable part in Muslim mysticism, where not only the letters composing the divine names, but also the seven letters not found in the fâitha, have been the object of a special veneration. In the Islamic hurâfiyya neo-Platonic and cabballistic traditions join with the speculations of certain exalted Sîfîs, to form a body of esoteric knowledge of such an obscurity that "only the Mâldî, expected at the end of time, would be capable of understanding its true significance" (Hâdîdî Khalîfa, wâ'asîs). This diversity of approach can be further complicated by divergences in the methods of classification. Certain authors, in fact, follow the long alphabet (alîf, bêt, zê, dâd, etc.) while others follow al-âbjadîyya (alîf, bêt, dâm, etc.).

The first method is called al-djafir al-habîr and includes one thousand roots, the second al-djafir al-saghar and includes only seven hundred. There is also a djafir mutassassî based separately on the lunar and solar letters; this last method is preferred by the authors, and is used generally in talismanic compositions (Hâdîdî Khalîfa, loc. cit.).

Beside this numerical and mystical aspect of the letters, which by its technical and mystical character puts the djafir on the level of the al-sîra (q.v.), mention must be made of its astrological aspect. According to Ibn Khalûdîn (Mubâhadîmûn, ii, 1912; Rosenthal, loc. cit.), the Abbasids' library, thrown into the Tigris by Hûlûqî, killed the Al-Mutawakkil, the last caliph. However, it appears that a part of this work reached the Maghrib under the name al-Djafir al-saghar, and must have been there adapted to the calendar of the B. 'Abd al-Mû'mîn.

According to the Ps. Djafîhî (Bâb al-sîra wa la-sagîr wa l-firasa atâ la-madhhab al-Furs, ed. Inostranzev, St. Petersburg 1907, 4) this astrological aspect of the al-djafir is of Indian origin; "Al-djafir" he says, "is the knowledge of the [auspicious and inauspicious] days of the year, the knowledge of the direction of winds, of the appearance and withdrawal of lunar mansions ... . The book called al-djafir
contains the predictions for the year, arranged according to the seasons and the lunar mansions; each group of seven lunar mansions, constituting a quarter of the remaining sign, occupies a Material reference to the Persian script (the Persians take omens from it for rains, winds, journeys, wars, etc. It is from India that the Chosroes and their people have learnt all these sciences . . . ."

The last and most important of the aspects of the djafir is the apocalyptic. This is properly the original aspect, already well developed under the Umayyads and much expanded in 'Abbāsīd times, in the form of books of oracles, called kutub al-hidtdn (cf. references in De Goeje, Carmathes, 115 ff.). The starting-point of these speculations was the book of Daniel. Books of predictions attributed to Daniel were being read in Egypt in the year 61/670 (Tabari, ii, 359; on the Arabic apocalypse of Daniel cf. the references in A. Abel, in Stud. Isl., ii, (1954), 28 n. 2). Muhammad b. 'Abd al-Malik al-Hamādhānī (d. 521/1127), who continued al-Tabari's chronicle up to 489/1095 (ms. Paris 1469, f° 457, quoted by De Goeje, Carmathes, 225 ff.; cf. ed. A. J. Kanaan, in Al-Machriq, 1955 ff.; and cf. Ibn Khaldūn, Mukaddima, ii, 198, Rosenthal 227-8) relates that under the vizierate of (Abū Dja-far al-Karkhī (324/936) there was in Baghdad a bookseller, called al-Dānīyālī, who exhibited ancient books attributed to the prophet Daniel, in which there figured certain prominent persons together with their descriptions. He enjoyed great success with the statesmen (cf. an anecdote in Tabari, iii, 496 ff., in the story of Mahdī, cited by Ibn Khaldūn, Mukaddima, ii, 192, Rosenthal 219, illustrating the tricks employed by forgers in this genre of writing). This literature is also known under the name of Malākim (cf. the astrological ms. Berlin 5903, 5904, 5912 and 5975, the last two of which are attributed to Daniel, as is Istanbul-Bağdatî Vehbi Ef. 2324). It has been widely diffused in the Maghrib. Written in verse or prose, sometimes even in a dialect, it deals sometimes with events which were to happen within the Islamic community in general, sometimes with those concerning one dynasty in particular. The greater part of these writings is attributed to famous authors, although it is not possible to find their authentic authorship. A list of malākim is given by Ibn Khaldūn (Mukaddima, ii, 193 ff., Rosenthal 220 ff.), mostly of Maghribi origin and dealing in general with the Hafsid dynasty. Two names in this list deserve particular attention: Ibn ʿArabi, in whose name there was current, in the time of Ibn Khaldūn, a makhbama entitled Ṣawākat al-bām (on this work cf. A. Abel, in Arabica, v (1958), 6 n. 3), and al-Bādjarbākī (d. 724/1323) to whom a poem on the Turks is attributed. The latter belonged to the Karandaliyya (or Kalandarīyya; cf. references in Dozy, Suppl., ii, 340), and founded a sect called al-Bādjarbākīyya (Ibn Khaldūn, Mukaddima, ii, 199 ff., Rosenthal 229; cf. TA, vi, 283). Other sources on al-Bādjarbākī are cited by Rosenthal, 230 n.). There are also many citations from these malākim to be found in the writings of Ibn Abī Usaybāʾī (d. 668/1270), and concerning its inner meaning. The statements have the excellent authority of Dja-far al-Sādīk (cf. Brockelmann, S. I, 104), notably a Kitāb al-djafr (B. M. 426, 10; cf. Steinschneider, Zur pseudograph. Literatur, 71). The foundation of this "pneumatic" exegesis seems to rest on this saying of Jesus: "Nāhī maʿdānā al-anbiyyā nāḥīkum bi 'l-lanzīl wa ammā 'l-tawīl fa-sāyātā bihā 'l-Bārāshīl al-lārida sayyīkum ba'dī. 'We the Prophets bring you the revelation; its interpretation the Paraclete [the Holy Spirit], who shall come after me, will bring ye" (Ḥājjī Khalīf, 603; cf. John, xiv, 26).

Bibliography: In order sufficiently to cover the range of this literature, the lists of writings on the djafr to be found in the manuscript catalogues should be consulted, especially Ahlwardt, iii, nos. 4213-29, and Fihrist al-kutub al-ʿarabīyya al-mahfūza bi 'l-kutubkhiyā al-khadiwiyya al-Misriyya, v, 333 ff.; numerous djafr treatises are to be found in the various collections at Istanbul. The principal works of reference are: R. Hartmann, Eine arabische Apokalypse aus der Kreuzzugzeit. Ein Beitrag zur Gaf-Literatur, in Schriften d. Königsberger Gelehrten Gesellschaft, Gesellschaftsw. Kl., Berlin 1924, 89-116 (Study of an extract of Ibn ʿArabi, Mukhdarat al-abār, ed. Cairo 1324/1906, i, 197 ff., completed by the Berlin ms. no. 4219); cf. especially 108 ff.; A. Abel, Changements politiques et littérature apocalyptique dans le monde musulman, in Stud. Isl., ii (1954), 23-43; idem, Un hadīf sur la prise de Rome dans la tradition eschatologique de l'Islam, in Arabica, v (1958), 1-14; Fr. Goldziher, Vorlesungen, 224 ff., 263 ff.; Fr. trans. Arin, Paris 1920; idem, in ZDMG, xli (1897), 125-3.
AL-DJAGHBUB, a small oasis to the south-east of Cyrenaica, the site of the tomb of Muhammad b. Allah-al-Sanusi, founder of the brotherhood of the Sanusiyya. It is the farthest east, the smallest and the least prosperous of the oases along the important traditional route which leads from the valley of the Nile and Siwa to Fezzan and the region of Tripoli, passing through a chain of depressions where are to be found the palm-groves of Djalo, Awjilla, Marada, and Djufra, which are close to the 29th parallel.

The depression of Djaghbub consists of a sinuous basin called Wadi Djaghbub covering 700 sq. km., and going down to 20 m. below sea-level: in the north it is dominated by the plateau in sand and limestone of the Mar marec (Miocene period); this gives way in the south to soft hills covered by dunes of Libyan erg. The depression is carpeted in red earth and yellow sand and the beds occupied by sebkhas or, to the east, by salt lakes (bahr).

The only traces of the distant past are the tombs dug out of the northern cliff, similar to those at Siwa. Djaghbub owes its existence to Muhammad b. Allah-al-Sanusi, who came from Cairo in 1856 with his family, followers and servants, and founded the mother zdwiya of the brotherhood on a slight hill to the N-E of the depression. Later a large mosque was built while gradually a town grew up, which, according to Rossi, had already by 1881 nearly 5,000 inhabitants, of which 750 were tolba and 2,000 slaves. But the departure in 1885 of Muhammad al-Mahdi—the son of the founder of the town, who died in 1859—for Kufra, marked the start of the decadence of Djaghbub, which is briefly mentioned by some travellers: Rohlfis (1889), Rosita Forbes and Hassanein Bey (1921 and 1923) and Bruneau de Laborde (1923). The town was occupied by the Italians in 1926: they put up two forts and encouraged agriculture. The British took it in 1941 and ceded it to Cyrenaica, a province of the Libyan federal union which was founded in 1951.

Djaghbub is a very small settlement of 200 inhabitants. Its enclosure of huge dry stones surrounds the great mosque and the zdwiya, both of which have a large porticoed courtyard, their annexes and a small number of houses which are often covered in stories. The tomb of Muhammad b. Allah-al-Sanusi, situated under the dome of the great mosque, is a place of pilgrimage for all the followers of the brotherhood, and the zdwiya a place of learning. Masters, tolba and officials of the zdwiya and the mosque form the greater part of the population, together with the negro servants who work in the few gardens in the date-grove; the latter consists of scarcely more than 2,000 cultivated date-palms; the gardens, watered by the brackish water of a shallow well, have been improved thanks to the drilling done by the Italians, who bored an artesian fondness for her brother, Dara Shukoh, and enjoyed an allowance of 600,000 rupees, and one of her works, [q.v.], order of Münis al-arwa'd, a medical work, an extract from the canon of Ibn Mikum, passim (in index); Sarton, Introduz., III, 659-700.

Djagir, land given or assigned by governments in India to individuals, as a pension or as a reward for immediate services. The holder (djadjar) was not liable for land tax on his holding (see PARIBA), nor necessarily for military service by virtue of his tenure. See further 1915.

Djahân Shah (i) [see SUPPLEMENT].

Djahân Shah (ii) [see NUSHAL].

Djahânâra Bégam, the eldest daughter of Shahdijahan and Muntâz Mahall (the lady of the Tâdj at Âgra) and their first child, was born on 21 Safar 1023/23 March 1614. She bore the complimentary title of Fatima al-Zamân, which was decreed by her father, Muhammad al-Mahdi, and his first wife, and it reflected in her aforesaid Court title. Through-out her life she remained staunchly devoted to her father and even kept company with him during his incarceration after his deposition by Awarngâl, whose displeasure she earned through her excessive fondness for her brother, Dârâ Shukhî [q.v.], his rival.

An accomplished lady, she is the author of two Šûf works: (i) Mu'nis al-arwâd and (ii) Ṣâhibiyâ, an incomplete biography of her father, Mullâ Shâh Kâdîrî. According to her own statement (see Oriental College Magazine, Lahore 1914), she was the first woman in the line of Tûm to have taken to mysticism. Originally a disciple of Mullâ Shâh Kâdîrî, she contracted her bay'â in the Chîfî order [q.v.], and one of her works, Mu'nis al-arwâd, is on the life of Khâdîja Mu'în al-Dîn Chîfî [q.v.]. She wielded great influence during the reign of her father, and enjoyed an allowance of 600,000 rupees, half in cash and half in lands, settled on her by the Emperor; Awarngâl doubled this amount during
his reign. During Shahjahan's captivity she served as a link between the deposed emperor and the reigning monarch, Awrangzib, all the important political correspondence passing through her. She died unmarried in 1002/1691 and was buried in Delhi, according to her wishes, in the compound of the shrine of Nizam al-Din Awliya [see Delhi, Monuments] in a simple marble tomb, built by herself attached madrasa, was built by Jahangir. This is the first mosque of major dimensions built under the Mughals, except for Akbar's at Fatehpur Sikri [q.v.].

**Dīḥāndār Shāḥī, Muʿīz al-Dīn, Mughal emperor regnant 21 Safar 1124/7 March 1712 to 16 Muḥarram 1125/11 February 1713. Born 10 Ramadān 1071/10 May 1661, eldest son of Bahādūr Shāh [q.v.], at the time of his father's death he was governor of Mūltān. Pleasure-loving and indolent, he was able to participate actively in the struggle among Bahādūr Shāh's sons for the throne only through the support of the ambitious Dhu ʿl-fikār Khān, ʿal-iṣlah Khān and ʿabādār of the Deccan who was anxious to exclude ʿAẓīm al-Shāhī from the succession and to win the wāsirāt for himself. After three days fighting near Lahore, ʿAẓīm al-Shāhī was defeated and killed. With the help of Dhu ʿl-fikār Khān, diets Dīḥāndār Shāh disposed of his other brothers Dīḥān Shāh and Raʾf al-Shāhī. At the time of his accession Dīḥāndār Shāh was 52 (lunar) years of age. His sybaritic tastes and devotion to the dancing girl Lai Kunwar, quickly seized upon (lunar) years of age. His sybaritic tastes and devotion to the dancing girl Lai Kunwar, quickly seized upon...
His alleged romance with a palace-maid called Anarkall, which resulted in a tragedy, finds no corroboration in history. The mausoleum known as Anarkall's tomb, in Lahore (see S. M. Latif, *Lahore, its history, architectural remains...*, Lahore 1892, 186-7) is said to have been raised over the mortal remains of his lady-love by the baulked lover, prince Salim. The marble sarcophagus, still preserved in a corner of the plain whitewashed octagonal building, bears the intriguing inscription "madjnun Salim-i Akbar". The entire affair is so thoroughly imbued with nothing convincing as to be said about it. The usual interpretation of it, while on the one hand may be interpreted to reveal the depth of prince Salim's intense grief on the cruel death of his beloved, said to have been built up alive in a wall by the order of Akbar, on the other hints at a compromise having been reached between the emperor, as head of the royal family, and the demoted prince, the heir to the 'Great Mogul'. Why none of the contemporary historians or Djahangir himself makes any mention of this tragedy is difficult to comprehend. Latif (op. cit., 187) gives the date 1008/1599 as the date of Anarkall's death. This date, according to him, is inscribed on the sarcophagus along with another date 1024/1615 and the words "in Lahore" which is considered to be the date of the construction of the mausoleum, but in 1008/1599 Djahangir was 31 (lunar) years of age and already married to a number of wives. Moreover, Djahangir was at Allahabad in 1008/1599 when he rose in open revolt against his father. Was the cruel fashion in which Anarkall was done to death the real cause of this rebellion? Akbar's leniency towards the rebel prince seems to be precalculated as he apparently wanted to soothe the lacerated heart of the erratic prince carried away by passion and distress by adopting a mild policy.

Akbar's attempts at a reconciliation were thwarted by the ambitious prince who in 1010/1603 marched at the head of a large army to Agra. On Akbar's showing signs of resistance the rebel prince retreated to Allahabad where he assumed the royal title and set up a regular court. Temporary reconciliation was again brought about by the widow of Bayram Khan [q.v.], Salima Sultan Begam, but the youthful prince soon after took to his old ways. He went back to Allahabad where he again set up his Court. In the meantime Salima was convinced that Abu 'l-Faḍl [q.v.], the talented minister of Akbar, was responsible for his troubles and that he was constantly poisoning the ears of the emperor against him. He, therefore, designed an attack on Abu 'l-Faḍl and while the latter was on his way back from the Deccan in 1013/1605 he was set upon by the retainers of the Bundelkch δeftian, Bhr Singh Dēw, who had been commissioned by Djahangir to perform the deed; his head was cut off and sent to Djahangir at Allahabad. This cold-blooded murder was unjustifiable, but Djahangir was so much convinced of the villainy of Abu 'l-Faḍl that he felt no compunction, but rather, was relieved at the removal of a stumbling-block from his way. (Tāsūk-i Djahangirī, tr. Rogers and Beveridge, i, 25).

On the death of Akbar in 1013/1605 Djahangir ascended the throne under the title of Abu 'l-Muẓaffar Nūr al-Din Muḥammad Djahangir Pāḏawār-i Ḍāl, which also appears on some of his coins. Soon after his accession he had to face the rebellion of his eldest son Khusraw in 1015/1606. Although a reconciliation was effected, the emperor never forgave the audacity of his son, whose death in suspicious circumstances in 1031/1622 at Burhānpur relieved Djahangir of considerable worry. The Sikh guru (spiritual leader) Aṅgūn, who had helped and sheltered Khusraw during his rebellion, was punished with death by the emperor. This punishment, however, was interpreted as an atrocius act on the part of the Mughal emperor, and it laid the foundations of that deep-rooted hostility which continued to embitter the relations between the Indian Muslims and the Sikhs over the centuries, at its worst during the supremacy of the Sikh general, Banda Bāyragī, in the 12th/18th century, and during the large-scale disturbances in India on the eve of Independence in 1947.

In 1016/1607 Djahangir was able to crush a conspiracy to murder him while camping at Kābul. Four of the ringleaders were executed while prince Khusraw, the moving spirit, was partially blinded by the orders of the emperor. With his marriage to Nūrādīhān, daughter of Shīr Afkān, known in history as the Ṭimāūd al-Dawla, in 1020/1611 Djahangir commenced a new phase in his life as a ruler. Contemporary sources make no mention of the popular story of Djahangir's passionate love for Nūrādīhān and the premeditated murder of her husband, 'Alī Kūn Kān Iṣṭāfīḏī (Shīr Afkān), at the instance of Djahangir, in 1016/1607. None of the European travellers who visited India during the reign of Djahangir makes even an oblique mention of Djahangir's complicity in the murder of Shīr Afkān and his anxiety to marry Nūrādīhān, then known as Mihr al-Nisā'. After her marriage to the emperor, Nūrādīhān gradually assumed all power and wielded great influence in affairs of state. Her name, along with that of the emperor, was inscribed on gold coins and she came to be recognized as the de facto ruler.

The Shi'i scholar Nūr Allah al-Shīṝstāri, who had been appointed kādī of Lahore by Akbar and who had so far practised taḥṣīyya, successfully concealing his faith from the people, emboldened by the meteoric rise to power of Nūrādīhana, herself an orthodox Shi'i, began to pronounce judgments which created doubts in the minds of the Sunni majority. This led to a Court conspiracy against the kādī, headed then in the queen's favour. He was accused of professing the Shi'i faith while boldly acting as a Sunni kādī. This revelation resulted in his execution by order of the emperor, who punished him for practising a fraud (Nūḏīḥam al-samah, 15-6). This act of bigotry on the part of a latitudinarian and eclectic like Djahangir, whose own consort Nūrādīhana was a Shi'i, is rather surprising but it shows, at the same time, the measure of influence that the disgraced theologians and 'ulamā' had again come to exercise in state affairs, after their calculated downfall during the reign of Akbar. No less surprising is Djahangir's estimate, based on intelligence reports, of šaykh Ahmad Sirhindī [q.v.] whom he described as an impostor (šayyāf), and his famous Ṭakhtā (as a tissue of absurdities (Ṭaṭā, Engl. tr., ii, 91-2). He was so much convinced of the šaykh's fraudulence that on the pretext of his having transgressed the limits of Šofic propriety in his Ṭakhtā (i, no. 12), he ordered his imprisonment in the fort of Gwāḷḷyār [q.v.], where political criminals were generally confined, but after a year or so revised his opinion and liberated him.

In 1032/1623 Djahangir had to face a filial revolt when prince Shāhjāhān rebelled, driven to this predicament by the machinations of
Nurdjahan who wanted her son-in-law Shahryar, a step-brother of Shahdjahan, to succeed to the throne at first successful, to the queen's discomfiture; but Āṣaf Khān, having first fled, later joined Mahābat Khān at Kābul at Nurdjahan's instigation, and provoked disension among the Imperial followers. On Mahābat Khān's flight and his subsequent alliance with Prince Khurrum, Nurdjahan appointed Khān-i Dījahān Lōdī as Imperial commander, with orders to subdue the rebels; but her plans were thwarted by the death of Dījahān, whose health had been shattered by excessive drinking, his greatest weakness, pursued since his early youth. Some hagiological works attribute Mahābat Khān's conduct to the maltreatment and disgrace that Ābdūl Khān Sirhindi suffered at the hands of Dījahān. It has further been claimed that prince Khurrum, (Azad Bīrgami, Nīdāḥān al-maṭ‘ādīn, Bombay 1903/ rāshī 898, xviii, 218, 221-22), cōrporate rankers nobles had secretly contrived their bāy'a with the shaykh and held him in high esteem; and that the treatment meted out to him was bitterly resented by them all. Before any decisive action could be taken against Mahābat Khān, Dījahān died while on his way to Bhimār from Rādjrāwī, on 27 Safar 1037/28 October 1627 in the 58th solar year of his age and the twenty-second of his reign. His body was brought down to Lahore where it was laid to rest, without its receiving an appropriate funeral on account of the disturbed conditions, at a spot designated by Nurdjahan over which she erected a magnificent mausoleum at her own expense. (For a description of the tomb, see Lāhawr).

A well-read man, a patron of literature and art, a keen observer of men and matters, Dījahān was the most polished and cultured of the House of Timūr. He was a sensible ruler, kind-hearted and generous, who hated oppression and had a passion for justice. Immediately after his accession to the throne he ordered a chain of gold, adorned with bells, to be hung from the imperial palace in Āgrā which an aggrieved person could shake at any moment of the day or night and get justice. (See Tāžuk, Rogers and Beveridge, i, 7). He was lover of nature; Dījahān's Tāzuk is full of descriptions of the scenic beauty of Kāšmīr and other lovely places and of the fauna and flora of the regions he visited. An accomplished prose-writer, his memoirs are in no way inferior to those of Bābur, although he sometimes portrays himself as a violent and unprincipled man whose personal account arouses our disgust and contempt. But unlike Bābur he must be credited with greater honesty and frankness in whatever he writes except in one or two instances when he deliberately tried to conceal the truth.

He makes no secret of his addiction to wine and opium, which ultimately ruined his robust health and hastened his end. He was exceedingly cruel sometimes, having once got a sodomite flayed alive and another castrated. Similarly he ordered the bones of Naṣhr al-Dīn Khandī, ruler of Mīlwa, who was guilty of poisoning his father, to be exhumed and thrown into the Nārbaḍā, when he visited Māndū (q.v.) in 1027/1617. As a rule, his reign brought peace and prosperity to the people; industry and commerce flourished; architecture, painting and literature progressed and on the political side there was stability and strength only marred by a few wars in Mewār and the Deccan, and some minor disturbances in Bengal as the ineffectual revolt of 'Ulūmān Khān Afgān.

Bibliography: Tāzuk-i Dījahānī (with numerous variants), ed. Sayyid Ahmad Khan, Ghazipur 1884 (Eng. transl. Rogers and Beveridge, London, i 1909, ii 1914, Urdu transl. Lahore 1960); there is another version of the memoirs called Ta‘rīkh-i Salīm Shāh translated into English by Major David Price (Calcutta, 1906), quite un-der-lying being a forgery and a fabrication; Šāhmān al-Dawla Shāh Nawāz Khān, Ma‘ādhī al-umardān, (Eng. transl. Beveridge), i, 57-54; Mu‘ātmad Khān, ḫalid-nāmāt-i Dījahānī, (Bibl. Ind.), Calcutta 1885; Beni Prasad, History of Jahangîr, Allahabad 1940 (contains an exhaustive bibliography and gives a fairly balanced account of Jahangîr's reign; certain statements by the author are, however, not unbiased); Cambridge History of India, iv, s.v.; Jahangîr and the Jesuits (transl. C. H. Payne), London 1939; Calcutta 1892, xcvi, 495; cf. Rogers, Major David Price (Calcutta, 1906), quite un-der-lying being a forgery and a fabrication; Sabāb al-Dīn Abī Hamad al-Ramān, Bazī-ī Timūriyya (in Urdu), A‘ṣamgâhar 1357/ 1948, 128-68; Storey, i, 556-64; Mirzâ Mu‘āmammad ‘Ali, Nūdgîm al-samâ‘ (for an authentic account of the death of Nūr Allâh al-Shâstârî) Lucknow 1302 A.H., 9-16; Embassy of Sir Thomas Roe, ed. William Foster (Hakluyt Society); Francis Gladwin, The History of Hindustan during the reigns of Jahangîr, Shah Jahan and Aurungzeb, Calcutta 1878, (based mainly on Kamgâr Husaynl’s Ma‘ādhī-i Dījahānī, still in MS.); V. A. Smith, Oxford History of India, s.v.; Dījahān Khāl Dīlahwâl, Ta‘rīkh-i Hind (in Urdu), vi, ‘Alîgâhar 1917, the only detailed account in Urdu; ‘Abî al-Ḥâyî Nadwî, Nuṣhāt al-ma‘ādûdîr, Haydarâbâd 1375/1955, v, 120-22, (the only brief account in Arabic known to me).

For the buildings of Dījahān, see Hind, Architecture; MUGHALS; also Āgra, Lāhawr, Palamādō.

For the Mughal garden, which Dījahān specially cultivated, see Būstān, Kāšmīr, Sīndgâr.

For miniature painting, which reached its highest point in India under Dījahān’s patronage, see Hind, Art.

Mughal coinage reached its highest point of elaboration in the variety of pieces and the refinement of designs during Dījahān’s reign. For Dījahān’s coins see Sikka.

(A. S. BAZME‘ ANSARI)
are two examples from among the most familiar:

1. Some traditionists like al-Baghawi, with an extremely literal and uncritical outlook, considering the precise wording of the dialogue (taweez) in the Kur'an, L. 30, between God and Gehenna, regard the latter as a fantastic animal of hell which they describe with endless hyperbole. It will be drawn along by 70,000 angels, its guardians, at the time of the resurrection, the width between the shoulders of each guardian angel being equal to 70 years’ march, etc. The description, supported by hadith, is repeated in al-Shar'i’s Mushharar (for this sort of commentary in Muslim thought, see Dianna).

2. Descriptions which show hell as a place made up of concentric layers of increasing depth generally put Gehenna in the higher zone, that reserved for members of the Muslim community who have committed “grave sins” about which they have not repented and whom God, in accordance with his threats, decides to punish for a time with infernal torments. It is thereby admitted, even by those who uphold the eternity of hell, that Gehenna will cease to exist. It will be wiped out when the last repentant sinner among the believers leaves it to enter paradise. We may note that the etymological reference to the idea of “depth” is suppressed here.—This interpretation, which occurs in the tafsir of Khazin and elsewhere is freely expounded in the manuals of the Ash'ari school (e.g. al-Baidari, Ḥāfiya ... ala Diawrat al-awza'id, ed. Catro 1352/1954, 107). For the place of Gehenna in the circles of Hell according to Ibn ‘Arabi, see the diagrams reproduced by Asin Palacios, La Escatologia musulmana en la Divina Comedia, Madrid-Granada 1943, 147.

Bibliography: In the article; detailed references will be given in the article Nār.

(L. Gardev)

Djahān-Scz, Allā Dīn Husayn B. Al-Ḥusayn, Ghūrid ruler—poet, notorious for his burning of Ghazna in 546/1151. The cause of the violence between the Ghūrids and Bahram Shāh of Ghazna [q.v.] would appear to have been an attempt by Kūf al-Dīn Muhammad, (eldest brother of Allā Dīn) to seize Ghazna through an intrigue with some of its inhabitants. Bahram Shāh had him poisoned; an attempt by another brother, Sayf al-Dīn Sūrī, to avenge his brother ended, after the temporary occupation of Ghazna by the Ghūrid forces, in his ignominious death at the hands of Bahram Shāh. Death (from natural causes) prevented another brother, Bahā’ al-Dīn Sām, from action, whereupon Allā’ al-Dīn marched against Bahram, defeating him in three battles and occupying Ghazna. The city was probably sacked so ruthlessly through rage at the fickleness of its inhabitants but also with the intention of securing ‘Allā’ al-Dīn’s rear for his wider ambitions against the Sālqīn possessions to the west and north of Ghūr. In the year following (547/1152), with Bahram Shāh a fugitive in the Pandja, ‘Allā’ al-Dīn moved against Sālqīn, in alliance with the mughf of Harat, only to be defeated and captured at the battle of Harat. He was released before Sālqīn’s quarrel with the Ghuzz in 548/1153 and appears to have ruled quietly at Frūz-Khū until his death in 556/1161. Several of his poems in self-praise survive both in the histories and in the biographies of the poets.

Bibliography: Ibn al-‘Arī, ed. Tornberg, xi, 89-90, 107-8; Minḥāḏ b. Sirāḏ Djūḏḏānī, 

Djāhbadh (pl. džāhrīdja), a term of Persian origin, perhaps derived from a *gahbād in the Sāsānian administration, (the term is suggested by Herzfeld; Paikuli, gloss. No. 274) used in the sense of a financial clerk, expert in matters of coins, skilled money examiner, treasurer receiver, government cashier, money changer or collector (Tādī al-ʿArās, ii, 558; Dozy, Supplement, i, 226; Vullers, Lexicon Persicum, i, 544; Ibn Mammātī, 304, etc.).

From the end of the 2nd/8th century on, bearers of this title in the time of the ʿAbbāsīd Caliphs Mānsūr, Harūn, and Mahdī are mentioned (Faḥrīshārī; Masʿūdī, vi, 227) also frequently in Arabic papyri (Karabaekte, Becker, Grohmann, Dietrich, etc.).

In an economy based on bimetallism, dinār and dirham, with their fluctuating weights and values and their diversity in circulation, the function of the Djāhbadh assumed an ever-increasing importance, as manifested by repeated references in Arabic sources of the 3rd/9th and 4th/10th centuries to:

(a) Māl al-Djāhbaḏīa, also known as Ḥākḥ al-Djāhbaḏīa, which represents the fee of the Djāhbaḏ for his services to the government, levied as a charge on the taxpayer and which, though somewhat dubious in its legality, became an integral part of the public budget (Kremer, Einahmebudget; al-Sāḥī; Tabafydt-i Nāsīrat, trans. H. G. Raverty, Calcutta, 1905-1908); and above all to:

(b) Dīnār al-Djāhbaḏha, whose chief was required to prepare a monthly or yearly statement accounting for all the items of income and expenditure of the treasury (Kudāma b. Dja ṣ, I, 308; Lekkegaard; Cl. 1953-54; see further Dāftar); and above all to:

(c) Individual bearers of the title Djāhbaḏ by name with precise information about their activities.

The text of an official appointment of a Djāhbaḏ (Taʿrīḵī Kumm, 149-53) specifies his function, his salary, and his obligation "to be just and fair in the collection of taxes and to give an official receipt for all incoming amounts in the presence of witnesses".

The 4th/10th century Arabic sources (Miskawayh, Tānḡiḵī, Sāḥī, Sūlī, etc.) indicate that it was customary for viziers to have their own Djāhbadh with whom they deposited large, legally or illegally acquired, amounts of money as the safest method of securing their fortune.

In the time of the ʿAbbāsīd Caliph al-Muqtadir, (930-932/1525-1527) however, the Djāhbaḏ emerged also as a banker in the modern sense, who, in addition to his functions as an administrator of deposit, and as a remitter of funds from place to place through the medium of the sakk and especially of the sulṭāda (qq.v.)—then a widely used instrument of the credit economy.—was called upon to advance huge sums to the Caliph, the viziers, and other
court officials on credit terms with interest rates and securities.

The Dähdbidha were mostly Christians and Jews whose appointment to this office despite their status as Dämim was legalized by a special decree issued in 295/908 by the Caliph (Mukaddasi, ed. de Goeje, 183). Among the Dähdbidha listed in the sources were Ibrâhim b. Yuâhannâ, Zakariyâ b. Yuâhannâ, Sahî b. Nazîr, Ibrâhim b. Ayyûb, Ibrâhim b. âHmad, Isrâ'îl b. Sâlih, Sulaymân b. Wâbî, and, above all two Jewish merchants and bankers, Yusuf b. Fînhâs and Hârin b. 'Imrân of Baghdâd. They were appointed at the office of Dähdbidhath al-Îldra of a Persian province of Ahwâz, and then became the court bankers (Dähdbidhat al-Îhadra) of al-Mûtâdîd and his viziers, and the pillars of the financial administration of their time. By virtue of their vast resources and commercial connections, these Jewish merchants and Dähdbidha and their associates were instrumental in establishing the first State bank in Islamic history (ca. 302/913), through which the urgent financial needs of the State could be satisfied and the financial ruin of the State stalled off. The sources indicate the amounts they lent, the contracts they concluded with the vizier 'Abî b. ʻIsâ, and other details of the methods of their credit transactions. They were given interest on their loans and securities in the form of the tax revenues of the province of Ahwâz (Fischel).

Under the successors of al-Mûtâdîd, the Dähba- bidha continued to play a rôle not only in Baghdâd, but also in Baṣra and other cities of the 'Abbasîd Empire. Under the Buwayhid Amirs mention is made of one 'Abî b. Hârin b. 'Allân (d. 329/941), and of ʻAbî b. Fâdîlân (d. 383/993). At the beginning of the 7th/13th century, Abû Tahir b. Dähba, the "chief of the Jews in Baghdad" occupied the position of a court banker (Ibn al-Fuwâtî). In later centuries the Dähdbidha lost his central significance as a Court banker; his functions were equated with that of a sayrafi (Kalkashandi, Subh, v, 466).

The double opposition and didhilîyâ is applied to all which is anterior to Islam, while didhilîyâ al-islâm to all which is posterior. Thus marks an evolution and a departure from the sect. (The word didhilîyâ al-isldm is inclined to distinguish two periods, the first corresponding to the were men who have not been initiated into the mysteries of God" but rather that of "knowledge of God, etc." and the second corresponding to the "time of barbarism", but he has not been followed to the letter by translators of the Kûrân who render didhiliyya as "not knowing God, the Prophet and the Law", or "lawless", and didhiliyya as "time of ignorance", "heathendom" [cf. however T. Izutu, The structure of the ethical terms in the Kûran, Tokyo 1959, index]. The fact is that the nine attestations of didhiliyya in the Kûrân scarcely permit of their sense being precisely determined; however, in the feeling of Muslims and of the commentators, didhiliyya is opposed to ʻâlim "one who knows God, etc.", and didhiliyya to islâm taken not in the sense of "submission to God" but as "practice of "knowledge of God, etc."

The word didhilîyâ as an abstract is thus applicable to the period during which the Arabs did not yet know Islam and the Divine Law, as well as to the believers current at that time. One the basis of the Dähba, didhilîyâ is opposed to ʻâlim "one who knows God, etc.", and didhiliyya to islâm taken not in the sense of "submission to God" but as "practice of "knowledge of God, etc." [compare the Druze terminology (see DURUZ), where didhilîyâ is opposed to ʻâhil, and designates all those who have not been initiated into the mysteries of the sect. The structure of the ethical terms in the Kûran, Tokyo 1959, index]. The fact is that the nine attestations of didhiliyya in the Kûrân scarcely permit of their sense being precisely determined; however, in the feeling of Muslims and of the commentators, didhiliyya is opposed to ʻâlim "one who knows God, etc.", and didhiliyya to islâm taken not in the sense of "submission to God" but as "practice of "knowledge of God, etc." [compare the Druze terminology (see DURUZ), where didhiliyya is opposed to ʻâhil, and designates all those who have not been initiated into the mysteries of the sect. The word didhilîyâ as an abstract is thus applicable to the period during which the Arabs did not yet know Islam and the Divine Law, as well as to the beliefs current at that time. One the basis of the Kûrân, XXXIII, 33, where the expression al-didhilîyâ al-ʻâmil "the first didhilîyâ" appears, one is inclined to distinguish two periods, the first didhilîyâ extending from Adam to Noah (or to other prophets), and the second corresponding to the "interval" between Jesus and Muhammad [see PATRÅ. The relative adjective didhilî formed from didhilîyâ is applied to all which is anterior to Islam, in particular to the poets who died before Muhammad's preaching; those who knew both periods are called muhâbrâm, and those born after Islam islâmî. The double opposition didhilîyâ and didhilîyâ islâm thus marks an evolution and a departure from the primitive sense of didhiliyya. The history of the Arabs during the didhilîyâ has been dealt with under al-ARAB, the geography and ethnography under DÄÄRAT AL-ARAB, the language under ARABIYYA, and nomadism under BADW; on all these points the articles on the different
regions, on the major tribes, and on the towns, should be consulted; for the economic situation see especially under VILAIK.

A point calling for some remark is, rather than the true state of pre-Islamic Arabia, the distinctive characters attributed by Muslims to their pagan ancestors, that is to say the traits which allow their conception of ḏāḥiliyya to be defined.

The ideas of the Muslims on pre-Islamic paganism are based on the Qurʾān and on traditions which, in spite of their contempt for everything before Islam, they have collected in the framework of their historical and linguistic researches; in the article Qurʾān will be found a résumé of the pronouncements of the Sacred Book on earlier beliefs; in the articles HADJDJ and KABILA an account of the ancient cult and the history of the Sacred House; under ŞANAM a study of idolatry. Also to be consulted are the various articles on the principal manasik, and also the articles on the adepts of the revealed religions, NASARA and YAHUD.
